The points which we have referred to in the life history of the conger, are dealt with at great length in the most recent number of the *Marine Biological Society's Journal.* There is much of interest in the paper. It is worthy of note that no fertilised and developing eggs of the conger have been found in the sea, but in its larval state the conger, which is then ribbon-shaped and transparent, has been identified, and if Mr. Cunningham is correct in saying that it is to be distinguished for the larva of the fresh-water eel found in estuaries, the theories that congers are simply freshwater eels which have taken up their abode in the sea seems altogether upset. But it is just possible that the fresh-water eels after breeding remain in the sea, and after breeding again and again in salt water, their larvæ, like themselves, become changed in appearance. It is difficult to believe that the millions of eels which descend some rivers never to return, should die much about the same time. If there were such a wholesale decease of eels in the estuaries of rivers, we should expect to see something of their remains. We venture to suggest to Mr. Cunningham that as an interesting experiment he should introduce fresh-water eels gradually into salt water, and note their growth-rate and any changes in appearance which take place. Considerations of space prevent further discussion of this interesting subject. In taking his observations Mr. Cunningham has made a somewhat valuable addition to an obscure branch of icthyology, and we only disagree with him in thinking that he has drawn his conclusions somewhat hastily.

Waltoniana

It is not easy to advise those enthusiasts who wish to catch fish at such times as these. As I have already said, many lakes and ponds are not affected by the rainfall, and the chalk streams are nearly always in order, not being drainage rivers. In other rivers the difficulty is to find the fish. Where many acres of land are flooded by the river-side, the fish are all over the place, and the angler cannot do better than leave the broader parts of the river valley alone. Where the rise of the ground from the river is somewhat sharp, the floods are, of course, less extensive, and there is more chance of finding a shoal of fish. Sometimes roach may be caught on the grass, and as the water is falling the mouths of the ditches are often the abiding places of chub, tench, roach, and perch. As I explained last week, depth is all important, the fish shifting into shallower or deeper water according as the water is thick or fining down. I have caught roach during a flood in eighteen inches of water and also in eighteen feet of water. In the first instance, the water was not unlike pea-soup; in the latter, it was clear, and the weather was very cold.

Pike fishing will soon be very good unless the weather keeps very bad. One of the best methods of catching pike at the present time is with the leger. Probably not one pike-fisher in fifty has used this tackle, which differs little from the barbel leger, but must, of course, be fitted with a lead of sufficient weight to keep down the bait, and with live-bait hooks, mounted on gimp. If the bait is a small one, I give the preference to a rather large single hook, but if it is at all large there should be a lip-hook on its mouth, and a triangle (that known as the "Bickerdyke," for preference) on its shoulder. It is when the pike are lying almost in shoals in quiet backwaters, and in the eddies at the tails of islands, that this tackle is most killing. I have, indeed, sometimes found that when the fish were very shy, and not to be taken by the paternoster nor any of the ordinary methods, one or two might be induced to take a bait presented to them on the leger.

Sometimes I have taken good pike by spinning when the water has been high and thick, but that has only been when I have been using very large baits. Generally speaking, so far as my experience goes, spinning is the most killing way of taking pike. Nine persons out of ten would think and say that live-baiting was the most killing method, and I long held that opinion myself, but now I only resort to live-baiting when the fish are quite off the feed and look at a bait for a quarter of an hour before they take it. Obviously at such times it is no use to draw a spinning bait in front of their noses. The only thing then to do is either to lay out a paternoster or live-bait with float tackle. In choosing the most suitable pike tackle for any particular occasion, it should be remembered that in rivers float tackle is not a stationary arrangement, and that if any particular corner is to be fished long and patiently, the paternoster should be used. In a lake, on the other hand, the live-bait on float tackle, unless it is a chub, will not move far, and if the bottom is weedy a paternoster is apt to get foul. The other day I saw about four fish killed on spinning tackle to every one killed on the paternoster. The baits used on both tackles were gudgeon. The largest fish of the day fell a victim to the attractions of a Chapman spinner and gudgeon.

With the exception of the lucky few who have chalk-stream, grayling fishing, or some private lake, unaffected by floods, south country anglers have been doing but little during the past week. Assuming that the weather holds up for a week or ten days, there should be some really excellent fishing for pike and coarse fish, but to assume anything about the weather these times is a monstrously rash proceeding. I confess that I am beginning to lose faith in the Meteorological Office. Time was when the weather forecasts, combined with an intelligent reading of the barometer and observation of the clouds, would enable one to read the weather with some degree of certainty. But all that is changed now.

One Sunday recently there was such a storm that I decided to put off a visit which was due to some friends on the morrow. But the morrow came up smiling, as the pugilists say, and at breakfast I read that the weather was to be "fine, with light variable airs." So I started. It was blowing a stiff breeze before I reached the station, at Oxford there was a gale, and at Eversham a hurricane, which was tearing up trees by the roots, and had broken the telegraphic communication, so that I was unable to let my friends know there was a lunatic on his way to visit them—a fishing visit, if you please. With one exception, the jolly angling excursions we had planned came to nothing. One day, noting in the paper that a fearful gale was prophecied, with much rain, squalls, and all the rest of it, I suggested to my friend that probably it would be fine, and that we could not do better than go fishing. We went, and the sun shone, and the air was balmy, the pike fed well, and everything was just as it should be. The moral to be deduced from these remarkable observations would seem to be that the meteorological reports should be read backwards. But then the humorous gentlemen who sent me out fishing by promises of "fine, with variable airs," are as likely as not, at the end of a few weeks, just as we begin to understand the art of reading their reports, to suddenly commence to state exactly what the weather is going to be, and then how awkward that will be. Templar.

ANSWERS TO CORRESPONDENTS.

J. R. C., Warrington: Gold fish belong to the carp family, and are not at all "like gudgeon."

Correspondence

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. Pritt.

"FISH PRESERVATIVE."

Sir,—Some of your readers, very likely some of your foreign friends, may be able to furnish the information I want—an efficient method of preserving fish for transit by rail in a hot climate, that of South Africa. Experiments have been tried by my brother and others residing there, but hitherto with only qualified success, Boroglycerine being the medium employed, resulting in a loss by the journey's end of some twenty-five per cent. of the weight of fish despatched, the time occupied being some two or three days. This wasting is a serious drawback where the carriage costs one shilling per pound, and the fish did not arrive in good condition if delayed at all in transit.

A process was patented in Germany I believe, some years ago, but I have endeavoured in vain to get particulars.—Yours, truly,

Joseph Sinclair.

17, Willsons-road, Ramsgate, Kent.

[We believe Boracic Acid is largely used in Norway for preserving fish; but fish so preserved, although they look quite fresh, always have a flat flavour of soda about them and are not to be compared with fresh fish.—Ed.]

FLY-FISHING FOR HERRING.

Sir,—When I noticed, some time ago, in the *Field* and afterwards in the *F. G.*, that it was considered a rare occurrence to take herrings with bait, I hoped more of your correspondents would have given their experiences in this charming but little-known branch of the angler's art. Whilst almost every conceivable method, dodge, tackle, gear, of, or appertaining unto fresh-water fishing, is pretty well known and practised, sea fishing and its ever varying opportunities for sport are sadly neglected. I have caught herring in the manner described by "W." It is much used in the Baltic, but it is nothing but pot-hunting and little sport; whilst an evening's fly-fishing, such as I had on Saturday last, is by no means inferior to a good day on Loch Leven. Flies are made specially for herring, *vide* Braddell, of "Belfast's Catalogue," and are much used about Strangford Lough, where at certain seasons, herring abound, and take the fly very freely. I cannot agree with "W." as to herring not showing sport, but will back one fairly hooked on a fly against a trout of the same weight. Although I have had many a good evening's sport with herring, I cannot recollect a pleasanter than one last summer. I had been mackerel fishing all the afternoon and had got rather tired of it, as I had more fish than I could use, or carry, besides sailing a boat single-handed; and continuously hauling a couple of lines with twenty fathoms out, and a 3lb. lead, savours more of hard work than pleasure. I reeled up about six o'clock, and made sail to beat back to Douglas, five miles off, but on the first tack, into Groudle Bay, a shoal of herring were jumping all round. The temptation was too great, so I lowered the sails, and let the boat drift across the tide, and began casting with a stiff ten-foot rod, strong enough to hold a shark. I put on one of Braddell's herring flies, white wing, silver tinsel body, as tail fly (of which I enclose pattern) one of Foster's Red Caterpillars, and another tied with a little green silk—my own idea. In an hour and a-half I three dozen and nine, sometimes taking two at a time, the Red Caterpillar and the green body killing best. I think I would have been fishing still, had not a vagabond pollack showed his ugly nose amongst the shoal, and grabbed (not fairly taken) my Red Caterpillar. Of course the cowardly cur, like all of his kind, bolted for the weeds, and "bang went several saxpences," in cast, flies, swivel, &c. I could not help wishing I had had you with me armed with the trout rod that did such execution at the tournament, as I feel sure I would have made another and most valuable convert to the charms of sea fishing. I fear I have trespassed rather too far on your columns, but if you can, at a future date, spare me space, I would like to mention a few more sea fish taken with fly and some artificial baits not generally known, but of the utmost use to amateur sea anglers.—Yours, &c.,

Stormy Petrel.

WATERPROOF DRESSING FOR FISHING LINES.

Sir,—"A Learner," who asks in last week's *Fishing Gazette* for a waterproofing that will render fishing-lines impervious to wet, should try the following: Half-a-pint of "doubled-boiled, cold-drawn," linseed-oil, and 2oz. of gold-size; place them in an earthen pipkin, on the hob of a fire-place, and keep the mixture at a gentle heat, occasionally stirring, until the oil and the size are thoroughly incorporated.

The line, which must be *quite dry*, should be wound in a loose coil, placed in the *warm* mixture, and kept there in soak for twenty-four hours, or until it is saturated to its centre (a thick line will require longer time than a thin one). Then take the end of the coil, and draw the line through a piece of cloth or wash-leather, squeezing or pressing it hard, so that all the *outside* waterproofing is removed, and hang it up to dry in the wind or sun, out of the reach of moisture.

I generally waterproof my lines in the summer. In about a fortnight, when moderately dry, re-dip the line, to give an outer coat, and wipe it again gently; then wind it on an old towel-horse, and place it before a hot fire for two or three hours, to cause the mixture to "flow," and form an even gloss on the surface of the line, which must then be left to dry as before; the length of time will depend on the weather and place. Fishing-lines should *always* be dried after using. A convenient way is to wind them on the backs of two chairs, placed a little distance apart. If lines are re-dipped every season they last many years.—Yours, &c.,

Alfred Jardine.

Dear Sir,—In reply to "Learner's" letter, in your last issue, I can strongly recommend him (*re* his grievance in the matter of running line) to use the ordinary roach silk-plaited line, dressed with the Wire-wove Roofing Company's preparation. I have myself given it a thorough trial in the sea as well as fresh water, and can testify to its usefulness. Of course an extra dressing of tallow or mutton fat is necessary before starting on a day's chubbing.

For bank fishing in a stiff breeze, a loosely-twisted line of the style of material used by saddlers for stitching patent leather will be found without equal, and merely requires fat dressing as above.—Yours, &c.,

Chublet.

PULBOROUGH AND AMBERLEY ANGLING COMPETITION.

Sir,—Owing to the excessive floods at Pulborough, I am sorry to say that the Open Roving Fishing Contest promoted by me, and proposed to take place at Pulborough on the 25th inst., will be postponed until a later date, due notice of which will be given.—Yours truly,

Alfred A. Eldridge.

P.S.—Have had a telegram from Pulborough, saying that the river is still rising, the grounds are inundated, and that fishing this week will be quite impossible or out of the question.—A. A. E.

RAYS BREAM (*BRAMA RAII*).

Sir,—I have just seen the journal of the Biological Association for May, 1891, wherein it states that a rays bream was caught on March 28, 1891, and the only specimen previous to that was caught on July 12, 1875.

If you refer to your paper of August 2, 1890, you will find that I recorded one 18in. long, 7in. wide, which was sent me by the Very Rev. Canon Du' Boulay, who was then staying at Prussia Cove, Marizion; and I also mention one that I had preserved in spirits, caught some time previous. I have seen several since, but have not made a note of the dates.—Yours, &c.,

Plymouth. William Hearder.

SOCIETY FOR PROMOTING THE READING OF PAPERS AMONG ANGLING CLUBS.

An important meeting of the above society was held at the Citizen, 70, Houndsditch, on Friday evening last. Mr. H. J. Tibbatts occupied the chair, and the room was literally packed with prominent members of the various angling clubs, every part of London being represented.

The chairman, having briefly addressed the meeting, called upon Mr. E. S. Shrubsole, who met with an enthusiastic reception. In the course of his remarks he drew attention to the fact that the idea of reading papers among the clubs of London, as promoted by that society had, during the past winter, received the hearty support of all concerned. There was not the slightest doubt but that there was plenty of work for such a society to do, and they had met there that evening to properly constitute themselves, and arrange their programme for the ensuing season; and to enable them to do this they should first of all considerably extend their committee.

The following gentlemen there upon signified their willingness to serve upon the committee, the general feeling of those present being that the movement was one in the right direction and deserving of support. Messrs. H. Howse, Clapton; G. C. Cooper, Gresham; F. Griffin, Pres. Silver Trout; Tidbury, Hoxton Bros.; J. Rich, Grange; H. O'Callaghan, Vice-Pres. Silver Trout; Kayes, Grange; R. Ghurney, Hoxton Bros.; G. Manning, Izaak Walton; Malby, Dalston; Windred, United Bros.; J. Smith, Causton; H. Higgenbotham, Battersea Friendly; H. Dunn, Causton; Croker, Grange; Sharp, Causton; R. Murphy, Good Intent; McDermott, Izaak Walton; F. Thorling, St. John's; A. Sowerbutts, Causton; A. Matthews, New Albion; H. J. Tibbatts, Good Intent; T. Keeble, Causton; W. R. Lawes, United Bros.; J. Rieb, Amicable Excelsior; J. Deplidge, Causton; J. Jones, Amicable Excelsior; and Wilson, Blackfriars.

Mr. R. B. Marston, Editor of the *Fishing Gazette*, had kindly intimated his willingness to become the President, and he was duly elected. Mr. E. S. Shrubsole was appointed to the post of hon. sec.; and Mr. G. C. Cooper signified his willingness to take charge of the vocal and instrumental items, which it is proposed to include in the evening's entertainments.

Upon the proposition of Mr. Tidbury, seconded by Mr. Sowerbutts, it was decided the hon. sec. should draw up a circular—have it printed and distributed among the London anglers, such circular to draw attention to the objects of the society, and generally make known the manner in which it was proposed to work it.

It was decided, upon the proposition of Mr. R. Ghurney, that the large hall, at the Foresters' Hall, be engaged upon the occasion of Mr. F. M. Walbran's lecture with dissolving views. Mr. W. Senior, of the *Field*, will occupy the chair upon that occasion.

It was decided that a gigantic smoking concert and conversazione, to be held at the Foresters' Hall at the end of the season, should be organised.

It was decided that the meetings of the society be held at the Citizen, 70, Houndsditch, when applications from clubs for one of its members to read a paper will be entertained every meeting night.

Several applications were made from clubs, and the following arrangements made:—

Nov. 4.—Paper by Mr. A. Matthews, at the Amicable Excelsior, Greyhound Hotel, High-street, Battersea.

Nov. 10.—Paper by Mr. E. S. Shrubsole, at the Battersea Friendly, Queen's Hotel, Queen's-road, Battersea.

Other dates will be fixed at the next meeting.

It was decided that the paper by Mr. G. E. Simms at the Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City, be read under the auspices of this society; and Mr. E. S. Shrubsolo signified his willingness to take the chair upon this occasion. The date is Monday, Oct. 26, and the subject—"Coarse Fish Culture."

The discussion upon the advisability of printing and publishing papers read by the members was adjourned till the next meeting, which will be at the Citizen, 70, Houndsditch (opposite Bishopsgate Church), on Friday evening, Oct. 30. Anglers wishing to join this society should make a note of this. Any secs. of clubs who would like a paper read at their meeting-house, should also attend and make the application. The hearty co-operation of anglers of all grades is earnestly desired by the executive.

THE GRESHAM ANGLING SOCIETY.

What may be considered as almost a new departure in the proceedings of angling societies took place at the Gresham last Tuesday evening, at their rooms in Masons' Hall Tavern, Basinghall-street. The society possesses around its walls a goodly collection of mounted fish, and it was resolved to make this the nucleus of an exhibition. Members were accordingly invited to send in objects relating in any way to piscatorial sport, with the result that a grand show was got together, consisting of fish, aquatic birds, paintings, engravings, fishing tackle, literature, &c., and the rooms were crowded with members and friends, who expressed themselves delighted with the entertainment.

Dr. Brunton, M.A. and M.D., an honorary member, was in the chair, and with his well-known ability and genial manner contributed greatly to the success of the gathering. He commenced by welcoming the visitors, and called on Mr. Tayler, the secretary, to give some account of the present position of the society. From the secretary's speech it appeared that the Gresham was founded in 1880 to supply a want felt among London anglers. Seeing that Sir Thomas Gresham—of whom a portrait by Holroyd is in the room—had rendered valuable services to his fellow-citizens, and founded important institutions in that immediate vicinity, the society had adopted his name and also his coat-of-arms, the grasshopper being their emblem. The society now consists of about one hundred members, of whom very many are keen anglers, from the capturer of the lordly salmon down to that of the humble roach and dace; and the excellent attendance at the weekly meetings shows its usefulness and the interest the members take in its proceedings. They now have an excellent library and a capital librarian, who has a private library of piscatorial works probably unsurpassed by any private library in England, and he is good enough to place these at the disposal of the members, so that any work on angling subjects would be almost sure to be found in one collection or the other. Furthermore, the society has in print a number of papers, many of them of a highly scientific nature, that have been read before it at various times, and a complete set of copies is handed to every new member on paying his first year's subscription. The society also rents two good fishing waters in Essex, which they have lately secured on a three years' lease, and have taken steps to preserve them better than formerly.

An advance has been made in another direction. A number of the members have combined and purchased a fishing boat called the *Gresham Lugger*, which is kept near Southend, and in which, and other boats accompanying it, fishing excursions for prizes are frequently made to the mouth of the Thames, with the result that large quantities of sea fish are frequently shown in the society's rooms. The society also gives silver medals annually for the best specimen fish of each of thirteen different kinds caught in the preceding year. There was on the table a silver challenge cup presented by the chairman, Dr. Brunton, to the society, to be held one year by the member who takes the best variety of specimen fish in the preceding year, and the name of the holder to be engraved on it.

The society is strongly opposed to prizes for gross weights, and, following up a paper lately read by the secretary, have passed a resolution that fish taken by live-gorge fishing shall not be eligible for prizes, and recommending the members not to practise that method.

The chairman then called on Mr. Norman, the honorary curator and librarian, to give some particulars of the exhibits, which he did in a very careful and lucid manner, giving the weights, time, mode of capture, and other interesting details. Prominent among the collection we noticed the following: Case of seven grayling (Dr. Brunton) weighing 10lb.; pike (Mr. C. K. Turpin) caught in January, 1889; pike, 25¼lb. (Mr. F. M. Jonas), caught in February, 1891, at Ponders' End; a very fine case of eight roach, selected from 77¾lb. caught in one day at Fordingbridge, by Mr. W. F. Grimmett, also a pike and two other cases by Mr. Grimmett; pike of 26lb. presented to the society for Mr. G. E. Rose; a black-headed diver and large grebe; three oil paintings of fish by Rolfe, the property of Mr. E. C. Clements; large bream and roach caught by Dr. Ladell, July 22, 1891; six cases of handsome fish sent by Mr. Hesse, of Old Ford; six cases of splendid fish by Mr. H. L. Short, among them a carp of 11½lb. and a pike of 27lb.; two good trout by Mr. J. W. Hearn; a small grebe, taken by Dr. Brunton with an artificial fly; a moorhen, taken by Mr. J. Tayler with an artificial fly; paintings by Mr. G. Chambers, V.P.; portrait of Izaak Walton, painted and presented to the society by Holroyd; two paintings by Morton, Dr. Brunton; a case of three pike, weighing respectively 19½lb., 18lb., and 22lb., presented by Messrs. Knechtli and Jardine; a painting by Rolfe, "Evening," fishing, Dr. Davidson; a model of a Japanese fishing punt, presented by Mr. F. M. Jonas; a small collection of ten rare sea fish, presented this evening by Mr. Woodcock; a valuable and unique china bowl, exhibited by Mr. T. R. Sachs; a number of paintings and prints (many uncommon) shown by Mr. Norman.

Among the tackle was some sea-fishing lines, hooks, &c., by Mr. Parker and Mr. Fosbrooke, also some ancient hooks and tackle by Mr. F. Fletcher.

A very humorous recitation was given by Mr. Claude Meller, and the secretary read an extract from "Ye Logge of Ye Lugger," which was highly amusing.

With two or three exceptions the whole of the entries were the property of members.

A foreign gentleman, an *attaché* to the Japanese Legation, was elected a member.

All members wishing to take part in the competition at Windsor are requested to communicate with Mr. T. Gilbert, of 38, Carter-street, Walworth, S.E.

Votes of thanks to the chairman, hon. curator, and secretary terminated the meeting.

THE NORFOLK BROADS DISPUTE.

MEETING AT SHEPHERD'S BUSH.

A PUBLIC MEETING, called for the purpose of discussing the steps now being taken to defend the public right to sail and fish on the rivers and broads of Norfolk, was held at the Bush Hotel, Shepherd's Bush, on Wednesday night, under the joint auspices of the local angling association, and the Norfolk Broads Protection Society. The chair was taken by Major-General Goldsworthy, M.P., and amongst those present were Mr. H. C. Richards, Mr. T. J. Woodrow (hon. sec. of the Norfolk Broads Protection Society), Mr. C. S. Houlder, C.C., Mr. Fountaine (president of the Shepherd's Bush Angling Association), Mr. Parkhurst (Lady of the Lake), Mr. Crumplen (Piscatorial), Dr. Spurgeon, Mr. Crump, Q.C., Mr. Harding, Mr. A. Matthews (New Albion Piscatorials), Mr. Simms (Gresham), and others. The meeting was well attended, but but the general absence of the London club anglers was much commented upon. A letter was read from Mr. Deputy Bedford, to the effect that he supposed that the society would ask the Corporation for help when the proper time came, upon which occasion "they could count on his eager and hearty support." The communication was received with loud cheers.

Major-General Goldsworthy, M.P., in opening the proceedings, spoke briefly, and said he had taken the chair with a view of hearing an expression of opinion from those interested in the question, and with a view of seeing if the thing could not be amicably settled, so that there might be no disputes between the public and the land-owners, and *vice versa*. Landlords had their rights, and so had the public, and he favoured a friendly action, in order that the dispute might be settled without the disturbances and jangles which sometimes occurred in such matters. He had taken the chair with an open mind, and should be quite impartial. (Hear, hear.) At the same time he thought that where a large number of people had found so much enjoyment in the Norfolk Broads, it would be a pity if they were deprived of their amusement, if they could participate in it with due regard to the rights of others. (Cheers.)

Mr. T. J. Woodrow, C.C., said that the sea had once been where the waters of the broads were. Therefore they considered the broads part of the Kings Highway, and they claimed the right of the public to go over them as they ever had done. (Cheers.) With respect to Hickling Broad, Mr. Micklethwaite claimed the right to it on the ground that it was granted to his father some ninety years ago. Undoubtedly an Act of Parliament had been passed, giving a right of land to the people, in order that they might re-claim it. But the Act of Parliament never gave the power to apportion the water; and they said that the award was contrary to the Act, and was therefore *ultra vires*. With regard to the right of shooting, he thought it was a very questionable right, for he was of opinion that it was just as dangerous to shoot indiscriminately on one of those broads as it was to use firearms in St. Paul's Churchyard. (Hear, hear.) In the case of fishing, it was a very harmless and innocent pastime, and they looked to the public to maintain the right to sail and angle on the broads. (Cheers.)

Mr. Crump, Q.C., moved: "That this meeting deprecates the closing of the Norfolk Broads to the public, and advocates a strenuous opposition to any such course. (Cheers.) He said that as they believed they had well-defined rights within the law, it was as necessary to keep the broads open to the public as it was to maintain the rights of the public to walk on Hampstead Heath or Wimbledon Common. (Cheers.)

Mr. Fountaine seconded the resolution as a sincere angler, but as one who regretted that the "gentle craft" was not better represented on that occasion. (Hear, hear.)

Mr. Parkhurst supported the resolution, and advocated the introduction of a Bill into Parliament dealing with the whole question, getting the rights of the Thames, the Lea, the broads, and other rivers purchased from the owners.

Dr. Spurgeon referred to the Bill brought in a few years ago by the Nottingham anglers. They placed it in the hands of Mr. Broadhurst, and it was to the effect that the right of fishing should be held inviolable on the part of the public on all navigable rivers, unless the owners could show a right prior to Magna Charter. The Bill passed its second reading, and it was only through some misapprehension on the part of Mr. Broadhurst that it did not pass through committee and become law. He thought a Bill to that effect would be a dozen times better than fighting a problematical question in face of the recent decisions in cases of alleged public rights.

The resolution was passed.

Mr. H. C. Richards then proposed: "That this meeting approves of the action of the Norfolk Broads Protection Society, and offers it its most cordial support." He said the Broads Rights case was no wild radical scheme, and if they could only get the London angling societies at their back they need not fear the result.

Mr. Houlder, C.C., seconded the resolution, which was also carried, and a vote of thanks to the chairman closed the proceedings.

PROVINCIAL ANGLING ASSOCIATION.

A MEETING of the committee of the P.A.A. was held on Saturday evening last, at the Globe Hotel, Castle-street, Cardiff (the headquarters of the Cardiff Association): Mr. T. Coles presiding. Letters of apology for non-attendance were received from Mr. J. W. Cundall, of Bristol; and R. Gumbley, of Birmingham, who were unable to be present owing to illness; and Messrs. Wingfield and Evans, of Worcester, were absent through pressure of business.

The minutes of the previous committee meeting, held at Bristol, on July 4 last, were read and adopted, when Messrs. Coles and White gave in a report of their interview with the London and North-Western Railway authorities in London, for the purpose of obtaining the privilege for the members of the association to travel at the reduced fare. The report went to show that great efforts had been made to obtain the concession, but from a letter read by the president the concession of the privilege had been refused for a while. After hearing the report, which the committee accepted, the gentlemen who were appointed to form the deputation were instructed to still continue their labours, with a view of ultimately securing the concession from the company.

Mr. Coles, in the absence of Mr. Wingfield, gave in a report of his work on the Severn Fishery Board, and made mention of the notice of motion which was brought forward by him, and backed by his colleague (Mr. Wingfield), and said they would use their best endeavours in trying to get the notice of motion passed, as it would be the means of opening up a new fishing ground for the whole of the Midland anglers, or those who lived within reasonable distance of the Avon, which lay between Tewkesbury and Stratford. This report was considered very satisfactory, and was approved of unanimously, and the representatives of the association on the Severn Board were asked to still continue their labours in the direction they had taken. At this point of the proceedings the secretary read certain letters received by him, and also the replies sent out, when it was moved that the action taken by the secretary, as mentioned in the replies, be approved of. Mr. Harris, of Cardiff, laid a notice before the committee, to the effect that the railway companies should be approached with a view of the privilege ticket being made available for six days instead of three.

The Secretary gave in a report of the late Tewkesbury contest, and mentioned the success that attended the same, and the great satisfaction expressed by the contestants, who all earnestly hoped that it would be made an annual affair. The question respecting the date of the annual meeting was left in the hands of the secretary and president. The meeting will, in all probability, take place about the middle of November next.

This concluded the chief business down on the agenda.

Mr. Coles proposed from the chair: "That a vote of thanks be given to the Cardiff Association for the kind and hospitable manner they had entertained the visitors." This was seconded by Mr. Luker, and was carried with acclamation. Mr. Harris, of the Cardiff Association, suitably replied.

The remainder of the evening was spent in conversation by the members of the committee and the members of the Cardiff Association, who expressed the great pleasure it gave them in making the acquaintance of the members of the Provincial Angling Committee.

LOCH LEVEN ANGLING ASSOCIATION, LIMITED.

THE annual general meeting of the shareholders of this association was held in Kirkland's Hotel, Kinross, on the afternoon of Monday last, Mr. Henderson, of Turfhills, in the chair. The balance-sheet, which was submitted and adopted, showed the drawings for boat hires to be £2,059 7s. 6d., as against £1,781 7s. the previous year. After paying the rent of the fishings and other expenses, there remained a clear balance of £84 6s. 7d., and after adding balance of £131 18s. 7d., carried from last account, and £23 8s. of interest on paid-up capital, there remained a disposable balance of £239. On the recommendation of the directors a dividend at the rate of ten per cent. was declared, which left a balance of £121 9s. 2d. to be carried forward to next account. Last year the dividend was five per cent.

The report by the directors showed the season to have been a fair average one, and a great improvement on last year. The total number of trout captured with the rod was stated at 16,058, weighing 12,830lb.; and the number netted 268, weighing 343lb. Six hundred and six pike were netted, weighing 2,081lb., or an average weight of over 3lb. During the year four new boats were built, and a handsome four-oared gig presented to the association by Mr. Aitken, Edinburgh, one of the directors.

After the election of four directors, in room of those who fell to retire by rotation, Mr. Bogie, secretary, submitted a letter from Mr. Smith, of Duloch, enclosing a memorandum —which was laid before the meeting—suggesting that a notice be sent to all the angling clubs requesting them to return all trout under a certain size. After some discussion Mr. R. Burns Begg suggested that it should be minuted as a recommendation that all angling clubs competing on the loch should return all trout under 8in., and that a copy of this resolution be sent by the manager to all the angling clubs, and also to make the resolution known to private parties, which was unanimously agreed to.

A letter from Mr. Masson, Edinburgh, was read, complaining of the distribution of shares, which he stated were largely held by persons who were not interested in angling. He also suggested that the representatives of deceased shareholders should be asked to dispose of their shares. Mr. Begg said he had had the opportunity of meeting with Mr. Masson in Edinburgh, and he had spoken to him on the subject. He (Mr. Begg) quite agreed with him in thinking that it was a question of very great importance. When the association was first started it was done with the intention of spreading the shares as far as possible amongst anglers, and they then resolved that no shareholder was to hold more than one share. They adhered to this resolution until they found there was a balance of shares not taken up, and a few of the directors agreed to take these. He considered the resolution was one which would tend very materially to increase the prosperity of the association. The more shareholders they had representative of angling the better. It would be a bad day for the association if these shares were finding their way to those who were buying them solely for speculation. There was a great tendency in that direction since the association began to give regular dividends, and he thought there was a great deal in Mr. Masson's suggestion to limit the number of shares held by each person to two. Of course they could not compel those who held more than two shares to part with them, but they could pass a resolution debarring any one in future holding more than two shares. In answer to Mr. Robertson, Mr. Begg said there were a few shares in the market, and the more they had to dispose of the better, but he considered these should be disposed of to persons interested in the loch. If they adopted a resolution to limit the number of shares to each person it would not prove a great hardship to large shareholders, because it would only preclude them selling all their shares in large lots, while the probability would be that they would realise a higher price by selling them singly. After considerable discussion it was agreed to remit Mr. Smith's suggestion to a meeting of the directors, with instructions to bring up same at next annual meeting.

Mr. Robertson asked permission, on behalf of the Glasgow District Angling Clubs Association, to get the use of all the boats for their annual competition on the 31st of August next year, instead of being restricted to fifteen, as formerly; and he also suggested that the loch should be set apart, during the last week of the season, exclusively to angling clubs, which would give them an opportunity of engaging all the boats, if desired, without causing any inconvenience to private anglers. Mr. Bogie said if the association was to adopt Mr. Robertson's suggestion to set apart the last week of the season exclusively to angling clubs it would not be fair to the shareholders. After due deliberation the meeting did not consider Mr. Robertson's suggestions practicable.

This concluded all the business of importance.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association.—The delegates of the association met at Foresters' Hall, Clerkenwell, on Monday, the 19th inst., at 8.30 p.m., when Mr. W. H. Beckett, the vice-president, occupied the chair. The minutes of the last delegate meeting, held on September 23 last, having been read, and confirmed, the minutes of the Renting and Preservation Committee were next read, and then those of the last General Committee. The recommendation of the Renting and Preservation Committee, that six inches should be the standard size for Crucian or Prussian carp, was unanimously adopted. The letter from the Great Western Railway granting concessions from Paddington and Westbourne Park to Staines and Colnbrook, was read, the reduced fares being from Paddington or Westbourne Park to Staines, 2s.; and to Colnbrook from Paddington, 1s. 9d., or 1s. 7d. from Westbourne Park. The question of obtaining cheap fares for sea-fishing was brought before the meeting by Mr. J. B. Close. After a short debate he was commissioned to obtain all the reliable information he could regarding this important subject, and to lay the same before the General Committee at its next meeting with any suggestions he might be able to make in regard thereto. The Perseverance Angling Society having applied for enrolment, it was decided that upon its presenting a copy of its rules, amended to meet the requirements of the association, that it should then be enrolled. The visiting officers next gave their reports, as follows: Mr. Manning had visited the Odds and Evens on the 7th inst., where two clubs were represented, the meeting being highly satisfactory. Mr. Thorling had visited the Funny Folks Angling Society, where seventeen clubs sent delegates; but hoped they would arrive somewhat earlier than they had of late. He had also paid a visit to the Islington Brothers, where members from nineteen clubs put in an appearance, a very agreeable evening being spent, listening to a good concert. Mr. Jennings reported he had not been able to make any visits for some time past. Mr. Armstrong had attended the St. Albans and Excelsior United Angling Club. The association were next asked to decide whether the fish variously known as roach bream, and bream roach should be weighed in under the head of roach or bream, there being a difference of 3in. in the standard measurements between these fish. After some discussion the matter was ordered to stand over in order that more reliable information might be obtained, as there appeared a great diversity of opinion amongst anglers, some supposing this fish to be a hybrid between the roach and bream, whilst others thought it to be a variety of the roach, and others that of the bream. On the suggestion of Mr. A. W. Parker, a preserved specimen was promised to be sent to the forthcoming Gresham Exhibition, where several naturalists were expected to be present, and as this society also possessed a valuable reference library, the authorities could be looked up and a report made to the delegates at its next meeting. The subscriptions of the Cmm Fund, amounting to £23 14s. 9d., which have been contributed by London and provincial angling societies, is now to be handed over to the trustees of this fund, and the subscription list closed. The secretary of the Royal Oak Angling Society desires to announce that it has removed to the Coborn Arms, Coborn-road, Bow, E. The delegate from the Allason United called attention to an important meeting to take place at his club, on the 29th inst., and trusted to be well supported by other club members on this occasion. Mr. Wheeldon has promised to read a paper at the Serapis Angling Society, meeting at the Neville Arms, Neville-road, Stoke Newington, on Wednesday the 11th November, to commence at 9 p.m., after which a concert will be given, at which several good artistes have promised to attend. The roll was called at 10.10 p.m., when the following sixty-one clubs responded: Allason United, Brompton, Bloomsbury Bros., Anglers' Pride, Bostonians, Bermondsey Bros., Brunswick Bros., Buxton Bros., Burton Piscatorials, Brompton, Clissold, Campbell, United Camden, Cambridge Friendly, City of London, Convivial, Cobden, Crown and Buckland, Duke of Norfolk, Dalston, Eastern Piscatorials, Golden Barbel, Good Intent, Globe, Gresham, Greenwich, Hoxton Brothers, Highbury, Islington Bros., Jubilee, Izaak Walton, Holloway, Hearts of Oak, Original Alexandra, Prince of Wales, Peckham Bros., Prince Arthur, Rodney, Odds and Evens, St. George's, Rising Sun, Serapis, Perseverance, Mildmay, St. Andrew's, Rifle, Royal Oak, South Hornsey, St. John's, South London, South Belgravia, Sundial, West Ham Bros., Wellington, Waggoners, Marylebone, North Lambeth, Midland, North Western, Lady of the Lake.—HON. REPORTER.

Anglers' Association. — VISITING LIST, EASTERN DISTRICT NO. 2.—The next return visit on the above list will place at the North London Angling Society, on Monday, November 9. Secretaries please note the date to prevent clashing with any other visit.—F. THORLING.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—The next visit on the above list will take place on Tuesday next, the 27th inst., at the Battersea Friendly Angling Society, Queen's Head, Queen's-road, Battersea. As this society postponed their visit from the 20th to the 27th, on account of the Bermondsey Brothers having their visit on the S L.U.V.L., I hope all clubs on both lists will rally round and give them a bumper.—G. W. ARMSTRONG, district officer.

Anglers' Association. — WESTERN DISTRICT. — The first visit on recommencing the list will be paid to the Allason United, at the Allason Arms, Uxbridge-street, Notting Hill-gate, on Thursday next, October 29. I hope all clubs which can receive a visit will attend as many clubs as possible, to assure a successful visit for themselves. J. JENNINGS.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting Hill-gate, W. — Mr. F. Roberts was out on the 18th inst., and caught 2lb. 3oz. of bream from West Drayton, and other members were at different waters and had fish. Mr. Morgan hooked a large roach at Langley, but after a struggle lost the fish, and Mr. E. Merritt lost a jack. Hoping my unfortunate brethren will be more fortunate in the next event. Mr. F. Roberts won Mr. Thomas Line's landing-net with the bream. I must remind the above members that the four following prizes are to be fished for on Oct. 25: first prize, five shillings; second, six electro spoons; third, a book entitled "The Compleat Angler"; fourth, a picture given by our esteemed member, Mr. Davis. The first visit on the Western List of the Anglers' Association takes place at the above club on Thursday, Oct. 29, when we hope to see many old faces. We will make one and all welcome. Nearest station, Notting Hill-gate, three minutes' walk to our club-house.—B. ABRAHAMS, sec.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—On the 18th inst., Messrs. Moir and Foster weighed in roach and bream. On Monday last our return visit took place on the Central Association, which turned out a great success, there being thirty clubs represented. Mr. T. Crumplen was present, and read a very nice paper, entitled "An Angler's Visit in the Olden Times." Mr. Medcalf occupied the chair. The next visit will go to the Amicable Waltonians. Our next match (which was to take place at Witham on Nov. 1), will be postponed on account of the unfavourable reports of the different rivers.—W. H. POTTER, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our sixth outing this season came off on the 18th inst. at Windsor, when the three prizes were all taken as follows: Mr. Roberts, first, with 1¾lb. of roach; Mr. Bond, second, with 1lb. 10oz. of roach; Mr. King, third, with roach and gudgeon; and the following weighed in: Mr. G. Rich, one roach, weighing 10oz.; Mr. J. Bell, roach and dace; Mr. Bray, roach; Mr. Blyth, roach.—J. RICH, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 18th instant, our members were out in good force (to the number of twenty-five), to fish for prizes, at Chelmsford; but only two were successful, Mr. Wright being first, with roach; and Mr. A. Merry, second, with roach. The remaining prizes stand over for another outing. — E. R. EMBLETON, secretary.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—Nothing much to report this week but a lot of wet. Mr. D. Davis had a show of roach and dace, 4lb. 13½oz. on the 18th.—A. G. SMITH, sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—The return visit of the Anglers' Association Visiting List will be to this club on Tuesday next, October 27th, when all anglers and friends will receive a hearty welcome. A poor show of fish this week, Mr. Hopkins weighing in roach. Mr. E. S. Shrubsole will read a paper at this club on November 10th, R. B. Marston, Esq., in the chair.—G. MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—Our trays were well filled with some nice roach and dace on the 18th by the following members: H. Patman, J. Warman, P. Allum and James Smith, total weight 45lb. A visit of the clubs on the South London United Visiting List was paid to this society on the 20th, and I am pleased to say was one of the best on record. The offices of chairman and vice were most ably filled by Messrs. J. Fiddes and H. Patman respectively, and I think everyone present was thoroughly satisfied with the evening's entertainment. On the roll being called at eleven o'clock twenty-six clubs responded: seventeen on the S.L.U.V.L., and nine from the other side of the water. For names of clubs see South London Visiting List report. The B. B. return their sincere thanks to those societies that were present, and will not forget to return the compliment on the occasion of any future visit.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—On the 18th inst. we fished a match at Egham, rather light baskets being the rule. The following members weighed in: Mr. White, first prize and 5s. for largest roach, with barbel and roach; Mr. Stillman, roach, second prize; and Mr. F. Barker, third prize, with roach; Messrs. Hacker, Wheelhouse, and J. Barker also weighed in. We have elected another new member to this society.—F. ROBERTS, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 18th we had a blank, though several of the members were out. The 21st being limit night we had a good muster. The auditors for the quarter are Mr. T. Brown and Mr. G. Gill. I hope all members will attend on Wednesday next, to arrange the quarterly match.—D. WARREN.

Bostonian Angling Society.—It is with regret that I have to announce the death of our late member, Mr, J. Daish, at Shanklin, Isle of Wight. The sad news has come as a blow to the members, by whom he was greatly liked. Messrs. Jennings and Lawson have had some nice takes of roach; Mr. Chapman, jack. Members who intend participating in friendly supper will oblige by letting me know not later than Wednesday next.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On the 18th inst. Mr. Robson had a nice take of roach; also Mr. Cowper and myself had over 10lb. each: and Mr. Avis had a nice jack. On Wednesday evening I saved a blank with a few roach. The competition arranged to take place at Bourne End, on the 25th inst., has been postponed until the 8th of November. Members will please note that next Wednesday is quarterly night. -H. ROACH.

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—We have had a very poor show of fish during the past week: Mr. J. Watkins, roach and dace; and Mr. T. Hawkes, perch and roach. We intend getting up a smoking concert for the benefit of an old member (Mr. R. Buffham). He has been suffering on and off for many months past with bronchitis, and is now ordered to give up work for some time to come by the doctor. I feel sure that all those who know "Old Buff"—as we call him—will rally round and give him a bumper. It is intended for this to be a real benefit. There will be no expenses to be paid out of the takings; the printing and postage expenses have been kindly borne by our worthy host and treasurer (Mr. Young). The concert will take place at the club-house on Tuesday, Nov. 10; so, friends, please keep that date open for this event.—T. HAWKES, secretary.

Burdett Angling Society, 118, Hackney-road.—We had a nice show of roach in the club-room on the 18th instant: Mr. D. Flint, 5lb. 2¼oz.; Mr. J. Pether, 4lb. 12oz.; Mr. Green, 1lb. 13oz.—J. PETHER.

Burton Piscatorials, Globe, Derby-street, King's-cross.—Although the heavy floods have rendered successful angling hopeless for a few days, anglers must congratulate themselves on its good results. On the 18th inst. Messrs. Jones, Hill, Sturman, and Richards weighed in roach and dace. Our next sweepstake takes place at Cookham on Nov. 29; two rods allowed, and bank fishing only, when a good muster is anticipated.—C. ROBERTS, hon. sec.

Caledonian Angling Society.—The members of this society fished for three prizes on the 15th inst., at Bourne End, a fair number of members (accompanied by a few friends) taking part therein. The first prize was won by Mr. W. Rooke; the second by Mr. Knock; and the third by Mr. A. George. Since then Mr. A. George has weighed in 6lb. 10oz. roach and dace and one grayling; among the roach was a fine specimen of 1lb. 7oz. Mr. A. Knock also weighed in nine roach weighing 9lb., the two heaviest fish weighing 1lb. 12¾oz. and 1lb. 10½oz. respectively.—A. GEORGE, secretary.

Cambridge Friendly Angling Society, Mason's Arms, Titchborne-street, Edgware-road, W.—In consequence of the flooded state of the river the outing to Pangbourne is further postponed until November 1. Members wishing to compete must give in their names on Wednesday, the 28th.—W. SUTTON, sec.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—Several members fished Langley Canal on the 18th inst., for prizes, but I regret to report a blank, the first we have had this season. The prizes will be fished for again on the 25th. Go where you please; all fish to weigh.—E. W. WOOD, hon. sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—Another member was introduced on Monday last, and there are more to follow next week. Mr. Alfred Sowerbutts read an interesting and humorous account of "Fishing with Elephants," as described by Mr. G. P. Sanderson in his "Thirteen Years amongst the Wild Beasts of India." Mr. Sanderson's—as an angler—conscience evidently pricked him, for he says: "I believe—at least hope—that, had the shades of Old Izaak watched us, he would have forgiven us under the circumstances." During the past week Messrs. Harry Dunn, Charles Dalton, C. Spanswick, H. Elleston, &c., have had good sport up the Thames, while Messrs. Fred Schmidt and A. Thorn, fishing off Ramsgate, caught more than sufficient codling, &c., to satisfy all their friends. Mr. E. S. Shrubsole has kindly consented to preside at the meeting of this society on Monday next, under the auspices of the Society for Promoting Readings of Papers at Angling Clubs. Mr. G. E. Simms, of the Gresham Angling Society, will read his paper on "Coarse Fish Hatching." Brothers of the rod are assured that a hearty reception awaits all who may favour the Causton with a visit on that occasion.—JOHN SMITH, hon. sec.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—Since my last report the following members have weighed in: 9th inst., Mr. Wilson, 18lb. roach: 11th inst., Mr. T. Jameson, bream, 2lb.; Chapman, bream, 2lb. 11oz.; Painter, roach; J. W. Jameson, jack. 15th inst., Mr. Wilson, bream, 9lb. 12½oz., largest fish, 3lb. 4oz. For the 18th inst. I have to record a blank, the first this season.—A. TROWBRIDGE, sec.

Clerkenwell and District United.—The next return visit on the above will be to the Funny Folks Angling Society, Rose and Crown, 21, Goswell-street, where a pleasant evening can be spent by any angler or friend who will favour them with their company.—F. CASTELL, hon. secretary.

Cobden Angling Society, Cobden Club, Kensal-road, W.—We fish a match for private prizes on Nov. 1, from Bourne End Railway Bridge to Marlow Point. Members to proceed by first or second train same morning; names to be registered at Westbourne Park Station or side of water. Fish to be registered at railway hotel at Bourne End not later than seven p.m., and return by the 7.42 p.m. A roving match, two rods; all fish to weigh; no live bait to be taken or bought; members must make themselves eligible to fish.—A. SMITH, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 18th inst. in spite of the flood water, Messrs. Freeman, Parram, W. Midson and Killick, had a fair show of roach, dace, perch, and bream. On November 1 a boundary match will be fished in the Lea for a series of prizes. Full particulars to be obtained at the club-house.—S. MALBY, sec.

East London Piscatorial Society, London Hospital Tavern, Whitechapel-road, E.—We fished a competition on Oct. 1, from Rye House to Ware, three prizes, 1st, £1 1s.; 2nd, 10s. 6d.; 3rd, 10s. 6d.; three highest gross weights; two rods, and was taken in the order named: Mr. Foggie, perch; Mr. Ewer, dace; Mr. Worrall, gudgeon. Messrs. Napper and Chapman were elected members. Our president, Mr. Myers, and Mr. Worrall, have been elected hon. bailiffs of the river Lea. The members fished at Earley, Berks, punt fishing, river Loddon, on Oct. 15, for three prizes: 1st, box of hundred cigars, which was taken by Mr. Ewer; also a box of hundred cigars for the finest specimen fish taken during the competition, which was also taken by Mr. Ewer; the other prizes were not taken. Mr. Morgan weighed a roach, 7½oz., from Wimbledon Park, also a small jack.—FRANK WOODS, sec.

Eustonian Angling Society, King's Head, Swinton-street, King's Cross.—On the 18th inst. we had a very poor show, Mr. B. Pitt saving the club a blank. On Wednesday last it was decided that we have an outing the 1st of November.—R. NEALL, sec.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On the 18th inst., the following weighed in a fair show of fish: Messrs. Biggs, roach; F. Vanhegan, roach; and Shevill, roach and rudd. The next return visit on the Clerkenwell and District will take place at the above on Monday, Oct. 26, when we shall be glad to see any that can attend. The following are the winning numbers in the draw: 512, 98, 1027, 1306, 148, 1521, 537, 38, 78, 214, 901, 642, 1180, 597, 854, 395, 868, 170 494, 1061, 530, 249, 189, 1147. The prizes will be given over on Monday, Nov. 2, when a concert will also take place.—J. W. BIGGS, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We had a few roach and dace, taken by Mr. Caborn on the 18th inst., and a nice jack, taken by Mr. Higley, weight 4lb. 10½oz. In Mr. Shrubsole's notice in the *Gazette*, on Saturday last, a slight error occurred—for Mr. D. Thomas's "roach," 1lb. 3oz., read "rudd," as we do not mount roach under 1lb. 4oz.—A. PAYNE, sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road.—Our sweepstake, at Langley, on the 18th, was very poor: Messrs. Chambers, Dodd, and Roach, all with a few roach each. The next sweepstake will be at Goring on Nov. 1.—J. ROACH, sec.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—There was a good show of fish at the club on the 18th inst. brought in by Messrs. Maybury, Taylor, Murphy, Mardell, and several others. The members will fish for prizes on the 25th inst., at Cheshunt; all start by the 9.8 train, Liverpool-street Station. On November 1, we shall fish for Christmas prizes at the Rye House, when I hope to have a large muster to compete; it is open to all members clear on the books, both honorary and working members; roam of water, Rye House boundary, both sides of the river.—R. MURPHY, secretary.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—Some members of the above club were out on the 18th, when Mr. J. Grand weighed roach, perch and dace; W. Creeke, roach. I wish to remind members that the match takes place at Taplow on the 25th, when I hope to have a good muster; all meet at Stratford Station at 7.30.—G. F. WEAVER, sec.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville. — Taking into consideration the bad condition of the rivers on the 18th inst., our show of fish was very fair, especially from the Thames. The following members weighed in some good samples of roach from the above river: Messrs. F. Watling, 13lb. 8oz.; W. Barnes, 7lb. 7oz.; J. A. Fitch, 5lb.; H. Proehl, 5lb., including a nice barbel 3lb. 13½oz.; J. Hewitt, 2lb. 3oz.; C. Large, 1lb. 10oz.; C. Watling, 1lb. 7oz.; H. Watling, 1lb. From other waters, W. Parkin, roach, 9lb. Total 46lb. 3oz.—J. A. FITCH, sec.

Great Yarmouth Piscatorials.—We fish a pike and perch match, at Potter Heigham, on the 29th inst., and a salt-water match, at Breydon, on Nov. 5. Good sport have been had with codlings recently in the sea and river. Fishing on Heigham Sounds last week, two days, Messrs. J. H. Fortescue, L. P. Garrett, and W. Kirby, landed eight jack; the largest taken by Mr. Garrett turned the scale at 23lb., and measured the extreme length of 39in.; Mr. Fortescue landed a perch, weighing 2lb. 9oz.—WM. KIRBY, hon. sec.

Hoxton Brothers Angling Society.—On the 18th inst. our members fished for special prizes at Broxbourne, three only being won—first, Mr. G. H. Wood, perch; second, Mr. T. Haycox; third, F. Gardner, perch. Our Christmas prizes will be fished for on Nov. 8 and following weeks until all are won, with the exception of Nov. 15, the day of the Rye House Competition in aid of the Anglers' Benevolent Society. We voted a prize, value one guinea, towards the competition.—R. GHURNEY, sec.

Independent Brothers Angling Society, Three Doves, 24, Berwick-street, Oxford-street, W.—On the 18th several of our members were out, the following weighing in: Messrs. Wilson and Pope, with roach and gudgeon. At our last meeting, Mr. Gray was proposed as a working member. We are open to enrol a few more of this class.—SNAP.

Islington Angling Society, Jubilee House, Hornsey Rise, N.—The usual fortnightly meeting was held on Tuesday, with Mr. C. S. Bentley in the chair. Some ordinary business was transacted. The next meeting will be on Monday, the 2nd November, at eight p.m.—C. DOWNING, secretary.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—It is arranged to have a roving match up the Thames in November, date not fixed. Several prizes have been added to the list. The following weighed in on the 18th inst.: Mr. Holder, roach, 6lb. 0¾oz.; Mr. Leach, roach, 3lb. 6¾oz.; others were out, but returned with a blank. We have room for a few more members.—J. H. HERBERT, sec.

Izaak Walton Angling Society.—As announced last week, the members will compete for three special prizes on the 25th inst. Competitors may choose their own fishing waters for these prizes. Mr. G. Washington weighed in jack and perch on the 18th inst. Messrs. T. Harris and J. Pool weighed in perch on the same day.—H. B.

Jubilee Angling Society, Portobello, Kensal-road.—On the 18th we fished a roving match at Cookham for four prizes, the result being as follows: 1st, Mr. Sadgrove, with roach; 2nd, Mr. E. Challen, roach and gudgeon, best roach, 1lb. 3½oz.; 3rd, Mr. Onree, roach; 4th, Mr. Child, with roach. Messrs. Fielding, Dunham, Manning, Wheeler and Warner also had fish.—A. IDE, sec.

Lady of the Lake Angling Association, Queen of England Hotel, Goldhawk-road, Shepherd's Bush.—At the weekly meeting, on Friday evening last, the treasurer reported having placed a further £5 in the Post Office Savings Bank. Members will receive, in a few days, the half-yearly balance-sheet and a revised list of prizes. Members are again reminded of the five special prizes of 10s. 6d. given for the largest roach, dace, barbel, chub, and pike, weighed in during October. It is hoped that Father Thames will reduce himself in size and colour, so that the various "bobby dazzlers" of the club can bring them up to the club house. Members will be pleased to know that "Nelson" has at last bought a frigate, and intends dodging the bushes for chub.—T. SALTER, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On the 18th inst. several members were out, the following getting some good fish: Mr. Johnson, roach and dace; Mr. Watling, roach; Mr. Webster, dace; Mr. Belton, dace. On Wednesday, the 21st inst., Mr. J. White and Mr. Palmer were proposed working members of the above, and will be balloted for in the usual way at our next meeting.—W. WATLING, sec.

Liverpool Angling Association, Bee Hotel, 5, Queen's-square, and 18, St. John's-lane.—Only a few members turned up for the day's fishing on the 15th, and these experienced shocking weather, the rain being incessant, with a cold wind. A few fine bream were taken, but really nothing to what there ought to have been got out of the particular water they were fishing. Messrs. Baker and Wood won prizes. It was resolved to have a day's fishing in the Vyrnwy on the 29th, going over night. This will probably be the final outing this season, and therefore members will do well to avail themselves of this excursion. Grayling should now be nearly at their best, and chub, perch, roach, and dace must be in prime condition. There will be four very good prizes, besides the two challenge clocks to be won, and specimen fish are often obtained in those classes at this time of the year. This will be a roving affair, and members may fish either up or down the river, but of course not in the prohibited water.—R. WOOLFALL.

Marylebone Angling Society. Pine Apple, Carlisle-street, Edgware-road, W.—On the 18th inst., our members were at various waters, Messrs. Penfold, Milburn, and Barnard, weighing in roach from the Thames, one of Mr. Penfold's roach, weighing 1lb. 8½oz. I wish to remind members that the special meeting is adjourned till Wednesday, 28th October.—W. F. PEARCE.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—We had another new member elected on Tuesday, our usual meeting. Several of our members were out on the 18th, Mr. J. Osborne being the most successful, with a fine show of roach and dace; several more prizes have been added to the list.—J. COMBER, sec.

Mitre Brothers Angling Society, Mitre Tavern, Kingsgate-street, Holborn.—Members of the above society were out fishing for prizes on October 11, when Mr. W. Talbot weighed in dace, from Ware; Mr. Crocker, from Richmond; Mr. Wells and Mr. Irish, from Walton, on the 17th instant. Mr. Timmis weighed in jack, from Cheshunt, on the 18th instant. Mr. Ryan weighed in a nice show of roach and dace, from Richmond, on the 18th instant. Members must not forget that there are other prizes to be fished for on the 25th instant.—J. JOLLIFFE, sec.

New Albion Piscatorials, Duke of Kent, Old Kent-road.—Owing to the floods our competition of October 29 has been postponed, and the *locale* of the outing left to the committee to decide on Thursday next. A letter was read from the Causton Angling Society *re* Mr. Simm's paper, and Mr. Arthur Matthews was elected to represent us at the same.—A. E. BALDWIN, sec.

North Lambeth Angling Society, 108, Westminster Bridge-road.—Several of our members were out on the 18th inst., but no fish were taken up to our standard. Members are reminded that several prizes will close at the end of this month; also that quarterly night is the 25th inst. The balance-sheet will be read on the 1st November, when all members are requested to be present.—F. WALLIS, sec.

North London Angling Club, Tap House, Holloway-road.—Since my last the takes have been but small, only a few members weighing in. We have elected Mr. Mayer as a member, and have another proposed for membership. Our match in the Thames turned out a failure, only one prize being taken (by Mr. Bennell), Mr. Hoyle weighing in dace, Mr. Taylor, gudgeon. The next visit on the Anglers' Association, No. 2, takes place at the above society on Monday, Nov. 9. It being our first visit on this list, I hope that the other clubs on the list will rally round us and give us a bumper.—H. STRETCH, hon. sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland-park, N.W.—Owing to the recent floods our members have had poor sport, but I am pleased to say that Mr. Lambert had a splendid jack from the Lea on the 18th inst.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—On the 18th inst., we had a fair show of roach, brought in by the following members: Messrs. Forster, Bygrave, sen., Bygrave, jun., Harrison, and Smith. At our last meeting night we made two new members, and we shall be glad, as we have room to have a few more eligible members.—J. CUTHBERT, sec.

Peckham Brothers Angling Society, Prince Arthur, East Surrey-grove, Peckham.—Only two of our members were out on the 18th inst., but did not have fish, this being the first blank this season. Our anniversary supper will take place at the above on November 9, when we hope to see a good muster of members and friends.—E. A. FAUTLEY, sec.

Prince Albert Angling Society, Prince Albert, Lincoln-street, Bow-road.—Our members were out on the 11th inst.; the result was, Mr. Fitt weighed in a nice show of roach. On the 15th, Mr. Gandy showed a splendid jack, scaling 8lb. On the 18th our members were out, to fish for a silver cup, Mr. Pignatelli taking the prize with a jack. We have two prizes to be decided next meeting night, when we hope to have a good muster. We are open for a few more members.—F. P., hon. sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—A good muster of our members were out on the 18th inst., fishing in the match at Langley, but only one member got fish worth speaking of, but refused to weigh in, so that we can have another outing to try and take all the prizes. Members will notice that the match will take place on the 25th inst., in the same place, under the same conditions except the one referring to live-bait, which will be allowed to be taken, and I trust that we shall have a good muster.

Prince of Wales Angling Society, the Globe, Lisson-grove.—The following weighed in on the 18th inst.: Mr. Davis, tench, 3lb. 6¾oz.; Robbins, roach, 11lb. 5oz.; Hayden, roach, 5lb. 7oz.; Ivermee, 3lb. 14oz.; Gibson, roach and dace.—WILLIAM BOWYER, sec.

Rising Sun Angling Society, The George, Brook-street, Holborn.—Owing to the small attendance of members, the necessary arrangements could not be made for the forthcoming outing. It is particularly requested that members will endeavour to be present on Monday next for the despatch of business. On the 18th, Mr. Comley had a nice show of fish of 6lb.—J. SKINNER, sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The following members weighed in some very nice shows on 18th inst.: Messrs. J. Wigley, roach; F. Lamberton, roach; F. T. Lamberton. The monthly outing takes place on the 25th inst. at Pangbourne. Members note that there is a prize for the largest roach on same day; to go where they like.—F. T. LAMBERTON.

Royal George Angling Society, Queen's Arms, Bateman-street, Soho-square, W.—On the 18th inst. several of our members weighed in from the Thames; but Messrs. Chart, Longland, and Harris had the best takes of fish. I beg to remind members of Mr. Wood's prize of ten shillings and sixpence, for the 25th inst. (bank only), and likewise the remaining prizes on our list which have to be won. On the 21st inst., we elected five fishing and one honorary members, and still have room for a few more respectable gentlemen. We fish another outing at Marlow, on the 8th November. Full particulars will be duly announced.—F. C. LONGLAND.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow, E.—Several of our members were out on the 18th inst., but the only gentlemen who had any sport were Mr. F. Barrow, with 13lb. 13oz. roach and bream; Mr. A. Barclay, 13lb. 5oz. roach; Mr. G. Barclay, dace. Secretaries will kindly take notice of our change of address from the Royal Oak, Roman-road, to the Coborn Arms, Coborn-road, Bow. Near to Coborn-road Railway Station (G.E.R.).—A. BARCLAY, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—We had a full meeting on Wednesday, and a great deal of business was gone through. We have ten prizes to fish for, given by Messrs. Wood, G. H. Howard, F. Birch, J. Wright, George George, A. Whitson, T. Ovens, and club prizes. They are to be fished for on the 1st of November. Place to be decided on Wednesday next; roving. I hope that all members will be present, so they can vote for the water they would like to fish in. No fish were weighed in on the 18th inst., although I heard that a member caught a specimen roach of 1lb. 12oz., which would have entitled him to the half-yearly prize given by Mr. George.—J. WRIGHT, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—Sport has been very quiet lately with the members of this society. The following members had fish on October 11: Messrs. E. Wright, roach and dace; J. Petrie, roach, 5lb. 11½oz. On the 18th the following also had fish: Messrs. E. Wright, roach and dace; W. North, roach; H. Rigsby, roach; J. Petrie, roach, 8lb. 11¼oz. Members in arrears are requested to attend on Tuesday next without fail.—S. E. CANE, sec.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden.—On the 18th inst. we had a good show of roach and dace by the following members: Mr. Kelly, about 7lb., largest roach 1lb. 0¾oz.; Mr. Smales, 6½lb., largest 1lb. 3½oz.; Mr. Jacobs, about 4lb., one dace going 9oz.; Mr. Massoy, 3¼lb., one dace 6¾oz.; Messrs. Clark and Williams also had roach. Our next outing will take place at Moulsford, on November 1, members to go down the previous afternoon, but may join on same morning. To enable the members to have a long day the fish will be weighed down there, and on this occasion jack will be weighable; entrance fee 2s. 6d.—PELICAN.

South London United Anglers' Visiting List.—A most successful visit on the above list was paid to the Bermondsey Brothers on the 20th, when a most pleasant evening was spent by all present. On the roll being called at eleven o'clock by the president of the list, Mr. G. H. Field, the following twenty-six clubs responded: Second Surrey, Rodney, South London, Anchor and Hope, Peckham Bros., Angler's Pride, Battersea Friendly, Grange, St. Albans and Excelsior, Blackfriars, St. George's, Clapham Junction, North Lambeth, St. Thomas's, Amicable Excelsior, Cliftonvillo, Crown and Buckland, North London, Islington Bros., Wenlock, Funny Folks, Amicable Waltonians, Odds and Evens, City of London, Amicable Bros., and Bermondsey Bros. The next visit will be to the Second Surrey, held at the Spread Eagle, Stangate-street, Lambeth, on Tuesday, Nov. 3, when I hope to see as good a muster of clubs represented. The delegates from the societies on above list are requested to attend committee meeting at the Pitt's Head, Grange-road, Bermondsey, on Friday, the 30th, at nine o'clock, to settle some important matters of business in connection with the list, and also to arrange for the next friendly competition amongst the societies.—A. CONN, hon. sec.

United Brothers, Deptford.—The members of the above were to have fished a match in the Medway on the 18th inst., but owing to the Medway being flooded, it has been postponed until a future date, which will be settled this evening (Saturday), when I hope all members will show up in good force. Several members were out on the 18th inst. but the takes were rather small. Mr. W. Tyler, roach; T. Beak, roach; H. Richards, gudgeon. Several other members were out, but returned with blanks.—H. TYLER, secretary.

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear. Best quality only.—EAST LONDON RUBBER Co., 8, Shoreditch, E.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—Several members were out on the 18th inst.; the following had fish: Messrs. Clegg, Smith, Russ, and A. Fry. We had a fair attendance on the 20th, Mr. Smith in the chair, in the unavoidable absence of our chairman, Mr. Phillips; Mr. A. Fry, vice *pro tem.* After our financial business was disposed of, we received a very interesting report from Mr. Skinner; after which an important discussion arose which could not be settled on that night. Sorry I could not get away to the Bermondsey Bros.—H. C., hon. sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—The result of the competition on Wednesday last was—Mr. Overton, first; Mr. James, second. No other fish weighed in. On Wednesday, Nov. 11, we propose to have our first smoking concert of the season, when ladies are cordially invited. The admission will be by programme, which we shall charge a nominal price for, and the proceeds will be given to the funds of the Anglers' Benevolent Society.—C. HIBBLE, sec.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 18th inst., Mr. A. Corras weighed in roach and dace; Mr. W. Gordon, roach and dace. On Wednesday next the place and conditions of November competition have to be settled; there is also a notice of motion regarding the same by Mr. T. Jenkins, so I hope members will show up in force to discuss the same.—R. J. DARTNALL, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—We had a few members out on the 18th inst., but hardly any fish weighed in, owing to the state of the waters: Messrs. Sullivan, roach and perch; Harden, jun., jack and roach. Our next outing will take place on the 1st of November; roving; all members to go where they like; start same morning. Members intending to compete must sign book at club-house on the Saturday night after nine o'clock.—W. M., sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on the 18th inst., but sport was poor, as only the following weighed in fish: Mr. R. Lowther, 5lb. 1½oz., of roach and bream; Mr. Hobbs, also roach. I hope our members will not forget the match for Mr. Beresford's prize on the 25th inst.; go where you please; and no roach to weigh for the prize less than half-a-pound. Our members passed a hearty vote of thanks to Brother Willis for the present to the club of a photo. (enlarged) of a group of our members.—R. LOWTHER, sec.

West London Angling Club, Dartmouth Castle, Hammersmith.—I beg to remind members that the third club match will take place on the 29th inst. and 1st Nov. Any public water; bank or punt. Members are allowed to start the day before, but not to fish before the morning of match. Members fishing on the Thursday must give notice at the club-house. Weights and prizes the same as in the last match. Mr. Edward White was elected a member at our last meeting.—J. J. HUNTER, hon. sec.

QUEEN'S HOTEL,

QUEEN'S ROAD, BATTERSEA PARK TOWN.

PROPRIETOR—C. SIMMONDS.

Under the auspices of The Society for Promoting the Reading of Papers among Angling Clubs,

MR. E. S. SHRUBSOLE

will read a Paper upon "FISHING BASKETS, BAGS, AND CREELS," at the above Hotel, on

TUESDAY, NOVEMBER 10.

There will be an exhibition of upwards of one hundred fishing baskets, bags, &c., to illustrate the lecture.

R. B. MARSTON, Esq. (Editor of the *Fishing Gazette*) will take the Chair at eight o'clock.

A GRAND SMOKING CONCERT, organised by Mr. Godfrey C. Cooper, will be held the same evening.

All anglers cordially invited.

ONE hundred and twenty-one fish Mr. Bott's party have landed within a month from a comparatively small section of the Don this season. It is the best record we know of to any one section, bar the Invercauld Water, on the Dee at Ballater, or the Glontana Waters.

LADY ANGLERS have been doing splendid work on the Dee and Don this season. On the Invercauld Arms Water, Miss Borthwick; on the Huntly Lodge and Dess, Mrs. Pickering; on the Woodend, Mrs. Farnell Watson; on the Carlogie, Miss Butchart, &c., have had several successes with heavy fish. On the Don, Miss Blair had a thirty-pounder to her own rod from the Kintore Water.

A CORRESPONDENT writes us from Perthshire that he has had some grand sport with salmon on the river Earn, having already killed over thirty fish, some of which were over 25lb. in weight each, and that he hopes to make a grand total of fifty ere the season is over.

⁂ Club and River Reporters will oblige by sending in their Reports early in the week.

Holloway's Pills are securities of health to all nations, of whatever clime. They have given hope, relief, and comfort to millions. In irritation and debility, generated by excesses of any kind, or in general prostration of the system, their effect is rapidly soothing, renovating, and restorative. They rapidly drive from the system the morbid cause of ailment, and renew in the frame its pristine animation, health, and vigour. They greatly increase the appetite, give tone to the stomach, assist the digestion, and impart elasticity to the spirits; the essence enters the circulation and, carried through its course, exerts its cleansing power over every organ. In the lungs they affect most striking changes, converting the impure venous into pure arterial blood, by which the whole frame is recruited.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add 30 min. for Chelsea.
40 „ „ Putney.
45 „ „ Hammersmith.
50 „ „ Barnes.

Add 55 min. for Kew.
75 „ „ Richmond.
80 „ „ Twickenham.
85 „ „ Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

English and Welsh Reports.

The Lower Thames.—GENERAL REMARKS.—In reference to the letter of "Liberia" in last week's *Fishing Gazette* on "Thames Fishing Reports," I was somewhat inclined to be amused, as it is generally understood by Thames anglers in a succession of takes of roach and dace the gross quantity represents those fish, and any other fish mentioned are simply supplements to the take. I have never before heard of a similar interpretation as that of "Liberia," and there can scarcely be an angler on the Thames who would decipher after a repetition of takes of roach and dace "in one day five dozen and four jack, the largest 6lb." to mean *all* jack. If it is essential to put "roach and dace" after each take of those fish in the tidal waters, I think it would occupy too much valuable space. I hope, however, with this enlightenment, my friend "Liberia" will be satisfied, and as a rule the takes of roach and dace in the tideway are estimated by weight and not by quantity. It will be no matter of surprise to learn that the angling reports this week are of a very limited character, as owing to the large amount of rain which has fallen, and so much boisterous wind, it has in most places been impossible for the boats to go out. With an overflow of water the fish are frequently carried away into the adjacent meadows and private grounds, and the value of honorary river keepers developes itself on such occasions, as will be seen from the following letter, received from Twickenham this morning (Wednesday), under date of the previous day: "I have been engaged with another honorary river keeper since eleven o'clock this morning, trying to save a great quantity of fish that have been washed over the high asphalte path by Richmond Bridge into Paul's meadow. The family are away from home, but the head gardener gave us permission to open the drains with keys. We had put a boat on the meadow, and employed two or three men to find the plugs. River keeper John Davis was there, and the head river-keeper is coming, and there is little doubt all will be right." The T.A.P.S. is now well fixed with some valuable honorary river keepers in most parts of the river.—B.

TWICKENHAM.—John Spong, in four days, 4lb. of roach and dace and a couple of bream; Pert Hammerton, in two days, 20lb. of roach and dace; and John Coxen, in one day, two dozen of roach and dace.

TEDDINGTON.—Joseph Baldwin, in one day, one and a-half dozen of roach and dace and three bream.

KINGSTON.—One of the bank anglers has taken a fine carp, variously estimated from 11lb. to 14lb., but it was a very large one, and was afterwards seen by Mr. Alfred Nuthall and Mr. M. H. Blamey, and the same angler another day got a fine bream of 6lb.; John Johnson, in three half days, six dozen of roach and dace, six barbel, and five chub; and N. Bolton, during the week, eight dozen of roach and dace, and twelve dozen of fine gudgeon.

HAMPTON COURT.—William Milbourne writes: "The water is high and thick, and no prospect of it going down. With the heavy rains no punt has been out, but the anglers are getting a few roach and dace from the banks."

STAINES.—John Keene, jun., says he has been out four days, but not done so well, owing to the condition of the high water. In two days, with Mr. Codd, who caught eight dozen of roach, the largest 1¼lb.; another day, with Mr. Wilson, three dozen of roach, one chub, one barbel, and a bream of 3lb. 6oz.; and another day, with Mr. Newbury and friend, 15lb. of roach.

Upper Thames.—Anglers intent upon paying the "grand old meanderer" a visit will be well advised to defer their slaughtering intentions until such times when the river can be found, which just at present in many places, between Windsor and Lechlade, it would be difficult to do. For many years I have firmly stuck to it, that the excellent new weirs and the still better, in time, management would prevent any serious floods as of yore, but the incessant rain of the past five or six months has at last mastered the weirs and their careful attendants, and the Thames Valley, before this is in print, will be in high flood. Fishing with any amount of success is out of the question, but roach, chub, and even jack may be sought for and found in quiet, inshore nooks and corners, behind boughs, or in lay-byes, and literally on the grass. Many years ago in Spade Oak Reach, in a very high flood, in a few hours' fishing, with tail of lob as bait, I took a splendid basket of roach—all sogdollagers—in some eighteen inches of water. When the flood subsided, I found I must have been fishing on the grass, three feet from the edge of ten feet of river proper in depth. As I write, it is deluging with rain, and my advice to those who think of fishing in the Thames just now is the same as that of *Punch* to those about to marry, viz., "Don't!"—MARLOW BUZZ.

Thames (Windsor).—A tremendously heavy water is now rushing through the Thames Valley and causing serious inconvenience and damage, though anglers for barbel are having excellent catches, the baskets being too numerous to mention all individually. Strange to say, out of the many hundreds caught, 6lb. appears to be the largest. Any eddy is worth trying for them now, as I doubt if any can live in the stream as it is at present. All those caught have been by bank anglers and quite close to the side out of the rush of water. Mr. Windsor, of Windsor, one afternoon had sixteen, about 40lb. Mr. Price, of Etonwick, nineteen fish, largest 5lb. The brothers Vickers, of Windsor, in one morning had thirteen, and a roach of 1lb. 3oz.—in all about 40lb. Mr. T. Skelton, of Datchet, Mr. Copsey, of Windsor, and Mr. Eaton, of Etonwick, have all had good baskets. Roach have been numerous and of good size, Mr. Young, of Windsor, having a specimen amongst others of 1¼lb. Water very high, being now over the weir staging and still rising, with every prospect of more rain. Worms only of any use.—B. R. BAMBRIDGE.

Ancholme District.—The recent rains have made the water too cloudy for good sport; a few fish of 3lb. or 4lb. were, however, caught at the end of last week. The best basket of the week was probably made by Mr. Hawkins, who had a nice dish of twenty fish, on Saturday afternoon. When the tempestuous weather ceases, sport should improve; and after the first frost, pike would doubtless begin to run. Several visitors were over from Hull, on Tuesday, but results were not reported.—THOMAS FORD.

Arun (Pulborough).—Owing to the incessant rain and high tides the river is in flood, and angling is at a standstill. There are, under the circumstances, no takes of fish to record.—GOOSEQUILL.

Chichester Canal and Sussex Rivers.—The heavy rain storms of the past fortnight have, in most waters put a veto on angling pursuits. The rivers are overflowing the banks, and in Mid-Sussex the country is for miles under water. The Canal at Chichester is the only available water, to my knowledge, and here the Canal is nearly three feet below the banks, and until the spring breaks there will be but little addition to the volume of water, which although at present weedy, is in good colour. A few enthusiasts have been out, and bream, roach, and a few small perch and pike have been taken. Several eels up to 2½lb., have been taken with both live and dead bait. Sea fishing is good, both from piers and boat, but the weather at present is too treacherous for boating operations. Wild fowl are already making their appearance. A young gannet was recently shot in Chichester Harbour, and several curlews and lapwing plovers.—GEORGE F. SALTER.

Dove and Tributaries.—Weather is still too wet for grayling fishing here. A few dry days will put the water right for fly-fishing; but as it is trout only can be got. And the law decrees trout out of condition, whilst, as a matter of fact, they are in prime order for sport and table.—D. and W. H. FOSTER, Ashbourne.

Esk (Whitby, Yorkshire).—Another week of good takes. At no time probably has the Esk been so plentifully stocked with salmon and salmon trout, and anglers are busy every day, when the weather and the stream are at all favourable. A good many of the fish below recorded were caught with the fly; but, for the bulk bait with the lure. Mr. J. Moore, Whitby, has landed four salmon trout of the following weight—3lb., 5lb., 11lb. and 12½lb.; Mr. Robert Hay, Grosmont; six of 5lb., 13lb., 11½lb., 7lb., 8lb., and 6lb.; Mr, F. Lloyd, Grosmont; three of 2lb., 14lb. and 5lb.; Mr. Geo. Tonkiss, Grosmont; two of 1lb. and 11lb.; Mr. Wm. Jackson, Grosmont; four of 3lb., 21lb., 17lb. and 5lb.; Mr. J. Calvert, Lealholm; three of 11lb., 12lb. and 12lb.; Mr. Wright, Castleton; three of 16lb., 12½lb. and 5lb.; Mr. Jefferson, Whitby; three of 8lb., 12lb. and 13½lb.; Mr. J. A. Bulmer, Trinidad; seven of 5lb., 11lb., 11lb., 7lb., 12½lb., and two others; Mr. J. W. Nicholson, Whitby; six of 6½lb., 17lb., 7½lb., 13lb. 11lb. and 13lb. Mr. Linton caught eight salmon in one day, the total weight of which was 110lb. Mr. Westgarth landed during the week ten salmon, but I have not been able to ascertain the weights. Several other anglers have made good catches, but complete records are not to hand.—JOHN J. JACKSON.

Fen Waters (South Lincolnshire).—The gale of last week put a temporary difficulty in the way of angling, but during the favourable intervals since some fairly good business is being done. Most of the local gentlemen are devoting themselves to trolling for pike, and they are beginning to meet with fair success. The Fortyfoot is still complained of for its weedy condition, but there are some capital reaches about the Donington Bridge, and some other places. Among the captures recently in this locality may be mentioned one by Mr. Dunn, who land five pike, averaging 5lb. each, and by Mr. Jackson, three being 5lb., 3½lb., and 2lb. respectively. In a three days' outing Mr. Smith captured eight pike, and running up to over 6lb. each, besides having lost three through the failure of the tackle to hold them. About Surfleet there has been some good sport.—LIMPET.

Idle (North Notts).—The storms have not largely interfered with the angling on the Idle, and the water running into fairly good condition, the members turning out on fine days is somewhat on the increase. There is a nice colour on, owing to the rains, and whilst the storms last week deterred some, those who braved the elements, both last and this, did fairly well. Good fish are now to be got from the deeper water, and anglers reporting success with both gentle and worm. Several fine dishes of grayling were caught in the river last week, with worm, from a swim above Ordsall. The samples shown were made up of well-fed fish. This week a nice lot of both roach and dace have been taken, and on Wednesday I saw a pretty lot of dace taken from a private water on the Ryton. Pike are coming to hand in the lower, and some of the higher, reaches rather freely; but they are poorly fed.—L.

Ilfracombe.—Sea fishing has been very good during the past week. Notwithstanding the stormy state of the weather, good quantities of whiting, codling, and pout have been taken from the pier by anglers. The herring season opened with good prospects, all boats having from three hundred to six hundred herrings at a haul. On Monday there was a fine seal captured in the harbour by Mr. N. Barbeary, boatman; it weighed about ¾cwt. When the boats are able to get out, those fishing with ground-lines get good sport with cod, ling, and conger. Should the weather be moderate, there is every prospect of a good fishing season. Weather stormy; wind, S.W.—E. COMER.

Leicester.—The autumn fishing season in Leicestershire so far has not proved up to expectation. This may be attributed in a measure to the extraordinary amount of rain, scarcely a day passing without heavy storms occurring, which have not only interfered with sport, but has caused the rivers and canal to rise very fast, and in many parts, where the banks are low, to overflow and cover large tracts of land. The only places where sport was obtained was at the bends of the river, at which the stream was not so rapid, but the colour of the water was almost like clay. Messrs. Rylott, Hobbs and Pirime, and a few of the more hardened disciples of the craft, were busy bait catching, but the supply was far short of the demand. A few anglers tried for chub at Aylestone, but only an odd brace or two was obtained. Late on Thursday rain was still falling rapidly, and the waters continued to rise.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers still nearly bank-full of discoloured water; weather unsettled; rain more or less every day; uncertain when there will be a chance of fishing with the fly—am afraid not this month.—R. T. WILLIAMS.

Medway (Maidstone).—The waters of the Medway are still unfishable and have been over the banks, not much sign of alteration under present circumstances, a few roach have been caught in the eddies, trust soon to see a change cannot be worse than it is now.—W. SHRUBSOLE.

Norfolk, Suffolk, and Cambridgeshire Waters.—Roach and dace are well on now in all our waters, and I can with confidence recommend my London angling friends to have a try. They can go to Littleport, where there is plenty of good and reasonable accommodation. Get a ticket from Benton, the keeper. They can also go to Brandon, where there are tons of good roach, dace, perch, and pike, and one of the most comfortable inns on the river bank that I know of; Mr. Rolph, the landlord, being a very obliging man, and a very good angler. I can with safety recommend anglers to this hotel. There is also the Lark, at Mildenhall, full of good fish—certainly some of the finest roach and dace to be had anywhere. You may fish from Mildenhall to Icklingham, right up to Ely—a distance of twenty miles or more, with good swims all the way. In most all our rivers and streams the weeds are cut, and the recent heavy rains have washed them away, so that I am safe in recommending the angler to try anywhere; and shall be pleased to give any information I can to persons wishing to visit these waters. Weather at time of writing fine and clear.—WILLIAM HOWLETT.

Ouse (Offord).—On Saturday last, October 17, Mr. Taylor took a pike weighing 10½lb., and two small ones of 2lb. each, below the mills, opposite Diamond Point. Mr. Ridgway had a good run with another one, about half an hour afterwards in the same place; but broke away just as he was trying to land him, weighing quite as much as the one Mr. Taylor took to-day. When writing quite a flush of water. It will be impossible to do any more fishing for four or five days.—H. COLLINS.

Ouse, &c. (York).—Nothing doing in this river nor its tributary streams, owing to heavy rains and the consequent floods. Much adjoining land submerged, especially in the Lower Rye district.—RONALD.

Plymouth.—SEA FISHING.—The succession of gales for the last week has almost put a stop to fishing, but nevertheless, in the lull, boats have been out and have had some good catches. Our harbour is admirably suited for fishing in rough weather, as it is sheltered from almost every wind, and we have that great protection from the southward, the Breakwater, which is nearly a mile in length right across the harbour. Flat fish and mullet are taken in the inner harbours, and some fine bass from off the Iron Bridge at Laira.—WILLIAM HEARDER.

Teme (Ludlow).—The Teme in this part has now gone down but is still muddy, and there is a good volume of water going down it which is swiftly lowering and clearing. At the end of last week there was more water in the river than has been since the flood of 1886. If the weather holds fine, sport should be had by the end of the week.—S. LUDLOW.

Teme (Tenbury).—In this district fishing is still at a dead stop, the water being high and muddy. By the end of the week it will be in fair order for fishing again.—WORCESTER.

Torridge (Torrington).—River big and thick; hundreds of salmon up, and only three weeks left to fish for them this season. Mr. J. D. Bastard, fly-maker, Torrington, took the first prize at the Bideford Show this week with a pair of Blue Duns against the United Kingdom.—PRACTICAL ANGLER.

Witham, &c. (Mid-Lincoln).—A fairly good muster of anglers have been again noticed on the Witham and the waters in connection with it, during the week, and though somewhat disturbed by the gales, the water was in fair condition. Anglers, however, report that fish, roach, dace, eels, &c., were somewhat difficult to catch. One expert, well known as a wily hand at thee business spent the best part of three days in getting about 6lb. Some of his fish were pretty roach, up to about 12oz. or 13oz. Some capital eels are being caught, both on the Witham and Trent. On Wednesday I saw a fine specimen, scaling nearly 5lb., and another over 3lb., among about 24lb. or 25lb. of smaller. How they had been taken I did not learn, but believe with rod, as one or two had their mouths cut. Poor luck has followed pike fishing.—LUCI.

East and West Cleddau (Pembrokeshire).—The rivers have been overflowing their banks during the past week, so that fishing has been quite out of the question; but as salmon have had a grand chance of running up, we still hope to have some sport ere the rod season closes.—H.

Teifi (Lampeter, Cardiganshire).—The rod season for salmon has closed here with a week of flood-water.—H.

Towy (Llandilo, Carmarthenshire).—Our rod salmon season closes on Nov. 1, and at time of writing, there is quite a sea of water out.—H.

Scotch Reports.

Border Esk.—Salmon fishers have enjoyed good sport in the Esk during the past week, notwithstanding the somewhat unfavourable state of the weather. Nearly an inch of rain fell in the Langholm district during Monday morning early. The river is now, however, in good order. A few selected results will be found below. Mr. D. Edgar had a splendid fish of 33lb. from the Willow Pool, and on another day three from Red Linn and Long Pools; Mr. A. Jardine, Skelton, had three fine salmon from Byreburnfoot Water, 21lb., 24lb., and 21lb. respectively; and Mr. W. Riddle, Rowanburn, had two from the same water, 12½lb. and 15½lb.; Mr. J. Graham, Rowanburn, had three fish from Willow and Cauldron Pools, 29lb., 19lb., and 14lb. While fishing below Gilnockie Bridge, Mr. William Urquhart, Langholm, got a salmon of 33lb.—45in. long, 22in. in girth, and 10in. deep; rather a coarse, ugly-looking male fish. The Metal Bridge Water is again to the fore with a capital record. My indefatigable Canonbie correspondent informs me that this has been the best angling season ever known in the Esk within the memory of the oldest native. My fair correspondent at the Metal

Bridge acquaints me that the recent numerous floods have caused several well-known and amiable anglers to resort to language that would not be tolerated in a kirk. One consolation, however, exists to soothe the feelings of the Metal Briggers—the Eden, the formidable rival of the Esk, has been in the same fix for some time.—Gilnockie.

Carron (Easter Ross, Ardgay, N.B.).—The angling season is now almost over, and as most of the sportsmen left for the south some weeks ago, very little has been done since last reported. Mr. Littlejohn and party, Inverchurron House, including General Bell and Mr. Bruce have been getting some sport on the Craigs Water. On Saturday week a fine salmon weighing 18lb. was landed. On Monday week two salmon of 13lb. and 15lb. were caught, and on Thursday other two weighing 16lb. and 12lb.—McB.

Dee (Aberdeenshire).—Another week of floods; and yet the amount of sport obtained is something surprising, seeing that the water has been in the worst of condition. However, the results obtained may be taken as an index only of what would have been the case under more favourable auspices. On the Birkhall Water, belonging to Her Majesty the Queen, Colonel Maude landed three fine fish, while several others have been got on the Abergeldie and Balmoral reaches. On the Invercauld Arms Water, Ballater, Mr. McGregor's gillie, Donald Morgan, landed the heaviest fish of the season, scaling 30½lb., while Dr. Mitchell, on the same water, landed two, of 9lb. and 10lb. each, on Saturday last. On the same water Sergeant James, of H.M. Guard of Honour, an enthusiastic angler, has made daily splendid baskets of both salmon and trout, in all kinds of weather, his favourite flies being the Yellow Eagle, and White Moth. On the Cambus O'May Water, Mr. Gaskell landed a fine fish of 18lb., while Captain Broadwood had two, of 20lb. and 10lb. respectively. On the Glentana Water, Sir William C. Brooks, Bart., M.P., and party are having splendid sport. Every day the pools can be covered, of all weights from 8lb. to 9lb., to between 20lb. and 30lb. in weight, and mostly fresh-run fish. On the Aboyne Water, Mr. Digby Cayley, who made his first essay for the autumn on the Huntly Arms Water, on Friday last, grassed two excellent salmon, of 11lb. and 17lb., and on Saturday one of 16lb.; while Mr. Hollis had one of 18lb. On Aboyne Castle Water, Lord Huntly had two on Monday, and two on Tuesday, ranging from 16lb. to 22lb. On the Desswood Water, Colonel Charles Leith Hay, landed one of 15lb.; Captain Brooke, two, of 6lb. and 7lb.; Harper, one of 8lb.; and Mrs. Pickering, a beauty of 15lb., on Monday. On the Kincardine Lodge Water, Mr. William Lamond, during the week, had one of 16lb., three, 29lb., 21lb., and 16½lb., and one of 28lb., while Colonel Charles Leith Hay had one of 15lb. on the same water. On the Carlogie Section, Captain George Campbell had one of 8lb., one of 7lb., one of 21lb., and one of 15lb.; while Mr. Archibald Campbell landed one of 26lb., two 23½lb. and 17½lb., one 19lb., one 17lb., one 20lb., and one 15lb.; and Miss Butchart made her first essay with *Salmo salar* on Wednesday last, and grassed a beauty of 16lb., after a most exciting run; following this up on Monday with a second success of 9lb., on the same water. On the Borrowstone Water, Admiral Hopkins landed a fine fish of 20lb., and the Rev. Mr. Stewart, R.C., one of 12lb. On the Ballogie Water, Mr. W. E. Nicol landed three, of 19lb., 18lb., and 8lb., and two, of 22lb. and 23lb.; Dr. Martin, three, of 14lb., 13lb., and 7lb., two, of 16lb. and 15lb., and two, of 14lb. and 15lb.; while Major Douglas had one of 7lb.; and Mr. Valpy, two, of 18lb. and 19lb., and one of 21lb.—in all sixteen fish for the week. On the Sluie Water, Mr. G. L. Chambers landed two, of 18lb. and 20lb. On the Commonty Water, Mr. Joe Farquharson, artist, had two, of 18lb. and 14lb.; and the Rev. Mr. Stewart one, of 14lb.; while Duncan, keeper, had other two. On the Woodend Water, which has been in the worst of angling condition during the whole week and two days unapproachable, Mr. Farnell Watson scored one, of 9lb., four, scaling 19lb., 15lb., 9lb., and 7lb., two, 18lb. and 13lb., and two, 20lb. and 8lb. On various days while Mrs. Farnell Watson added to her already magnificent score, two splendid fish, of 20lb. and 18lb., after some first-class play. On the Blackhall Castle Water, Mr. G. T. Hay landed one of 16lb., seven scaling from 12lb. to 22lb., two, 7lb. and 14lb., eight ranging 18lb. to 28lb., one of 20lb., and five varying from 16lb. to 21lb.—in all twenty-four splendid fresh-run fish. On the Inchmarlow Water, Mr. Duncan Davidson and friends had some capital sport, considering the state of the river; Mr. Davidson landed one of 20lb., and one of 11lb.; Captain W. L. Davidson had five, of 9lb., 25½lb., 22lb., 9½lb. and 16½lb. on one occasion, and two, of 11lb. and 16lb. on another; while Mr. E. Hanbury had one of 12lb. on the same water. On the Lower Crathes, Durriss, and Park Waters a great many fish have been got, while Mr. Irvine, on the Drum Water has added considerably to his already heavy record. On the Heathcot Hydropathic Water five fish were got on Saturday, of average weights.—Deesider.

Deveron (Banffshire).—The recent rains kept the river Deveron in good ply for angling during the past week, and the pools on the whole extent of the river are reported to be well stocked. Capital sport has been had.

Don (Aberdeenshire).—The sport on the lower sections has been unprecedented, considering the uncertain state of the water. On the Kintore Section, Mr. J. H. Bott and party have landed the magnificent total of one hundred and twenty-one fish during the past month, and they are still adding heavily to this grand record every day. Miss Blair, a guest of Mr. Bott's, landed two great fish on Friday last, one of which scaled 30lb.—the heaviest fish got to the rod of a lady angler this season. On the same section, Lord Adam has had splendid sport, having one, two, and more fish every day. On the Grandholm Water, Mr. R. Y. Ellis, London, had nine fine fish to his rod one day last week, his total for the week being sixteen in all. Mr. Rooper, on the same water, had twelve; Professor Niven, eight; and Mr. Jopp, five, all of an average of 22lb. apiece. The closing week promises even better results.—Don.

Liddle.—This river has been more or less flooded during the week, and very little angling has been done. It is now in good order, and a high old time for Liddle anglers anticipated during the forthcoming week.—Gilnockie.

Loch Migdale (Bonarbridge, N.B.).—In the course of the past week the following excellent baskets were made by Mr. John MacPherson, Bridge Hotel, Bonarbridge. On Monday, in five hours' fishing, he landed twenty-nine trout, aggregating 12lb.; on Tuesday, in four hours, fourteen trout, averaging over ½lb. each; on Wednesday, in one hour and a half, seven trout, 4lb.; and on Thursday, in five hours, twenty-six beautiful trout, weighing in all a little over 14lb.—McB.

Rhiconich Hotel Waters (via Lairg, N.B.).—The weather has been exceptionally stormy of late; nevertheless some nice clean-run salmon have been caught since last reported. On the 5th inst. the Rev. D. Lundie, Tongue, caught an 8lb. salmon on Loch Garbetbeg; and Mr. William Wallace on same loch two salmon weighing 8lb. and 10lb. On the 7th, Mr. MacDonald, Inshegra, landed a salmon of 5½lb. on river Inchard, besides a ten-pounder and eight sea trout, aggregating 9lb., on Loch Garbetbeg; Mr. Wallace on same loch had one salmon 10lb., and two sea trout 3lb. On the 10th, Mr. MacDonald had a 10lb. salmon on Loch Garbetbeg, and one of 7¾lb. on river Inchard.—McB.

Shin.—Mr. Walter Scott Brock, Achinduich House, Invershin, and Mr. R. MacHardy, Culrain Lodge, have been fishing the upper waters with fair success. On the 7th inst. a fine salmon weighing 15lb. was landed. On Monday last week they caught two salmon weighing 14lb. each; and on Thursday four salmon were grassed, weighing respectively 8lb., 8lb., 9lb., and 10lb.—McB.

South of Scotland.—The back-end salmon fishing in the South of Scotland has been very seriously interrupted ever since the beginning of September. Now there is a prospect of a good wind-up before the season in the different rivers close. In the Annan some grand sport has been had yesterday and to-day, indeed, I do not remember of such good sport during the past thirty years. The Annan has had no less than fifteen floods since the 1st of the month, and yesterday the waters began to come into ply for fly. Mr. Arthur Nicholson, St. Asaph, North Wales, has carried off the record for the season so far. In three hours angling on Wednesday, Mr. Nicholson killed five salmon of 30½lb., 30½lb., 17lb., 18½lb., and 7½lb., a total of 91lb. Mr. Nicholson caught his fish in the Blackpool of the subscription water, with a Grey Turkey Fly. Mr. Nicolson lost two other salmon. Mr. Nicolson killed one on Wednesday of 21lb., on the same cast. This pool was fished well on Wednesday, Mr. William Park, Annan, killed one of 10lb.; Mr. John Laurie, Annan, landed one of 18lb.; Mr. McGiverin grassed one of 11lb.: the Rev. Mr. Philpott, Manchester, had a long fight with a big fish computed to be nearly 10lb., the fish broke his line after an hour's play; and Mr. John Omerod had a similar misfortune; Mr. James Dixon killed one in the afternoon, in the Battery Pool, of 19lb. In the Fish House Pool the Rev. Geo. Kennedy, Newington Lodge, caught one of 12lb. Below Millbie Canal, Mr. Will Robinson, fisherman for Mr. Gardiner, Annandale Distillery, killed one in the forenoon of 21lb.; and in the Tower Pool of Mount Annan, Mr. Crawford's fisherman, William Carrick, killed one of 20lb. On Wednesday, in Mount Annan Water, Mr. P. A. Pasley-Dirom, of Mount Annan, killed one of 20lb. in the Long Rig, and in Jamie's Stream he had another of 12½lb. His fisherman, Andr. Bell, caught one of 19lb. in the Flat Water. These salmon were killed with the Black Doctor Fly. Sir William Marsh, a visitor at Mount Annan, killed one of 20lb. in the Backwood Pool; Mr. Crawford's man had one on Wednesday of 7lb. On Friday, Mr. John Bell-Irving, Mount Annan, killed a fine salmon of 18½lb. His keeper had one of 19½lb. in the Wood Pool, and another of 7½lb. On the following day James Riley, keeper, killed one of 20lb., and a second fish of 18lb. out of the Salmon Pool. Mr. Andrew Bell landed one of 18lb. out of the Wood Pool; and in the Tower Pool Mr. Crawford's fisherman caught one of 20lb. In the Hoddom Castle Water, on Saturday, Mr. Thomas Hoare, Kinmount House, Annan killed a good fish of 18½lb. out of the Scales Pool, and on the previous day Mr. Hoare caught two of 22lb. and 7½lb. Captain Bell-Irving, Whitehill, caught four salmon of 22lb., 18lb., 15lb., and 15lb. Mr. John Rad, the Firs, Ecclefechan, had one of 19½lb. in Castle Milk Water. Mr. Alex. Scott one of 20lb. in Jamie's Stream, above Brydekirk Bridge. In the higher waters, Mr. James, London, killed one of 13½lb. Besides these kills a great number of other anglers have all been landing salmon. The sport in Castle Milk, Murraythwaite, Dormont, Kirkwood, and Four Town's Water has been the best for many years. The full details have not come to hand this (Thursday) evening.—Heatherbell.

Tay (Perth).—The river has been very high and unsettled lately. On the Burnmouth Water, on Wednesday, Mr. G. Clark, Bedford, had a fish of 26lb.; the same gentleman fished the Birnam Hotel Water, on Thursday, and killed four fish, 25lb., 18lb., 18lb.; and 16lb.; Mr. P. D. Malloch killed nine, 20lb., 18lb.. 17lb., 16lb., 16lb., 13lb., 9lb., 8lb., and 7lb., casting from the bank. On the Ballathie Water, Col. Chalmers, Brighton, and Mr. Alston Stewart, Urrard, killed four, largest 24lb., gave the Colonel excellent sport and took two hours to kill it. On the Taymount Water, on Saturday, Mr. Murray landed six, and Captain Menzies on the same water killed eight; Mr. C. Holland, London, fished the Stanley Water on Saturday and landed nine fish, one of which weighed 46lb. It is the largest fish got with the rod on the Tay this season. The dimensions are as follows: Length 54in., girth 29in., breadth of tail 13in. Col. Hornsby Drake had one of 18lb., and Mrs. Hornsby Drake had one of 13lb., on the Delvine Lower On the Icone Palace Water, Lord Stormont had two fish and two grilse on Saturday. On Monday the boatman had a fish and a grilse on the Bertha Water; and on the Burnmouth Water, George Clark killed seven, 30lb., 21lb., 19lb., 18lb., 11lb., 11lb.. and 9lb. On the Taymount, on Tuesday, Mr. Murray killed two, largest 42lb.; Mr. C. L. Wood on the same water had five; Colonel Hornsby Drake killed two on the Lower Delvine Water, 21½lb. and 15lb.; and Mr. B. Malloch killed five, 22lb., 18lb., 16lb., 11lb., and 9lb. Sir R. D. Moncrieffe fished the Icone Palace Water on Monday, and landed ten fish.

Free Water.—On Wednesday, Mr. Armstrong had one, 14lb.; Mr. D. Malloch, one, 20lb.; and Mr. Murdoch, one; Mr. Bruce, a fish and a grilse; Mr. Spiers, one, 20lb.; Mr. Brody, one; Mr. Ramsay, one, 14lb.; Mr. Mason, a fish and a grilse. On Saturday, Mr. D. Malloch killed one, 23lb.: Mr. Armstrong, one, 15lb.; Mr. Muirhead, one, 7lb. On Tuesday, Mr. Wardrope had three; Mr. Forbes, one; Mr. Muirhead, one, 14lb.; Mr. Paterson, one, 7lb.; and Mr. Shaw, one.

Earn.—Splendid sport continues to be got on this river On the Lower Dupplin Water, Mr. Hart, two, 20lb. and 16lb. On Trinity Gask, Mr. Forbes, Crieff, five, total weight 88lb. On the Lower Earn, Mr. Hunter, three; Mr. Bell, Crieff, one, 16lb.; Mr. D. Hally, one, 20lb.; Mr. McCallum, one, 8lb. On the Duniera Water, Mr. McKenzie, the keeper, one, 15lb. On the Drummond Castle Water, Mr. T. Bright, Liverpool, two, 20½lb., 15½lb.; Mr. Cresswick, one, 19½lb. On the Inner Peffray Water, Mr. Dixon, four, 19½lb., 17½lb., 16½lb. and 11lb. On the Club Water, Mr. Tuck, five, 22lb., 21lb., 21lb., 12lb. and 11lb.; Mr. Kelsall, one, 7lb. On Friday, Mr. Dixon had a fish of 18½lb., and one of 10lb.; Master T. Dixon, one, 8lb. On Drummond Castle Water, Mr. Cresswick, one, 15lb.; Mr. T. Bright, Liverpool, one, 13½lb. On Strowan Water, Mr. Welsh, Chester, three, 21½lb., 16½lb., and 16lb. On the Club Water, Mr. C. McCowan had two, 8lb. and 7lb.; Mr. Tuck, three, 14lb., 13lb. and 7lb. On Drummond Castle Water, Mr. Cunningham, three, 19½lb., 16½lb. and 7lb.; Mr. East, London, four, 20½lb., 18lb., 12lb. and 10lb. On the Club Water, on Tuesday, Mr. Tuck had four, 15lb., 11lb. and 14lb.; Mr. Kelsall, two; Mr. McCowan, two, 21lb. and 16lb.; Mr. P. White, one, 19lb.; and one of 20lb. was caught on the Innerpiffray Water by Mr. Dixon.

[Received too late for last week.—Ed.]

Tay (Perth).—The rod fishing on this river closed on Thursday. This year it opened on the 15th January, instead of the 11th February, as formerly, giving the rods twenty-three clear days before the nets went on on the 11th February. On the opening day the river was in good order, and a number of fine fish were caught, both on the upper and lower reaches. For several days after the opening the river kept in high flood, so that anglers were unable to get on the river. Notwithstanding this drawback the result was very satisfactory, over ninety fish being killed on the Tay, besides a number on the Tummel, Garry, Lyon, and Loch Tay, before the nets went on. The spring fishing all through has been one of the best experienced for years, and opening the river at this early date will prove a great benefit to the upper proprietors, and afford good sport to anglers. Over six hundred fish were killed throughout the spring, one of the best individual takes being that of Mr. Pople; one day he killed, on the Stobhall Water, six fish, weighing 107lb., and in five days eighteen fish were got on this water. The largest fish got in spring was killed by Mr. Shaw, London, and weighed a few ounces under 40lb. Nearly all the beats fished well. The Tummel, Garry, and Lyon also did well. The Foskally Water, fished by Lord Mount-Steven and friends did very well, from two to five fish being killed daily. Bonskied Water did well, so did Tullynut. In July grilse were fairly plentiful, and several were killed in the lower reaches in August. Both salmon and grilse became plentiful by the end of the month, and the autumn fishing was fairly begun from this time till the close. Flood after flood came, bringing up a continual supply of fish. The oldest anglers and fishermen never remember them being so numerous and of such good quality; even on the closing day large numbers of bright fish were observed passing up. The supply seems to have been unlimited. Comparatively few heavy fish were got, however, only three over 40lb. having been recorded. A good deal of time was lost with high floods, but the moment the river came into ply rare sport was got, the fish being so strong that in many instances the angler's tackle came to grief. Grilse have been of a good weight, some of them reaching as high as 12lb. and 14lb. Only three spring fish have been recorded this autumn. On the Free Water at Perth good sport was got, both from the bank and boat. The Bertha Water, fished by Dr. Wyman, has done fairly well. His best day was eight fish. Redgorton Water fished by Mr. McLean and friends, yielded over one hundred and fifty fish. Benchill Water, fished by Sir J. E. Millais, has not done so well owing to the high state of the river. Nevertheless, he has killed sixty-three fish. Scone Palace Water, fished by Lord Stormont and friends, has done well; and Stanley Water, fished by Charles Holland and friends, has done fairly well considering the high state of the river, close upon two hundred fish having been killed in seventeen days. Mr. Holland has been successful in killing the largest fish that has been got on the Tay this season with the rod; it weighed 46lb., and was killed on Oct. 10. He has sent it to Mr. Malloch, Perth, to have a cast taken of it. Burnmouth Water, fished by Mr. George Clark, Mr. Marples, and Mr. Archibald has done fairly well, Mr. Marples' best day being ten fish. Stobhall Water (the home of the salmon), fished by Mr. Field and friends, has done exceedingly well, a very large number of fish having been killed; the largest, 43lb., was killed by Capt. Morris. Taymount Water, fished by Mr. Charles Murray, has done exceedingly well, close upon three hundred having been killed. Mr. Murray's best day, eighteen salmon, one grilse, weighing 273lb., while a friend on the same beat had ten fish on the same day, Mr. Murray's largest fish was killed casting from the bank, on the 13th October, and weighed 42lb.; and on the 10th October, he landed one 37lb.; Ballathie and Mickleour Waters have fished well. Delvine Water, fished by Col. Drake, has done fairly well. Murthy Water has also done fairly well. A few fish have been killed on Birnam Hotel Water. Dunkeld, Dalguise, Kinnaird, Logierait and Grandtully Water, have been blank. Fish had not run up this length from the time the nets went off. The prospects for a good spawning season could not be better. Owing to the high state of the river, fish have got well up and into most of the tributaries. No signs of disease have yet appeared in the Tay this season, and it is to be hoped it has entirely disappeared. The Earn goes on to the end of the month, and some fine sport should be got up to the close.

Tweed.—On Floors Castle Water, on Wednesday, rare sport was got: the Duke of Roxburghe had thirteen fish; Her Grace the Duchess seven; and Mr. C. G. Barrington had a like number. On the Sprouston Water, Col. Trotter had three; and Capt. Griffith three. On the Makerstoun Water, the Messrs. Deakin (Milnthorpe, Westmoreland) and Grange (Sands, Lancashire) had capital sport, killing seven, 19½lb., 19lb., 18½lb., 17½lb., 17lb., 14lb., and 7lb., on the same water. On Thursday (to-day) they had half-a-dozen, weighing 18½lb., 20lb., 17lb., 16½lb., 16lb., and 14lb. On the Ednam House Water, Mr. Forrest, Kelso, had four, the heaviest 20lb. On the Hendersyde Upper Water, Mr. R. P. Page had four fish, 19lb., 18lb., 14lb., and 8lb. Weather to-day splendid, and rivers full of fish; grand sport expected to-morrow (Friday).—Maxwheel.

Whitadder (Ellemford).—Since my last report the fishing has been very good (of course Mr. Turnbull's water is closed). Mr. John Wilson, Fence Houses, fishing the Dye Water, on Saturday, had fifty-three trout. Mr. Stephen Eltringham, of Sunderland, had thirty-four, one over a pound on the same day. On Monday, Mr. Eltringham had twenty-three trout, one a bull trout weighing 2½lb. Many bull trout have come up in the late floods. Weather more settled to-day.—R. V. Fenton.

Irish Reports.

Ballinderry (East Tyrone).—The heavy rains of the past week put the Ballinderry out of fishable order till Saturday last; but only a few pike were caught on the upper reaches. A further flood resulted from the rains of Sunday. On the following day, Mr. C. R. Stevenson and your correspondent fished the Ardtrea Sections, and had five and four pike respectively, taken on the Devon and Phantom. Mr. Cooke killed a 7lb. salmon on the same water. On the Coagh sections, Mr. Glen had a 16lb. salmon; and Mr. Compton had three salmon, 8lb., 8lb., and 12lb. each. From Coagh Bridge to the Burmouth is well stocked with salmon, and on this water professionals are doing well.—J. A. B.

Lough Neagh.—Rough and wet weather have again greatly interfered with these fisheries. In the storm of last week a good deal of damage was done to the fishing boats and fishing gear, and at the "Battery," the new piers in the process of being built for the more convenient shipment of fish, were washed away by the tremendous waves dashing against them. Salmon netting is weekly declining, and scarcely any are being caught just at present. Trouting is practically over. Eel fishing continues prime, and looks like continuing so till the end of the season.—J. A. B.

Suir and Tributaries (Clonmel).—The season for angling for salmon and trout closed here on the 16th. inst., and on the sister rivers Nore and Burrow a fortnight earlier. The spring fishing, owing to the constant low water from the commencement, was the worst on record, but the rivers of Peal and Antrim was the best we have had for many years, and since the nets were taken off on the 16th August, increasingly good sport was had during the two months that remained open for angling. The rivers during the past week or ten days have been flooded bank high and overflowing in places so that the salmon have easy access to the tributaries, up which they are crowding in shoals promising to make the coming an abundant spawning season, and, so far, everything promises well for the future. We never, in my memory had so many fish up so far at this time of year, it is generally held that the early spawners are the best.

NOTES FROM BIRMINGHAM AND DISTRICT.

ONE of the most important meetings that has been held during the present year in connection with the Birmingham Association, took place on Thursday evening last, Oct. 15, at the Birmingham Arms Hotel, Smithfield. The meeting was called for the purpose of taking into consideration the unsatisfactory condition of the public fishing grounds to which the members had access, and to see what could be done to improve the same; but in order to carry out the work, as indicated in the circular drawn up by Mr. T. Coles, the president of the association, the subscriptions of the members would have to be considerably increased. Mr. T. Coles presided, and Mr. J. Dance occupied the vice-chair. Forty-six clubs were represented by about seventy delegates, and the following clubs were unrepresented, namely, the Oak Society, Ring of Bells, Bordesley Waltonians, Ladywood, St. John's, Convivial, Anglers' Pride, Birmingham Heath, and Brothers Well Met. The president, in opening the business of the meeting, dealt at some considerable length with the objects of the circular, and pointed out that the principle had already been affirmed, and took date from the last July general meeting. As to the *locus standi* of the association to deal with the matter, he referred them to the bye-laws, which stated that the objects of the association be to promote the general interests of all the united clubs, so that, while recognising that the railway concessions was one of the props upon which the association rested, there would be no doubt but what the angling interests was another, without which the association could not exist. The depleted conditions of the Midland fisheries called for immediate action by them. Illegal netting and pollution had been two important factors in the unsatisfactory condition of the same. With regard to the first, the speaker said that canal companies and other public bodies must be approached, and it must be made worth their while to suppress netting and other illegal means of taking fish. They could not expect them, having no other interest in the water-way than the maintaining of the same for the transit of goods, to take an interest in the fishery, and the water committee, if appointed, would extend their operations, not only to the canals, but the public portions of the rivers Severn and Avon. He (the speaker) could pledge his word, and that of his worthy colleague, Mr. Wingfield, as members of the Severn Fishery Board, to do all they could to improve these rivers. The navigable portion of the Avon must receive their attention, and notice of motion lies before the Severn Conservancy Board in the speaker's name, dealing with important matters in this direction. He (the speaker) earnestly hoped that the meeting would that night do something practical towards the improvement of the fishing grounds, and in a little time they would be what they should have been a long time ago—a source of attraction to the followers of the gentle art. In conclusion, he hoped the delegates would discharge a duty that would do credit to themselves, do honour to the association, and give a convincing proof of their desire to advance another stage of the principles of the association, and in order to carry out the objects in view, the subscriptions of the members would have to be increased to carry out the work to a successful issue.

MR. LEE, of the Brookfields Society, wanted the meeting to appoint a water committee, but the president pointed out that the question of raising the member's subscriptions would have to be decided first. Mr. Dance said that he had given the matter his consideration, and that he should put his foot down upon any increase of subscription on the members, he also said that he was in favour of a water committee being appointed in order to see if there were any prospects of water being acquired in the vicinity of Birmingham for the members of clubs who did not rent water, and at the same time he did not think it fair or equitable for members to pay, as some of the large clubs rented water for their own use, and it would be hard to tax them for a thing they did not require.

MR. ARKELL, of the Midland Piscatorials, said that he thought the Association should adopt the matter contained in the circular, and that the Association should watch and give the scheme a fair trial. He agreed that something should be done to provide fishing for the members of clubs who did not rent water, and would willingly give all the assistance in his power to further the object in view. The representatives of the Highgate Society were in favour of water being secured, and to support the principle of the circular.

MR. GRIFFITHS, of the Prospect Club, said that he was instructed to vote in favour of the scheme, but wanted to know if the water rented could be fished on Sunday. Mr. Keeling, of the Plume Society, said that he objected to the unfair tax being placed upon the members, and agreed with Mr. Dance, he also said that the Severn Board should take steps to better the fishing of this river, and it would be hard on the Birmingham Association to benefit the Severn, when the anglers who did not belong to the Association, would, in certain instances, reap more benefit from the fishery than those who did the paying, and he hoped that the delegates would seriously consider the matter before either for or against the matter contained in the circular.

MR. HUGHES, of the St. Paul's society, said that his club agreed with the purport of the circular, and his members were unanimous that the subscription to the association should be increased in order that the surplus money should be used to start the scheme, in order to provide better fishing for the members—and finished his remarks by proposing the following resolution, which was seconded by Mr. C. Wainwright, of the West End club: "That the yearly subscription of each member to the Association be increased to one shilling per member, in order to carry out the important matter contained in the circular. This was followed by an amendment by Mr. Lee, Camden Society; seconded by Mr. Pratt, Deritend Society. That this association disagree with the proposed increased subscription, and that no levy be paid until a water committee has been appointed; and that they set to work and bring in a report at the next general meeting, so that the delegates may have something before them. Mr. Turner, of the City club, supporting the amendment, and said that the canals should receive the attention of the water committee in preference to the rivers. Mr. Kendrick, of the Aston Britannia also supported the amendment. Mr. Simkiss of the St. George's, supported the resolution, and said that his society although a large water-renting club, had instructed him to support the scheme; and that the whole of his members were in favour of the subscription being increased for the purpose indicated in the circular, and he the speaker was in favour of the canals being better looked after, but without the increase of the subscription, the committee if appointed would be powerless to act.

MR. ALLEN, Old Green Man club, said that his club was in favour of the subscription being raised, providing the canals were included in the scheme, for the purpose of providing better fishing—Mr. Hall, St. George's; favoured the scheme, and said that it was the duty of all present to aid and assist in bettering the present unsatisfactory state of the public fishing in the Midlands, and quite agreed that the funds should be increased before the committee be appointed, as they would then have funds in hand to work with, and that the present funds were inadequate to meet the requirements of the scheme, and he was of the opinion that the present funds should not be encroached upon for the purpose laid down in the circular.

THE PRESIDENT, in summing up the various arguments brought forward, pointed out that the water committee would be in a foolish position without funds to work with, and pointed out that those who were in a position to rent water, ought not to object to pay the increased subscription, and also that the Association should be generous, as it was impossible to conserve the water for the exclusive use of the members only, and also said that he would not become a member of any committee until the funds were increased, to carry out the work. With these remarks he concluded by saying that he left the matter in the hands of the delegates, which might be deferred, but sooner or later something must be done to benefit the unsatisfactory state of the Midland fisheries. with this he proceeded to take the vote, when the amendment was carried by a majority of thirteen votes, the result of the voting being received by the majority with acclammation. After hearing the result, it was moved by Mr. Griffiths and seconded by Mr. Lee, "That the election of the water committee take place at once," when Mr. Turner moved, and Mr. Hughes seconded "That the election be deferred until the next general meeting." The latter was carried by the casting vote of the president, and the meeting, which was of a lively character, terminated.

THE members of the Duke of York Angling Society, Dudley, held a scramble contest on October 10, at Cornsale, near Kidderminster, to contest for the remainder of prizes left from their annual contest on August 1. The rain fell very heavily during the forepart of the day, but happily it cleared up during the time of fishing. Twenty-four members sat down to fish, and the contest was of the usual duration—two hours—at the termination of which it was found that only ten had been successful. Much to the surprise of the members, the first prize again fell to the junior member of the club, Master Harry Lane, who, it is well to state here, has never taken a rod in his hand, only in the last two contests. He managed to take a roach of 9¼oz.; Mr. Thomas Septon was second; Mr. George Hunt, third; Mr. W. Cannon, jun., fourth; Mr. John Shaw, fifth; and Mr. F. Brown, sixth, &c. The prizes were distributed on Oct. 19, and consisted of some very nice articles, not forgetting the copper kettle. Great praise is due to the umpires and referee, for the able manner in which the contest was conducted.

NOTES FROM THE LAKE DISTRICT.

SALMON fishers are making the most of their opportunities and the limited time still at their disposal. The stormy weather and heavy rains have operated in contrary directions. While the floods and constant high state of nearly all rivers have enabled salmon to run up many streams often impassable, the gales of wind have militated against successful, or at any rate, enjoyable angling. Many well-known hands have been out when half an opportunity offered, and from all sides reports speak of an unusual number of fish in our north-country rivers. Mr. T. Browne fishing last week in the Troutbeck, Windermere, took a 5lb. grilse; and in the same stream, Mr. J. Coward, on Tuesday, caught two salmon of 5¾lb. and 7½lb. respectively; and on Thursday, two others of 5¾lb. and 2½lb.

A CURIOUS experience is recorded of the latter gentleman which may be worth quoting. On the Tuesday he had hooked a large salmon, in addition to those given above, but this big fish broke him—as is the way with big fish—and escaped with the hook in its mouth, and a long piece of gut and line. The following morning at the same place he saw his lost gut and line floating on the water, and thought he might still secure his salmon; but when he pulled it in he found a large eel with the identical hook and line fast in its mouth! It is asked, how had the hook got out of the salmon's mouth and into the eel's so securely? How, indeed!

IN the vicinity of Keswick, the Greta has been much swollen, the following being the takes I have heard of: Mr. D. Melvin, Brigham, four salmon, the best 13lb.; and one each to Mr. J. Stanley-Burns, Mr. M. Stanley-Burns, Mr. Mark Stanley; Mr. A. Taylor, 10lb.; and Mr. W. Gasgarth, 8lb. The Cocker has yielded some good fish, as will be seen from the following list: Mr. J. Graham, Papcastle, three, 9lb., 20lb., and 27lb.; Mr. A. Graham, one, 5lb.; Mr. J. Wilkinson, 20lb.; Mr. J. Reynolds, 13lb.; Mr. J. Douglas, 26lb.; Mr. J. Vickers, 20lb. and 18lb.; Mr. G. Banks, 17lb.; Mr. W. H. Clift, 17lb.; Mr. Thompson, Embleton, three, two of which weighed 16lb. and 20lb.; Mr. J. Newman, 18lb. and 26lb.; Mr. J. Neale, 15lb. and 18lb.; Mr. J. White, 20lb.; Mr. J. Clark, 5¾lb.; Mr. J. Lister, Great Broughton, 7lb.; Mr. D. Bowes, Netherton, 20lb.; Mr. J. Atkinson, Penny Bridge, 18lb.; and Mr. J. Byers, one of 22lb. I have also information of Mr. A. B. Dunlop, troutbeck, securing three salmon, the best of which scaled 12lb.

THE advisability of extending the close time for salmon in this district was considered at a quarterly meeting of the Board of Conservators last week, held at Bowness (Windermere). Mr. Pollitt moved a resolution that their bye-law, altering the annual close time for salmon, and confirmed by the Board of Trade on the 18th of February, 1888, be altered, so that the annual close season for rods shall commence on the first day of November in each year, instead of on the fifteenth day of November. A lengthy discussion followed on this motion, and some widely divergent opinions were expressed. Mr. Pollitt argued that many fish in the Kent and other rivers, captured in October, were full of spawn, mentioning some striking instances, and asked the board to seriously consider whether the fortnight in November ought not to be given up entirely as a quiet time to the fish while breeding. Mr. Rawlinson opposed the motion strongly, as far as concerned below Ulpha Bridge. Below that bridge the fish were quite fit to take until the middle of November, indeed that was the only time they were able to catch good salmon. Major Machell opposed it on behalf of the Leven, where some of the biggest salmon were caught in November. Mr. Dickson said that the best fish were supposed to run up at the end of October and beginning of November, and those caught below Low Wood Bridge were most of them good fish, though they might get worse higher up, and when they reached Lake Windermere might not be fit for food. Down below, however, they were perfectly eatable and very good. Mr. Watson said with regard to the Kent side of the district the end of October was quite late enough to have the season open. On Monday there was a fish taken about 10lb. weight, which was simply covered with spawn. The head watcher to the board was called into the room and questioned as to the condition of salmon in different rivers, and his evidence tended to show the advisability of an earlier close time. On being put to the meeting, Mr. Pollitt's motion was rejected by a majority of one.

NOTES FROM LANCASHIRE.

FISHING in this district during the past week or ten days has been all but *nil*. The rivers and brooks generally are bank high, and in some instances overflowing. This state of things naturally causes enforced inactivity, and consequently items of interest are very scarce,

THE minutes and balance-sheet of the Amalgamated Anglers is at last to hand after a month's delay. It is as usual entirely free from any minute of interest to the general body of its members, but in the balance-sheet is subject matter for consideration, and in all probability for searching criticism at the forthcoming district meetings of the various districts composing the parent association. If the trip profits are left out, the expenses of the delegates exceed the legitimate income. Again, so heavy are the costs of the trip, including the gratuity of an extra five shillings each to the committee, that the balance is so small that many will think the great risk is much too serious an item for such a small possible profit. Business appears to be very bad with the delegates when private correspondence is read and resolutions passed on the same to gratify a questionable feeling of injured dignity. Delegates would do wisely in always continuing their deliberations to questions affecting their organisation, and not introduce extraneous subjects; much irritation would then be avoided.

THE Dee season has a far better record than it has enjoyed for some years past, and the present flood, although, now preventing extensive operations may tend to a further period of good sport when the waters return to their normal condition. The Ribble also may be classed amongst those rivers whose condition has somewhat improved. Whilst the Dane is so much fished sensational catches cannot be expected, and yet considering the demand made upon its resources it comes out of the season's ordeal in a highly satisfactory manner. The Northwich Waters have this week been unproductive of good sport, but after the heavy demands of late this may be expected.

THE Palatine Club had a very successful outing to Poynton Pool, valuable prizes were offered for competition, and fair all-round catches were made by the members taking part in the contest. The first prize was secured by Mr. W. Jennett, the second by Mr. J. Cleumcy, and the third by Mr. J. Kershaw.

THE last match of the season arranged by the Gorton tank anglers, was fished at Lostock Graham, on the 17th, only poor sport resulted. The prize winners were: First, J. Crawshaw; second, E. Massey; third, E. Taylor; fourth, R. Ashley.

THE Openshaw Club appear to have abundance of support given to them in the way of prizes, and on Saturday last, the unsuccessful competitors in previous contests had an opportunity offered them of obtaining prizes in a consolation contest arranged for their special benefit. The following is the result: First, H. Hamley; second, J. Curran; third, W. Thomas; fourth, T. Ruberry; fifth, C. Cartwright. Three prizes remain unawarded.

A NOTICE of motion is down for the next meeting of the Manchester District, to appoint a sub-committee to secure waters for this district, the members appointed will have a lot of work before them.

NOTES FROM NORFOLK.

BOTTOM FISHING during the past week has been very much below par, in fact only one or two anglers have been out; the weather having been so cold and wet. The water on the Yare is in very good condition. At Brundall this afternoon it was in splendid colour. Last Wednesday the river was lower that has been known for years, but now it is of more than usual volume. The pike fishing is very good, and some nice baskets of fish have been taken. The rivers are full of them, owing no doubt to the fact that all the waters in the county were frozen up last winter and very few pike being caught there.

On the Yare some few roach fell to the lot of two or three of our local anglers. I cannot say the total weight, but one fish of 2lb. 3oz. was caught at Brundall last Thursday. Several lots of pike, amongst them one fish of 17lb (taken on Rockland Broad on Friday), have been secured.

On the Bure a few bream have been taken, but I can only vouch for the weight of one catch 1½st. taken on Thursday near Ranworth Dyke. On Friday twelve pike were caught by a party of gentlemen between Horning Church and Woodbastwick Broad. On the 18th inst., three-score fair roach were caught at Horning.

On Thursday a splendid catch of pike was made on a private broad, total weight about 45lb., largest fish 15lb.

NOTES FROM NOTTINGHAM.

The practical portion of angling is at present under a cloud. Anglers are ever the victim of circumstances, and during the last ten days the Fates have been most adverse to them. No sooner are there slightly encouraging signs of the river receding and improving in colour, than rain again sets in, and makes matters really worse than they were before. On Sunday night, the flood was fast disappearing, and arrangements were made in some quarters to try the high banks at Shardlow and Weston, but before daylight on the following morning another violent storm sprang up and completely upset calculations. On Tuesday, the water was again out in the fields, and on Wednesday, when my Notes were written, prospects were still on the gloomy side. Yet one or two "items" have reached me. On Friday, at Colwick, Mr. T. Leak, Nottingham, caught a remarkably good perch, weighing, I understand, 1¾lb.; and on Tuesday and Wednesday, in the Long Higgins, above Holme Pierrepont Loch, sundry choice captures of roach and bream were effected with the cockspur worm. The meadow wherein the sport was obtained belongs to the estate of the late Mr. G. C. Musters, who used to hunt the South Notts Hounds, and since the Colwick rights have been secured on lease by the New Racecourse Company, Limited, of Nottingham, fishermen go into it, and so far they have not been interfered with. Legally speaking they have no claim whatever on the fishery, and as the whole of the fishery rights have been taken over by the company named, I suppose that when they take formal possession of the property they will issue season tickets. But these should not be overdone as regards price. Some people have a notion that if they rent a water close to Nottingham, they can secure any number of subscribers at a big price. All I can say is they had better try. The fishing in the immediate neighbourhood is overdone and requires a rest.

Mr. John Theaker, of Canal-street, Nottingham, has just consigned a splendid lot of live pike to Mr. Warner, at the Welsh Harp Fishery, Hendon. The order had been on hand some time, but pike for stocking purposes are not obtained every day. The consignment included about forty of *Esox lucius*, some of them measuring between fifteen and sixteen inches in length. They were a fine healthy lot, and ought some day in the future to afford Mr. Warner's numerous patrons a grand bit of sport. One of the heaviest fish was badly undershot, but in condition it was all that could be desired, and there is no doubt the malformation was bred with it. The whole of the fish came out of clear-running streams in the Nottingham district, and they are certain to thrive in Host Warner's extensive lake.

A few days ago a portion of the Nottingham and Grantham Canal, which joins the Trent immediately below the New Trent Bridge at Nottingham, was netted in most wholesale fashion. The water is supposed to be in the right of Mr. A. Heyman, J.P., of West Bridgford, and it would be curious to know who gave the necessary permission for the stream to be dragged. Mr. Heyman himself is a thorough sportsman, is highly esteemed, and he has not hitherto interfered with the quiet enjoyment of large numbers of Nottingham people frequenting the water. In the summer season hundreds of boys may nightly be seen plodding away in search of humble roach, bleak, or perch, and it seems a thousand pities that a few swoops of a formidable drag-net should deprive them for perhaps months of a little innocent recreation. I have heard it stated that when the last wholesale slaughter took place, Mr. Heyman was away from home, and he ought by all means to know who are the authors of such wanton destruction. There is quite enough netting indulged in on the Trent, without resorting to the canals.

The prizes—special and ordinary—won by the members of the Nottingham Bowling Green Inn Angling Society, during the summer season were presented at the recent half-yearly dinner of the society. I briefly mentioned the matter last week, and have now pleasure in publishing the awards. They are: Barbel, first, Mr. G. Bee, 5lb.; second, Mr. S. Pogson, 5lb.; third, Mr. J. Minion, 2lb. 1¾oz. Roach, first, Mr. C. Pidd, 1lb. 3¾oz.; second, Mr. W. H. Smith, 1lb. 2¾oz.; third, W. H. White, 12½oz. Dace, first, Mr. R. Fish, 8½oz.; second, Mr. W. Burrows, 8oz.; third, Mr. W. Dupe, 7¾oz. Bream, first, Mr. C. Tye, 2lb. 13¾oz.; second, Mr. J. Iago, 1lb. 15¾oz. Perch, first, Mr. H. Coxon, 1lb. ¾oz.; second, Mr. A. W. Smith, 7¾oz. Chub, first, Mr. E. Towers, 3lb. 2¾oz.; second, Mr. P. Wilson, 2lb. 10oz.; third, Mr. J. Farnsworth, 1lb. 3¾oz. Bleak, first, Mr. E. Rogers, 3¾oz.; second, Mr. A. Bostock, 1¾oz. Special class (pike), first, Mr. H. Burrows, 4lb. 9¾oz. The last prize was liberally given by Mr. A. W. Smith, and he has promised one of similar value for the winter club now in progress. The prizes generally were remarkably good, and those who had given the "specials" received a hearty vote of thanks. The dinner, I might add, was very ably presided over by Mr. P. Wilson, who had as his *vis-à-vis*, in the vice-chair, Mr. W. H. Smith, the genial owner of the *Althea*, in the Barton Waters. Host Pogson promised sundry "specials" for the winter term, and during the evening his voice was heard to great advantage. Recitations were given by the president and Mr. Joseph Simpson, and one of the best gatherings ever held in the club-room extended into a second night. Mr. Iago, the secretary, announced that the receipts for the old club amounted to £16 1s. 6d. The classification of the winter fish runs as follows: Chub, roach, dace, bream, perch, and pike.

At the annual dinner of the Fisherman's Rest Angling Society, held on Alfreton-road, Nottingham, the prizes won during the summer season were awarded to the following—viz.: Messrs. P. Aram, A. Bennett, S. Squires, E. Allen, H. Bretnall, A. Keys, and J. Smith. The club, although not a strong one in point of numbers, is certainly one of the oldest in the town, and efforts are being made to increase its popularity, as well as to strengthen its membership. Mr. E. Allen presided over the dinner, and the *post-prandial* proceedings were enlivened by songs and recitations from Messrs. Squires, Smedley, Barnett, and Allen.

NOTES FROM SHROPSHIRE.

For more than a week the Severn has been converted into a seething, turbulent and discoloured stream, and for several days many acres of land have been under water. The constant rainfalls have kept the river at high flood, and it will be yet some days before it resumes its normal height, and gives anglers an opportunity of pursuing their lost avocation. Probably, however, the flood will be beneficial in arousing the fish from their lethargy, and as soon as the stream becomes clear, pike-fishers should have some good sport. Two enthusiastic pike anglers, one a well-known local Excise officer, and an ardent follower of "Old Izaak," journeyed on Tuesday to Cottingham, for a day's pike-fishing in Lord Berwick's water, hoping against hope that the water would have become sufficiently low to enable them to visit their favourite localities. Alas! however, for human hopes, the Tern was quite as turbulent and high as its parent stream, the Severn, and the meadows on each side were flooded to such an extent that it was impossible to find a resting-place. Disconsolately the disappointed would-be anglers fled the scene without putting rods and tackle together, and returned home to await a more propitious opportunity.

Mr. A. Mostyn Owen, a prominent member of the Severn Board of Conservators, who has taken energetic action on behalf of those interested in the Severn salmon fishing in the upper waters of the Severn, in pressing for an increased supply of fish, writes an interesting and practical letter in reference to the recent visit of inspection paid by Mr. Berrington, Chief Inspector of Fisheries, to the weirs in the Severn. He accompanied Mr. Berrington in his official visit to the weirs below Worcester, and gives a valuable account of the journey down the river, and the result of the inspection. His visit was made in the interests of the upper riparian owners, by whom he was particularly requested to undertake the journey. Embarking in a small steamboat at Worcester bridge, on the 18th, they journeyed to the first weir, below that place, "Diglis" Weir, just above that which they landed and took "a hasty view" of it. "Hasty," says Mr. Owen, because they were not there long, and did not attempt to take any measurements of the formation and incline of the arrangements existing at this weir to enable the salmon to pass over it. He, however, made the best observations he could. On the north side he says there is what was termed a salmon pass, but which was so badly constructed—the breaks in it so ill-shaped, the flooring so steep, and the entrance so impracticable for salmon to enter it at the time he saw it, that he considered it almost useless; for, in his opinion, what fish managed to get over the weir at certain states of the water would do so as easily as if the so-called pass was not there. None but the most active fish, says he, and certainly but very few gravid hen-fish could accomplish it, and even if they did so they would be considerably damaged by their exertions. On the south side of this wear there is no attempt at the provision of a salmon pass, such as is made with breaks in it, to lessen the force of the water rushing through it, but there is a long piece or bulk of timber fixed on the face of the sloping weir, diagonally slanting down the weir, which has the effect of congregating the water coming over the crest of the weir against the side of the timber, and down which it rushes with such unchecked violence that, at the time when Mr. Owen made his inspection, no salmon could, in his belief, possibly get up it, the incline up the side of the piece of timber being so steep. The actual incline of the weir at the place were there was this rush of water was not, however, measured. Mr. Mostyn Owen was unable to attend the inspection on the evening of the 17th, when he inspected the pass on the weir at Lincome, above Worcester, but he states that he heard from a Conservator who did so that it was worse than the one at Diglis. On the weir at Tewkesbury, he continues, there is no pass, and when he saw it, it would be very difficult for a salmon to get up at the north side where the crest of the weir was slightly lowered, but at certain states of the water the fish would be able to pass over with the tide. It ought, however, as Mr. Owen remarks, to be passable at all times, and a perfect pass might easily be made close to the nort side where the fish are now expected to get up with a rush or stop below till the water rises higher, or, what is much more likely, till they are taken in the nets. Concluding, he says he is decidedly of opinion that the present imperfect state of the contrivances for assisting the salmon to get over Diglis Weir, without reference to the efficiency of the others, quite sufficient to account for the lamentable falling off in the supply of salmon from the Severn Fisheries, and that unless a perfect pass is made at this weir, these fisheries must continue to decline. It is not, he says, reasonable to expect that the owners and occupiers of the upper waters, will devote enough time, trouble, and money to preserve from ever-ready poachers the few fish which are now enabled to get to the upper waters where, if the fisheries are to recover and prosper they must have easy access at all times. At the south side of Diglis weir there is, continues Mr. Owen, ample space between where the timber is now placed diagonally and the shore to make a perfect pass, and it would be so if made with an elbow so as to elongate the pass and thereby diminish the incline which should not be steeper than *one in eight*, and with the entrance below low water mark near the foot of the weir so as to allow and entice the salmon to swim into it without leaping. If the passage of Diglis and one or two other of the weirs in the lower water were thus altered, and this might be done at a small cost, the result would undoubtedly be a large increase of salmon in the upper waters.

NOTES FROM YORK AND DISTRICT.

An important meeting of the North-Eastern Sea Fisheries Committee was held at York Castle, on Wednesday, Mr. J. W. Woodall, of Scarborough, presiding. Professor Mackintosh presented an exhaustive report on the mussel beds of the Tees, the Humber, and the Yorkshire Esk, which it was decided to print and circulate, as being of great interest. Mr. J. C. Clayton, of Darlington, proposed a bye-law to apply within so much of the district as lies between Skinnington Beck on the south, and Castle Eden Dene on the north (excepting as may be otherwise provided by the 13th section of the Sea Fisheries Regulation Act, 1888); the object being to put down the wanton destruction of young sparling and salmon by means of haffle or offal nets. There was no objection to anyone fishing for sparling with a rod, say merely for sport, but with nets it should be discontinued between March 21 and July 21 inclusive in any year. The nets which he proposed should be used in future were those recommended by Mr. Noel Malon, made of thirties yarn, with a five-tenths to six-tenths mesh. Mr. Alderman Toozes seconded, and Mr. Alward supported the motion. Mr. Jeffs could not support it, and considered it a question for the Tees Salmon Fishery Board. The resolution was, however, subsequently adopted by eight votes to three.

A meeting of the riparian owners, anglers, and others interested in the improvement of salmon fishing in the river Ure was held on Friday evening, in the Town Hall, Ripon, to agree upon a requisition to the Yorkshire Fishery Board, and to point out to the conservators the urgent necessity of reconstructing the present faulty structure at Linton Weir; and, if thought necessary, assisting them with subscriptions, so as to give salmon at all times an easy access to the upper waters. The Most Hon. the Marquis of Ripon, K.G., presided, and amongst those present were Mr. J. H. Phillips, secretary to the Yorkshire Fishery Board; Major St. Paul, Ripon; Mr. F. Sharp, Newby; Mr. T. Arton, Tanfield Lodge; Mr. Brian Hebden, Ripon; Mr. Arthur J. H. Wood, Bellwood; Mr. S. Swire, Mr. R. M. Bowman, and others. The noble chairman, in opening the meeting, said he was of opinion that some permanent good was certain to result from the steps which were proposed to be taken to improve the salmon fishery in the river Ure. Speaking for himself, he considered the salmon fishing in the Ure was not what it ought to be; but he fully believed that the various works which had been undertaken by the Yorkshire Fishery Board had in the past produced some good results. But the weir which it was proposed to deal with at Linton had always been a great difficulty—in fact, one of the greatest obstacles they had to deal with; and although the fish-pass constructed some years ago had improved it, yet experience had shown them that the alterations were not adequate, and that the results were not such as they hoped for. The Fishery Board had done something at Westwick; but the Linton Lock was a much larger and more important matter, involving an estimated expenditure of £600 or £700. As most of the income of the Yorkshire Fishery Board was spent, such a large sum was beyond their reach; it was, therefore, the duty of everyone interested to assist them in this matter. The alteration proposed was simplicity itself, for it was well known that the less gymnastic exercise they asked the salmon to perform, the greater number of fish they were likely to get up their rivers. He therefore moved: "That this meeting wishes to impress on the Yorkshire Board of Conservators the necessity of reconstructing the present defective fish pass at Linton Weir, so as to give salmon access at all times to the upper waters of the Ure." Major St. Paul seconded the motion, and said he was convinced if the new scheme were adopted, that it would be greatly to the advantage of the riparian owners. Mr. A. J. H. Wood said the Fishery Board had long wanted to improve the pass. They had now an excellent pass at Boroughbridge, but unfortunately at present they did not get the full benefit of it. They were now to have a pass at Westwick, so that the salmon could ascend the river there; but they still had the difficulty of Linton Weir to be surmounted, while the income of the Fishery Board was almost entirely spent in watching the rivers. He remembered, some sixteen years ago, holding a meeting of that sort, when £510 was promised by the riparian owners. The present fish pass at Linton was designed by an eminent engineer on theory, but not on practice. The models they now saw on the table were designed by himself. Her Majesty's Inspector of Fisheries, Mr. Berrington, wrote that he had carefully considered this fish pass, and was of opinion that the method and scheme were the most feasible ever proposed for helping the fish over the weir. The proposed weir was on the same principle as the one at Boroughbridge, which had proved so successful. A river-watcher, writing under date October 7, had said that he had counted thirty-five salmon ascend the weir at Boroughbridge in an hour, and salmon were ascending all day. He had received a letter from Lord Grantley, who had promised to subscribe £20 to the project. Mr. J. H. Phillips, secretary to the Yorkshire Fishery Board, speaking from twenty-seven years' experience, said that the present chambers at Linton Weir were too small, and the fish never found their way above the second pool. The water at present was too much confined, consequently there was too much boiling, and the salmon fell into deep water, and there deposited their spawn, which became addled and good for nothing. He pointed out that in the Ure, they had, in its higher reaches, a quiet unpolluted water-shed, which was calculated to be most favourable for the breeding of fish. Salmon must have clean water and a clear run if they desired to have large quantities of them. He was informed that at present they were running up the Yorkshire rivers in large quantities, and never hesitated at the Boroughbridge Weir. Lord Ripon then put the resolution, which was carried unanimously. His lordship said he should be happy to subscribe £50, provided the scheme was carried in its entirety, but if a smaller scheme were adopted, then he would reduce the amount of his offer. Mr. Arton then moved: "That, in order to raise the requisite funds to cover the estimated cost of the alteration of this fish pass, and (as the revenues of the Board of Conservators is almost entirely spent in watching and protecting the fisheries throughout the district) this meeting is of opinion that a vigorous canvass for subscriptions should be made amongst those more particularly interested in the fisheries of the river Ure, and that Mr. Arthur J. H. Wood, of Bellwood, Ripon, be requested to accept the office of hon. secretary and treasurer." He added that he would give £25 to the fund, and a little more if need be. Mr. Bowman seconded, and the motion was adopted *nem. con.* Major St. Paul then moved, and it was agreed: "That a committee, consisting of the following noblemen and gentlemen, or their representatives—viz., The Most Honourable the Marquis of Ripon, the Right Hon. Lord Grantley, the Right Hon. Lord Masham, Sir Reginald Graham, Bart., the Hon. S. Cunliffe Lister, J. T. D'Arcy Hatton, Esq., A. S. Lawson, Esq., T. Arton, Esq., R. C. Vyner, Esq., and H. St. Paul, Esq. (with power to add to their number) be appointed, for carrying these resolutions into effect with as little delay as possible." He was of opinion that some steps should be taken to prevent the pollution of the stream by the Aire and Calder. The meeting then terminated with a vote of thanks to the chairman.

THE ABERFOYLE DISTRICT.

By DUINE MÔR.

the genius of Sir Walter Scott had never d its "kindly light" (at least to inn-keepers, way companies, *et hoc genus omne*, that live by wandering stranger) over the district of rfoyle, yet in time that district would most redly have become famous, not only by son of its marvellous natural beauty and proquity to the busier haunts of men, but also on ount of the excellent lochs which are embraced hin its other charms. It is, nevertheless, a ky thing that Aberfoyle rhymes with toil, and , at least to a Cockney, is suggested by the same d; so that the celebrated stag in the "Lady the Lake" is made most naturally to pause think what rhymes with toil, and so makes his mind not to seek refuge "by far Loch Ard Aberfoyle," it being only an *obiter dictum* on part, introduced no doubt to help the Pegasus the Wizard of the North on his way. "Rob ," however, made Aberfoyle famous, and, if inn of the present day be a somewhat more tely and more imposing pile than that which ltered the immortal Bailie, still it retains his ne, and the veritable poker which he so iantly wielded yet waves on an adjacent tree the credulous to gaze at with wonder, and the ptical to regard with a cynical sneer; but the is the latter's, for it is pleasant to believe that all these things were true, not the fictitious creations of a genius that persuades us into belief. Aberfoyle is only some twenty odd miles from Glasgow; so that the journey to it is by no means a long one, and occupies only about one and a-half hours. The journey from Edinburgh (*viâ* Stirling) is rather tedious, and Glasgow is undoubtedly the best starting-point. If one prefers a circuitous route, then that *viâ* Callander and the Trossachs, and thence by coach to Aberfoyle, will satisfy him, and the scenery will, of course, more than compensate (if the day be fine) for the somewhat protracted journey. Arrived at Aberfoyle, one is at once in the midst of charmingly diversified scenery. Wild, precipitous, rocky hills, whose bold cliffs rise sheer for many hundreds of feet, long wooded vistas, diversified with smiling fields, and soft green pastoral undulances, and over all, in the distance, the huge masses of Ben Lomond and his attendant hills, with the Forth murmuring over its pebbly bed as it glides past the door of the hotel—forms as fair a picture as one would wish to see. This, however, is only the beginning of the many lovely views. The road to Loch Ard is full of beauty. Nestling under the hill-side lie many lovely villas, which, here at least, from the good taste displayed in their architecture, seem in harmony with their surroundings, not out of place. The road is richly wooded in all its length, and the drive is a lovely one. The "Queen's View," from a point a mile from Aberfoyle, is alone worth going all the way to see, and when at length Loch Ard opens up, with the morning breeze sweeping gently over its surface, one no longer wonders at the enthusiastic admiration of Osbaldistone for its many and varied charms.

There are three lochs attached to the hotel at Aberfoyle: Loch Ard, Loch Dhu, and Loch Chon. The first of these is, of course, the most celebrated, and viewed as a whole is the most pleasant to fish, because the scenery is as fine as anything in Scotland, and the fishing is at times very good indeed. Loch Ard is an irregular sheet of water, about three miles long by a mile wide. These are the dimensions of Loch Ard proper, for there is a lower loch—two lower lochs in fact from one point of view—one of which is about half a mile in length, or perhaps a little more. The fish in the lower loch are, as a rule, larger than those of Loch Ard proper, but they are also shyer, and hence sport is more uncertain. Some very heavy trout frequent the lower loch, but they do not rise freely. The average size in the lower lake is about ¾lb. Pike are numerous here, but the loch is not very suitable for trolling. Between Loch Ard proper and the lower loch there is a longish stretch of good water known as the Narrows. With a good breeze this is a capital place for sport, and every inch of water should be carefully searched. The trout here run on an average better than in any other part of Loch Ard, and are very well fed and handsome fish. Loch Ard proper is, as I have said, about three miles long by one wide, a small area of water, apparently, but there is in reality a much greater extent of fishing ground than the dimensions of the loch would lead one to suppose. There are a great number of bays and shallow banks, and all these afford good fishing. The boatmen can be trusted to put the angler on the best water, as they are, as a class, very keen and very willing, and the stranger cannot do better than put himself entirely in their hands.

The best flies for Loch Ard are those ordinarily used in Loch Leven, but of a smaller size than those employed on that celebrated loch. Indeed, on Loch Ard small flies will be found most deadly, especially amongst the better class of fish, and the cast should be as fine as possible, especially in calm weather, for Loch Ard trout rise in lighter airs than almost any trout on the mainland and much-frequented Scotch lochs—a fact which did not escape the keen notice of the late Francis Francis.

There are undoubtedly far too many boats on Loch Ard, each of the many feuars on the loch side having the right to put a boat on the loch. I do not see how this can be avoided. I do not think a restrictive clause in the feu-charter against trout fishing would hold good in law, because the land passes, and hence such a strict pertinent as trout fishing must go with it, but the question (so far as I know) has never been decided. In spite of the number of boats there are many days when few—some days when none—are out, and hence the angler fortunate enough to be able to reside in this lovely region for some time has a much better chance of sport than the transient stranger. Despite the many boats, too, the trout are bold risers to *small flies* on *fine* gut, and personally I have found little or no "short-rising." I cannot say the fish are very lively or great jumpers, though they pull hard and fight obstinately, if they keep somewhat low; but perhaps the glorious pluck of our Western islands trout has made me a little difficult to please. On the table, the Loch Ard trout fulfil ably the most ignoble portion of troutish duty, and for flavour and delicacy are unsurpassed by any trout in Scotland, Loch Leven trout not excepted.

Loch Ard is a very early loch, the earliest in Scotland, perhaps, for, with the exception of Loch Vennachar (on which I have seen trout killed with the fly early in February on a wild day with snow *everywhere*), there is no loch on the mainland where fish are so soon in condition and willing to rise. Indeed, I have been told by anglers who have fished it early in the season, that they have cast *on to ice* and drawn their flies off it to kill trout in good condition at the edge of the frozen portion. March is often very good, April and May first-rate, but I should prefer the two last months, as fishing from a boat in March is rather chilly work. Moreover, the trees are not "out" and half Loch Ard's charm consists in its sylvan splendours. The season is supposed to end with May, but I am credibly informed by the boatmen that the fly-fishing is often better in June than at any other time of the year, and I see no reason why it should not be so, though most attention is then given to trolling with the natural minnow—a mode of fishing only to be resorted to when all other means have failed—at least from my point of view. I will not attempt to describe the natural beauties of Loch Ard. The scene is one not easily forgotten, and if there is a lovelier loch in Scotland I have yet to see it. So lovely is Loch Ard, that no angler whose soul can rise above slaughter, ever comes off it disappointed, however poor his day may be, because one could not gaze on the richly-wooded shores, the bluff rocks, and towering mountain peaks of Loch Ard, and think the world anything but beautiful or a place made only to be the chosen home of regrets.

Loch Dhu is a much smaller loch than Loch Ard, merely a tarn, in fact, or a large pool formed by the stream connecting Lochs Ard and Chon. One can easily see how it acquired the name of Loch Dhu, or the Black Loch, because even were the water clear, which it is not, being intensely peaty, the dark and frowning hills which lie around it would in themselves be a sufficient justification for the title. Loch Dhu, though a small loch, is a very good one. If one does not capture a great number of fish, those one does get are beauties, better from my point of view than either the Loch Ard or the Loch Chon fish. The bay at the head where the burn flows out on its way to Loch Ard is a very good place, and should be carefully fished. I once killed a genuine Loch Leven trout in this bay—a good number of which were put into Loch Ard, and if none were put into Loch Chon (about which I am not sure), this is the first instance, so far as I know, of Loch Leven trout *ascending*, their tendency always being to descend out of a loch, if they are allowed to do so. The shore next the road is the best shore of Loch Dhu, and some very heavy fish of 3lb. and 4lb. lie here, but of course it is a matter of chance whether one may drop into a fish of that size or not. I have never fished the loch without raising or hooking one of these large fellows, but curiously enough fortune has not yet favoured me with a sufficiently killing smile for the capture of one of these big ones. Loch Dhu requires a great deal of patience, but yields well to a persevering angler. The boat belongs to the Water Works, but can, as a rule, be easily obtained. A dozen trout running from ¾lb. to 1½lb. is a fair day's work on Loch Dhu. The loch is about six and a-half miles from Aberfoyle, a lovely drive.

Between Loch Dhu and Loch Chon there are two deep pools in the burn, well worthy of a trial if the breeze be good. There are some very fine trout in these dubs, and, if in the mood (and they will rise at once if they are), a moderately skilful angler should secure half-a-dozen or so before the rise is "off."

Loch Chon, the third of the hotel lochs, is a largish sheet of water, some three miles long by three-quarters of a mile broad, situated amidst wild, mountainous scenery. The sylvan beauties of Loch Ard are absent, save at the Aberfoyle end; but this is compensated for by the rugged hillsides and the wild, romantic scenery. Loch Chon was at one time a favourite abode of herons, if we are to suppose that Sir Walter Scott had some reason for the lines—

> "On Duchray's towers no beacon shone
> Nor scared the heron from Loch Chon."

But now only an occasional heron is to be seen, and they no longer build on the island, which is, however, a great resort of black game. Loch Chon rather a fickle loch *by reputation;* but I have found, on the few occasions on which I have fished it, that the trout rise quite as freely as on Loch Ard, and, if a little inferior in quality, are larger in size, and, if anything, have more spirit. They run all over about ¾lb., and from a dozen to twenty fish is a fair day's work, though larger and, of course, *smaller* baskets are often made. April and May are the best months for fishing Loch Chon with the fly, and a brisk, steady breeze blowing up and down the loch is the best wind. The far end of the loch from Aberfoyle is very good, but round the islands the fishing is, I think, best, and especially round the large island at the eastern end, where one may spend the whole day comfortably, especially if it be blowing hard outside. The feeding here is excellent, and the fish numerous and of a good quality. Patience is a *sine quâ non* of success on Loch Chon, for the trout come "on the rise" every now and then in a very marked way, with intervals of non-rising, and one has to keep working away to reap the benefit of these moves. After May, the Phantom or natural minnow is largely used on Loch Chon, and some fine heavy trout up to 3lb. (with an occasional giant) are thus captured. The natural minnow is much better than the Phantom, both in Loch Dhu and Loch Chon, but it does not yield much in Loch Ard owing to the plentiful supply of minnows in that loch. In June, fly is not much used, at least during the heat of the day; but in the evening, I believe, the fish rise freely to the fly, and it is well worthy of trial.

I can conceive of no more enjoyable prospect than the idea which a fine June evening on Loch Chon presents to my imagination, with the sun sinking behind Ben Lomond, and he and all his neighbouring vassal hills bathed in the golden splendour of the declining rays, and the soft balmy breath of the summer evening sweeping gently over the waters of this romantic lake. Add but a little fishing, and the angler who would not be content must be hard to please; and he who would not leave the scene with regret would be callous indeed to the charms of Nature and the soothing influence of its unspoken sermons.

To return to the practical, however, I may mention that the charge for a boat on Lochs Ard and Chon is three shillings a day, and the boatman's fee is four shillings, exclusive of lunch and the inevitable whisky. The hotel at Aberfoyle is a very comfortable one, and commands lively views. The charges are not excessive, but just what one would expect in the locality, while Mr. Blair, the proprietor, and Mr. Logan, the manager, are more than obliging, as I can readily testify from many personal experiences of their kindness and attention. The boat on Loch Dhu is to be had free of charge, but of course one has to ask for it. The fishing on the Forth (or Avon Dhu), which passes the hotel door, is often very good, yellow trout running about three to the pound, with an odd large one, while sea trout, after the "Lammas floods," are fairly numerous, and run pretty heavy.

Viewed as a whole, the Aberfoyle district is well worthy of a visit. It is conveniently situated; the fishing is usually fairly good, and sometimes excellent; while the scenery is certainly unsurpassed in variety, picturesqueness, and beauty by that of any district in Scotland, and has many romantic and traditional associations to enhance its natural interest for the lover of Nature in all her varied forms and moods.

THE best individual record this season on the river Annan was obtained on Saturday last, on the Mount Annan Section, when Mr. John Bell-Irving killed six fish, of 17lb., 18½lb., 19lb., 20½lb., 21lb., and 22½lb.

"REDSPINNER" ON TWEED.

[WE advise our readers to purchase *Baily's Magazine* for November, and read a delightful article by "Redspinner" (Mr. Wm. Senior, Angling Editor of the *Field*), who, we are glad to see, got four good fish in one day. We give an extract from it.—ED.]

THREE men, in costumes that might serve for either fishing or shooting, come out under the porch and gravely survey the scene. It is a picture of late autumn in a year when the foliage of the woods has been preserved to the farthest limit of change. But the sportsmen are not noticing either the glossy green of the hollies, the bright colours of the remnant of leaves on the maples, the russets and yellows of the oaks, or the rich deep brown of the beeches. They are not contrasting the purplish-green of the Scotch firs with the out-at-elbow larches, nor the dense cover of the rhododendrons with the scarlet patterns on the hawthorns. They are looking very dolorously beyond the woods, beyond even the fields—dotted now with grazing cattle, now with sheep—to the broad river, and they cannot but confess that "she is up again." Behind the group is the fair-haired young mistress of the establishment, trying hard, out of a sense of duty to her husband, to look as sympathetically dismal as he and his friends undoubtedly do, yet scarcely concealing an irresistible desire to laugh merrily at the downcast demeanour of these full-grown men, as they give up hoping against hope, and realise the hard fact that there will be no line cast on either upper or lower water that day. It is no use tapping the venerable glass on the wall, consulting the aneroid for the fiftieth time, or saying that it looks a little lighter to the westward. There has been rain during the night—there is rain now; and no amount of specious explanation can do away with the evidence of that grassy tongue of land on the left bank, and the shingly promontory on the other. Surveyed at the end of a vista of trees, both have been considerably reduced since last night by the swelling water. The old gillie at this moment stalks up from the winding path in the shrubberies, and laconically announces that she is a foot higher, by the figures on the post, than she was yester-even, and nasty in colour.

"She'll nae fesh the day," he says.

The three knights of the sorrowful countenance smile in sickly fashion at one another, enter the house, cast themselves into easy-chairs, and moodily charge and smoke their after-breakfast pipes. Eventually they relieve their feelings according to their respective temperaments. Though the host says nothing, there is a pathetic look of appeal to Fate in his dark eyes; the young cousin, resigning himself to the inevitable, placidly reads a yellow-back, not permitting anything in the world to disturb his philosophic serenity.

⁂

At length dawns a brighter day. Before fairly opening your eyes you ask the servant with the water, as he draws up the blinds, what the weather is like, and an admitted gleam of sunshine answers the question before he has time to speak. November, however, is quite as chill as October, and the sunshine cheers rather than warms. At any rate, it promises a change of weather. The water is now just right—volume and colour beautiful. The nasty specks of creamy froth are no longer coming down; the yellow leaves, loosened by the frost, are swishing below the surface swiftly out to sea. As you trudge down to the river by the high bank you see that fish are on the move—not noisy and splashing, as if they are on the run, but quietly priming on the top. I never heard of such fish taking the fly, though few anglers can resist the temptation of casting towards all rises of the kind. In due time you reach the fishing ground, and go forth full of hope; and fortunate may you be if, under these conditions, you fare as well as did a small party of which I was one. Let me tell the story briefly of a characteristic back-end day.

The old gillie, looking at the sun, shook his head, and said it was too bright for that time of the year. There had been lightning the previous night in a clear moon-lit sky. The hoar-frost was thick on the grass. The two boats put off a few minutes before ten o'clock, A. N. G. giving me the lower, himself taking the higher section of his bonnie water. The Silver Grey was on my cast; and my host had a fly of his own creation and bearing his name. As he was working up an down, at the start we were within fifty yards one another; and we had just got into the sw of the thing when I heard the scream of winch. A. N. G. was clearly into a fish, an glanced over my shoulder, to see the rod arc like the rainbow of the day before. One m cast and half-way down a splendid sensat enabled me, in answer to the boatman's " G.'s got a fesh," to say, "By Jove! and so have

There was no breaking of the surface with mi he took the Silver Grey fairly under wa sheered off a little, and sulked. When he be to move he did it briskly, shaking head savagely throughout. I was, in truth, g to have the salmon flopping in the net, be not a bit sure of the result, even after I stepped to land and brought him near the sh I had ten minutes more fun even now, but at a bright, handsome fish of 19lb. was landed. hold was torn wide and loose, and anot minute would have given the fish the liberty which he fought so well. Some time now elap without a touch or sign, and I exchanged Silver Grey for the Wilkinson, the mage hackles of which I always fancy. Three thro and at the fourth the winch was again speed round in full song. This was a more determi customer than the other, and he never slacke pace till he had run out seventy yards of line stream. There is a pleasanter music than e that of the reel—to wit, the soft hissing sound the line tautened on a salmon cutting its through the water. Most soothing is it to ear, because it generally signifies a firmly-hoo fish, running deep and steady. This fish walked up and down the bank after we had left the bo but I felt quite certain of him, and a better ba end fish I never greeted than this, which mar an honest 20lb.

The other boat had long since passed from view, but my skipper opined that A. N. G. wo be "amang 'em." The water he was fishing more rapid than mine, but it is always conside excellent holding ground for fish at that condit of water. The old man at the oars was in midst of telling me this when I hooked a th fish. It was obviously small, and, could I ha had my way, I would have had him netted fr the boat; but the netter was not of my mind, a we went ashore to settle accounts with num three—a grilse of 8lb., red, indeed very red, wh we placed him in the bottom of the boat by side of the larger silvery fish. The Wilkinson too good to depose, and, within half-an-hour, brought up a lusty fish, which jigged about a g deal on the surface, leaped a yard out of water, and betrayed an irritable or restless d position. Here again was a fellow that could be considered caught until he was actually in t net, and by the net he was duly lifted out on t grass, after a really spirited fight both from b and shore. This was a fish of 16lb., and he m have had an unpleasant interview out at sea cently with a seal or some other marine enem who had left deep, ruddy reminiscences of cl and tooth on his side. Like the other three, No had the so-called sea-lice upon him. Putting again, I rose a grand fish that did not fasten; only rolled over like a porpoise.

Three salmon and a grilse in three hours oug to content anyone. It contented me, and I f happy and at peace with all the world as I sp through the wood to join the other sportsm at lunch in the rustic hut.

⁂

Next morning there was no need to go out the porch or survey the stream from our windo Beyond any question she was in yellow flood aga turbulently foaming around the post, where showed seven and a-half feet above summer lev so that for the time all angling was suspended. *"Redspinner" in "Baily's Magazine" for Novemb*

ON the Makerstown Water of the Tweed t gentlemen—the Messrs. Deakin—on Friday la week, scored sixteen salmon and grilse, and t trout, the weights of which were 18½lb., 16½l 16lb., 15lb., 15lb., 15lb., 14½lb., 14½lb., 14lb., 9½l 9½lb., 9lb., 8lb., 7½lb., 7½lb., and 5½lb—a total 195½lb. This beats the record on this water t season. The Duke of Roxburghe and Mr. Berrin ton topped the individual one-day scores for t week, each with twelve fish. A few other tak closely approaching these two twelves were go

Notes

Flyfishers' Club.—The annual dinner of the Flyfishers' Club has been fixed for Wednesday, December 9, at the Holborn Restaurant. Mr. Basil Field will preside. A smoking concert will be held in the club rooms, on Tuesday, Nov. 17.

A correspondent writes: "Two anglers who recently went fishing in the vicinity of Richmond, report that they saw a red fluid discharging itself into the river. The fisherman who was with them said the fish liked it (the red fluid). Considering, however, that many barbel have lately been discovered in a sickly and dying condition, between Barnes and Richmond, the contrary would appear to be the case, so far as regards the red fluid being 'good for the fish,' as the owner of the punt added."

With reference to the Note about his story in the *Boy's Own Paper*, Mr. E. M. Tod writes: "I fear I did not quite explain that my story in *Boy's Own Paper*, as told by William Landsborough, one of Australia's most fearless explorers (recently dead, to my sincere regret), is only 'history' till his brother John's station is reached (and here memory failed me); and as the story was told to me by himself in 1864, I had to invent the story of the fight, to give it greater interest to the 'boys.' The journey, the swim for life, and the hurricane which he endured that terrible night, are all *facts*; no man was ever less of a 'Jack Brag' than William Landsborough, M.L.C., whose silent jaws seldom opened, and whose bravery was a matter of no doubt whatever. He was a stranger to fear—if ever man was. This much to explain your kindly notice in 'Notes' of this week in *F. G.* I had altered the surnames only, but as he and his dear little wife are now both in their graves, I see no reason to conceal my hero's real name. Might I add (but that I fear to trespass on your space with so much foreign matter) that I think you are both right and wrong in your view of the Queensland blacks? They in no way lack courage when face to face with one of their own enemies equally armed; but when a man with a stick in his hand —a stupid, uneducated, savage to boot—has to try conclusions with a man, or men, active, intelligent, and armed with weapons of precision, I think it will be conceded that, sooner or later, discretion becomes the better part of valour with these poor fellows; and, I add with a blush, that when the white man has shown his power, and has humiliated and cowed the natives until they are afraid of their unknown power, I fear they import more vices than virtues—more grog than Bibles—and so by degrees the race becomes (under this very influence) so degraded and debased, that no doubt cowardice is added to their other degraded qualities. Worst of all, they die like rotten sheep from the lives they lead under civilisation! I know no man whose record has been a cleaner one in all these respects than that of William Landsborough. All honour to his ashes, say I!"

It is reported that a fish of 45lb. has been got on the Ardoe Water on the Dee. If this turns out to be the case, this will be the largest salmon landed on the Dee for the year. It was on this same water, some years ago, that the heaviest weight ever got on the Dee—a fish of 57lb.—was landed.

Very few fish over 30lb. have been grassed this autumn, yet the number between 18lb. and 30lb. is unprecedented.

Lately a run of small fish, scaling from 8lb. to 11lb., have come away more spring-like in appearance than autumn fish.

Let of Tay Fishings.—Last week, at Perth, the Kinfauns and Inchyra Fishings were let by public roup. The total price obtained was £1,815, as against £1,812 of last year.

Still another lady angler has made her *début* on the Dee this season. Mrs. F. H. Irvine landed a beauty of 20½lb., on Tuesday last, on the Drum Water.

Mr. G. L. Chambers (Madras) has done some splendid work on the Sluie, a small section of the Dee; while Mr. Archibald and Captain George Campbell have made a splendid record on the Carlogie Water.

Mr. G. T. Hay had a salmon of 33lb. on Blackhall Castle Water last week.

This year, amongst the noted "back-end" fisheries, the Floors Castle Water of the Tweed appears to be "taking the cake." On it, takes in a day by one rod of ten, twelve, and fourteen fish, would seem to be nothing uncommon. The Duchess of Roxburghe has, on different days, run up scores of six and seven fish, while on day, after lunch, she had six. The best reaches of the river are reported to be "perfectly *hobblin'* with fish of all sizes and colours."

On the North Esk, have been three takes, this autumn, of nine salmon in one day by gentleman anglers, without gillie assistance, fishing *with fly*—wading and from the bank. In this fine autumn river quite bright fish, in great numbers, were ascending continually up to the very closing day.

Mr. Alexander Speedie, one of the largest salmon fishing tacksmen in Scotland, died at Perth, on Sunday night. Mr. Speedie leased fishings on the coast, in the Tay, Sutherland, Caithness, Ross, and indeed all over Scotland. He was a singularly able and successful business man. Twenty years ago he purchased the estate of Kinshaldy, in Fife, whence came most of the rabbits and hares in connection with his business in Perth.

In a salmon poaching case from the Don, before the Sheriff in Aberdeen, last week, a poacher of more than ordinary notoriety had to "pay the piper" sweetly—in the shape of a heavy fine.

When fishing on the river Ayr, on Saturday afternoon, last week, in company with Mr. Lipscomb, dentist, Kilmarnock, Sergt.-Major Flyn, Kilmarnock, was drowned at the head of the Barskimming Holm. This is the second drowning accident on Scotch rivers during the present angling year.

Mr. Fortescue's (of Kingcansie) half-mile stretch of the Aberdeenshire Dee, yielded one day, the other week, no fewer than eleven fine fresh-run salmon, ranging in weight from 10lb. to 30lb. upwards. Nine of the fish of this take were got with the Gordon Fly.

Lieut.-Col. John Foster Forbes, of Rothiemay, has acquired a large extent of land from the Duke of Fife, to add to his estate; and going with it is a nice stretch of the river Deveron, running along the south boundary. The fishing, both for salmon and trout is excellent, and with this recent acquisition, Col. Forbes has now a length of river about two miles in extent, forming one of the finest fisheries connected with residential estates to be found on the run of the Deveron.

A beauty of a fish, about 33lb. in weight—the heaviest killed on the Deveron this season—fell to a rod on the Mountblairy Water, on Friday of the week before last. That week a lady angler at Eden House, Banff, had ten fish, the heaviest 20lb. Old anglers on the Deveron are unanimous in saying that this past month of September has been the most notable for numbers of salmon caught for the last thirty-five years.

The top weights caught on the Don last week were three thirty-pounders, a thirty-two, a thirty-four, and a forty-pounder, the last mentioned by Mr. Fred Rooper.

One boat's fishing for three days on Loch Stack during the past season was one hundred and thirty-three sea trout, with brown trout besides. In consequence of the very low state of the Laxford river, during June, no sea trout were forward to the loch till early in July—nearly a month behind the usual time.

About five hundred salmon, ranging in weight from 6lb. to 40lb., have been killed on the Grandholm Section of the Don since 1st Sept. The fishing is let to seven rods at £30 per rod, and this sum covers the right to what spring and summer angling there is, besides the capital early trouting.

Doctors differ. Recently we published a note from a correspondent to the effect that Loch Stack is "the most productive sea trout loch in Scotland." Afterwards another correspondent wrote stating that some other loch is the "best," but without indicating whether it *is more productive* than Loch Stack or not. A mistake must have been made by this correspondent in saying that Mr. Archibald Young, Scotch Salmon Fisheries Inspector, favours the claims of the particular "water" he named to be the best in Scotland for sea trout, for in his report Mr. Young says that "the loch of Strand is, for its size, the *best* sea trout loch in Scotland."

On Spey and Tay the back-end salmon angling closed on the 15th; on Dee, Don, Deveron, the Esks (three), and indeed the bulk of the late-season rivers of Scotland, it closes to-day; but on some of the Solway rivers it goes on for yet a while longer, whilst on Tweed there is still a whole month of it to go."

A very good season has been had by the Gordon Castle party on His Grace the Duke of Richmond and Gordon's miles of the Spey. From Aug. 27 to Oct. 15, fish to the number of eight hundred and eighty-eight, ranging in weight from 6lb. to 35lb., were caught. The best day was sixty-three fish. Only once—six years ago, when one thousand and forty-one fish were got—has this season's take been exceeded since 1870.

A Lochy-Spean angler writes: "All over the river, in consequence of a splendid head of fish having come up, we had quite a grand month during September, killing double the number of fish that we did in August, which is a most unusual thing. I am particularly pleased to see you suggest that no one should be allowed to dispose of salmon after the close of the net season. This is one of the most important points needed in salmon fishery legislation that could be given effect to."

A correspondent writes: "The fishing on the Duke of Richmond's water at Fochabers has been a successful one, but considerably below the highest season's take recorded. The number of salmon taken by the rod since the close of the net-fishing on the 26th August, is 888, as compared with 1,041, the highest recorded take obtained some six years ago. There has been a considerable number of heavy fish landed, several weighing over 30lb. Most of the salmon were taken with the fly, except on the last two days. On Tuesday of last week fifty-eight fish were landed, and on several other days the number exceeded fifty. Large numbers of fish are now going up the smaller streams for the spawning. These streams are now quite full of them, more so than for many years past. There is a good stock of spawning fish in the river Spey itself. I don't believe the notions of the "old school" party on Speyside—that in spring and autumn fish we have two distinct breeds of salmon."

The superintendent and bailiffs of the Dee Fishery Board have for some time back been engaged stripping the small early-run fish on the upper tributaries of the Dee, for the purpose of obtaining ova wherewith to stock the Durris hatchery.

Some magnificent sport—with as bright and fresh-run fish as have anywhere been got in Scotland—has for over a month past been obtained on Lord Aberdeen's complimentary ticket section of the river Ythan.

The Burgh Water of Don, at Kintore, for which the charge is one shilling and sixpence per rod a day, since the middle of September has been yielding an average of twelve to fifteen fish daily.

Miss Fortescue, of Kingcausie, Deeside, is, as usual, to the front with the largest fish of the year to a lady angler A fortnight since, she hooked, played and landed a thirty-seven pounder.

A FORTNIGHT'S HOLIDAY.

By Francis M. Walbran.

(*Continued from page 245.*)

On the following morning, when "Redspinner" and I turned out with our impedimenta on to the platform at Pickering railway station, we agreed that for once in a way the Fates appeared to be in our favour, as the day was dull, and a fairly good breeze blowing, both of which contingencies are considered necessary to ensure good sport on the Costa. Under such circumstances we were neither of us likely to waste much time, so that after a brief call at the White Swan, to ensure our beds and a good dinner when we arrived home in the evening, we chartered a trap, and were soon bowling along a level country lane *en route* for Kirby Misperton Bridge, which is on the lower portion of the club's water, and which was to be our starting-point. Dismissing our Jehu, we commenced putting our rods together, that operation being greatly accelerated by my friend's announcement that he had just seen a thumping grayling below the bridge. I got to work the first, and at the third cast up-stream I hooked a small fish, about a quarter of a pound, which was duly landed. "Green Insect," I shouted, in reply to my friend's inquiry what fly the fish had taken, and accordingly he put that fly into his cast as top dropper. We fished on for perhaps a mile without another rise, excepting baby fish about two or three inches long, with which the river appeared literally to swarm. We accordingly held a consultation of war, under the lee of a thick fir plantation, and eventually decided to cross a ricketty plank bridge and try the other side.

Hitherto we had seen very few really good-sized fish, but now they appeared more frequently, and at last my friend beckoned to me to approach cautiously. I had the pleasure of seeing a real two-pounder, waving his tail and huge dorsal fin slowly to and fro, showing in fine relief against a patch of golden gravel.

I should have mentioned before that the great fly on the Costa is a kind of small silver-bodied Alexandra, with a bit of red swan and jungle cock in the wing, so that when we had both of us cast some half-dozen times over the above-named leviathan, we concluded that the best thing that we could do was to try the favourite well sunk. "Redspinner," in his usual unselfish way, wanted me to have the first try, but I would not hear of it; and at the third cast had the satisfaction of seeing a big wave in the water, and hearing the welcome cry of "Got him." Our triumph, however, was brief. One tremendous plunge for the weeds, the sight of a broad silvery side in the crystal water, and the next moment the line floated like a pennant in the breeze. Our faces were a picture, but nothing further could be done; the hold had simply given, and the fish departed to his shelter under the weeds, *liber et exultans.*

We had gone a short distance farther when we met a couple of anglers—father and son—who were fishing in turns with one rod. They had killed three and a-half brace between them, a couple of the fish being about 1½lb. each. On inquiry, we found that all these had been taken out of one place, which was a sheltered corner under a plantation, and where the wind just ruffled the surface; whereas the part that we had been fishing was exposed to the full fury of the blast, which was now blowing a small hurricane. Round the next corner we found perhaps a quarter-of-a-mile of sheltered water, and out of it we both got a few decent fish, chiefly with Red Tag and Little Marryat.

Metcalfe, the head-watcher, now appeared on the scene, and had a long chat with us about the water, recent sport, &c. It seems that up to mid-day the top length near Pickering always fishes the best, the fish rising there more freely; but towards afternoon, the water that we had come from should be visited.

As the sun began to settle westwards the wind lulled a little, and we strolled slowly onwards, casting here and there in a likely place until we arrived at the lower mill. Before reaching that place there is about half-a-mile of shallows, with pebbly bottom and patches of weeds here and there. It is here that the trout spawn, but not with satisfactory results, so that the club are seriously meditating the introduction of yearling fish into their waters. A single line of rails (to Kirby Moorside) crosses the stream in the middle of this length, and below it, in a gravelly basin, we saw what "Redspinner" quaintly termed "a mob of grayling." There must have been at least fifty, and some of good size; but the rise was over for that day, and we walked up-stream to the second mill, where we had ordered the trap to meet us. The stream rises about a mile above Pickering, at a place called Keld Head, coming direct out of the earth like the generality of the rivers or becks in that district. Near the source, Metcalfe told us there are several monster trout, which defy the angler's art.

Some very heavy trout have been taken from the Costa. Some eight years ago, one of nearly 9lb. weight was taken from a deep hole below Misperton Bridge, on a trimmer, sad to say. A friend of mine, Mr. H. Coverdale, of Pickering, was paternostering for pike, in the last week of December last year, when he hooked something considerable, and which flew about in a very lively manner. He never saw the fish for some time, and then he beheld the spotted sides of a huge trout. Metcalfe was with him, and ultimately the fish was landed; it had, however, gorged the hook and rather than injure it by endeavouring to abstract it, the gimp was cut off close to its mouth and the fish returned to the water. It measured 23½in. in length, and 13½in. in girth. Mr. C. estimated its weight at 6lb. or 7lb. I told him at the time that I should have considered him quite justified in killing it, as such fish are quite as destructive as pike in a club's preserve.

Now comes the most curious part of the affair. In the early part of June in the present year, there was a flood in the Costa, and after it had subsided, a farmer, named R. Kitching, was walking along a ditch on his land, when he saw a large fish almost stranded. After some difficulty he succeeded in landing it, when he found it was a large trout, which measured 23½in. in length, and 13in. in girth, weight 5½lb. The fish was sent for preservation, and upon being opened, Mr. Coverdale's pike tackle was found just as it had been cut off nearly six months previously. As the fish measured half-an-inch less on girth in the May-fly season, when he ought to have been much more, it is only fair to assume that he had wasted, and ought to have been nearer Mr. C.'s estimate.

But to our fishing once more.

The next morning appeared a much more likely day, the wind not being nearly so blustering; we were therefore eager to commence business, and at ten o'clock we were both on "bended knee," casting a single dry fly on the shallow, between the lower mill and the railway bridge.

I should have said that the club limit of takeable fish is 8½in., and we caught several under that size before we basketed one.

"Redspinner" drew first-blood in the shape of a nice half-pound trout; and then I left him the upper water to himself, and walked half-a-mile down-stream to the plantation, where I knew there were some good fish. Here, the water being deeper, I changed my single fly for a cast (consisting of the Alexandra arrangement) as point-fly, a red tag as first dropper, and a partridge hackle with a rough red body and gold tip, as the top fly. I had not been long at work, when I hooked a good grayling on the last-named, but after a roll or two he escaped. I murmured something softly to myself, and made a cast into a little bay between two thorn bushes on the opposite bank. A three-quarter pound trout responded at once, and was just being transferred to my creel as Metcalfe approached. After another false rise or two, we proceeded to the end of the plantation, where the river took a turn, and there I experienced some good sport. Kneeling on the ground, and casting carefully towards the opposite bank, I caught six or seven nice fish, nearly all on the tail fly, besides losing several others. While I was so engaged, my friend passed. He said he had killed other two grayling and a trout, and he started fishing about fifty yards down-stream. He had not been there ten minutes when I happened to glance in that direction, and saw his rod bent almost double; at the same moment he commenced running down-stream. "He is into a good one at last, Metcalfe," I said, "run and help him;" but before he could get to the place, I saw "Redspinner" stoop and net the fish, Metcalfe returning shortly after, announcing it to be a two-pounder which had fallen a victim to the Alexandra. So the day went on, and when we reeled up near the mill again in the evening, we had a very pretty spread of beautiful silvery grayling, and three or four trout, on the grass.

After October the worm is allowed below Black Syke Foot, and then grand sport is experienced among the large fish with which the river swarms. I hope to have another couple of days there as soon as ever the first frost appears. Metcalfe is an excellent keeper, full of odd experiences, and thoroughly well up in natural history. I quite enjoyed listening to his conversation. I wished our stay had been longer; but as we had arranged to meet Mr. Phillips, the genial hon. sec. of the Costa Club, at Helmsley, to fish the Rye the next day, there was no help for it. Our adventures on that beautiful river I will relate in my next article.

(*To be continued.*)

A NIGHT WITH THE CONGER.

By Clucas Gill.

It is just a year ago since I received a telegram from my brother, telling me to catch the ten o'clock train that night from Euston for Liverpool. We had arranged to spend our holidays in the Isle of Man, induced thereto by the glowing descriptions of the beauty of the place, given by our friend, the manager of the Bank of Port. St. Mary, who wound up by promising us a night's conger fishing if we would visit him. Hence the telegram; and the next day we were driving into Port St. Mary, "The home of the artist and the pleasure-seeker," through a fine drizzlin grain, to receive a warm welcome from our Manx friends.

Day after day we spent on the cliffs, or in the bay; but each evening saw the clouds coming up from the south-west, bringing a heavy swell which prevented our getting our night with the conger. We had spent a day on the Calf of Man, and fished without success in the strait; we had shot rabbits every evening on the cliffs, and had spent one calm day on the Chickens' Rock Lighthouse, making friends with the keepers; but our brief holidays were nearly over before we got our wishes so far as conger fishing was concerned.

We had heard wonderful yarns of the sport afforded by these monster eels; of their biting through the thickest leather with ease; how fishermen would sometimes as lief let them go as keep them, when it became a question as to which was to remain in the boat. And so, when our friend Cannell hurried in one afternoon, and told us we were really going at last, and that Breeze (the lighthouse-keeper on holiday) would go with us, we experienced those joys of anticipation which are never spoilt by the dregs of fact.

Scouring the little town for fresh herring for bait, and borrowing a couple of lines as reserve from an old fisherman, we got down to our boat after tea to find all the fishing population ready to see us off, with good-humoured chaff, for had not the most experienced declared the season was young for conger, and was it likely cockneys would succeed where natives had failed? Each of us had on two suits of clothes, for the air bites shrewdly at night on the sea, even in August. With no little pride in our "feathering," we went across the bay, and made for the Calf, for it was under the lee of that little isle that Breeze intended to anchor for the night. What a pull that was! It took an hour's hardest of hard work to get across the strait. Breeze told us he had seen a boat with four fishermen for three hours try to cross, and then they gave it up, so strong are the currents which rush round Manx land. We were all right under the Calf, however, and soon we had anchored and had our light lines out. Not for conger, however, it was too early for that. In an hour we had a 6lb. cod and a dozen callach (?) in the boat, when, at Breeze's suggestion, we started for the lighthouse for more clothes.

He thought the tide was a thirteen-feet one, whereas it was one of sixteen feet six inches—a serious mistake, and one which nearly cost us our lives. The idea was to creep along under the cliffs until we got to the end of the Calf, and then, striking boldly into the current, to let it carry us down until, by careful steering in the midst of the stream, we reached the rock. From the point of leaving the land to the lighthouse was about one mile, but, to our surprise, we found we were in the swirls of the parting current in front of the rock before we were aware. Desperate pulling almost carried us into the smooth middle water, when the last swirl caught us—the boat spun round like an autumn leaf in a corner, heeled over, and, as we hung over the other side with our legs in the water, the edge of the swirl knocked us into the calm water. Then we could attend to the three lighthouse keepers who had been down on the rock shouting directions and watching our struggle. Their faces were worn and haggard with the intensity of their feelings. Fully expecting to see us swept away to death, they knew they could not help in the least, and that, if we did not reach the rock, no boat could live in the boiling backwater beyond.

"Ye have reason to thank God this day, lads," said Black, as we landed, and with bared heads we stood while the good old Scotchman gave thanks in a trembling voice for the wonderful preservation of his young friends. It was wonderful. He who doubts that, on a specially calm evening, we could have been in such peril, let him write to the head lighthouse-keeper, Chickens' Rock, Isle of Man, and ask whether it would be advisable for anyone to approach the rock with a sixteen-foot tide running, whatever the weather; no doubt the reply would contain an allusion to our adventure last year.

My brother and I stood watching them moor the boat, when, stooping, I tore off a mass of seaweed, and threw it into the current. In a moment it was out of sight down the stream. We turned, looked at one another, and silently shook hands, and then climbed the ladder into the lighthouse. Two hours later we were fighting the current again. Had we stayed, the boat would have been smashed, and Black's duty would have been to have reported us as "shipwrecked mariners;" and the results might have been serious to Breeze—whose manful exertions had saved us—for taking us near the rock with a high tide running.

High water sweeps over the rock, but the current slackens half-an-hour before. We therefore got into our boat, and pulling into the V of slack water, for an hour we maintained our position, our friends of the beacon watching us from the platform round the lamp. Every now and then, Black's voice came floating down, "Are ye comfortable down there?" And the reply went up, "Comfortable it is" The adjective afterwards reminded us of Sam Slick's "miserably fat turkey," but it was no laughing matter at the time, and we were glad when we found ourselves gradually pulling away amid the parting cheers of our friends above. Our clothes had been dried, so we were fairly "comfortable" when we settled down to fish under the cliffs of the Calf. Weird was the effect as every seven seconds the light came round, showing up every plank in the boat and every detail of the overhanging cliffs.

Before long, however, the excitement of conger catching—for, in spite of the prognostications of the experienced, we were successful—made us forget our surroundings.

Cannell struck the first—feeling the hook, it went sweeping round in huge circles. The other lines were quickly taken in to avoid tangling, while round and round it went, the phosphorescence of the sea, enabling us to follow it as we leant over the sides of the boat.

We got it up at last, only to see it go slap over the other side, and we had the struggle over again. When in the boat, we found we had but a small pocket-knife with which to kill it. Holding its head on the seat, Breeze felt for the nick in its neck, and thrust the blade in, only to find it snap off short; so we had to stun the rest of our catches by punching them with the boat-hook in "the white."

Out went the lines again, and by four o'clock we had six fine fellows, when, in the increasing light, Breeze lifted up our first catch, already dead, though the rest were moving sullenly up and down, groaning and hissing, and shouted, "Look lads, it's no an eel we've caught the neet; saw ye ever an eel with gills like that? 'Tis a ling, and the finest ever caught off the Calf," and so it was.

At six we hauled in our stone anchor, and set off for the lighthouse again—a risky proceeding I thought; but we got there all right, had some breakfast, and after wishing a kindly farewell to the keepers—men Britain may well be proud of—we pulled home. After passing Spanish Head, the back current carried us across the bay with so little effort on our part, that at one time the boat and those in it were asleep on the placid sea.

When we got to Port St. Mary, hearty were the congratulations of the fishermen, and many were the visits paid to the owner of the boat, to whom we gave our catch, and who placed them on view prior to despatching them to Liverpool.

The others lounged about all day—self-satisfaction writ large all over them—but going to my room for a bath, the bed looked inviting, and I knew no more till sundown.

MR. W. F. F. ROBERTSON.

By Garthdee.

Knowing that the readers of the *F. G.* delight to hear of any noteworthy angler, irrespective of his social position, I have roughly drawn up a short account of one of our best-known and most-respected Tyneside anglers—viz., Mr. W. F. F. Robertson, late Wylam-on-Tyne, but who has now made Hexham his headquarters.

Like most anglers of repute, he first saw the light of day on the other side of the Border. He was born in the vicinity of Sanquhar, situate on the Nith side. Afterwards he removed, with his parents, to the County of Ayr, whose river was at one time one of the best trout streams in the North—but now, alas! from various causes, sadly deteriorated; it, however, still holds its own as one of the best streams for grayling. On this stream, Mr. Robertson received his first lessons in the angler's art. Later he visited most of the best-reputed streams between Berwick and the south-west of Scotland, and tested for himself the fishing capabilities of each, at the same time improving himself in the theory and practice of his art. From there he turned southward and proceeded steadily, trying the various streams on his way until he reached our Coaley Tyne, upon whose banks he has long resided, and where I have heard him repeatedly declare he has spent some of the happiest hours of his life. He possesses a fine, tall, athletic figure, with a genial and pleasant face. He is, like most Scotchmen, naturally fond of all out-door sports, but angling is his pastime of pastimes.

MR. W. F. F. ROBERTSON.

During the seventeen years that he has resided on Tyneside, his exploits with the rod and line are well known, indeed to see him throw a line is simply a treat; he can throw equally well with either hand, in fact he can throw better with his left hand than many anglers can with their right.

J. G. Wood, Esq, of Newcastle-on-Tyne, in a letter giving an account of a day's fishing in Miss Allgood's water at Hexham, says: "On the Hexham side of the stream was Mr. Robertson, who landed five fish, weighing from 8lb. upwards, a most difficult achievement to perform, deep and dangerous wading being necessary, and long casting; but at the latter Mr Robertson is an adept, in fact, a *gem of the first water.*" His biggest kill on that stream was, I believe, seven in one day, and the weight over one hundredweight.

At the waterside, Mr. Robertson is kindly and genial, and ever ready to give a tyro the benefit of his knowledge and experience, and many an angler, myself included, have been indebted to him for many a valuable hint, which has operated very materially in increasing the weight of our creels.

He is a very temperate man, but can take his glass in reason, and those who are fortunate enough to obtain his services, either as an angler or tackle-maker, will find him always obliging and cheerful. He knows his work and does it well.

THE ANGLING PASSION TRIUMPHANT.

By Edgar S. Shrubsole.

In a southern town, which for my present purpose shall be nameless, there dwells an ardent lover of the gentle art of angling, one who espouses sport and activity of every description. The ranks of the Local Volunteer Fire Brigade, and the Ambulance Corps know him, a prominent and popular officer of the Rifle Volunteers, he is known as a sure shot, and is bursting for the time to come when our great civilian army will "prove they are Englishmen." In the contests of cricket and football he is found a formidable antagonist, and in fact he is a good all round man.

His hours of relaxation, when the sun has gone down, are devoted to the billiard cue, or to consorting with boon companions. Very popular is our friend, and his word is accepted as final upon matters appertaining to sport generally, and angling in particular. He is also considered a good judge of an old October brewing, and this last-named accomplishment has been very frequently the means of sending the subject of this veracious narrative to his home and family—for he is married, very much married—in the small hours of the morning, and in that condition which is euphemistically denominated as "fresh." It has, too, placed him in situations which have gained for him a rather extensive local notoriety for amusing and witty escapades, one or two of which are worth relating here.

The old tale of the tin fish possessed our friend upon one of these early migrations, and when he chanced to pass the bedecked establishment of the local seller of fishing tackle, his optics, though dim, enabled him to discern the fishing rod which projected from the premises, and the line with the orthodox metal fish attached. With instinctive alacrity he began to pull at the shop-door bell, and to kick with might and main at the panels of the door itself. The shopkeeper was as might be expected, disturbed from his peaceful slumbers, and with alarm he appeared at the window and inquired what was the matter? The belated disciple of Izaak replied, "Why, you old idiot, you've got a bite" (pointing to the tin fish), "and you don't know it." The irate shopkeeper at once knew he had been had by a chestnut, and his feelings may be imagined; but, recognising his visitor with a charity which did him credit (!), he thanked the jovial interferer with his repose, and bethought him of immediate retaliation. He held out the inducement of a view of "some of the finest live-bait you have seen for years," and further instructed his visitor to go quietly down the passage and unlatch the back gate; "I'll be down at the kitchen door to let you in." "Right you are," says our friend, and away he goes in the desired direction. It was a dark—a very dark—passage, but he knew his way, "every inch of it"; and, arrived at the back gate, he lifted the latch, and——the next instant there was a yell and a splash. The local waterworks company had been "looking to a loak," and had to go some depth for it; the soil in the particular locality, a foot below the surface, is clay, and our friend found himself at the bottom of a pit about 8ft. deep, with perpendicular sides of a soft greasy nature. Vain were his attempts to get out of his prison, until the shopkeeper, thinking of our friend's wife more than our friend himself, consented to lower down a ladder, and the late prisoner wended his way home, having every appearance of a brickmaker and a sewage man combined.

The habits of our Bohemian friend, as may be conjectured, very frequently reduced him to the unpleasant condition known as the impecunious, and upon one of these occasions his watch was deposited with "mine uncle," in order to "raise the wind." It so happened that at an early hour in the morning of a dark day in November he was meandering past the shop of the local pawnbroker, when the sight of the pendant gilt three-fold sign reminded him of the transaction with the owner. To vigorously pull the bell and kick at the shop-door was the work of an instant, with the result that the half-drowsy pawnbroker came to the window and loudly demanded the cause of the sudden disturbance. The reply delivered in stuttered accents was: "I want to know the time, and you've got my watch!" Tableau!

Particularly addicted to beer as a potation, his capability for partaking of an October brewing was unlimited. Upon one occasion, when on fishing bent, he pulled up at a roadside inn, and calling loudly for the landlord, asked him if he had any *good* beer. The reply being in the affirmative, the beer was produced, and *three pints* rapidly disappeared down our friend's throat. "Ah," said he, smacking his lips, "that *is* good beer. Here!"—to the ostler who was looking on at our friend open-mouthed—"just hold the pony's head, *I think I'll get down and have some!*"

These are small incidents, by the way, but the crowning episode in the somewhat eccentric career of our friend is the one which I propose to narrate as it actually occurred, leaving the moral (if such there be) which attaches to it to be drawn by my readers. Before proceeding to do so, I must say a word upon the manner in which our friend scoured his worms for hook baits. Those of my readers who know the dodge will not mind the repetition, and those who do not will probably be pleased with the information; all will probably appreciate the concluding portion of this paragraph. When he really meant it, our friend would bait up a bream hole for days before he fished it, and during that time would scour the worms, which he intended for the hook, in the following manner: He would first of all place them in damp—not wet—moss for at least three days, constantly shifting them about and picking out the dead or dying ones. Then he would take the healthy worms, one by one, and place them in another large tub filled with thoroughly cleansed moss, and feed them on eggs and milk! Fact, I assure you! He'd get about a pint of milk, and whip up in it the yolk of an egg; a little of this was sprinkled over the moss once a day—and it's a splendid tip if you care to take the trouble. Treated in this manner the worms get beautifully bright, pink-coloured, and tough. I have said our friend was very much married. Upon one occasion the sharer of his joys and sorrows thought he had had *quite* enough fishing for a time—and a day or two before a projected fishing excursion—a magnificent lot of worms, that had been liberally fed upon eggs and milk, and were literally in the pink of condition, received an ample sprinkling of salt at her hands! Our friend's language can be better imagined than described when he discovered what had happened; but his better half got the worst of it, after all, for he went away, all the same, for a day's fishing—and stopped a week. This is a true and awful warning to those angler's wives who object to their husbands going a-fishing.

In the town of the nationality and abode of him whose idiosyncrasies I have faintly indicated, there is in full working order a mill which affords employment to many hundreds of men and women. This mill is picturesquely situated in a lovely valley, and its surroundings embrace the most charming sylvan beauties. The house of the proprietor, a stately building, has stretching from its portals a commanding lawn of emerald verdure, and flanking the lawn and in close proximity to the mill premises is an extensive pond, which is well stocked with coarse fish of every description. For permission to fish in this water, our erratic friend had, on many occasions, applied, but for reasons which were not stated, his applications were not acceded to. Often in his wayward wanderings had he glanced at the forbidden pond, and as far as his sense of devotion allowed him, he had offered up a prayer to that fickle God Fortune that she would be propitious in aiding his angling desires. Little, however, did he think of the curious manner in which the jade would befriend him and how soon the great object of his angling ambition would be gratified.

It so happened that at early morn in the month of August the mill to which I have referred was discovered to be on fire, and the members of the Volunteer Fire Brigade, of which, as I have said, our friend was a member, were called out. Overcoming a heavy drowsiness, he rose in response to the call of duty, donned his fireman's costume, and sallied forth to the station. He learned that the *locale* of the fire was the mill contiguous to the much-coveted water, but he found that the engine, manned by his comrades, had departed, and that nothing was left for him but to proceed to the spot on foot. In doing this he passed near to his domicile, and when within sight the thought flashed through his mind that in some way opportunity would arise for a quiet turn at fishing in the pond without the permission for which he had so long sought. Instinctively he entered his house, and reached down his roach rod and tackle-book. The only bait available was the crumb of a day-old loaf (and a very good bait too) and this was quickly appropriated and stowed away.

The scene of the fire was reached, and there he could discern his old chums all engaged in the self-denying and heroic labour to which they had voluntarily devoted themselves. To get at the conflagration he had to skirt the pond, which, in the soft break of day, presented a picture of lovely repose. Before him was the raging fire, and nearly at his feet the pond, upon which his hopes had been so long set. Duty called him to the fire and his angling passion to the pond. For a few moments he mentally struggled as to what his action should be. For one moment duty triumphed, and in the other the angling passion. Like the lady described by Byron, he

> "Struggled oft, and oft relented,
> And, vowing he would ne'er consent,
> At last consented."

Angling gained the supremacy over his will, and making for a quiet and secluded nook, our recreant fireman put to his tackle, threw in his line, and, to his ecstatic delight, fish after fish fell to his lot; and by the time the fire was nearly extinguished, he had filled his knapsack with a couple of dozen as fine roach as ever fell to an angler.

It is the practice when fires have reached the happy stage of subdual, for much-needed refreshment to be supplied to the firemen, and as our friend felt in the condition described by himself—namely, that if anyone had kicked him, dust would have come out of his mouth!—he put his tackle and fish in a place of safety, and with an innocent effrontery warranted by the occasion, presented himself in the throng of refreshment-takers, and partook of his share of the supply. In the bustle and excitement his absence had not been noticed, and therefore no remark was made.

This narrative its subject is fond of relating to a few of his more particular friends, and in publishing it I am willing to bear the full force of any irate feeling which the publication may cause him. But I don't think he will drop on me very severely!

SPORT BY NIGHT IN NEW ZEALAND.

By W. H. S.

It is the first week in '91. The scene, a bare, bleak spot on the Canterbury Plains—a low, barren, uninteresting flat, with nothing growing on its surface near but the coarsest grass and rushes. An acre of it would not produce sufficient nourishment for a single sheep. No living creature cares to stay there except swarms of marsh flies, that rise in angry thousands at our approach, exulting to find at last some animal on which to prey; in front, an apparently almost interminable expanse of water, bounded only at a great distance by a low range of hills; far behind, a few clumps of trees scattered here and there, marking the site of a homestead on the plains—surely the last place in the world to spend the night for choice.

Only turn round and walk back a mile or two; there is splendid grass and waving tussocks. If the sky is to be your only covering, surely it will be better to pass the night there, where there are no marsh flies nor a single harmful thing to disturb your sleep. The evening is warm and delicious, and there it will be no great hardship for once to lie on the sweet-scented grass during the few hours of darkness at this time of the year. Why choose a wet, sandy, dismal swamp, hardly raised above the level of the stream, that may be swept by any sudden gust from the south-west, coming cold and biting, even in summer, from the surface of the lake, flinging particles of sand and dust with stinging violence in your face, when yonder is a comfortable couch?

What on earth can induce human beings to cluster here so late as this? Already the sun is nearly gone; yet we three land and drag our canoe ashore as though our day's work were only just beginning. Two other apparent lunatics are there already, seemingly for no other purpose than slowly to fill their pipes. At a distance of a couple of miles several others are evidently making their way towards us—now a cart, now a buggy arrives; occasionally a man on horseback. Soon we number over twenty souls. This sandy waste, which half-an-hour ago was barren—bleak, and desolate, is full of life. It must be that a meeting of some sort is about to be held—a secret meeting, too, for nearly every man carries a lantern. Has this bleak, desolate, out-of-the-way place been chosen by some band of conspirators, to avoid discovery?

Yet what object can these have in common? Workmen, labourers, Government officials, lawyers, schoolmasters, well-to-do farmers, professors, clerks—all are here, all unanimous, all evidently actuated by some common object, all well drilled, too, for each goes about his business, whatever it is, after only a word or two with the others. No one attempts to take any lead; there seems no head or tail to this meeting—a Socialistic gathering of some sort, certainly, for our professor yonder is chumming with Tom White (who has a contract for cutting gorse), while the two are busy cutting tobacco in the most approved colonial style, and interchanging ideas of consuming interest to both.

The scene is the mouth of the Selwyn river, where it enters Lake Ellesmere. As the sun sets, the great trout come from the lake to the river to chase the little silveries and bullies and gorge themselves therewith. We are all actuated by one common object, a new kind of sport—trout fishing by night.

There is no waste of gorgeous apparel here; nearly every man is equipped in the commonest, but most comfortable garments. C.'s trousers would be more complete and useful if they possessed their proper quantity of buttons, fewer holes, and less dirt. H. has a shirt with different coloured arms, while my own hat and general outfit would be dear at eighteenpence to a swagger. Yet what do we care? We are out for a holiday, and our object is to catch trout, and mighty ones will be here presently this warm night; and there is not a man amongst the crowd who would not sit down without hesitation in the dirtiest mud pool on the flat if it expedited the catching of a ten-pounder. As C. says, after all, it is mostly sand and water, and we can wash it all off to-morrow, and dry our things while we enjoy a glorious bathe in a deep pool of the Selwyn near our camp. C. has a special facility for acquiring sand and dirt when on a camping expedition, and H. and I have much difficulty in keeping his washing arrangements up to the mark.

But mark the tackle, as each man puts his rod and line together, and fits it with a 6ft. cast; there is no mistake about that—everything is of the best, no frayed gut, no weak lines, no cheap and bad winches, no worthless rods; everything has been overhauled with the utmost care before being put together, and the gut well soaked in our bait cans, for we are too old hands not to know that success or failure depends more than anything upon attention to details like this, and that the newest hat and best shirt in creation won't be of any avail against that leviathan that H. lost the night before last, then only thought to be about 8lb., but which H. is certain now was at least 25lb. If somebody doesn't catch that fish to-night he will have grown into a 20ft. crocodile by the time we strike camp next week.

It is evidently too early yet to begin fishing: several have been trying the last hour with no result. You can never tell, though; the fish may begin to feed at any moment, so we put on our fishing stockings and take a turn, just arranging things carefully in the canoe, and putting our mackintoshes handy in case a shower may come up from the lake. The bank of clouds in the south-west look like it too; we shall get some sport at some time or other to-night, if we only stick to it.

What a queer and incomprehensible thing is a trout! Often for hours not a fish will move. Your choicest baits and most skilful casts, where you know there are hundreds of fish, are of no avail; then suddenly, with no apparent cause, every fish in the whole river seems on the alert, and not only here, but all up the river, the water is alive with fish. I have fished a stream teeming with trout for four solid days without moving a fin; and yet, at another time, fishing in the same water, in the same condition, and with the same wind, almost every cast has produced a rise.

Apropos of this, about two years ago I was fishing with a well-known resident magistrate and his brother in the Waitaki. On the evening of our arrival I had had grand sport, catching 28lb. weight of trout in about two hours, without moving fifty yards, besides losing several good ones. These I had to carry home on my back in the dark. The next morning we all determined to try this place again, and it being about two miles from our hotel, B's. brother and I had a long wrangle whether fish could be best carried on a string or in a kit. At last a happy thought struck us. The resident magistrate was noted for his decisions, and it should be left to him to decide on the best way of getting home the trout we were sure to catch. He decided the matter off-hand—a man on horseback should come down to us with a sack, and take the spoil. Steadily we fished on, for three, four, five, six hours, and not a fish did we move. Presently, along the top of the bluff, appeared the man on horseback, a large sack conspicuous on his horse's neck, and there he promenaded for two hours while we fished, and fished, and fished below, and the recriminations were frightful; B's. brother openly saying, if that was a specimen of the resident magistrate's decisions, he wouldn't give a twopenny something for a bushel of them. Next morning there was seven-and-sixpence in the bill for the man with the sack. B's. brother and I decided off-hand that he and I were not liable on that item, and absolutely refused all leave to appeal.

But Tom White below has got a fish, and a good one too; a sharp and short struggle, and an eight-pounder is gaffed. The fish are about to move, and we leave the shelter of the canoe, where we have been taking in grub, lying sheltered from half a gale of wind from the north-west, and start fishing in earnest. It is no good, however; two hours more of it, but not one of the twenty rods has touched another trout, and then most of them throw it up, and make off home, wondering how on earth it was the fish did not take to-night. Beside ourselves, only one angler is left—left in a double sense, for his horse has got away, and he must wait till the return of light before he can hope to find it on the flat.

It is one o'clock, and we go back to the canoe and take a slight sip of something from a little flask, which, on occasions like this, can generally be found in H's. coat pocket, though oftener empty than not. It is dangerous work leaving the flask with H. when the fish don't bite; however, it is all right this time, and another hour passes listening to choice and chaste anecdotes from C. of his experience in the north island. We can sleep all day to-morrow in our tent, two miles up the river, if necessary, and we intend to stay it out. Meanwhile the clouds in the south-west are getting bigger, and the man who has lost his horse advises us to go home. He would, if he only had the chance; and he enlightens us as to his course of proceeding with that something—something old horse when he does get hold of him. After a pull at the flask, however, he agrees to let the horse off half of it.

Suddenly the wind changes round to the south-west, and we know at once that now is our time. H., who is a little ahead of C. and myself, throws in his smelt, and before I can get my line in the water he is fast in a trout; in another minute a yell from C. tells us that he is fast too, and before they are landed (both good fish of 6lb.) I am aware that a mighty one has taken my bait; he gets away, though, five minutes later, but why I cannot make out; he was well hooked and the tackle is not broken, so I bait again, and have not moved a yard before I am fast in an eight-pounder. This time he is safely landed, and as we lay the three prizes side by side and admire their wonderful condition, we forget the long hours we spent in vain, and hasten to re-bait our hooks. The fish are on the feed, and for two hours either one or the other of us is fast in a glorious fish. Then, as the first glimmer of the dawn shows itself behind the tops of the distant hills, and another day in life's mystery begins, they cease to take the bait everywhere as if by mutual consent, and our sport by night is ended. We gather up our spoil —twelve trout, weighing 68lb.—a glorious end to an unpromising beginning; not the biggest take of the season by any means, but enough surely to satisfy the most exacting angler. Slowly we paddle up the river in our canoe, reach our camp about four a.m., have breakfast, and go to bed.

Waltoniana

The following extract from a letter I recently received from a friend is somewhat instructive reading: "I was up at the big artificial pool, and found that though there was a good stream there was no ripple. Remembering the day on which I took eight fish out of it when the water was smooth, I tried a trout cast and sunk a good-sized Jock Scott. I felt a tug under water, in the hole above the tail of the pool where the water was quite smooth. I struck to no purpose, and, after cutting off a lot of the fly that overlapped the hook, tried again; and what they call a 'sulky boil' was the result, but although the fish did not take the fly, Sandy was satisfied it was the biggest fish ever seen at G. So again I tried with the fly well sunk; and the fish came slowly swimming after it, near the bank. Half in desperation, half as an experiment, I gave the fly a little jerk which made the fish dash at it and take it right down. No need of striking, and very lucky too, as he was right under my nose. I did not know which was most astonished, the fish or myself. He sailed up the river, with every inch of line before I could say 'Jack Robinson,' or run after him; and how I blessed W. for sending me ten yards more line than I ordered. And in due course it was landed; and was not the largest ever taken from the river, but much above the average."

I have some bad news for the many anglers who fish the Bedfordshire Ouse. A company is in the course of formation to re-open the navigation of the river between Earith and Bedford, and if the project is carried out, the effect on the fishing will be very serious. Of course, where considerable commercial interests are involved, everything else has to go to the wall; but a lament over the introduction of steam traffic on the waters of the fishy Ouse may be allowed. Not only do the steam-tugs and launches scare the fish, but they actually kill the small fry by thousands by washing them high and dry on the banks of the river. I have seen some millions so destroyed on the Thames. But perhaps the greatest injury of all which is done by these abominations-in-the-sight-of-anglers is the washing away of spawn in the spring-time of the year. Once the eggs are shifted from their position among the weeds, they either sink to the bottom, where they die, or get washed down-stream, and fall a prey to a variety of the enemies of fish, including fish themselves and water-birds.

Of course it will be very pleasant to have the locks in working order between Bedford and the Wash, and if a canal is made between Bedford and the Grand Junction Canal, there will be through communication by water between the Midlands and the East Coast. But no longer will there be a first-rate river nearly as large as the Thames where the angler can peaceably and quietly pursue his favourite sport. The next best river to the Ouse will probably be the Warwickshire Avon, but nearly the whole of that river is in private hands, a considerable portion being let to Birmingham angling clubs. The fishing it affords for roach and some other coarse fish is decidedly above the average.

I hear unpleasant rumours that certain riparian owners on the Upper Thames intend netting the meadows as soon as the floods subside sufficiently for the purpose. It has been done before in the Henley district, and a great quantity of fish killed. I can imagine nothing more unsportsmanlike or more selfish. Possibly the riparians are within their rights in acting in that manner, but if that be so, the sooner the Conservators obtain powers to put a stop to the practice the better. The way to pay these gentlemen netsmen back in their own coin would be to rent some land close to their pheasant preserves, lure their birds on to it by a plentiful supply of corn, and then slaughter them ruthlessly. They might then understand the feelings of others when their sport is spoiled by this wholesale slaughter of Thames fish.

Newspaper writers have been making the most of the Thames floods, but, as a matter of fact, nothing so very extraordinary has taken place. About nine years ago the water was as high as it has been recently. Had the wet weather continued for a few days longer we should have had floods worth talking about. On Saturday last, the river reached its highest, but on Sunday fell about a foot in the upper reaches. On Monday the fall was checked by a fresh downpour, but the water did not rise. On Tuesday and Wednesday there was a considerable fall of water, and, so far as colour was concerned, the river was in by no means had condition for fishing. The difficulty was to find the fish, as they were still scattered over the meadows. By the time these lines are in print, I expect the river will be fishable, but the weather has been subject to such sudden changes that nothing certain can be said. If there is no more considerable rainfall during the next few days, and we are favoured with a frost or two at night, some remarkably good perch and pike fishing should be enjoyed on most of our South of England coarse fish streams.

The difficulty I always find on the Thames at such times as these is to get baits. Minnows—which in particular cannot be done without—hide themselves in the most marvellous way. If you can find them at all you will probably find them in goodly numbers, but they will not come over the minnow-net as they will when in the river during the summer months. Ditches and brooks communicating with the river are the places to find them, and unless a fine meshed little flue-net is available for the purpose, the only plan is to hold the round minnow-net at a slight angle, and get someone to drive the minnows into it. Minnow catching in winter is quite a fine art. By the way, there is a plan by which minnows can be caught in a glass trap, and I should be very glad to know who makes such traps, and if they really answer at this time of year. Templar.

Increasing the Stock of Fish in the Thames.—It is now some time since the committee of the T.A.P.S. have been able to increase the stock of fish in the river by means of netting a lake or reservoir, but that has not arisen from want of making application for such a purpose. The river, however, in the Chertsey district has been fortunate enough, through the energy of Mr. A. E. Armstrong, the active honorary river-keeper in that neighbourhood, to obtain a most satisfactory consignment from the lake of Mr. W. C. Gosling, through the kindness of his bailiff, Mr. Stewart, in offering them to him at a very short notice. It was not until eleven o'clock in the morning that notice was given of the drawing-off of the water, and it required all the energy Mr. Armstrong had at his command to get his forces together, and a water-cart to convey the fish to Chertsey Bridge. At one o'clock, however, the work commenced and was continued until six o'clock, when during that time ten thousand roach, rudd, carp, and chub, and about one hundred perch were safely placed in the river. Mr. Armstrong was well supported in his work by Mr. F. J. T. Capes, Solicitor, Ottershaw, who rendered great assistance in their migration, and also in making an accurate return as to the quantity of fish deposited for the future benefit of anglers in the Thames. Thirty of the carp weighed 5lb. each.—B.

Thames Angling Preservation Society.—At the last committee meeting of this society, Mr. R. B. Marston, the Editor of the *Fishing Gazette*, was unanimously elected a vice-president of the society, which is the oldest of the kind in the country, having been instituted in 1837.

ANSWERS TO CORRESPONDENTS.

J. H. S.: There are plenty of grayling in the Clyde, and probably in the lower reaches of some of its tributaries.

A LEARNER: Any fishing tackle maker will show you how to put the bait on by threading, but a much better plan is to use the Jardine snap tackle.

F. W. HOLLOWAY: (1) Messrs. J. Cooper and Sons, 28, Radnor-street, St. Luke's, London, E.C.; (2) Manley's "Notes on Fish and Fishing," six shillings, published by Sampson Low and Co.

Correspondence

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. PRITT.

THE IMPROVED "MOSCROP" REEL.

SIR,—At length I have succeeded in making the reel to my satisfaction; and send you the small trout net so long promised.

In order to get at the inside, take reel in the *left* hand, and insert the thumb and first finger between the bars, and exert pressure outwards on the revolving part; then nip with the nails of the thumb and first finger of the *right* hand the small spring catches, and the reel should come out.

I do not propose to attach an adjustable drag to trout sizes, unless specially desired.

The points in the reel to which I may draw your attention are—the click, the drag (on salmon reels), the corrugated plates, and the handle.

The click is on new lines. I have tested it thoroughly: fished it a year; and also run it, from a revolving shaft, during four weeks, when it made three million revolutions, and still clicked merrily. This satisfies me that brass is durable enough, and has the advantage over steel of not rusting. You will note that the spring to the pawl is obtained by torsion: this has the advantage of pointing always centrally and of being without rivets.

The drag (in the salmon reel) is delicately adjustable.

The corrugations in the revolving plates add stiffness without weight.

The handle is solidly attached. I have left the ebonite part loose in order that you might examine it.

The reel (2⅜) weighs five ounces; holds forty yards of ordinary trout line; is absolutely without screws; and I claim for it simplicity, and quick access to the working parts without tools.

Personally I prefer a reel all black, or to be direct from the workman's (the brass turner's) hands, and to allow the brass to take a natural tarnish; but it is necessary to consider the taste of the general public, and I therefore send you the reel as I propose to make it.—I am, yours truly,

Market-place, Manchester. J B. MOSCROP.

[The objection to the old "Moscrop" was its weight. The sample sent us is as pleasantly light as the old one was unpleasantly heavy. As regards the various improvements Mr. Moscrop describes, as far as we can judge, without long trial in wet weather, they seem to be real improvements. It is very strong, very easily taken apart, and, above all, there are no screws to work loose. As regards the check, if it stands three million revolutions on a revolving shaft, it ought to wind in a good many fish without showing signs of wear; all the same, we have lively remembrance of anxious moments caused by a reel "sticking" through the cog-wheels getting worn when playing a salmon. This improved "Moscrop" has very strong claims to attention, especially from salmon and trout anglers.—ED.]

THE SLIDING-HOOK ON FLIGHTS.

SIR,—Would you allow me through your columns to draw the attention of tackle-makers to a matter which I have no doubt has occurred to others than myself? It is that the so-called sliding-hook on flights does not act as it should. One takes, say, an ordinary snap-tackle, armed with a double and small hook and a sliding-hook; the chances are that, either from the size of the bait or its movements whilst the tackle is adjusted, there is considerable sag between the sliding-hook at the back fin and the flight behind the gills, which will soon free the latter unless rectified. Now is the time for the slide, in order to draw things up taut; but will the sliding-hook work?—not a bit; as a rule it is as fixed as if whipped to the gimp. On examining, it is at once found that in addition to the gimp passing through the two eyes of the hook so tightly as to be (as a rule) sufficient to prevent the bait being drawn out of shape, two, and sometimes *three*, turns of the gimp has been passed round the shank, rendering it for all practical purposes a fixture. To answer the purpose, one single turn between the two eyes, I should say, would be ample.—I am, dear Sir, yours truly,

Bishop's Stortford. J. W. KING.

WHAT EFFECT HAS PRAWN FISHING ON SALMON?

DEAR SIR,—I shall be much obliged if you will be so kind as to give me your experience of the results of prawn-fishing upon fly-fishing for salmon. I should not ask you myself, but I have been appointed by several fishermen to make the inquiry of you. The facts are these. The river Conway is a short one, with about eight miles of fishing, narrow enough to be covered by a good cast almost anywhere. The fish are very shy. There has been a movement on foot for the use of the prawn all over the river, which has for the last two years been limited to about a mile, with six or seven pools after one o'clock. Some of the old fishermen object to it, and I for one, though I am not an old one. I have been asked by friends of yours to ask you to give us your experience, but as the matter has to be settled this week, I cannot ask you through your paper, but only privately; and several will be glad if you will kindly say if the use of the prawn spoils fly-fishing in the river, or even a pool? and if so, for what length of time, and in a shy river, if it will not affect the fly-fishing for the day, and after or even the next season, and entirely destroy the prospects of fly-fishing hereafter. Can you tell me any rivers that have suffered from it?

Your kind reply will be much appreciated.—Yours faithfully, T. DUTTON.

[We told Mr. Dutton that, in our opinion and experience, the use of the prawn is most detrimental to fly-fishing. Of course there are some heavy waters where fish never rise to the fly, where you must use minnow or prawn if you want to catch fish at all. It seems a little unreasonable to expect the proprietor of a stretch of salmon (river on which fly-fishing is useless) not to fish at all; but there can be little doubt that fish which have to run the gauntlet of a hard "prawn" water, will not rise so freely when they get to fly water as unmolested fish will. We should like some other opinions on both sides of this interesting question.—ED.]

PIKE FISHING WANTED IN NORMANDY.

DEAR SIR,—I should be very much obliged if you could inform me through the *Fishing Gazette* whether there is any place within fifty miles of the coast of Normandy where one could get good free pike and coarse fishing? I have consulted the "Anglers' Diary," but the information given is very scanty, though several places mentioned might do.—Yours, &c., P. S.

UNSIZEABLE FISH.—George Pewky was brought before the Kingston County Bench on Thursday last, charged with having in his possession twelve unsizeable roach, which he had taken out of the river Thames on Tagg's Island at Hampton Court. Mr. T. S. Bunting, solicitor to the Thames Conservancy, prosecuted on behalf of the Thames Angling Preservation Society, upon the evidence of Head River-keeper William Douglas, who stated he had previously cautioned the defendant against repeating the offence. The Bench thereupon fined him in the sum of thirty shillings.

*** **Club and River Reporters will oblige by sending in their Reports early in the week.**

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association.—Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly meeting of the general committee will take place on Monday evening next, November 2, at 8.30.—R. GHURNEY, sec.

Anglers' Association. — VISITING LIST, EASTERN DISTRICT NO. 2.—The next return visit on the above list will take place at the North London Angling Society, held at the Highbury Brewery Tap House, near Highbury Station, on Monday, November 9. That well-known and regular attendant at all return visits, Mr. Stretch, sen., is the secretary, and as this is his first return visit I hope he will have a bumper. Clubs in north London please note this and oblige.—F. THORLING, visiting officer.

THE LONDON UNITED ANGLERS' SOCIETIES' FOURTH ANNUAL ANGLING COMPETITION, in aid of the funds of the Anglers' Benevolent Society. On Friday, the 23rd, the sixth committee meeting took place, when the committee were appointed for their various duties on November 15. The following prizes were added to the list: Mr. E. Levett, a prize; Mr. E. Shrubsole, a prize; a Friend, a prize; Hoxton Brothers, a pair of lustres, value £1 1s.; North London A.S., tackle case and reel; Mr. Cuthbert, of the Odds and Evens, a second prize, value 10s. 6d. Received from Izaak Walton, 10s. 6d.; Prince Arthur, 10s.; Campbell United, 7s. 6d.; Dalston, £1 1s., for prizes. Gentlemen and societies who have promised prizes will kindly oblige by sending same to the Foresters' Hall, E.C., as soon as possible. The next committee meeting will take place on Friday, the 13th of November, when I hope to see all the committee present.—S. MALBY, sec.

Allason Piscatorial Society, Golborne Liberal Cub, Portobello-road, Notting Hill, W.—A few of our members were out on the 25th instant, but met with little success. A match takes place at Cookham, on November 22. We have some tickets for the Rye House Competition, which takes place on November 15.—W. MILLER, sec.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting Hill-gate, W.—The match, which was arranged for the 25th ult. was not successful, no prize being taken, therefore the match will be discussed at our next meeting, and will take place on Nov. 8, two rods, jack, eels and pope barred. Members are therefore notified that less than a half-pound of fish will not take a prize. [See Cobden Club report.]—B. ABRAHAMS, sec.

Alma Angling Society, Crown Distillery, Vere-street, Clare Market.—Several of our members were out on the 25th, but returned with a blank, on account of not being able to get near the water. Our quarterly competition is postponed to Nov. 8, on account of the flooded state of the river. Our secretary was out on the 27th, and weighed in 15lb. 12oz., including a grayling, 14½oz., a dace 10½oz., and best roach, 1lb. 1½oz., a nice show of fish.—J. PAILES, sec.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—On the 25th inst., Messrs. Moir and Abel weighed in roach, bream, and jack. It was proposed by the members present on Wednesday last, that we fish a roaming match from St. Margarets Lock to Aqueduct Lock, on November 8. I trust members will show up on Wednesday next, so that the minutes can get confirmed as regards the above.—W. H. POTTER, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our seventh outing that should have taken place at Windsor, on November 1, is postponed until further notice. A paper will be read at the above club by Mr. Mathews, on Wednesday, November 4. The chair will be occupied by Mr. Shrubsole, when members and friends are cordially invited.—J. RICH, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 25th instant, several of our members were out, but only three members were successful. Mr. Wright with roach, dace and jack; Mr. Munn, sen., with jack; and Mr. Rowe with jack. The next return visit on the Central Association takes place at the above house on Monday, November 2, when we hope our brother anglers will show up in good force on this occasion.—E. R. EMBLETON, sec.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The usual weekly meeting was held on Wednesday, when Mr. J. Rennington was elected as honorary member. Mr. D. Davis weighed in roach and dace, 3lb. 12oz.; Mr. Elston, 2lb. 9¼oz.; Mr. A. Davis, 1lb. 9¼oz.; and Mr. F. Davis had fish weighed to his account. I should like to see some of the members at the Amicable Angling Society, the Sun, Great Sutton-street, on Monday, 2nd November, and also at the visit to the Second Surrey Angling Society, on Tuesday, 3rd November, on the South London List.—A. G. SMITH.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—Our trays were again fairly well filled on Oct. 25 with roach and dace, contributed by the following members: H. Patman, Pallum, James, Smith, and Mr. Hamp a small jack. Members wishing to take part in the forthcoming benevolent competition at Rye House, on the 16th November, can obtain tickets at the club house.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—Despite the adverse weather, on the 25th inst. four of our members managed to get into some nice fish. Mr. Hacker, fine show of roach, bream, and perch; Mr. Rouzilier, nice show of roach; and Mr. F. Barker, roach; also Mr. Deplidge, an honorary member of this society, showed a splendid basket of rudd.—F. ROBERTS, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—The only one to weigh in on the 25th inst. was Mr. C. Davis, with roach. Our usual quarterly match will take place at Ware, from the Engine House down, on Nov. 8 for three prizes. Mr. Clark will give a prize for the largest roach taken in the match.—D. WARREN.

Bostonian Angling Society.—Since my last report, Messrs. Jennings, roach and dace; Hoare, roach; Halsell, roach; Pearson, perch; Clark, jack. Annual friendly supper next Wednesday at the club-house at eight o'clock.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On the 25th inst. only two of our members weighed in: Mr. Robson, roach; and Mr. Aitchison, roach. On Wednesday evening Mr. Norton brought up a nice show of roach, bream, perch and dace; and Mr. Williams roach. A special meeting has been called for

Wednesday, the 11th November; every member will please to make it convenient to attend, as some very important business will be brought forward.—H. Roach.

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—Since last report the following gentlemen have weighed in bream, roach, and dace: Messrs. Watkins, Wilson and Tucker. Will members kindly attend next Tuesday, for the purpose of deciding and arranging details of smoking concert on behalf of R. Buffham on Nov. 10? Members can have tickets on sale or return, sixpence each, on application to "Uncle Foster," who has the matter in hand.—T. Hawkes, sec.

Burdett Angling Society, 118, Hackney-road.—I hope members won't forget to come up next Wednesday night, as we go out for prizes on Nov. 8, to fish a pegged-down match. We had a very nice show of roach on the 25th, and one small jack. Mr. D, Flint weighed in 13lb. 1oz. of very nice roach; Mr. Gurney weighed in one small jack, 1lb. 14oz.—J. Pether, sec.

Buxton Brothers' Angling Society, 4 and 6, Buxton-road, Walthamstow.—On the 22nd inst., Mr. W. Davis caught roach and dace; Mr. J. Berry, dace; on the 23rd, Mr. W. Davis, jack; on the 24th, Mr. W. Davis, roach; on 25th, Mr. Howell, dace; and Mr. Maxwell had a grand show of roach, including one of 1lb. 3oz. (a fine specimen), as well as ten others, making a nice trayful. On the 28th, Mr. W. Davis landed some very nice roach and dace. On the 23th our meeting was well attended, and some interesting discussions took place. Members are informed that there will be a meeting every Wednesday evening, to make arrangements for the future outings.—A. Shuker, secretary.

Cambridge Friendly Angling Society, Mason's Arms, Titchborne-street, Edgware-road, W.—It is proposed by this society to hold a public meeting shortly, to take into consideration the advisability of increasing the standard of fish. The meeting will be held at the Swallow Assembly Rooms, Swallow-street, Piccadilly, W. Further particulars will be duly announced. The outing to Pangbourne is again postponed until November 8.—W. Sutton, secretary.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On October 18 the following members weighed in: Mr. King, roach; Mr. Sairtin, roach; Mr. Leslie, roach and dace; Mr. Critcher, roach. On the 25th, Mr. Sharp, dace; Mr. Critcher, roach: Mr. Marshall, dace; Mr. Boxall, jack; Mr. King, roach. I beg to remind members that Wednesday next, November 4, will be quarterly night, when I hope that all members will show up.—E. T. White, sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—On Monday next, November 2, Mr. J. Deplidge will read from Sir Samuel W. Baker's "Albert N'Yanza" an account of "Fishing in Abyssinia." An account of last Monday's meeting will be found in another column.—John Smith, hon. sec.

Central Association.—The monthly delegate meeting will take place on Monday next, November 2, at 8.30 p.m., at Bedford Head Hotel, Maiden-lane, Covent Garden, W.C.

City of London Angling Society, White Bear, Bride-lane, Ludgate-circus.—On the 11th inst., Mr. Castell weighed in bream from the Thames. On the 18th, we had no fish weighed in, on the 25th, Mr. Castell had roach and dace from the Thames.—Cas.

Clerkenwell and District United.—A visit on the above was paid to the Funny Folks Angling Society on Monday evening, Mr. Embleton in the chair, the following eighteen societies being represented, viz., Great Northern Brothers, Lincoln, St. John's, Convivial, St. Andrew's, Crown and Buckland, City of London, Seymour Brothers, Amicable Waltonians, Funny Folks, Islington Brothers, Bloomsbury Brothers, Burton Piscatorials, North London, Camden, Dalston, Royal George, and Bermondsey Brothers. The next visit will be to the Islington Brothers, held at the Myddelton Arms, Canonbury-road, one of the best visiting clubs on the list.—F. Castell, hon. sec.

Cliftonville Angling Society, Cliftonville Hotel, Ilderton-road, South Bermondsey.—We fish a match on Nov. 1 on the Stort at Burnt Mill. Members to start from Liverpool-street by the 8.2 train. Full particulars can be had at the club-house. Mr. Levim weighed in some good roach from the Lea. Mr. Emberson was successful in securing first prize in the roving match. Mr. A. Payne also weighed in some nice dace. Members are requested to show up at the Second Surrey Angling Society on Tuesday, Nov. 3.—P. Gardner, sec.

Cobden Angling Society. Cobden Club, Kensal-road, W.—The £23 14s. 9d. collected by Mr. B. Abrahams for Mrs. Camm was paid over on Friday last to the trustees, and we take the opportunity of thanking Mr. Abrahams for the spirited manner in which he took up this sad case. The match is put off until further notice, on account of the floods.—A. Smith, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 25th inst. a few of our members ventured out, but the only gentlemen who were successful were: Messrs. Parram, Wild, Freeman, Cogswell, Killick, W. Midson, and C. Flowers, who had, considering the state of the water, a fine show of dace, roach, and jack. On the 1st of November we fish a boundary match in the Lea, from Carthagena Weir to the Fish and Eels.—S. Malby, sec.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—There will be an outing of the members of this society on Nov. 1, weather permitting, from Hampton Court Bridge to Kingston Bridge; all fish to weigh; all to go down by the 8.40 train from Earlsfield. We made two new members this week. Three of our members, Messrs. Waterman, Biéderman, and Mayer had lively sport amongst the gudgeon and dace on the 25th inst., the total reaching twelve dozen. I must ask as many members as can make it convenient to attend next Wednesday, as there will be some important business to discuss.—R. W. Bird.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On the 25th inst., we had a nice show, by the following: Messrs. F. Vanhegan, roach and chub; and Biggs, roach, rudd, and dace. Total 21lb. 11oz. Our return visit on the Clerkenwell and District, took place on Monday last, and was well attended, eighteen clubs answering the roll. I hope friends will not forget the distribution of prizes in connection with Mr. G. Watling's benefit on Monday, Nov. 2.—J. W. Biggs, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We were saved from a blank on the 25th inst., by Mr. Stebbings with bream, and Mr. Payne with nearly 3lb. of roach and dace.—A. Payne, sec.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—Thirty-four of our members fished at Cheshunt, on the 25th inst., for nine prizes, but only six were taken by the following: Messrs. Devon, Almeroth, Huggett, Wilkinson, J. Sallomon and F. Raynor. We fish for Christmas prizes on Nov. 1, at the Rye House Fishery; roam; all to start by the 9.8 train, Liverpool-street. All members—honorary as well as working—can compete who have cleared the books.—R. Murphy.

Grange Angling Society, the Earl Derby, Grange-road, S.E.—The members are particularly requested to attend the meeting on the 5th of November, as there is some very important business to be done.—W. K.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—On the 25th inst. the members of the above club went to Taplow to fish for several prizes, but owing to the flooded state of the river, one fish only was taken, winning Mr. J. Grande first prize. I wish to remind members that Tuesday, the 3rd Nov., is quarterly night, when I hope to have a good muster.—G. F. Weaver, secretary.

Gresham Angling Society.—The usual weekly meeting was held on Tuesday, with Mr. Frank Fletcher in the chair. Mr. Fosbrooke reported on the sea-fishing competition, which took place off Southend, last Saturday. It had been arranged that an equal number of rods and hand-lines should be used, but from a variety of circumstances, chiefly the previous bad weather, the sides were very unequal, three fishing with hand-lines, and eight with rods, which with two visitors, made thirteen in all, and the total amount of fish taken was 171lb. 15oz. The greatest take by one individual was 17lb. 5oz., by Mr. Fosbrooke, who also had the best five fish, weighing 7lb., and the best specimen fish, 2lb. 2oz. All had some fish, the least weight caught by anyone being 4lb. 4oz. In consequence of the numbers on each side not being equal, it was resolved that the competition should be fished over again on Saturday, Nov. 7, at the same place. Train leaves Fenchurch-street at 9.5 a.m. Should the numbers on the two sides vary, they are to be reduced to an equality by lot; not less than three on each side. Prizes: Articles worth a guinea, half-a-guinea, and half-a-guinea respectively. The competition from punts on the Thames is postponed till Tuesday, the 10th, for a prize of tackle worth a guinea. Intending competitors are requested to communicate with Mr. T. Gilbert, 52, Lyndhurst-grove, Camberwell, not later than Tuesday, the 3rd November. Dr. Brunton reported having caught a pike over 6lb. on the Upper Lea. The fish snapped the trace the first time, but came again immediately, and was taken. Mr. F. R. Ohlson will read his paper next Tuesday, Nov. 3. On the 10th, Mr. C. S. Bentley will read a paper. On the 17th a smoking concert, and on the 24th a paper by Dr. Brunton. —James Tayler, sec.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—It has been arranged to fish a roving match at Cookham on November 8. The following weighed in on the 25th inst.: J. H. Herbert, roach, 2lb. 13½oz.; Mr. Willsher, roach, 2lb. 0¾oz.; others were out, but had no sport. The next return visit on the Clerkenwell United Visiting List will take place at the above on Monday, November 16.—J. H. Herbert.

Izaak Walton Angling Society.—The members competed for three special prizes on 25th inst. Only two members succeeded in taking prizes, Mr. C. Layton being first, Mr. J. Mack second. Messrs. G. Washington, Harry Auburn and D. Auburn, had takes on the same day. The members will compete for a series of Christmas prizes on November 8, between the lock at Ratty's Weir and the Cattle Bridge, above St. Margaret's, and fish from the towing-path only. In the event of the whole of the series of prizes not being taken on the day named, the remainder to be fished for afterwards.—H. B.

Lady of the Lake Angling Association, Queen of England Hotel, Goldhawk-road, W.—Many of our members have been out during the week, the most successful being Messrs. Carter and Stevens, who weighed in a nice show of gudgeon and dace respectively.—T. Salter, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On the 25th inst. several members were out; but few fish were taken owing to the very thick and flooded state of the rivers. Messrs. Belton and White, roach and dace. On the 28th inst., Mr. J. White and Mr. Palmer were unanimously elected working members of the above.—W. Watling, sec.

Liverpool East End Friendly Angling Association, 150, West Derby-road, Liverpool.—Our match took place on the 25th inst., at Rufford Canal, for several prizes. Very little sport was obtained, on account of the weather. However, we were saved from a blank by Mr. E. Matthews weighing in perch. The prizes are added on to the prizes for a match which is to take place on November 1, at Raby Mere, Cheshire. All competitors to go by the 8.35 train from Woodside Station on morning of match; no fish under 2oz. to be weighed in; one rod only. Members must abide by these rules, or be disqualified.—T. C. Segar, sec.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 25th inst., our members were at various waters. Messrs. Penfold and Barnard only showed up to weigh in with a few roach and one small barbel. I wish to remind our members of the match on November 1, at Bourne End. Pegged-down; all to start same morning.—W. F. Pearce.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—We had a good show of members on Tuesday, but a bad show of fish, owing to the state of the river. Mr. J. Osborne had a nice show of dace on the 25th. I hope all members will attend on Tuesday next, as there is some important business to bring forward.—J. Comber, sec.

Mitre Brothers Angling Society, Mitre Tavern, Kingsgate-street, Holborn.—Members were out fishing for prizes on the 25th inst., when Mr. Ryan won first prize (fishing box) and money prize; Mr. L. Talbot won a money prize; Mr. Crocker and W. Talbot also weighing in fish from the Thames. I am sorry to inform members that Mr. J. Irish, one of our old members, met with a severe accident at Elstree Station by breaking his ankle; he is now lying in University Hospital.—J. Jolliffe, hon. sec.

New Albion Piscatorials, Duke of Kent, Old Kent-road.—The outing on Nov. 5 will be an open competition for roach only (bank or punt). Mr. Taylor having expressed a wish to read a paper before the club members, we have fixed the night of Nov. 26 for the occasion, the proceedings also to include a smoking concert.—Arthur R. Matthews.

North London Angling Club, Tap House, Holloway-road.—We met as usual on Wednesday, when it was decided that we fish for the prizes left over from last match, from the Rye House to Broxbourne, on Nov. 1; all to go by the 8.8 train from Hackney Downs. The next return visit on the Anglers' Association No. 2 will take place at the above society, on Monday, November 9. On the 25th inst., Mr. Dain weighed in perch, heaviest 10¼oz.—H. Stretch, hon. sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland-park, N.W.—On the 25th inst., in spite of the bad weather, Mr. Lambert weighed in jack, and Mr. Scultz, junr., also jack. Members please note that Thursday, November 12th, is the half-yearly night, when all subscriptions are due, and all those who can make it convenient to attend that night will greatly oblige.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—In last Saturday's *F. G.*, under the heading of "Anglers' Association," Mr. Manning is said to have visited this society, and reported that "two" clubs were represented; this should have been "twelve." On the 25th inst., although a most miserable day, and the water overflowing in all directions, three of our members succeeded in bringing in fish to our headquarters—viz., Mr. Bygrave, sen., bream and roach; Mr. Harrison, dace and roach; and Mr. Neville, roach.—J. Cuthbert, secretary.

Peckham Brothers Angling Society, Prince Arthur, East Surrey-grove, Peckham.—Our next series of prizes will be fished for on Nov. 15; members to go where they please, same morning only. Only a few of our members were out on the 25th, and only two weighed in—viz., Mr. Fautley, dace and gudgeon; and Mr. Daniels with dace and gudgeon, the largest gudgeon going just on 2oz. All members who are desirous of attending the supper on Nov. 9, would they kindly give in their names, with their friend's, by Wednesday, Nov. 4.—E. A. Fautley, sec.

Phœnix Angling Society, the Crown, Old St. Pancrass road, N.W.—On the 25th inst., two prizes were angled for; Mr. Carr gaining first prize, and Mr. Charles Dove the second prize. Twenty members competed, but not many fish were taken. On Tuesday last, our half-yearly supper took place, when seventy-one members and friends sat down to a splendid spread provided by Host Ben Forster. —W. Elbourn, sec.

Prince Albert Angling Society, Prince Albert, Lincoln-street, Bow-road.—Our members were out last week, Mr. Gandy taking two nice jack. I beg to contradict the report made by Mr. Pignatelli last week; the fish was disqualified, as he did not land it himself.—W. Fitt.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—Our match was continued on the 25th inst., but only two members were successful, which leaves several prizes not taken. I hope members will attend on Wednesday next, to arrange what we shall do with what is left, and to hear the auditors' report.—J. W. Harris, secretary.

Prince of Wales Angling Society, the Globe, Lisson-grove.—Notwithstanding the state of the water on the 25th inst., several of our members were out, and the following weighed in: Buckland, jack; Hayden, roach and perch; Davis, jack; Ivermee, dace. As the weather seems to improve, I hope to record better shows next week.—Wm. Bowyer, sec.

Rising Sun Angling Society, The George, Brook-street, Holborn.—On the 25th inst., Mr. Affelett had a nice show of roach, 5lb. 3oz.; and Mr. Comley, 4lb. 2oz. I must remind members that there are several prizes to be fished for, and that we are only waiting for them to attend to settle the time and place.—F. Bradley, hon. sec.

Royal George Angling Society, Queen's Arms, Bateman-street, Soho-square, W.—On the 25th inst. we fished for Mr. Wood's prize of 10s. 6d., where we liked; but, in consequence of the water, only Messrs. Gibbons, Harris, Jerquet, weighed in, Mr. Gibbons taking Mr. Wood's prize. Mr. Frederick Flegg was duly ballotted for and elected a fishing member of this society. We fish our next outing at Marlow, from Marlow Bridge to Temple Lock; tow-path, one rod only; when several prizes will be competed for. I trust all members will make a point of attending next Wednesday to settle the outing. The balance-sheet was audited by Messrs. Gibbons and Jerquet, and found favourably.—F. C. Longland.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow, E.—On the 25th inst., several of our members were out, but owing to the flooded state of the waters, the only gentlemen who had any sport were: Messrs. A. Barclay, F. Barrow, J. Yeo, and G. Barclay, with a very fair show of roach and dace. We had our first meeting at our new club-room at the above house, on Tuesday last, when every one was satisfied with the room.—A. Barclay, secretary.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—As the weather is not suitable to fish for our prizes on Nov. 1, outing postponed. The place will be settled on Wednesday next. Our visit on the South London United Visiting List will take place on Tuesday, Nov. 3, not as I have stated on the post-cards to the various clubs as "Tuesday, Nov. 1." Our club-house is only one minute's walk from the tramway, Westminster-bridge, where we hope to see many friends on that occasion.—J. Wright, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 25th inst., a few members ventured out, but only one succeeded in weighing in: Mr. J. Petrie, roach, 5lb. 8½oz. We had a poor muster present on Tuesday last. I hope members will show up better on Tuesday next. Members in arrears will greatly oblige by attending next Tuesday, and clear the books.—S. E. Cane, sec.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—On the 25th inst., in a downpour of rain, at Twickenham, the match between sides captained by the president and vice-president took place and resulted in a win for the latter. Sport was very indifferent, owing to the river being in flood. Fifteen members out of twenty-eight took part in the match, which was very gratifying to the committee. On returning to headquarters, our host (Mr. Watts) had ready a splendid dinner, which fully compensated for the bad weather. Two members were elected at our last meeting. —C. B.

Silver Trout Anglers' Association, Bedford Head, Maiden Lane, Covent Garden.—Our next outing announced for Nov. 1st, at Moulsford, is postponed till Nov. 29, in consequence of the flooded state of the river.—Pelican.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—The only members weighing in fish on the 25th inst. were Messrs. D. Marks and G. Pleydell. Notice to members—a special meeting will take place on Thursday, November 5, to take into consideration an outing for Christmas prizes, when I should like to see all members present. —R. Spencely, sec.

South London United Anglers' Visiting List.—The next visit on the above list will be to the Second Surrey Angling Society, held at the Spread Eagle, Stangate-street, Upper Marsh, Lambeth, on Tuesday, Nov. 3, and as this society has not been able to receive a visit for the past two years, on account of the room at their late quarters not being large enough, a fact which has not prevented them turning up in fair numbers at every visit on the list, I trust they will be well supported.—A. CONN, hon. sec.

St. John's Angling Society.—Our match that was to take place at Great Marlow on Oct. 25 for four prizes is postponed till Nov. 1. Honorary members are invited to compete. We were saved from a blank last week by Mr. A. Catanach with a few roach.—F. THORLING.

Stoke Newington Angling Society, the Dun Horse, Kingsland-road, E.—In consequence of the floods, none of the prizes were won on the 25th inst. They will be fished for again at Wateringbury on Nov. 1. In the event of their not being taken, members will be allowed to choose their own water from week to week until they are decided. Quarterly night is Wednesday, Nov. 4.—T. GRETTON.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—Many of our members were out on the 25th inst., but it rested with Mr. Carpenter to save us from a blank with one jack. The half-yearly supper took place on the 21st, inst. when over twenty members and friends sat down. Mr. D. A. Parker occupied the chair, faced by Mr. G. Boreham. The secretary read a statement of accounts showing a substantial balance in hand, and stated that the club was increasing in numbers rapidly, making new members almost every meeting night. The company dispersed at an advanced hour all having spent a thoroughly enjoyable evening.—H. R.

Tadcaster Angling Club.—Eight members of the above club had a fishing contest on Thursday afternoon in the river Wharfe, at Ouston. The successful competitors were Mr. William Holloway, 1lb. 15½oz.; Mr. E. Jackson, 3½oz. Mr. Holloway (the secretary) was fortunate in hooking a grand specimen roach, weighing 1lb. 9¼oz.—said to be the best that has been taken in this neighbourhood for some years.

United Brothers, Deptford.—Mr. F. Beak, out on the 25th inst., saved the club from a blank with roach and dace. The members of the above will fish a pegged-down match on Nov. 1 on the Thames for several money prizes, and the given prizes will be fished for on the same date and at the same place. Should the weather keep fine, I hope to see a good muster on this occasion.—H. TYLER, sec.

Waggoners Angling Society. George and Dragon, Vauxhall Cross.—Several members were out on the war path on the 25th inst., Mr. Clegg. roach and perch; Mr. Petty, roach; Mr. Smith had fish, but did not turn up to weigh in. We had fair attendance on the 27th. I was very pleased to see our chairman, Mr. Philips, in his place again, but nothing of importance was done, owing to the members arriving late. I wish they would attend much earlier, as we have a lot of business before us.—H. C., hon. sec.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 25th inst., Mr. W. Gordon weighed in roach and dace. The November competition will take place on Nov. 1, from Richmond Bridge to Kingston Bridge. Bank only. All fish to weigh. Members to go down by eight o'clock train, Waterloo; 8.5, Vauxhall. Show fish at Swan, Twickenham Ferry, at six o'clock.—R. J. DARTNALL, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—On the 25th inst., we had a few fish by Messrs. Francis and Sullivan; other members returned a blank. I hope members will not forget to sign the book at the bar of club-house, for match on the 1st November, roving.—W. M., sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on the 25th instant for Mr. Beresford's prize, which was won by Mr. J. Newton, who had six roach over the half-pound. The total weight was 4lb. 6oz. Mr. Goodrich, 1lb. 1½oz. of roach; Mr. Maxted, 1lb. ½oz. roach, and a dace weighing 8½oz.—R. LOWTHER, sec.

CLUB FIXTURES.

Nov. 2.—Clerkenwell and District visit to Funny Folks, Rose and Crown, 21, Goswell-road, and distribution of prizes.

Nov. 4.—Paper by Mr. A. Matthews, at Amicable Excelsior, Greyhound Hotel, High-street, Battersea. Subject: "Some Angling Experiences."

Nov. 9.—Supper at Peckham Brothers, Prince Arthur, East Surrey-grove, Peckham.—Eastern District, No. 2, Anglers' Association visit to North London Club, Tap House, Holloway-road.

Nov. 10.—Paper by Mr. E. S. Shrubsole, at Battersea Friendly, Queen's Hotel, St. Philip's-street, Battersea Park Town. Subject: "Fishing Baskets, Bags, and Creels." Exhibition of upwards of one hundred baskets, bags, and creels. Chairman, R. B. Marston, Esq.—Concert at Brunswick Brothers, Cherry Tree, Brunswick-road, Bromley, E., in aid of Mr. R. Buffham's benefit fund.

Nov. 11.—Paper by Mr. J. P. Wheeldon, at the Serapis, Neville Arms, Neville-road, Stoke Newington. Subject: "The Science of Angling."—Smoking concert at Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.

Nov. 15.—Competition at Rye House, in aid of the Anglers' Benevolent Society.

QUEEN'S HOTEL,

QUEEN'S ROAD, BATTERSEA PARK TOWN.

PROPRIETOR—C. SIMMONDS.

Under the auspices of The Society for Promoting the Reading of Papers among Angling Clubs,

MR. E. S. SHRUBSOLE

will read a Paper upon "FISHING BASKETS, BAGS, AND CREELS," at the above Hotel, on

TUESDAY, NOVEMBER 10.

There will be an exhibition of upwards of one hundred fishing baskets, bags, &c., to illustrate the lecture.

R. B. MARSTON, Esq. (Editor of the *Fishing Gazette*) will take the Chair at eight o'clock.

A GRAND SMOKING CONCERT, organised by Mr. Godfrey C. Cooper, will be held the same evening.

All anglers cordially invited.

SOCIETY FOR PROMOTING THE READING OF PAPERS AMONG ANGLING CLUBS.

A PLEASANT and highly instructive evening was spent under the auspices of this excellent society, at the Causton Angling Society's club-house, the Coffee Pot Tavern, Warwick-lane, City, on Monday night; when Mr. G. E. Simms (of the Gresham Club) read a paper on "Coarse Fish Hatching." Mr. E. S. Shrubsole took the chair, and there was a fair attendance, taking into consideration the wretched weather which prevailed. In the course of his opening remarks the chairman observed that he had received a very interesting letter from Mr. Evans, of the Westbourne Park Piscatorials, who had sent on with it two samples of line which he had himself dressed in linseed oil and terebene, and had had in use for four years. He (the chairman) thought the subject of dressed lines was a very interesting one, and he invited a discussion upon it, prior to Mr. Simms's paper, which, he had no doubt, would be a most excellent one.

Various anglers—including Messrs. Dunn, Keeble, Smith, Simms, Wood, Guest, &c.—then related their experiences of dressed lines and the preparations they, as amateurs, had used to dress them with. Pure linseed oil was spoken of as being one of the best dressings known. The chairman said, of course the great desideratum was to obtain a preparation that would render the line as pliable as possible. In the course of the discussion it was announced by several of the speakers that they had brought mutton fat, the fat in the region of rabbit's kidneys, and red-deer fat into use, with satisfactory results.

The chairman then announced that Mr. Simms would read his paper, and spoke encouragingly of the work and aims of the society. He hoped that the London anglers would feel it their duty to extend their support to it, and that, whenever a paper was announced to be read, they would make a point of being present on that occasion. (Hear, hear.)

Mr. Simms, in the course of his paper, spoke of the "miserable little specimens" of fish which the Thames and Lea fishermen took under the cognizance of the Thames Conservancy, the T.A.P.S., and the two leading angling associations. He was glad to say, however, that a number of the London angling clubs had voluntarily raised their standard of fish, although he believed, as far as the general question was concerned, that the movement would only be spasmodic. He (the speaker) did not believe that any standard short of making it almost prohibitive to take fish out of the Thames and Lea would prove effective. His reasons for saying that were: firstly, where there was one angler thirty years ago, there were one hundred, perhaps two hundred, to-day; and, secondly, owing to the improved process of drainage, he very much feared that large quantities off fish would be left high and dry when the water was run of at flood times. The only means of dealing with the question was, he contended, to continually keep restocking the rivers he had mentioned, from over prolific waters. If that could be carried out he (Mr. Simms) should not insist upon an increased standard. The reader then proceeded to give some interesting and valuable particulars on coarse fish hatching; varying his remarks from time to time with many humorous anecdotes, and succeeded in commanding the rivetted and close attention of his audience. He gave instances of his own attempts at fish hatching, and said that with ten pickle bottles and a couple of aquariums he once produced ten thousand roach and perch. In the course of his investigations he said he had discovered that the plant microbe was an admirable food for young roach, and would, he thought, prove equally efficacious to perch, although it was very difficult to get the latter fish to feed elsewhere than the river. Mr. Simms thought that if the Anglers' Association and the Central Association would only collect the spawn in the waters rented by them, and treat it in the method he had described to them—using wicker hampers—they would have a large increase of fry; and, in conclusion, he expressed the opinion that the question of restocking was the pivot on which the whole future of our inland fishing depended. (Applause.)

A discussion followed, and upon the motion of Mr. Dunn, seconded by Mr. Guest, a very hearty vote of thanks was passed to Mr. Simms for his paper.

The reader having replied, a vote of thanks to the chairman for presiding brought the proceedings to a close.

TO CLUB SECRETARIES.—Many club secretaries will shortly be buying the prizes for their clubs. We strongly advise them to write to Messrs. J. Knight and Co., 47, Boar-lane, Leeds, before purchasing elsewhere. We have every confidence in recommending this firm.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add	30 min. for Chelsea.		Add	55 min. for Kew.
	40 ,, ,, Putney.			75 ,, ,, Richmond.
	45 ,, ,, Hammersmith.			80 ,, ,, Twickenham.
	50 ,, ,, Barnes.			85 ,, ,, Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

English and Welsh Reports.

The Lower Thames.—GENERAL REMARKS.—In the absence of any rain on Tuesday the water began to recede, but up to that time there was one of the heaviest October floods that have been known for years. There was a time in my recollection when it was no uncommon thing to expect a flood at that period of the year, and I have known it to be of long continuance. I went down to Staines last Saturday and found the water had then risen to a considerable height, completely covering the towing-path [and coming up to the boat-house of the Pack Horse Hotel, which hostelry has just been taken by my friend, Mr. E. H. Blamey, whose brother is the deputy-chairman of the T.A.P.S., and I had the pleasure of enrolling the new proprietor as a subscriber and supporter of Thames Preservation—anglers will kindly make a note of this. The holidays which give the river keepers so much anxiety, and for which special arrangements have to be made at the cost of the T.A.P.S., are now over, and I am happy to say have passed away without any interference by the poachers. In this work the keepers of the Thames Conservancy are united with our own, and in the Chertsey district the committee are largely indebted to their honorary river keeper, Mr. A. E. Armstrong, for liberally taking charge of it. I am always glad when this time is over, as I remember the days of old when there was an organised gang of poachers infesting the river on those occasions, and there has been many a good fight with them for mastery, and we have not conquered without the keepers receiving rough usage and jeopardising their lives in the struggle. At the meeting of the committee, on Tuesday last, the reports from all portions of the river proved how satisfactory the arrangements had been carried out in respect to the three periods in this month when the river required additional watching. At that meeting the committee having regard to the very valuable services which have been given for so many years by Mr. R. B. Marston, Editor of the *Fishing Gazette*, in the interests of the general body of anglers, and as an appreciation of what he has done for the Metropolitan river unanimously elected him as a vice-president of the Thames Angling Preservation Society, which I hope he will do them the honour to accept, as no one is more deserving of the recognition. There was another complimentary and deserving act agreed upon, and that was in making my old and valued friend, Mr. T. R. Sachs, a honorary member of the society. It has been my pleasure to receive from him for more than a quarter of a century the customary guinea qualification as a member, and he is well deserving of the position he has now gained. The fourth rule of the society gives power to the committee to elect vice-presidents and honorary members. The agenda of last Tuesday's meeting was a very heavy one, having no less than seventeen items upon it, and as evidencing the work that has been going on since the previous meeting, there were three distinct cases of illegal offences—the turning into the river of 10,000 stock fish at Chertsey, including thirty-five carp of 5lb. each, and a systematic examination of takes in punts and on the banks, between Staines and Isleworth, when no unsizeable fish were found in any of them. I must before closing refer again to the flood which has so disturbed the rats as to drive them away in large quantities, and on the island at Twickenham, I heard, they ran up the trees, and some ferrets were got and sent up after them. I hope I shall have better news about the river next week.—B.

Upper Thames.—Thursday evening.—A very big memo. for the upper regions of the Thames should be made, for it has actually not rained for three consecutive days, the result of this not long raining over these uninhabited and unvisited solitudes being to reduce the flood by many inches per day. As I write I can, from my windows, now discern the outlines of the "grand old meanderer," which has for days past been merged in a "sea of troubles," against which it was useless for anglers to take up arms. By the time this note is in print (without further deluge) the Thames water will be snugly tucked up in its little bed, and as the weir tackle will be gradually put down, meadow netting in flood time abolished, ditch snatching looked after, and the weeds well cleared away, ye gods and little fishes, what sport there should be.—MARLOW BUZZ.

Thames (Datchet).—The river is falling fast, and by the time this is in print, weather permitting, anglers will be able to make another start. The water is in splendid colour for anything, and jack fishers will have a fine chance in the eddies.—G. LUMSDEN.

Thames (Windsor).—It is nine years since the Thames Valley had such a thorough cleansing, and though at first sight nothing but discomfort and damage would appear to be the result of such a flood, an immense amount of good is done, as during the summer months our once beautiful crystal stream is most horribly polluted by the many hundreds of house-boats, launches, tugs, and barges, to say nothing of the thousands of smaller crafts, which all add their quota. At time of writing the subsidence is well maintained, and since yesterday has fallen about 6in. By the time this is in print it should be once again in bounds. Many anglers who will not be denied their favourite pastime, have been fishing in the meadows, and some in kitchen gardens, where some very fine roach were taken from amongst the potato rows and marrow beds. A few afternoons back I noticed quantities of good-sized fish, presumably barbel and roach, in a meadow, quite two hundred yards from the river. They should be in good condition after such a "diet of worms."—B. R. B.

Ancholme District.—Notwithstanding the recent fresh, and consequently muddy state of the water, better sport has been obtained during the past week. The Hull Angling Club fished a match on one of the stormy days; the chief prizemen were: Messrs. W. Goodwin, A. W. Dhata, and F. Temperton. Mr. Goodwin had amongst his take a fine bream of 4lb. 8oz.; and Mr. Dhata obtained the gold medal for the largest aggregate catch during the season. Mr. White had a good basket of fish, on Saturday last. The elements have now moderated, and prospects for the coming week are good. Pike and bream will offer the best returns.—THOMAS FORD.

Arun (Pulborough and Amberley).—All fishing has been stopped by the floods. The competition arranged for Oct. 25, at Pulborough, has been postponed indefinitely. The district was, however, visited by about one hundred anglers from London on that day, but all they could do was to go flood-seeing. As the water and floods are beginning to subside, I hope soon to have to record some good baskets, especially of roach.—GOOSEQUILL.

Cambridgeshire, Norfolk, and Suffolk Rivers.—Nearly all our waters in these three counties are flooded, and high coloured. I think by Friday or Saturday, if we get no more rain, anglers may come and have a try.—WILLIAM HOWLETT.

Dove and Tributaries.—Weather is now dry and genial and favourable for sport with the grayling. The water is also in good trim for the fly, and the wind and weather-glass promise a continuance of fine weather. There are no fishermen out as club members have not had time to hear of the favourable change as yet.—D. and W. H. FOSTER, Ashbourn.

Eden (Carlisle).—After a blank time of fully a week the river was just fishable in some places on Wednesday, the 21st inst., when Mr. E. L. Hough landed five fish at Crosby; Mr. T. Robinson, Mr. R. Ellwood, and Mr. T. Bone, each two in the Cargo Water; Mr. J. Hills, two, at Corby; and Mr. J. Robinson and Mr. Cameron, each one. On the 22nd, Mr. T. Robinson and Mr. T. Bone had respectively two and three in the Cargo Water; and Mr. E. L. Hough landed eight fish at Crosby, weighing 202lb. This is likely to be the record bag of the season. His heaviest fish was 34lb. He had five more the next day, making twenty-four fish in five days' fishing. Two other bags of five fish were made by Messrs. T. and J. Robinson at Cargo; Mr. Wright had six at Warwick; and Capt. Rhodes, four, at Warwick Hall. Several other anglers had one or two each. On the 24th, Mr. Mackenzie killed four; Archdeacon Prescott, Mr. J. W. Hills, Mr. Spottiswoode, Mr. T. Hodgson, Mr. G. Selby, Mr. John Little and Mr. William Stephenson, each one. On the 26th the Rickerby Water yielded well, Mr. MacInnes getting two; Mr. Catherall, two; Mr. J. Fox, three; Mr. Sayers, Mr. Parkins, Mr. C. Wilson, and Mr. Francis, each, one. On the 27th, Mr. J. Robinson had four, and Mr. Huthart, one, at Cargo; Mr. Bland, three, at Rickerby; and Archdeacon Prescott, one. In the Association Water, Mr. Matthews killed two; and Messrs. Catherall, Widowes, Francis, Howitt, and Learess, each, one. The fish average fully 20lb., and are in grand condition, giving excellent sport. The river is now getting very clear.—SILVER GREY.

Esk (Whitby, Yorkshire).—The sport on this river has again been excellent. The results so far as can be ascertained are as follows: Mr. C. G. Broadwood, Acomb, York, caught with the minnow, eight salmon, weighing respectively 12½lb., 10lb., 8lb., 3½lb., 5lb., 12lb., 8lb., and 10lb.; Mr. J. Marsden, Scarboro', four salmon of 5lb., 7lb, 8lb. and 3lb.; Mr. William Bradley, Ainthorp, four salmon of 15lb., 14lb., 10lb, and 20lb.; Mr. Robert Hay, with the fly, near Grosmont, three salmon of 13lb., 15lb., and 7lb.; Mr. C. Rhodes, with the fly at Sealholm; one salmon of 20lb.; Mr. F. Jefferson, one salmon of 8½lb.; Mr. J. W. Nicholson, Talbot Hotel, Whitby; seven of 3lb., 13lb., 13lb., 9lb., 6lb., 6lb. and 4lb.; Mr. T. Morris, Sheffield, one salmon of 4lb.; Colonel Clark, Canterbury, one of 13lb.; Mr. Geo. Falkinghidge, Whitby, two of 12lb. and 14lb.; Mr. J. W. Wheldon, Pickering; two of 10½lb. and 6lb.; Mr. G. H. Rhodes, four of 5lb., 5lb., 12lb. and 10lb.; Mr. J. H. Keighley, Whitby, five of 13lb., 14lb., 15lb., 16lb. and 17lb.; Mr. T. Gray, Beckbole, eight salmon of average weight of 4lb. each; Mr. F. W. Horne, two salmon.—JOHN J. JACKSON.

Fen Waters (South Lincolnshire).—The past week has been very favourable for angling, the weather having settled and the streams run lower. Roach, dace, and other smaller fish have been feeding better, and some very fair baskets have been made by the bottom fishers. The colder nights have been favouring pike fishing, and some pretty good specimens are coming to hand. Among the catches in the Fortyfoot, in the neighbourhood of Billingborough, were a nice pike by Mr. Dexter, scaling 7lb., one of 6lb., and another of nearly 4lb.; Mr. Heath, bottom fishing, also caught in two hours 7½lb. of good roach. These were brought from near Denington Bridge, a very good length on this water. Water much improved, and now in capital trim.—LIMPET.

Idle (North Notts).—Autumn angling has had a good time this week. The weather having settled down, most of the streams are in good order both for bottom fishing and trolling. Roach and dace are to be had in many places, and not only on the Idle river, but on the Ryton, the canal, and the older drains. A few good grayling have been again brought down from the Eaton and Gaveston district, and I hear that several anglers have caught some good pike about the Hardimoors. About 6lb. or 7lb. are mentioned as among the best. There are a lot of flounders still in the river about Mattersey, and plenty of eels abound. Many of the latter are now taken in the night-time about the sluices and sent to market.—L.

Lake District.—With a week of really magnificent weather, the best we have had during the present remarkable year—salmon fishers have enjoyed sport that at one time could hardly have been expected, and takes which will bear favourable comparison with past seasons have everywhere been obtained. The lower reaches of the Kent have accounted for some good fish, chief among which was a twenty-pounder, killed by a working man named Bigland, on the Waste, a favourite stretch of free water, a few miles below Kendal. In Captain Bagot's private portion of the river running through Levens Park, Mr. R. Craig had a salmon of 10lb. and one other of 14lb. was taken on Tuesday week from the Troutbeck, in the neighbourhood of Windermere. Keswick and West Cumberland generally have a splendid record. Of course it is chiefly bait that has been accountable for the greater part of the fish taken. In the Greta and St. John's streams, the following have been successful: Mr. Q. Brownrigg, 11lb.; Mr. J. Hope, 16lb.; Mr. J. Millican, 8lb.; Mr. M. Stanley, 12lb.; Mr. D. Melvin, 11½lb. In the Derwent, Mr. G. E. Lowthian had a grand fish of 25lb. In the Cocker and Derwent a great many fish have been taken, Mr. Thompson, of Embleton, accounting for no less than seven during the week, ranging in weight from 16lb. to 27lb. The following have also taken fish from the same rivers: Mr. J. Neale, 25lb.; Mr. J. Graham, 23lb. and 25lb.; Mr. J. Atkinson, 17lb. and 18lb.; Mr. J. Lister, 6lb. and 19lb.; Mr. J. Shaw, 24lb.; Mr. G. Grabam, 7lb., 18lb., and 19¼lb.; Mr. G. Smith, 10lb., 19lb., and 21lb.; Mr. J. Graham, 19lb., 19¾lb., and 28lb.; Mr. J. Clarke, 10lb. and 22lb.; Mr. J. Lister, Great Broughton, 24lb.; Mr. J. Sbaw, 23lb. and 27lb.; Mr. J. Dixon, 8lb. and 7lb.; Rev. J. Gamble, 6lb.; Mr. T. McGlasson, 18¼lb.; Mr. W. Bell, 18lb.; Mr. D. Sanderson, 18lb.; Mr. D. Pollock, 13½lb.; Mr. H. Clift, 17lb.; Mr. J. Dixon, 24lb.; Mr. A. T. Martin, 20lb.; Mr. J. Pearson, 18lb.; Sergeant Howard, 28lb.; Mr. J. Wilson, 17lb., 15lb., and 17lb.; Mr. Vickers, 18lb. Mr. Thompson, Embleton, is said to have taken, during the season, twenty-seven salmon, of an aggregate weight of nearly 450lb. Other captures in addition to the above, might be recorded, but regard for your valuable space bids me refrain.—WESTMERIA.

Lea and Stort.—Both rivers are now rapidly getting into fishing order again, and anglers prospects are decidedly in the ascendent. The fine weather of the last few days has brought the old river down almost to its ordinary height, and another day or two of continued fine weather will make the water in the best possible condition. During my walk to-day (Thursday), I noticed that many banks or beds of the obnoxious weeds have been carried away, and now that we have had two nights' frosts, they will soon rapidly disappear altogether. I saw a good many anglers starting out, evidently anxious to take the first opportunity of getting on terms with the quarry; and I have no doubt, whatever, that some good sport has been had. The navigation river at the present moment is in very nice order; of course, it has not suffered so much from the floods as the old river has done. There is nothing special in the way of catches to record, except that of a handsome well-fed jack of 6lb., taken by Mr. Tuck, from the lower pool, at the Ferrie Boat, Tottenham. When there this morning it was a significant fact that fish were likely to be got, when I saw that able veteran angler, Mr. Bennet, turn out on a spinning expedition against the pike; I thought he showed great judgment in using a bright spoon bait in the present state of the water. I am a great advocate of spinning in any state of the water, both on account of its being the most artistic and pleasant method, and also the one that injures the fish least of all; just now it gives the very best chances of success. After the late flood and the frosty nights there is a certainty that pike will feed well.—SPLICED JOINT.

Leicester.—There has been a splendid change in the weather, and now that the heavy storms have ceased anglers are putting in full time at the river side. At the end of last week the waters were again in fishing order, the canal at Leicester being the first to receive attention. The best fishing has been in the canal at Aylestone village, some fine lots of roach and perch coming to hand, and among the more successful were Messrs. Hobbs, Bacehus, Manship and Rylott. Most of the roach were of good size, the best being one landed by Mr. Hobbs, a handsome specimen, weighing 1lb. 9oz. Mr. Rylott, amongst a mixed lot of fish, showed one roach of 1lb. 3oz., and other anglers had nice lots. Pike fishing has been remarkably quiet. The waters a distance away from the town do not run away so quickly as at Leicester, thanks to the admirable flood scheme. Angling, therefore, in the Wreake and above Leicester has not attracted a great many anglers during this week.

Loddon (Earley).—For the last fortnight nothing but torrents of rain and wind, and the country a perfect lake. It has been the highest flood known here for many years, however the water has rapidly gone down, and the river is in good condition, as it is quite cleared out of all rubbish and weeds. Some grand all-round sport ought to be had.—J. R. GOULD.

Lugg and Arrow (Leominster).—Both these streams have gone down and improved since last week, they are clearing nicely and there is every prospect of sport if the weather will hold fine. The Pinsley is in fair fishing order, but little has been done in it of late.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers are still high and sink but slowly. Yesterday was the first day this month without rain. After a strong frost last night, to-day (Thursday) has been fine, and if it continues, bottom fishing may be resumed with the coming week, though possibly the water may be rather high, it will be the latter end of the week before the fly can be used.—R. T. WILLIAMS.

Medway (Maidstone).—The Medway has been in flood, one of the heaviest we have experienced for some years; but the water is now running down, and getting a good colour for angling. Anglers were very busy on the 25th, and a large quantity of bream were taken with the worm. under favourable conditions the water should prove right for the pike fishing. The roach are also taking the worm.—WM. SHRUBSOLE.

Nene (Northamptonshire).—Fishing has fallen flat in this neighbourhood on account of the extraordinary wet weather. The river is very much swollen, and much land is under water. Angling prospects, therefore, for a few days at least, are practically *nil*. The water is rising, and to-day the guage at Peterboro' Bridge rogisters 13½ft.—NENEBANK.

Ouse (Brandon, Norfolk).—The reason I have not sent a report for the last three weeks is because we have had nothing but rain and wind. I have visited the place during that time eight different days, and am now writing from where the waters are high, but the weather has set in with frosty nights and fine dry days. Host Rolph has just told me in about three or four days, with suitable weather, the river will be fit for angling, and good catches are expected. Will write again next week.—JOHN O. GEORGE.

Ouse (Offord)—We have been flooded all the week, but the water is going down, and we hope to be able to fish again in a few days, and after this flush of water I think we shall have some good sport if the weather holds fine.—H. COLLINS.

Ouse (York).—Our river has run down since my last report, and prospects for the bottom fishermen are much brighter. Some capital catches of roach and bream are being made just now in the Bream Field Swims below the city, where several local hands have banked some splendid specimens with maggot and paste. Now that the weather is a bit more settled, with sunny days following sharp nights, we may expect good sport among the grayling.—RONALD.

Scarborough.—(SEA FISHING).—Since the storm left us, both pier and boat anglers have had excellent sport. Billet are very plentiful with each return of the tide, and one of our local anglers caught four stone in weight the other afternoon, varying in weight from 1lb. to 12lb. each, and Mr. Wardell and Mr. Jubb, fishing from a boat over one of the "sears" in the bay, caught eight stone in weight of rock cod in the course of two hours' fishing. Plaice are also plentiful, and we shall doubtless have a continuance of good sport for another month at least.—H.

Severn and Lower Teme (Worcester).—The late flood has passed away, and both rivers will soon be down to their ordinary level again, when anglers will be out after the pike, no doubt. Warner, of the City Club, and another member, have had some good sport among them (in private water) during the past week, and a grand lot of roach, some over 1lb., were taken off the grass when the Severn was nearly bank full, the worm being the most taking bait.—R. WINGFIELD.

Severn (Shrewsbury).—The river is now in better condition than it has been for weeks, and since the water has cleared some excellent pike fishing has been obtained. These fish seem to be on the increase, and if they continue to do so some measures will have to be taken to destroy them. Craddock, a professional fisherman, has made some good captures during the week. On Monday he took ten pike at Uflington, at the junction of the brook with the river. The lot weighed 30lb., all being between 2lb. and 5lb. On Wednesday the same angler captured five pike in the same locality, the heaviest weighing 7lb. Mr. Goodman took a 4lb. fish on the same day, and his companion Mr. Edwards captured four nice pike. Coarse fishing continues good.—PISCATOR.

Sussex Rivers and Chichester Canal.—The Sussex rivers, where are they? In some districts the channel is difficult to define, and one huge sheet of water covers the lowlands. The Adur, the Arun, and the Ouse have overflowed the banks, impeding the train service, and in some districts the water has been up to the carriage doors. Angling prospects must be the tenour of my letter. It will be some days with favourable weather before enthusiasts can hope to wet a line on the rivers, yet at Chichester the canal is far below its height, and in good colour. Fish are not feeding well, too much natural food perhaps—but a few bream, roach, and small pike have been taken. The water in most reaches is at present too weedy for spinning. Sea-fishing, both from piers or boat is remunerative, and with favourable weather anglers cannot do better than patronise the briny.—GEORGE F. SALTER.

Taw (North Devon).—The rivers were much over-flown last week; but since the water has cleared, some good day's salmon fishing has been had. One gent took four fish weighing 25½lb., 23lb., 21lb. and 20½lb., in the junction of Mole and Taw.—RUSTY GAME.

Tees (Barnard Castle).—Never since the erea of the Tees Fishery Board have such a number of salmon been known to ascend the river as have done this autumn. The numerous floods have enabled the fish to bid defiance to Dinsdale Dam and other obstructions, and at the present time I am quite within the mark when I say that both river and tributaries are *literally swarming* with salmon. As the season closes on Saturday next, I will endeavour to give you next week the catches for the last week. The water is in good order, and, with the exception of rather too much frost at nights, all seems promising for a good finish up.—J. H. R.

Teme (Ludlow).—The Teme in this part is now running slightly coloured, but a nice height; it is slowly clearing, and if the weather will hold fine, should be in good order for either fly or maggot fishing by Saturday.—S. LUDLOW.

Teme (Tenbury).—The water has lowered considerably, but is still stained. Greyling fishing should be good by the end of the week with the maggot and fly.—WORCESTER.

Trent (Newark).—River reporting of late in the Newark district would have been a waste of space in the *Gazette*, which has been more profitably occupied. For nearly three weeks the Trent has been in full flood, and though at time of writing it is running at something approaching its normal winter level, its waters are charged with a peculiarly heavy colour, not at all acting as an auxilliary to success with the rod. Though several attempts have been made during the past week, but little reward has been attained, and the capture of a few chub, heaviest 2½lb., from the Corporation Waters, by Mr. C. Brownlow, and a brace of small jack, and a few roach by other gentlemen about, represent the average takes, but with a continuance of the present weather good sport with either worms or gentles may be looked for, and pike will in all probability come freely at either live-bait or spinner, as a symptom of frost is apparent at early morn, and the bed of the river has received a thorough cleansing of all accumulated weeds and rubbish.—TRENTSIDER.

Witham, &c. (Mid-Lincoln).—Since the boisterous weather has given off there has been a better chance with the rod and line. The colder weather is stirring up the eels, and many have been taken for market. Eels of 2lb. to 3lb. have been by no means rare, and are worth angling for. A great many good tench are now being caught about Bardney Lock, and experts tell us that seldom before have they been caught in greater quantity and more freely. Of course, trolling is now the chief game, and it may be worth while mentioning that the bottom has much improved since the floods. The river has also been cleared in other ways for a long distance below Bardney. Live-baiting is declared best, but the pike now are beginning to run at anything in the shape of a spinning, as well as live bait.—LUCI.

Yore (Hawes).—The Yorkshire rivers are now getting into nice order for grayling and pike fishing, and some good sport may be looked for during the next week. I have heard of several fairly good baskets, having been made on both the Yore and Wharfe, with worm and fly, the latter principally. Several members of the Yorkshire Angling Association have been salmon fishing on the Eamont during the past week. Mr. H. Knott, Staleybridge, had three fish in two days, largest 17lb.; smallest 9½lb.; these were with the Angel. Mr. F. C. Branson, Leeds, killed a fine fish, 18½lb., with fly.—FRANCIS M. WALBRAN.

Yare (Norwich).—The sport amongst the pike has continued good since my last report. I heard yesterday that on one broad on this river considerably over one hundred pike have been caught this season. Only a few days since eleven nice fish were caught on a broad lower down stream; these fish were captured before noon, which shows they must have been well on feed. Last Thursday, I heard of very fine jack which had been caught a few miles above Norwich, on the Yare; it weighed 16½lb. I have called on the man who captured the two very large bream on the Wensom, which I reported about a month ago, and he says the weights were as I gave them, viz. 8½lb., and 6lb. 10oz.—The weather during the past two days has very much improved, and sport is likely to go on merrily.—ROBERT MOLL.

Usk (Abergavenny).—The river has been bank-high for days. It is now clearing and gradually falling. As the barometer is rising, it is expected that there will be some good sport during the last three days left of the season. The river is full of salmon, and it is hoped that they will be well watched during the spawning season.—J. CLARE.

Scotch Reports.

Border Esk.—Glorious weather at last, and the river in splendid trim. The season closes at the end of this week, and good sport is prognosticated up to the finish, especially in the Middle and Lower Reaches. Lower Waters.—Despite the fact that the Border Union coursing is now in full blast in the vicinity, anglers are catching salmon fast. Mr. Yates, Metal Bridge Hotel, two, 30lb. and 26lb.; Mr. Story, Longtown, one, 18lb.—GILNOCKIE.

Dee (Aberdeenshire).—The last week of the season promises to compare favourably with any of its predecessors in this most gratifying season all through. Had it not been for the floods the record would have been undoubtedly broken by the present closing back-end, but as it is, a very high average has been made, which will be considerably augmented by the close of the week. On the Ballater reaches a good few fish were got on the Birkhall (Queen's) Water, Invercauld Arms, and Cambus O'May Waters, while Sir William C. Brooks, Bart., and party had very good sport, Dr. Kerr landing a fine fresh-run fish, with sea lice adhering, on Saturday last, which scaled 16lb. On the Huntly Arms Hotel Water, Aboyne, Mr. Digby Cayley has had splendid sport every day during the week. He had one of 15½lb.; two, 16½lb. and 15½lb.; four, 20lb., 22lb., 17lb. and 18lb.; two, 21lb. each; and two, 7lb. and 5lb. and on Saturday a fine fish of 20lb., while Mr. Gerold Collis had one of 11lb. and Mr. Cayley, three, 7lb., 11lb. and 15lb., on a later occasion. On the Desswood Water, Captain Davidson landed two, 11lb. and 8lb., and three on Monday, 16lb., 21lb., and 22lb. On the Kincardine Lodge Water, Mr. Lamond had one of 14lb., while Colonel Charles Leith Hay landed three on Friday, 32lb., 16lb., and 21lb. On the Upper Dees Water, Captain Ramsay had three on Tuesday of 8lb., 9lb., and 22lb. On the Carlogie Water excellent sport is being had daily. Mr. Archibald Campbell landed one of 18½lb., one of 18lb., two of 18lb. and 20lb., two of 18lb. and 19lb., and two of 18lb. and 29lb., while Captain George Campbell had one of 16lb., one of 22lb., and one of 20lb. On the Borrowstone Water, Admiral Fane had one of 21lb. and another of 15lb., while Mr. Hart had one of 21lb. On the Ballogie Water, Mr. W. E. Nicol landed one of 16lb., and another two on Monday, while Mr. Valpy had one of 25lb., and Mr. Petrie, postmaster, one of 26lb., on the same water on Saturday. On the Sluice Water, Mr. G. L. Chambers has had some very good sport, having grassed a fine fish of 25lb. on Friday, two of 8lb. and 11lb. on Saturday, and one of 16lb. on Monday. On the Commonty, Mr. W. Blacklaws had one of 12lb. on Tuesday. On the Woodend Water, Mr. W. Farnell Watson landed during the past week, one of 21lb., one of 22lb., two of 17lb. and 22lb., and three of 18lb., 17lb., and 17lb., while Mrs. Farnell Watson had a fine fish of 17lb. On the Blackhall Castle Water. Mr. G. T. Hay had two of 18lb. and 15lb., two of 18lb. and 10lb., five sealing from 10lb. to 29lb., seven, from 17lb. to 24lb., three from 17lb. to 23lb., and three of 15lb., 19lb., and 33lb., in all, twenty-two fish ranging from 10lb. to 33lb. On the Inchmarlo Water, Mr. Duncan Davidson and Lord Chesterfield landed twenty fish during the week, all heavy weights. On the Cavinton, Mr. T. Turner Farley had similar successes, while the lower sections are doing admirably well. On the Drum Water, Mr. F. H. Irvine landed four fish one day, scaling 18½lb., 22lb., 24lb., and 24lb., while Mrs. F. H. Irvine had a fine fish of 20½lb. On the Durris Water, a salmon of 37lb. is said to have been got, and on the Ardoe, a fish of 45lb., but these have not yet been authenticated. Most of the fish have been got with the fly, while the Phantom Minnow has also done noble execution. Sea trout of 2lb. and over, have been quite plentiful, and very good baskets have been made on the tidal waters, chiefly with the worm. There is a splendid run of fish in the pools, which are seldom so well stocked so early in the autumn, and an excellent spawning season will undoubtedly be had. The best sport has been had with the latest arrivals of the autumn migration, stale fish taking but quite indifferently, although they are literally swarming in the pools in the middle and lower reaches.—DEESIDER.

Deveron (Banffshire).—The river Deveron continues in fair fishing order, and sport was well maintained during the past week. A large number of the fish killed were newly-run. On the 23rd inst., on the Netherdale Water, Turriff, Mr. Findlay had three salmon of 13lb., 13½lb., and 20lb.; Mr. K. Maitland, a grilse of 5lb.; Captain R. W. Calquhoun, a salmon of 11½lb.; Major Hunt, a salmon of 16lb.; and Mr. Fraser, the keeper, one of 22lb. On the Mountblaing Water, Major Ramsay, London, had two grilse of 4½lb. and 9lb.; the keeper had a grilse of 4lb., and a salmon of 14lb.; Mr. Beecham had fourteen salmon of 8lb. to 19lb. On the Cragston Water for the week, Colonel Alexander landed eighteen salmon, for the week, of 7lb. to 19lb. A similar number were killed on the Forglen Water, ranging from 9lb. to 30lb., by Sir Robert Abercromby and party. On the Camonsie Section, Colonel Napier had three fish; Mr. R. J. Beech, three, and the keeper, one, from 7lb. to 19lb. On the Mayne Water, Mr. Lawrence, Dr. Barry, Mr. Thurburn, and Mr. Sandison had six fish of 11½lb. to 19lb. On the Laithers Water, Dr. Grey, Fyvie, three; and Mr. Mintz, Corse of Jackston, two. On the Connehaugh Water, Huntly, Mr. Porter had two salmon. On the Huntly Lodge Water, Mr. W. P. Sutherland had four salmon of 7½lb. to 25lb. On the open water, at Huntly, fair sport was also got by Mr. A. Brander, Mr. George Gray and others. On the Edinglassie and Beldornie Sections, Mr. Smith and Mr. R. W. Grant had four fish of 7lb. to 18lb. Several good baskets of trout have also been got lately on the river and tributaries.—H. WISEMAN.

Earn.—This river has been in good ply, and some good sport has been got lately. On the Club Water at Crieff, Mr. P. White killed four, 24½lb., 24lb., 22lb., and 19lb.; Mr. D. Forbes, two, 16lb., and 16lb.; Mr. McCowan, one, 18lb.; Mr. J. Halley, one, 26½lb.; Mr. Relsell, one; Mr. McLevy, London, two 18½lb. and 7½lb.; Mr. Cameron, four, 28lb., 15lb., 8lb., and 6lb.; four fish were also got in the Ferntower Water. On the Dupplin Reserved Water Miss Oliphant Gask had one, 11lb.; Mr. Harvey and Mr. Willyams two, 18lb. and 15lb.; Mr. Grindlay one, 7½lb.; Captain Murray one, 18lb. On the Inner Pettray Water Mr. J. S. Pagan killed twelve, 24lb., 18½lb., 18lb., 17lb., 17lb., 16½lb., 16lb., 15½lb., 12½lb., 11lb., 11lb., and 8lb.; total 186lb. On the Club Water Mr. Jack killed two, 27lb. and 21lb; P. White three, 20lb., 20lb., and 7lb.; Mr. McCowan one, 16lb.; J. Bell one, 17lb.; G. S. Comrie one, 16lb. On the Drummond Castle Water Mr. Cameron killed two, 15½lb. and 14lb.; Mr. Thomson, Alloa, one, 15lb.; Major Grove, Maidstone, three, 30lb., 15lb., and 15lb.; Mr. Gordon one, 9lb.; Mr. Archibald, one; Mr. McLeay two, 15lb. and 6lb.; Mr. Marples one, 17¾lb. On the Strowan Water Mr. Archibald killed four, 20½lb, 15lb., 17lb., and 8½lb. On lower reaches on Saturday Mr. Pierrie killed two fish and a grilse; Mr. Hunter, three; Mr. Hutchison, one; Mr. Mason, one. On the Club Water on Monday D. Forbes killed five, 28lb., 17lb., 16lb., 15lb., and 7lb.; Mr. Tait three, 20½lb., 16lb., and 9lb.; Mr. P. White, five, 28lb., 24lb., 23lb., 18lb., and 16lb.; G. S. Comrie, one, 10lb.; Major Gibson, four. On the Gask Water Mrs. Moon killed three, 14lb., 12lb., and 9lb.; Mr. Moon, three, 20lb. 15lb. and 7lb.; F. D. Malloch, three, 19lb., 16lb., and 13lb. On Stronwan Water Mr. Henderson killed three, 16lb. 12lb., and 8lb. On the Strathallan Water Lord Strathallan killed nine during the week, 27lb., 24lb., 22lb., 19lb., 20lb., 8lb., 8lb., 8lb., and 7lb.; Mrs. Fellows, one, 8lb. The master of Strathallan two, 22lb. and 9lb. On the Dipplin Reserved water Mr. Willyams, Col. Leigh, and Sir E. Moss killed six Monday, and four on Tuesday. On the Lower Dipplin Water Mr. Macpherson killed two, 9lb. and 8lb.; Mr. Beattie, one 14lb.; and Mr. Hamilton the keeper, one.

Nith (Dumfriesshire).—Since the floods have passed away, the autumn salmon angling has much improved, and some capital sport has been had during the past week in the middle waters. On Friday, Mr. Levy, of Dalswinton, killed three beautiful salmon, of 17lb., 19lb., and 27lb. on the Dalswinton portion of the river; Mr. Fergusson, of The Isle, and a friend, killed five salmon in Cowhill Water, the gross weight being 101lb.; Mr. T. Tait, Boghead, had one of 19lb. in Ellisland Water, and Mr. J. Webster, Portrack, one of 20lb. On Saturday, Mr. Fergusson and another rod had again good sport, securing five salmon, weighing a total of 100lb.; Capt. Thackeray, from Dalswinton, had two, weighing 25lb. and 19lb. respectively; Mr. D. Welsh, Dumfries, killed one in Portrack Water of 17lb.; Mr. Miller, Dumfries, one of 31lb. in Blackwood Pools; Mr. Currie, two, of 16lb. and 10lb.; Mr. Grierson, Ellesisland, and Mr. Tait, Boghead, had one each in the Ellisland Water. On Monday, Capt. Thackeray, Daltwinton, had two fish, weighing 19lb. and 16lb.; Miss Levy, Dalswinton, one of 10lb.; Mr. Ainslie, Stroquhar, killed five fish in Blackwood Water, weighing 22lb., 18lb., 18lb., 18lb., and 13lb. respectively; Mr. Tait, one of 21lb.; Mr. McMillan, Dumfries, one of about 18lb.; Mr. Aitken, two, of 25lb. and 22lb., in the Isle Water; Mr. Fergusson had a fine catch in the Cowhill portion of the river by killing six salmon, weighing over 100lb. On Tuesday, Mr. Mitchell, Dumfries, landed a capital salmon of 30lb. in Blackwood Water, and another of lighter weight; Mr. Maxwell, jun., of The Grove, killed one in Friars' Carse Water, weighing 17lb.; Mr. Ord, Closeburn, on Friday and Saturday, had a good salmon on each day in the Closeburn portion. Mr. Duncan, Dumfries, landed two on Monday in Ellisland Water, weighing a total of 47lb., and another angler had two good fish. Near the town of Dumfries I hear of a fish or two being killed this week. Season closes November 14.—HEATHERBELL.

North and South Esk (Forfar).—On the Panmure Arms Hotel Water, Mr. W. Murdoch, Aberdeen, landed a fine salmon of 18lb. At the Sheriff Court, Forfar, Roberts, labourer, Brechin, was fined 5s. with £1 1s. expenses, for being found in possession of a gaff, at Brechin Castle Dam Dyke; while Sangster, a mason, Brechin, was mulcted in the sum of £2, with £2 4s. expenses, with the alternative of thirty days in prison, for a similar offence; Stewart, a sweep, £5, with £1 2s. 3d. expenses, or sixty days in jail; and Alexander, a labourer, £2, with similar expenses, or thirty days' imprisonment, for being found with a lighted lamp and gaff at the river's bank for the purpose of catching salmon. These wholesome lessons will no doubt have effect on the Brechin poachers for some time to come.

South of Scotland.—THE ANNAN (GRAND SPORT).—The autumn salmon fishing in the Annan has been of a magnificent character during the past week, and many remarkable catches have been made within the last few days, the like of which has not occurred in the river for the last thirty years. I noted last week in the *Gazette* the killing of five salmon in about four hours by Mr. Arthur Nicholson, St. Asaph, North Wales, which weighed a gross total of 94lb. It was thought at the time that this could not be surpassed; but, good though it was, four other rods have over-topped this record by many pounds. Mr. John Bell-Irving, Mount Annan, angling in the Mount Annan Water on Saturday, on the Island Flatt, killed with fly in three hours six salmon, weighing 17lb., 19lb., 21lb., 17lb., 16lb., and 17½lb., a gross total of 108lb.; Mr. Bell-Irving's keeper, James Riley, angling in the pools immediately above his master, at the same time, had four salmon, weighing 21lb., 17½lb., 16lb., and 22½lb., thus giving a grand total of 185lb.; for ten fish, an average of 18½lb. Angling in Sir Robert Jardine's water at Castlemilk, Mr. D. J. Bell-Irving, Waterside, ran his brother a close race by killing five salmon, weighing 17lb., 18lb., 24lb., 23lb., and 24lb., a total of 106lb. This gentleman lost four salmon on the same day, when attempting to gaff his own fish. At two outings he had other four salmon, weighing 21lb., 23lb., 26lb., and 21lb., and lost three others. On Saturday morning he killed one of 23lb., thus he had a grand total of 220lb. for ten salmon, or an average of 22lb. each. In Mount Annan Water, on Thursday, Mr. Crawford (Northfield), fisherman, William Carrick killed one of 20lb. in the Tower Pool, and on the following day one of 16lb. on the same cast. On Friday Mr. P. A. Pasley Dirom, of Mount Annan, killed two in "James's Stream" with the Black Doctor fly, which weighed 19lb. and 15½lb. Out of the "Long Rig," Mr. Dirom killed another immediately after of 20lb. His fisherman, Andrew Bell, landed one out of the "Long Rig" of 19lb., and the gardener at New Park, D. D. Phillips, killed one of 4lb. in the Luce Pool. On Saturday Mr. Dirom's fisherman killed two in Alice's Pool of 18½lb. and 9lb.; and Mr. Dirom, one of 23lb., in Jamies Stream. Sir William Marsh (a guest at Mount Annan) was rather unfortunate on Saturday; he hooked four salmon, and every one escaped. On Monday there was again some grand sport in this part of the river, Mr. Dirom and his fisherman killing seven salmon of the following weights: Mr. Dirom, 16lb., 19lb., 19lb., and 20lb.; Andrew Bell, 16lb., 17lb., and 21lb.; a grand total of 130lb. These fish were all killed within the stretch above Brydekirk Bridge, and the killing fly was the Black Doctor. Sir William Marsh killed two of 11lb. and 16lb. in the Wood Pool on Monday; and the keeper had two of 7lb. and 18½lb.; Mr. Crawfords, fisherman, one of 24lb. in Luce Pool; Mr. Joynson, Wyseby, in Castle Milk Water, killed two of 23lb. and 21lb. In the Hoddom

Water scores of salmon have been killed, the Rev. James Monilaws had two of 20lb.; Mr. Johnstone, Ecclefechan, one of 18½lb.; Mr. Charles Brook, a fine fish of 25lb. In the same water, on Saturday, the second keeper (T. Reid) had four salmon of 18lb. each (average). The keeper, Moscrope, one of 18½lb. The head-keeper (A. Dalziel), one of 20lb. Mr. John Bell, Howrig, landed one of 25lb. Capt. Bell-Irving, Whitehill, killed three salmon in Castle Milk Water, weighing 7lb., 20lb. and 25lb. Mr. J. Bell, one of 22lb. Mr. Stewart, Ecclefechan, two of 7lb. and 30lb. Mr. Wm. Johnstone, a fish of 10lb. Mr. D. Tweedie, Ecclefechan; one of 17lb.; Mr. R Bell, one of 17lb.; Mr. Irving, Tweedie, Ecclefechan, a fine salmon of 22lb.; Mr. Johnstone, two of 12lb. and 16lb.; Mr. Crear, Langlands, one of 18lb. Mr. Thomas Hoare, Kinmount House, killed one of 18lb. in Hodden water. Mr. David Halliday, Brydekirk, landed one of 16lb. On Monday, a large number of good fish were killed in Hoddem, Castle Milk, Dormont, Murraythwaite and Kirkwood Waters, besides what have mentioned. On Tuesday, on Hoddom Water, Mr. T. B. Johnston, Lord-street, Liverpool, aud his friend Mr. Ramsbottom, killed six splendid salmon; Mr. Johnston weighed 21lb., 19½lb., and 16lb. Mr. Ramsbottom, 22lb., 19lb., 16lb. In the same water on Tuesday, Mr. D. Tweedie, Ecclefechan, killed four capital fish of 22lb., 20lb., 17lb., and 17lb. The keeper (Tom Reid) killed five, weighing 24lb., 20lb., 18lb., 18½lb., and 17½lb., a total of 98lb. Yesterday, Mr. Ramsbottom, Liverpool, killed four salmon, in Hoddom Water, of 25lb.; 18lb., 16lb., and 14½lb.; Mr. T. B. Johnston, Lord-street, Liverpool, killed a good fish of 18lb.; Mr. Irving Tweedie in the same water had one of 20lb.; Mr. William Smith, Brocklerigg, one of 17lb.; the keeper (Walker) had one of 18lb.; and others had fish. In the tidal and lower waters, the sport obtained has been the best ever known in the Annan.—HEATHERBELL.

Tweed.—Salmon anglers on this river have had no cause to grumble at the lack of sport since last week. The elements, generally speaking, have been all that could be desired for the prosecution of angling amongst the monarchs of the "Tweed's silver stream," and the disciples of Old Izaak have not been slow to take advantage of the opportunities afforded them. Fishing began in earnest last week on Wednesday, on the majority of the salmon casts, although a few were out on tho day previous, and managed to kill a few good fish—more especially on the Floors Castle Waters. To give a full and detailed account of all the salmon and grilse that have been got since last report, would take up too much of your valuable space. At present the weather is all that could be desired for the season of the year, being fine and dry, with a touch of frost during the evening and in the early morning; this latter circumstance having caused the river to run in pretty low once more, and we would be nothing the worse for a small flood—seeing that the various angling waters have been well thrashed for a week past—while, at the same time, such an occurrence would promote a fresh run of fish from the sea, as well as give a much-needed rest to all the casts on the river.—MAXWHEEL.

Ugie (Aberdeenshire.)—A good few fish have been got during the latter part of last week, the floods having had a had effect as far as present sport was concerned in the earlier part of the week.—G. U.

Ythan (Ellon).—The angling season, on the Ythan has been exceptionally good. Mr. W. T. Tourney, Brockhill-park, Kent, has made a record of over fifty fish, scaling from 5lb. to 30lb., and this will be considerably augmented before the season closes. On the tidal reaches anglers fishing from the Udney Arms, have met with exceptionally good sport: general details of which will be given next week.—G. U.

Irish Reports.

Ballinderry (East Tyrone).—The Ballinderry is in splendid trim for pike spinning, and a good many anglers have taken advantage of the favourable state of the water and weather. On the Finvoy reaches many heavy pike have been taken, and on the Ardtrea Sections Mr. Campbell, Mr. Manuely, Mr. Norris, Mr. Armstrong, and other local anglers have had good baskets of pike. Last Monday Mr. S. Anderson killed a 12lb. pike on the Tullyleggan water, and same day he hooked a heavy "dullaghan," but it broke off after a short struggle. The season has now closed for the ensuing four months of the close season.

Lough Neagh.—The netting of pollen ceases to-day (Saturday), and the close-season commences. On the whole the season was a very good one, considering the large number of boats employed, and the increasing scarcity of fish. Salmon are running up from the sea now through the Lough to the inland streams, making for the spawning beds. Lake trout are also leaving for the spawning beds in the rivers. Some of these as high as 20lb. in weight have been seen crossing the bars at the mouths of the Bann, Blackwater, Ballinderry, and other Tyrone streams. Perch and pike fishing is fairly good, and eel fishing is prime, the takes on the night-lines being heavy.

Waterville (County Kerry).—SEA FISHING.—As the fresh water angling has closed here, anglers have turned their attention to sea angling. The weather up to Saturday was very bad, however, and no boats could venture out. Since then one or two boats have done well at the Ballinskelligs side, principally of gurnet and bream. Mackerel are reported to bo numerous in the bay at present. I expect good sport will be had for the next few days if tho weather continues favourable.—THOMAS J. DENNEHY.

Shannon and Lough Derg (Killaloe).—It was a pity the storm and rain, which continued up to Saturday last, spoilt all chance of sport on river and lake. Thero can be no doubt that the salmon fishing would have finished up brilliantly, as there was quite a large quantity of fish in all the pools on the preserves at both sides of the river. The water has gone down a few inches since yesterday (Tuesday), and although there are only one or two casts fishable on the streams, we expect that a few of the big twenty-five or thirty-pounders will be landed. On Oct. 20, Mr. Sidney Mitchell, one grilse, 6½lb.; 22nd, one, 6½lb.; 23rd, Mr. F. Johnson, one, 5lb.; Mr. S. Mitchell, three, 7½lb., 6½lb., and 6½lb.; Mr. J. H. Gillott, one salmon, 10½lb.; 24th, Mr. S. Mitchell, one salmon, 24lb.; Mr. Gillott, one grilse, 7lb.; Mr. F. Johnson, one salmon, 8½lb.; 26th, Mr. Gillott, one salmon, 16lb.; Mr. S. Mitchell, three grilse, 9½lb., 8½lb., and 5½lb.; 27th, John Barry, on Mr. W. Young's preserves, one salmon, 11lb.; Mr. S. Mitchell, one, 18lb.; Mr. Gillott, one grilse, 5½lb. Mr. W. Young, D.L., Mrs. and Miss Young, and Mr. J. W. Young, who have been fishing their preserves here for two or three weeks, have returned to their seat, Brockley Park, Stradbally, Queen's Co. Mr. H. W. Tayler has returned to England.—S. J. HURLEY.

NOTES FROM BIRMINGHAM AND DISTRICT.

DURING the last fortnight or so angling in the Midland rivers and streams has been out of the question to a certain extent. In the neighbourhood of Eckington and Defford the floods stretch as far as the eye can reach, and viewing the scene from the railway on either side the flooded fields puts one in mind of travelling between two large lakes, and the level is only broken here and there by the tops of the willows and trees just showing themselves through the water. The same state of things is to be seen in the Trent district. I am pleased to say that as these Notes are being written the weather signs are more favourable; the barometer is rising, and the improvements in the weather not only in the Birmingham district, but throughout the Midlands is more marked. There is one thing that the floods will do, and that is, they will clear the rivers of the weeds and rubbish, and also part of the natural feed which the fish have been living on, so that those who are hale and strong and do not fear the weather will reap the benefit of what the floods have done in this respect.

THE St. George's Society, held their by contest on the 25th instant, at Amington, near to Tamworth, in the river Anker. The contest was fished under the most disagreeable surroundings, as the river was over the banks, and only places here and there could be found where there was a chance of getting the line in, besides the state of the ground was beastly to the extreme, and nothing better than a perfect quagmire. Owing, no doubt, to the bad weather, the contest was not so well patronised as the committee desired. The contest was of two hours' duration, at the end of which time it was found that only five of the contestants had taken fish above the standard for weighing in. Mr. Rose was first; Mr. Stanmore, second; Mr. Luckman, third; Mr. Bedell, fourth; and Mr. Bowler, fifth. The prizes were distributed on Monday evening last, and there remained over about twenty prizes for another contest, which will be held at Christmas, during the holidays, if the weather is anything like favourable.

A COMMITTEE meeting of the Birmingham Association will be held on Thursday evening next at the Birmingham Arms Hotel, Smithfield, chair to be taken at 8.30 prompt.

I AM pleased to inform the members of the Provincial Angling Association that the Great Western Railway authorities have again granted the concession to the members to travel at the reduced fare for 1892.

NOTES FROM LANCASHIRE.

LANCASHIRE men are always to be depended upon for taking their full share of the hard work connected with any popular movement, and the way they are now at work with the undertaking to secure extended privileges in railway tickets further proves that the traditional character of the county Palatine will not suffer in this instance. The Northern Anglers' Association has long been engaged in a quiet way in putting their extensive organisation into working order, and have, after mature consideration, put into the hands of the various clubs a memorial, the drafting of which is excellent. Signatures are now being obtained, and it is to be hoped that every angler in the north of England, and especially in Lancashire, will immediately visit his club-house, or if unattached to any club, find out where a copy is lying, and promptly do his duty. From the formation of the N.A.A. great importance has been attached to its constitution, and the loyal support hitherto awarded it is now being amply verified in the splendid efforts put forth on behalf of every angler within its jurisdiction. One of the chief objections to the issue of anglers' tickets was the great difficulty experienced by the railway companies in dealing with the various organisations, but now that all are merged into one large and responsible body this will be removed, and the guarantee about to be offered for a faithful observance of the conditions laid down should lead to a favourable verdict in our favour.

ONE of the best known and enthusiastic anglers in this district is Mr. J. Statter, of Oldham; his efforts on behalf of the sport generally are a feature of our local reputation; and we are glad to learn that his health is so good that he intends to resume his addresses and visits to the clubs in his own town, and also those in Ashton and Staleybridge. Mr. Statter and Messrs. W. H. Hudson, J. Ormrod, together with the Rev. —Phillpot, have been visiting Annan, but owing to the prevailing bad weather their sport was of a disappointing kind.

ALREADY the festive meetings usually heard of during the winter have commenced; but it is not every club can sit down to two salmon of the weight of 25lb. and 35lb., both taken by their own members; yet such is our happy lot.

BOLTON is running Oldham a close raco for the honours attending the furthering of anglers' interests, and in Mr. S. W. Redford they have a worthy and hardworking representative.

THE Manchester executive will do well to inquire into the action of one club in their district, who havo awarded prizes to the competitors in a recent contest for the fish locally known as "Jack Sharps."

THE Royal Walton Angling Society held their first smoking concert after their removal to the present headquarters, which aro exceedingly desirable ones, and in the genial landlord of tho Farm Yard Inn they have a good friend to all true sportsmen. It was a matter of regret that the president of the district found himself unable to be present, and Mr. Chadwick, the indefatigable general secretary, was also prevented from accepting the invitation extended to him. The attendance of visitors was very good and included members of the Blackly Football Club. Mr. William Smith officiated as chairman, being supported in the vice-chair by Mr. Henry Etchells. Somewhere about a score of singers contributed to tho programme. Mr. Tom Higgs acted as the accompanist. A word of praiso is due to Mr. John Holmes, the secretary, for the excellent programme and arrangements generally.

MESSRS. ALLSOP, Timpé, and Boyers have been paying a visit to Sibsey. They report the coarse fishing in that district as excellent. The Hob Hole and Trader's Drains were the two waters mostly patronised, and abundance of pike, perch, roach, bream, and eels were taken. On the 26th, Messrs. Allsop and Timpé secured six pike and about 40lb. of mixed fish in six hours, and this may be taken as indicative of any day's sport. They speak highly of the accommodation of the district, and recommend any angler anxious for this kind of fishing to pay Sibsey a visit.

NOTES FROM NORFOLK.

OWING to the very high tides, which have made the water on all our rivers very thick, no bottom fishing has been done during the past week. On the Yare, only one catch is worth recording—that of about fifty good roach in Buckenham Reach on the 25th inst. On the Bure, on Friday, a nice catch of twelve pike were taken at Ramworth. On Saturday, at Salhouse, about a stone of roach and bream were taken by two rods; and on the 25th inst., a similar catch of the same fish fell to the lot of a party fishing near Woodbastwick Broad. On Thursday a good pike of 22lb. was caught at Potter Heigham.

ON Tuesday evening a meeting of the Norwich Angling Club was held at the club-room, Walnut Tree Shades, to elect officers for the ensuing year. The officers of the past year were re-elected as follows: Mr. J. B. Pearce, president; Mr. G. G. Whineop, vice-president; and Mr. J. D. Beeston, secretary.

AT an influential meeting of riparian owners, held at the Norfolk Hotel, Norwich, on Saturday last, it was unanimously resolved: "That it is expedient to take such steps as may be necessary for obtaining an Act of Parliament for the regulation of traffic, the keeping of public order, and the prevention of nuisances on the rivers of Norfolk and Suffolk."

NOTES FROM NOTTINGHAM.

ANGLERS have at length been fortunate in enjoying a brief spell of fine weather, although on most days the wind has blown at a most furious rate. On Sunday it veered round from the south-west into the north-east, in which quarter it remained when my Notes were penned on Wednesday night. The river, I am glad to report, was on Wednesday fast running into condition for pike fishing, and as the back waters had been well flushed out by the floods, it is fair to presume they will hold plenty of fish. Several gentlemen were even out on Monday, and at Colnick, in the Parson's Water, one of the subscribers killed eight small fish with the live-bait; whilst two others landed five. At Barton, on Tuesday, Mr. H. Stafford, Nottingham, bagged seven, including one of 6½lb., and on the following day the same angler was again busy amongst them. Sundry fish have also been met with at Weston Cliff and Clifton. A report has reached me that recently three grand fish, weighing 50lb., were caught in the Home Pit below Clifton Hall. The pit, or rather lake, is fed by the Trent, and in years gone by I have enjoyed brilliant sport in it. Now, however, the water is strictly preserved, and there is no doubt that the three fish named were, to use a slang phrase, got on the cross. The heaviest was reported as weighing 24lb. Coarse fish anglers have been doing considerably better. At Weston, on Saturday, Mr. H. Atkinson, of Radford, had a substantial bag of roach, chiefly by the aid of bread-paste; and at Shardlow, Mr. M. Leek, of Lenton, bagged a variety of roach, bream, and perch with the worm. At Barton, Mr. H. Stafford caught nearly a stone of roach with the maggot, using for groundbait a mixture of bread and bran; and at Weston, on Monday, Mr. J. Theaker and Mr. P. Wilson; of Nottingham, took a number of very fine bream and roach. One of the bream weighed 4¾lb., and the next best, 3½lb.; Mr. Harrington, Radford, caught many splendid roach; and on Tuesday, Mr. Atkinson showed a large quantity of roach and bream.

AT the last meeting of the Nottingham County Council the Health and Sanitary Committee reported that they had further considered the question of the pollution of the rivers in the county. Complaints having been made to them of the pollution of the river Soar, which flows into the Trent below Trent Lock, the committee communicated with the Leicestershire County Council and the Loughborough Corporation. They were pleased to state that steps were being taken by both to remedy the pollution; the Corporation of Leicester had spent large sums of money this year in dealing with their sewage, with the result that there had been a great improvement in the effluent. The Corporation of Loughborough had purchased thirty-four acres of land on which to deal with the sewage of the borough by precipitation. In addition to the steps taken by the Leicester and Loughborough Corporations, the inhabitants of Keyworth had under consideration a scheme for dealing with their sewage. The committee had been in correspondence with the Corporation of Newark-on-Trent with regard to the pollution of the Trent below that town. They regretted to report that, although the matter was still under the consideration of that authority, no definite steps had been taken by them to deal with the sewage. The committee hoped that before the next meeting of the County Council they would receive from the Newark authority an assurance that definite steps had been taken. The committee had received from the Nottingham Wellington Angling Society a complaint as to the serious pollution of the Trent owing to the discharge of matter from the Burton-on-Trent sewers, and they were in correspondence with the Derbyshire and Staffordshire County Councils and the Corporation of Burton on the subject. A complaint had been received from Long Eaton Local Board of the flow of sewage into the river Erewash, at Stapleford. The committee had forwarded a copy of the complaint to the Shardlow Rural Sanitary Authority, in whose district it was.

FROM the above it will thus bo gathered that at length anglers have got in the thin end of the wedge. Pollution is rampant, not only in the Trent, but in the majority of the tributaries—rivers like the Soar, the Derwent, the Erewash, and the Leen, to say nothing of the various canals which find their outlet into the parent stream. The evils complained of are a standing disgrace, and it is to be hoped that, now the County Councils have started on the work, they will be heartily supported by the angling community at large. Personally, I do not think the Burton refuse is so bad as it was a few years ago, but anglers visiting the upper reaches of the Trent will very quickly ascertain—for it is generally in November that the outpouring of the brewery stuff takes place. When it is coming down the stream it is almost impossible to fish, especially in the districts of Willington, Foremark, Swarkestone, and Weston. We must, however, hope for the best.

I presume the annual meeting of the Trent Fishery Board will shortly be held, and in anticipation of it, the following gentlemen have been recommended for the election on the Board for the County of Nottinghamshire by the Notts County Council—namely: Mr. Henry Bromley, Ald. Fearfield, Mr. G. S. Foljambe, Mr. J. Neale, and Mr. C. W. Wright. Of these Mr. Bromley and Mr. Wright are devoted anglers, and it is chiefly to them that our fishermen must look for support. Already Mr. Bromley has been a most active member on the Board.

I was much struck and amused with an original fishing term used by an old fisherman the other morning. He called upon me, asking whether I had any scissors that required grinding. I replied, "Yes, you may grind my old fishing scissors." I handed them—they had seen some service—to him, and after the sharpening had been executed, he plaintively uttered: "Ah! my boy, they have assisted in some happy days amongst the fish. They have carved up a few *Izaaks*." "Izaaks," I retorted, "what do you mean?" "Why," he rejoined, "you have read of our esteemed angling father, the venerable Izaak Walton. His scissors were something like yours, but in his day they were only used for cutting hair—not worms." Enough, I thought. *Izaaks* for *worms* is not bad.

Mr. H. Spray, hon. sec., informs me that the half-yearly dinner and musical evening of the Nottingham Wellington Angling Society, takes place at the society's headquarters, the Wellington Hotel, Station - street, Nottingham, on Thursday, Nov. 5. It is not intended to issue any complimentary tickets, but members may introduce a friend or friends at dinner on payment of a small fee. By this means it is believed the popularity of the society may be increased still more than at present. The season for weighing in specimen fish extends from one March to another, and already some extraordinary specimens have passed the scales. The society is in a sound financial position, and is doing a good work amongst fishermen generally.

A very unpleasant incident cropped up at the Nottingham Bowling Green Society on Friday evening. One of the members—I won't mention names—produced a roach at the bar for weighing in purposes. Its appearance and general condition at once aroused suspicion, and although Mr. Pogson, the treasurer, placed it on the scale, and duly weighed it, he informed the member he could not pass it until the fish had been seen by members of the committee. The member was very indignant, but Mr. Pogson felt justified in retaining the fish, which I might state weighed 1lb. 10½oz. Subsequently it was shown to me, and I have no hesitation in saying it had been dead at least four days. It was filled with water, the points of the fins were dropping off, and the gills were nearly white through decay. When picked up and shaken, the water rattled in it, after the manner of a child rattling the milk in a cocoa-nut. On Saturday night the committee met, and not only disqualified the fish, but ordered the secretary to inform the member that his name would be struck off the society's books. No angler with the slightest knowledge of the art would ever have mustered sufficient courage to show such a fish. Its very appearance carried conviction, and I am in possession of information that it had been seen floating on the surface of the Nottingham and Grantham Canal on the Tuesday.

NOTES FROM SHROPSHIRE.

That never-ending source of complaint, the weather, has been more than usually unpleasant during the last twelve days or so, and that is saying something. Anglers are just the kind of people to air a little grievance of this kind and to let it rankle in the heart, sour their nature and make them obnoxious to all the women folk around the place. Their chief solace and recreation during these incessant rainy days is in wandering about their respective domiciles, and using bad language on every conceivable opportunity, and towards every possible animate and inanimate object. They scatter their tackle all over the house, and swear if any of it gets moved in the course of domestic labour, or if perchance some of their numerous hooks find their way into mater's dress or Freddy's fingers. They meander about like Othello, with their occupation gone, and in short make themselves profoundly miserable and nuisances to themselves and to everyone around them. Such is the angler in the damp dismal dreary days with which we have been favoured during the first few weeks of golden autumn. A fitting ending is this to the wretched summer season that we have experienced through the vile conspiracy hatched between Jupiter Pluvius and that facetious and eccentric demi-god, the Clerk of the Weather.

The angling season proper, now past, has not been one against which the red-letter of distinction may not be fixed in the annals of the Shrewsbury Severn Angling Society. There is no gainsaying the fact that, during this summer, this excellent institution has not been doing the work it might have done, and has not maintained that high standard of popularity that it has achieved in the past. Undoubtedly the wretchedly bad season has had a good deal to answer for in this respect; but whatever the conditions and reasons, the doings of the society have not by any means been as prominent as they might have been, and the danger of allowing its popularity to wane must be at once apparent. One outing only has been held, and, to the credit of Mr. J. Williams, the hon. sec., who beyond doubt, has the thorough welfare of the society at heart, it must be characterised a distinct and decided success. The management, however, should not rest content with bringing off one or two outings during the year, promoting an annual dinner and one annual meeting, and hatching a few thousand trout fry. If the society is to continue to prosper there must be more gatherings of a convivial and social nature organised, which will tend to bring the members more in touch with each other, and promote a feeling of good fellowship, without which no institution of the kind can expect to prosper and flourish to any appreciable degree. There are many ways in which this may be accomplished. At the present time there are only one or two angling gatherings held during the season, and these take place on a Thursday. Now, doubtless there are many of the members whose business engagements prevent them from attending these, and thus they are debarred from obtaining any advantage by their connection with the society, except that by supporting it they assist in promoting the interests of anglers in general by the amount they contribute towards restocking the river. This is a condition of things on the face of it hardly tending to bind the members together and ensure the success of their society. In the first place a series of contests may with success be brought off during the season in the water near the town, and as the Severn encircles the borough, within five minutes' walk from the centre, there should be little difficulty in bringing the members together in an evening or holiday. As to the winter months, a few social gatherings might, with equal advantage, be arranged, and at these papers might be read by the members. At present there seems to be a lack of interest among the members in the welfare of the society, and a want of touch between them and the committee which represents them. While complimenting the committee for their excellent work in the past, it may be well to suggest the infusion of a little new blood into their ranks. There are doubtless many members who are desirous of studying the best interests of the society, and a change in the management would, perhaps, have a salutary effect. It is hoped that at the next annual meeting suggestions will be made and taken up whereby the members may be brought together more often, and that the popularity of the society will by this means be more than sustained in the future.

NOTES FROM YORK AND DISTRICT.

After a somewhat unpleasant and trying delay, anglers have this week been enabled to resume the favourite pastime under more normal conditions than has been vouchsafed to them lately. By Monday—and in some places Saturday—the streams had pretty well cleared themselves of the surplus water caused by the recent heavy floods, and capital sport has been forthcoming during the past week. Grayling angling on the Yore has been very good, while at Boroughbridge pike have been taking fairly well. The best flies for grayling have been Snipe and Purple, Grey Palmer, Green Insect, Olive Blue, and Red Tag. Several gentlemen, on Saturday, journeyed to the Pocklington Canal, to indulge in pike fishing. Perhaps the most lucky amongst them was Mr. C. H. Slater, a member of the York Angling Association, who hooked and successfully landed a pike weighing about 16lb., and measuring 3ft. 3in. in length, and 17in. in girth. The Derwent at Malton and Hackness has afforded good sport, while the Swale at Richmond has been successfully fished.

Active efforts are now being made by the Northern Anglers' Association, *re* railway facilities for anglers. Although with the North Eastern service anglers appear to be fairly satisfied, they are far from being so with the London and North Western and Lancashire and Yorkshire Railway Companies, who have, as will be seen from the subjoined petition, withdrawn their facilities, through their being misused by some unscrupulous persons, whose conduct well merited due punishment. Through the decided action of the Northern Anglers' Association, however, there yet remains a hope that these privileges may be once more restored. Petitions are to be presented to the two railway companies mentioned above, of which the following is a copy: "To the chairman and directors of the Lancashire and Yorkshire Railway Company. The memorial of the undersigned members of the fishing clubs, and other anglers in the counties of Lancashire, Yorkshire, Cumberland, Westmoreland, Durham, and Northumberland, showeth that your memorialists have viewed with great regret the withdrawal by railway companies generally of the facilities in the way of reducing fares, and other accommodation, formerly granted to *bona-fide* anglers. They do not doubt that the reason of that withdrawal was the improper use made by unscrupulous persons of those facilities, and attributes this, to a great extent, to the want of a central association able and willing to undertake the detection and punishment of those who have offended. This difficulty has been remedied by the establishment of the Northern Anglers' Association, which is essentially a federation of angling clubs and individual members of the six northern counties of England, now comprising about seven thousand members, which are daily being increased. Your memorialists beg to request that a deputation of the Northern Anglers' Association be received by your board for the purpose of conferring with yourselves and your officials, in order to devise an effectual method for preventing the misuse of such privileges. In the event of these facilities being again granted, your memorialists will be only too anxious to support the Northern Anglers' Association in the rigid enforcement of such regulations as may be found necessary. Your memorialists would respectfully urge (1) that there is, according to estimation, a body of no less than fifty thousand anglers in the district of the Northern Anglers' Association, and the ordinary passenger rates are, to the bulk of these persons, absolutely prohibited, except for the very shortest distances; (2) that the reduction of fares will tend very largely to the renting of more distant waters, to which anglers are at present unable to resort, on account of the expensive travelling; (3) that the Northern Anglers' Association promises to pledge itself ready and anxious to undertake, in the interests of angling generally, to support and uphold such rules and regulations as may be necessary to insure that no persons but *bona-fide* anglers avail themselves of these special facilities, and your petitioners will ever pray, &c."

Last week, at the Bishop Auckland Police-court, two residents of that place, named John Dowson and John Brown, were charged at the instance of Police-constable Weir and Fred Lambert, river-bailiff, with illegally fishing for salmon in the river Wear, and Brown was further charged with assaulting Lambert. The two defendants had been observed by the officers taking fish with a long net below the dam. Upon Lambert attempting to arrest Brown, he threw a stone at the officer, which struck him in the breast. Defendants had captured several fish. Both pleaded guilty to illegal fishing, and were fined £2 each, or a month's hard labour in default, and Brown was mulcted in a further sum of £2 or a second months' imprisonment for the assault.

NOTES FROM EAST TYRONE.

With the closing days of the month angling practically terminated over the remaining parts of Tyrone where the season did not close on the 10th inst. On the whole it was a very good one, considering that the number of anglers are yearly increasing, and that the stock of fish in all the waters is yearly decreasing. The broken weather and frosty nights precluded the possibility of making heavy baskets this last three weeks.

The Ballinderry has scarcely yielded anything, except a few pike, in the past and closing week. Salmon and trout are yet running up from lough to the spawning beds in the mountain tarns. A water-bailiff assured me that he never saw a better run of salmon than was during the late floods. One monster, which had great difficulty in getting over the "curries" in the stream, weighed at least 40lb.

The Blackwater is down to its usual level, and many salmon are lying in the pools, waiting for an increase of water to push farther up the river. The season closes today (Saturday), and it has been but a middling one. All the season the trout did not rise well, and the run of salmon was poor. Trouting on the tributaries—Callan, Conah, &c.—was much better than on the main stream, but such small rivulets suffer greatly from netting. On the mountain waters of Kildress, Broughderg, Doravill, &c., the past season has been an average one.

The Pollen Fisheries of Lough Neagh ceases on the 31st inst. Take it all round, the season was much better than was expected, but firm and prompt legislation is required if this important industry is to be pursued. In the early months of the season immense numbers of under-sized fish were taken and exposed for sale in the public markets. Some of these were not more than 5in. in length. The matter was brought before the Local Board of Conservators, and posters were issued containing the section of the Irish Fishery Act, which defines the minimum length (8in.) of the pollen to be taken, and the penalties attached for the infringement of the section cited. This had the desired effect, but we hope to see Mr. W. E. McCartney's Bill, which deals with this important question, pass into law next Session. The eel fishery is now the staple one of the Lough.

NOTES FROM IRELAND.

[From Our Dublin Correspondent.]

On the 1st Nov. the notable salmon rivers of Ireland will by law be closed for this season against all intrusion of the rod. On the majority of the late rivers sport during the past fortnight was of but an indifferent nature, and indeed the weather during that period has not been of an over-inviting nature to the angler, and during the few favourable days that intervened rods were scarce, and although some good salmon were landed, it was found in most parts that the fish are now too far advanced in spawn to admit of sport being pursued.

Glancing through the season just concluded, we find that although it has not been by any means a remarkably successful one, it has proved at least an improvement on its predecessor, and on all sides it is admitted that, as regards the run and condition of salmon, nothing was more satisfactory. The western districts, with one or two exceptions, held out remarkably well, and in this quarter special mention might be made of Loughs Corrib and Mask, where many magnificent fish were killed during the season. The Westmeath Lakes were rather unfortunate owing to bad weather, whilst the early salmon fisheries of Wexford and Waterford were comparatively good. Netting in the latter county was wonderfully successful, and fish were caught in great numbers, so much so, in fact, that, during the recent inquiries by the Fishery Inspectors concerning the salmon fisheries of the south and south-east, it was elicited that, in one particular instance, the fish were so numerous that pigs were fed on them because of the insufficient demand from the markets.

Although angling for salmon has been slightly backward it is pleasurable to be able to record the trout fishing of this season amongst the best for years. Every district has the same to say—and in a few of the localities I personally know, Wicklow and Meath for instance, trouting has been phenomenal.

The first opening of next season's rod-fishing commences in a few districts in January, but for the majority of them February and March are the months, and a perusal of the latest orders issued by the Irish Fishery Inspectors will be of much assistance to intending anglers in Ireland.

Westmeath Lakes.—A general meeting of the Westmeath Lakes and Rivers Fish Preservation Society was held at the Greville Arms Hotel, Mullingar, on Thursday, the 22nd inst., for the purpose of electing a chairman, vice-chairman, and other officers for the ensuing year. Amongst those present were Mr. Charles Tottenham, J.P., Major Fetherstoutt Whitney, J.P., Mr. James Doyne, J.P., Mr. John Holt, Mr. Thomas McDonnell, Mr. Francis Stafford, Mr. H. W. Lloyd, Mr. N. J. Downes, Mr. Thomas J. Shaw, Mr. E. J. Hope, Mr. William Murray, Mr. William Paul, Mr. Arthur Fetherstoutt (solicitor to the society), and Major Grant, J.P., and Mr. W. J. Thomas (hon. secs.). It was duly proposed and seconded that the out-going chairman (Colonel J. R. Malone) and the other officers be re-elected, which was unanimously adopted amid applause. Arrangements were made for the appointment of a suitable staff of water-bailiffs to take charge of the lakes and spawning streams during the close season of 1891-2, and other routine business was discussed. Several members expressed the highest approval of the manner in which the fish preservation scheme had been carried out by the hon. secs. (Major Grant and Mr. W. J. Thomas). It is currently reported that otter fishing is practised, both in the open and close season, on Lough Lane, in the north of the county. The lough contains splendid trout of large size, but it is claimed as private property; and the Westmeath's Society's scheme of preservation does not extend to it, although fished by the public.—T. J. W.

Holloway's Pills.—In general debility, nervous tremour, and mental depression, these unrivalled Pills have a marvellous effect. They have won the confidence of millions in all parts of the civilised world. Constitutions shaken by sensual excesses, or by long residence in unwholesome climates, or by sedentary habits, are wonderfully renovated by a course of this extraordinary medicine, which, powerful as is its action on the whole system, is perfectly harmless to the tenderest frame. The Pills are composed of rare balsams, without the admixture of a grain of any mineral whatever, or of any other deleterious substance. They operate directly, powerfully and beneficially upon the whole mass of blood, nor can we question the fact when we see indigestion cured, liver complaints arrested, the oppressed lungs brought into healthful play, and every physical function renewed and strengthened by their agency.

— NOTICE. —

FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

imunications relating to the Literary Department Fishing Tackle for Notice, Books for Review, &c., must be addressed to R. B. MARSTON, the Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter Lane, London, E.C.

respondents are requested to write on one side of the paper only, and give their realnamesand addresses, notnecessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

Terms of Subscription.

GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston, and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

SOME "ORCADIAN" MEMORIES.

By DUINE MÔR.

ORKNEY, apart from the very excellent angling be obtained in some of its lochs, is a very in-esting place to visit, because one meets more ices there of the Norse influence in all its anifestations than in any other part of the ited Kingdom, with the exception, of course, of tima Thule. The names of all, or nearly all e towns, villages, lochs, hills, headlands, and ys "smack of the wild Norwegian still," as rquil,

> " . . . from Dunvegan high,
> Lord of the misty hills of Skye,"

marks to the Abbot in Artornish, by way apology for his bluff manner. The tenure which the land is held (Udal), is Norwegian, d bonnet-lairds are as "thick as autumn rains," that, when shooting, you can only judge of ether or not you are on your own ground by erally taking your bearings, for, say if such and ch a church be bearing north-west by north, and ch a hill be east north-east, and in a line with mething else, then you are off your ground, and d better not shoot until you are on it, unless u want the laird of the spot, on which you are standing, to come and make you an offer of his extensive moor at half-a-crown per annum (this is fact, not fiction, and a difference of opinion as to an additional sixpence a year for a portion of your shooting may, in certain parts of Orkney, lead to your not getting that portion at all); the whole superstition of the islands composing the Orcadian group is of Scandinavian origin, with perhaps a dash of Scotch spirits thrown in, and altogether the place is unique and intensely interesting. Kirkwall and Stromness are equally good centres for the angler, but there is more life and bustle about Kirkwall and more accommodation. Kirkwall is most conveniently reached from Aberdeen or Thurso, to which the angler should proceed by rail, and thence by sea. The steamers are very good and comfortable boats. There is plenty of accommodation, both at Stromness and Kirkwall, either in the hotels or private apartments, but many anglers prefer farm-houses as places of residence, on account of their proximity to the lochs. Accommodation in these is, as a rule, easily obtained. The fishing in Orkney, though at times very good, is remarkably fickle, and one may fish in unfavourable or even apparently favourable weather on the most justly celebrated of Orcadian lakes—Loch Stennis—without much reward. I was shooting a good deal when in Orkney, but so far as my memory serves me I spent four or five very unprofitable days in trying to wile some of the Stennis trout into taking; a few did take, but they were very few indeed and far between, and I do not think that I killed a fish over 1½lb., though I had one or two rises from apparently heavy fish. I was too early (August) for sea trout, which, I understand, run very late as a rule in Orkney, and secured only a few of no great size. The days I spent at Stennis were, in the main, bad angling days—a cold north-east wind sweeping over the sullen waters of the loch; one day, however, was warm and fine, with a good breeze, and on it we did fairly well. Stennis is a peculiar loch, quite unique, in fact, and though there are a good many lochs, comparatively speaking, in the Outer Hebrides, into which the sea flows at both ends and in which the water is as much salt as fresh, there is no loch which is so much of a wandered bay of ocean—if one may so put it—as Loch Stennis. Loch Bee, for example, in South Uist, attached to Creagorry and Caarnan Hotels, is a loch connected with the sea at both ends; yet it contains only remarkably fine yellow trout, from 1lb. upwards, but no sea trout, or at least only a very odd one; whereas, Stennis contains both loch and sea trout, and all manner of sea fish besides, from flounders up to lobsters. The water of Stennis, so far as I observed it, is remarkably clear, the trout very pretty and game fish of, or very similar to, the *Salmo nigripinnis* order (with some variations); and all over it is a pleasant loch to fish. The real big fish of Stennis are rarely killed with the fly, but fall, as a rule, to the bait or the minnow. To get a monster—I am not speaking of 3lb., 4lb., or 5lb. fish—is about as hard as to get a Thames trout or big *ferox*. Luck may favour you at once, or only after a very long time, if ever. Last year one of 12lb. was killed on the Phantom. He must have been a fine fish, and on the fly would have given the perfection of sport on a trouting-rod. In a loch, where feeding is as plentiful as it is in Stennis, these big fellows must rise but rarely. However, the chance is always there, and I can remember that it was the possibility of raising such a fish that made me stick almost entirely to the fly. The 29½lb. Stennis trout of, I think, two seasons ago (caught on a set-line) was the largest fish of his kind I ever heard of, save a 30lb. fish killed in the Tay many years ago with the fly, and a 39½lb. fish said to have been picked up dead in the Loch of Wester, in Caithness-shire. Loch Stennis is well worth fishing for the chance of a big fish turning up, for there are probably more enormous yellow trout in it than in any loch in the United Kingdom, with, of course, the exception of some of the famous Irish lakes. Of small fish it yields, as a rule, only a very moderate quantity, Harray, the connecting loch being much more productive of steady sport. The trout of this loch, according to local belief, cannot stand salt water, and, after high tides have poured into Stennis, are, it is said, not only so sickened that they will not rise, but are even occasionally poisoned. The influx of salt water may certainly keep them from rising, but the supply of food which it carries in is probably the reason why it so affects them, for trout are in no way affected by salt water, and often go down to the sea (though non-migratory in the strict sense), while in Orkney it is no uncommon occurrence for the angler, fishing in the sea for sea trout, to kill an occasional ordinary yellow trout. Yellow trout of a large size are likewise often killed in the Strome, in South Uist, the water of which is almost entirely salt. These do not appear to be estuary or slob trout (if there be such a distinct species), and only, so far as I could judge from the specimens which I have seen, deserved the title from the fact that they were killed in an estuary. The best brown trout fishing which I had in Orkney was in Loch Swannay or Swona (though Loch Isbister and that many-named lake Loch Twatt or Kirbuster or Boardhouse or Birsay, which has as many *aliases* as a distinguished criminal, are also good), and I thoroughly enjoyed the few hours I had on it, killing fifteen the first day (one and a-half hours) and twenty-five the second (three hours), the fish running from ½lb. up to 1¾lb., and giving excellent sport. Though somewhat dark in colour, they were well-fed, handsome fish, while for the table they quite equalled any trout which I have ever tasted. Curiously enough, my companion, who had killed more trout, perhaps, before I was born than I have done since that memorable event, secured only one fish and had only one rise on the second day, and fared but little better the first; the only reason I could assign for the difference being that I fished with a short line and he with a long one, and so I got in three casts to his one, though perhaps it was only another example of the many mysterious curiosities of angling. Swannay seemed to me to be a most admirable loch and a very pleasant one to fish. Apart from the really good fishing, of which there is plenty to be had free or for the asking, Orkney is a very interesting island. Its coast scenery, though perhaps inferior on the whole to that on the west coast of Shetland, is nevertheless extremely fine; to the ornithologist it offers a splendid field; while to the antiquary and the lover of romance the many memorials of the old Viking days and the traces of the Norse influence in the wild legends of a somewhat barbarous superstition, invest each rude hill, wild lake, and barren plain with an interest which the stern hand of Nature has denied them, Orkney has a charm almost peculiarly its own. The more matter-of-fact observer will be struck by what appeared to me, at least, to be the three salient features of modern Orkney—namely, the manifest enterprise displayed in extending the "margin of cultivation," the beautiful flowers in every cottage window, and the immense number of hens and geese everywhere to be seen. With regard to the poultry, the revenue derived by Orkney from eggs is, I believe, in excess of the rental of the whole group, while, though geese do not pay so well to keep as of old, they still say in Caithness-shire when it snows, that they "are plucking geese in Orkney." The love for and the cultivation of flowers amongst the cottagers is due to the fact that annual prizes are offered for the best specimens of cottage growth, while the reclaiming of waste land and improved agricultural methods, though partly due to the operation of "industrial progress," is to a large extent to be attributed to fresh energy and enterprise in the people. Triptolemus Yellowley, were he resuscitated, though he might still, with some show of justice, complain of the niggard generosity of Nature to these northern isles, could hardly accuse their inhabitants of lack of energy and enterprise in utilising such advantages of soil and climate as she has bestowed upon them.

LOCH LEVEN TROUT.

MIGRATION TO THE SEA.

By EDWARD HAMILTON.

IN August, 1888, I sent you a short letter on the migration of some Loch Leven trout from a hill loch in Argyleshire, where they were bred, to a river which, after a course of a few miles, terminated in a salt-water loch communicating with the Sound of Mull, and I asked the question—Will these Loch Leven trout migrate down to the sea loch? I have visited the locality again this year, and the result of my inquiries induces me to send you a more detailed history, from the depositing of the ova to the present time.

On January 25, 1882, somewhere about nine thousand loch Leven trout ova were procured from Howictoun. Five thousand of these were deposited in the sand and gravel at the mouth of two or three small burns which supplied a hill loch about 1,000ft. above the sea level, in which there were no fish of any kind, and which had only one outlet, a small burn with a very steep descent, almost dry in summer, but connected at its mouth with a small but swift-running river, joining a much larger one, which contains plenty of salmon and sea trout. The hill loch is about three-quarters of a mile long by some two to three hundred yards broad, weedy at the upper part, not very deep, with a pretty, woody island in the centre. There appeared to be plenty of food, in the shape of small snails and abundance of water insects, &c. The remaining four thousand ova were placed in some burns which supplied a much larger loch, about 500ft. above sea level, some three miles away, containing common trout (*Salmo fario*), which seldom attained a larger size than half-a-pound. The hatch-out in both cases appeared to be very successful. In the autumn of 1883 the hill loch was visited, and small fish were seen rising in every direction. Some were caught with the fly. They were beautiful little fellows, very bright and silvery, from 4in. to 6in. in length. In May, 1884, four fish of the respective weights of $3\frac{1}{2}$lb., 3lb., $2\frac{1}{2}$lb., and $2\frac{1}{2}$lb., were taken with the fly out of this loch. When we consider that only two years and four months had elapsed since the ova were deposited, this growth was very remarkable, and is attributable in all probability to the virgin water and excessive quantity of food. In the autumn of this year (1884) some fine fish were taken, one weighing over 4lb. They gave capital sport, and were very pink in the flesh. In the winter of 1884-5 heavy rain caused the hill loch to overflow its banks, and a great quantity of water came down the burn into the river below. Whether the large fish were washed down in this flood, or whether they took the opportunity to migrate, must remain a problem. Be that as it may, in 1885 some large ones were caught whilst salmon fishing in the upper river, one angler taking a sea trout of $3\frac{1}{2}$lb., a loch Leven of $2\frac{3}{4}$lb, and a sea trout of 2lb. in three successive casts, and in that year only one or two were taken in the hill loch itself. In 1886 not a large trout could be taken in the hill loch, but were constantly being captured in both the larger rivers, one, indeed, of $3\frac{1}{2}$lb. being taken in a pool within a quarter-of a-mile of the sea. In 1887, although the hill loch was full of small trout, none above $\frac{3}{4}$lb. were taken, but there were plenty of large ones in the rivers, even in the pools and streams very near the sea; and in 1889 two unmistakable loch Leven trout were taken in the nets in the sea loch about half-a-mile from the river's mouth, together with a number of sea trout and some salmon. In 1890, many loch Leven trout were taken in both rivers, but none in the hill loch; and I was informed by one who had fished it that he could take none exceeding $\frac{1}{2}$lb. to $\frac{3}{4}$lb. Loch Leven trout were also taken in a famous sea trout loch, which communicates with the above two rivers. This year, on September 25, when salmon fishing, I hooked a large trout which gave me grand play, and, on landing it, both my gillie and myself thought he was a sea trout which had been long in the water, but, on closer examination, I found he was a Loch Leven, and weighed $3\frac{1}{2}$lb. Whilst playing him, he behaved very much as a sea trout does—throwing himself several times out of the water and making a hard fight for his life; he took a large salmon fly (the Butcher). Whilst playing him, two salmon, as is often the case, threw themselves out of the water as the line went over them. On the next day I took another Loch Leven much lower down the river with a Popham, with which I had just killed a salmon of 9lb. I found, on inquiry, that the Loch Leven trout would take the sea trout and salmon flies in the rivers, but only smaller trout flies in the hill loch.

In the other loch, in which the four thousand ova were placed in 1882, the Loch Leven trout have never grown to any size, a half-pounder being considered large. This may be accounted for by the number of the common trout in the loch, causing thereby a deficiency of food; but from this loch some have migrated seawards and last year were caught in the brackish water at the mouth of the small river leading from the loch to the sea.

It appears from the above account that Loch Leven trout, or, at any rate, some of them, will migrate to the salt water when they have an opportunity. Will they eventually lose their specific dress and put on the spots and colour of *Salmo trutta?*

A VISIT TO THE "SEVEN SPRINGS."

By H. R. FRANCIS.

AMONG the pleasantest of the angler's rambles I have always reckoned those devoted to tracing a stream—a trout stream especially—from its sources downwards. Such explorations I have enjoyed in Scotland, in North Wales, and even when seeking to recruit an exhausted brain in beautiful Tasmania. But nowhere have I pursued them with greater delight than in Devonshire and the adjoining ranges of Exmoor. The high moorland ridges which divide that wildly picturesque region form a watershed, whence flow a multitude of picturesque streams, of which the course is necessarily short, and consequently swift and varied. They hurry to the sea with no ungraceful haste. The explorer finds the first sources of the infant stream welling up through patches of gravel, and forming little pools, marked by bright green herbage, amidst a wide expanse of heather and coarse bent. Tiny streamlets from several of these sources soon unite to form a runnel—narrow, dark, and occasionally deep—which steals along, growing as it glides, till it swells into a brooklet not incapable of trout. I have on several occasions amused myself with bestriding such a "bit burnie," and dropping my fly into the mere riband of water left clear between its feathered banks, and extracting sundry troutlets, who had mostly to be sent flying, in defiance of all angling propriety. After gathering its forces during a mile or two of peaceful and almost level progress, it nears the sloping border of the high *plateau* across which it has led me, and anon plunges downwards to the vale—sometimes by a continuous rapid descent through some sylvan combe, where you need steady nerves and feet to follow it; sometimes by a series of leaps from one rocky basin to another down a slippery green hill-side, where each dark pool, stirred by its own little cascade, pays tribute to the careful angler. Ah! these were pleasant rambles, while I enjoyed unimpaired powers as a pedestrian; and if I were proposing to revel in the pleasures of memory I could enlarge with delight on the rapid changes of the scene as the brook swells and widens in its more peaceful passage through the vale to the sea.

But to-day I wish to say something on a different though kindred theme—the birth-place of a great river. Much of poetic interest has always attached to such places, and every student of Virgil will remember with pleasure the fine passage in the Fourth "Georgic" where Cyrene shows her son, in a sort of underground panorama, the sources of divers mighty streams. I resist the strong temptation to quote; but lovers of good English poetry will forgive me for referring to a parallel passage in Armstrong's "Art of Health," a poem which has, I think, been underrated, owing to its didactic character. In these days of reduced water supply and wholesale pollution of our streams, anglers should remember, to Armstrong's honour, that he sets forth eloquently and forcibly the importance to public health of pure and abundant water. Beginning with the invocation—

> "Now come, ye Naiads, to the fountains lead" . . .

he approaches, with reverent awe, the rocks,

> "Whence glide the streams renowned in ancient song;
> Here from the desert down the rumbling steep
> First springs the Nile; Euphrates hence devolves
> A mighty flood to water half the East;
> And there, in Gothic solitude reclined,
> The cheerless Janais pours his heavy urn."

Surely these lines, which I have purposely abridged in quotation, have a genuine ring about them! No doubt, however, the theme is an inspiring one; and when I started from Cheltenham, some four months since, to drive to the "Seven Springs," the cradling-place of Father Thames, I felt some kindling of the imagination, some vague dream of an ideal scene, where the infant river, destined in its full growth to bear the commerce of a world, should burst forth amidst surroundings of appropriate grandeur and beauty. Never were poetic visions more rudely dispelled. The drive, it is true, was a beautiful one; the undulating green pastures, chequered with rich woodland, which mark the lower slopes of the Cotswold range, were in all the freshness of early summer. But where were the glorious springs? Readers of "Charles O'Malley" will remember the laughable *tableau*, when Dr. Barrett, looking at the remarkable excavation under the walls of Trinity College, Dublin, pointed out to him by the pitiless joker, Frank Webber, vents his disgust in the profane exclamation, "May the Divil admire me, but it's a rat-hole!" My feelings of disappointment at what I saw were much like those of the learned Provost, and I was almost tempted to exclaim, "May the Divil admire me, but it's a gutter-sink!" There was just a small dirty hollow by the road-side, into which trickled rather than gushed several tiny streams of clear water, issuing from beneath the bank, and thus justifying, no doubt, their title of "springs." There were, however, five only instead of "seven"—a deficiency perhaps due to the rainless character of the past season. The meeting of these waters just formed a respectable puddle (or, Scotice, a "dub"), the overflow of which ran away under a grated arch, surmounted by a wall which effectively forbade any ulterior views. But by stooping and peeping through this arch, I caught a glimpse of something beyond that looked like open water, and though the romance of the affair was hopelessly dead, something of curiosity survived. So I turned up the road, following the obstructive wall till I reached a door therein which to my surprise and pleasure I found unlocked. Anglers are said to have generally rather loose notions as to the law of trespass; at all events, I made no scruple of entering, and was rewarded by a pretty scene enough. On my left lay a crystal pool or lakelet, surrounded by trim gravel-walks and well-kept flower-beds, and evidently fed from the obscure sources I have just described. Two noble swans, one of them the finest I ever saw, floated double—swan and shadow. On the farther side of the pool the garden ground sloped boldly upward to a park-like hill-side, showing some good timber, with glimpses of a well-placed mansion at the summit. Oddly enough, not even a gardener or labourer was in sight. Prompted and encouraged by my wife—[N.B.—The company of a lady on such occasions is a real safeguard to the otherwise unprotected male]—I went down with her to the water-side, and followed the footpath round the margin. When we reached the end farthest from the springs, I was interested by observing that the stream at the outlet far exceeded in volume that which entered from the road-side. It was clear that there must be a spring—probably several—welling up from the bottom of the pool before me, and I thought I could distinguish two or three dark patches which showed their position. My scrutiny of the waters was rewarded by another pleasant discovery. Gliding hither and thither, heedless, if not unconscious, of my presence, were a goodly number of trout—not babies, mark you, nor three-year-olds, nor of that "herring size" (convenient term) which so often figures in vague accounts of unweighed baskets—but lusty, well-grown fish, averaging, I should say, some two pounds a-piece. One or two that I saw were fair three-pounders, nor did I see a single fish under a pound weight. Some such, no doubt, there were which, in spite of a bright and breezeless sunshine, escaped my notice in the broader parts of the pool, but they were certainly few. The water was evidently first-rate feeding water, and as I could see no likely breeding-ground, I assumed it to have been judiciously stocked with sizeable fish—perhaps from the pretty brook formed at the outfall, and augmented, as I heard, by two small tributaries, respectively three and five miles farther down. We left this young river as a sort of "Yarrow unvisited," as the downward exploration would have been, for one of us at least, too much of a scramble. Moreover, I must confess that I was not sorry to make a timely retreat after our successful reconnaissance. So retreat we did, with all the honours of war, unopposed and unquestioned. We could say, like Grizzle, in "Tom Thumb"—

> "With victory our arms are crown'd;
> For though we have not fought, yet have we found
> No enemy to fight withal."

And so we went galumphing back to Chelten-

m. On our homeward drive I reflected much, t on the poetry of river sources—that line of ought had received too rude and too recent a ock—but on the relative values of land and ater, and the possible profits of pisciculture—rdid considerations, no doubt, but by no means t of place. Here was a pond barely over an re in extent, capable, I am convinced, with very tle aid to its natural food supply, of turning out arly some fifty brace of two-pounders, which ould find a ready market at a good figure hardly x miles off. To the general cheapness of prosions at Cheltenham I can bear witness; but, dly enough, taking into account the large and y no means dear supply of the finest salmon, the rown trout is the only fish that fetches what ay be called a fancy price. I repeatedly saw a w on sale; indeed, a small lot used to appear bout every other day in one of the best shops, ut never at a less price than one shilling and sixence per pound, and it was remarkable how uickly they found purchasers. Now, I am not oing to work out a formal calculation on paper; ut it strikes me forcibly that here we have an cre of water which would easily pay a better nt in these days of agricultural depression than ny but the very best land. No doubt the water of the finest quality, thanks to the pure sources y which it is fed. But pond trout are far less articular about their *habitat* than theorists ssume; and there are other fresh-water fish esides trout that would be welcomed in the arket if they were supplied regularly and in heir right season. Perch, tench, and pike from ear pools are all excellent from October to March iclusive, and even carp in winter are less ependent on cooks and sauces than is generally upposed. If some of the successful energy which as been thrown into the breeding of fish for stock ere applied to feeding them up for the table, reat results might be achieved. We must not hut our eyes to the fact that our streams, already owered to a formidable extent by improved drainge and the silting up of gravels, are beginning to uffer yet more serious depletion owing to the vholesale tapping of springs for town supply and anufacturing purposes. The hope of pisciculture, vhether for food or sport, must yearly depend nore and more on careful water storage and the ormation of pools and reservoirs.

But it is time to wind up, after this long ligression. Should any brother angler visit the Seven Springs, I hope he will improve on my xperience, and neither expect too much nor do oo little. Many of your readers would, I think, e interested in learning how the youthful river ares after issuing from the pretty pool I have ttempted to describe; how it is gradually swollen y fresh affluents till it sweeps through the open valley "a broader and a broader stream," a joy to rtist and angler.

Notes

ON Tuesday evening next a paper will be read by Mr. E. S. Shrubsole, at the Queen's Hotel, Queen's-road, Battersea Park Town. The subject is, "Fishing Baskets, Bags, and Creels," and the lecturer will show a collection of different baskets, bags, creels, and other appliances, for carrying fish and fishing tackle, which have been lent to him from all parts of the kingdom. Mr. R. B. Marston will take the chair at eight sharp. Among the many creels, &c., Mr. Shrubsole will show upon this occasion, is the favourite—fishing-box we should call it—of the late "Dicky Routledge," and a basket of Nottingham make more than fifty years old. Mr. S. also has in his collection baskets and creels from all parts of the kingdom, made of wicker, tin, leather, wood, &c. Most certainly such a collection of different makes and styles has never been brought together before, and we feel sure many of our readers would like to see and examine them.

"How long will trout live?" we asked Mr. Thomas Andrews, the well-known fish breeder, who says: "I knew a man, whose father put a trout 1¼lb. into a well; after twenty-five years the fish was taken out weighing less than 1lb."

HUBBARD'S SOUTHERN CROSS SMOKING MIXTURE.—Messrs. Hubbard, who advertise this tobacco in our columns, sends us a packet to notice, and after trying it for a week, we can, with confidence, state that we believe it is a mixture which will find favour with the majority of smokers, being fragrant, cool, and in every way pleasant to smoke.

WITH reference to a letter received at this office, anent the Border Esk, Gilnockie writes: "I never expect to send full and complete records, only accurate ones, so far as they go. I have the northern papers sent me, and receive two of them on the morning I write my report. These are useful to me sometimes—but only sometimes—as I am usually so far ahead of them that their contents are valueless to a great extent. On the other hand, I have two correspondents in Langholm; two in Canonbie; two in Longtown; one at Metal Bridge; and one in Carlisle, all of whom have unusual facilities for getting angling information, and whose veracity is unimpeachable. I repeat I don't pretend to supply full lists; no one can; besides, certain anglers are averse to having their names mentioned, while others are particularly anxious to shine in print as being great fishers, notwithstanding the fact that at the same time they may be very small fry. With regard to the former section, sometimes their innate modesty has been studied at the expense of the report. On the other hand, the Editor of the *Fishing Gazette* cannot be expected to immortalise every embryo angler who may happen to catch a minnow while fishing wi' a preen in the guse dub. Perhaps neither of these is the class of man who has written the rather ill-judged letter; indeed, it has more likely proceeded from one of those semi-professional native fishers who would like to farm the river entirely in his own interest, and send visitors anywhere but in a Metal Bridge direction. I may say I know the Esk river. I spent the first twenty years of my life in its vicinity. I visited the Netherby, Longtown, and Metal Bridge portions of it a little over a fortnight ago, and recorded what I saw and heard on the occasion in this paper. 'A chiel's amang you takin' notes.' Yes, I took several notes, and no doubt that is the real grievance, because I ascertained several things that were intended to be hidden from me by certain persons I foregathered with during my short stay. The letter is an ill-judged one; and if the writer will assume the responsibility of his name and address in these columns, he shall have complete satisfaction from me. I may say the report complained of was cut down through want of space, and last week's only embraced eight lines, and contained only two names—viz., Mr. Yates, Metal Bridge; Mr. Story, Longtown."

WATERPROOFING COMPOSITION.—We have received some pots of Gishurstine "with the compliments of Price's Patent Candle Company, Limited, who hope that the Gishurstine continues to be approved of." We certainly hear nothing but praise of this excellent composition, which has now been before the public for many years.

DURING last week, at the close of which the season ended, the Hon. Robert Cotton, Messrs. John Webster, W. L. Freeman, R. Robertson, W. Milne, and another captured, on Dee and Don, fish weighing respectively 39½lb., 35½lb., 33½lb., 33¼lb., 32½lb., and 30lb. A fish of 40lb., hooked by the back fin, was taken from the Don the previous week.

IT is much to be regretted that salmon disease is making headway in the back-end rivers of the East Coast of Scotland. On the autumn fish in only a couple of these rivers has it not yet appeared. The North Esk is in a particularly bad way. The grappling and consequent injury to the fish in this river, together with dykes, and the almost impassable natural barrier known as the "loups" at the Burn policies—close below which and where there is no spawning-ground—the fish are packed like sardines in a box, which cannot but tend very greatly to make the disease spread. The sister river, the South Esk, has far from a clean bill of health.

LATELY the best one-day takes and heaviest fish killed on the Tweed have been got by Mr. Arkwright, who scored twelve; Lord Home, ten; Sir Richard J. Waldie Griffith, nine; Mr. Drummond, seven; Mr. Hamilton, seven; Mr. Gilbey, six; and the Hon. Alexander McDonnell, for six days, forty; Mr. Hamilton, one, 37lb.; Lord Home, one, 35lb., and one, 31lb.; Mr. Arkwright, one, 31lb; and Mr. Gilbey, one, 30lb.

AMONG the rivers of Scotland, Tweed and Tay are ties for the distinction of having yielded the highest take, or top score, of salmon to one rod in a day this autumn. On each a catch of seventeen has been obtained—by the Duke of Roxburghe, on the Tweed, and by Mr. Barclay Field, on the Tay.

DURING the last ten days or fortnight of the now past season, lots of anglers on Tay, Spey, Deveron, Earn, North Esk, South Esk, and other rivers, were much disappointed with the fish, particularly those of Earn, Spey, and Deveron, of which a great proportion were greatly off colour, being "quite black, red, and striped," as one correspondent puts it.

A MEETING of the Fishery Board of the district of the river Doveron was held in the County Buildings, Banff, last week, Mr. A. F. Leslie, Montcoffer House, presiding. A statement of the income and expenditure was submitted, showing a deficiency of £275 9s. 4d., which, it was stated, could be met by an assessment of 2s. 9d. per £, and the board resolved to assess accordingly.

THE Ugie pollution case, in which the clerk of the Fishery Board charges several parties with polluting the river, to the detriment of the salmon fishings, has been taken to the Court of Session.

ON many of the Scotch salmon rivers, during the last week of the season, when, with the water having run too low, the angling was poor, it was a practice, widely prevalent, of making the fish come out on to the bank, whether they voluntarily initiated the proceedings leading up to this or not!

IT is singular that whilst all the other back-end rivers of note in Scotland have yielded fish of up to 40lb. in weight this autumn, Spey and Deveron, two of the most important, have not.

A STATEMENT has been published giving the takes of salmon on the larger back-end sections of the Aberdeenshire Dee during the late autumn fishing as: Blackhall, 170; Crathes, 180; Drum, 140; Park, 200; Durris, 300; Cairnton, Woodend, Ballogie. Borrowstone, and Inchmarlo, 600—in all 1,580 off the fifteen miles of the best autumu water of the Dee.

IT is looking as if salmon disease will soon be very bad in several of the rivers of the Solway.

THE autumn season's heaviest fish caught on the Earn was 40lb; on the Firth, 44lb.

THE rod salmon fishing on the North and South Esks closed for the season on Saturday. This has been the most successful season for the past five years, and the only one of those years that anglers generally have been satisfied with the amount of sport obtained. On the North Esk, between eight hundred and nine hundred fish have been landed from the policies of Colonel McInroy at the Burn to the sea; while upwards of three hundred have been taken from the South Esk.

WE have some prospectuses of our Fourteenth Annual Christmas Number now ready; they are specially designed and printed in five colours, and have been produced to attract more attention to our paper. Any of our friends and subscribers can have some of them to distribute, and we should esteem it a favour if they would apply for same. We shall spare no expense in the production of our Christmas Number, and hope our efforts will be appreciated. Our many friends can substantially assist us in the above manner.

SALMON HATCHING ON THE DEE.—It is very gratifying to learn that the Deeside Salmon Fishery Board have recently taken over the Durris Salmon Hatchery, which stood empty last season, and that already it is being stocked with salmon roe from the upper feeders of the Dee and its tributary, the Cluny, where ripe fish are easily secured at this season. Mr. Duncan, the Inspector of the Dee and Don Fishings, has charge of the arrangements, than whom it could not be in better hands. The Durris Hatchery has already done good work in the past, when in the private hands of Mr. Baird; but a step in the right direction has been taken by the Dee Fishery Board, which it would be well were the good example thus set to become general with every fishery board throughout the country.

SOME NOTES ON THE BEDFORDSHIRE OUSE.

BY AN OLD HAND.

(Continued from page 260.)

ST. IVES.—St. Ives is a municipal borough, head of a union, and a parish situated on the north bank of the river Ouse, and ou the road from Huntingdon to Lynn. It was anciently called “Slepe,” and appears under that name in Domesday Book, but acquired its present name from Iva or Ivo, a Persian bishop, who, it is said, travelled through England preaching, and at last came here, where he died, about the sixth century. It is fifty-nine miles from London, five east from Huntingdon, fourteen north-east from St. Neots (or “snouts,” as the porters call it) in the northern division of the county. The Midland, Great Eastern, and Great Northern Railways have a joint station here, and a line from Ely, viâ Haddenham and Sutton (Cambridgeshire), to St. Ives, was constructed and opened for traffic in 1878 by the Great Eastern Railway Company. Every Monday there is a market for cattle, sheep, and pigs. The markets belong to the Corporation. Two well-frequented fairs are held annually, one on Whit-Monday, and one on the 11th of October, and at these fairs (which were granted by charter), great numbers of cattle, sheep, and quantities of general wares are disposed of.

FLOODS.—Floods are very much against angling operations, more or less, all through the winter, and anglers should never go down on the “off” chance; but obtain good and reliable information about the state of the water, &c., and so prevent disappointment. The present weather is bad for it. The lower parts of the town, being built directly on the Ouse banks, have been frequently overflowed. This was more especially the case in November, 1823, when a very high flood occurred in which a considerable quantity of property was destroyed. Destructive floods also occurred in 1875 and during the following six years, which have been very detrimental to the trade of the town. Over the river is a stone bridge of six arches, said to have been erected by the abbots of Ramsey; two of the arches were rebuilt in 1716, by William, Duke of Manchester, and history says the same individual widened the Wharfe in 1724. Near the centre over one of the piers is an ancient building, the *lower* part of which, a very long time ago, was a chapel (I do not know what sect), but is now used as a dwelling-house. Adjoining the bridge on the south side is a brick causeway on arches, which was erected in 1822, reaching a considerable distance, the arches affording a free passage for the water during the overflowings of the river. Slepe Hall, once the residence of Oliver Cromwell, has been taken down, and a number of houses built on the site. The same fate will overtake St. Paul's one of these days, I expect. A great part of the town was destroyed by fire, on the 30th April, 1680. It crossed the sheep market, consumed everything in its way down to the waterside; laid in ashes houses belonging to one hundred and twenty-two families, besides goods, corn, malt, &c., amounting to upwards of £13,000 in value. One of the most ancient and interesting specimens of domestic architecture in this most interesting old town is the residence of Mr. John Wadsworth, close to the river and bridge. It contains some very fine oak panelling, and with its numerous gables presents a most picturesque appearance.

The Ouse from Bedford “right away” down to Earith, probably, contains the finest chub and bream to be seen in any river in England; and in the neighbourhood of the charming village of Hemingford, near St. Ives, during the past three or four years, some fine catches of chub have been made with the fly. Hemingford is a favourite spot of some Cambridge anglers; and, as a rule, fly-fishing in the main stream must be done from a boat, as the high sedge prevents bank fishing. Some good cases of chub are to be seen in Cambridge, that were taken in this locality.

SEDGE.—Some five or six years ago, several persons used to cut the rushes and sedge, and this was stacked, dried, and sent all over the country, for basket and chair work; but cane has supplanted this material, and the rushes have been left to grow, or only cut in places to clear certain swims or likely haunts for fish—hence the necessity of having a boat to fish the river properly.

A good hook knife or billet is a capital thing to screw in the landing-net handle to clear a place, and an opening for two or three rods can soon be made. Of course there are several places between St. Ives and Earith where the river can be fished from the bank: notably Friend's Corner; Ducker's Hole; between the railway bridge and Holywell; the two bank swims just above old Swavesey drain; the field above Over Staunch, and the field below the railway bridge near the quaint, quiet old-fashioned village of Earith; but one can command and fish even these swims with more comfort and far better by the aid of a boat, and more especially where weeds are growing near the side.

GENTLES.—Gentles are used by some of the very old-fashioned fishermen when fly-fishing. Now, it appears to me this is a very unnatural proceeding, and I should think that a tiny piece of white kid or wash-leather, so arranged to hide some of the hook in very bright water, and thus give a little more weight to the fly, more especially in windy weather, would be more to the purpose.

If such immense trouble is taken to imitate the natural fly, why spoil such a perfect imitation by sticking a fat, caddy-looking twirling liver gentle on the hook to be used in a bright gin-fine water? One would think that these fish would take the gentles better if used separately. If the fish are taking (say the Bluebottle fly), where is the utility of sticking a liver gentle on the hook?

If tipping a hook with a gentle makes the fly look more attractive, and induces the fish to “go” for the fly, then further comment is really unnecessary; but, as both roach and rudd, &c., may be captured when adopting this method, then I presume that it is the gentle that is the attraction, and not the fly. I say presume, because I have no positive proof whether the gentle makes the fly more attractive, or the fly the gentle. If gentle makes fly more attractive, why not carry it out all through the piece?

FAVOURITE LOCALITIES.—HEMINGFORD MILL.—To get to the mill, I passed the remarkably short, fat, rotund, broad-backed, full-featured, red-faced, jovial old toll-keeper, at the foot of the bridge, a perfect picture of peace and contentment, who had been in the same line of business ever since he could walk (well, very nearly), and who “could not give it up.” The tales he told me about his experiences at Hounslow made my blood boil. I say, passing this remarkable specimen of a bygone age, over the bridge with the quaint-looking dwelling, and turning to the left, I immediately came to a path that led into the most magnificent meadow I ever saw in all my life. This meadow must be nearly a mile in length, broad, and level as a die, and runs up to the Ouse at the farther end, a short distance above the railway viaduct, with a singular bit of rural scenery (spinney, &c.), on a slight elevation to the left, and called, I believe, “Jerusalem.” Follow the path across this meadow, cross the railway on the left near the end, and a short distance down the lane leading to the village of Hemingford Grey, is a pathway to the delightful, tree-sheltered, charming old mill and pool.

It is no use, Mr. Editor; I can plainly see that these notes, like Tennyson's brook, will flow on for ever. This rigmarole must cease, and, with your kind permission, cease it shall in my next.

(To be continued.)

HOW WOMEN MANAGE TO MAKE GOOD BASKETS WHEN FISHING FOR TROUT.

THE science of fly-fishing is not acquired lightly. Let not the eager and sanguine novice, who buys a second-hand rod for ten shillings, think he has done all that can be required of him, and that a few hours by a stream will suffice to make him master of its contents. Old hands and white heads will tell him that it takes a lifetime first to learn what to do and how to do it; then another lifetime to forget it all and learn the other thing.

Methods of a few years ago, put aside as useless, are again patronised; for fish—in all waters—occasionally assert themselves, and make it very plain that they are weary of the one uniform practice adopted at various times by all devotees of the rod. Therefore, to make a good basket is no easy matter.

Now, when women are concerned, the questio must be looked at from quite another point o view. It is not that the difficulties are less; o the contrary, for besides the usual ones, other are added of quite another character.

The gentler sex is, of course, never expecte to be bound by rules, and if they cannot fill thei baskets in one way, they will try another, b which they show their very good sense. Then a woman loves change too much herself to withhol that luxury from the creatures she intends t slay, aud as she has to contend against many disadvantages, it is quite natural that a certai license should be taken by her when possible.

If these disadvantages are numerous, they ar also unavoidable. For example, though no on dares dispute her right to wed, it is generall admitted that she is unable to wade with eithe comfort or dignity. Then she cannot possibl wield as heavy a weapon, nor throw as long a lin as her brother sportsmen. Again, her powers, o inclination to sustain Nature by sundry draught not strictly drawn from the river are limited; s that, thus alone and unaided, she is soone exhausted, and cannot long do battle against th onslaught of sun, wind, and rain. No wonder therefore, if she has recourse to her mother wits and thus succeeds to fill her basket to her own and everybody's satisfaction. The followin account of how it is done may prove useful, and we hope, not too surprising.

Our heroine, fully equipped, has gone fishin with several friends of the male persuasion—w shall soon find that, what there is of persuasio is mostly on her side.

After a few hours of ineffectual whipping, he arms naturally begin to ache, also her back, an gloomy thoughts probably fill her mind, when u comes one of the friends. His step is brisk an buoyant. He hails her cheerfully. These ar good signs, which she is quick to note. He stops glad of an excuse for a chat and a few moments rest. A little judicious questioning soon brings ou the fact that he has three fine trout in his basket which he is easily persuaded to exhibit with pardonable alacrity. They are duly admired, and when Adam says: “But what have you done?” then Eve knows that her opportunity has come and she answers:—

“Not much—yet.” Then very sweetly, “I you like, I will carry one of your fish for you. I you go on at this rate you will not know what to do with them.”

Adam: “Oh! will you? You, are very kind.” She is a brick—he thinks. “Are you sure it will not be too heavy for you?”

Eve: “Not at all. Just leave it there on the grass; I'll take it up presently.”

It would spoil everything to appear too eager to secure the prize.

Adam: “But you have not shown me what you have caught.”

Eve: “Oh! it is not worth showing”—strictly true; then suddenly—“See that rise over there? I'll have him.” The professional attitude is assumed at once, and Adam—all sympathy, and totally unaware of the fact that he has been given another apple to eat, retires stealthily, not to endanger the prospective capture. And as he disappears, Eve fishes on, smiling to herself.

Presently another brother saunters up.

Adam II.: “Have you caught anything this morning?”

Eve: “Not much; and you?”

Adam II.'s pride in his skill is not proof against the temptation, and out comes a fine brace of trout. The most gratifying admiration is bestowed on the fish. Then Adam perceives the trout lying on the grass—“Halloa! is that yours? What a fine fish! Where did you catch it? It is a beauty!” &c., &c.

After Eve's unbounded praise of his sport he cannot say less, and she allows his flow of complimentary phrases to run smoothly on. A victor's silence is counted as modesty, so she merely says—

“Yes, it is rather fine, is it not?”

Adam II. (with a sudden burst of generosity): “Here, have one of mine, to make up a brace.”

Eve: “Certainly not. I could not think of such a thing; but it is very kind of you.”

Adam naturally insists, and Eve is, at last, persuaded to accept, still protesting:—

“It is not fair, really; but if you will have it so.”

This time the two trout are at once snugly and fely laid within the sheltering folds of the bag, hich is slung on her back. It would be un-acious to treat a gift carelessly.

Then, Adam II., with unspoken admiration ining in his eyes: "Are you sure it is not too eavy for you?"

Eve: "Oh, no, certainly not. And besides I ave fished enough for to-day. I think I'll go ome now."

"It looks uncommonly well," says Adam II., ishing to say something complimentary, and not nowing exactly how to do it. As Eve does not now whether he is alluding to her bag or her ack, she vouchsafes no answer; and he goes his ay, feeling quite pleased with himself and his enerosity, and consequently with her also, and ying, half aloud: "A clever little girl! Fancy tching that big fish all alone. I wonder how e managed to land it."

He overtakes Adam I. "Seen that large trout e has caught?" he asks.

Adam I.: "No. Has she really? How big it?"

Adam II.: "A real good 'un—about two pounds, should say."

Adam I. (with a touch of jealousy): "Did you nd it for her?"

Adam II.: "No; did it all herself. I say, old llow, she is coming on; we must look to our urels."

Meantime, Eve is walking towards home, but ill following the river, whose waters she is in-ntly watching. Presently, at a likely place, she es a fish quietly feeding under a large tree. She ay not throw a very long line nor be able to fish p-stream against the wind, but she is very clever fishing down-stream without being seen by the sh; and now she lets her fly drop lightly about yard above the feeding trout. It floats down st over its nose, and—yes, he has taken it. hen follows the usual floundering and rushing p and down peculiar of smaller fish, and Eve ns up and down too, not thinking of the tree, d she does not see that her line is round one of s branches. How she succeeds in getting the sh into her net is a mystery; but there it is, rtainly. As soon, however, as the net and the sh are out of the water, and the double strain on e branch overhead is relaxed, it straightens itself p, and lo! the trout is lifted up high into the air d dangles and twirls between sky and water. his is a most humiliating position to be in—for e angler; but a furtive look around brings some mfort, for no one is in sight—these little acci-ents are best unwitnessed.

What is to be done? The tackle is strong, and ve thinks that, in future, she will always trust om to choose tackle for her. But if the fish is t of water, it is out of reach, too. How ridi-lous it looks up there, hanging on the tree! ve actually laughs aloud as she once more turns her faithless net. With its help the branch is ught and lowered, and the trout re-captured. *looks* the right length, but, alas! subsequent easuring proves beyond a doubt that it must be stored to its element, and it is soon swimming way, seemingly none the worse for its flight, hile Eve is not sorry to be spared the unplea-nt necessity of killing it.

When all is over, and order restored, a keeper seen approaching. He comes nearer, he salutes d passes on. Eve's bag shows unmistakable gns of sport, which, no doubt, his keen eyes see, t, thank heaven, the keeper who could stop d ask a woman to show him the contents of her g, is not yet born; and if so, he would soon *die.*

But virtue is often more than its own reward, d soon Eve catches another trout, a good one-ounder this time, and it is with profound satis-ction she places a third fish into her basket.

Who will wonder, therefore, if her skill and roitness are bruited far and near, and her fame great along many streams?

Thus it is that Eve goes on merrily fishing, nowing full well she is only a woman, but—with sh in her bag, and a smile on her face.—M. D.

WE have much pleasure in stating that Mr. J. P. heeldon has kindly consented to give a lecture the Serapis Angling Society, Nevill-road, Stoke ewington, on Wednesday, Nov. 11, entitled, "The cience of Angling," on which occasion Mr. A. G. rdine will take the chair at 8.30 p.m., after hich there will be a smoking concert.

Waltoniana

THAT accomplished North Country grayling fisher, Max Walbran, is to fish the Test this week, and be introduced to fish three or four times as large as those in his native streams. It will be interesting to see if the flies of the North, fished wet, prove as killing as the dry fly, to which the fish are accustomed. Mr. Walbran is one of the most enthusiastic fishermen in the world, and I hope he will enjoy the sport his enthusiasm and skill deserve.

MOST wonderful fishing has been enjoyed on the Tweed during the closing days of the season, but I must leave the river reporter to tell his tale in his own intelligent way. Still, when one rod alone kills over fifty large salmon in a week, such fishing calls for more than passing comment. For weeks and weeks, flood succeeded flood, and little or no fishing could be done. The pools were not flogged, and the river became about as full as a river could possibly be of fish which had been let alone, and knew little or nothing of fly, prawn, or minnow. But when the water did clear, never were such days seen on the Tweed before. It is no exaggeration to say that anglers must have fairly killed some thousands of fish.

NEVER, within living memory, has the jack fishing at Henley-on-Thames been so good as recently. In fact, the old palmy days, when Henley was one of the very best places on the Thames, would almost seem to have returned. It is certain that there are many more pike in the Thames than was generally believed, and that the non-success of anglers has been simply owing to the ever-growing cunning of the fish. But anglers have their chances occasionally, and the clearing of the river after recent floods was one of them. The fish were simply ravenous, and a child might have caught them. The river reports will no doubt give details. It is sufficient for me to say that in one week more than sixty jack, the largest over 1lb., were taken between Henley Bridge and Marsh Lock.

THE veteran fisherman, Parrott, saw a very exciting incident in the course of a day's attendance on a pike-fisher. A jack of about 4lb. had been hooked, and was being played, when suddenly a monster fish, weighing at least 20lb., made a swoop at the jack, seized it, and bore it off willy-nilly. Anyone who wants to catch a specimen cannot do better than put themselves into Parrott's hands, and fish for that big pike. I would commend this extraordinary pike-fishing at Henley to the notice of those who think that fish preservation on the Thames has not been productive of great results. For two or three years I have noticed that the pike were steadily increasing at Henley. Large fish were not being taken in any considerable quantities, certainly; but parts of the river were simply swarming with small fish. On one occasion, when paternostering for perch, I landed no less than a dozen small jack in less than two hours. Small fish will, of course, grow, and I am not at all surprised to find, from recent events, that the Thames at Henley is now really well stocked. Of course there will be a general run to Henley on the news getting known; but I fear many anglers will arrive too late, for the water is fining down very rapidly. By the way, I wonder how many anglers will recognise the good work done by the Henley Fishery Preservation Society, and will send subscriptions to the hon. collector, Mr. Hobbs, of 30, Hart-street, Henley-on-Thames?

PERCH fishing in the Thames should now be particularly good. The best way to fish a large river, at the present time, is to row some distance up-stream in a boat, and then drop down from eddy to eddy, using the paternoster with skill and discretion. Care should be taken not to disturb the water before fishing it, and if the angler and his attendant keep their seats in the boat, they will catch more fish than if they stand up and show the perch who has come to visit them. Very few professional fishermen on the Thames are sufficiently particular about approaching a swim. Many of them seem to think that it matters little what is done until after the ground-bait is thrown in. After the punt is fixed, how often does one see the anglers and their attendants walking up and down, changing places, moving the chairs, &c. "Oh, it's all right, sir," says Bill Dumps, "I ain't chucked no ground-bait in. The fish ain't here yet."

A FRIEND of mine once said that Thames punt fishing consisted in first frightening the fish away, and then collecting them together again. There is some truth in that. But to return to my perch fishing, the boat should, as I have said, be dropped down from eddy to eddy. If the spots containing the perch are small, the boat should be kept well away from them. No rypeck should be put in, it being quite sufficient for the fishermen to hold on to a branch, or to the bank, with a boathook. Perhaps only two or three perch will be caught, and then you are swept rapidly down-stream to the next place to pick up another brace or so.

IF the water is much coloured, one of the hooks of the paternoster should be placed close to the lead. Two hooks will be found ample. I have recommended a boat, simply because the stream is a little too strong for one to take a heavy punt any distance; but even if a punt is used, it is as well to keep a few minnows in a bait-can, from which they can be taken with a small aquarium-net, which saves wetting the hands every time a bait is required. If the fish are biting very shyly, a very small triangle should be tried, instead of a single hook, one hook of the triangle being placed through the lip of the minnow. Sometimes float-tackle will be found more killing than the paternoster, but that is not often the case at this time of year. If every now and again you find that some fish has bitten your minnow in two, do not abuse a little jack. It will be the throat teeth of a chub which has worked the damage.

TEMPLAR.

ANGLING AND ITS TRADE BENEFITS.—If the wholesale and retail tackle-makers and sellers, whose advertisements appear in *F. G.* year in year out, were to give the gross receipt for rods and lines, hooks, flies, and the many patented lures bought by anglers, the amount would be enormous. And if to this were tabulated the very many persons engaged in tackle-making and the retailing thereof, and who get a good living thereby, the statistics would be very interesting. The physical benefits derivable from following the "gentle art" are doubtless enshrined indirectly in the various returns to the Registrar-General, while the moral good might be judged in part from the vast membership of anglers in the London and provincial angling clubs. The spur applied by this journal was speedily felt as a purely fishing paper: and not only English inn-keepers and the railways, but most of the canny Scotch hotel-keepers beside river and locks, quickly found the benefit of advertising in the *Gazette.* No doubt the great love of angling has arisen from the force of example, and partly from the general tendency towards athletics and out-door sports. Mr. Ruskin, on one occasion, induced a number of Oxford undergraduates to accompany him to South Hinksey, to do a bit of amateur road-making. The lesson might have been useful if only from its novelty. But anglers, instead of depriving labourers of work, largely encourage highly-paid male and female labour up to artistic and very delicate manipulation. This is not the least of the benefits accruing from angling for the lordly salmon down to the coarse fish in our ordinary rivers. Every sport largely benefitted trade—the workers and the sellers—be it saddlers and makers of "pink" coats; horse-breeders and dealers, corn merchants and provender-growers, worm-seekers and wire-makers, and feathers of some rare birds and fowls, to say nothing of the taxidermists. Dark be the day when idleness or effeminacy shall wean any Englishman from the exercise of the manly sports—of the grand sport beside loch and river and stream, or from partaking of the "sport of heroes and kings"—stag and fox-hunting; and from keeping up the *prestige* of Britons everywhere beside—in the cricket and football fields. Manly sport is the greatest foe of pessimism, and the humblest life might be illumined by loyalty and patriotism, and many sons of toil will in the future have greater leisure for enjoyment of the branch of sport most compatible with their several means and tastes.—*W. F.*

ESK & LIDDEL (DUMFRIESSHIRE.)

The "Esk and Liddel Fisheries Association" has by judicious conservation made these rivers among the best in Scotland for all-round angling—salmon, grilse, sea trout, yellow trout, herling.

The excellent paraphrase of the "Eskdale Temperance Hotel Visitors' Guide and Anglers' Note Book," by "Gilnockie," in *F. G.* of the 25th July last, gives a fairly vivid idea of the surroundings of the two streams—prices of fishings, tickets, &c. Let us supplement by a few notes, the *localé* of the best casts, hooks, &c.

Langholm is the best centre from which to fish these waters—the "upper." Eight miles below the town the two streams become one, and forming two of the best pools in the river—the "Cauldron" and the "Willow"—are known as the "Double Water." They can be commanded by ticket-holders (£4 4s.) from both the English and Scotch sides of the river—best from the English or left bank. Good at all times, they are the special resort when the waters aro low and clear.

THE ESK, DUMFRIESSHIRE.—THE TODHOLES SALMON CAST.

Proceeding up the Esk, we find two miles of water, to Canonbie Bridge, a chain of stream and pool, almost as good as tho two pools previously mentioned. Wilson's Stream, Red Lynn, Rice, Round Pool, Long Pool, Dead Neuk, Priorslynn Pool, Turnbull's Hole—all good holding ground, and fishable every yard, flowing through grazing lands—"Canonbie Lea," with few obstacles.

Above Canonbie Bridge we get into the "Canonbie Parish" Water, where we find the "Hollow's Dub," "Tommy's Pool," "Grey Stane," stream and eddy alono yielding a good day's sport. Here we must leave the river and take to the road for a mile or so, a twenty minutes' walk 'mid nature's finest grandeur—wood and water, mead and stream. The road (the fine old mail-coach road between Carlisle and Edinburgh) follows the windings of the river, and lands us, almost at the water's edge, at the "Todholes," the lower eud of the Langholm Water, which extends from this point to Langholm, two miles up-stream. Our illustration of the "Todholes" shows pretty clearly its character. Headed by a long wash, which tumbles into a rock-bound pool, it tails off with a long, boulder-strewn, deep-stream, holding ground for every size of fish, from the lordly thirty-pounder to the half-pound herling, at all times.

Of the two miles to Langholm, more anon.

For salmon, the red and grey turkey wing are the most killing, varied by silver, gold, or brown bodies, according to colour of water. For sea trout and herling, stick to the "Teal," "the Blue Dun," the red turkey, and keep always in mind that sea fish rise at a brighter-bodied hook than the native.

X.

ODDS AND ENDS OF PIKE-SPINNING WITH THE NATURAL BAIT, &c.

By A. C. H.

If one had to instruct a beginner in fishing, one would surely get him to first accomplish the simplest movements—but the right ones—the principal essentials, and only those necessary, and leave secondary *finesse* and dodges to a futuro time. Thus, in fly-fishing, one would teach the bold back-throw, the wait, and the throw forwards; that learnt and appreciated would be a great deal. The "scholar" might then do nothing further for the time being than hold the rod up till another throw. All angling manipulations may be analysed into the main essential actions, and additional skilful secondary movements of art—playing the bait, &c.—the first teachable, the second depending rather upon the individual's own genius. These facts are well illustrated in spinning. A beginner should at first accomplish the main movements simply. The fact is, the throwing and working-in of bait is difficult enough; but it goes far when *done*, though simply. One fancies that one fault of unsuccessful anglers is to fail in the simple essential movements, fixing the attention on various *finesse*—"beginning at the wrong end of the stick," in short.

I don't know how others spin for jack, but this is the way I do it (dead-bait on flight of hooks Starting with a lot of loose line off the reel, catc hold of the line or rod with right hand (as afte wards described) and swing the rod to the le perhaps once or twice to get the right distance swing and *momentum*, the length of bait from ro top depends on its weight, quality of tackle, ho working, &c., then at the throw a strongish in pulse as it were from the wrist, at the very *fir* of the urge forwards, to make the most of th *momentum*, aud let the bait run. If it goes too f to the right, and not enough across the water, th impulse may be too strong, or it may be the wir *with* the bait, but with the wind against, th stronger urge is required. If bank fishing and bushes, the swing is straight behind, &c.; young trees, bushes not too high, the bait may thrown up above them, though it is harder baing it out over the water afterwards. Wh the bait has reached the water, and there is an loose extra line out, catch hold of the line by th first ring with left hand quickly. If the full lin is used, then, holding the rod in right han secure the line against it by a crook round of th right middle finger, and givo tho bait an ur through the water with the *rod;* then draw length of line through ring with left hand, lettir right finger grasp go if you like, return the ha a bit and gather up a loop of line with finger an thumb—*which hold*—then urge the rod to the le again. So that the idea is, there is a doub movement, giving variety to the bait—of whic one, that of the rod generally, is the greater, or may be worked *vice versâ*, but the principle soug is that the direct rod movemeut gives the mo agile and natural effect to the bait, and th right-hand control of line secures a direct ho and strike of fish if he comes at bait. The doub working is more tiring than the simple left-han drawing, but my idea is it "pays more." beginner should be taught to get the bait out we and bring it in in easy, simplest instalments—an *moderate* as to pace, as all jack spinners know.

Now, as to dodges. If there is no boat, of cours fishing from bank one can only partially and in

and then go

particular way reach the deeper water in front, even though the side, rush or reed-fringed, is good too; to reach the deepest water across is desirable. Though there may be jack near, there are others farther out. Therefore, the dodge is, to make the most of the extreme length of throw; don't be in a hurry to begin drawing in; but be rather slow for the beginning; let the bait sink well, and let the first urge be a little one, just to start it. This making the most of bait dwelling in deepest part may give a deep-lying pike chance to see, run in, and take it. This happened twice the other day. Then, for the rest of the spin, do as a recent writer in the *Fishing Gazette* has admirably said (in referring to something else): "Fish hard—that is, do all you can or know," or words to that effect, especially when you come, later, to see the stroke of spin through the water. Here, by tuning your faculties to the sight of it, you may make the bait swoop through, turn, and stay in the water, as you please. Remember, also, that although, of course, you cannot let it go to the bottom and stick there (!), yet the farther you dare wait for it to sink between the pulls, the more you make of the spin. In fact, any spinner knows that, though a sharp spin may be successful, the jack being characteristically a startling, hungry grabber, yet that, on the top of that, the lengthened spin gives absolutely certain additional chances. And don't forget the first sink and little draw. *Finesse* may be suggested, but whether learnt second-hand appears doubtful. If a touch of the jack has failed, and you are still out in the water, *go on* spinning, and when hold strike in a line with everything, without loosening. If something tells you there's something wrong in the hold, be gentle; don't haul in or hold on sharp. Careless usage may lose a pike. A trout fisher is more careful, and may win; but the roughness of the jack is the thing to combat. If it is deep water, and an attempt has failed, whether circumstances lead you to rightly give an immediate telling spin, or show him the bait to take, depends on genius. Similarly an extraordinary concatenation of circumstances—an ambiguity—may inform you rightly to strike sharp. If the jack makes an attempt at the very edge of the bring-in and misses, *don't* try and show him the bait, but whip out, wait, and go over him again. If you even almost land a pike, and lose him, give him a long rest, and try again for same fish; and, of course (to a beginner), be aware of the simple rule that where there's been one pike there's no doubt another. In the whole business, try all you can, and know what you are doing.

It may be fancy, but I think that a warm, yellow, or bronze-coloured bait is a better colour twining about the water than an entire silver—more alluring, natural. This may be the explanation of favouring the gudgeon as a bait. There is no more beautiful colour of fish play than the red-gold gleam of a perch turning in a stream in the sunlight (*au naturel*, I mean), and I mean to try, with opportunity, spinning the eel front—the thing like a cross between a barbel and an eel—of a good brown, and especially the small rock cod, which is mostly favoured with a brilliant gold bronze coat. I can't imagine it failing. I have been lately using for spinning bait, the sea "podley" (young coal fish), preserved in spirits of wine, with entire success as far as the jack are concerned, except that podleys are softer in the skin of upper part of belly than trout are—this finally giving way with protusion of stomach. Some agent might be found of hardening in a great degree the stomach skin, as the compactness of fish's natural build, fulfilled by the stomach's presence, alone preserves its strength. If the stomach should be gone (if you are short of bait), and head drops on body, carrying movable lip-hook with it, pull it up, and fire a shot below bend of lip-hook.

ON Saturday last the members of the Edinburgh Angling Club, on the Caddonlee and Fairnielee fishing of the Tweed, held their annual competition for the medal presented by the president, Mr. Charles Morton, U.S. The water was very clear, with a bright sun, rendering it not good for fishing. The only salmon caught fell to Mr. W. Scott Dalglish.

THE RENTING & PRESERVATION OF FISHERIES FOR CLUB ANGLERS—MR. R. MURPHY.

BY EDGAR S. SHRUBSOLE.

WHEN it is taken into consideration that on all sides unmistakable signs are not wanting of the gradual depletion of the fisheries available to the ordinary club angler, it is simply astounding that more interest is not centred in the efforts of the few to preserve that which they have and acquire as much more as they can while it is yet possible.

The suicidal policy of many London clubs is truly deplorable. They exist simply to organise matches; and week after week their members assist in the taking of fish from waters that they never dream of helping others (financially or otherwise) to preserve and re-stock. It is only when one contemplates the fact that the annual income of the London angling clubs is not less than seven thousand pounds (I am quite within the mark), and that less than one thousand pounds is expended upon the renting and preservation of waters, that the fact becomes truly appalling, and is exposed in all its hideous truth. One thousand pounds to preserve fish and fishings and so provide sport, and six thousand pounds for copper kettles and sets of jugs!

MR. R. MURPHY,
CHAIRMAN OF THE RENTING AND PRESERVATION COMMITTEE OF THE ANGLERS' ASSOCIATION.

Taken *individually*, some of the clubs show to even worse advantage than they do collectively. What a common thing it is to listen to the club angler who "Thank's God that he is not as other anglers are," the cause of his assertion being that the club that he is a member of, which probably has an income of over thirty pounds, is actually alive to the claims of preservation, and with an assumption of virtue utterly unwarranted, hands over to the Thames Angling Preservation Society the enormous sum of —— 10s. 6d. annually! Great Scott! This "dem'd insignificant sum," as M. Matalini would have termed it, warrants about forty anglers in asserting that they "support preservation," and actually induces them to look down upon their brothers of the rod who subscribe nothing.

So much from the income point of view, but this question assumes a worse aspect still when the enormous amount of money subscribed annually as "private prizes" is taken into consideration. Roughly speaking, there are about two hundred clubs in London, at most of them the private prize list would average £30, in many it would mount up to £50, and in several it would reach £100. The sum thus handed over to the grim and ever-hungry monster, "Prize List" is, as Dick Swiveller would have said, "a staggerer;" at a moderate calculation it would be six thousand pounds! Fancy what this sum *annually* would do if it were devoted to the renting and preservation of waters!

I have seen £90 subscribed in one night at an angling club towards the prize list, and even in working-men's clubs it is no uncommon thing for £20 or £30 to be offered in private prizes upon the occasion of the annual supper. The man who will *willingly* give £5 5s., for a prize, or prizes, thinks 10s. 6d. quite enough to subscribe to a preservation society. The working man who annually gives a prize in his club of 10s. 6d., would flatly refuse to give our worthy friend, Mr Brougham, 2s. 6d. towards the preservation of the Thames! When the Christmas prizes are being offered, it is no trouble to get members to say, "Put me down for 5s.;" or "I'll be a bottle of whisky" (by this latter expression it is to be understood that they do not intend to transform themselves into a bottle of Scotch, but that they will be willing to defray the expense of one as a prize), but those same individuals will put 2d. or 3d. into the T.A.P.S. box, and even then consider they have done well.

Without funds the proper preservation of our fisheries cannot take place. If only some of these thousands of pounds that are annually squandered upon prizes could be devoted to renting and preservation purposes, the effect would be magical, for it is a well-known fact that the Thames, Lea, and other fisheries frequented by London anglers are wonderfully prolific. Of course, the increase in the standard of fish weighable at clubs, which is being so heartily taken up all along the line—and in this connection I would remind my readers that a meeting will shortly be held at the Swallow Assembly Rooms, Piccadilly, W., to promote this excellent movement—will considerably assist in keeping up the stock of fish, but this is only one portion of the structure so many of us are eager to erect; and renting and preservation are of far more importance. I would like here to refer to the remarks that fell from Mr. T. Crumplen when he read that valuable paper upon "The Apparent Diminution of Fish in the River Thames" before the members of the Gresham Angling Society (which he was largely instrumental in founding) some years back.

"I take it for granted," he said, that fish *are* gradually diminishing in numbers; if it be not so, then is there no need for fence months and other protective measures now so properly resorted to. Bear in mind, therefore, two important facts. Fish were formerly abundant in that part of the river running through the metropolis—there are still fish there; but for the most part they may be said to have disappeared. In the upper waters of the same river they are not so numerous as they used to be, in some cases not so large, and are being gradually overtaken by the fate which befel their metropolitan *confrères* some two generations ago. Now I venture to affirm that the very conditions that have practically exterminated the fish in the London waters are, in a degree, precisely those now operating in the more sylvan portions of the river. What I may call the fisheries of old London succumbed only as docks, factories, and gasworks multiplied, the noxious refuse from which was turned into the Thames, there to commingle with the sewage of a great city, the whole being stirred up, and battered by the iron or copper-bottomed steamboats, which at the same time appeared upon the scene. Moreover, nets were in constant operation, and the baser sort of the population probably but too ready to make use of them. What wonder, then, that fish disappeared from such a water—or will disappear from any water where such conditions prevail? I put it, therefore, that these or similar causes are now in operation in a minor degree in the non-tidal waters of the Thames, and just in proportion as these causes increase, so will our stock of fish inevitably diminish. It has been repeatedly stated that the vast increase of late years in the number of anglers is sufficient alone to account for the diminution of fish; but I venture to assert that if our river be properly cared for, its quantity of fish would never be seriously affected by any fair rod-and-line angling. It is my strong belief that the preservation and conservation of the spawn and fry would do more than anything else to improve our fisheries. I feel sure if we provide proper harbours for fish, and give Nature a chance, she will stock the river. The increase in the number of anglers can do no possible harm, *so long as they do not take small fish*—[the italics are mine.—E. S. S.]—and I trust the day is not far distant when *all* the London clubs will abolish gross-weight competitions as they now exist. I know the Thames Angling Preservation Society, and other preservation societies are doing good service; and in treating this subject, let us follow as much as possible in the footsteps of Nature; let us impose no needless artificial barriers to the stream; let us keep our river free from pollution; let our preservation societies *combine*, and take, not merely a police, but a scientific view of their duties; let the angling clubs of London forego the capture of small fish, and act like men in the true Waltonian spirit; then is there yet time to arrest the destruction going on, and to restore a strong and healthy progeny to dear old Father Thames."

Events that have occurred since Mr. Crumplen read that paper—now ten years ago—only confirm the opinions he then expressed, and if there is not so much netting carried on, other causes produce the same effect. Anglers are still increasing in number and the quantity of fish decreasing, and if not properly preserved, the Thames will soon be "fished out;" or, to speak more truthfully, become utterly useless as an angling resort simply through neglect. What will be the good of the thousands of pounds' worth of kettles and jugs then? I may be told that anglers *do* support preservation more than they used to; and to this I reply, perhaps they do, but ample proof can be given that they do *not* support it as they should. As I have said, preservation cannot be thoroughly carried out without ample funds, while our preservation societies, *it is well known*, are crippled for want of funds—the sinews of war are devoted to a baser object. When will London anglers discontinue to shut their eyes to this undeniable fact?

It is often asserted, it cannot be expected that club anglers are going to pay for preserving water anyone can fish; but, outside the selfishness exhibited in such an assertion, I rather fancy friend Brougham could put a very different aspect on the case. I believe the greatest support for the T.A.P.S. (financially and otherwise) comes from those who fish the Thames the least; and the munificent donations the society receives—without which it would be utterly impossible to do any work—come from individuals who never put a foot inside an angling club in their whole life! But if London anglers will not subscribe towards the preservation of public fisheries, then why not support the *renting* of waters more heartily?

It is indeed a relief to turn from the consideration of this matter, in the manner I have had to in this article so far, to the more pleasant and encouraging programme laid down by the Renting and Preservation Committee of the Anglers' Association, of which Mr. R. Murphy (whose portrait appears in the *F. G.* this week) is the chairman. Look at the good this committee has done with an outlay of less than £250 per year, and then think of what could be done if the movement were more general. Even in this case, no doubt, a few hundred pounds spent in stocking would be beneficial to the waters rented by the association.

In addition to the waters held entirely by this committee, they pay for water-bailiffs, and appoint from among their members hon. bailiffs, to watch the various fisheries they have under their control. The cost of drawing the water in the various pens is also a considerable item in the expenditure, and grants are made to the T.A.P.S. and other deserving preservation societies; in fact, in every way possible it does what it can to promote the renting and preservation of waters for the use of members of angling clubs; but there is not the slightest doubt about one thing—ample use could be found for £2,500 per year, instead of £250, and there is no reason why this sum should not be raised if club anglers would forego such an enormous number of prizes, and devote the money to this far worthier object.

Mr. R. Murphy was born in Somerset, and his grandfather, who died about fifty years ago, was a fly-fisherman of some considerable repute in Bath. The angling passion descended with full force upon the grandson, and many are the pleasant recollections Mr. Murphy has of delightful rambles with his grandfather by the side of the lovely West Country streams, rod in hand. Early morn was a favourite opportunity, and time and often would the two break their fast with some toothsome trout that only an hour or so back had been in full possession of vigorous life, but which had to succumb to the skill of the elder and younger Murphys. I think most of us look back upon our boyhood's days through a medium of roseate hue, and I have often thought of the young Murphy by the river-side at early morn, when I have watched the now silvered Murphy being harassed, questioned, and sometimes annoyed by the absurd controversies indulged in at times by delegates to the Anglers' Association meetings; and I have been tempted to whisper a few words in the veteran's ear, and watch the magical effect as the sylvan scenery of Somerset and the recollection of days long past would crowd into his brain, and in thought take him hundreds of miles away from Tom, who has been weighing in fish that he "hadn't ought to!"

Not that I for one minute would suggest the delegates are uncourteous to the officials of the association; on the contrary, I have noticed that a great amount of respect is shown to those placed in positions of power. But don't some of those delegates like to air their little grievances, utterly regardless of the waste of time, and the annoyance caused to the chairman and the rest of the delegates!

Well, the time came when young Murphy had to seek his livelihood, and the powers that be decreed that this should be done in the great Metropolis; so we next find him located in London, industriously pursuing his trade,—cabinet making—and gradually forming a wide circle of friends; for I may here remark that from the time he first came to London until the present hour, he has always been able to "make friends," and even those who differ from his opinions willingly acknowledge his honest integrity. Of course, fishing and fishermen occupied his hours of relaxation principally; and at first the change in style of fishing and character of water were to him somewhat confusing. The light taper trout rod had to be replaced with the orthodox long Lea pole, and the delicately-winged lure had to make way for gentles, paste, and worms; nevertheless the enthusiast, with characteristic determination, soon became a master of the art of coarse fishing, as practised by the Metropolitan anglers; although I rather fancy Mr. Murphy has always had a sneaking regard for his boyhood's style, and even now at times plies his old art, with some considerable success, among the chub and dace.

Mr. Murphy soon became a member of an angling club, the Good Intent, and in a very short time his *confrères*, recognising the suitability of the man, promoted him to the post of secretary, a position he has held ever since; and that he may continue to do so, notwithstanding his advanced years, is the sincere wish of the whole of the members, I am sure. Possessed of exceptional organising ability, and assisted by staunch and true supporters, he has built up one of the largest and soundest angling clubs in London. A working man himself, he has shown what can be done by sincere determination and honesty of purpose, and without flattery he is one of those London anglers whose light shines bright and clear and sheds a lustre over the darker phases of club life.

Any movement, having for its object the advancement of the sport he loves so well, and the well-being of those he is always so pleased to associate with that has been promoted during the time he has lived in London, has always had his hearty support; and his record of good work among anglers is equalled by few, and excelled by none. His herculean efforts on behalf of the Anglers' Benevolent Society are well known; his work in connection with the Renting and Preservation Committee is never done, and his general usefulness as a prominent member of the Anglers' Association is acknowledged by all.

Such a thing as "having his hands full" he never dreams of, and, in addition to the numerous duties entailed upon him now, he has lent his valuable assistance to the recent movement for promoting the reading of papers among angling clubs, being firmly convinced it is one which will prove of permanent value to anglers generally.

Only those who work hard among the clubs can imagine the miles he must travel, and the hours he must spend in encouraging the efforts of those eager to promote the welfare of club men; he "turns up" at all sorts of out-of-the-way meeting houses, and that he may long continue to have the health and strength to "trot round the town" is my sincere wish. His face is ever welcome, and his kindly advice and good fellowship appreciated by all.

Correspondence

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. Pritt.

TROUT AND GRAYLING AND SALT WATER.

Dear Sir,—A friend has called my attention to the items under the heading "Waltoniana," in your issue of October 10. There "Templar" mentions a small experiment I made in attempting to accustom Loch Leven trout and grayling to a life in salt water. It is always a pity when people rush into print having only a slight understanding of the subject they are treating. If "Templar" had a rudimentary knowledge of natural science, he would have understood what I meant by the expression "propagate their species;" he would also have known that if the environment of an animal is entirely changed, the animal must either die or adapt itself to circumstances. If it is able to do the latter, it *must* reproduce its species, otherwise it is not wholly adapted to its new surroundings.

No doubt "Templar" is right when he implies that if you place the eggs of a fresh-water fish in salt water they will die. Probably he has tried; I haven't, and don't intend to. But when he says that properly acclimatised fishes' eggs will die, or, to use his own beautifully flowing expression, that "deposition, fertilization, and incubation of ova" under changed conditions is impossible, he is only exposing his own ignorance.

Surely I need not give examples to prove the truth of what I say. Let "Templar" enlarge his own knowledge by reading an excellent book called "The Origin of Species," by a man named Darwin, or an equally powerful book, called "Darwinism," by a man named Wallace. But please do not let him try the art of throwing the boomerang; it has a nasty way of jumping back and striking the thrower. In any case it's a depressing instrument to exhibit with.—Yours truly,

W. J. Calderwood,
Director, Marine Biological Association.

Plymouth.

THE JARDINE SNAP.

Sir,—Would your contributor, Mr. Jardine, kindly inform me about how many seconds would he give after the float had finally *disappeared* before sending the hooks home when using his snap tackle? Supposing he *knew* that the water he was fishing contained jack, say not over 4lb., would he give said jack more time if he were using a 4oz. or 5oz. *roach*, than if he were using a bleak or small dace?—I am, &c., Mark.

P.S.—No other bait to be had. If he would give more time, will he kindly say how much more?

A SPECIAL HOOK FOR GRAYLING.

Dear Sir,—Find enclosed a few hooks to gut, knowing you are open to notice any notion for the benefit of the angling public. You will see they are flattened in the bend, and are designed to obviate the frequent disappointment to anglers losing fish after having hooked them. This hook, from its form, does not tear through the delicate cartilage of a grayling's lips, like the time-honoured round wire. They have received a fair trial, and are found to be a useful hook. They offer no impediment to the baiting. The "idea" has been carried out by Messrs. Guise and Sons, Redditch, who tell me they are in a position to supply wholesale trade only. They intend making them in all shapes, both for fly and worm.—Yours, &c.,

John C. Perfect.

204 and 205, Station-street, Burton-on-Trent.

[This idea strikes us as being a good one; but only actual trial would prove if the flat bend tore-less than the round. A grayling turns and twists about so, that it would often be pulling against the edges of the flattened bend, and that would cut more than the round wire, we imagine. Mr. Walbran should see these hooks.—ED.]

FISH SCALES WANTED.

SIR,—I shall be much obliged for a few scales off any kind of *Salmonidæ*, especially from any fish whose age is known. I should like them taken from close to medial line, directly above middle of pectoral fin, when fin is laid close to side. Wrap scales in screw of paper; label name of fish, length, and, if possible, age and weight. A few scales off large grayling of any age are much wanted.

I shall be very glad to hear from anyone who has by him a collection of scales off any kind of *Salmonidæ* whose ages were known and recorded. —Yours, &c., O. GREIG.

Thuboro House, Sutcombe, Holsworthy.

NOTICE OF REMOVAL.

SIR,—The Havelock Angling Society, late of the Havelock, West-street, Hackney, will in future be held at Mr. W. Stewart's, Royal Oak, Whiston-street, Haggerston, where all business will be carried on. Secretaries of other societies will please address all correspondence to the new clubhouse.

Meeting nights: Tuesdays, for general business; Sundays, for weighing in, as usual.

We shall be pleased to see some of our old members that have stayed away from the old house.—Yours, &c., T. THOMPSON,
Secretary.

THE OPEN ROVING ANGLING CONTEST AT PULBOROUGH.

SIR,—I beg to inform you that, owing to the recent heavy floods in Sussex, as in other places, the great fishing competition promoted by me, and which was to have taken place on the 25th ult., on the river Arun, has been postponed until the 29th inst., on which day the London, Brighton, and South Coast Railway have kindly consented to run a special train to Pulborough and Amberley, starting from London Bridge at eight a.m., and calling at Peckham Rye at 8.5 a.m.

I should be glad if other intending competitors would make an early application for tickets at my establishment (late Clout's), 21, Goswell-road.

Entries will close on the evening of the 28th inst.—Yours truly, A. A. ELDRIDGE.

THE FLYFISHERS' CLUB.

THE Annual Dinner has been fixed for Wednesday, December 9th, in the Venetian Chamber of the Holborn Restaurant, at half-past six for seven p.m. Basil Field, Esq., has kindly consented to preside. The committee will again have the assistance of a number of well-known artistes, who have kindly consented to give the club the benefit of their services.

A Smoking Concert has been arranged for Tuesday, the 17th of November, in the Club Rooms, at 19 and 20, Arundel-street, Victoria Embankment, W.C. A number of well-known artistes have kindly consented to assist, and the committee hope to see a large muster of members and their friends.

FISH CULTURE AT LAKE VYRNWY.—Since the close of the fishing season, special attention has been paid to the breeding ponds, which are now becoming a valuable adjunct to the estate. Next spring several thousand fine trout (of different breeds), ranging from a half to a pound in weight, will be ready to be transferred to the lakes, there to await their final fate. The yearlings look healthy and are making rapid growth. Close to the ponds a suitable spawning race has been made, which the fish seem to like very well; here may be seen fine specimens of Loch Levens, from one to three pounds each. Several fish have already gone up the streams to spawn, but the majority will not run until a flood occurs—the water at present being rather low to admit of large fish passing. Strict watch will be kept on the rivers until the trout return to the lake. Preparations are being made for "stripping," and soon the hatchery will again be in full working order.—LONG DRIFT.

NOTES FROM BIRMINGHAM AND DISTRICT.

A COMMITTEE meeting of the Birmingham Anglers' Benevolent Society was held on Friday evening last, October 30, at the headquarters of the association. Mr. T. Coles presided, and Mr. C. White occupied the vice-chair. The meeting was fairly attended, and letters of apology for non-attendance were received from Messrs. King and Gumbley, who were detained through pressure of business. The minutes of the previous meeting, held on October 2, were read and confirmed, when the secretary gave in a report of the financial position of the society, which went to show that the funds in hand exceeded £50, and that the profits on the late contest amounted to £5 15s. The numerical strength of the society was about five hundred, but out of this number only two hundred were entitled to benefit. The report was accepted as satisfactory. A vote of thanks was accorded to the two referees, who had given their services free. The chairman of the divisional committees had no report to give in, when Mr. Pratt, of the Deritend Society, called the attention of the committee to the importance of each one present bringing the objects of the society before his particular friends in order that the strength of the society might be increased. This suggestion will, I hope, be acted upon, as much good may be done if the whole of the committee follow out this valuable suggestion. Several of the committee advocated the desirability of holding a smoking concert on behalf of the funds of the society, during the winter months, when the vice-chairman gave a report of an interview with one of the managers of one of the Birmingham music-halls, who had generously placed at Mr. White's disposal the free use of the hall for an extraordinary small sum for the purpose of holding a concert on behalf of the funds of the society. The report was adopted, and Mr. White was requested to obtain full details of this grand offer, and to bring in a report at the next monthly meeting of the committee. This concluded the business of the meeting, when a vote of thanks was accorded to the following donors of prizes to the late contest, with a request from the committee that their names be published in the *Fishing Gazette*—namely, Messrs. Hands, Chambers, King (Bird-in-Hand Club); Mr. Hall, Mr. Slim (West End); Birmingham Heath, Hearts of Oak, Sparkbrook; Mr. Bowler, St. Paul's; Bee Hive, Queen's Arms; Mr. Wingfield, Brothers Well Met; Birmingham Association (two prizes), Mr. Bushell, Mr. Thurston, Mr. Perks, Mr. White (two prizes), Rose and Crown, Bellbarn, and Mr. Tanks. To these gentlemen and the clubs, I also beg to personally thank them, as it was chiefly through their generosity that the contest turned out such a decided success.

I AM pleased to say that since the forwarding of my last Notes, the weather has taken a decided turn for the best. There has been little or no rain for the last four days, and the whole of the Midland rivers have reached their winter level, and are in excellent order for all kinds of fishing; the late floods have cleared the rivers and opened up numerous places, which were before the heavy rains unfishable. The cold frosty nights have sent the roach into the deep water. The Trent is reported to be in fine fishing order, and the members of the Birmingham clubs who rent that portion of the river near to Birmingham should lose no time in taking advantage of the present satisfactory state of the water. The Severn has gone down a great deal since last week, and is now in beautiful condition; and some few anglers who live on the banks of the river have not been slow to make the best use of their time since the fine weather has set in to make up for the lack of sport during the bad weather. Some very decent takes of nearly all kinds of fish have been had near to Stourport, Lincombe Lock, and up to Arley and Hampton Lode. Several fair-sized pike have been seen on the feed at Lincombe Lock, near to the mouth of the old river; and from what I hear, some of the Brums are planning the transportation of these fish to Birmingham. On the Avon, the fishermen have been busy with the pike during the week, and several have been taken in the Stratford district, but none above 7lb. This seems to be the standard weight of the pike in this portion of the Avon, as it is a rare occurrence to hear of any being taken over this size; but as you get on down towards Tewkesbury the pike run larger; and of all places on the Avon I consider the last-mentioned place the best, and any one paying a visit to Tewkesbury during the present weather will not be disappointed in coming home water beat. The roach on the Avon have gone off the malt and wheat, and the small red worm is now the most killing bait. Perch are running well at the minnow.

THE long-pending fishing match between T. Foley, of the Old Green Man Club, and W. Kimberley, of the Brothers Well Met Club, came off on Saturday last. The choice of the water fell to Foley, who took his opponent to the Oxford Canal, seven miles from Coventry. The allotted length of the contest ground was 500yds. with the stipulation that the parties were not to fish within 15yds. of each other. Roach only to count. The contest was of two hours' duration, at the end of which time Foley succeeded in capturing one hundred roach and one perch, whilst Kimberley only succeeded in taking thirty-five fish, all roach. The winner during the first twenty minutes took two fish per minute. The weather was very cold, and towards the latter portion the contestants were almost unable to hold their rods. The winner beat the record, which has been held for years by Mr. G. Paste, who succeeded in capturing upon one occasion, in a match, ninety-nine roach in two hours. The veteran, Mr. Clem Wainwright, acted as referee, and the match passed off in a very agreeable manner.

A GENERAL meeting of the Provincial Angling Association will be held this (Saturday) evening, Nov. 7, at the Birmingham Arms Hotel, Smithfield, Birmingham, for the election of officers for the ensuing year, and to transact other important business, a report of which will appear in these columns next week.

Holloway's Ointment and Pills.—Shortness of Breath, Coughs, and Colds.—Thousands of testimonials can be produced to prove the power possessed by these corrective remedies in cases of asthma, incipient consumption, and all disorders of the chest and lungs. The Ointment, well rubbed upon the chest and back, penetrating the skin, is absorbed and carried directly to the lungs, where, in immediate contact with the whole mass of circulating blood, it neutralises or expels those impurities, which are the foundation of consumption, asthma, bronchitis, pneumonia, and similar complaints. On the appearance of the first consumptive symptoms the back and chest of the patient should be fomented with warm brine, dried with a coarse cloth, and Holloway's Ointment then well rubbed in. Its absorption will subdue advancing symptoms, and baffle this formidable foe.

NOTES FROM LANCASHIRE.

THE fine cold weather of the past week has certainly, to a great extent, improved our local fishing, and those whose health is robust enough to warrant exposure to the severe east wind, have profited by the same, in the good sport falling to their skill. The condition of our waters generally is improved, and to this state of things two factors—viz., the absence of rain and the night frosts, have largely contributed, the former to the condition of the water, and the latter in a great degree removing the abundance of food upon which the fish have been extensively feeding. Roach, perch, bream, and even tench, have been taken freely, the weights being calculated by pounds, where ounces have sufficed for months. Pike seems to be receiving great attention, and are repaying the trouble of carrying the usual luggage, by the numerous fish reported as killed.

AMONGST the individual catches of our locals, Mr. Gregson, of Blackburn, is credited with a fine salmon of 18lb.; while several others fell to Lancashire rods, of 10lb. to 15lb.; one angler (unknown) was seen to kill a 30lb. fish; all the foregoing taken from the Ribble and Lune. Pike from 4lb. to 10lb. have also been taken. Local rods visiting Lincolnshire appear to be well satisfied with their visit, especially with respect to the pike fishing. Poynton Pool has again contributed to the list, with a good fish of 26½lb., whilst fish of a smaller weight are being taken daily.

NOW that trout-fishing is closed, the coarser kinds of fish are receiving more attention in the Cheshire meres and streams, and no diminution in the number of rods out on these waters is as yet noticeable. Lancashire anglers, especially from Manchester and districts, frequent these waters. The Dane, its tributaries, such as the Crannage Brook and others, together with the Weaver throughout and the Flashes in particular, seem to have had above the ordinary quantity of visitors, and judging from the many reports to hand, are likely to do, for good sport is the unanimous verdict, unless we have some syndicate amongst us, formed for perpetuating the reputation of all anglers now wrongfully awarded us by our enemies.

A PARTY of Oldham anglers have been finishing up the season with a return visit to Scotland, but their experience is only of the ordinary kind—no sensational catches. Perhaps if they had sent some ladies, Scotch gallantry would kindly have magnified the fish, so that our ears may be tickled; but as the Oldham man is a plain truth-speaking man, the report must still be, "Nothing extraordinary."

CLUB items are of a very uninteresting character, being mostly confined to taking a retrospect of the year's undertakings. We regret to hear that a leading club in Hulme is likely to be broken up. Good clubs are always to be admired, and it is with regret we hear that another is likely to follow the example of the Charles Cotton. Rumour is busy out Openshaw way, and if report is true, Mr. Chadwick, the president, together with his lieutenant, Mr. Starkie, intend giving way to younger hands. Openshaw owns a large club, and its executive must needs be efficient.

A PARTY of Ardwick anglers recently fishing in private waters in the neighbourhood of Stockport, obtained really good sport amongst chub and other coarse fish. The average catch was 7lb. per rod, but when we take in consideration the fact that Messrs. Brooks and Kershaw, jun., were counted in the number, it is no wonder that the all-round result was excellent. In a party (all experts), who shall take first place is a knotty point, and we abstain from deciding.

MR. GEO. YATES is still to the front as regards enthusasm; his successes in club contests during the last four months must be very gratifying to himself and his club. Mr. F. Bibby is another fine specimen of our local angler, and his prizes obtained during the late contest period are a really valuable collection.

A SUGGESTION is likely to be made at the next meeting of the Manchester District, to the effect that the specimens in the possession of the various clubs and individual anglers of the district be collectively exhibited for a short period in some place easy of access to the whole of the Lancashire anglers.

NOTES FROM NORFOLK.

WATER is in good condition, but very little has been done either in bottom or pike fishing, very few anglers having been out. On the Yare on Friday, four pike from 4lb. to 7lb. were taken at Buckenham (spinning). On Saturday, one boat had forty roach in Buckenham Reach. Opposite Rockland Dyke, two rods had a fair catch of roach; and in Cantley Reach another boat took some roach and bream. On the Bure, on Thursday, a gentleman took six nice pike and five very good perch (spinning) near Salhouse. On the 1st inst., a catch of about one stone of bream was made at Ranworth. On Monday six good pike and a few perch were taken by one rod, spinning between Horning Ferry and the Church. On Wednesday a good bag of a dozen pike of 4lb. to 6lb. was made at Wroxham with artificial bait.

NOTES FROM NOTTINGHAM.

PIKE anglers have been favoured with very fine weather for sport, and I should say that every length of the Trent in our district has been fished during the past week or ten days. The run on the tackle shops for bait has been unprecedented, and on Tuesday I question whether a good strong dace could be obtained in Nottingham. Whilst the river remained tinged with colour, the bait catchers fared well, but as soon as the fining-down process began in earnest, the fish—dace, I mean—bit very tardily indeed. On Oct. 29 the upper section of the Weston Subscription Water was alive with pike experts; but, although the weather was all that could be desired, *Esox lucius* was found to run anything but freely. The rods did not average a fish each, although in the King's Mills section Mr. W. Dupe succeeded in taking five very choice specimens. The greatest fun was enjoyed in the Thrumpton private water below the weir. Two of the subscribers, Mr. Carter and Mr. W. F. Bromley, landed thirteen, including one of 12lb. Four only were retained, and, in placing the others back, the anglers acted with true sportsmanlike instinct. It is pitiable to witness the hauling ashore of miserable specimens for home consumption. Some people—they cannot be dubbed anglers—will take fish of half-a-pound weight, and if by chance they bag one of a couple of pounds, the whole village has to see it. On Monday I was returning from a chubbing excursion from one of the lower waters, when a fellow passenger, who had been pikeing, produced from a cloth three fish, which he confessed he was almost ashamed to take home. But he added, "You see they have been hooked badly, and, if I had put them back, they would not have lived. I had some *better* than these last Saturday." I trust he had. Those he produced would perhaps average a pound each—glorious specimens, truly, to show to fellow travellers, and, as it happened, all anglers. I could have shown him, if I had been disposed, seven chub that would have opened his eyes. Seven better fish have not been seen in our district this winter season. I caught them with greaves, in swims that were most difficult to fish owing to the prevalence of a violent "up-gate" wind. But as regards pike-fishing, in the Thrumpton Water, on Monday, Mr. Carter was again to the fore with ten fish, half of which were returned, those retained averaging between 5lb. and 6lb. apiece. Several very good ones came from the private back-water of Hon. E. W. Curzon's Fishery on the Soar; and at Barton no angler has enjoyed so much sport as Mr. H. Stafford, of Nottingham. He has also excelled as a roachist, getting, in two days, 22lb. of fish with the maggot, and using for ground-bait a mixture of soaked bread and bran. A perch of 1lb. 5oz. has, I hear, been weighed in at the Victoria Angling Society, at Beeston, and the successful angler caught, in addition, sundry remarkably fine roach, the whole coming out of the Weston Fishery. Here, on Thursday week, Mr. W. Stevenson, of the Nottingham Wellington Angling Association, took, in my presence, a grand bream of 3lb. 12oz., besides several good roach; and in the same length, on Saturday, roach were secured by Mr. A. Fewkes and Mr. J. Theaker, Nottingham. Another gentleman had a bream of nearly 3lb. At Wilford, before the river got so low, some rare catches of dace were effected with the maggot by Mr. J. Boyd, of Nottingham, and Mr. W. Kennedy, of the Avenue Hotel, Hyson Green; and, near the old village church, on Saturday, Mr. H. Briggs, of Radford, bagged a very choice quantity of roach. On Wednesday, Mr. Hammerton, of West Bridgford, landed, in the Colnick Fishery, six pike, and others came to hand from Kelham, near Newark.

THE annual dinner and presentation of prizes, in connection with the Notts Piscatorial Society, took place on the evening of the 29th Oct., at the house of the popular Mordecai Sherwin (Notts County wicket-keeper), the Alexandra Inn, Carrington-street, Nottingham. The society is an off-shoot of the Nottingham Wellington Association, and was started with a rare flourish of trumpets. There are, I understand, upwards of thirty members, and at the dinner, or rather after it, Mr. Chas. Jackson presided, with Mr. H. Beardsley doing the honours of vice-chairman. The secretary submitted the prize list, and read out the winners as follows: Barbel, 1st, Mr. Langley. Roach, 1st, Mr. T. Leak; 2nd, Mr. James. Dace, 1st, Mr. A. W. Mee; 2nd, Mr. E. Smith. Bream, 1st, Mr. E. Robinson. Other prizes are said to have been awarded, and a good promise of support accorded for the winter season, now, of course, in full swing. After the awards the proceedings were devoted to conviviality, and not the least of the diversion was caused by Mr. Sherwin and his promising son and vocalist, Mr. Willie Sherwin.

THE half-yearly dinner of the Nottingham Wellington Society, was held at the Wellington Hotel, Station-street, on Thursday, and was followed by a musical evening. I will, however, do more justice to the gathering in my next batch of Notes. Needless to say, the society still keeps in a most flourishing state.

THE Nottingham Shoulder of Mutton Association (Host R. Higginson's, Smithy-row) continues to make rapid progress, and the members seem determined to make the most of the long winter evenings. The first smoking concert of the season, held the other night, was a great success. Mr. F. A. Dabell, one of the vice-presidents, presided, having as his colleague in the vice-chair Mr. Brotherton. A choice programme had been arranged, and those heard to advantage were Mr. C. Heald (hon. sec.), Mr. J. Bell, Mr. O. Jowett, Mr. P. Jones, Mr. T. Bamford, Mr. A. Smith, and Mr. A. Knight. During the evening Mr. C. Jackson delivered an interesting lecture on "The Habits of Fish." Mr. H. S. Wright, M.P., would have joined the company but for indisposition; and Mr. Councillor Sam Brittle (vice-president) excused himself on the ground of previous engagements.

NOTES FROM SHROPSHIRE.

ANGLING in this locality has been this week characteristic of the weather—decidedly dull—and no reports of noteworthy catches came to hand. The river, however, is in good condition, and roach, perch, or pike fishing will be found a profitable pursuit, though the water is somewhat too fine for the latter.

THERE were some grand catches of pike made in the neighbourhood of Shrewsbury last week, and while it is satisfactory to note that a few anglers have been playing havoc among these destructive fish, it is a fact to be regretted that the fresh-water shark appears to be increasing in numbers very considerably. By the unalterable laws of Nature it is always the weakest that goes to the wall, and undoubtedly the large number of pike in the river must very materially diminish the trout, which, notwithstanding the re-stocking operations of the Shrewsbury Severn Angling Society, are anything but abundant. Some steps should be taken during this winter by this institution to thin the number of pike in the river in the locality of the town, and to this end it would be well if the society were to organise a few pike fishing excursions among its members. These outings might be made very pleasant gatherings, and it would lend additional interest to them if prizes were offered. Thus a double purpose would be served, the members of the society would benefit by the arrangement of these excursions, and at the same time the number of pike, which (to say the least) is assuming alarming proportions, might be appreciably lessened.

SEVERAL of the members of the Shrewsbury Severn Angling Society agree as to the practicability and advisability of some such methods as those suggested in these Notes last week, to increase the popularity of this valuable institution by organising fishing excursions in the neighbourhood of the town, and more especially by promoting social gatherings. I suggested last week that the members should be brought more into touch with each other, and that a generous feeling of good fellowship should be brought about among the brotherhood by means of social gatherings as well as prize-fishing contests and frequent excursions; but I am met with the suggestion that all these things would mean a drain upon the finances of the institution that its purse would not stand. I cannot, however, think that such would be the case. The prize contests and excursions need not be such expensive affairs as the principal outings held during the summer. They might be organised with little difficulty, and might be held within a mile of the town, so that not only would every member have an opportunity of taking part, but the cost would be trifling. For instance, a prize pike fishing contest might be held on a Saturday afternoon at Monkmoor, Uffington, or Preston Boats, or even nearer to the town. Pleasant social gatherings, too, might be easily arranged, and (say four or six) during the winter months might do a great deal to promote the interests of the society, and prove profitable as well as entertaining to its members by the reading of papers, illustrated lectures, &c. The idea was, I believe, once mooted that the possession of a club-room, to which members could resort at any time to peruse the angling papers or otherwise spend a pleasant hour, would do much to promote the welfare of the society. The expense might be covered by the amount that is now paid for the Shrawardine Weir, which, to say the least, has proved a doubtful acquisition. The experiment of renting this weir was made with every good intention, but now that it has been found a failure, it should be at once given up, and the money devoted to a more profitable undertaking. A better use for it than using it to maintain a club-room could not be imagined, and it is sincerely to be hoped that, at the next annual meeting of the society, the unprofitable weir will be dropped, and a club-room maintained in its stead.

NOTES FROM YORK AND DISTRICT.

UPON the whole, the Yorkshire streams have this week been in "good trim" in the direction of angling. On the Yore, at Hawes, grayling and pike fishing has been fairly good, the best flies at allurement being said to have been Silver Dun and Bradshaw's Fancy, which latter, it may be added, has been in considerable favour this season. The weather is not as yet quite sharp enough for worm fishing, and the grayling only takes that lure moderately well at present. On the Yidd, at Pateley Bridge, fish have risen pretty freely, but have been just on the contrary in the Derwent, at Hackness, inasmuch as anglers have remarked on the short rising of grayling to the fly, although the river has been in good order. In the Swale at Richmond angling matters have also been on the improvement.

THE decision of the West Riding County Council, last July, in reference to the polluted condition of the river Aire, to enforce the provisions of the Rivers Pollution (Prevention) Act, 1876, without the appointment of a joint committee, under a section of the Local Government Act, 1888, is likely to be productive of some good results. Local anglers, through the reports which have from time to time appeared in the columns of the *Fishing Gazette*, will be well acquainted with the general bearings of the question, but the present aspect of the matter will be more interesting. The two chief points upon which the County Council, on the one hand, and the Leeds and Bradford Corporations, on the other were unable to agree were (1) As to whether the proposed Conservancy Board should be a joint board for the Aire and Calder; and (2) as to the basis of representation. Hence the practical resolution of the West Riding County Council to proceed, without Leeds and Bradford, with the work of purifying the Aire and other rivers in the West Riding. This decision was communicated to the Leeds and Bradford Corporations, who disapproved of the step taken, and who subsequently sought and obtained an interview with Mr. Ritchie, President of the Local Government Board, as to the constitution of a Conservancy Board for the Aire only. After that interview the West Riding County Council received a letter from the Local Government Board, asking them to reconsider their decision with regard to acting alone in the matter of river purification. It was then felt by the sanitary committee of the West Riding authority that the joint deputation from Leeds and Bradford had evidently impressed Mr. Ritchie with some of their arguments, and consequently they themselves decided to wait upon the President of the Local Government Board, and put before him their views on the matter. The conference between the right hon. gentleman and the deputation of the West Riding County Council was fixed to take place yesterday (Friday), at the offices of the Local Government Board, Whitehall. The chief among the numerous matters to be discussed will be as to whether a Conservancy Board shall be established or not. To that question the County Council say "No," but behind that point is a very important question, into which the deputation will not go unless invited to do so by Mr. Ritchie—viz., "If a Conservancy Board is established, shall it be for the Aire, without the Calder, or for both rivers?" The County Council prefer a joint board for the two rivers, but then there is the question, "What shall be the basis of representation if a Conservancy Board (whether for one or both rivers) is formed?" Leeds and Bradford have contended that the basis of representation should be the drainage area, but the County Council say that they will not be parties to any proposal to split up the West Riding into sections, and that if they be represented on the board they must have a representation of the whole of their county. The deputation will also ask for a commission to be appointed to inquire into the best practicable and available method of purifying manufacturing effluents. The Rivers Pollution (Prevention) Act does not, I am informed, specify any standard of purity below which manufacturing liquids may not be passed into the river, and it is with the object of supplying this omission in the Act, as well as of assisting both sanitary authorities and manufacturers, that the commission is applied for. The sanitary committee propose to hold, at an early date, a conference with the representatives of riparian authorities within the watershed of the Aire and its tributaries (excepting the Calder), upon lines similar to those had with the sanitary authorities within the watershed of the Calder, to consider the best mode of arranging for the purification of the river and its tributaries.

_ **Club and River Reporters will oblige by sending in their Reports early in the week.**

NOTES FROM EAST TYRONE.

THE Blackwater has fallen down to its ordinary level. In the closing days of the season pike spinning was fairly good. Salmon are in all the pools, waiting for freshets to push farther up stream.

FISHING for salmon, white trout and brown trout, have ceased on the Doraville, Broughderg, and other mountain tarns on the 31st ult. These streams are very small, but in certain parts of the year they swell into respectable rivers, but from their remoteness and difficulty of access they are not much frequented by anglers.

THE Kildress stream has not yet fallen down to its usual level. The past three weeks on it were very poor, the only sport to be had being spinning for pike. Salmon are running up well, but I hear that poaching is very prevalent, the river being unprotected. The Kildress is well stocked with brown trout, with which excellent sport was enjoyed all season. Trouting has closed for the next four months.

ON the other streams in East Tyrone—Kingsmill, Littlebridge, Moneymore, Newmills, Rock, &c.—trouting has ceased for the season, which altogether was a very good one. Perch fishing on the lakes of Roan, Carnteel, Moy, Stewartstown, Esknagh, Farlough, &c., is bad but pike fishing is reviving slightly. Since the frosts came, spinning is much easier by the weeds being killed in both lake and stream. There is no close season for pike, but, notwithstanding this, numbers are increasing. In the Blackwater and Coalisland Canal bream are feeding well, and excellent sport has been had by local anglers.

LAST Friday a veteran Tyrone angler—Mr. John Nesbitt—went quietly to rest, having almost accomplished the lease of life given by the Royal psalmist. Mr. Nesbitt was an enthusiastic and skilled angler, and lived on the banks of the Ballinderry, holding large tracts of land along the river. As a riparian proprietor, he never interfered with the public fishing his lands, but gave free permission to all comers. His funeral, on Monday last, amply testified to his extreme popularity with all classes, and now his remains lie but a few perches from the stream he loved so well. Mr. Nesbitt died worth about £6,000.

SOCIETY FOR PROMOTING THE READING OF PAPERS AT ANGLING CLUBS.

UNDER the chairmanship of Mr. J. H. Tibbatts, a meeting of this society was held on Friday night, at the Citizen, Houndsditch, when several matters of importance were discussed. Mr. Francis M. Walbran's lecture on "Two Yorkshire Rivers," was fixed to take place in the Foresters' (Lower) Hall, on Dec. 10, and the arrangements in connection with the hiring of the hall were left in the hands of Messrs. Ghurney and Murphy. Mr. Shrubsole announced that a large gathering might be anticipated on the occasion. The chair will be taken by Mr. R. B. Marston, editor of the *Fishing Gazette*.

Several applications were personally made for papers to be read at certain clubs. The following is the latest list arranged for: Nov. 26, New Albion Piscatorials, Duke of Kent, Old Kent-road, paper by Mr. Taylor; Nov. 30, St. John's Angling Society, Skinner's Arms, Clerkenwell, paper by Mr. Howard; Dec. 7, Epsom Angling Society, paper by Mr. Simms; December 10, Foresters' Hall, Mr. F. M. Walbran's lecture; Dec. 15, North London Angling Society, Tap House, Holloway-road, paper by Mr. Simms.

Mr. J. H. Tibbatts was elected permanent chairman of the society, and Mr. Arthur Matthews assistant hon. sec.

Mr. Murphy moved, Mr. Rich (Amicable Excelsior) seconded, and it was unanimously resolved that the society should for the future meet on the first and third Fridays in each month.

Mr. E. S. Shrubsole spoke of the presentation of gold, silver, and bronze medals to *bona-fide* working-men anglers who read a paper of their own composition before the members of their own club. He suggested that the jury should be elected from the members of this society, and that they should be empowered to say which was the best three papers. He thought they could easily raise the necessary funds for the purchase of the medals, because they could get the requisite sum by voluntary subscriptions. He thought the medals would be a splendid idea, and he should certainly like to see the matter carried into effect. The main feature of the society was to promote the reading of papers on piscatorial topics amongst the working-men angling clubs. They wanted to encourage a more enlightened feeling in that direction, and he believed that if they were to introduce the medals, and present them at the annual meeting of the clubs, it would be a great inducement for working men to strive on their own hook to write a paper and read it before their brother members. (Hear, hear.)

Eventually, owing to the lateness of the hour, the matter was ordered to stand over until the society's next meeting.

The proceedings then closed with a vote of thanks to the chairman for presiding.

The club-room of the Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea, was crowded on Wednesday evening last, upon the occasion of a paper being read by Mr. Arthur Matthews, entitled "Some of My Angling Experiences." The proceedings were held under the auspices of the Society for Promoting the Reading of Papers amongst Angling Clubs, and the chair was occupied by Mr. E. S. Shrubsole. Anglers were present from Kilburn, Clapham, Battersea, Camberwell, the City, Old Kent-road, Bermondsey, Blackfriars, &c., the attendance including Messrs. Smith, Howard, G. E. Simms, Rich, Jones, Parker (vice-chairman), Curtice, Evans, A. Conn (secretary, Bermondsey Brothers and South London United Visiting List), &c.

Mr. Matthew's paper, which occupied close on an hour, was well received. He spoke of his experiences on the Eastwood and Nottingham Canal, the river Erewash, the Trent, and the Norfolk Broads and Rivers, and he exhibited the rod and tackle he used when a boy. His reminiscences were altogether of an entertaining and instructive character, and upon the conclusion of the paper he was accorded a very hearty vote of thanks.

The subsequent speakers included the chairman, Mr. Howard, Mr. Smith, and Mr. G. E. Simms, and a very pleasant evening was passed. The musical part of the programme was ably sustained by Messrs. Curtice (who accompanied on the piano), Lovett, Raymond, Parker, &c., and with a vote of thanks to the chairman the proceedings, which had been of a most successful character, were brought to a termination.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association.—Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly meeting of the Renting and Preservation Committee will take place on Monday evening next, November 9, at 8.30.—R. GHURNEY, secretary.

Anglers' Association.—NO. 1 EASTERN DISTRICT.—The next return visit will be to the Stepney Angling Society, the Beehive, Rhodswell-road, Stepney, on Wednesday next, November 11, chair will be taken at 8.30 p.m. I hope to see a good muster.—G. M.

Anglers' Association. — VISITING LIST, EASTERN DISTRICT NO. 2.—The next return visit on this list will take place at the North London A.S., held at the Highbury Brewery Tap House, Highbury Station, on Monday next, Nov, the 9th. This is a young society, but one of the right sort; they are to be seen at every return visit in this district and many out of it: ann as this is their first return, I hope the compliment will be returned, the chair will be occupied by the president. Mr. G. Koyle, and the vice by Mr. Stretch, jun., these two names should be sufficient attraction to fill the room.—F. THORLING, visiting officer.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—A return visit on the above list took place on Tuesday, October 27, at the Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea, when a most enjoyable evening was spent. On the roll being called the following seven clubs answered: Amicable Excelsior, Battersea .Friendly, Bermondsey Brothers, Clapham Junction, Rodney, Walworth Waltonians, Lady of the Lake. The next visit will take place at the Bermondsey Brothers Angling Society, Pitts Head, Grange-road, Bermondsey, on the 17th inst., where I hope to see a good muster of brother anglers.—G. M. ARMSTRONG, District Officer.

Anglers' Association. — WESTERN DISTRICT. — A successful visit was paid to the Allason United, on the 29th ult., upon the roll being called thirteen clubs responded; the A.B. box was opened, and found to contain 24s. The next visit will be paid to the Allason Piscatorials, at the Golborne Liberal Club, Portobello-road, Notting-hill, on Tuesday next, Nov. 10th, when I hope to see a good muster.—J. JENNINGS.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge with thanks the receipt of £1 8s. from the Hearts of Oak and £1 4s. from Allason United Brothers Angling Societies, the contents of their donation boxes. The next meeting of the committee will take place on Friday evening, Nov. 13, at 8.30.—R. GHURNEY, sec.

THE LONDON UNITED ANGLERS' SOCIETIES' FOURTH ANNUAL ANGLING COMPETITION, in aid of the funds of the Anglers' Benevolent Society.—On Friday, the 13th, the usual meeting will take place, when I hope to see the whole of the committee present. In my last report I made an error in stating that Mr. Cuthbert would give another prize. He has informed me that he meant that he would give a donation of 10s. 6d. to the Anglers' Benevolent Society. A pair of boots to measure, value 12s. 6d., has been promised by the Original Alexandra.—S. MALBY, sec.

Allason Piscatorial Society, Golborne Liberal Club, Portobello-road, Notting Hill, W.—The next return visit goes to this club, when we shall be very pleased to see as many clubs represented as possible. A few of our members were out on the 1st inst., and weighed in barbel and roach from the Thames. N.B.—Nearest station Notting-hill and Ladbroke-road.—W. MILLER, sec.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting Hill-gate, W.—The first visit of the Western District was paid to the above club, and which proved most successful. When the roll was called thirteen clubs were represented, including our esteemed and worthy friend, Mr. R. Ghurney, which the anglers present greeted him immensely. After which Mr. Ghurney gave a short speech on the growth of the Anglers' Benevolent and the Anglers' Association finances, which was listened to with the greatest interest. Our Benevolent box was opened, and it contained the sum of £1 4s, considering this club being only lately started, we must congratulate ourselves at the grand sum arrived when the box was opened. E. Merritt saved us from a blank, with a jack, from the Langley Water, on the 1st inst. Our match will continue on the 8th inst., when four prizes will be fished for. Hoping members will show up with some fish (jack and eels are barred).—B. ABRAHAMS, JUN., sec.

Alma Angling Society, Crown Distillery, Vere-street, Clare Market.—On the 1st., J. Windsor weighed in roach, from the Thames. On the 3rd. inst. our secretary weighed in 5lb. 8oz. of roach, dace, and perch, best dace 10oz. I wish to remind members that we fish a pegged-down match at Windsor, for seven prizes, jack barred, one rod only, leave off fishing at four o'clock.—J. PAILES, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—The reading which was so kindly and so grandly delivered at the above club on Wednesday last, November 4, was a great success. We hope to see Mr. Matthews in our club-room again. The chair was occupied by Mr. Shrubsole. Our next outing will take place at Windsor on November 8; tow path only; jack barred. All to start from Clapham Junction at 8.30 a.m.—J. RICH, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—Several of our members were out on the 1st instant, but owing to the flooded state of the water, only the following gentlemen weighed in: Mr. Wright, roach; Mr. Hake, dace; Mr. Nunn, jun., roach; Mr. G. Merry, roach and dace; W. Embleton, roach and jack. On Monday evening, the 2nd inst., the return visit on the Central Association, took place at the above, and was a grand success; on the roll being called, thirty-three clubs answered, thus beating all previous records. We beg to return our thanks to those clubs who attended, and a notice from any club will find us represented. I wish to call attention of members to the visit of No. 2 Eastern to the North London Angling Society, Tap House, near Highbury Station, on Monday, Nov. 9. The next visit on the Central goes to the Anchor and Hope. —G. MERRY.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The usual weekly meeting was held on Wednesday night with a good attendance. Mr. F. Davis weighed in a specimen dace on the 1st inst. from the Cam, 12¼oz. It was carried that we hold the visit on the Central Association List, on Monday, November 16. Notice of the same will be sent to each society in the usual way. I trust we shall have the pleasure of a good muster from our friends.—A. G. SMITH.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—On the 1st inst. our trays were well filled with some capital roach, contributed by the following members; H. Patman, J. Warman, P. Allum, J. Smith, and J. Pocock; total gross weight 51lb. 9oz., the best fish being six roach, by Mr. Warman, 5lb. 8oz.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—There were only a few of our members out on the 1st, and but one weighed in, Mr. J. Barker, dace. On Nov. 30, Mr. Crumplen, of the Piscatorial Society, who passes under the *nom de plume* of "Old Izaak" in *The People*, will read a paper at this society entitled, "Curiosities of Fish Life." A large number is expected to be present.—F. ROBERTS, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 1st inst. the following members weighed in: Mr. H. Davis, jack, and Mr. C. Davis, roach. Members will not forget the pegged-down at Ware on the 8th inst. None to start before the morning of the match. On the 4th inst., Mr. J. Clark, jun., was elected a working member of the above society.—D. WARREN.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On the 4th inst. Messrs. Cowper, J. Hall, and myself brought up some nice shows of roach. A competition will take place at Bourne End on the 8th inst. A special meeting has been called for next Wednesday; a very important matter has to be gone through. Members will please attend the club as early as possible.—H. ROACH, secretary.

Burdett Angling Society, 118, Hackney-road.—We go out on the 8th inst. for prizes. Members to sign on Saturday, the 7th. We had a nice show of roach on Nov. 1. Mr. D. Flint weighed in 6lb. 14½oz. roach and one dace, 5oz.; Mr. Pape, perch, 14¾oz. I hope to see a good muster show up.—J. PETRIE, sec.

Burton Piscatorials, Globe, Derby-street, King's-cross.—Several of our members weighed in a few fish on the 25th ult. November 1 proved more successful, our trays being well patronised by the few that ventured out. C. Roberts, 8lb. 13oz.; W. Hill, 4lb. 10oz.; Messrs. Brierley, Sturman, Jones, and Richards, also contributing to a very creditable and pretty show, consisting of jack, roach, perch, and dace. I hope members will not forget Nov. 29, when we hope to see every member compete.—C. ROBERTS, hon. sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On the 1st inst. we had a nice show of fish on our trays: Mr. Boxall, five jack; Mr. C. Chapman, two jack; Mr. A. Chapman, jack; Mr. J. Boxall, jun., jack; Mr. King, roach; Mr. Langton, roach. Members are reminded that Wednesday next is clearing-night, per Rule 4.—E. T. WHITE, sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—Mr. Harry Dunn presided at the meeting of this society on Monday last, November 2. The attendance was fairly good, and included representatives from the Gresham, Earlsfield, Rodney, and Kenningtonians. Mr. J. Deplidge's reading of Sir Samuel Baker's "Fishing Experience in Abyssinia," was well received, and the expressions of approval indicated that the Causton had again "hit the right nail on the head," by instituting weekly readings from standard authors appertaining to angling. On Monday next, Mr. Harry Dunn, will read from the Rev. Charles Kingsley's letters, published in 1883, "Canon Kingsley (author of 'Westward Ho!' &c.) as an angler." With regard to sport, Mr. Tom Keeble, and Mr. Fred Smidt, fishing off Ramsgate, caught in two days, 300lb. weight of codling and whiting. By permission of H.R.H. Prince Christian, Messrs. A. Thorn, Tom Keeble, and J. Deplidge, fished Virginia Water, on Monday last, but although they had some grand runs, Mr. Thorn was the only one who succeeded in punting a fish, a jack, 3½lb.—JOHN SMITH, hon. sec.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—On the 1st inst. the following members weighed in fish: Mr. T. Jameson, chub, 2lb. 14oz., and Mr. Moore, one dace, 5½oz. On the 8th inst., twenty members fish a friendly match for a supper, ten each side; Chertsey Bridge to Penton Hook Lock, towpath only; two rods allowed; jack, bleak, and minnows barred. All to leave Clapham Junction by 8.30 for Staines. I hope to see a good muster of members on Tuesday evening, 10th inst., at the Battersea Friendly Anglers to listen to Mr. Shrubsole's lecture on "Fishing Baskets," &c.; and as Christmas is near, I hope we shall have an outing for Christmas prizes. —A. TROWBRIDGE, sec.

Clerkenwell and District United.—The annual delegate meeting of the above will be on Thursday next, Nov. 12, when some important alterations of the rules will be proposed, and the next outing will be taken into consideration. To meet at the Middlesex Arms, Clerkenwell-green, at 9.30 sharp. Each club on the list can send two delegates.—F. CASTELL, hon. sec.

Cliftonville Angling Society, Cliftonville Hotel, Ilderton-road, South Bermondsey.—Several of our members fished at Burnt Mill, but only one was successful in getting fish. Mr. W. Ibbs weighed some nice roach, winning second prize. Members will oblige by showing up in full force next Wednesday to arrange about concert.—P. GARDNER, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—We had a fair show of fish on the 1st. inst., weighed in by the following members; Messrs. G. Percival, roach and bream, 11lb.; E. Baxter, roach amongst which was a fine specimen, 1lb. 9¾oz.; E. Baker, chub, 2½lb.; F. Nunney, roach; W. Parbury, with dace. The match takes place Nov. 8, at Bourne End, under conditions already announced in this paper. Members must make themselves eligible to fish.—A. SMITH, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 1st inst., we fished a boundary match for six prizes in the Lea. Result: Mr. Killick, first; Mr. C. Bobinson, second; Mr. Wright, third; Mr. Freeman, fourth. The two prizes remaining will be competed for in the Lee from St. Margaret's Bridge to Ware Bride on the 8th. Members to go down by the eight o'clock train, and the 9.10 from Liverpool-street, boundary tow path only.—S. MALBY, sec.

Epsom Angling Society.—The first monthly meeting of the above was held at the Wellington, High-street, on Monday evening last. The election of a vice-president was proceeded with, when one of the most popular gentlemen in the district was elected. It was unanimously agreed to accept the kind offer of a gentleman well known in the angling world, and his friends, to pay us a visit on our next monthly meeting, and read a paper on some subject, interesting to anglers, when I hope we shall have a good attendance. Several new members were enrolled, making a total of forty members, which, considering our society has not been in existence a month, is very good progress. Great credit is due to our secretary for our success, it being almost entirely owing to his energy and enthusiasm. Our worthy treasurer and host (Mr. W. Dix) has given a nice useful prize for the largest pike taken from any water, before New Year's Day. Two of our members who had been on the Thames at Twickenham, with J. Spong, showed a splendid tray of roach and dace, weighing over 16lb. We are endeavouring to obtain some private water in the neighbourhood, which, if we succeed, will be a great boon to our society.—G. M.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road. —On the 1st inst. Mr. F. Vanhegan weighed in a nice show of roach. I hope members will not forget the Benevolent competition on Nov. 15, and Mr. A. Eldridge's at Pulborough on Nov. 29, when I trust to see as many as possible.—J. W. BIGGS, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We had a moderate show of fish on the 1st inst., nearly 10lb. of roach and dace, taken by Messrs. Slade, Coborn, Stebbings, and Payne. Other members out but not successful.—A. PAYNE, sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road, W.—On the 1st instant Mr. Ellins weighed in 16lb. of roach, dace, and chub from the Kennet; Mr. Y. Roach, 2lb. of roach; Mr. J. Green, roach, from the Thames. We fish a Christmas sweepstake from Boulter, Lock to Cookham Ferry on Dec. 6.—F. FISH, sec.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—Forty-six of our members fished at Cheshunt on the 1st inst. All the joints for Christmas was taken in the following order: F. Grey, 1st; Haines, 2nd; Whitmore, 3rd; Hunt, 4th; Hewett. 5th; Sampson, 6th; Snook, 7th; Kemp, 8th; How, 9th; Huggett, 10th; Maddams, 11th. Ten more to be fished for on the 8th, the members to go where they choose. On Tuesday we voted £1 1s. to the prize list of Anglers' competition. —R. MURPHY, sec.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville.—The following members weighed in some nice roach from the Thames on the 1st inst.: F. Watling, 25lb. 9oz.; J. A. Fitch, 14lb. 12oz.; C. Watling, jun., 5lb. 8oz.; H. Watling, 4lb. 7oz. From other waters: W. Parkin, roach, 6lb. 15oz.; H. Proehl, one jack, 1lb. 10oz.; and H. Wright, jack, 3lb. 7oz.; total, 65lb. 4oz. A late member showed 16lb. of good roach from the Thames.—J. A. FITCH, sec.

Greenwich Angling Society, Prince Albert, Royal-hill, Greenwich.—We had a capital meeting on Wednesday last, and some important business was transacted, and two new members were enrolled. Fresh water fishing having been almost out of the question lately, several members had turned their attention to the briny deep, and gave interesting reports of excursions to Deal and Southend on Sea; where there efforts had been rewarded with good bags of whiting, codling, dabs, flounders, &c. Members are reminded that Mr. Giffard Hooper, will read a paper on Wednesday next, the 11th inst., entitled, "The Mimicry of Nature." I trust they will make a special effort to attend what I am sure will be an interesting reading, and bring a friend with them. We shall be pleased to welcome any brothers of the angle who would care to come. G. J. TOYNBEE, hon. sec.

Gresham Angling Society.—The usual weekly meeting was held last Tuesday, presided over by T. R. Sachs, Esq., a hon. member. A splendid show of fish was sent in by Mr. W. F. Grimmot. who is fishing in Hampshire. It contained a pike of 8lb. 5oz., and eighteen roach, varying in weight from 1lb. 9½oz. down to three-quarters of a pound, the eighteen weighing 22lb. 14oz. A vote of thanks was passed to Mr. Grimmett for his contribution. Some further arrangements for the sea fishing competition at Southend, next Saturday, were made. A train will leave Fenchurch-street, at 9.5 a.m. The competition from punts at Windsor, will take place next Tuesday. Members will leave Waterloo at 8 a.m., and those intending to be present are requested to communicate with Mr. T. Gilbert, 52, Lynhurst Grove, Camberwell. A very excellent and interesting paper was read by Mr. F. R. O'Lilson, giving the result of some fishing experiences in Devonshire during a month's holiday, lately, for which he was cordially thanked. A new member was proposed. Mr. C. S. Bentley will read a paper next Tuesday, the 10th, and a Smoking Concert will be given on Tuesday, the 17th.—JAMES TAYLER, sec.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On the 1st inst. several of our members were out, the following being successful: Holmes, with dace, roach, and perch; Bagshaw, jun., chub; A. Fish, roach; Braham, roach; Rider, perch; and Saalfield, perch. On the 8th inst., a pegged-down match will take place for prizes, and no doubt many will go to compete for them.—W. FENNER, sec,

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—There has been some good shows at this now-flourishing society during the past few weeks. Mr. Shaw had a handsome take of jack from the Hampshire Avon, weighing, total, 58lb., in two days, largest fish 13lb. 2oz., second heaviest, 10lb. 9oz. These have been sent to Cooper's; also some fine roach on the 1st inst. (largest, 1lb. 4oz.), by Messrs. Giles, Rutherford, Ball, and friend (in all about 16lb.). Mr. Monty, from the Thames, 8lb. of roach and dace.—J. T. GRIFFITHS, sec.

Hoxton Brothers Angling Society.—The members will fish for the Christmas prizes, on November 8, in the river Lea, from St. Margaret's Bridge to Ratty's Lock; to leave London on the morning by the train from Liverpool-street, 9.8. a.m.—R. GHURNEY, sec.

Islington Angling Society, Jubilee House, Hornsey Rise, N.—The usual fortnightly meeting was held on Monday last, Mr. C. S. Bentley in the chair. A long discussion on piscatorial matters took place, and some formal business transacted. The next meeting will be on Monday, November 16.—C. DOWNING, sec.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—We fish a roving match at Cookham, on November 8, for several prizes; all to go by the morning train from Paddington. Several of our members were out on the 1st inst., when the following weighed in: Mr. Willshire, 13lb. 3oz., roach and perch; Mr. Leach, 8lb. 13oz., roach and dace; Mr. Holder, 3lb. 13oz., roach and dace; Mr. Croker, 2lb. 5oz., roach; Mr. Budd, roach; Mr. Herbert, roach. We have room for a few more members. The next visit on the Clerkenwell United Visiting List, will take place at the above on Monday, November 16, when the company of any angler or friend will be esteemed a favour.—J. H. HERBERT.

Izaak Walton Angling Society.—As announced last week the members will compete for seven special Christmas prizes, on the 8th inst., between the lock at Rattys Weir, and the Cattle Bridge above St. Margarets. The members will also compete for six Christmas prizes, on Wednesday, the 18th inst., between Burnt Mill and Harlow. Members competing for the above prizes must fish from the towing path only. The half-yearly distribution of special prizes will take place on Wednesday, the 18th inst., on which occasion the members will have a supper. Messrs. C. Layton, and A. Furlong, had trays of roach, on the 1st inst.; Mr. J. Poolo, weighed in perch on the same day. Mr. C. Hayward had a take of nice roach, on Wednesday, the 4th inst.—H.B

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On the 1st inst. several members were out, some good fish being taken: Mr. Webster, a nice show of roach, one fish, 1lb. 2¼oz.; Mr. Johnson, roach; Messrs. White, Belton, and Watling, roach and dace; Mr. Wallis and Mr. Porter, jack. On Wednesday, the 4th inst., Mr. Beesley, a nice show of fish—roach, chub, and dace.—W. WATLING, sec.

Liverpool Angling Association, Bee Hotel, 5, Queen's-square, and 18, St. John's-lane.—There was a very fair muster at the meeting on the 29th ult., when several of the members who had been fishing in the river Vyrnwy turned up, and gave an account of their outing, from which it appeared that they had had, from the weather point, a splendid day, and been fairly successful in their fishing. For grayling, Mr. Gass was first; and for other fish Mr. Bleasdale, first, Mr. R. Wilson, second, and Mr. Roberts, third. Some very fine grayling were had with the fly, and, taken altogether, it may be put down as a red-letter day. Another party are off to the same river this morning (4th), and as they are intending to stop for two or three days, good sport may be confidently looked for, although the wind is in the east. We have now arrived at dreary, foggy November, and many of our members are laying aside their rods and tackle for four or five months, but those who care to brave it out are sure of successful sport in the river Vyrnwy.—RD. WOOLFALL.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 1st inst. our members were at Bourne End for our competition for five prizes, when we had some good shows of roach by Messrs. Milburn, Taylor, A. Clark, Sansom and Barnard, winning the prizes in the order named; also Messrs. Bartlett, Pearce, Penfold and Gray having roach, some over 1lb. in weight.—W. F. PEARCE.

New Albion Piscatorials, Duke of Kent, Old Kent-road.—A splendid show of jack and roach was sent up to the club on the 5th instant, by Mr. W. F. Grimmett. The largest jack was 11lb. 1oz.; thirty-five of the roach weighed 49lb. 1¾oz.; six best, 10lb. 7oz. He took first prize in our roach competition; Mr. Newbury being second; and Mr. Shonfeld, third. Mr. La Feuillade (vice-chairman) presided at the meeting.—A. E. BALDWIN, sec.

North Lambeth Angling Society, 108, Westminster Bridge-road.—None of our members were out on the 1st inst. All members in arrears are suspended from weighing in until such are paid. The question of Christmas prizes will be discussed at next meeting.—F. WALLIS, sec.

North London Angling Club, Tap House, Holloway-road.—The next return visit on the Anglers' Association, No. 2 Eastern District, will take place at the above on Monday, Nov. 9, when I hope that the anglers of the district will rally round us on this occasion, when they will be heartily welcomed. Our president, Mr. George Hoyle, in the chair; vice, Mr. W. Stretch, jun. We had two candidates proposed for membership, and they will be elected next meeting night by ballot. On the 1st inst. Mr. Hoyle weighed in perch.—H. STRETCH, sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland-park, N.W.—On the 1st inst., Messrs. Pritchard, weighed in dace; Holman, jack; Billings, a grand show of roach 22½lb.; and Weaver, roach and some nice dace. Thursday, November 12, is half-yearly night, when the favour of as many of our members that can make it convenient to attend will greatly oblige, as there is important and interesting business to be brought forward and settled.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—On the 1st inst., we had a good show of fish at our headquarters, brough in by the following members: Messrs. Forster, perch and roach; Bygrave sen., roach; Harrison, perch, dace, and roach; Hiscox, jack and roach; Neville, jack and perch; and Bygrave, jack. We are still open for a few more eligible working members.—J. CUTHBERT, sec.

Peckham Brothers Angling Society, Prince Albert, East Surrey-grove, Peckham.—Messrs. Daniels and Fautley weighed in a nice show of roach and dace on the 1st inst. Members are respectfully asked not to forget the anniversary supper takes place on Monday next, November 9.—E. A. FAUTLEY, sec.

Prince Albert Angling Society, Prince Albert, Lincoln-street, Bow-road.—Our members were out on the 1st inst., to fish for the silver cup. The result was, Mr. Fitt winning it, at Dagenham Gulf, honestly and fairly.—W. FITT.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—Several members were out on the 1st instant, but nothing worthy of note was taken. I beg to remind members that if they wish to have a ticket for the Rye House competition they must attend on Wednesday next; and I hope to meet a good muster of anglers at the Allason Piscatorials return visit on Tuesday next.—J. W. HARRIS, secretary.

Rising Sun Angling Society, The George, Brook-street, Holborn.—On the 1st inst., Mr. Comley saved the club from a blank. At our meeting on Monday last, it was proposed and carried, that our late secretary be expelled from the club, Mr. Bradley being elected secretary in his place. A complimentary concert will be held at the above house, on the 18th inst.—F. BRADLEY, sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—Our outing at Pangbourne was a failure on October 25. The following members weighed in on the 1st inst., for the four prizes left over as follows: Messrs. E. Pyne, first, roach, 5lb. 8¼oz.; T. Lines, second, roach, bream, and dace, 2lb. 10¼oz.,; W. Lamberton, roach, 1lb. 11½oz., divided third and fourth prize with H. Mitchell, roach, 1lb. 11½oz.; best roach and dace, 1lb. 4½oz.; J. Wigley, roach, 1lb. 1oz.; F. Lamberton, roach; F. T. Lamberton, roach; P. Martin, perch; Searle, roach. The next visit on the S. L. U. V. L. comes to this society on the 17th inst., when I hope to see a good muster. The supper takes place on Wednesday evening, the 11th inst., at 9.30 for ten o'clock. Members wishing to partake will give their names in by the 8th inst.—F. T. LAMBERTON, sec.

Royal George Angling Society, Queen's Arms, Bateman-street, Soho-square, W.—On the 1st inst. several of our members were out, but only Mr. Gibbons weighed in, thus saving us from a blank. On Wednesday, the 11th, we have a smoking concert, when the presence of all members, both fishing and honorary, will be esteemed. We fish our next outing at Marlow, from Marlow Bridge to Temple Lock; tow-path only; jack barred; first train from Paddington; leave off fishing at five o'clock. The delegates gave in their report from the Central Association, which was favourably received.—F. C. LONGLAND.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow, E.—On Tuesday, October 27, Mr. Parsley weighed in jack and perch. On the 1st inst., several of our members ventured out in the hope of getting some sport, but the only members who returned with fish, were Messrs. A. Barclay, with 8lb. 3oz., good class roach from the Lea; Parsley, roach; G. Barclay, jack; J. Yeo, jack and roach. I hope members will attend on Tuesday, November 10, as there is some important business to be settled.—A. BARCLAY, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—We had a very good meeting on the 3rd instant; twenty-two clubs were represented, and the harmony, both vocal and instrumental, was very good, and highly appreciated by all present. I thank the members and friends of the various clubs who supported me on that occasion. We fish for ten prizes on the 8th inst., roving between Staines Bridge and the locks at Egham. Go by the first train from Waterloo, and leave off fishing at four p.m. Members wishing to stay later must show their fish to another member by four p.m., or will be disqualified for the prizes. I trust the members will show up in full force, and that all the prizes will be taken.—J. WRIGHT, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 1st inst. several members were on the war-path, and returned with the following result: Messrs. J. Petrie, roach; E. Wright, roach; W. North, roach and dace, 5lb. 2oz.; H. Raine, roach and dace, 3lb. 15oz. On Tuesday we had a few more members up than we have been having lately, when several matters were brought forward. I beg to inform the committee that a meeting will take place on Monday next *re* rules, &c. On Nov. 15 we fish a match at Bourne End for four prizes. All to go by the first train from Paddington on the morning of the match. Fishing between Bourne End Bridge and Marlow.—S. E. CANE, sec.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden.—On the 1st inst., although many of our members were out, only Messrs. Clark and Geale weighed in, having between 6lb. and 7lb. of roach and perch from the Thames. I should like to remind members that we are supposed to meet on Tuesday evenings by nine p.m.—PELICAN.

Sociable Brothers Angling Society, Hope, Pollard row, E.—The members showed up better on the 1st inst. the following members weighing in fish: D. Marks, roach; M. Marks, roach; C. Pleydell, roach; J. Riggs, roach; and R. Spenceley, dace.—R. S., sec.

South London United Anglers' Visiting List.—A delegate meeting of the clubs enrolled on the above list was held at the Pitt's Head, Grange-road, on Friday, Oct. 30, when it was arranged that a friendly competition for a series of money prizes should take place at Windsor on January 24, 1892; conditions, roving, between Windsor Bridge and Linley Hall. It was also decided that the Cliftonville Angling Society having shown good cause why they were not represented at the visit to the Amicable Excelsior (as per Rule 2 at bottom of list) they shall receive a visit after the Rodney A. S., instead of waiting for their next turn in rotation. On Tuesday, the 3rd, a most successful visit was paid to the Second Surrey, twenty clubs (out of a possible twenty-three) on the list being represented, the absent ones being Walworth Waltonians, Grange, and Earlsfield. There was also one club not on the list represented (the South Belgravia), making a total of twenty-one clubs present. The next visit will be to the Rodney A. S., on Tuesday, 17th.—A. CONN, hon. sec.

St. Albans and Excelsior United.—The improvement in the weather of the past few days and condition of the Thames enabled our members to exhibit a better show of fish on the trays on the 1st inst. than we have had for some time past. Mr. Shaylor produced three jack from Weybridge scaling 7lb.; Mr. Sherman had roach from Pangbourne, one fish, a very handsome specimen, weighing 1½lb. (this was presented to our host, Mr. C. Dick, and has been forwarded to Mr. Cooper for preservation); Mr. Fordree, a good take from Goring, all roach weighing 5lb. Messrs. H. Jones and J. Leighton visited Egham, and weighed in barbel and dace, the former member unluckily losing a heavy fish through a defective gut trace. Several other members were out, but did not meet with any success worth recording. I hope to send you a still better report for next week.—FRAS. J. DALE, hon. sec.

St. John's Angling Society.—Our competition at Great Marlow on the 1st inst., was not a success, as only three prizes were taken, and those with small takes, the winners were: Mr. J. Rapley, Mr. G. Jeffreys, and Mr. A. Catanack. I beg to remind secretaries and angling friends generally, that on Monday, November 30, we have a grand concert and a paper to be read; the full particulars I will give next week, but I mention the date to prevent clashing with any other meeting.—F. THORLING, soc.

St. Thomas's Angling Society, Waterman's Arms, Paris-street, Lambeth, S.E.—The members of the above clud having a series of prizes to fish for, have decided to go out on the 8th inst., and fish at St. Albans, a roving match. Few of the members went out on the 1st inst., but had poor sport owing to the bad weather.—G. MORTON, sec.

Stepney Angling Society, Beehive, Rhodeswell-road, Stepney.—Since my last report, Messrs. West and Woodford have had shows of jack and perch. On the 1st inst., Mr. West saved a blank with some bream and roach. Our return visit takes place on Wednesday next, Nov. 11, when I hope to see a good many old and new faces. We shall do our very best to amuse.—E. N. P., hon. sec.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—Mr. G. Boreham was the only member who weighed in on the 1st inst. We had a full meeting on Tuesday. Two new members were made. A punt competition is arranged to take place at Staines, on Nov. 22. Members intending to take part in it will oblige by giving in their names as early as possible.—H. R.

United Brothers, Deptford.—Several members of the above fished a pegged down match on the 1st inst. in the Thames; for several money prizes and their given prizes. Mr. W. Windred, first, with roach; H. Fordham, second, with roach; G. Bull, third, with chub and roach; R. Lawes, fourth, with dace; J. Turner, fifth, with roach. Members are allowed to fish for the remainder of the given prizes on the 8th inst.—H. TYLER, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—In spite of the floods one or two of our members were out on the 1st inst., and got a few fish, nothing worth speaking of. I wish to remind members that there is another prize on for this month. Members wishing to compete in our next match are requested to clear the books and be in attendance on Tuesday next. Those who require tickets for the Rye House Competition, can have them by applying of the secretary. Your attendance is wanted here for Tuesday next.—H. C., hon. sec.

Walham Green and Fulham Angling Society, Albany-street, Regent's Park.—The members of the above held their usual weekly meeting at the Stamford Arms, Fulham-road. Mr. Templeman presided, and the minutes of the previous meeting were read and confirmed, and general business transacted; the delegates to the Central Association then gave a lengthy report of the business transacted at their monthly meeting. On the first instant, Mr. Templeman weighed in a nice show of roach, from the tidal waters—8lb. in all. I have to remind members that, on the 8th instant, the first Supper Match of the season will take place (between Penton Hook and Bell Weir, Staines), and all members are requested to attend.—E. SUTCHALL, sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—On Wednesday last, we had a good muster, Mr. H. Bayley in the chair. It was decided to have our next outing on the 8th inst.; to be open punt or bank. First prize, Mr. Craddock, cash, £1 1s.; second prize, R. Bailey, silk umbrella, value 10s. 6d., and two lapsed prizes. Mr. Hibble weighed in from the Avon, twenty-three roach over 12oz. each, one specimen roach 2lb.; gross weight, 30lb. 5oz. (two days' take). Our first smoking concert of the season takes place, on Wednesday next, ladies are cordially invited. Admission by programme which we shall charge a nominal price for, and the proceeds will be given to the funds of the Anglers' Benevolent Society.—C. HIBBLE, sec.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 1st inst., the monthly competition took place, with the following result: Mr. W. Gordon, first; Mr. T. Jenkins, second; Mr. W. Turnbull, third; Mr. W. Bryant, fourth; Mr. F. Hailey, fifth; Mr. A. G. Gamble. sixth; the following also weighed in: Mr. F. Barnes, Mr. Boyd, F. Field, E. Enwell, P. Marten, A. Amos, and W. Wilson, the first prize being won with 6lb. 1oz., and the lowest weight boing 2lb. 12oz.—R. J. DARTNALL, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—Our members fished a roving match on the 1st inst., the results being a nice show of fish by the following gentlemen: Mr. Parslow, first; Mr. Mercer, second; Mr. Casey Wedmer, third; also weighed in, Messrs. Blyth, Kertland, Harden, Frances, Fullbrook, Maples, and Anderson. I hope all members will attend on the next meeting night, to arrange for our outing for Christmas prizes.—W. M.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on the 1st instant, and the following weighed in fish: Mr. J. Newton, 5lb. 13oz. of roach and dace; Mr. R. Lowther, 2lb. 8½oz. of roach. I wish to remind our members that it is our monthly meeting on Wednesday next, November 11, hoping to have a good attendance.—R. LOWTHER, sec.

West London Angling Club, Dartmouth Castle, Hammersmith.—This season's third club match proved a great success, as several members went out for the competition, resulting in the first prize of one guinea, with Mr. Elsmore's presentation guinea, being taken by Mr. J. J. Hunter, with bream and roach, scaling 11lb. 3oz.; Mr. E. Hunter taking the second prize with bream and roach, 10lb. 3oz.; and Mr. H. Lidgard the third prize, with a jack and roach, 6lb. 3oz. Messrs. Mallinson, Rogers, and Cox also weighed in. Myself and brother, out with Job Brain, of Richmond, on the 1st, had 22lb. of bream, roach and dace.—J. J. HUNTER, hon. sec.

Ye Pluckie Perche Piscatorial Society, the Earl Derby, King Edward-road, South Hackney.—The usual weekly meeting was held on Wednesday, 4th inst., Mr. Hesse in the chair. Mr. Rayner, fishing at Ware, on Monday, 2nd inst., had good sport with the jack and perch.—H. RICHARDSON, hon. sec.

SMOKING CONCERTS, CLUB DINNERS,
&c., &c.

THE Swallow Assembly Rooms,
(NEXT ST. JAMES'S HALL,)
SWALLOW STREET, PICCADILLY, W.

Newly Built, Fitted with Electric Light, &c., &c.

A few vacant dates open, for which early applications should be made.

CLUB FIXTURES.

Nov. 9.—Supper at Peckham Brothers, Prince Arthur, East Surrey-grove, Peckham.—Eastern District, No. 2, Anglers' Association visit to North London Club, Tap House, Holloway-road.

Nov. 10.—Paper by Mr. E. S. Shrubsole, at Battersea Friendly, Queen's Hotel, St. Philip's-street, Battersea Park Town. Subject: "Fishing Baskets, Bags, and Creels." Exhibition of upwards of one hundred baskets, bags, and creels. Chairman, R. B. Marston, Esq.—Concert at Brunswick Brothers, Cherry Tree, Brunswick-road, Bromley, E., in aid of Mr. R. Buffham's benefit fund.—Mr. S. Bentley will read a paper at the Gresham Angling Society, Mason's Hall Tavern, Basinghall-street.

Nov. 11.—Paper by Mr. J. P. Wheeldon, at the Serapis, Neville Arms, Neville-road, Stoke Newington. Subject: "The Science of Angling."—Smoking concert at Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.

Nov. 15.—Competition at Rye House, in aid of the Anglers' Benevolent Society.

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear Best quality only —EAST LONDON RUBBER Co., 8, Shoreditch, E.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, NOVEMBER 7, 1891.

SCOTCH FISHERY BOARD REPORT.

THE FRESH-WATER FISHERIES.

THE salmon fishing during the year 1890 did not come up to the standard of late years. A table showing the number of boxes of salmon sent to the Billingsgate Market from Scotland in each year, from 1834 to 1890, given in the report, at once indicates the variable and fluctuating nature of this branch of commerce. The number of boxes sent forward in 1890 was 18,931; and, looking into the number for the last fifty-six years, it will be seen that only on sixteen years was the number below 20,000. For eleven years it was over 30,000, reaching as high as 42,000 in 1835, and 39,417 in 1842. Taking the two periods of twenty-eight years previous to 1890, these being from 1834 to 1861, and from 1862 to 1890, it will be seen that the number of boxes for the latter period exceeded the number for the former by 56,852. At the same time it will be observed that during the former period the number for each year was much more variable; in 1835 it was as high as 42,320; while in 1851 it was as low as 11,593. The results on the whole during the latter period, as will be seen, were much more satisfactory and steady; but then it must be remembered that there has been a far greater amount of netting, together with increased numbers of fixed engines, that operations have been more systematic and constant all round, and that the methods of capture with the appliances for such have been vastly perfected.

The value of salmon during the fishing season is estimated at £5 10s. per box. This gives a round sum of £104,120. Now if this amount is doubled, it is calculated to cover the value of all the fish consumed and sent to the other markets within the United Kingdom, including London. This certainly is a fairly modest estimate.

The report goes on to say that the improvements on the Tay recommended by the board have been given effect to. There is a further recommendation that the falls of the Tummel should be opened up, on the hypothesis that if such were done, and thus fifty miles of river and twenty thousand acres of lochs be made accessible to salmon, the fishing would be proportionately improved. This is extremely doubtful. In the first place, the same number of salmon would be scattered over a much greater extent of water, thus diminishing the number per area on the whole. That they would increase in number in proportion is open to grave doubt. Secondly, such opening up of small streams as would necessarily follow, would admit salmon to out-of-the-way regions, where it would be impossible to protect them from the depredations of poachers, except at extraordinary expense. Moreover, to such an experiment, quite a host of other objections, not easily rebutted, might be urged. We would advise careful examination of the nature of the waters, and a thorough experiment on a small scale before attempting a gigantic undertaking such as is advised for the salmonising of the waters inland from the Tummel Falls.

The illicit traffic in salmon from the different parts of Scotland, more especially the Tay, shows no signs of diminution. The steps to put a stop to this traffic recommended in the seventh annual report are certainly very necessary. That extending of powers of search and seizure to officers of district boards, river watchers, and police officers, would in a great measure mitigate the evil is beyond doubt. That these powers which are given with regard to game by the Poaching Prevention Act of 1862 should be withheld from salmon is unreasonable. We think, however, that the most effectual means would be the "Prohibition of sale, offering for sale, or having in possession for the purpose of the sale, of salmon during the extension of the time for rod-fishing." If these suggestions were embodied in a measure, and became law, the principal means by which poachers get rid of their salmon would be pretty effectually thwarted.

Good results have been obtained by the Loch Awe Fisheries Improvement Association in ridding the loch of pike, and stocking it with Loch Leven trout. This has tended greatly to counteract the stock-diminishing effects of over-fishing. By this association 1,600 pike have been killed during the past five years; and 150,000 ova of trout been deposited into the burns during the last two years. Mr. Hartly, the late secretary, to whose energy a great deal of the work of this association is due, thinks that the fishing is improving, and that it will be better for the next few years than it has hitherto been. He believes that during the earlier part of the season the loch is very much over-fished.

The Esk (Midlothian) Association has given a very satisfactory report. From the accounts kept by the water-bailiffs a table has been compiled which shows the number of fish and their weights killed during the past four years. From this table it appears that the annual take is on the increase, and that the average weight of trout is about ½lb.

It is a commendable idea that all the hotel-keepers having salmon and trout fishing in connection with their hotels, should keep a regular account of the number and weight of fish caught. This would give most valuable statistics as to the actual increase and decrease, and thus accurate and most useful information to indicate in what position the fishing stands would be obtained with comparatively little trouble or outlay.

The report refers to the Inch-na-Damph Hatchery, which has been carried on for some time with good success. Here both salmon and trout are reared. Mr. Fleischman, of the Invergloy Hotel, Loch Lochy, is, we are glad to learn, proposing to start a hatchery. The number of experiments tried with this artificial means of maintenance have been so successful nearly all over, that it is a great wonder that hotel-keepers, who are otherwise so enterprising, have not more universally gone in for assisting Nature in the plenishing of their waters. The expenditure would be small compared with the great advantages derived in the shape of increased patronage by anglers during the fishing season.

There is a complaint from the Upper Don proprietors that the number of salmon is decreasing in their waters every year. The cruives and dykes on the lower part of the river must be one of the principal causes contributing to the decrease. The mills at Muggiemoss and Pirie's dykes drain most of the water through their mill lades, and in the close season salmon are to be seen in immense numbers in the pools immediately below, the salmon passes being completely dry. Another cause is the pollution of the water through the mill refuse being run directly into the river. And, again, the destruction of smolts is so great that they are described as being seen in thousands, dead and broken in bits, at the tail of the lades. They go down the lades, and are killed by the turbine wheels. The mill-owners should certainly be compelled to put on smolt hecks along where the lades break off from the main river during the season, as recommended by the Board. It is only possible for salmon to get up past these obstructions easily during a spate, or the twenty-four hours of Sunday, when the water is not utilised. On account of this the upper proprietors do not derive the full benefit of the weekly close time, and the fish lying thick in the pools, not being able to get up, are clipped and dragged in immense numbers. A petition has been got up and sent to the Secretary of State by the proprietors on the upper reaches anent the contraventions of the Salmon Fisheries Act of 1862, committed on the lower reaches at the cruives and dykes, more particularly at the dyke near Gordon's Mill. The manufacturers could certainly do a great deal by providing efficient passes to assist the passage of salmon when running. Last year 560 fish were taken out from below the pool at Muggiemoss dam in boxes, and placed above the obstruction, besides 400 that were taken out with landing-nets, they having fallen back in the futile attempt to force a passage; during the previous year 660 required similar assistance.

The Aberdeenshire Dee fishing yield is on the increase. On this river the months of March, July, and October, are the most productive, the former for salmon to the nets and rods, the second for grilse similarly, and the latter for angling. The report says that the heaviest fish taken by the rod weighed 27lb. This is a mistake, as a large number, exceeding 30lb. in weight, were got. In December there were a few diseased fish in the river. There is a further statement that the chief run of grilse is in May. But this information, wherever obtained, is certainly very far from correct, as every year the strength of the grilse run is during the period lasting from the middle of June to the end of July. In no Scotch waters was ever the chief run of grilse heard of in the month of May.

It appears that there is no increase in the number of fish taken on the Ness; in fact a considerable decrease is recorded. But the fluctuations of the Ness net fishings are largely due to the nature of the weather in the early months of the year. When very open weather prevails during this period, the greater bulk of the very strong head of fish native to the Oich and Garry, have pushed inland beyond all the netting stations on the Ness, before the season for netting commences, and the opposite, should conditions be different.

The want of an annual close time for trout is being felt more and more every year in Scotland. Re-stocking the rivers with artificially reared trout, will, it is obvious, not alone keep up the high standard of the fishing that has hitherto been obtained all over. The reason of this falling-off is undoubtedly the great increase of anglers, owing principally to the easy facilities for travelling which modern times afford, making easy of access parts which were some years ago totally beyond the reach of the numbers that to-day go in for trout fishing—numbers that are increasing to an incredible extent annually. Owing to this, there is every reason to believe that, unless more active steps are taken, the trouting in a few years will be far below its present-day standard. That an annual close time is a favoured and practical remedy can be seen from the answers given to queries anent this subject, sent by Mr. Young to the principal hotel-keepers having trout fishing in connection with their hotels. To these queries thirty-two answers were returned, and of these twenty-four were favourable, three were against, and five were neutral. As to the time, we think, that from 30th September to the 15th March, would certainly be the best for most waters.

The fishing on the Spey we are glad to see has not fallen off; it is reported to be much the same as in the previous year.

The by-laws with regard to hecks and fish passes, and regulating the annual and weekly close times, are not infringed upon to any noticeable extent. Tables showing the number and dates of the first appearance of salmon on the redds, the number of redds and the fish counted on them, on the river and its tributaries, are given. These tables are arranged by the superintendent from information acquired by careful observation on the part of himself and the water-bailiffs on the different parts of the river; they are far and away the most perfect of their kind that we have seen. As most interesting and valuable information could be obtained if the officials on the other large rivers in Scotland would arrange similar tables, we would highly recommend them to do so. Fungoid disease was not so prevalent as during the previous season. Between 1st of December, 1889, and 9th of January, 1890, sixty-four dead fungoid diseased salmon were taken out of the Fiddich, by the water-bailiffs, and one hundred and thirty-four on the previous season during the same period. Disease is generally confined to male fish, and it makes its appearance about December.

A hatchery has been set up by the Duke of Richmond and Gordon, at Speybridge, near Garmouth. A suggestion has been made by Mr. James Grant, of Glengrant, to the effect that it should have been erected much farther up the river. His reason is that "late fish produce late fish," and as none other than autumn fish are taken in the gravid condition out of the lower waters, the hatchery will be stocked entirely with ova, which will produce autumn-running fish, and *these only*. This theory that the offspring of fish are of like habits to their parents in all stages of their existence is not, however, borne out by facts. If we assume that spring fish breed spring fish, and autumn fish breed autumn fish exclusively, we are at once confronted with the question, Where do grilse come from? Grilse run in summer so to prove this theory there would require to be three distinct breeds of fish—autumn salmon, spring salmon, and grilse respectively. But to class grilse as a distinct species from salmon is an idea long since exploded by actual experiment. We see that the grilse at the very first chance it has of showing its hereditary instinct, at once goes directly contrary to it by running, not in the spring or autumn, but in the summer. Thus the theory that the offspring inherits the instinct of its parents at all periods of its existence is at once knocked on the head. Another strong argument against this theory is that in the spring thousands of fish seek up the larger rivers, such as the North Esk, Don, Spey, Deveron, and others. Of these only one or two per thousand succeed in escaping the nets and poachers, &c. It is extremely improbable that these few—in view of the immense destruction of the ova deposited in the natural way, the loss of parr and smolts from various causes in the rivers, and the great havoc committed amongst the young fish by their enemies in the sea—could be the parents of the many thousands of salmon that are found in, or in connection with, the several rivers named in the spring of the year. Further, it has been abundantly demonstrated that autumn salmon, on account of their greater uniform size, contain more ova than spring fish, and are much more profitable to breed from, on account of the thirty to forty greater percentage of their ova that hatches out. These are proved facts; so if we admit that the few couples of spring fish that manage to spawn are the progenitors of the many thousands that are netted in spring, we have to face and answer the question: Why are not the same rivers filled *solid* with the progeny of their many thousands of autumn-running fish? Our opinion is that the early-running fish are those that, whether grilse or salmon, were not spawners in the preceding year, but wintered in the sea; that the salmon of summer are those that were the first descended spawners of the preceeding season; that the grilse which seek inland in summer or even in autumn are those—the portion of them—that will be spawners the same year, as proved by their ova and milt; and that the autumn salmon are the fish that were latest in spawning and descending the season before, and for this reason are the last in returning to the coast for the purpose of again making their way to the fresh water, with the object of reproduction. Believing what we say, we heartily commend the policy of His Grace the Duke of Richmond in taking from large healthy autumn-run fish the ova with which the Garmouth Hatchery is stocked.

REPORTS FROM RIVERS, LOCHS, &c.

☞ *River Reporters who want forms and envelopes should send a post card to the Manager of the* FISHING GAZETTE, *St. Dunstan's House, Fetter-lane, London.*

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add	30 min. for Chelsea.	Add	55 min. for Kew.
	40 ,, ,, Putney.		75 ,, ,, Richmond.
	45 ,, ,, Hammersmith.		80 ,, ,, Twickenham.
	50 ,, ,, Barnes.		85 ,, ,, Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

		Morning.	Evening.
Saturday,	Nov. 7	4.49	5. 9
Sunday,	,, 8	5.33	5.59
Monday,	,, 9	6.28	7. 1
Tuesday,	,, 10	7.40	8.22
Wednesday	,, 11	9. 6	9.50
Thursday,	,, 12	10.28	11. 3
Friday,	,, 13	11.34	—

English and Welsh Reports.

The Lower Thames.—GENERAL REMARKS.—The continuance of last week's bright and cheerful weather, apart from some of the early local fogs, had a wonderful effect in reducing the height and improving the condition of the water, but it left something to do for the officials of the T.A.P.S., inasmuch as the flood covering the meadows drove the fish from the natural stream to other pastures "fresh and green," and then there was the getting of them home again. In the neighbourhood of Chertsey the honorary river-keeper, Mr. A. E. Armstreng, has been again in activity, and by the use of nets has been in search of any stray fish and restored them to the river. The paid officials have been on the move at other points and it is to be hoped there has been a good recovery. The stream ran down at a very rapid rate, and if the fish went with it there is every probability the bulk of fish would follow. It will appear from the brief reports that have come to hand, the anglers have been at work, and there is a successful capture of perch at Sunbury with the presence of some very good fish. I have known after a similar flood in October directly the water was in anything like condition there has been some very good captures of jack; and one thing is certain, if the river is not depleted of those fish, and I do not for one moment believe it is, only let the jack fishers go out in some of the likely spots, they will be sure to find them. The late flood must have been attended with regretful consequences in the Sunbury rearing stream, and whatever fish there were in it must either have got away or perished. I remember years ago in one of those floods though of longer continuance the stream got filled up with washed-in gravel. It was reported to me the river in the Tideway was largely attended by the bank anglers on their only available day, but with very meagre results, and the T.A.P.S. river-keepers were continually on the watch against the retention of any unsizeable fish.—B.

RICHMOND.—Job Brain, in four days, 32lb. weight, of roach and dace; Henry Mansell, in five days, 75lb., one of the roach weighing 1½lb.; and in addition one bream of 4¾lb., the successful angler being Captain A. Graham Schuzler.

TWICKENHAM.—John Spong, in two days, 20lb. weight of roach and dace, and another day with Mr. Dicks, of Epsom, twenty dozen of roach and dace; Richard Meffatt, in one day, nine dozen of roach and dace, and one brace of perch; and F. Wiggins, in two days, 14lb. of roach and dace.

TEDDINGTON.—Charles Baldwin, in one day, three dozen of roach and dace.

KINGSTON.—John Johnson, in four days, eighteen dozen of roach and dace, five bream, and one brace of jack. N. Bolton, in three days, fifteen dozen of roach and dace; and J. Knight, during the week, sixteen dozen of roach and dace, two bream, three chub, and one barbel.

SUNBURY.—Mr. Edward Clarke, in one day, thirty perch, eighteen of them weighing from 1lb. to 1½lb. Mr. Stroud, in one day, four dozen of fine roach. J. Jeck, in one day, three dozen of roach and dace, and R. Batt, in one day, one and-a-half dozen of roach and dace,

Upper Thames.—The flood in the Upper Thames is a thing of the past, and possibly not likely to recur again in the nineteenth century, for it is hardly likely such another continuously wet season as that of 1891 will be experienced for many many years. The river has again got into bounds, the weir's tackle is being gradually shut down, the weeds have gone to that bourne whence no such objectionable travellers ever return, the water is in superb angling colour and condition, and fish are back in their old haunts, and eager for the fray and the fry. In the Henley district, in two days, some 200cwt. of jack have been taken with the rod and line, George Arlett, with patrons, accounting for 75lb. At Hurley, Scott has been busy amid the jack; and Wood, of Temple, in two days, had four jack, going respectively 7lb., 7½lb., 8lb., and 18lb. In the Marlow district, Mr. Bennett has had a pretty jack of 8lb.; and patrons of the Coster Brothers done well. A jack of 19lb. was scaled the other evening at the Marlow Railway Station, but who was the fortunate captor could not be gleaned by MARLOW BUZZ.

Thames (Monkey Island).—Water going down very fast, and should it continue, there ought to be some good all-round fishing by the end of the week.—R. PLUMMER, senior.

Thames (Staines).—The water here is just the colour for angling, but the stream is still very wild and strong, and swims are most difficult to fish. To-night (Thursday, November 5), the wind is dead north-east, and it looks very much like snow. Bitter weather was experienced in the course of the day, and it put the fish completely off the feed, both bank and punt anglers securing but poor baskets. The jack and chub can be seen right under the banks and "boughs," but cannot be got at. The roach seem to have vanished altogether.—GOOSEQUILL.

Thames (Windsor).—The river here is now in bounds, though a deal of water is outlying, and as a consequence quantities of fish would have to perish, were it not for the Windsor and Eton Angling Preservation Society, who intend as soon as practicable, netting them and returning the proceeds to the river. Some very good roach have been taken lately, but the jack do not appear to be on feed, as many anglers have tried them without any result. When water is lower and clearer they may come, especially if some lively 4in. dace on a single salmon gut paternoster are brought before their notice. A rather unusual capture was made here, a few days back, by Mr. Dennett, jun., of Windsor, who in midday whilst bottom fishing, hooked and eventually landed a fine eel which scaled 2¼lb. —B. R. BAMBRIDGE.

Ancholme District.—We have as yet had no frost, and autumn flowers are still in full bloom. As a result of this mildness, pike have not begun to feed so early as usual. Waters are fining down nicely, and will be in good condition during the coming week. It is very pleasant now, but though the season has been comparatively wet we have quite escaped the heavy floods which have prevailed in southern and western shires. Catches have been light during the week, but are improving a little now.—T. FORD,

Arun (Pulborough and Amberley).—The floods have at last commenced to subside. They have been the most severe experienced for many years, and have caused the farmers heavy losses. As for the Arun, it has received a thorough scouring, and the water will soon be in good trim again. It is thick now, and not what one would consider in roaching condition, or yet favourable to jack fishing; but, nevertheless, I hear that on the 1st inst. several fair baskets of bream and roach were made, some of the roach being of a choice description. The water should be greatly improved by the 8th inst. An enthusiastic angler took a 2lb. roach, fishing from a punt in one of the flooded meadows at Pulborough. I should recommend anglers to try a shrimp the next time they go out; I have taken several good roach and perch with it in the Arun, and once a fine eel—of the order very far above the "shoestring" species. Mr. Eldridge's competition amongst the London club anglers at Pulborough, postponed on account of the floods, has been fixed to take place there on Nov. 29. —GOOSEQUILL.

Brighton.—SEA ANGLING.—The sea has been very calm this week, and boat anglers have been off again. What little wind there is, is off the land, and at time of writing (Nov. 5), the sea is as calm as a lake.—H.

Cambridgeshire, Norfolk, and Suffolk Rivers—Since my report last week, our rivers, broads, and streams, have very much improved, and the fishing is again good. I have, during the last few days, visited most of the principal fishing stations and found the roach well on, especially in the Ouse at Littleport, Ely, Hilgay, and Denner. Pike are also well on in most all fen rivers. I had half-a-day on Wednesday, at Mildenhall, up to Worlington, and took a splendid lot of chub, the largest weighing 4¼lb. and the smallest 3¼lb.—a most beautiful lot. The river Lark, all the way, is now in good order for angling, and up to the present time the weather is very fine. Anglers should have a turn at the Brandon river. Since the flood last week all the rotten weeds and deposit have washed away, and the swims are in fine condition. Send a wire to Mr. Ralph, Ram Hotel, before starting. The Yare is now in fine order for big roach, perch, and pike—not too high, nor yet too much coloured.—WILLIAM HOWLETT.

Douglas (Isle of Man).—Seldom have we had a better season than that which closed on the 31st. Bad as to weather from a tourist point, but good for angling. Sea fishing still continues very fair.—STORMY PETREL.

Dove and Tributaries.—We have now splendid weather and a decent water, plenty of grayling on the feed but no fishermen. Mr. W. Bullock is the only angler we have heard of being out, and his bag was six brace; these were taken with the fly. — D. AND W. H. FOSTER, Ashbourne.

Eden (Carlisle).—Weather and water being favourable, good sport was had at the end of last week. The river is now getting very fine, and sport will fall off unless we get rain, of which there is no sign at present. A fish of 12lb. was killed a few days ago, near Appleby, by Mr. Hamilton. This is higher up than I have ever known a salmon caught with the rod.—SILVER GREY.

Esk (Whitby, Yorkshire).—The angling season for salmon and salmon trout on this river is now at an end. The closing day was on Saturday last; but for several days before that the bulk of the local anglers had suspended operations. Since our last report, Mr. Calvert, of Lealholm, landed three salmon, the aggregate weight of which was over 60lb.; while Mr. J. Moore caught one of 8½lb. Several other anglers brought to land some good fish. The season which has just closed has been the most successful on record; and all being well, the next cannot fail to be a brilliant one, as there is abundance of fish left for spawning.—J. J. JACKSON.

Fen Waters (South Lincolnshire).—Pike-fishing is now the kind of sport receiving most attention in the fen districts, but the disturbance the water sustained a fortnight ago has taken a good deal of settling. Pike are best caught in the drains when the stream is slow, and it has only been within the last few days that this state of things obtained. Doubtless, by the end of the week some good fish will be handled; but as yet the captures, so far as I know, are unimportant. The frosty nights are stirring up both pike and eels, and good samples of the latter have been shown. Roach and perch are biting fairly; but on the whole it has been a bad season for roach.—LIMPET.

Idle (North Notts).—The colder weather is all the better for grayling fishing, but as a rule it is deterring many of the ordinary run of bottom fishers, such for instance as those who seek roach and dace. The river has run into nice trim for grayling, and those who know how to use the gentle or brandling worm for them will do very well. The fish doubtless will be found in the deeper slacks and at the tails of streams, where the water runs over the gravel; and it is well to try very close to the bottom, for as a rule the fish will probably be seeking their food among the bottom accumulations. If the weather becomes drier and colder flies would be worth trying.—L.

Lake District.—Salmon fishing continues good in the north, and anglers are regretting the near approach of close time, though there still remains another full week in the Kent, Leven, and Duddon district. The weather is all that could be desired in "chill November," being bright and comparatively warm during the day, with just a suggestion of frost nightly. Takes are reported as satisfactory from nearly all quarters, and the fish captured are bright and in good condition. Spawning will be later than usual. In the Keswick district a few nice fish have been obtained. Lord Leconfield was successful in grassing a good fish of 23lb. from the Derwent, with fly; but this was topped by Mr. J. Byers and Mr. J. Stephenson (Greysonthen), each of whom landed a thirty-five-pounder.—WESTMERIA.

Lea and Stort.—The rivers are now in the best possible condition, both as regards colour and height, and some very good sport has been had, principally amongst the pike. There has not been much roach fishing since the flood; but now that the water has cleared nicely, I should strongly advise all brother fishermen, who thoroughly understand the difficult art of roach fishing, to be up and stirring, as there cannot be a shadow of doubt that now is their chance. Thanks to the flood and the frosty nights we have had, most of the weeds are cleared away, and there are plenty of available swims to be found at all the fishing stations. At Waltham Abbey some good sport has been had, but no less than three anglers have had their tackle smashed up with veritable monsters. Harry Avis, of the King's Arms, can supply fishermen with all they require, from baits up to bedrooms. At the Ferrie Boat, Tottenham, a few good pike have been taken during the past week. Anglers will do well to supply themselves with live baits, as they are somewhat difficult to get at some places.—SPLICED JOINT.

Leicester.—Fishing has been exceptionally good for a week or so. Frequently in the autumn there are weeks when Leicestershire anglers obtain very heavy catches, and this week has been one of those satisfactory periods that piscators hope for. There has not been an over large number out, but, all round, the takes have been far in advance of the average. Doubtless the waters just getting to a nice height and colour after the storms of last month have had a lot to do with the recent success at the Leicester Society's waters, which run from Aylestone to Leicester. The new basin near the Twelve Bridge yielded a splendid lot of fish, the most conspicuous takes being those of Messrs. F. Towe and J. Hobbs, who on Saturday took eleven pike, the lot weighing 40lb. Mr. Towe took three brace, and Mr. Hobbs two and a-half. In addition to the pike, a lot of perch were taken from this spot, one captured by Mr. Hobbs scaling 1lb. 11¼oz. Roach fishermen have also been very successful along the canal, fish up to 1lb. 5oz. being among the sport. At the higher reaches at Aylestone capital sport was had among the chub. A fair amount of fishing has been done at the Wreake, Blaby, and Narborough, and success of no mean order has been met with.

Loddon (Earley). — A week of fine weather has brought anglers out again, and several fair baskets of fish have been taken. I hear of a gentleman roach fishing and taking a very nice trout of 2lb., which was returned, which is very rare in this part of the river. Mr. Wilson had one dozen of chub, the largest 3lb. A few jack have been taken from 3lb. up to 5lb. No doubt, got the wind out of the East, it will improve sport. River in capital condition.—J. R. GOULD.

Lugg and Arrow (Leominster).—Both these noted grayling streams are running clear, and have lowered, and in order for grayling fishing. The nights have been cold and frosty, with fine days, and grayling have been moving better than they have for some weeks. Fishing is best between eleven and three o'clock, when good sport should be had.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—A week's fine weather has brought these rivers once more into angling trim. Some sport has been had bottom fishing, and by the time these lines are in print the fly may be used. Mid Blue, Whirling, Willows, Red Tag, Blue Gnat, Green Insect, and Red Palmer, are all good, but the weather must be the guide as to which are best.

Medway (Maidstone).—The river is now in good condition for all-round fishing. A good run and good colour to the water, and anglers ought to obtain good sport with the rod. Roach and bream are well on the feed. The worm for bait. An angler took some good roach near the bridge, Maidstone. At Farleigh anglers were again busy on the 1st. I have not heard of any pike of any note being taken since my last, but the water for pike is now grand, and good sport ought to be obtained.—W. SHRUBSOLE.

Ouse (Huntingdon).—The river being in flood this last fortnight, I had nothing important to report, but at the time of writing it has gone down, and is in prime condition, and jack are feeding well, but the north-east winds are not at all pleasant. The local rods are out and doing well with some good fish. Anyone wishing for sport should not miss this opportunity after the flood, which is a good prospect. —H. ROUT.

Ouse (Offord)—On Monday, the 2nd, Mr. Adams took a very fine jack, weighing 9½lb., in the Mill Pool, with live bait, the Rev. T. G. Thompson took a very fine one in the back waters on the same day; when writing water in good condition. Gentlemen wishing for good sport should not miss the present opportunity, for if the weather holds fine I have no doubt but that there will be some very good sport for several days, as they appear to be well on the feed.— H. COLLINS.

Scarborough.—(SEA FISHING).—Sport from the piers and from boats in the bays, has not been so good during the past week, due perhaps to the calm sea and clear state of the water.—H.

Severn (Shrewsbury).—We have had some good angling weather of late, and bottom fishers have been successful, but few anglers have been out. Pike fishing continues fairly good, but the water is rather too fine for heavy takes. —PISCATOR.

Sussex Rivers and Chichester Canal. — With a cessation of rain future angling prospects are more hopeful but with the saturated soil and springs from the hills breaking and adding their quota to the general overflow, it will yet be some time before the rivers will resume their wonted placed course. The only takes I can vouch for are from Chichester Canal, with the water bright and low, but the Lavant, dry up to a week since is now pouring a great body of water into the basin. Perch fishing off the Calverts is generally successful with the stream running, and the small roach and bream fry, called here shiners are the most successful lure. A few roach and bream have been taken, but the water except at the basin, is too bright for sport. Sea fishing from piers and boats is good on the coast, quantities of whiting, small cod, conger, and plaice have been taken. Anglers should take advantage of the present calm weather.—GEORGE F. SALTER.

Teme (Ludlow).—The Teme in this district has now cleared and lowered, and is now in capital order for either fly or bottom fishing. The weather has been suitable for grayling fishing, with the cold frosty nights and foggy mornings, and the grayling have been more on the move.— S. LUDLOW.

Torridge (Torrington).—River in prime order for fishing. Many salmon and peal have been taken since last week's report. Next Saturday week is the last day this season for fishing in North Devon.—PRACTICAL ANGLER.

Wimbledon Park Fishery—The water in the lake is in good colour for jack and bottom fishing, Mr. Hursent, Lavender-hill, five jack, largest 7lb.; Mr. Wood, Putney, two jack, largest 5lb.—W. BUCKETT, keeper.

Witham, &c. (Mid-Lincoln).—Very varied luck has attended operations on this water, and whilst some have done pretty well, others have come away almost empty-handed. One reason which accounts for this is the fact that strong stream and blustering wind requires much heavier tackle than calm and slow-going water. Those who still persisted in bringing light summer tackle stood no chance with those putting on the heavier, and this is a fact worth remembering when the river is inclined to be floody. On the subsidence of the flood the rule is fish bite well, and therefore the bottom fishers have done pretty well this week, but anglers deem it a trifle too cold to pursue this sport for many hours together. Trolling for pike is indulged in by most fishermen, but the big fish are yet sluggish. Some rather nice fish are reported from the lower district, but the best are but 5lb. or 6lb.; plenty not half these weights.—LUCI.

Yare (Norwich). — Pike fishing still continues very good on this river, both trailing and also live baiting, the former on the stream, and the latter on the broads, being the modes most adopted. Several catches of six to twelve jack are reported, during the past week; and yesterday two rods landed seven nice fish; and on the Bure, at Wroxham, good luck attended two gentlemen, they caught fifteen jack, three were returned as undersized, and twelve were taken home. The weather is now in fine order for pike, and the sport this season has been exceptionally good up to the present. At Oulton Broad, I hear, they are doing well, whilst at Yarmouth a gentleman fishing for cod off the jetty, hooked a seal which he unfortunately lost.—ROBERT MOLL.

East and West Cleddau (Pembrokeshire).—Our rivers were so high during the closing week of the salmon (rod) season, that we had no sport whatever.—H.

Tenby (South Wales).—SEA FISHING.—A few cod and conger have been caught. No bass; plaice and silver whiting are becoming scarce.—H.

Towy (Llandilo, Carmarthenshire).—We had good sport during the closing week of our salmon (rod) season, which the following will show. Mr. Tressler, of Dynevor, landed two, 9lb. and 10lb., on the Dynevor Water, and Mr. Joseph Lockyer, two, 6lb. and 9lb.; Mr. John F. Common, of Cardiff, six, 20lb., 14½lb. 10lb., 5lb., 5lb., and 3lb.; Mr. J. Savil, on the Trigib Water, two salmon, 7lb. and 8lb., and two sewin, about 2½lb. each; Mr. James Fuller, on our club water, two salmon, 8½lb. and 9½lb.; Mr. Thomas Lewis, of Dryslwyn, during one afternoon on the Monkey Pool, Golden Grove Water, five fish, 12lb., 14lb., 16lb., 16lb., and 19lb.; Mr. William Lewis, of Llandilo, on the club water, one sewin, 4lb., and three salmon, 2½lb., 4½lb., and 6½lb.; and a youthful angler, Master Willie Thomas, of Carglase, landed a nice 10lb. fish on the fly, his first, after loosing a good one by letting his rod drop during an early rush.—H.

Scotch Reports.

Border Esk.—The weather was fine up to the close of the season, and the river daily became clearer and smaller in volume, although the catches were not quite so numerous as during flood time, some good sport was witnessed. The quantity of salmon still in the river is enormous, and the "oldest inhabitant" does nothing but *ferlie* at the circumstance. Space does not permit of a complete list of the most recent catches up to the 31st, but the following may be selected, commencing with the Broomholm reserved water, where Mr. W. A. Connell had a prolonged struggle lasting two hours, with a lively fish weighing 18lb., which he ultimately landed; Lord George Scott and Lord Henry Scott had also good sport in the Irvine House Water, below Broomholm. In the Byreburr Foot Water, Mr. D. Hutton, Canonbie, had two salmon of 21lb. each; Dr. Macnaughten, Blackpool, staying at the Eskdale Temperance Hotel, had a beautiful summer of 25lb. in the Canonbie Water; Mr. Glazier, a salmon 16lb., in the Broomholm Water. Sport has been rather tame in the Double Water; Mr. Walter Scott, Holmfoot, a fish of 22lb.; Mr. John Graham, Rowanburn, a nice salmon of 20lb.; Mr. John Davidson, Langholm, a fine salmon; Dr. Macnaughten had another salmon of 19lb., in the Canonbie Water. I now come to the Metal Bridge division of the river, which shows a good record. Among the most recent catches are the following: Mr. Mason, Rockliffe, a salmon of 23lb.; Dr. Birrell, one of 24lb.; Mr. J. Bell, Longtown, one, 24lb.; Mr. Kirkpatrick, staying at Metal Bridge Hotel, two, 22lb. and 16lb.; Mr. Kerr, at the same hotel, one, 17lb.; Captain Gandy, one, 24lb.; Mr. S. Walton, one, 24lb.; Mr. W. Walton, one, 18lb.; Mr. Tweddle, one, 19lb.; Mr. Watson, Shennan Moffat, staying at Metal Bridge, one, 8lb.; and Mr. Lamorbie, one, 17lb. In the Netherby Water, Miss Graham, Arthuret Rectory, had two salmon, 28lb. and 20lb.; and Mr. I. Graham, had two, 18lb. and 11lb. In the previous week, Miss Graham had four salmon; Mr. Malise Graham had five, Mr. Johnson (keeper) had four, Mr. Millican had one, Mr. Matthew Brown (of Scaur Bank), one, 27lb.; and the Rev. Malise Graham, landed three salmon, all in the Netherby Water. I hope to return shortly to the subject of the Metal Bridge Water, when I trust my remarks will interest those who may be chiefly concerned in their tenour.

Dee (Aberdeenshire).—The season closed on Saturday. The back-end has yielded most magnificent returns as far as the lower reaches were concerned, while the middle reaches, although not coming quite up to the anticipations owing to the excessive floods, have yet yielded a good average. The quality of the fish has, as a general rule, been excellent all over, and the weights unusually heavy, although no extraordinary fish have been got, the heaviest on the Dee being two of 37lb., and, on the Don, one of 40lb. During the past week the closing sport was well maintained, and especially on the last day of the season, when some splendid baskets were got. On the Invercauld Arms Water, at Braemar, Sir Algernon Borthwick, M.P., Mr. Oliver Borthwick, and Miss Borthwick had a splendid spring season during their visit, when sixty-four fish were got in some six days' fishing. Very little effort has been made during the autumn to angle these waters, although the pools were literally teeming with fish. A splendid season has been enjoyed all through on the Balmoral, Birkhall, Dr. Profeit having made a capital record for the year. On McGregor's Invercauld Arms Water, Ballater, seven hundred and thirty fish were landed for the season. The most successful month was April, with one hundred and eighty-seven fish, May yielding one hundred and eighty-one. On the Monaltrie Water Mr. J. F. Heaven landed his first fish, a beauty of 18lb., on Thurs-closing the score on this water at one hundred and forty, the best month being May, with forty-nine. On the Cambus O'May Water one hundred and ninety fish were got between the 1st April and 4th June, while Mr. Gaskell and others have since then added greatly to this fine score. On Mr. Keiller's Craigendarroch Water thirty-one fish were got. The heaviest fish got on these waters was one of 28lb., by Mr. Upcher, jun., Mr. Upcher, sen., having one of 25½lb., and Mr. Yarrow one of 24lb. On the Forest of Glentana Waters Sir William C. Brooks, Bart., M.P., and guests have participated in the magnificent run of the spring migration to a great extent, and some exceptionally fine sport was got, while the season's record is close on a thousand fish. The autumn season has been very prolific. On the Aboyne Waters, Mr. Digby Cayley landed, during the closing week, from three to five fish daily, scaling from 8lb. to 20lb. On the closing day he had five of 11lb., 11lb., 17lb., 20lb., and 29lb. The season has been a very fair one all through on these waters, Mr. Allan, Mr. Milne, and others having a good record. On the Huntly Lodge Water, Mr. Pickering's party have had twenty-nine fish for the autumn, seven of which were to Mrs. Pickering's own rod. On the Upper Dess Water, the closing day was the best of the season, when Captain Brooke, of Her Majesty's Guard of Honour, made his best single day's record on the Dee, landing, in three hours, no less than six splendid fish, scaling respectively, 24lb., 23lb., 19lb., 18lb., 17lb., and 8lb. On the same water, Mr. Burnett Ramsay, landed the heaviest fish got hereabouts, on the day previous, which scaled 34lb.; while Mr. Wilson had one of 14lb., and one of 23½lb., on the Lower Dess. On the Carlogie Water, during the closing days, Captain Campbell landed one of 10lb., two of 20lb., and one of 23lb.; while Mr. Archie Campbell had two of 18lb. and 29lb., one, 25lb., and one of 18lb., on the closing day, after a desperate struggle, being foul-hooked. In all some sixty-four fish have been got on this section since the 15th of September. On the Kincardine Lodge water, Mr. William Lamond landed one of 23½lb., completing a good average fishing all through. On the Borrowstone water, Admiral Fane landed five on Friday of 12½lb., 17½lb., 19½lb., 20lb. and 26lb., and six on Saturday of 10lb., 25lb., 18lb., 20lb., 19lb. and 21lb., while on the same water on the closing day, Col. C. L. Hay had three of 16lb., 17lb., and 19lb.; making a score of fifty-seven for the autumn on this section. On the slime water, W. G. L. Chambers, landed three of 16lb., 16lb., and 12lb.: and Mr. G. M. Mackay, one of 8lb., making some twenty fish for the last two months. On the Ballogie and Commonty waters, fairly good sport has been had, and more particularly so on the former, by Mr. W. E. Nicol and party. On the Woodend water, Mr. Wm. Farnell Watson had ten of 23½lb., 22lb., 21lb., 19lb., 18lb., 18lb., 16lb., 15lb., and 9lb. On Monday last, three of 21lb., 17lb., and 15lb., two of 18lb. and 15½lb., three of 33lb., 19lb., and 19lb., and one of 28lb. on the following days, while Mrs. Farnell Watson had one of 21lb.; making ninety-five fish for the autumn, and a total of one hundred and sixty, three for the season. On the Cairnton, Mr. T. Turner, Farley, has a good record, having killed two heavy fish in the closing days, scaling 35lb. and 37lb. On the Blackhall Castle Water, Mr. G. T. Hay, landed during the week six, of 16lb., 16½lb., 18lb., 18½lb., 19lb., and 20lb, four from 16lb. to 19lb., two of 10lb. and 17lb. two of 12lb., and 27lb., and six on the closing day, scaling from 14lb. to 24lb. The season has been a very good average, from twenty to thirty fish having been got weekly. On the Inchmarlo Water, Mr. Duncan Davidson and party have had several fish every day almost, and a good record has been run up. On the Crathes, General Keene, and Lower Crathes, Mr. J. C. Wordie, have enjoyed fair sport. On the Durris water some three hundred fish have been grassed during the season. On the Park Water Mr. Davidson, of Wellwood, and Sir Charles Turner and friends have landed over two hundred fish, closing the season with four to his own rod, of 28lb., 25lb., 14lb., and 14lb. On the Drum Water Mr. F. H. Irvine has had some exceptionally good sport, having got upwards of one hundred fish to himself and two friends. On the Kincausie Water, Miss Fortescue has the honour of having landed the heaviest fish but one of the season, being a beauty of 37lb., which she hooked, played, and landed by herself.

DON.—Since the 26th of August, the Don has been in capital trim. The improvements effected on the lower dam dykes, seems to have reopened a career for the upper waters, such as they used to enjoy in days gone by, as the sport obtained this season has been more prolific than for the past ten years. On the Kintore Burgh Water, which is let at one shilling and sixpence per rod, per day, was extensively taken up this autumn; and in the aggregate twelve to fifteen fish were landed daily. On Mr. Botts Water upwards of one hundred and fifty fish were landed, scaling from 8lb. and near 30lb. in weight. On the Grandholm Water, seven rods plied during the last two months, and made a total basket of nigh five hundred fish. Mr. Ellis, and Mr. Rooper, sen., London, were most successful on this section, having several fish over 30lb. and up to 35lb.; while Mr. Fred Rooper had the heaviest fish got to the rod this season, scaling 40lb. On the Cruives and lower waters (tidal), an excellent back-end has been had all through, the most successful anglers being Messrs. Williams, Walker, Gibb, Murray, and others.—DON.

Deveron (Banffshire).—Rod fishing closed for the season on the river Deveron, on Saturday last, and reports from all the sections indicate the large amount of sport anglers have had. It has been one of the most successful seasons for many years; and waters that fish scarcely ever reach, in the upper districts, until the spawning season begins, were early stocked. The frequent falls of rain kept the river in splendid fishing condition. It is not a large nor deep stream, and an occasional spate is necessary to enable the fish to shift from pool to pool, and to scour out the *debris* that is sure to accumulate, which, if it settles for any time, taints the water and disease is sure to spread. Fortunately, nothing of the kind has occurred this year, and it was only on the closing days that a few fish were landed with a tendency to disease. Sport somewhat diminished on the closing week, owing to the water getting low and clear. Since the month of July, fish have been very shy to take with the fly, and the worm has been the most successful bait.—H. W.

Earn.—CLOSE OF THE ROD FISHING.—One of the most successful rod fishing seasons that has been experienced for many years on the river Earn, closed on Saturday. The early floods at the end of August, brought up large numbers of strong fish, which were enabled to surmount all obstruction and reach the upper water much earlier than usual. A continual supply of salmon and grilse came up with every flood till the close. A good deal of time was lost waiting till the flood subsided, but Earn anglers do not object to this as the river goes down quickly, and it requires a flood every five or six days to keep it in order. On the closing days a large number of anglers were out, and many of them waited patiently for the desired ripple which did not come. Those who fished where there was a stream got fair sport. The lower beats have not done so well this season. Moncrieffe Water, Freeland, and Dunbarny have been under the average. Lower Dupplin Water has fished fairly well. On this beat the largest fish of the season was got by Mr. J. Irvine, and weighed 40lb. The Dupplin reserved water, fished by Mr. Brydges Willyams and friends, has been under the average. On the Upper Dupplin Water, however, Captain Murray has done well. Good sport has also been got on Invernary. Gask Water, fished by Mr. E. Moon and friends three days a week, and the alternate three days on Duncral Water, has fished well, about eighty fish having been killed. The other three days on Gask Water, fished by Miss Oliphant, have done well. Trinity Gask Water, fished by Mr. Thomas and Mr. Lewis, has done well, about one hundred and thirty fish having been killed. Mr. A Cox, Dundee, has done well on Camperdown Water, several fish, from 25lb. to 30lb., being killed. Strathallan and Innerpeffray have yielded good sport. The best take of the season was got on the Innerpeffray Water by J. S. Pagan, with eleven fish and one grilse, weighing 186lb. On Drummond Castle reserved water, Mr. Curr, the factor, has killed about sixty fish, his best day being nine. Drummond Castle ticket water, and the Pittasher Water opposite, called the Club Water, has done better than any other part of the river, between three hundred and four hundred fish having been killed. Strowan and Ochterlyre Waters have also done well. All the upper reaches and tributaries are well stocked, so that a good spawning season may be anticipated.

Liddel.—This river afforded capital sport up to the close of the season. During the ten days preceding the 31st Oct. the following among other takes are recorded: Mr. J. B. Balfour, Langholm, a salmon, 17lb.; Mr. D. Reid, Langholm, one, 13lb.; Mr. Geo. Cummings, Langholm, one, 9lb.; Mr. Jas. Anderson, Langholm, two, 20lb. and 11lb.; Mr. Jas. Elliot, Langholm, two, 19lb. and 11½lb.; and at another fishery Mr. Elliot landed two fine salmon; Mr. W. Keir, Commercial Hotel, Langholm, had three salmon at a fishery below Kershope Foot, a beautiful stretch of water; Mr. Wm. Elliot, Newcastleton, a salmon, 20lb.; Mr. Wm. Elliot, Hawick, three fine salmon; Mr. D. Ferguson, Newcastleton, had two in Clerk's leap; Mr. Jno. Crozier had three good fish; Mr. Wm. Nichol had three; and Mr. Arthur Little, Newcastleton, had two splendid salmon at a fishery. The past season has been an exceptionally good one, the frequent floods contributing to the sport in a great degree. The usual poaching raid was successfully brought off during the last week, and an extraordinary haul wasmade, but not of the poachers.—GILNOCKIE.

Thurso and Lochmore (Halkirk).—The river is almost at its lowest level. The salmon cannot get on to the redds to deposit their spawn. All the fish in Lochmore are, and will be, prisoners till a spate comes. Formerly the early fish in the loch were almost finished spawning on the upper reaches by the first week in November, whereas this year they have not yet commenced for want of sufficient water to admit of their ascending the upper reaches and on to their favourite spawning ground. A spate is much needed.—A. H.

Tweed.—Salmon anglers on this river are still enjoying good sport, notwithstanding that the river has now run pretty low, owing to a spell of fine dry weather, aided by slight frost during the evenings and early morning. The amount of fish caught, however, has been most satisfactory on nearly all waters, and Waltonians have had little to complain about. Only one water has been materially affected by the late floods, that of Ednam House, where the best cast on it—the Junction—has been entirely "sounded" up, so that there is no "lair" for the fish in this portion of the water. The Floors Castle upper and lower waters again yielded a large number of fish to the various anglers last week. The total number killed from Monday to Saturday, being close on to seventy fish. The biggest catch being got by the Hon. E. Majoribanks, M.P., who had fourteen fish on the 28th ult. On the lower water itself, during the present week, nineteeen salmon and grilse have been got on the Hendersyde Water. Since last week close on eighty fish have been killed. The Ednam House Water has given up about a dozen fish since last report. On the Teviot during the week, four fish have been killed, two grilse, one salmon, and a sea trout. The Messrs. Deakin, whose lease of the celebrated Makerstoun Waters on the Tweed, finished on Saturday last, ended their fishing there on Friday of last week, and their takes during Wednesday, Thursday, and Friday forenoon, amounted to fourteen fish, thus finishing up a most successful lease since the 8th ult. As things are at present we would be much the better if a slight rise in the rivers, which would both give us a fresh run of fish, put a little more colour into the water, and materially improve fishing all round.—MAXWELL.

Irish Reports.

Ballinderry (East Tyrone).—The river has fallen greatly since the floods. The last days of the season (which closed on the 31st ult.) were extremely fine, so that pike fishing ended well. On all the reaches of the river, which is some thirty odd miles in length, anglers were out, and great numbers of pike fell victims to their spoons. Devons, and Phantoms. Trout are on the redds, but the heaviest fish won't be till the end of this month. Salmon in numbers are lying below Coagh "carry" waiting for another flood to run further up, and it takes great watchfulness on part of the water-keepers to prevent poaching. Remnants of fires have been discovered along the banks of the river in sheltered spots, which indicate that poachers have been at work gaffing the fish.—J. A. B.

Lough Neagh.—The pollen fishing having ceased, the only important fishing now carried on is "night-lining' for eels, which is very good, and has been so since the season commenced in July last. Perch and pike-netting furnish limited employment for the fishers, as there is no close season for these fish, which swarm in the lake. Some of the heaviest pike in the United Kingdom are to be found in it. Instances—but very few—have been recorded, where pike up to 60lb. have been caught, and in summer, an old fisher informed me that during the "Crimea War," as he called it, a pike, which weighed 1cwt. (112lb.), and the weight of an empty flour-sack (2lb.), in all, 114lb., was caught off the Waslingbay shore. The one hundred and fifty odd square miles of water contained in the lake afford ample room for pike to thrive, and there is plenty of food for these rapacious fish.

Shannon and Lough Derg (Killaloe).—The angling season for salmon and trout on the Shannon and its tributaries closed on Oct. 31, and although the wild and rainy weather had presented sportsmen from fishing for many weeks, still, the number of fish--salmon and grilse—killed this year exceeds by two hundred the capture with rod and line of last season. Anglers have this much in their favour at this station, that, when the trout fishing is over, we have pike fishing to fall back upon. Very many big pike have been killed this week.—S. J. HURLEY.

Waterville (County Kerry). — SEA FISHING. — Sea fishing has been excellent for the past week. About a dozen boats have been out on the bay, and the average takes for each hand-line has been about one hundred whiting besides some gurnet and bream. Pollack also are very numerous, and have been caught in large numbers at Rumeen, and inside Scarriffe Island. The fish varied in weight from 3lb. to 14lb. Weather fine, but wind rather too hard occasionally.—THOMAS J. DENNEHY.

ARTIFICIAL FLIES FOR GRAYLING.

THOSE of our readers who are in the happy position of looking forward to a few days with the fly among the grayling before this season closes, should try the following six "first favourites" among the many good killers made by Messrs. W. H. Foster, of Ashbourne, who live in the midst of a fine grayling fishing district:—

The Silver Dun,
Cock-winged Dun,
Fiery Bumble,
Rough Bumble,
Light Bumble,
Red Tag.

The Mulberry Bumble we have also found very good for grayling. These flies of Messrs. Foster are all first-rate. If we remember rightly, Mr. Pritt, in his capital "Book of the Grayling," gives the post of honour to the Silver Dun and Light Dun, in his coloured plate of flies.

AT a meeting of the Yorkshire Philosophical Society, in York, on Tuesday morning last, a most interesting discussion took place with regard to the nature of certain fish in the museum. Dr. W. Rawdon, of the Hermitage, Malton-road, an expert fisher, had presented to the society a fish he had caught, and which he described as a hybrid between a grayling *(thymallus vulgaris)* and a carp *(cyprinus caprio)*. The fish had been stuffed by Mr. Allan, but before setting it amongst the large collection of fish the society boasts, the curator was desirous of being assured that it was really a hybrid as mentioned. I saw the fish myself, and it certainly looked, in almost every particular, to resemble a dace. Mr. Arthington Worsley, who had taken great interest in the subject, and prepared notes, produced fresh-caught specimens of the grayling and the carp, in order to detect the comparisons. He said there was no doubt about the possibility of hybrid between different fishes, but in this case there was great improbability, because the carp and the grayling were two separate and distinct genera. On a very close examination, he thought it bore some striking resemblance to the dace of our northern rivers. They varied from that of the south country—the Thames, for instance—in one or two noticeable particulars. The dace of the Thames was a comparatively small fish, and was very thin, with a bluish back and yellowish fins; while our dace was of very large and nearly cumbrous fish, with reddish fins, and varied slightly in the direction of the chub. He produced a dace which he had got from a tributary of the Rye, and the resemblance it had to the fish presented by Mr. Rawdon was singular. There was no doubt that the dace varied greatly in different streams, and it was rather difficult to say which was really a typical dace of our rivers. There had been a dispute on the point, dating back nearly a century, and they found well-known authorities contradicting each other on the subject. He had got a skelly from the river Eden, and there it was nearly a chub. The specific differences in the dace, carp, roach, and chub were in the number of rays of the fins; and if they examined the fish, which was supposed to be a hybrid between the carp and the grayling, they would find that it bore no similarity to the grayling in that respect. He should suggest, as a method of arriving at a conclusion as to its identity, that the curator should examine the similarity between the fish and the dace of our northern rivers, and report whether it was correct to call it a hybrid. The Chairman (the Rev. Canon Raine, D.C.L.) said he had basketed hundreds of both dace and grayling, and he should have put down the fish in question as a dace at once. The curator (Mr. H. M. Plantneur), said Dr. Rawdon, who had sent the fish, was a most experienced angler, and was well versed in matters relative to fishing, and he was most certain that it was a hybrid between the carp and the grayling. Then the circumstances under which he found the specimen were again remarkable. In his grounds the doctor had made an artificial pond, and stocked it with nothing but perch, grayling, trout, and carp. After a time, fish appeared in the water corresponding to the one mentioned, and this had greatly puzzled Mr. Rawdon. The Curator ultimately decided to procure a south country dace, and said he should get a paper from Dr. Rawdon on the subject, he having promised to prepare one.

Anglers' Hotels, Fishing Quarters, &c.

CRICKETERS HOTEL
CHERTSEY.

Within a few yards of the River Thames.

Headquarters Chertsey Angling Association.

Club Room to hold 50 persons and Grand Piano. Good Bed-rooms. Hot and Cold Luncheons. Liqueurs, Wines, Spirits & Ales of the best quality

The Proprietor having fished the immediate district for upwards of 20 years, can assist Anglers to the best swims.

Punts and Fishermen engaged at the shortest notice, and all requisite bait kept.

DEVERON AND TRIBUTARIES.

FREE FISHING.

By W. M.

In the course of the sixty miles' wandering which the waters of this delightfully diversified stream takes, the whole of the fishing is the property of large landed proprietors, excepting, in all, an extent of water measuring about a dozen miles.

An important proposal, it is understood, was made recently to His Grace the Duke of Fife by the owners of fishings on the upper and middle sections. For a considerable number of years complaints have been rife on these sections regarding the overfishing by nets on the part of the lessee of the Duke's extensive fishery on the lower waters. Further, a sore of long standing has been the existence of Cruive Dykes, two miles from the river's mouth, in passing which, fish experience the utmost difficulty, except during spates—and even with these in early spring, when the water is very cold, they do not succeed in getting over. The proposal made to the Duke, it is understood, was the offer to purchase his Grace's fishing in the sea and river, the bargain also concluding for the removal of the Cruive Dykes. By law, it should be mentioned, these Cruives have to suspend working, during the net-fishing season, from Saturday night to Monday morning, and of course they are not used at the close of the season. Proprietors of rod fishings on the upper and middle sections further complain of the chronic scarcity of fish in their waters during spring and summer, owing to the dykes and to over net-fishing; and negotiations are, we understand, still in progress, with the object in view we have stated.

The greater part of the free water is in Aberdeenshire, and is comprised in the parishes of Cabrach, Glass, Cairnie, and Huntly. There is a small extent of free water in the parish of Turriff; another at the river's mouth—the water below the Bridge of Banff—measuring in length about half-a-mile.

The first-mentioned area of water is by far the largest of all, extending as it does to about ten miles. The fishing in this section, however, is not important so far as salmon are concerned, although it is good for trout, and might well be excellent were matters different. It begins at the source of the river in the Cabrach, and with the exception of the Beldorney, Blairmore, and Cairnbarrow Waters, extends to the old Castle of Huntly.

The scenery through which the river here flows is mountainous, and more especially in the higher regions it has a rugged aspect, largely owing to the lack of wood. The lower part of the Cabrach is upon the transition series of rock, and the soil is generally of a fertile nature, so are the lower hill slopes, and if the lower wastes had been dried and planted along with some of the barren hill slopes, this district, like many others in the higher parts of the county, would have presented a different aspect from that which it now presents. The Duke of Richmond and Gordon, the proprietor, has a shooting lodge on the upper stretch of the valley—on the Blackwater. The inhabitants are known for their industrious habits and hospitality to strangers, but they do not value the angling privileges conceded to them by a generous proprietor, nor discourage poaching as they ought.

From the twin streams—at whose junction the water first takes the name of Deveron—where in the remote uplands of the Upper Cabrach it rises, the river shapes its course from west to east, and flows with a moderate velocity through a deep narrow vale, having a pretty regular line of hills on each side, rising two thousand feet or thereby above the level of the sea.

The private waters of Beldorney, Blairmore, Edinglassie, and Cairnbarrow, extending to over sixteen miles, are situated in the centre of the open water. The scenery on these estates is of a grand and picturesque appearance, especially about the mansion house of Beldorney, which is situate on the north side of the river. The mansion house recently erected by Mr. Geddes, of Blairmore, Glass, stands in a very prominent position, and has a fine appearance.

On the open waters of Cabrach and Glass the fishing for salmon is poor during the summer months, the water usually being too low, over and above not having many fish in it; but in the autumn, should there be copious falls of rain, numbers of salmon and grilse ascend to the uppermost reaches, when there is some good fishing, with plenty of water-burning and sniggering besides, the whole paraphernalia of poaching gear—to wit, creeper, clip, leister, sieve and crusie, all being liberally requisitioned.

There are no pools of note on the upper part of the water; but on the lower, from Cairnbarrow to Huntly, not a few occur. The pool of Terryhern is about a quarter of a mile from Cairnbarrow; then follow the pools of Cairnford, Peterkirk, and Inchtammack. Near Huntly is the Boat-hole Pool, a short distance above the bridge of Gibston; and the pools in the vicinity of the Mermaid and Buller rocks are considered the best on the open water. The proprietor, the Duke of Richmond and Gordon, by his generosity has conferred a great boon on the inhabitants of Huntly and district in allowing angling without restriction; and it would look appreciative of this generosity if in Huntly, where there are so many keen anglers, an angling club was formed, having among its foremost objects the discouraging and preventing of poaching by every means in the power of the members.

After meandering from west to east for a score of miles through sylvan scenery of the most beautiful description, in the parishes of Rothiemay, Forgue, Marnoch, Inverkeithnie, and Forglen, the river abruptly changes its course at Turriff, and runs from south to north through the highly cultivated estates of Forglen, Dunlugas, Mountblairy, Alvah, and Duff House, a distance of over twelve miles, emptying itself into the Moray Firth, near the county town of Banff.

The piece of water at Turriff open to the public to fish is some 176yds. in extent. It is situated on a pretty bend of the river adjoining the policies of Forglen, and extending from the bridge to the burn of Turriff. It has no pools of any importance, yet a few salmon are taken out of it every year in the back-end. The water runs in an almost even course, and in April the fishing in it for trout is pretty good. The proprietors, who grant the right of fishing, are Provost George of Macduff, and his brother, Mr. Francis George, solicitor, Banff, who a few years ago acquired the lands around it from His Grace the Duke of Fife.

The fishing below the Bridge of Banff is entirely restricted to trout, and is regularly fished by followers of "Old Izaak" in the adjoining towns of Banff and Macduff. Very good baskets of sea trout and whitling are frequently got in the best seasons of the year for them.

The chief tributaries of the Deveron are the Isla, Bogie, burn of Auchintoul, burn of Inverkithnie, burn of Turriff, and burn of King Edward, all of which are open to the angler, except a few policies portions of them.

The Bogie, which is a capital trouting stream, containing first-rate trout of a good size, rises in the parish of Auchindoir, and winding its course of about fourteen miles, through the parishes of Rhynie and Gartly, unites with the Deveron a little below Huntly. The only portion that is reserved is that from Pirie's Mill down to the river, for Huntly Lodge. Lots of salmon, chiefly of small size, ascend in October.

The Isla is a fairly good trout stream. It rises in the parish of Botriphnie, runs through Keith and Grange, and enters the Deveron at Rothiemay. It is very sluggish, but it "grows" grand trout which, were it not over-fished and hurt by pollutions, would be got in numbers to make sport such as no reasonable angler could affect to despise.

The burn of King Edward joins the Deveron on the south bank, some seven miles from the source of the river, and is a noted angling stream. It is capital for brown trout with fly, from the middle of April to the middle of June, and is well fished during the back-end of the year. In the closing days of last fishing season baskets of forty to sixty trout—sea and yellow—were got. An occasional grilse is caught in the deeper water, known at the entrance to the stream as the "Craigs."

The burn of Turriff has a course of about a dozen miles, and many parts of it give good sport to anglers fishing with fly and worm during May and June. Here and there it is very rapid. Salmon and sea trout are not got in numbers worth mentioning. Of both there is a run in autumn, but it is questionable if many of them manage to survive the spawning season. Anglers usually put up at Turriff, or at farm-houses in the vicinity of Cuminestown, close past which the water runs.

For angling, especially for trout, the Deveron, in the character of its water, is an ideal stream. With runs going briskly for long distances over pebble and amid boulders; with beautiful shallow glides gently curled on the surface, and ending in spacious salmon pools or water-weed expansions; with many windings, here silent, slow, and deep, there sounding, swift and shallow, ever varying and ever gathering in volume as it pursues its way; it is a stream, in its several seasons, having many charms for the angler, be it in the glad spring-time, when the trees are "set with shoots of tender green"; in the gay summer's prime, when Nature most lavishly adorns wood, field, and "bonnie brae"; or in the ripe mellow autumn, when the gorgeous variety of woodland colouring is the herald of the approach of the winter of the year. A thousand pities, therefore, it is that a stream possessing magnificent scenic charms, and naturally so excellent for fish and fishing should be so punished by poachers, so harassed by netting, and so effectually closed against the ascent of the migratory *Salmonidæ* by the Cruive—very appropriately named the "Rack"—dyke.

Every year many of the best reaches are let for the whole or a part of the season to sportsmen.

DACE AND BLEAK: AND ANGLING FOR THEM.

BY ALFRED JARDINE.

(Continued from page 234.)

IN concluding my article on chub, and before describing the remaining members of the *Cyprinidæ* family, or throat-teeth fish, I would tell my readers that there is a mile of good fishing in the back-water which flows round Wargrave Marsh, on the Berkshire side of the Thames; it abounds with chub and dace, but though public water, the late owner of adjacent ground assumed the right to molest and drive away anglers. His arrogating exclusive title to a fine piece of river—which from time immemorial had always been fished without "let or hindrance"—was another instance, among many, where portions of the Thames had been filched from anglers. He also placed a chain across this channel, previously free for the navigation of boats and punts. Some few years ago, a gentleman well known as an angler, who is on the staff of the most potential paper of the daily press, wished to fish this back water, but his puntsman said: "You must excuse me going with you, sir; for, although I have angled there from boyhood, yet matters are altered now, and if I was seen there I should be summoned before the J.P., who is a friend of the landowner's, a fine would be inflicted, and my fisherman's licence cancelled." "Then," said the angler, "you had better get out of the punt, and I will go alone." He went a little way down this back-water, commenced fishing, and in a short while saw someone coming along the meadow, with several dogs following. The angler was hailed somewhat in this fashion: "Hullo, you sir, who gave you permission to fish?" The angler took no notice, so the question was repeated, with the information that it was a private fishery. The angler replied that no permission was required, inasmuch as it was part of the Thames, and had always been public navigable water. The *gentleman* owning the land turned his dogs into the river, threatened to send for the village constable, and give the angler into custody for trespass. Screwing the spear into his landing-net staff, the angler said he would stab any dog that came near the punt. The dogs were called off, and then he gave his address at the George and Dragon, Wargrave, where he was remaining till the next day, and should feel delighted if he was given into custody, and thus afforded an opportunity of contesting the right of the claimant to this back-water. I need scarcely say the angler was not troubled further in the matter; but plenty others have been turned off, who had not the courage to remain and fish.

Up to comparatively few years ago, I, in common with others, often fished this piece of the river, for, as steam launches never ventured there, and but few boats—a careful, quiet angler was almost certain of good sport. I have no doubt it is now as prolific in chub and dace as then; it also held nice jack and plenty of perch.

Since the above-mentioned *fracas*, the land has another owner, who places no impediments in the way of anglers, but he has erected notice-boards requesting them not to damage the banks, or leave broken bottles, paper, and *debris* of picnics or luncheons behind them, or in other ways injure his property. In the main river, near the lower end of the Marsh, opposite Bolney Court, are several small islands, with dense growths of rushes and spear-grass, round and about them; splendid "holts" for pike and perch. Below this is Marsh Pool, and Lock. It was near here ten or twelve days ago, that five or six anglers captured a large lot of pike. *Lloyd's Weekly News*, of November 1st, stated the aggregate weight of them was *half a ton*; and "Marlow Buzz," last week, said they weighed *ten times that*—viz., 200cwt.; but I have reliable information that the whole catch was a little over two hundred weight, and not bad at that. One punt in a few hours had 75lb. as its share, without moving away from the eddy of the angler's choice. The pike evidently were driven by stress of stream to congregate in the quiet lay-byes, and thus, those few fortunate fishermen, "Struck ile." A similar experience happened to the writer when the Thames was flooded in 1875—at Sonning, in one lucky hour, he caught six pike, the largest being 13½lb., 10lb., and 9lb., the total 46lb.*

Marsh Pool is a prime piece of the river, and should account for other large catches during the next few days—as Thames is still "running big." For choice, I would fish with live dace; they are silvery, and attractive on a paternoster," and, because of their liveliness and tenacity of life, work better and stronger on "Snap-tackle," searching through much more water than either roach, gudgeon, or small chub—consequently they find, or at any rate, induce more pike to feed, thus increasing the anglers' sport.

Leuciscus vulgaris—the silvery slender dace—may be considered a typical representative of the genus *Leucisci*; they are generally plentiful in most clear, rapid streams—but are not so, as a rule, in lakes and ponds. They seldom exceed three-quarters of a pound in weight—indeed, one of half-a-pound would be considered a good specimen; dace shorter than 6in. are not legal captures in the Thames, unless caught by a licensed fisherman, for use as baits for pike or trout.

Dace rise freely to an artificial fly; Small Red and Black Gnats, Palmer's, Yellow Duns, are all killing, especially in the autumn months; and during the May-fly rise, an imitation of that insect, or a natural May-fly, is generally taken greedily—the largest dace being captured at that season. The tackle must be *fine*—such as is used fly-fishing for trout on well-whipped waters, and two or three flies on the "collar" is sometimes an advantage—one at the fine end of the *taper* gut; another looped 2ft. above it, on 4in. of gut; and the third fly 2ft. higher; these last are called "droppers," and the flies may be varied. When fishing with "naturals"—such as a May-fly, Bluebottle, House-fly, &c., placed on No. 1 or No. 2. "Pennell-Sneck" hooks (with *shortish* shanks)—a long rod, not too whippy, and fine silk line are necessary. The angler stands with his back to the wind, which wafts his line and bait out across the stream—then, by lowering his rod-point, the fly drops on to the water—this is called "daping," and the largest fish are usually caught by this method.

In the Thames, on the shallows about Twickenham, some excellent autumn fly-fishing is to be had; it not being unusual for a proficient in the art—at a proper state of the tide—to catch five or six dozen dace during an afternoon and evening.

Bottom fishing for dace is at its best during October and the three following winter months; then they frequent deep streams, are in the primest condition, and take worms and gentles readily. Caddis are also capital baits; but, unlike roach, dace care little for paste baits of any kind. The tackle may be the same as used when roach fishing; and, if from a punt, the rod (made of light cane or lancewood) need not exceed 10ft. in length; when angling from the river's bank, a longer rod is required.

Other needs are: Porcupine, or ordinary quill-floats, some two-yard lengths of selected fine gut carefully shotted to the *calibre* of floats, and No. 0, No. 1, and No. 2 round-bend hooks, with rather short shanks; a bag of nicely-scoured red worms, and a box of gentles—not forgetting to take some ground-bait made of clay and bran, and *carrion* gentles, worked up into balls; and *of course* a flask of whisky—for choice give *me* that known as "Bush Mills," it being of the finest—and nothing is too good for true anglers Thus equipped, either in punt or on river's bank, with favourable wind and weather, the dace angler is sure of sport.

Dace are rather shy fish; in clear streams, it is well to use Nottingham tackle, and fish "fine and far-off," as described in a former article (page 233) on chub angling. A good plan to keep dace together and on the look-out for food, is to throw, now and then, a few of the baits into the water, well above the swim or punt, so that they may settle just at, or *in the right place*. Obviously it is useless for the ground-bait to settle a yard or two *beyond the swim*.

Dace frequently feed in mid-water, and large ones are often caught when chubbing with the tail of a lob-worm or with greaves; also, while legering for barbel, the finest of *Leuciscus* find their way to the angler's pannier. Dace spawn in April, afterwards remaining for some weeks in swift streams, to scour themselves on the gravels.

In the Kennet and Colne dace grow to a large size, but the largest the writer has caught was in the Test—a 16oz. fish, with artificial May-fly, June, 1884. The best specimens recorded in the 1883 International Fisheries catalogue are—W. Howlett, of Newmarket, a dace, 16oz.; A. C. Critchfield, London, one of 16oz.; R. Pugh, London, one, 14½oz.; the Friendly Anglers, London, one, 14½oz.; the Piscatorial Society, London, 16oz., 15oz., and 14oz.

Dace are in the best of condition just now, and will be for the next three months. They are fairly delicate food broiled in butter, and served up hot and dry: the fleshy fillet on the back is really toothsome eating; or baked in a deep dish, with layers of spice, bay-leaves, and vinegar; allowed to get cold, they make an excellent breakfast relish.

Another *Cyprinidæ* of the sub-order *Leuciscus*, and a species of dace, is the bleak. These pretty fish are common in most rivers producing roach and dace, and are so well known that they scarcely need description. Sprat-like in shape and covered with brilliant silvery scales, they make the best of baits for *large* trout, such as the Thames *fario*, whether for spinning or live baiting, but they are much too tender for pike fishing. A seven-inch bleak would be considered a fine specimen. Bleak spawn in May; then congregate in large numbers; they rise freely at a small fly; and, from a gastronomic point of view, when nicely fried, are dainty fare.

(To be continued.)

FISH HATCHERIES IN THE HIGHLANDS.—That the time has now arrived when highland proprietors and others should look after their own interests by the artificial rearing of fish or by procuring fresh stock from hatcheries in the south, is evident from this fact—trout angling on the northern lochs and streams is rapidly deteriorating. This is, no doubt, in a great measure due to over-fishing, combined with the practice adopted by too many anglers of retaining the tiniest sprats they land with a view of making numerically large baskets. That artificial stocking will become general is almost certain. Already several lochs and rivers have been replenished with Loch Leven trout, from the Howietoun Fisheries with beneficial results, and in a few cases hatcheries have been established. About a year ago the Conon Fishery Board had one constructed, after plans and specifications supplied by Mr. J. MacNicol, consulting piscicultural engineer, Highfield, Tain, who adopted a new pattern as an experiment. Instead of the usual glass grills, he substituted perforated zinc, over which a layer of gravel was placed which prevented the ova from coming in contact with the zinc—the water ascending through the perforations from below. Under the careful management of Mr. Nesbit, superintendent of the Conon District Fisheries, this method has turned out to be a complete success. Out of the 100,000 Tweed salmon ova deposited last year, fully 95,000 fry have this year been turned out.—*W. T. B.*

AN EXTRAORDINARY FISH STORY.—The fish in the neighbourhood of Sierra Leone, West Africa, are credited with some extraordinary behaviour. It is only a short time since that one of these marine wonders ran off with a small boat which was moored in Freelam Harbour, and a correspondent, writing from Sierra Leone, reports the drowning of a man by a huge fish which leaped into the canoe and knocked him overboard. The man, whose name was Stephen Pratt, was a fisherman, and along with a young man was fishing in a canoe at Cline Town Wharf. A fish of immense size leapt into the boat, striking Pratt severely in the face and body and rendering him unconscious. In this state he fell over the side of the canoe into the water. His lines were tied to his feet and partly to the canoe, and being thus entangled he ultimately sank. In the meantime the fish had wriggled and jumped about until it had got out of the boat again, and soon disappeared in the water. The young man who was with Pratt at once gave the alarm, and several persons were attracted to the spot. The fishing lines were hauled up, and at the end was found Pratt quite dead. The body was subsequently brought to land for interment. Pratt was a native of Kissey, a town near Freetown. The whole circumstances, although of so extraordinary a nature, are stated to be perfectly true, and were verified by the authorities. The strange affair happened on the morning of the 5th ult.—*Daily Chronicle.*

Notes

Mr. E. Andrews writes as follows: "I wish to let you know of some fishing I had last week. Messrs. Edward Andrews and Joseph Brooks, of Maidenhead, fishing, in Thames style, with Messrs. E. Mundy and W. Lawson, in Norfolk, captured, in four days, as follows: Wednesday, in four hours, sixty-one pike, weighing 365lb. (largest 15lb.); sixteen perch, weighing 20lb. Thursday, in four hours, forty-one pike, 237lb. (largest 13lb.); three perch, weighing 2lb. Friday, in four hours, seventy-nine pike, 380lb. (largest 16lb.); sixteen perch, 22lb. Saturday, in two and a-half hours, eighteen pike, 95lb. All pike under 5lb. returned to the water, and not included in the above weights. Three rods and two boats were used."

All who knew him will hear with regret that Mr. Henry Dickinson, of Kingston-on-Thames, died on the 2nd inst., after an illness of more than two years' duration. Mr. Dickinson was vice-chairman of the Richmond Piscatorial Society, and the last time we had the pleasure of seeing him was at one of the annual dinners of that flourishing society. Mr. Dickinson interested himself greatly in the preservation of Thames angling, and at considerable personal expense, he at different times bought and placed into his favourite river many fine two-year-old trout. Mr. Dickinson was a valued member of the Thames Angling Preservation Society, and up to the period of his illness took great interest in its work. We have asked his son, Mr. Harry Dickinson, if he can let us have a photograph of his father, to reproduce in our columns.

Anyone walking through Rye-lane, Peckham, on Friday evening, the 6th inst, might have observed a mild excitement at a tobacconist's shop, the cause of which was quite outside the mere vending of the fragrant weed. The genial and highly-respected proprietor, Mr. Arthur E. Harris, had just returned from an angling trip of two days' duration. He had been fortunate, for displayed upon one of his counters were close upon 70lb. weight of fish, consisting of about 25lb. of handsome roach, several of them reaching 1lb. in weight, and many weighing from ½lb. to ¾lb.; six jack, weighing about 20lb. in the aggregate; and, what was the feature of the show, a handsome pike of 19¼lb., which gave the captor a half hour's exciting work before it could be got into the net, the fish cutting itself with the line in two places in its mad rushes to escape. This feat is the more noticeable from the fact that Mr. Harris is comparatively a novice, and that snap tackle was used. The fish were taken in the neighbourhood of Pangbourne, and, almost needless to state, were taken from a punt. The pike is being preserved.

The collection of fishing baskets and bags, which Mr. Shrubsole exhibited last Tuesday evening, at the club-room of the Battersea Friendly Anglers, was an extremely interesting one; and the paper he gave was certainly one of the best and most practical we have ever heard, and gave universal satisfaction.

Last week, on the Tweed, the fishing—in consequence of the fine weather, and the too low state of the water—by no means kept up to the standard of the two previous weeks. All round, however, it was encouraging, and some heavy fish and good takes were got. The largest fish caught weighed 37lb. The more recent big takes in one day by a single rod were all got on the Floors Water, Mr. Majoribanks topping the list with fourteen, Mr. Barrington coming second with twelve, and His Grace the Duke of Roxburghe, third, with nine.

There has been a great stiffness in the letting of the Tay net fishings. Those belonging to the City of Perth were recently put up by auction, but competition was so bad that only three out of the eight exposed were let. For these, however, the prices obtained were higher than those of the previous year.

This is a good angling tit-bit, which we give as recorded by a fishing correspondent. "On a Border river last week an English gentleman had an exciting encounter with a *thirty-five-pound salmon* in a pool noted for harbouring heavy weights. After having been on for about an hour, this fish ran out quite one hundred yards of line, and passing through the adjoining stream got into the pool underneath the railway bridge. The angler gamely followed on, although wading up to the waist in water. The salmon then ran round one of the pillars of the bridge, and the line got foul in a seam of the masonry. A boat was brought into use to get it freed, but before this could be accomplished the salmon broke and escaped." It is rather a good idea to tell so accurately the weight of one's fish before it is caught.

So far as we have been able to find out, the "top-weight" fish caught in the several back-end rivers of the East Coast of Scotland this autumn are: Tweed (season not yet ended), 42lb. and 39lb.; Forth, 44lb.; Tay, 46lb. and 43lb.; Earn, 40lb.; South Esk, 35lb.; North Esk, 40lb. and 37lb.; Dee, 46lb. and two of 37lb.; Don, 40lb. and 39½lb.; Brora, 40lb.; Spey, 35lb. and 33lb.; Ythan, 33lb. and 30lb.; Deveron 34lb. and 32lb.

The Kingcausie Water of the Aberdeenshire Dee has yielded the two heaviest fish of the autumn season got on this river—namely, one of 46lb. to Mr. Fortescue, jun., of Kingcausie, and one of 37lb. to his sister Miss Fortescue.

A Montrose correspondent writes: "The rod fishing on the rivers North and South Esk, finished the other week. Since the middle of September excellent sport has been got. A continual stream of fish kept ascending the North Esk, and in some places, particularly the Knab Stream, Pantry, Kinnairdie, Hatton Pool, and the Sneck, they were sometimes to be seen lying in perfect layers. The best fishing on the South Esk was got on the Kinnaird Water, where from four to five hundred salmon were caught. The weight in both rivers averaged 17lb. No such sport has been had for many years."

During last week great numbers of small salmon were observed on the "redds" in rivers of Sutherlandshire, Ross-shire, and the upland tributaries of the Dee and Spey.

On the Floors Castle upper water of the Tweed, on Friday last, the Duchess of Roxburghe landed seven salmon, several of which were large and fresh-run. On the lower beat of the same fishery, on Saturday, General Cooke had ten fish; and Sir Richard Waldio Griffith, on Wednesday, had thirteen, the aggregate weight being 230lb.

About 300,000 ova taken solely from spring-run fish in the upper feeders of the Aberdeenshire Dee have been placed in the Durris Hatchery. This undoubtedly will save a great destruction of spawn, but the hatch-out will be nothing like so great as it would be from the same number of ova taken from sound autumn-run fish.

On Saturday last, Robison, a professional fisherman, on the river Annan, caught with fly, in the Craigdale Pool, a fine fish of 42lb. in weight. It was 41in. in length, and girthed round the shoulder 25 inches. About a month ago a fish of 43½lb. in weight was killed on the same river.

The rod fishing season on Annan, Urr, and Nith—the last to close of the Solway rivers—ends to-day.

On Dee and Don, gudgeon was the great bait during the late autumn fishing.

The boxes of Scotch salmon sent to the Billingsgate Market during the season of the present year numbered 25,889.

At Billingsgate 2,187 boxes of 112lb. a-piece, were received from the Aberdeen Harbour Commissioner's and Salmon Company's Fishings, and 1,762 boxes from the Tweed Sea and River Fishings at Berwick.

Erratum.—"Odds and Ends of Pike Fishing."—Page 291, line 67, for "eel front" read "eel-pout."

Notes and Queries

Pat's Fish Story.—The following story is related of one of the Kerry lakes: "An English gentleman out one day with one of the local professionals, began to enter into conversation with the latter on the subject of salmon generally. The breeze having died away and a dead calm having succeeded, the gentleman, to wile away the time, thought he would test Pat's ability for telling one of those wonderful yarns so common among the old race of Kerry anglers. 'Have you ever seen a salmon leap into a boat, Pat?' he asked, to begin with. 'No, yer honour,' said Pat, slowly enough; 'but,' continued he, scratching his head, and looking rather sly, 'Begorra, I have seen a quarer thing about a sammun.' 'What is that, Pat?' 'Well, yer honour, I was goin' to fish one day, and when I comes to the lake I saw it got too calm, yer honour—just like it is now. Says I, No use going out. So I stretched myself down on that bank yonder, and smoked my dudeen, just at the brink of the water.' 'Well, what then, Pat?' 'Begorra, yer honour, what do you think? but a sammun jumped up out of the water and landed between my legs; and I throttled him in a jiffey.' 'Ah! that was wonderful indeed, Pat.' 'Faith, yer honour did not hear the whole of it yet; because in that sammun's mouth I found my flies and casting *loin* that I lost four weeks before, when the fish broke away from me!' 'You should return that fish to the water, for his kindness in returning your line and flies, Pat.' 'I beg pardon yer honour,' said Pat; 'for it is not always that I can catch a sammun so aisy.'"—*T. J. D.*

Capture of a Seal.—The Aberdeen papers last week described the capture of a seal near Fraserburgh. Several boys observed the creature lying asleep on the rocks, and informing some men of the matter, they proceeded cautiously, it is said, to the spot, and dealt it a heavy blow on the head with a spade, and then belaboured it with sticks till it was dead. The seal was beautifully marked and apparently half-grown. The paragraph concludes: "The creature could easily have been caught alive, and much regret was expressed that it should have been killed in this unmerciful manner." There is no doubt the seal was sick or otherwise injured, else the captors (*sic*) could not have got within reach to kill it with a spade. The difficulty is to get within gunshot of them even, unless there is something wrong.

The Annual Poaching Raid in the Liddel.—"Burning the Water."—I recollect, in the *Fishing Gazette* of Oct. 26, 1889, sounding a note of alarm anent snatching and other forms of poaching in the Esk and Liddel, the result of which was that three noted Border anglers were caught "snatching" red-handed in the Damfoot Pool, in the Liddel, and their rods and other tackle taken from them. The mode of operation then was to watch the solitary bailiff and policeman out of sight, and then to the slaughter with vigour. It appears that the fish have been so plentiful this season, that many old ticket-holders did not take the trouble of procuring the usual pasteboard, but contented themselves by enjoying the sport without that necessary document. At times the fish were lying within a yard of the side of the water, and even women and boys cleeked them out with bits of sticks. It is said that fifty salmon were taken out in two days, in a very short stretch of water in the lower reaches. Not content, however, with the hauls made by day, "burning the water" was resorted to by a gang of men at night in the upper portion of the river close by Newcastleton. Whithaugh was the scene of operations, and about forty salmon were taken from the river. So plentiful were the salmon that they could be seen by people walking along the banks. Certainly the temptation was great, but "burning the water" is rather an audacious proceeding in these days of policemen, bailiffs, and watchers. As has been said before, two watchers are easily watched themselves; hence the ease with which the raid was successfully carried out. During the past week a large number of salmon have been removed illegally from several well-known Border rivers, and it is argued by some, that as salmon disease has made its appearance, probably many of the fish would have to be taken out by the water bailiffs later on and buried. Be that as it may, such a high-handed and daring mode of procedure as "burning" a supposed well-watched water with impunity sticks in my gizzard—more so, too, because I have been blamed by some busybodies for not reporting in the pages of the *F. G.* every baggie and beardie taken both from the Esk and Liddel; and this, too, forsooth ! at a time when forty salmon can be taken from a pool within a cockstride o' Cophaw, whose proper name, by the way, is Newcastleton. I say "Gil," auld man, ye're no havin' fair play, and in the words of the immortal Samuel, I must ask—"Is nobody going to be whopped for this?"—*Gilnockie.*

Prawn Fishing for Salmon.—"I am perfectly certain, from fifty years' experience as a salmon fisherman, that the use of a prawn or spinning minnow over a salmon pool destroys all the chance of a fly following it, for at least many hours, or until new fish are settled in the pool. In the Tweed in the autumn no bait fishing of any kind is allowed. I can positively assert that on the Dee and many other rivers, the use of minnow and prawn is entirely destructive of all the pleasure of fly-fishing; and, from its general use on some rivers where you cannot command both sides, in these degenerate fishing days, any gentleman sportsman is liable to have a prawn or minnow sent flying over the pool and splashing into the water: and he might just as well expect to catch a salmon on his own side, as if he threw his line over a ploughed field."—*J. C., in "The Field."*

"I am very pleased to give 'T. D.' any information I can on the above subject. Prawn fishing is generally supposed to be detrimental to fly-fishing; but to what extent would, I fancy, depend a good deal on the river. I am one of nine rods on the river Corrib—or that part of it running through the town of Galway—a short stretch of water about half-a-mile. Fishing with the prawn (or other lure than the artificial fly) is only allowed on a certain part of the river, and between the hours of nine a.m. and seven p.m. When the run of the salmon is well on in the spring, and the peal or grilse in June, fresh fish are constantly coming up from the sea, so prawn fishing is not so injurious as it might be in other rivers. I have hooked salmon with the fly, and more frequently grilse, after the prawn had been used for two or three hours, or more. Again, on the Shannon, which is a wide river, I have killed salmon and grilse casting with the fly, with a prawn trolling behind the boat. In a small river where salmon are apt to lie in one spot for some time, the continued use of the prawn would, I fancy, make them shy of rising at the fly."—*F. S. H., in "The Field."*

Capture of a Large Salmon in the Annan.—On Saturday, Mr. William Robison, fisherman for Messrs. Gardner's, the Distillery, killed a splendid salmon with fly while angling in Craigdalo Pool, near to Northfield House. The fish weighed 42lb., and its measurements were as follows: Length, 41in., girth round the shoulder 25in. This is the second largest salmon killed in the Annan this season, one of 43½lb. being killed in Hoddom Castle Water, about a month ago.—*Heatherbell.*

A Lochy-Spean angler sends us the following lines, composed by the "Doctor" on the capture of his first salmon:—

The Doctor came, on fishing bent,
And all his days by Spean spent.
"Ah, me," said he, "oh, don't I wish
A salmon rare, a monster fish,
Would take my fly or humble worm
While here I stand erect and firm."
Hardly the words outspoken were
When echoing far to Inverlair
The Doctor gave a shout of glee:
"My goodness gracious, only see
A great big fish has taken me!
What shall I do? where shall I run?
I only wish I had my gun,
And then I'd shoot him straight away,
And not lie floundering here all day."
The fish he rushed him up and down:
The Doctor turned both pale and brown;
He reeled him up, he let him run,
And said it was most glorious fun.
And when he got him on the bank
He fell upon his knees to thank
His blessed stars that now at last
He'd got a "fush" and held him fast.

Shark Caught with Hook and Line Off the Custom House, near to London Bridge.—"Considerable interest was recently excited in the City by the capture of a young shark in the Thames off the Custom House Wharf. Upon the arrival of a vessel described as a Dutch 'scoot,' named the *Daval*, on Monday, the master (who had his baby on board) stated that a shark had followed him since he put to sea from Rotterdam. He offered a reward of £1 for its capture. Several men were soon on the alert. Charles M'Kenna, describing himself as England's ex-champion weight-lifter, kept watch with a huge cod-hook, baited with beef. Upon two occasions the shark snapped at the bait. About two o'clock in the afternoon it swallowed the bait, and, the hook catching in its jaw, it was dragged to the surface, stunned, and ripped open. Upon being landed, the shark was found to measure 6ft. in length and weigh over 11cwt. Besides benefiting by the reward, the captor placed his trophy in a barrow and wheeled it about the streets, collecting the halfpence."—"*Lloyd's.*"

A MARVELLOUS SHILLINGSWORTH.

Messrs. A. and F. Pears write to us as follows:—

Dear Sir,—We have the pleasure to forward you herewith our first Christmas Annual, the artistic merits of which, in respect of the chromo-lithography and printing, and the quality of the paper, you will at once recognise, as well as the very full value of the whole. We should esteem it a favour if you will give this such notice as you may deem it worth in your publication, and oblige.

We certainly advise our readers to obtain a copy of this Annual and the three coloured pictures given with it. A large oleograph, entitled "A Good Joke," after the painting by Torrini, is in itself worth much more than a shilling. It is a picture calculated to purge "moping-melancholy," and cure a "fit of the blues;" indeed, the whole production will prove a charming and cheerful visitor in hundreds of thousands of homes.

Correspondence

[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. Pritt.

THE JARDINE SNAP.

Sir,—In reply to "Mark," who asks a question in last week's *Fishing Gazette*, I would state that when fishing for pike with "Snap" tackle, I hold but very little slack line coiled in my hand—not more than two yards. When my float disappears I gather the line up, and allow about three seconds (for the pike to *turn* the bait into his mouth) before, to use "Mark's" own words, "driving the hooks home." I seldom *strike*, but tighten the line up smartly; then, *holding the pike firmly* for a second or two, he hooks himself. One day last December, when snap fishing, I "ran" eighteen fish, and by pursuing these tactics landed seventeen of them. A sharp strike often smashes the tackle, or rod, if the pike is a heavy one.

I should consider a five-ounce roach too big a bait to use where "I knew the pike did not exceed 4lb. weight." A three-ounce *dace* would be better, adopting the time and method recommended above.—I am, &c., A. Jardine.

PAPERS ON FISHING AND FISHING IMPLEMENTS READ AT ANGLING CLUBS.

Sir,—Through seeing the notice in your *Gazette* of last week that a paper would be read at a meeting of the Battersea Friendly Angling Society on Tuesday evening, by Mr. Shrubsole, on "Fishing Baskets, Bags, and Creels," I determined to journey up specially to be present, and glad I am that I went, notwithstanding the distance, more particularly the walk from Battersea Station in the rain to the society's rooms, with an equally unpleasant return. Mr. Shrubsole's paper was most enjoyable, and very instructive. I feel sure that everyone of his listeners in that crowded room of the Queen's Hotel must have learnt something, besides having an opportunity of seeing a picked collection of a hundred different fishing bags and baskets.

This paper, I understood, was read under the auspices of "The Society for the Promotion of Reading Papers at Angling Societies' Meetings," a society (with the happy and reasonable *alias*, "The Society with the Long Name") having you, sir, for its President. Many of the readers of the *Gazette* are doubtless unaware of this new effort, and therefore I take the liberty of drawing their attention to the value and great importance of the project, one fully worthy of all support.—Yours faithfully, W. Pugin Thornton.

Canterbury.

A GOOD TAKE OF SALMON.

Dear Sir,—On looking at the reports from salmon rivers in last week's *Fishing Gazette*, it occurred to me to ask you whether my catch for this season (from August 1 to October 31) is not about as large as any on record for an English river—viz., eighty salmon and grilse, seven bull-trout, thirteen sea trout; total, one hundred fish, 788lb.—Yours truly, C. T. Keighley.

Spring Hill House, Whitby.

[We have heard of nothing to approach this from an English river.—Ed.]

THAMES FISHING REPORTS.

Dear Sir,—I am glad Mr. B. was amused with my letter in the *Fishing Gazette* of Oct. 17, and hope the laugh did him good; but with all his enlightenment, I do not see what other interpretation he can put on it. In his Kingston report he says, "thirteen dozen of fine jack." Now, Mr. B., if I had sent a report that Mr. Jones had killed five dozen of trout and four salmon in one day, and someone else had killed thirteen dozen of fine salmon in four days, you would have thought the same as I did, as we are not all living on the banks of the Thames. I must thank Mr. B. for his kind reply.—Yours, &c., Liberia.

LOCH LEVEN TROUT.

Dear Sir,—I have read with much interest in the *F. G.* of Nov. 7, about Loch Leven trout gradually descending and disappearing when put into lochs with access to the sea, and the explanation therein given confirms the opinion I have had for some years, that they are nothing else than confined sea trout, and when they are at liberty to follow out their natural inclinations they in course of time become what they originally were.

If we take the surroundings of Loch Leven, leaving out of account the appearance, shape, and play of *Salmo Levenensis* proper, as there are two kinds of trout in Loch Leven (the other, which is coarser, and not so elegant a shaped fish), there is everything to make one believe that they are in reality confined sea trout. Loch Leven has its outlet to the east, at a place called the Sluices, from whence it flows into the river Leven. Many years ago this river was noted for its salmon and sea trout; but in course of time mills were erected on its banks, which poured into the river matter deleterious to these fish, with the natural consequence that they now know it no more. The sluices are so made that no trout of any size can pass through. When they were first put up I do not know, but it must be many years ago. What is more natural than that those fish when they could not get out, adapted themselves to their new circumstances? Nature is not obstinate: she adapts herself to circumstances in more wonderful ways than making a migratory trout into a non-migratory trout. We are seeing the same thing taking place in other parts; why, therefore, not in Loch Leven?

Granted that there is a slight difference between a Loch Leven trout proper and a sea trout, will the confinement, change of habit, and food, not account for this difference? Nature is not too lavish: she only gives what is necessary to make them fight the battle of life; and a confined trout can easily dispense with what might be absolutely essential if it migrated to the sea. We see the same principle in plants. If an uncultivated plant is placed in a garden, manured, cut, and tended, it changes materially. Leave it alone, and after a few years it gradually falls back to its original condition. Food and altered circumstances made the change; why, therefore, should the same principles not apply to *Salmo Levenensis*?—Yours faithfully, H. W. A.

Glasgow.

HE MARINE BIOLOGICAL ASSOCIATION.

Sir,—May I ask if the letter of Nov. 7, signed L. Calderwood, Director Marino Biological ssociation," was actually written by that gentle-an, or whether it is only a rather ill-timed and tupid joke by someone who has used his name o parody and burlesque the style of answer sually adopted by scientific men when they wish o put right someone who is a little less better formed than themselves? I ask the question ecause I had some idea of contributing towards he funds of the Marine Biological Association, so hat I might from time to time ask for informa-ion concerning ichthyological questions which terest but perplex me. But if the letter referred o is really a specimen of the director's style of eply, I am afraid that my subscription would be hrown away; for I should never dare to expose yself to such withering sarcasm, nor should I are to have my ignorance on scientific matters ade public in terms of such crushing contempt. Templar" has had to submit to this, and will robably bear his chastisement in mind, and in uture will hesitate before offering his opinions on atters which only the learned director of a cientific institution can be expected to be profi-ient to deal with. But I, sir, would rather void such cutting comment, and so I ask you hether the letter does really come from the arine Biological Association?—I am, &c.,

A. M. Hiddon.

P.S.—"Templar" "rushing into print" is dis-inctly "precious."

[Mr. Calderwood's letter was genuine enough. He seemed to us to be writing under a feeling of aving been attacked by "Templar"; in fact, it ooked from the tone of his letter as if he were marting under the attack. We must say, in justice to Mr. Calderwood, that he asked us not to insert the letter, if we thought it would give offence. We did not think it would; and having published "Templar's" attack, we could not refuse to insert Mr. C.'s reply, especially as 'Templar" can take care of himself, as his letter this week shows.—Ed.]

TROUT *v.* GRAYLING IN SALT WATER.

A Reply from the Wicked Critic of the Marine Biological Association.

Dear Sir,—On Oct. 10, in "Waltoniana," I commented on an experiment carried out at the Marine Laboratory, Plymouth, in connection with placing trout and grayling in salt water, a not very novel proceeding so far as trout are concerned. The director's account of the matter ended with the words, "It will be interesting to watch their development, although we can scarcely hope that they will propagate their species." I pointed out, as to this, that if the hatching of trout eggs in salt water was suggested, the thing was impossible, but that the trout might possibly develop ova, which, if taken from them at the right time, could be hatched in fresh water.

There was nothing personal or offensive in my remarks on a subject which has long interested me. It would appear, however, to be a heinous offence to criticise anything done at the Laboratory or written by its officials, for in last Saturday's issue appeared a letter from the director, in which I am charged with having not even a rudimentary knowledge of natural science, and having only a slight knowledge of the subject I wrote about; the letter winding up with an invocation to Darwin and Wallace, and some wild talk about casting boomerangs and the Origin of Species.

From all this, I opine that Mr. Calderwood, the director aforesaid, is so annoyed at my very mild criticisms that he has forgotten to write in the dignified manner which we would expect to find in a communication to the Press from a person in his position.

The worst of it is, I am so stupid that, after reading his letter thrice, I have but a hazy idea of the grounds of his complaint. Perhaps he will tell us, in unmistakable language, what he really did mean by the term "propagate their species." If he only knew as much about the natural history of the *Salmonidæ* as he does about "the head kidney of teleostean fishes," on which important subject (the connection between which and the welfare of our sea fisheries is so evident) he contributes a paper to the May number of the *M.B.A. Journal*, he would know that brown trout are almost as much at home in salt water as the salmon, frequently leaving rivers where the food supply is insufficient for a residence in sea or estuary, but that, though the environment of the animal is changed, and the animal does not die, to reproduce its species it has to return to fresh water. Mr. Calderwood, who appears careful to express himself vaguely, seems to suggest that in the course of years brown trout might so adapt themselves to a salt-water environment as to breed in salt water. I say that is impossible, because, before any brown trout adapted itself to such an extent to salt water as to breed in it, it would die of old age, and that, as it could leave no offspring which could continue to develop the inherited instinct of a tendency to breed in salt water, no evolution of the kind suggested could take place; in other words, if all the trout in the world were kept in salt water for the duration of their lives, the race would die out.

We have in the sea trout a fish which has adapted itself to its salt water environment, but which has to go into fresh water to breed, its eggs being killed by immersion in salt water. The same may be said of the salmon. If Mr. Calderwood had studied Day's "British and Irish Salmonidæ," the writer of which was a greater authority on that subject than Darwin, he would hardly suggest the possibility of such a marvellous evolutionary feat as the breeding of trout in a salt-water aquarium. So far from my having exposed my ignorance by saying that the eggs of trout can never be hatched in salt water, I think I might well retort with a *tu quoque*. If the eggs of sea trout will not hatch in salt water, still less will the eggs of brown trout.

Mr. Calderwood has made a small mistake, and seeks to cover himself by calling his very friendly critic a fool. The study of the natural history of the *Salmonidæ* hardly comes within his province, so the mistake was excusable enough. In conclusion, let me assure Mr. Calderwood that, notwithstanding his rather offensive letter, he has no greater well-wisher than myself for the success of his work at the Laboratory, but that I, and many more, see with some misgivings a tendency to waste the labours of the officials and the funds of the association on subjects which can hardly tend to promote the welfare of our great sea fisheries, either directly or indirectly. Even this little experiment with the trout and grayling possessed practically nothing beyond a scientific interest, and not much of that, while not one of our sea fishermen is likely, either directly or indirectly, to be one farthing the better for inquiries into such subjects as the head kidneys of teleostean fishes. The association certainly was intended to have its purely scientific side; but so long as its funds are as limited as they are at present, I submit that scientific inquiries which are not likely to benefit the fisheries should hold a very secondary place. The existing income is certainly not more than enough to cover the costs of inquiries into those scientific subjects which are likely to bear fruit and be of practical value.

I think that, as a member of the public, I have a right to make these remarks, the association being supported by public money.—Truly yours,

Templar.

P.S.—It is a little startling to find that the only English paper which is solely devoted to fish and fish culture is not perused by the Director of the Marine Biological Association, and that references to the association are not seen and commented upon until a month after they appear.

PIKE FISHING IN SALMON RIVERS.

Dear Sir,—Would you kindly tell me, in your Answers to Correspondents, what is the practice as to fishing for pike in the close season, in rivers which also hold salmon and trout? By the "close season" I mean close for salmon and trout, as we have no close time in Ireland for pike. In several deep pools and stretches, in rivers here, there are many pike at present, many having run up from the Shannon with the late floods. Salmon and trout do not, as a rule, lie in the dead water, being on the spawning beds or shallows; and I do not see why I should not spin or live snap for the pike and take them when they are in best condition, and when they take most toll off the trout running up from the lake (Lough Derg). In fishing such deep water, I do not see how I could be held to be disturbing or interfering with salmon or trout spawning, and I do not know of any law to prevent me. What is the practice in your salmon and trout rivers in England where pike frequent them? Are they fished for in close time?—I am, dear Sir, yours faithfully,

Ormonds.

[Unless specially prohibited by Boards of Conservators, pike fishing is carried on in all our salmon rivers, the Conservators as a rule being only too glad to get rid of them.—Ed.]

GLASS MINNOW TRAPS.

Sir,—Messrs. Alfred and Son, 20, Moorgate-street, keep them in stock; they are similar to those I saw in use at Besancon, in the south of France. Besancon is a military station, and most every soldier there fishes for gudgeons and minnows, for there are but few larger fish, as the river is so much netted to supply the wants of the officers and better-class of town's-people's tables.

Most of the soldiers, who could not afford to purchase the white glass minnow traps, brought common brandy-bottles, which had a hole knocked through the bottom, some bread-crumbs inserted, the neck well corked, and a long string attached to throw into the water some yards away. I saw some of these bottles hauled up, which were literally crammed with minnows. I have tried the same dodge with a brandy-bottle, at West Drayton, in the Colne, with success. I think, if several traps were used, the angler will be rewarded for his trouble. Gudgeons and fry of other fish I have trapped with the minnows.—Yours truly,

T. R. Sachs.

A GOOD SUGGESTION.

Sir,—In conversation with Mr. Laws, our representative on the T.A.P.S., he informed me that they had some collection boxes for fixing in club-rooms, and promised to send one to our club (the Sundial Angling Society, King-street, Hammersmith), and I promised to do all I could to forward the interests of this society by collecting all the money possible; but from experience I know that it is a very difficult task to extract pennies from the Thames angler's pockets, as he considers the river free, and continues fishing year after year without thought or care where the fish are to come from; and I believe ninety-five per cent. of the Thames anglers never subscribe one penny towards its support. After leaving Mr. Laws I thought of a method that may do something towards filling the box, but occupying the chair I was not in a position to move a proposition, so I simply explained my ideas to the meeting, and they unanimously agreed to pay a self-imposed tax upon "*fish*" (not on "*rods*") of not less than one farthing for each pound of fish taken from the Thames. This small sum in our society alone will amount to about four shillings a month, and if all the West-end societies, would try and do the same, I feel confident that the T.A.P.S. would be able to supply more men to look after the interests of the Thames anglers.—I am, sir, yours truly,

James Harwood,
"An Old Thames Angler."

47, Bradmore Park-road, Hammersmith.

[Any suggestion which will bring funds to the Thames Angling Preservation Society is welcome, and Mr. Harwood's seems a good one.—Ed.]

PRAWN FISHING FOR SALMON.

Sir,—I was very much pleased to see in your valuable paper, a letter from Mr. T. Dutton, on the question, "What effect has prawn fishing on salmon?" But what rejoiced me most of all was the downright, straightforward, sportsmanlike view the Editor of the *F. G.* took on this important matter. I endorse every word he says; and as regards the Conway, at least, after over forty years' experience, I feel sure that the unrestricted use of the prawn, or any other bait (the genteel way of poaching), would simply mean the ruin of the river, in a short time, for legitimate, fair fly-fishing. Shades of our ancestors on old Conway rise up in judgment against such desecration; the mountains of Snowdonia shroud their heads in mist with shame; and the glorious river murmurs her soft complaint against such practices when she is low, and rages against them when she is in spate. What are we coming to? We shall soon hear that the worm, the minnow, or anything else, may be used on the celebrated chalk streams of England, where now a consummate artist, with the dry fly, is quite satisfied with his brace or two of good fish. Or we shall hear that it is all right, and the proper thing, to shoot into the brown of a covey; if that can't be done, to blaze away over a fence into the midst of the birds on the stubble. "We pays our money and we takes our choice!" that seems to be the little game. It behoves all true anglers, all true sportsmen, to protest against it.

Mr. Dutton and myself are acting as the representatives of the majority—fly fishermen and true sportsmen. Mr. Dutton tells you he is not an old hand, but he is a good man with the salmon rod, and most energetic in everything he undertakes. I am a very old hand. I have a stake in the river as a landed proprietor on its banks; the old Conway is my first, my only love; and I am quite satisfied with the sport she gives to the fly. I simply wish her *fairly treated.*

In conclusion, I think I may be allowed to say that, in conjunction with Mr. Dutton, we have proposed a compromise, which wo trust may be agreed to and give satisfaction to all.—I am, Sir, yours faithfully, **John Blackwall.**

Hendre, Llanrwst.

Dear Sir,—Although a subscriber, I only happened to read last week's number last night, and saw the letter *re* "Prawn Fishing."

I am perfectly convinced that prawn, minnow, and worm do absolutely no harm to salmon water, and in no way scare the fish, unless the fisher cast his line in such a manner as to advertise his presence, and this can be, and is equally well done, by the fly-fisher. There are times when the minnow will kill better than fly, and the man who is so pig-headed as to stick to only one thing, whatever the weather, state of water, &c., may be, will certainly not kill fish so well as the man who makes a study of everything to do with the salmon; and fishes according to what experience has taught him. A few years ago, worm and minnow trout fishing was looked down upon as unsportsmanlike, and I have heard many men say that it was no sport to catch trout except with a fly. It is now fairly well understood that there is a time for the fly and a time for minnow, &c., with trout, and doubtless in a few years we shall begin to understand much the same for salmon.

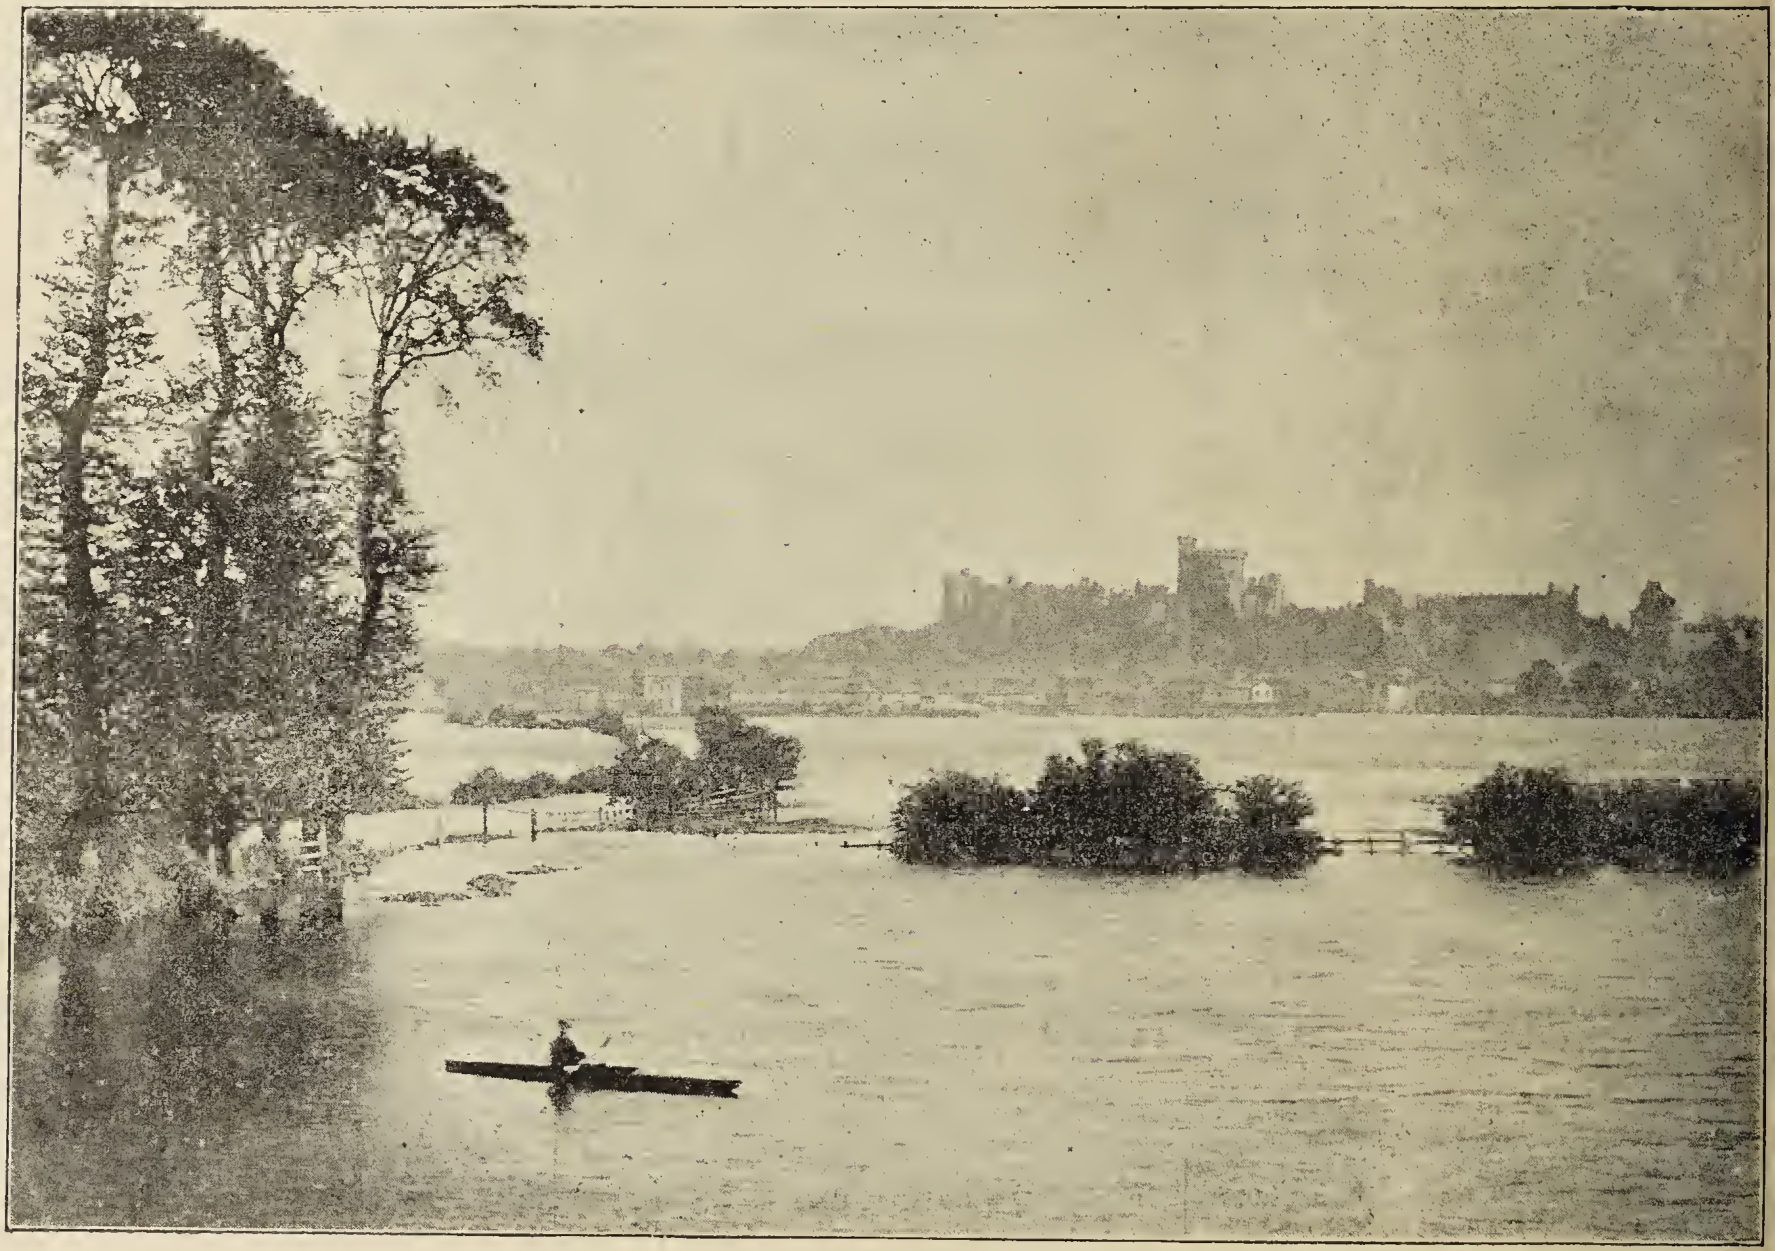
This season, on one pool of the Dee, two men started to fish, turn about, one with fly, one with minnow. Up to noon the minnow had taken three fish, 90lb., the fly nothing; but in the afternoon the fly took seven fish (I forget weight) and the minnow none. You will understand the minnow took its turn down the pool all the day, so that the fly did its work on a well-fished and minnowed pool. What applies to minnow will apply t prawn, as the latter does not make any more, if so much, splash, &c., in the water. Minnow, prawn, and spoon are not fishable with a fly-rod with any kind of comfort, and with many men I have met I am certain the trouble of fishing anything but fly is their true aversion to the use of other baits. When you meet men like Ramsbottom (of Liverpool), Francis (of Liverpool), and Malloch (of Perth) all agreeing that it does no harm to salmon water, there is no doubt the subject is one that is not understood by us comparative novices in salmon fishing when we say fly is the only sportsmanlike way of taking salmon.

I sincerely hope you will have this matter well thrashed out, subjects of the kind being well worthy of a large share of your valuable paper, which will become more valuable if it educates us in the noble sport of salmon fishing by showing up a few facts to refute the many fallacies at present in existence.—Yours truly, C. S. S.

P.S.—By the way, the Conway is a river on which a great many men fish, and of course it is annoying to see a man taking fish with prawn when fly won't do it for you. But there will be days when the fly will lick the prawn hollow even on the Conway, which is getting, like the Welsh river Dee, to be a very slow-rising river, why is not quite certain.

WINDSOR CASTLE DURING TH RECENT FLOODS.

As but few of our readers have seen Winds Castle during a Thames flood, we have repr duced a photograph, by Macdonald, of Eto kindly sent by our old correspondent for this d trict (Mr. Bambridge, of Eton), who we noti in the foreground in a Rob Roy canoe. We shou have preferred giving the view as seen from t top of the higher, or what is best known as t "round" tower, the photograph before us givi but a faint idea of the immense area under wat when the Thames is in flood. From the latt coign of vantage, as far as the eye can reach, is vast expanse of water, relieved only by the tre and the higher hedge-rows. It is nine years sin a flood swept down the Thames valley; and ma doubted if, with the modern appliances at t weirs, and a smart set of men (as a rule old na men) which constitutes the body of lock-keepe such an occurrence as a Thames flood would eve occur again; but there can be no doubt that ha it not been for the modern improvements an vigilance of the lock-keepers one of the mos disastrous floods ever known would have been th consequence. Our correspondent informs us tha large quantities of fish are left in the hollows an ditches; and already the Sunday morning loafe has been scooping out what would have formed handsome basket for the true sportsman. Th local society, we are still further told, inten netting all such places as soon as they can be go at; and we shall watch with interest the result o such netting, though we understand this societ is very poorly supported by those who fish th Windsor waters most, and it is just possible tha ere long it will give up its useful work for wan of funds, when, as a consequence, poaching wil again be rampant, and the thousands of fis which might have been rescued, left to the tende mercies of the river-side shark.



WINDSOR CASTLE AND THE RECENT THAMES FLOOD.

HOW TO BREED AND REAR TROUT.

BY T. ANDREWS, GUILDFORD.

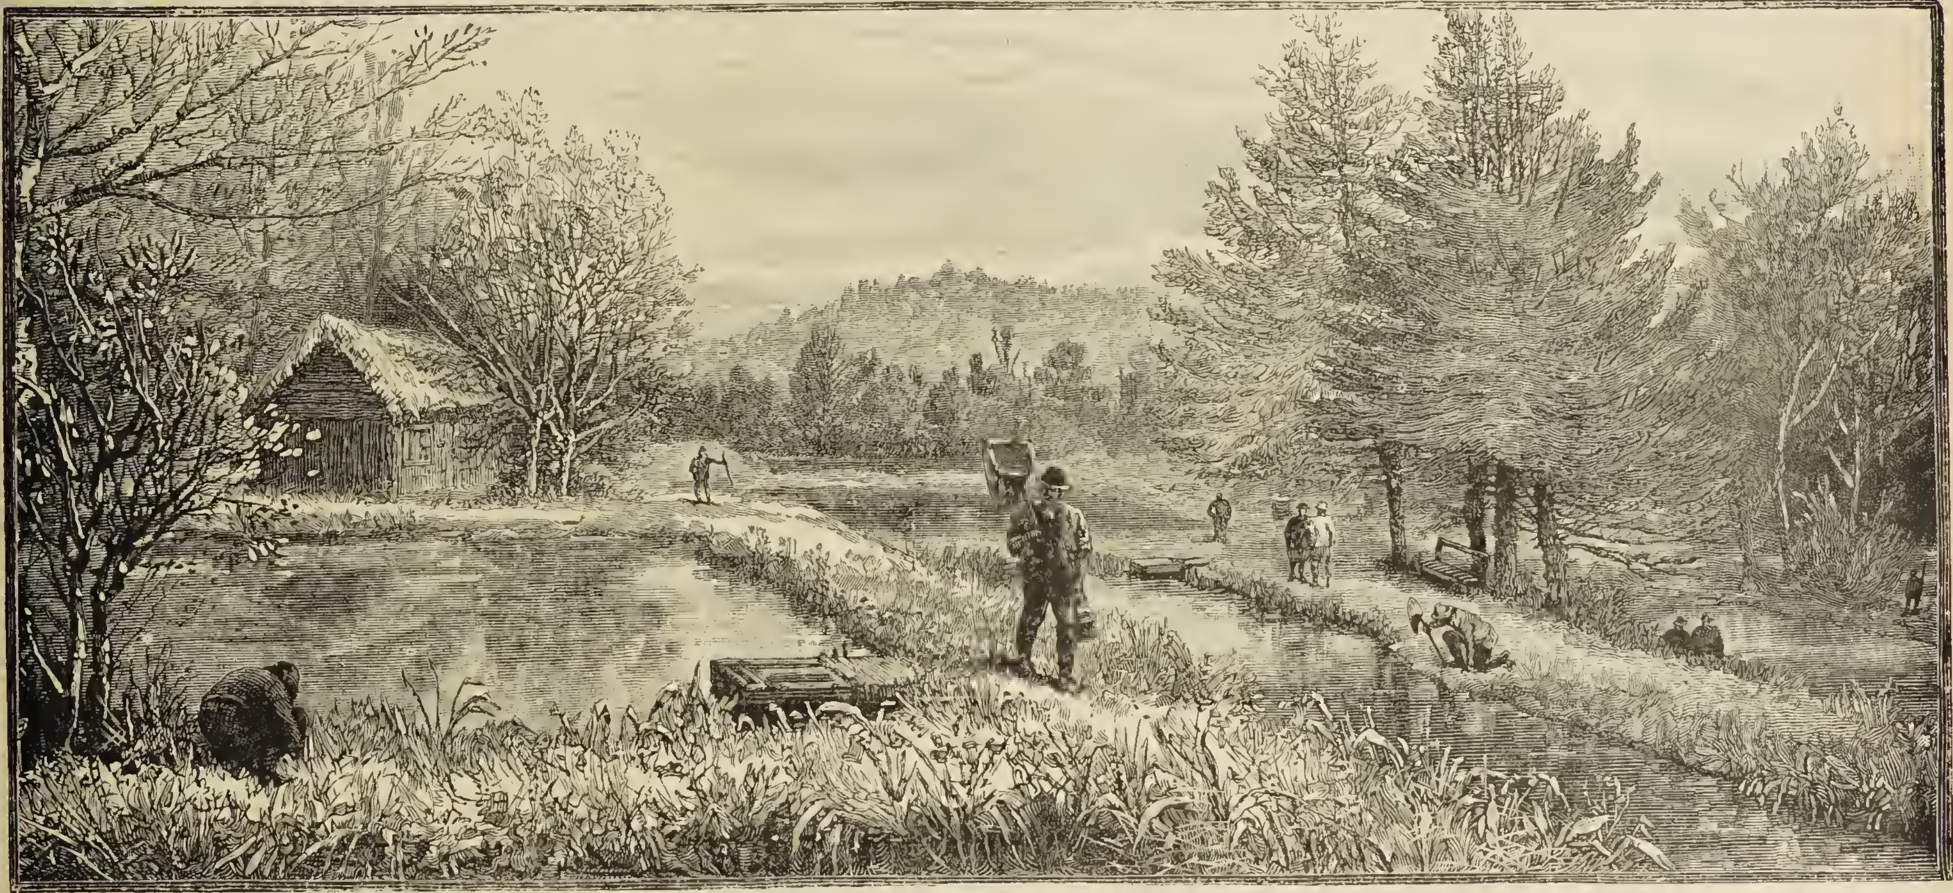
FIRST PAPER.

AMONGST a great many questions I am asked on matters connected with trout-breeding, the following frequently occurs: "May I ask what induced you to take to fish-culture in this serious manner?" My answer, showing what may eventually spring from nothing more than a hobby at the outset, will be found embodied in the next few lines. Previous to the year 1864, when my father died, it was usual for us to receive regularly every season invitations to come and fish on many of best trout streams in the home counties, and we could always reckon on getting a few days now and then at our favourite sport, at which my father was an adept, and I, a boy, in my teens, not altogether a novice. On some of the most beautiful parts of Test, Itchen, Kennet, Lambourne, Wey, Loddon, &c., I well remember the grand fishing we often had. There was in those days—for us, at least, who had the privilege of fishing on private water—no need to dry the fly before each cast; although I recollect an occasional dainty fish, who refused the wet fly, alight it never so lightly; but if we gave our line an extra twist or so in the air, partially drying the fly, the chances were that the fish *came*. We used not to have to stalk fish, and wait for half-an-hour or more at a time, until we saw one rise, although they were not so unsophisticated as to come and help themselves out of our fly-books! But we went steadily on as long as there appeared half a chance, throwing into every little narrow alley between the weeds, or under a bush, or into a corner where we knew there *ought* to be a fish. "Fishing the wide world," or "chuck and chance it," it is called, I think; and I find as much amusement, and certainly more constant employment in flogging every likely foot of a stream, as the dry-fly man does in his own way. Of course, when we did see a fish well on the rise, I need scarcely say we paid special attention to him; but I think I am right in saying that there was but very little "dry-fly fishing" in those days; yet I do remember seeing it practised, especially on the Itchen, at Bishopstoke, where I have also had some splendid fishing, with no attempt to dry the fly. What a typical south country trout stream is this Itchen! notwithstanding occasional stretches where a good deal of mud has accumulated. Rising a few hundred yards above the Alresford pond, and receiving two considerable tributaries, about two miles below Alresford, there is scarcely a yard (except the pond at Alresford, which supplies the river with pike) which is not *trouty!* It has been my good fortune to fish the Itchen from its source to the tidal pool at Swathling; there is scarcely a meadow which I have not at one time or another been privileged to fish. The "Claimant" put in evidence—or proposed to do so—his knowledge of the way to catch those big fish just below Alresford. Whether it was his own experience, or whether he was put up to it by some of his would-be Alresford friends, I know not; but I do know that many years ago I have taken some of the biggest trout at night with a huge *Black Palmer;* and I remember that when we used to stop at a little farmhouse close to where the new railway now crosses the river, I often went out in the small hours, less than completely dressed, and seldom failed to bring in a brace of good fish, as well as plenty of stinging-nettle marks! This must be forty years ago; but I recollect the old keeper's story of how he relinquished his former occupation to become one of the best river-keepers I ever saw. I believe that being frequently caught poaching, he was asked by the late Lord A. how much he made by it, and on his replying that he generally made "so much," he was asked if, in the event of his being engaged as keeper at that sum, he would do his best for the river. His answer being considered satisfactory, he was taken on, and, I think, remained there till his death, at a very great age; and being up to all sorts of poaching artifices, he was able to frustrate all such little games, on the principle of "set a thief to catch a thief," and he certainly had some splendid fish.

If I digress in this my introduction, I may be excused on account of my being an enthusiastic trout fisher, and perhaps my knowledge gained in former years of the habits of trout may have proved of some advantage to me in fish culture, for it is certain that a tolerably close observer of nature will bring something away with him wherever he goes, which will serve him in after years. My experience has always been that the most killing moment is that at which the fly falls on the water, and I still hold that, wet or dry, if the fly falls *well* at a fish, the probability is that he takes it at the first introduction if he means feeding. Nowadays there is no doubt that the fish are extremely well educated, and although I fancy the modern imitations of most aquatic insects are far better made than they were thirty years ago, and a great many men can and do throw a wonderfully light and true fly, I think the fish have become somewhat more suspicious of the glistening piece of gut sailing down near them, which to their sharp eyes must look something like a transparent ship's cable. In dry, fly-fishing, the gut frequently floats as well as the fly; but for all this I have heard it urged, and found it to be a fact myself, that on some hard-fished waters there is no chance of a fish coming unless the fly floats down by them in the manner most nearly resembling the passing of a natural fly.

Again, the frequent appearance of a flashing rod over the water, and perhaps the knowledge that it is held by the trout's mortal enemy, may teach a fish to defer the remainder of his meal until the dreaded upright form is out of sight (and this is often an angler's difficulty) when he may consider it safe to resume. Trout will continue to feed unalarmed while ducks are splashing and swimming all round them, and I have often observed that they will take no notice of a horse or a cow walking along the bank, or even stepping into the water; but so soon as a man or a rod is caught sight of, they have good reason to fear that there is mischief brewing, and promptly quit the feeding spot for the hiding-place, and small blame to them for that! Livingston Stone says that trout are not naturally averse to man in their primitive wildness, before they have learned to fear him. It will not, I think, be doubted for a moment that trout—at all events in many of our small English rivers—were getting very scarce indeed until fish culture came to be practised on a large scale, and was carried farther than formerly. Thirty years ago a few fry were hatched and turned into the streams with, of course, but poor results, as it is well known that fish of five or six inches, as well as the larger fish, *went for them* wholesale; and such is their cannibalistic propensity that scarcely a dozen yearlings were to be seen in the water the next season. In course of time the stock of mature fish had dwindled so much that the common complaint was that there were hardly any fish in the river. The more effectual system of drainage may have had something to do with it, as owing to the rapidity with which the water falls off, many good spawning-grounds—which are also generally good rearing-grounds—run absolutely dry. Then it will be generally admitted that the average rainfall is less than it used to be, particularly at the time of year when the springs would be filled. These two partially natural causes, and the fact that many more men require trout fishing, will go far to account for the falling-off in the *yield* of many of our best trout streams, and doubtless the first-named is an important cause of the continually-decreasing average yield of our salmon rivers also, though, of course, "education" cannot have had much effect on the migratory *Salmonidæ just fresh* up from the sea.

In view of these, some artificial means must be found whereby the stock of fish can be increased, and with the knowledge we now have of fish culture, and the trifling loss which should occur



GENERAL VIEW OF MR. ANDREWS' TROUT PONDS AT CRICHMERE, NEAR HASLEMERE (PONDS 4, 5, 6, 9, 10).

in the transportation of live fish, any river within a reasonable distance can be re-stocked with fish of a size practically able to take care of themselves—viz., good yearlings, running four or five inches, or, better still, two-year-olds, and persons who require fish for stocking purposes are getting alive to the fact that their money is far better spent on yearlings than on the same amount of money's worth in fry. I long to see the effect that I think would be produced on salmon rivers by the hatching and rearing of *Salmo salar* on lines similar to those adopted in well-regulated trout farms, but until a complete farm is established, with ponds to confine the mature fish previous to the spawning season, and ponds to rear the fry into yearlings and perhaps two-year-old fish, I cannot see any chance of success; also the operations should be conducted on a very large scale. Comparatively very little salmon breeding has been done beyond hatching and bringing to feeding point, and when we remember that all young salmon must go down to the sea (I am not speaking of a land-locked variety) and we attempt to realise the dangers to which the little fish are subject in the salt water, it seems a marvel that any survive to revisit the rivers, where nine hundred and ninety-nine out of every thousand are captured, let alone enough to provide sport for a few, and marketable food for the many.

It may be argued that Nature provides amply for loss, but have we not been taxing to the utmost for many years past every river in this little country, aye, and in America too, in order to supply large towns made easily accessible by the modern "iron road" with fresh and tinned salmon? What was the use of skinning a river sixty years ago, when there was comparatively no market for the fish, and the only way of making use of them was to dry them for winter use, or to feed servants and apprentices on. I have stood on a stone in the Spey, where my gillie assured me he had gaffed a hundred salmon at a stand. No doubt a great number of salmon thus stored up were "kelts," and then no wonder that tradition says there was a clause inserted in apprentices' indentures that they were not to be fed on salmon *oftener than twice a week.* Is any such indenture forthcoming? I cannot find one; all that I can elicit with regard to it is that someone's great grandfather said his aunt told him that her father's lawyer had several of them.

An occasional wet autumn like the present (1891) will no doubt encourage many more spawning fish to ascend to the extreme limit of the spawning grounds, and, with proper protection during the winter, there will be millions of eggs naturally deposited. But what becomes of them? A dry, frosty January and February, and the greater part are destroyed by being left high and dry long before the hatching time arrives. Should the ova have been deposited in a part of the river which retains some water during the "incubation" period, salmon and sea trout kelts have a gay time of it, and we scarcely know whether there is more destruction on account of cannibalism in the river than in the sea. This is exactly what "fish culture," properly conducted, provides against—viz., by the construction of many ponds for the fish in the various stages, thus minimising cannibalism, and by the retention of mature fish, which can be easily caught at the spawning season, thereby securing a great number of eggs. I said that the attempts to breed salmon artificially in this country had not been carried far enough. What may have been done in America I cannot say, but I fancy the results have lately proved more encouraging. When we think of the enormous value of the salmon as a sporting fish, to say nothing of its value as an article of food, it is strange that the experiments in breeding should stop short at the point where I think the greatest dangers in modern fish culture are past.

(To be continued.)

Holloway's Ointment and Pills.—Indisputable Remedies.—In the use of these medicaments there need be no hesitation or doubt of their cooling, healing, and purifying properties. The Ointment stands unrivalled for the facility it displays in relieving, healing, and thoroughly curing the most inveterate sores and ulcers, and in cases of bad legs and bad breasts they act as a charm. The Pills are the most effectual remedy ever discovered for the cure of liver complaints, diseases most disastrous in their effects, deranging all the proper functions of the organs affected, inducing restlessness, melancholy, weariness, inability to sleep, and pain in the side, until the whole system is exhausted. These wonderful Pills, if taken according to the printed directions accompanying each box, strike at the root of the malady, stimulate the stomach and liver into a healthy action, and effect a complete cure.

Waltoniana

A strong protest ought to be made to the Thames Conservancy on the subject of the by-law which allows little jack only 18in. in length, to be caught in the Thames. Several hundreds of little fish about that size have been taken recently, and the loss of this young stock to the river is very serious. I should imagine that the persons who are responsible for the length which was fixed had no idea of the weight of jack of that size. I carefully weighed a little jack of exactly 18in., the other day, and found it even lighter than I expected, not turning the scale at 1lb. 3oz. A 16in. trout weighs a great deal more than an 18in. pike, more than double as much if it is in decent condition. In fact, I heard of one trout weighing almost 3lb., which had to be returned, being under 16in. in length. To allow pike under a pound and a quarter to be killed, while trout of between 2lb. and 3lb. have to be returned is obviously ridiculous, if pike are to be preserved at all.

The great sea-serpent is sure to crop up in some form or another during the silly season, and this time it appears to have been responsible for the death of a bishop. As many readers of newspapers are doubtless aware, foreign telegrams to English news agencies are sent in as few words as possible, and are amplified by clever Press men. It seems that Dalziel's news agency received the following telegram from a correspondent: "Influenza extensively prevalent Wales Victoria numerous deaths Bishop Adelaide found dead sea serpent sixty feet Coffin Bay"; and the clever person who amplified that telegram let it go out to the world that the Bishop of Adelaide was dead, which was incorrect, and now the news agency can only assume that the Bishop of Adelaide, or possibly a Mr. Bishop, of Adelaide, found something in Coffin Bay which their correspondent described as a dead sea-serpent.

I am quite sure that the good old maxim respecting a wind from the south blowing the bait into the fish's mouth is good old nonsense. For three days, while the wind was nearly due north, I was taking perch every day. Then the wind suddenly changed to the south, and not a perch could I get. The conclusion I am coming to is that fish like settled weather, and that unsettled weather unsettles them and puts them off the feed. For winter perch fishing commend me to a fine, calm, hazy November day after a frosty night. Unless the water is very very clear, the perch nearly always bite well at such times, and then those who fish finest will catch most. I have lately been using large crystal hooks for perch, and have never landed a larger proportion of fish to bites. There is no better hook for roach than those of the crystal bend, and I am seriously thinking of having some triangles made with that bend of hook, and experimenting with them on jack.

I have frequently marvelled why the great majority of men use such strong tackle for perch, a fish which in the Thames averages something under half a pound. I never use for this purpose anything stouter than the finest undrawn gut. Sometimes, indeed, I have found that by using very fine drawn gut I could take perch when they appeared untakeable by the ordinary methods. I well remember one sunny, calm day, on Lough Derg, when fishing of any kind (rudd fishing, perhaps, excepted) seemed out of the question, making a very fair basket of perch by using fine roach tackle and casting it out as far as I could from me. Fine as my paternoster was the fish would not look at it (or perhaps they did *look* at it); but on the roach tackle I had no difficulty in taking them. The bait, by the way, was perch fry, the only live-bait obtainable in those parts except yearling trout, which I considered it immoral to use.

As a matter of fact, I expect little perch are taken by almost any of the fish-eating fish. I have frequently found them in the stomachs of pike, and only this year I took a Thames trout of between 4lb. and 5lb., which shortly after being landed brought to my notice a perch of about 2½in. in length. A perch is by no means a bad bait for a pike in some waters. Not a baby perch, but one of half-a-pound or more. There is not the least advantage in cutting off the back fin, as has, I believe, been recommended by some writers, for in headforemost passage of the perch down the throat of the pike, the fin does not get int he way, but rather assists progress than otherwise.

Templar.

GRAYLING FISHING EXTRAORDINARY.

One of the recent regulations in connection with the Houghton Club permits of the use of the minnow, worm, or other bait of that kind, in certain hatch-holes. No great results have been recorded from this privilege until last week, when Mr. F. M. Walbran, of Leeds, went down into Hampshire for three days' fishing. The river has been higher than has been known for many years during recent floods, and even on Thursday morning last was running over the path leading from the mill to the Sheep Bridge. The mill-tail at Houghton was in heavy volume—very strong, but clear. The body of water was so great, that one or two of the hatches had to be shut off before it was possible to fish.

Mr. Walbran, who had been asked to see what he could do with his favourite Yorkshire method of swimming the worm, commenced operations with a few small cockspur worms, which a boy collected for him in a neighbouring garden. He fished with a very small roach-hook, on fine, undrawn gut—so fine as to deserve the name of "gossamer," which is indiscriminately applied to this kind of gear. At about the second swim he hooked and was fighting with a 2½lb. trout, which was landed, and found to be in perfect condition. This being returned to the water, the little float was sent again on its journey, and then a good grayling was taken. This was the beginning of a day of sustained sport. Mr. Halford was present during the day, and gave invaluable assistance to the angler in landing the fish which he took. The result of the day's fishing was a dozen grayling killed, weighing 22lb.; eight trout landed, and returned to the water; two or three small grayling, returned, as not being of the regulation size; and three or four breakages from heavy fish. That all these large grayling were landed in strong water, with such fine tackle, marks the angler to be one of the very first stamp. The grayling meanwhile refused to take the fly in the main river, either dry or wet; and Friday produced no results worth speaking about. On Saturday, Mr. Walbran, at half-past nine in the morning, before passing up-stream, determined to have one more trial with the worm, and in a few minutes was fast in what was evidently a very large fish. A swirling mass of weeds fouling the line nearly ruined the transaction; but after fifteen minutes' tough fight, Mr. F. M. Halford, lying on his stomach on the wall, managed to net out the grayling as it was still running. It was weighed by the spring-balance there and then, and registered at 3½lb.; but in London, at night, Mr. Wm. Senior weighed the fish on more accurate scales, and found that it was then fully 3lb. 9oz. The fish when measured presented the following figures: Extreme length from snout to last scale at the tail, 19¼in.; girth, forward of dorsal fin, 11in.; at the hindermost ray of ditto, 9¼in.; at root of tail, 4in.; the dorsal fin was 4¾in. long at the base; and its posterior ray was 4¼in. long.

On Saturday afternoon, Mr. Halford, with hare's ear and gold twist (fished dry), above Boot Island, killed a very shapely grayling of 3lb.; but this laid by the side of the bigger fish seemed comparatively small. A measurement of the fish, however, showed that the disproportion was only apparent. It was 17⅝in. long, and the respective girths were 10⅜in., 8⅞in., and 3⅞in. Such grayling are seldom seen in Yorkshire, and Mr. Walbran accordingly has sent the two bigger fish to be set up in separate cases, and three of the largest of Thursday's takes to be artistically presented in another case by Mr. Cooper, of Radnor-street, St. Luke's. It is not often that the angler who travels some hundreds of miles, in the hope of getting specimen fish, is so fortunate as Mr. Walbran has been, and we heartily congratulate him upon his sport.

NOTES FROM BIRMINGHAM AND DISTRICT.

A GENERAL meeting of the Provincial Angling Association was held on Saturday evening last, at the Birmingham Arms Hotel, Smithfield, Birmingham. Previous to the meeting the delegates who came from a distance and the committee of the association were entertained at tea by the Birmingham Association, after which the committee took in hand several private matters in connection with the association, and at 6.15 the general meeting commenced. Mr. T. Coles, Birmingham, presided, and Mr. J. W. Cundall, Bristol, occupied the vice-chair. Delegates were present from Worcester, Bristol, Gloucester, Kidderminster, Cardiff, West Bromwich, Dudley, and nearly the whole of the district clubs; letters of apology for non-attendance were read from the Liverpool and Malvern Association. The president opened the proceedings by welcoming the delegates from the various clubs, and explained the nature of the chief business to be discussed, and also the important matter of electing the officers, so that it would facilitate the secretary in getting the new travelling cards printed, and then the clubs would be in possession of them by the beginning of the New Year. The minutes of the committee meeting held at the Bush Inn, St. John's, Worcester, were read (the chief portion of which were relating to the late Tewkesbury contest for the Marston Challenge Cup) and confirmed. The minutes of the committee meeting held at the Drawbridge Hotel, Bristol, on July 4 last, were also confirmed, together with the auditors' report and balance-sheet, which went to show that, after all the liabilities had been disbursed, the amount of £50 remained in hand. The minutes of the committee meeting held at the Globe Hotel, Cardiff, together with the report of the deputation who were appointed to wait on the London and North Western Railway authorities, with a view of obtaining the concession to travel at the reduced fare were adopted, and the chief officers were asked to continue their labours in order to induce the company to follow the example of the other companies. This dispensed with the first part of the business, when the election of the officers and committee for the ensuing year was proceeded with. Mr. Thomas Coles, of Birmingham, was again elected president, being unopposed. Messrs. J. W. Cundall, of Bristol, and R. Wingfield, of Worcester, were unanimously elected vice-presidents; Mr. Cundall was also elected to again fulfil the office of treasurer. A vacancy occurred through the resignation of Mr. A. Bass, one of the trustees, when Mr. J. Dance was elected to fill the vacancy. Mr. C. White was elected without opposition as secretary. The election of the working committee resulted as follows: Mr. W. Luker, Gloucester; Mr. W. F. Harris, Cardiff; Mr. R. D. Frost, Bristol; Mr. T. Wright, Kidderminster; Mr. Turton, West Bromwich; and Messrs. Dance, Gumbley, Atwood, Holding, Hughes, Hall, and Keeling, of Birmingham. This finished the chief business of the meeting, when Mr. Cundall moved, and Mr. Harris seconded, "That the visitors express their best thanks to the Birmingham Association for the kind and hearty welcome accorded to them, and for the generous manner in which they had been entertained." This was responded to by the president on behalf of the Birmingham Association. The usual votes of thanks to the chief officers of the Provincial Association, (which were ably responded to), brought the fourth annual meeting of this successful and flourishing association to a close.

I AM sorry to inform my readers that an extraordinary large quantity of fish have been poisoned in the river Penk, at Penkridge, during the past week. Some hundredweights of splendid roach and pike, some of them weighing over 20lb., have been seen dead floating on the water. The cause of this sad destruction of fish is at present unknown, but it is supposed to be either the work of poachers who infest this neighbourhood and who have recently been prosecuted for netting the water a time back, or, that it is through some offensive matter coming from a large manufactory about a mile distant from the river, but is situated on the banks of a small brook which empties itself into the Penk at the part where the fish were first observed to be thrown up. Anyway, the matter is under investigation, and the Lord of the Manor, Lord Atherstone, has instituted a searching inquiry to be made, which I hope will be the means of discovering the cause of this wholesale destruction of fish. The cause, as far as I can ascertain, is pollution from this brook; as the water above, which is rented by the Birmingham Hearts of Oak Society, has not suffered in the least. This I am pleased to note, and at the same time I beg to caution anglers in this district to give Penkridge a wide berth for a time, and also to warn them against being imposed upon by the proprietor of the Lyttleton Arms Hotel. This gentleman rents the fishing from Lord Atherstone, and has been in the habit of charging so much per day for the privilege to fish the water. On Saturday last a few of my friends visited the water, and were charged just the same as if the river had not been interfered with, but they were soon confronted with the fact that something was wrong by seeing the fish on the water. They returned to the Hotel, and wanted the return of their money, but they were told "that they only advertised the water, and not the fishing," and refused a return of the money.

THE ordinary monthly meeting of the committee of the Birmingham Angling Association was held on Thursday evening week, November 5. The chief business transacted was to consider the application of the Highland Laddie, Spring Hill, and Belmont Societies, who ask to remove their clubs to more suitable quarters. The Spring Hill and Belmont Clubs were allowed to make temporary removals, but in the case of the other club, the removal was allowed to stand over pending the sanction of the St. Paul's Society.

ALL our Midland rivers and streams have considerably subsided, but nothing of any note has been done worth recording except on the Severn, where some of our members have had some decent catches of roach, the chief of which have been had from Arley and Stourport, the fishing at the former place being reported to be first-rate.

A GENERAL MEETING of the Birmingham Association for the election of officers, will be held on Thursday evening next, November 19. Chair taken at 8.15 prompt.

⁂ **Club and River Reporters will oblige by sending in their Reports early in the week.**

NOTES FROM LANCASHIRE.

THE prevailing fine weather has again contributed to good all-round sport. Most of our local streams have been in excellent condition, and although some kinds of fish have been off the feed, others have been correspondingly running well, and good baskets are generally reported.

THE event of the week in Manchester—viz., the lecture given by the Rev. O. R. Roberts, under the auspices of the Northern Anglers' Association, was a marked success. Knowledge of the various fish and their habits is always being sought after by every true angler, and, judging by the many members of the N.A.A. in the surrounding towns who have applied for permission to attend, shows the feeling of interest in all things relating to our sport, which must be very gratifying to the promoters. We hope to give a detailed account next week.

MR. G. SCALES, of the Townsend Arms Angling Society, has replied to the sceptics who have hinted that the report relating to the good sport obtained in the Flashes with pike is overdrawn in a most conclusive manner. He produced unanswerable evidence of the fish taken, and this coming from one in authority on the spot must be accepted as final.

THE Levenshulme Club held their annual meeting on Wednesday. Mr. Pendrigh, in his report of a very interesting season's work, stated that, after renting and stocking their waters, a balance was still in hand. An entrance fee of ten shillings will in future have to be paid for admission to this excellent organisation. The following officers were duly elected: president, Mr. T. Sheldon; vice-president, Mr. R. C. Ramshaw; secretary, Mr. J. Pendrigh; treasurer, Mr. C. H. Robinson; committee, Messrs. Bird, Breakall, Makin, Mycock, Marsland, and Taylor.

MR. J. ANDERTON writes to corroborate the accounts lately published of the excellent sport to be had in the Hob Hole and Trader's Drains, both near to Sibsey. His own experiences of the waters in question were in every way satisfactory. Mr. Dyson, of Manchester, is reported as having had capital sport in the Ribble. The Flashes have received great attention from Mr. Scott, of Longsight, Mr. Rigby, of Oldham, and Mr. Lees, of Northwich, together with many others. Really good fish were taken, and a visit to these waters will repay the pike hunter. Perhaps the fishing of this district may be just now termed a "pike crusade," for nothing is being done but pike fishing and fishing for pike bait. The absence of grayling fishing within easy reach is much felt, and perhaps contributes to the energy developed lately in the pursuit of pike; at any rate pike fishing is extensively indulged in, and the scarcity of bait is very much felt. Gudgeon are particularly difficult to get hold of.

MANCHESTER anglers are reminded of the annual district meeting, to be held on Thursday, the 19th, at Blackley. Business of vital importance is down for consideration.

NOTES FROM NORFOLK.

PIKE fishermen are now having a very good time of it all over our rivers and broads, none (if any) of the many anglers out during the past week returning home with empty baskets. Lots of small fish have been caught and returned to the water, not many of our local anglers killing jack of 3lb. and under; but some fair fish have been taken, as well as seen, by the following: On Thursday week eight pike were killed by two rods at Surlingham, on the Yare; and on Friday, six fell to the lot of one rod near the Yare Hotel, at Brundall.

A MEMBER of the Gresham Angling Club had two good days on Thursday and Friday, killing, on the first-named day, eight fish of 5lb. to 6lb.; and on the Friday, seven fish of similar size. On Nov. 8 Rockland Broad was alive with anglers, all getting some pike. One rod had eight nice fish, some of them 6lb. to 7lb.; and another rod had one of 9½lb. On Monday two rods had six fish of fair size.

ON the Bure some good pike have been taken. From Salhouse to Wroxham Broad one boat took twelve pike, spinning, on Thursday; and on Friday another party took ten very nice fish, spinning, between the Ferry and the church at Horning.

ON Nov. 8 two rods took about one stone of roach near Horning village, some of the fish being 1¼lb. in weight.

ON Monday Mr. W. Miles, the president of the Bordesley Waltonians, Birmingham, secured a very pretty pike of 14½lb., with live-bait on snap-tackle, near the entrance of Salhouse Broad. This fish had been seen feeding for several days before, and had been tried after by two or three anglers without effect. The Thurne river has also been productive of good fish, several pike of 8lb. to 15lb. each having been taken since Thursday, at Potter Heigham and Heigham Sounds.

THE water, which on Tuesday was in splendid condition for spinning, is now fast losing its clearness, and will be some days before it is in a fit state for pike fishing again, especially if this weather lasts. To-day (Wednesday), at Brundall, one could scarcely keep one's feet, much less venture out on the river.

STRAY CASTS.—If the season on the Dee and Don did not actually close in a blaze of glory from an angler's point of view, yet some exceptionally fine work was witnessed, on the last two days at least. On the Borrowstone Water on the Dee, Admiral Fane had five and six fish respectively on Friday and Saturday, making a total basket of 203½lb. On the Upper Dess Water, on the closing day, Captain Brooke, 79th Highlanders (Her Majesty's Guard of Honour), landed six magnificent fish in three hours' fishing, giving a total of 109lb. This is the best basket he ever made in one day on the Dee. On the Invercauld Arms Water, Dr. Mitchell, Ballater, had to dance attendance on an 11lb. fish which he foul-hooked for the space of sixty minutes almost, and ultimately landed it, after having perforce to survey the costs of several small islets by the way, which block the bed of the stream some two and a-half miles from where it was hooked. Good sport for the size of the game. On the Carlogie Section, Mr. Archd. Campbell had a somewhat similar experience with an eighteen-pounder, though having to obey orders for over a mile of his water on the closing day before he could bring him to the gaff. It was a capital wind-up to the season.

NOTES FROM NOTTINGHAM.

PIKE and chub anglers have certainly much cause for congratulation. November, so far, has been crisp and bright, and with the Trent running at low summer level and scarcely any tinge of colour in the water, every inducement has been held out to fishermen to patronise the various backwaters. My experience tells me that as yet the pike have not ascended very far up them. The fish still prefer the mouths, or the edge of the streams, and it is in these places that the majority have succumbed. At King's Mills, on the 5th inst., Mr. Wood, the lessee, caught a handsome fellow of 8½lb., and two or three fine specimens have, I hear, been met with in the celebrated Wig's Pool above King's Mills Weirs. Many rods have been at work on the backwater below Weston Cliff, and one good fish of 10½lb. has been followed by a bigger of 12½lb. A punt would be useful here, but the privilege of using one was withdrawn some two years ago. The water at Shardlow has not been far fished of late, and only meagre items of news reaches me. A thorough trial with an attractive spinning bait—to wit, a bleak—ought to well repay any of the subscribers with any pretensions to trolling. Good fish are said to have been caught in the Sawley private length, and a leviathan of 20lb. has been killed in one of the numerous ponds in the immediate vicinity of Trent Station. In Mr. Bembridge's (Long Eaton) extensive lake, Mr. Bembridge, jun., captured a grandly-proportioned fish of 9½lb. on Monday, by the aid of a lively gudgeon; and in the same water, on Tuesday, Mr. Henry Turner, of West Bridgford, landed one of about 6lb. Most of the backwaters on the Trent below Nottingham have been extensively fished with varying success, Mr. F. Baker, of the Nottingham Wellington Angling Association, securing a couple at Kelham of 10lb. odd. Mr. Baker was broken whilst trolling with one estimated at 15lb. Coarse fish angling has fallen off considerably owing to the low and clear state of the river. Pike bait fishermen are complaining of a dearth of sport; and when these hard-working fellows cannot catch dace, the ordinary angler cannot hope to meet with much sport. Many valuable lessons may be learned from the bait catchers, who are down to every move on the piscatorial board, especially in the winter season. Chubbists do not seem as yet, to have thoroughly settled down, the attractions of pikeing have been too great to resist; but ere long the sport is certain to begin in earnest. For my own part I am more attached to a day's chub fishing with bullock's pith and brains than to any other branch of angling, and already I have made some fair bags, although the fish killed have not run large.

LAST week I briefly mentioned that the Nottingham Wellington Angling Society had celebrated, on the previous Thursday night, its half-yearly dinner, at the headquarters, the Wellington Hotel, in Station-street. I have now to add that the proceedings were of a highly successful character. Host Sam Bestow, who was looking as blooming as ever, excelled, with his amiable hostess, in the catering department, and after the removal of the cloths, Mr. W. Gaskell, the president, proceeded with the business. The health of Her Majesty having been drunk in true angling spirit, the chairman said that to give the toast, "Success to the Society," savoured very much of drinking their own healths. The society had been accustomed to hold two dinners during the year, and generally they had been honoured by the presence of several of the leading men of the district. Owing to certain alterations in the constitution of the society, it had been thought advisable to hold their present dinner that night, and to have the banquet some time in April. They had only one angling season—from March 15 to March 15, but it had been felt by the committee that they ought at least to meet together twice a year. He was pleased, therefore, to welcome them on that occasion, and to tell them that the society was still in a most flourishing condition. They were making new members every month, and already they possessed a member-roll of close upon a hundred. (Applause.) But they intended to go on, and as their sphere of usefulness extended, they hoped all connected would take greater interest in the doings of the club. He regretted the weekly meeting nights were not better attended. Members should certainly turn out a little better than at present. They had a hard-working committee, and a most valuable honorary secretary, Mr. Harry Spray. That gentleman was unquestionably the right man in the right place, and not a little of the prosperity of the society and its increase of membership was due to his untiring efforts. (Applause.) He was prohibited, in his capacity as president, from making any disclosures with regard to the class and weight of fish weighed in. The "Mystery Box" contained papers giving the weights in the several classes, and occasionally, as president, he had a peep inside. (Laughter.) Without divulging secrets, he might say they still held their own as the premier society in the Midland Counties; and before the angling season terminated, he trusted that every member would be represented by a fish of some kind in the box in question. The facilities they possessed for killing fish were amply known, and their records made the society the envy of all others. Mr. H. Spray, whose name was linked with the toast, briefly acknowledged the compliment. His work was a labour of love, but he hoped members would show up better at the weekly meetings. The society had a room to themselves, and every night they had the comforts of a splendid fire. Besides, they could see the *Fishing Gazette* and other angling papers. Singing and music were indulged in until a late hour, the principal vocalists being Mr. George Essex (who presided at the piano), Mr. Tom Essex, Mr. Joseph Baker, Mr. Herbert Baker (vice-chairman), Mr. Fred Baker, Mr. Armistead, Mr. Honey, Mr. C. J. Whiteball, the president, and others.

CHUB fishing during the winter season is an art in itself, and to ensure success the golden rule of fishing fine and far off must be strictly followed. Chub are bold feeders, and always bite better in frosty weather. We had a severe frost on Saturday night, and this was cordially welcomed by the chub anglers. Last Saturday I performed a feat in the river which I am not likely, I think, to repeat. Whilst chub fishing with chandler's greaves, I hooked what at first I looked upon as an aldermanic chub. The fish, on being struck some distance below me, dashed into mid-stream, and sulked after the fashion of a heavy chub. Using very light tackle, my line being nothing else than bobbin silk, I played it more carefully than usual, and gradually brought it nearer the bank. Then it dashed forward, and coming to the surface showed its sides. I then saw that it was a barbel. I landed it in safety, and was much struck by its lean and lanky appearance. It weighed a trifle over 3lb., or at least 1½lb. less than it would have weighed had it been taken in summer. I have known rare instances of barbel being caught in January and February with the worm, when the weather remained open, but the fish in question is the first I have ever known to be taken with the rod in the Trent during the month of November. If any of my numerous readers are aware of any other instance I hope they will not fail to place the capture on record. There is nothing extraordinary in killing the fish, pure and simple, and I have only called attention to the subject because from a very long experience I am unaware of any previous record. The fish was seen by several gentlemen, who, like myself, were agreeably surprised at its peculiar shape and general appearance.

A SMALL fine has been inflicted by the Derbyshire County magistrates on an angler named Thomas Tunnicliffe, for unlawfully fishing in the private waters of Sir Vamcey Crewe, at Sinfin, near Swarkestone, on the 18th October. Defendant was caught by one of the keepers fishing in the canal. He had no right there, and notice-boards were fixed up as a caution. Defendant said he did not see these, but the justices thought he did, and imposed a fine of two shillings and sixpence, with twelve shillings costs. Oh, these costs, especially in county magistrates' courts!

NOTES FROM SHROPSHIRE.

ANOTHER week of damp, dreary weather has caused the angler to lay by his rod and pursue a more congenial avocation, until a more suitable time. Angling has been almost at a stand-still, but the river is in good trim, and those who brave the weather will probably be rewarded.

AT their quarterly meeting, on Saturday, the members of the Shropshire Council were unanimous in adopting the report of the Executive and Rivers Pollution Committee, which contained the following paragraph: "Your committee have given the question of the supply of salmon in the Severn and its tributaries in this county, which was referred to them from the last council, their careful consideration, and they have instructed the clerk to write to the Shropshire members of the Severn Board of Conservators, to point out how unsatisfactory the state of the upper waters is with regard to the supply of salmon, and to urge them to use every effort to improve it." Thus the hands of the upper water representatives have been strengthened by the support of another important body, and it is to be hoped that they will leave no stone unturned to accomplish the object for which they have been so long struggling.

A VERY encouraging letter has been received by Mr. J. Williams, the hon. sec. of the Shrewsbury Severn Angling Society, from the gentleman who wields the pen in the interests of that popular little institution, the Ironbridge Severn Angling Society. This letter signifies the intention of the Ironbridge anglers to forward any surplus they may have to the Shrewsbury Society to assist in their endeavours to re-stock and preserve the river. The secretary expresses regret that owing to the bad season the societies have not been able to bring off the much-talked-of fishing contest, but hope to do so next season. The letter is full of good wishes, and proves how thoroughly in touch with each other in feeling are the two societies, and how greatly the Ironbridge brotherhood appreciate the work which the anglers of the county town have been doing for so many years.

NOTES FROM WORCESTER AND DISTRICT.

THE Severn and Teme are in excellent condition for angling, are now down to their ordinary level again, and sport much improved since the late floods; and the weather during the past week just what anglers like—slight frosts at night, with a little fog, and bright in the middle of the day. The grayling in the Teme have been going well, and some grand baskets taken with the gentle and red worm, but they are not taking the fly at all well as yet, but a few have been taken with the Red Tag, Green Insect, and Whirling Blue.

IN the Severn the roach have been well on the feed, and some grand catches have been made with the maggot and red worm, one angler taking over 16lb. of fine fish, many of them over 1lb. weight. The chub are also going well at the pith and brains, one angler taking seven fish, weighing 11lb. 12oz.

SINCE the late floods the pike have been going well, and anglers have been very successful with the live baits and the spoon baits, though none of any great weight have been taken, the heaviest I have heard of being 8¼lb., the majority running from 2½lb. to 4lb. each. There are, unfortunately, too many of this variety in both Severn and Teme at the present time, and it behoves anglers—members of the various angling societies in particular—to use all their skill, and every opportunity, in reducing their number.

THE members of the Izaak Walton Angling Society had their last prize competition of the season at Knightwick, on the Teme, on Thursday week; the weather was grand, and the fish came well, all the contestants, with one exception, taking nice baskets of dace and grayling, mostly the latter, Webb being first with a grand lot, about 12oz. each; W. Smith being close up for second; Cooper, a good third. All thoroughly enjoyed the sport, and did full justice to an excellent supper on their return to the club-house, which had been provided for them by Host Beckley in his usual good style.

NOTES FROM TYRONE.

LATTERLY there has been some talk about reviving the once famous "Ballinderry Angling Association," which had its headquarters in the pleasant little hamlet of Cough, on the banks of the Ballinderry, or the "Big Water," as it is locally termed. The revival of this club would do much to forward the interests of sport in the eastern section of Co. Tyrone. The club preserved some half dozen miles of water, I am informed—it was not in my reporting days—and paid half-a-dozen extra keepers for watching the river. Something must be done in the interests of angling. 'Tis rather bad that thirty miles of as good a trout stream as is in Ulster should be left over to the half-dozen bailiffs allowed by the Coleraine Board of Conservators, and who find enough to do in protecting the lower six or seven miles that lie between the village of Ardtrea and the Barmouth, where the river enters Lough Neagh. Trout are on the principal redds, and apparently "spawn gatherers" are giving much trouble to the fish. I have never seen a better run of salmon than has taken place this season, and the best of it is yet to come.

THE Blackwater is down to its usual level. Pike lining is very good I hear. Salmon are to be seen in the pools in great numbers. Bream are feeding well in this river, and its branches, the Cullean and Conali, while Coalisland Canal yields an occasional good basket.

GOOD reports reach me as to the spawning season on the network of rivers in North Tyrone, that ultimately form the noble Fayle. There is the Strule, Mourne, Castlederg, Castlefinn, Broaghderg, Doraville, and a dozen other rivers and streams, which hold the best spawning grounds in Irish water, and which I am glad to say are properly preserved.

MANY and strange are the ways in which the poacher prosecutes his nefarious work, but in Tyrone—and some of the adjoining counties, these gentry have a weapon which is unknown to their English and Scotch congeners—flax water. The *modus operandi* is simple—a stretch of river, generally a mountain stream, is netted across at certain intervals. The flax water is allowed to flow into the stream, and in a few moments the trout turn up sick, and are shovelled out in baskets, nets, and other instruments. The fish cannot escape, and the operation is repeated till perhaps a mile of a river is plundered of its inhabitants. Of course this cannot be done except at a particular time of the year; but the flax water will retain its killing properties for months after the flax is taken out of it, and for this purpose the fluid is retained in the pools till the downfalls of rain purify it, and render it harmless.

NEW PATENTS.

THE following is a weekly list of New Piscatorial Patents, specially complied for the *F. G.* by Messrs. Hughes, Eli, and Hughes, Patent Agents and Engineers, 76, Chancery-lane, London, W.C., authorised Attorneys for the procuration of English and Foreign Patents, Designs, and Trade Marks:—

17,494.—Frederick John Williams, of 10, Great Queen-street, for "Improvements in detachable leads for angling or fishing purposes."

17,501.—John Brown Moscrop, of London, for "Improvements in fishing-reels."

19,001.—A. C. MacLeod, of 116, Ivydale-road, Nunhead, Surrey, for "Improvements in fishing winches or reels."

19,148.—J. W. Chaplin, of London, for "Improvements in artificial flies for angling."

ANNUAL SUPPER OF THE PISCATORIAL SOCIETY.

IT is the custom of this venerable society to have an annual supper, commemorative of the foundation of the club; in this advanced age the menu partakes more of the character of a splendid dinner, and as keeping up its originality. On the occasion this year, on Friday evening in last week, it took place in the Queen's Salon at the Holborn Restaurant. Mr. R. S. Fennings, the respected treasurer, occupied the chair; and the well-known angler, Mr. Edward Foreman, in the vice-chair. There was a muster of sixty members and friends, including Messrs. D. Wilson, R. E. Booker, E. J. Walker, R. C. Blundell, W. H. Brougham, T. R. Sachs, W. T. Galloway (hon. sec.), A. Galloway, W. B. Adlington, Thomas Crumplen, T. N. Harrisson, E. Bennett, Dr. Coates, W. Fennings, B. Fennings, E. H. Dixon, W. Fenn, and James Tayler (Gresham). The name card was a device of coloured fish in various specimens, made of thin wood, and the menu having on it a representation of fish gave the tables a very fishy appearance. The formal list of toasts was altogether dispensed with, and the one toast of the evening was "Success to the Piscatorial Society," which was briefly proposed by the chairman, who stated the society was in a very flourishing condition, and any idea to the contrary would be negatived by the splendid attendance that evening. The toast was drank with great enthusiasm, and the remainder of the evening, with the exception of two complimentary toasts, "The Chairman" and "The Vice-Chairman," was spent in the enjoyment of some excellent harmony contributed by members and friends. Mr. W. T. Galloway, as honorary secretary, was most energetic in carrying out the arrangements.

CAPTURE OF A SUN FISH AT WHITBY.—A few days ago some persons standing near the sandy beach of Whitby observed what at first sight appeared to be, from its rolling and turning motion in the water, a porpoise, not far from and coming towards the beach opposite the West Cliff Saloon, a few hundred yards north of the piers. When it had got into sufficiently shallow water, a lad waded in and seized hold of one of its fins, and, with the assistance of some youths who were playing at football on the sand, soon hauled it clear of the sea. The creature proved to be a large sun fish of the following dimensions, for which I am indebted to Mr. T. Stephenson, curator of the Whitby Museum: depth from tip to tip of fins, 6ft.; length of body, from snout to outer edge of caudal fin, 4ft. 5in.; length of dorsal fin, 1ft. 10½in.; width of dorsal fin, 1ft.; length of anal fin, 1ft. 6in.; width of anal fin, 10in.; length of pectoral fin, 7in.; width of pectoral fin, 7in.; width of caudal fin from body to outer edge, 10½in.; circumference of body at thickest part, 6ft. 4in.; depth of mouth, 2in.; width of mouth, 3½in. Two large powerful teeth in the front of the upper and lower jaws, with small elongated teeth, like bone, behind. The liver consisted of two large lobes or flaps, weighing about 28lb., and were of a chrome yellow colour. From the description given by Narrell, a doubt exists as to whether this is the oblong sun fish, or a very large specimen of the short sun fish, the caudal fin of this specimen differing much from that of the *Orthagoriscus* mold, captured at Whitby on the 22nd September, 1887, and now in the museum. But the pectoral fins of both closely resemble each other in shape and formation. The weight of the fish has not been exactly ascertained, but approximately it may be put down as at least 5cwt. The skin of the fish appears to be devoid of scales, and is hard and rough, similar to that of the shark, but rough both ways. The flesh is hard, firm, and tough, white in colour, and in general appearance resembles the kernel of the cocoanut. It had no stomach or bag, but one large gut, or tube, about 18ft. long, which contained nothing but a brown, slimy mucous. If it be an oblong sun fish, it is the first that has been seen on the Whitby coast since 1867, when one measuring 5ft. from tip to tip of fins, and 5ft. in length from snout to tail, was captured near the same place.—JNO. J. JACKSON.

REVIEW OF THE PAST SEASON'S ANGLING ON THE SHIN.

THE sport obtained with the rod during the past season exceeded that of the previous three seasons put together. Although the favourable state of weather and water had a good deal to do with it, there is no doubt but that the abolition of the netting at Invershin is the primary cause of the great improvement in sport. These net fishings were abolished by His Grace the Duke of Sutherland two or three years ago, and the effect on rod fishing is now beginning to tell. During February and March this year twenty-eight salmon, aggregating 302lb., were landed, as compared with sixteen salmon, 172lb., in the corresponding period of 1890. During the month of April, Mr. Lake and party secured sixty-eight salmon, 839½lb., while the same month last year only yielded seventeen salmon, 205lb. Sir J. Ferguson Davie and party fished the river in May, and got sixty-nine salmon and one grilse, aggregating 865½lb., against twelve salmon, 121lb., in May, 1890. During the month of June, Mr. Buxton and party grassed thirty-five salmon, 444½lb., and twenty-three grilse, 121½lb., while June last year only yielded twelve salmon, 151lb., and two grilse, 11lb. In July, during which three spates occurred—the river being too high to allow fish over the fall—Lord Braybrook landed fourteen salmon, 128lb.; and twenty-nine grilse, 129lb.; and Captain Greenwood, on the upper water, had ten salmon, 125lb., which made a total for the month of fifty-three fish, 412lb., as compared with twenty fish, 189lb. in July, 1890. In August, Mr. Lewis D. Hall and party grassed nine salmon, 95lb., and sixteen grilse, 101lb. Last year the take was nine salmon, 108lb., and four grilse, 27lb. During September, Mr. Hall fished to the 14th, and got five salmon, 73lb., and six grilse, 35lb.; from the 19th to the 30th, Mr. Blanco White and Mr. Dickinson grassed nine salmon, 126lb., and one grilse, 6lb.; which made a total for the month of twenty-one fish, 240lb., as compared with thirteen fish, 162lb., in the corresponding month of last year.

The following tabulated statement will show at a glance the great increase in sport:—

1888..	72 salmon,	894½lb...	25 grilse,	132½lb. ..	total,	1,027 lb.
1889..	72 ,,	949½lb...	3 ,,	14 lb. ..	,,	963½lb.
1890..	85 ,,	999 lb...	20 ,,	129 lb. ..	,,	1,028 lb.
1891..	247 ,,	2,993 lb.	76 ,,	428 lb. ..	,,	3,421 lb.

The average weights do not fluctuate very much in 1888—salmon averaged 12½lb., and grilse 5¼lb. In 1889 salmon reached an average of 13lb. 3oz., and grilse only 4¾lb. In 1890 salmon made 11¾lb. and grilse 6½lb. In 1891 salmon 12lb. 2oz., and grilse 5½lb. This year a number of salmon, ranging from 20lb. to 31lb., were landed. Amongst the best baskets for individual days were six salmon, ranging from 9lb. to 28lb., on 13th April. On the 23rd of that month six salmon, aggregating 77lb., were landed. In May seven salmon, 81lb., were grassed on the 15th; six salmon 59½lb., on the 16th; six salmon, 80lb., on the 19th; five salmon, 63lb., on the 20th; and six salmon, 82lb., on the 26th. The best day in June was on the 13th, when five salmon, 67½lb., and three grilse, 13½lb., were landed. McB.

ANGLING AT WATERVILLE.

CLOSE OF THE SEASON.

THE angling season closed here on October 15. On the whole, it was rather poor, although, as far as salmon are concerned, it showed an improvement on the season of 1890. The season opened on February 1. Fair sport was had during the opening week, but the remainder of the month turned out very unfavourable, and sport was only of a middling kind. March was little better than February, and the number of salmon taken was very small; this was principally due to harsh, unfavourable winds and occasional heavy rainstorms. Towards the end of March, however, brown trout began to take freely, the heaviest of them being got by the natural minnow. April was an average month, and a few anglers met with pretty fair sport at salmon. The best killers during this month were the local pattern flies. Sport would be better at this time if the waters were not so low; indeed, at the beginning of April, the lake was far below its ordinary summer level. Peal began to appear during the last week of April, and white trout put in an appearance about the same time. The spring salmon were heavier this year than usual: they averaged about 15lb., showing an increase of 2lb. on former recorded averages. The first run of white trout were also heavier than those of past seasons, but all subsequent runs were very small, only about herring size. May was far from favourable, and sport was very slack. June, July, and August were fair enough, and sport at white trout was about up to the average. The remaining time of the season was rainy and wild for the most part, and the returns of sport showed a great falling-off when compared with past years.

The following Table will show the number of salmon, &c., taken this year (by rods only), and also the number for 1890:—

MONTH.	SALMON.		WHITE TROUT.		BROWN TROUT.	
	1890.	1891.	1890.	1891.	1890.	1891.
February..	18	30	—	—	150	109
March	22	32	—	—	199	150
April......	28	45	—	6	250	181
May	24	27	15	8	605	545
June	12	18	194	170	800	795
July	4	10	1215	1209	884	901
August ..	6	12	1042	991	730	590
September	10	8	590	485	501	601
Oct. (to 15)	2	4	201	98	245	87
Totals..	126	186	3257	2967	4364	3962

The heaviest salmon (18lb.) was caught by a local professional, Denis Currane; the heaviest peal (7¼lb.) by Mr. A. R. Brook-Leeds, Ryde, Isle of Wight; the heaviest white trout (4½lb.) by Captain C. Bromley, R.N., London; and the heaviest brown trout by E. Dennehy, a local angler and fly-tier. This fish was a splendid specimen of its kind, and weighed 9¼lb. It was in the pink of condition, and was taken on a small white trout fly.

On the Inny river, the season has been below the average in the number of white and brown trout killed, but it has yielded sixty salmon, as against fifty-five in 1890. This is a late river, and is rarely fished for salmon before the middle of July. I think it would be only reasonable to extend the season on this river to the middle of November.

THOS. J. DENNEHY.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* Fishing Gazette, *St. Dunstan's House, Fetter Lane, London," and marked* Club Report *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association.—Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly delegate meeting will take place on Monday evening next, Nov. 16, at 8.30.—Further Railway Concession.—The Great Eastern Railway Company, with their usual liberality, have consented for the accommodation of anglers residing in the locality to issue anglers' tickets from Lower Edmonton Station, on the new branch line to Cheshunt, to all stations available by the privilege tickets, on the Hertford, Buntingford, and Cambridge lines.—R. Ghurney, sec.

Anglers' Association. — Visiting List, Eastern District No. 2.—The visit paid to the North London A.S. on the 9th, was one of the right sort; the talent was good and plenty of it, the room was packed, and nineteen societies represented. The next visit on this list will take place at the St. John's A.S., on Monday, November 30, when Mr. Howard will read his paper, the name of and full particulars I will give next week.—F. Thorling.

Anglers' Association.—Southern District Visiting List.—In consequence of extensive alterations in the club-house of the Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey, the visit on the above list will be postponed from the 17th instant to the 24th, when I hope to see a good muster of brother anglers.—G. W. Armstrong, district officer.

Anglers' Association. — Western District. — A successful visit was paid to the Allason Piscatorials on the 10th instant. Upon the roll being called twelve clubs responded. The A. B. Box was opened, and found to contain nine shillings. The next visit will be paid to my own club, the Bostonians, at the Dalby Tavern, Dalby-street, Prince of Wales-road, Kentish Town, on Monday week, Nov. 23, when I hope to have the pleasure of welcoming many old angling friends.—J. Jennings.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge with thanks the receipt of £1 6s. from the donation box of the Dalston Angling Society.—R. Ghurney, sec.

The London United Anglers' Societies' Fourth Annual Angling Competition, in aid of the funds of the Anglers' Benevolent Society.—I have much pleasure in announcing that I have forty-one prizes for the competition, Mr. Carter, of the Railway Inn, St. Margaret's, giving a prize. Winners will have their choice in rotation. The date of the distribution will be duly announced. Received with thanks P.O. from the Beaufoy, Barbican, Globe, Original North Lambeth, and Wellington. Tickets can be obtained of the secretary on the morning.—S. Malby, sec.

Allason Piscatorial Society, Golborne Liberal Club, Portobello-road, Notting Hill, W.—The second visit of the western district was paid to the above club, and which proved most successful, considering the state of the weather. When the roll was called twelve clubs were represented, and a jovial night was spent. On the 8th inst., Mr. Miller and Mr. Hammans gave us an eye-opener with a show of roach and dace from Richmond, to the tune of 36lb., as nice a lot as anyone wished to see. They were out with F. Brown, of Richmond, and it seems as though they were in it. Mr. Severn was also out, and had a show of roach and dace. A match takes place on Nov. 22 at Cookham, in the cutting, all to start by the first train from Westbourne Park. Hoping all members will show up in full force on that day.—W. Miller, sec.

Alma Angling Society, Crown Distillery, Vere-street, Clare Market.—On the 8th we fished a pegged-down match Windsor for seven prizes. Very poor sport was had, only five prizes being taken, in the following order: W. Thornett, Sid Cutbush, J. Fairbairn, T. Smith, and J. Whiston, the two remaining prizes being left over to the next outing. Mr. H. Bray and his brother showed a splendid tray of roach and dace from the Thames, weighing over 18lb. On the 10th we elected Mr. W. Birt as an honorary member.—J. Pailes, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our seventh match this season came off on the 8th inst., at Windsor, when only two prizes out of the three that were fished for were taken, as none of us could reach the required weight to take the first prize, which is a handsome silver cup. Mr. Roberts was the nearest to approach it, with 2lb. ¾oz. of fish, comprising chub and a very nice perch of 1lb., taking second prize; and Mr. Jones took third prize with 1lb. 8oz. of roach and dace; and several others had fish. On arriving at Clapham Junction, someone handed out somebody else's fishing-box in a mistake. If the owner will call at the above club and give full description of same, we shall be very proud to hand it over.—J. Rich, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—Several of our members were out on the 8th inst., with the result that we had a very nice show of fish weighed in by the following gentlemen: Messrs. Nunn, sen., roach; Hake, roach; Wright, roach; Becks, roach; and G. Merry, dace. Our next outing for a series of five half guineas and silver-mounted walking-stick will take place on the 15th inst., from Windsor Bridge to Surly Hall. Members are reminded of the next visit on C.A.D.U. Visiting List, which takes place next Monday at the Islington Brothers, Myddelton Arms, Canonbury-road.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The result of the fishing for November series of prizes is as follows: Mr. Bowling, first; and Mr. D. Davis, second; leaving one still open to be fished for. Mr. Eldridge's competition will be held on 29th November, at Pulborough. Train leaves London Bridge at eight o'clock, Peckham Rye 8.5. Please note the date of our visit should be Monday, 23rd, not 16th, as per my last report; trusting we shall have a good muster. P.S.—A visit will be paid to the Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road, on Tuesday, 17th November, when I hope to see some of the members.—A. G. Smith, sec.

Anglers' Pride Angling Society, the City Arms, Great Dover-street, Old Kent-road.—Several of our members were out on the 8th inst,, the trays being well filled by the following: Mr. Scutt, roach and dace; M'Tucker, roach, dace, and perch, the largest perch 1lb. 3½oz.; Mr Warman, roach and dace: Mr. Savage, roach and dace. I do hope the members will not forget the South London visit to the Rodney, on Tuesday next, Nov. 17, and give them a good bumper.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—The usual weekly meeting was held on Tuesday evening last, and the occasion was a red-letter day in the annals of the society. Mr. Edgar S. Shrubsole, who takes such a great interest in the welfare of this club, delivered a lecture on "Fishing Baskets, Bags, and Creels" before one of the biggest and most representative meetings ever held in the South of London. Notwithstanding the unpropitious state of the weather, anglers came from near and far to listen to him, and the hearty way in which he was thanked for his efforts to entertain them was a proof of the satisfactory manner in which he had succeeded in doing so. His lecture was listened to with wrapt attention by all present, and the universal opinion was that it was one of the best ever delivered to the members of an angling club. Mr. R. B. Marston occupied the chair, and the hearty manner in which he was received testified to the keen appreciation London anglers have for that gentleman's efforts on their behalf. The lecture was illustrated with an exhibition of baskets and bags, the like of which has never been seen in this country before, and these were carefully examined by those present with much interest. A full report of the proceedings will be found in another column, but the members wish to make use of the space allotted to them here to record their sincere thanks for the excellent lecture delivered by Mr. Shrubsole and the genial manner in which Mr. Marston came into their midst.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—On the 8th inst. our trays were again well filled with some capital roach, contributed by the following members: James Smith, J. Warman, D. Dodson, H. Patman, and Hamp; total weight, 49lb. 15oz. On the 22nd inst., the members will fish a competition for their November series of prizes; place and conditions to be decided at the meeting on the 20th inst. The next visit on the Anglers' Association List (Southern Division) will be to this society on Tuesday, the 24th inst.—A. Conn, sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 8th inst., we fished our match at Ware, when the following weighed in: Mr. Gill, first, with perch: Mr. C. Davis, second, with perch, heaviest perch, 1lb. ½oz.; Mr. Warren, third, with perch. Mr. Newton has won Mr. Clark's prize for the heaviest roach taken in the match. Messrs. H. Davis, T. Davis, and A. Stewart, also weighed in.—D. Warren.

Bostonian Angling Society.—On Wednesday, the 4th, the members took part in a friendly supper, in celebration of the wedding of one of our oldest and most respected members—namely, Mr. Jamieson, who was presented, during the course of the evening, with a handsome set of carvers, in case, suitably engraved, to mark the respect the members have for him. The testimonial was presented, in appropriate terms, by Mr. Jennings, the chairman, and feelingly acknowledged by Mr. Jamieson. The rest of the evening was spent in harmony. We have had some grand shows of fish during the past week by the following members: Mr. Brown, perch and roach; Mr. Jennings, dace and roach; Mr. Chapman, jack, heaviest over 8lb.; Mr. Halsell, roach; Mr. Taylor, roach; Mr. Lawson, roach; Mr. Hoare, roach; Mr. Clark, roach, heaviest 1lb. 3oz. Our return visit will take place on Monday, November 23, when all brother anglers will be welcome.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—The competition, which took place at Bourne End, on the 8th inst., for five prizes, turned out a success this time. Eighteen competitors went down, and everyone weighed in. The successful members were as follows: Mr. Robson, first; Mr. E. Briggs, second; Mr. F. Briggs, third; Mr. Brooker, fourth; and Mr. Brown, fifth. A competition for the prizes given by our brewers (Messrs. Matthews and Canning) and several other prizes, given by the members, will take place at Cookham on the 29th inst. This evening (Wednesday) I saved a blank with a few nice roach. On the 8th inst., two of our honorary members brought up four jack, weighing over 25lb., the heaviest fish turning the scales at 13lb.—H. Roach, sen.

Burdett Angling Society, 118, Hackney-road.—We had a very small show of fish on the 8th instant: Mr. D. Flint, a nice jack of 5lb. 11oz.; Mr. Gurney, 1lb. 6oz. of perch. Some of our members were out for prizes, of which three were won: Mr. Andrews, first, one chub, 7oz.; Mr. Pert, second, one roach, 2½oz.; Mr. Pether, third, one roach, 2½oz.—J. Pether, sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On the 8st inst. we had a good show of fish on our trays: Mr. King, roach and perch; Mr. Langton, roach; Mr. C. Chapman, jack; Mr. Marshall, dace; Mr. Critcher, perch; Mr. Sartain, roach. I should like to see members show up a little better on Wednesday nights.—E. T. White.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—On Monday last, Mr. Harry Dunn's reading, "Canon Kingsley as an Angler," was crowded out by a surprise entertainment provided by Host Tom Keeble, to celebrate the Prince of Wales' jubilee. Mr. Dunn will therefore read next Monday. "Fly-fishing for Carp and Dace," by Mr. Edgar S. Shrubsole, is the subject for this month's lecture, and will be delivered by him on Monday, Nov. 23, under the auspices of the Society for Promoting the Reading of Papers Among Angling Clubs. Mr. H. J. Tibbatts will preside on that occasion.—J. Smith, hon. sec.

Central Visiting List.—The next return visit on this list will be to the Anchor and Hope A.S., held at the William IV., Canal Bridge, Old Kent-road, on Monday, November 23. Secretaries who are about arranging dates of visits, readings, &c., are requested to note this fixture. Anglers and friends are cordially invited.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—Since my last the following have weighed in: Mr. Mackerel, roach, 11lb.; Mr. Robinson, ditto, 7lb.; Mr. A. Bowater, ditto, 3lb. 10oz.; Mr. A. Painter, jack, 3lb. 4½oz.; Mr. Turner, roach, 1lb. 14½oz.; Mr. T. Jameson, roach, 1lb. 11½oz. Our match which was announced to take place on the 8th inst., has been postponed till the 15th inst., on which I hope to see a good attendance. On Tuesday last several members and myself journeyed to the Battersea Friendly Angling Society's club-house, to listen to the lecture by Mr. Shrubsole, on "Baskets," &c., and must say it far exceeded our anticipations.—A. Trowbridge, sec.

Clerkenwell and District United.—The next return visit on the above will be to the Islington Brothers Angling Society, held at the Myddelton Arms, Canonbury-road, on Monday evening next, Nov. 16. A pleasant evening's amusement is in store for any brother angler or friend who will favour them with their company.—F. Castell, hon. sec.

Cliftonville Angling Society, Cliftonville Hotel, Ilderton-road, South Bermondsey. — Several members were out on the 8th inst,, but only two weighed in: Mr. A. Payne, and Mr. W. Emberson, roach and dace, from the Thames. Members are requested to bear in mind the visit to the Rodney takes place on the 17th inst., and it is most important we should be represented as our own comes next.—P. Gardner, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—We fished a match at Bourne End, on the 8th inst., for twelve private prizes, which were all taken with a moderate amount of fish, the winners were as follows:—Messrs. J. Hicks, roach, 2lb. 1oz.; E. Baxter, roach, 1lb. 3oz.; F. Nunney, roach; A. Tucker, boatman; T. Twyman, T. Marsh, J. Owen, G. Perham, F. Boccius, W. Hill, A. Smith, all with roach.—A. Smith, sec.

Crown and Buckland Uuited Piscatorial Society, Middlesex Arms, 34, Clerkenwell-green, E.C.—I am sorry to say that we had a very poor show of fish on the 8th inst., there being only three members weighing in fish — G. Walters, 11lb. 8½oz., roach; G. Norris, 6lb. 5½oz., roach; H. Long, 2lb. 4½oz., roach and dace. I wish to remind the members and friends that our half-yearly supper will take place at the club-house on Wednesday evening, Nov. 25, at 8.30. —G. Rogers, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 8th inst. twenty-four of our members competed for the two prizes left over from the 1st. Result, Mr. Wild, 1st; W. Midson and W. Edwards, a tie; Mr. Webber, 4th. On Nov. 22 we fish for ten prizes, value ten shillings each, in the Thames; full particulars at the club-house. Members please attend on Tuesday next, as there is some very important business to be brought forward. Members, don't forget Rye House.—S. Malby, sec.

Eagle Angling Society, Chesnut-road, Tottenham.—Our members have been very busy lately. That indefatigable fisherman, Mr. Hazlewood, since my last report, captured a pike weighing 11½lb., in our private water at Tottenham, not very far from the same spot where he captured, last March, one weighing 22lb., and he says "there are plenty more like 'em." Mr. Bennett, and Mr. Dwyer had arranged to fish a match at Staines on Nov. 2,; but Mr. Bennett failed to put in an appearance, and as a consolation to Mr. Dwyer, I have much pleasure in stating that he is the successful competitor for Dr. Hall's prize of £1 1s., with 9½lb. roach and dace, Mr. Ashmore coming in second, and Mr. Hazelwood third. Another match for a dinner for six was fished for on Tuesday last at Staines, between Mr. Dwyer and Mr. Pettipierre, the former having Keene, jun., as puntsman, and the latter Hone. Mr. Dwyer was again successful, with 15½lb. of roach and chub, although he was run very close by his opponent, who had the largest chub, which scaled a little over 3lb. The next members' meeting is on Nov. 17.—T. F. B., hon. sec.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road. — On the 8th inst. we had a fair show of roach and dace by Messrs. F. Vanhegan and Biggs. Mr. A. A. Eldridge's competition will take place at Pulborough, on November 29; special train from London Bridge at eight o'clock.—J. W. Biggs, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We had but a small show of fish on the 8th inst.—about 8lb. of roach and dace, taken by Messrs. Slade, Caborn, Stebbings, and F. Lawrence. Other members out, but not successful.—A. Payne, sec.

Grange Angling Society, the Earl Derby, Grange-road, S.E.—On Saturday last, Mr. T. Sandilands took from the Thames a brace of barbel, scaling 8lb. 3oz., some roach, and chub. On Tuesday, Messrs. J. H. Rich, Ryder, Woolland, and Croker weighed in 7½lb. roach between them. Mr. Rich's scaled 3lb. 13oz. Members are requested to attend the meeting on Thursday, the 19th inst.—W. K.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—Since my last report, Mr. W. Carr weighed on October 25th, a splendid perch, 2lb. 1oz.; Mr. F. Bates also weighed some roach on the 1st. The same gentlemen weighed a nice brace of jack, nearly 12lb., besides roach. On the 8th, Mr. J. Grande saved a blank with roach.—G. F. Weaver, sec.

Great Northern Brothers Angling Society, Robin Hood, Southampton-street, Pentonville.—On the 5th inst., Messrs. C. Watling, jun., and J. A. Fitch, had a splendid show of roach from the Thames—viz., 62lb. 12oz.; the respective weights being 33lb., and 29lb. 12oz. On the 8th inst., the following members weighed fish: Messrs. C. Large, 6lb. 4oz.; A. Bambridge, 6lb. 4oz.; J. Cooper, 8lb. 5oz.; A. Proehl, 2lb. 14oz.; J. K. Fitch, 11lb. 11oz.; W. Parkins, 7lb. 9lb.; C. Watling, jun., 15lb. 14oz.; F. Watling, 10lb. 3lb.; J. A. Fitch, 14lb. 12lb.: W. Barnes, 1lb. 8oz.; J. Hewitt, 1lb. 6oz.; total 86lb. 10oz.; all the above takes consisted of roach and were taken from the bank.—J. A. Fitch, sec.

Greenwich Angling Society, Prince Albert, Royal-hill, Greenwich.—Notwithstanding the inclement weather on Wednesday evening last, we had a very good muster of members and friends, Mr. G. H. Dowsett in the chair, and Mr. Dryden in the vice-chair. The usual routine business having been gone through, the attention of those present was drawn to a paper read by Mr. Giffard Hooper, entitled "The Mimicry of Nature." Although not strictly a piscatorial subject, it was listened to attentively from start to finish, and was of an interesting and instructive nature, and a very hearty vote of thanks was accorded Mr. Hooper for so kindly reading same. The thanks of the members were also given Mr. W. Marshall for his present to the society of a perch in case caught in the Lea at Hertford in October, and weighing exactly 2lb.—G. J. Toynbee, hon. secretary.

Gresham Angling Society.—The usual weekly meeting was held on Tuesday, with Mr. E. H. Bramley in the chair. Mr. Fosbrooke reported on the competition of Rods *v.* Handlines, held at Leigh, last Saturday, which resulted in favour of rods. Seven members fished on each side, and as the rods won, the members who took the best five fish, second best, and third best, on that side, won the three prizes. They were Messrs. Allen, Dippie, and Norman, in the order named. The total weight of fish caught was 207lb., chiefly flounders and dabs. A vote of thanks to Messrs. Norman and Fosbrooke, for having made the arrangements for the match, was agreed to. Mr. Gilbert reported on the competition which had taken place that day (Tuesday), at Windsor. Mr. J. W. Hearn took the first prize with a roach of 1lb. 1oz., and Mr. Gilbert a prize offered by himself, which he generously re-offered for a future occasion. A large quantity of small roach were taken and returned. Mr. C. Bently presented the society with a black-board and easel for the use of lecturers. Mr. Allen reported having taken sixteen roach at Caversham; Mr. Gilbert, 10lb. of roach from the Ouse; Mr. Young, six codling at Deal; and the Rev. E. Meyer, roach at Brundall. Two new members were proposed. Mr. C. S. Bentley then read an excellent paper on "Fish as a Symbol," illustrated by drawings, and discoursed most learnedly on his subject, which was highly appreciated by a large meeting. It was proposed by the Rev. E. Meyer and seconded by Dr. Brunton, that the paper be printed, which was carried. A smoking concert will be held next Tuesday, the 17th inst., at eight o'clock, when it is hoped there will be a good attendance of members and friends.—JAMES TAYLER, sec.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On the 8th inst. several of our members were out for a pegged-down at Chelmsford, for five prizes, but only two were taken—viz., Messrs. Hunter and Rider, with perch, one singular coincidence being that both fish were exactly the same weight. Mr. Saalfield also had a nice show of roach and dace.—W. FENNER, sec.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—We have had a good show again. Our members were well on the war-path this week. Mr. Glover, with a good show of roach, 6lb., and a good show of chub, heaviest roach, 1lb. 5½oz.; also Mr. Gehrling, some handsome jack; and on the 8th inst., under most unfavourable weather, sixteen of our number fished for four prizes at Pangbourne, the first being taken by Mr. Shaw; second by Mr. Rutherford; third by Mr. Dash; and fourth by Mr. Giles; Messrs. Burton, Wymer, and Ball also weighing in.—J. T. GRIFFITHS, sec.

Hounsfield Otters.—The present season, I regret to say, has not hitherto proved very successful, and our amended scale of sizes, of course, operates somewhat against gross weights. Nevertheless, on the 1st inst., Mr. Henry Liddle had a pretty little jack of 6lb. 9¼oz., and another over 21in. (this is our limit), from Flander's Weir; and J. Bullworthy, one, from the Rye House. On the 8th, however, Mr. J. Hales quite eclipsed these with one of 9lb. 4¾oz. from the first-named water, and this fish has, I understand, been entrusted to Mr. Cooper for preservation by Mr. Green, the landlord of the Pike and Anchor, Ponder's End; so, doubtless, ere long it will be on view again, as it was on Nov. 8 at that well-known fishing resort. On the same date, Mr. W. Jones weighed in a jack a trifle over 3lb.; while Mr. S. Smith had three roach of 2lb. 12oz.; Mr. W. F. Liddle, roach and dace; Mr. F. Ashmore, roach; and Mr. C. Lane, roach. On Tuesday last, Mr. Pettipierre showed about 6½lb. from the Thames, amongst them being a chub of 2lb. 13oz., and a roach of 1lb. 3oz. I have much pleasure in announcing that our annual smoking (programme) concert, in aid of the Anglers' Benevolent Society, will take place at our club-house, the King's Head, Lower Edmonton, on Wednesday, the 2nd December, when anglers and friends will be cordially welcomed. We are promised support from a host of talent, and hope to make the affair a grand success.—F. S. T.

Hoxton Brothers Angling Society.—The members fished for thirteen Christmas prizes at the Rye House, on the 8th, eight only being won, all with perch. The quarterly general meeting will take place on Tuesday evening next, Nov. 17, roll-call at nine o'clock sharp. Members will oblige by their attendance on business of importance.—R. GHURNEY, sec.

Independent Brothers Angling Society, Three Doves, 21, Berwick-street, Oxford-street, W.—On the 1st instant, Messrs. Pain and Pope weighed in roach, dace, and gudgeon. On the 5th instant, Messrs. Hansford and Gray were elected working members of this society. On the 8th instant, Mr. Pope weighed in roach—just saving us from a blank; several others were out but had no luck. I wish to inform members that on Thursday last, Mr. Edward Watkins brought up two silver-plated cups under glass shades as prizes from himself and wife, as a substitute for the money prizes promised by them. The best thanks of the society are due to them for their handsome contribution, which we all appreciate. They will be given for the best and second best roach, taken from the Thames; bank only. One member not allowed to take both.—SNAP.

Islington Angling Society, Jubilee House, Hornsey-road, N.—There will be a microscopical evening on Tuesday next at eight o'clock, when Mr. C. S. Bentley will exhibit various subjects.—C. DOWNING, sec.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—The match at Cookham was a success; six prizes out of seven were taken. The following weighed in: Mr. Croker, first, 7lb. 9½oz.; Mr. Blackman, second, 5lb. 5oz.; Mr. Holder, third, 4lb. 15½oz.; Mr. Leach, fourth, 1lb. 15½oz.; Mr. Wilsher, fifth, 4lb. 5¾oz.; Mr. J. H. Herbert, sixth, 9oz.; Messrs. Herbert and W. Stretch; all with roach and dace.—J. H. HERBERT, sec.

Izaak Walton Angling Society.—The half-yearly distribution of special prizes will take place on Wednesday evening next, the 18th inst., on which occasion the members will have a supper. Those members who intend being present at the supper will please send in their names not later than the 15th inst. The supper will be served at 8.30 precisely. The members competed for a series of Christmas prizes on the 8th inst., only two members succeeded in taking the required weight (Messrs. H. Butt and T. Harris being the successful ones). The remainder are to be fished for on Dec. 20; competitors may choose their own fishing waters. Messrs. Henry, Harry and Daniel Auburns, weighed in perch. There are also a series of Christmas prizes to be fished for on Wednesday next, 18th inst., between Burnt Mill and Harlow; towing-path only. If not taken on the day named, to be fished for again on the Wednesday previous to Christmas Day. Mr. J. McDermott was unanimously elected to serve on the committee of the Society for Promoting the Reading of Papers at Angling Clubs.—H. B.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—The committee have arranged the following competition—namely, for the heaviest gross weight of fish weighed in from the 1st November until the 6th January, 1892, first prize value £3 3s; second heaviest ditto, value £1 1s.; third heaviest ditto, £1 1s.; all fish to be weighed in at the club-house. A pegged-down competition to take place on the 22nd, first prize, £1 1s.; second prize, 10s. 6d.; for further particulars apply to the secretary. The following members have weighed in during the week: Messrs. Master, roach and dace, 22lb. 7oz.; Hollyman, roach and dace, 7lb. 12oz.; Delevante, roach and dace, 5lb. 8oz.; Carter, roach, 3lb. 2oz.; T. Salter, roach, 2lb. 13oz.; H. Salter, roach and dace, 1lb. 15oz.; Newcombe, roach and dace, 2lb. 14oz.—T. SALTER, hon. sec.

Leeds Golden Fleece Angling Society.—On Wednesday evening, Nov. 11, Mr. Francis M. Walbran delivered a lecture, entitled "The Four Seasons of Angling," before the members of the above society. Although the night was very wet and stormy, about fifty of the members and their friends attended. The chair was occupied by the president, Mr. Leah. Mr. Morgan proposed, and Mr. Wright seconded, the proposition that a vote of thanks be given to the lecturer, which was carried out with musical honours. Mr. Walbran briefly responded, and the remainder of the evening was spent in harmony.—T. HUNTER, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On the 8th inst. several members were out, and some good fish were shown by the following: Messrs. Johnson, Belton, Nelson, Watling, Stanton, Webster, J. White, and W. White, roach and dace. I hope to see a good muster at our next meeting, to arrange our Christmas outing.—W. WATLING, sec.

Liverpool Angling Association, Bee Hotel, 5, Queen's-square, and 18, St. John's-lane.—Our first social for the winter last week was well attended, and a pleasant and enjoyable evening was passed. Mr. A. H. Mason occupied the chair. Our next social, on December 3, already bids fair to be a great success, members and friends on all sides promising their assistance and to be present. At the ordinary weekly meeting on the 5th inst., one new member was duly elected, and an instruction passed that a notice will be put up in the hut at Knowsley prohibiting members from using the tackle of others without express permission.—RD. WOOLFALL.

Liverpool East End Friendly Angling Association, 150, West Derby-road, Liverpool.—We were saved from a blank on the 1st instant by Mr. T. C. Segar, weighing in roach, taking first prize. I hope all members will be present at our next meeting, on the 24th, to decide about a supper. It being the first year of this society it is to be hoped it will be a success.—T. C. SEGAR, sec.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 8th inst. our members were at various stations on the Thames. Mr. Milburn weighing in 10lb. 2oz. of fine roach; Messrs. A. Clark, W. Pearce, Samson, Penfold, Gray, and Bartlett having some nice shows of roach, some of them weighing over 1lb.—W. F. PEARCE.

New Albion Piscatorials, Duke of Kent, Old Kent-road.—The next competition—an open one—will take place at Windsor, on Thursday, November 19; bank or punt; no one to go down on the morning in question before the 7.35 a.m. train.—A. E. BALDWIN, sec.

North Lambeth Angling Society, 108, Westminster Bridge-road.—A few of our members were out on the 8th inst., and we were saved from a blank by one member weighing in jack. The Christmas prizes will be finally decided on November 29. Election of delegates will take place on the 15th inst.—F. WALLIS, sec.

North London Angling Club, Tap House, Holloway.—We took our return visit on the No. 2 Eastern District last Monday, and I am happy to say that it was a success, our room being crowded, so that we had to make use of our spare room. On the roll being called nineteen clubs responded, to whom, on behalf of the North London, I return my sincere thanks; also that we shall return the compliment. The harmony was good, and plenty of it, being kept going until our worthy host called time. On Nov. 8 we had a few fish weighed in. The next visit will be to the St. John's, of which Mr. Thorling is secretary, and I hope that he will be well supported on the occasion.—H. STRETCH, hon. sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland-park, N.W.—We have had our trays well filled by the following members: On Nov. 5, Mr. Billings weighed in 20lb. of roach; Mr. Schultz, jun., 22¼lb. of roach, also chub and perch; and again on Nov. 8, Mr. Billings, chub and roach, 9lb. 13oz.; Mr. Schultz, jun., roach; Mr. W. Ward, roach; Mr. Pritchard, roach; Mr. Goodman, roach; and Mr. Harris, three jack; being a grand show of fish, considering the weather. Last Thursday, Nov. 12, was half-yearly night; all members not having been heard from will receive notice, as per Rule 7.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—On the 8th inst., we had a very respectable show of fish put on our trays by the following members of our club—viz.: the Messrs. Forster, roach and perch; Neville, perch; Harrison, perch; Bygrave, sen., roach and dace; and Bygrave, jun., jack; altogether upwards of 21lb.—J. CUTHBERT, sec.

Peckham Brothers Angling Society, Prince Albert, East Surrey-grove, Peckham.—Our anniversary supper turned out a splendid success, forty sitting down to the supper, which was provided for by our worthy host, Mr. Reed, who also took the chair. After the supper a very nice concert took place. Members will please not to forget that an open match takes place on November 15.—E. A. FAUTLEY, sec.

Prince of Wales Angling Society, the Globe, Lisson-grove.—On the 1st inst. Mr. Robbins credited us with a nice show of roach, weighing 10lb. 13½oz.; Messrs. Clist and Hayden also having fish. On the 8th inst., Mr. Porter, roach, 9lb. 6oz.; Messrs. Hayden, Brett, Robbins, F. Reed, and Ivermee, having fish. I have received tickets for the competition at Rye House, on the 15th inst., and shall be at the station to supply members with the same.—W. BOWYER, sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The next on S.L.U.V. List comes to us on Tuesday, the 17th inst., when I hope to see a roomful. Secretaries that have not received notice will take this as such. Our supper on the 11th was a success. About thirty sat down, when a most enjoyable evening was spent. The following members weighed in on the 8th inst.: Messrs. T. Lines, roach, dace, and gudgeon; P. Martin, roach, dace, and gudgeon; J. Wigley, roach; Tidmarsh, roach; F. T. Lamberton, roach; and W. Lamberton, roach.—F. T. LAMBERTON, sec.

Royal George Angling Society, Queen's Arms, Bateman-street, Soho-square, W.—We fished our outing on the 8th inst. at Marlow with very good results, Messrs. Trotter, Hughes, Holder, Webber, Longland, Flegg, and Cavers being the successful competitors in the order named. Our next outing will be for the Christmas prizes, when full particulars will be duly announced. Our smoking concert took place on Wednesday, the 18th inst., and proved a decided success, thanks to our worthy host and brother (Mr. Galloway).—F. C. LONGLAND.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—Result of the fishing competition at Staines on the 8th inst.: Mr. J. T. Wright, first; Mr. Walls, second; no other prize taken. The remaining eight prizes will be fished for on the 22nd inst., at Chelmsford, roving from the Pontoon to the Old Mill at Barham. Go by the first train from Liverpool-street, and return by the 7.10 train from Chelmsford. We hope to have better sport than we had at Staines.—J. WRIGHT, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—Only a few members were out on the 8th inst., when the following were successful: Messrs. J. Petrie, roach, 13lb. 15¼oz., one fish, 1lb. 3oz.; G. Sander, roach, 4lb. 15¾oz.; E. Wright, roach, 1lb. 14½oz. On November 15, four prize will be fished for at Bourne End; all members to go from Paddington only on the morning; two rods allowed; members to fish between Bourne End railway bridge and Marlow Lock; and all to return from Bourne End only. Members are requested to attend on Tuesday next.—S. E. CANE, sec.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—A competition has been fixed for the 29th inst., to take place between Temple Lock and Cookham from bank or punt. Members intending to compete are requested to send their names to the secretary at an early date. Mr. Josiffe weighed in a well-conditioned jack of 6lb. 6oz. from the Thames. It being the first time he has ever fished, he was congratulated by the members present on his success; 3lb. 12oz. of roach and dace have been credited to the President's account. I am pleased to report the continual increase of members.—C. B.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden.—On the 8th inst., although a great many of our members were out the sport was indifferent, only the following weighing in: Messrs. O'Callaghan, jack; Smales, roach; Frank Griffin, and Williams, dace; the largest dace weighing 8oz. being taken by Mr. Williams.—PELICAN.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—The only members weighing in on the 8th inst. were Mr. T. Jones, jack; Mr. H. Spenceley, dace. Notice to members, we fish Teddington on the 22nd November; members can go by any train same morning; show fish at the lock at five o'clock.—R. SPENCELEY, sec.

South London United Anglers' Visiting List.—The next visit on the above list will be to the Rodney Angling Society, held at the Rising Sun Tavern, Harper-street, New Kent-road, on Tuesday, the 17th inst., and as this society is always well represented at every visit in the South of London, and also at several visits in other parts of London, I trust they will be as well supported as they deserve.—A. CONN, hon. sec.

United Brothers, Deptford.—Several members were out on the 8th inst. for the remainder of the given prizes, Mr. W. Tyler being the only successful member, taking the sixth prize with roach. The following members weighed in who did not fish in the match: Mr. W. Windred, roach; Mr. H. Freame, roach; Messrs. Cockerton, Marshall, and Drage weighed in roach. The members of the above will fish a jack and perch match in the Medway, on Nov. 22, for several money prizes.—H. TYLER, sec.

Walham Green and Fulham Angling Society, the Stamford Arms, Fulham-road.—Mr. Power was duly elected a member at the last meeting. On the 8th inst. our members fished at Staines for a tripe supper, and the same will take place on Wednesday, the 25th inst., when all members who would like to be present are requested to send in their names by Wednesday. We shall be pleased to see any member of any other club. Tickets two shillings each.—E. SUTCHALL, sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—Result of last competition: Mr. Smith weighed in roach, taking first prize; no other prize taken. It was carried that our next outing be on Wednesday, Nov. 18; open punt or bank. Our first smoking concert of the season came off on Wednesday last, and was a great success, our old esteemed friend (Mr. H. Charik) in the chair, and Mr. W. J. Crisp in the vice-chair; pianist, Mr. H. A. Sutch; Mr. Lovegrove and pupil, mandolinist and banjoist; Mr. J. Martin, violinist; Mr. Smith, reciter.—R. B.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 8th inst., Mr. F. Barnes weighed in roach and perch, the largest roach, 1lb. 3oz.; largest perch, 1lb. 8½oz.; Mr. P. Marten, jack and roach; Mr. W. Gordon, roach and dace, 5lb.; Mr. Cooper, barbel. Mr. A. D. Kidd has given an oil painting for largest jack during the season, and another oil painting to be decided by members how it shall be fished for.—R. J. DARTNALL, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—We had a few fish on the 8th inst. by the following members: Messrs. Frances, bream and roach; Smith, roach; and Anderson, roach. I hope members will attend, as we have several prizes to fish for.—W. M., sec.

Western Piscatorials, Bear and Rummer Tavern Mortimer-street, Cavendish-square, W.—On the 8th inst., several of our members were out, and good takes of jack, dace, and roach was the result. Mr. Schmidt alone weighed in 21lb. of jack; and Mr. Garrod's dace is the largest of the present season up to date. We hold a smoking concert next Wednesday, 18th, commencing at 8.30 sharp, and we trust members will attend with their friends in good force.—T. W. EVANS, sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on the 8th, and I am sorry to say we have to return a blank. I wish to inform our members that it has been decided at our meeting to have a pegged-down match at Whitham, on November 29, for five prizes.—R. LOWTHER, sec.

Ye Pluckie Perche Piscatorial Society, the Earl Derby, King Edward-road, South Hackney.—The usual weekly meeting was held on Wednesday, the 11th instant, Mr. Munro, in the chair, when it was resolved to hold a special meeting on Wednesday, the 25th instant, at nine o'clock sharp, to consider urgent and very important business, and all members are earnestly requested to attend, in the interests of the society.—H. RICHARDSON, hon. secretary.

CLUB FIXTURES.

Nov. 15.—Competition at Rye House, in aid of the Anglers Benevolent Society.

Nov. 16.—Central Association visit to Anchor and Hope, Canal-bridge, Old Kent-road.—Clerkenwell District visit to Islington Brothers, Myddleton Arms, Canonbury-road.

Nov. 17.—Anglers' Association, Southern District visit to Bermondsey Brothers, Pitt's Head, Grange-road, Bermondsey.—Smoking Concert at Gresham, Mason's Hall Tavern, Basinghall-street.—South London United visit to Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.

Nov. 18.—Distribution of Prizes at Izaak Walton, Old King John's Head, Mansfield-street, Kingsland-road.

Nov. 20.—Meeting of Society for Promoting the Reading of Papers at Clubs, The Citizen, 70, Houndsditch.

Nov. 23.—Paper at Causton, Coffee Pot Tavern, Warwick-lane, City, by E. S. Shrubsole. Subject: "Fly Fishing for Chub and Dace." Chairman, H. J. Tibbatts.

Nov. 26.—Paper at New Albion, Duke of Kent, Old Kent-road, by J. Tayler. Subject: "The Humane Angler." Chairman, W. F. Grimmett.

Nov. 30.—Paper by G. H. Howard, at St. John's, Skinners' Arms, Coburg-street, Clerkenwell. Subject: "An Amateur's Experiences." Chairman, H. J. Tibbatts.

Dec. 1.—Paper by E. S. Shrubsole, at Good Intent, Crown Inn, Church-street, Shoreditch. Chairman, H. J. Tibbatts.

Dec. 7.—Paper by G. E. Simms, at Epsom, Wellington, High-street, Epsom. Chairman, E. S. Shrubsole.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, NOVEMBER 14, 1891.

FISHING BASKETS, BAGS, AND CREELS.

In spite of the unpropitious weather, the large hall at the Queen's Hotel, Battersea Park Town, was crowded on Tuesday night by London anglers to hear Mr. E. S. Shrubsole's lecture on "Fishing Baskets, Bags, and Creels." As president of the Society for Promoting the Reading of Papers among Angling Clubs, Mr. R. B. Marston (Editor of the *Fishing Gazette*) took the chair, and anglers were present, not only from north, south, east, and west London, but from Eton, Canterbury, Kingston, Redditch, and Brighton. Those supporting the chairman included: Mr. T. R. Sachs, Piscatorial Society; Mr. T. Crumplen, Piscatorial Society; Mr. R. Holt, Flyfishers' Club; Mr. Thornton, of Canterbury; Mr. Cyril .E Hodgson, *Rod and Gun;* Mr. B. R. Bambridge, of Eton; Mr. E. S. Browne, Mr. T. Keeble, Causton Angling Society; Mr. A. Meyer, of Redditch; Mr. J. P. Conellan, Clapton; Mr. E. Holbron, Mr. W. Burkitt, Earlsfield; and Mr. G. Mumford, secretary of the Battersea Friendly Angling Society, who had kindly placed their capacious club-room at the disposal of the S.P.R.P.A.C., under whose auspices the meeting was held. Several letters were received from other well-known anglers regretting their inability to be present. To illustrate his lecture Mr. Shrubsole had an exhibition of upwards of one hundred fishing baskets, bags, &c., that have been lent to him by anglers from all parts of the United Kingdom, and these were displayed at one end of the room on a large stand. It may be safely said that never in the history of the angling world had such a collection of baskets and creels been brought together, and intense interest was manifested in the "show." The collection was as remarkable for its varieties in shape as it was for the different materials of which the bags, creels, and baskets were made, the exhibits comprising specimens of the above-mentioned articles in tin, wood, wicker, and waterproof-cloth. Additional interest was added to the collection by the fact that several of the creels had been in use for half a century. There was the favourite creel of "Dickey" Routledge, a once famous Cumberland fly-fisherman, and Mr. E. M. Tod's creel was also to be seen on the stand. As may be imagined, the audience spent a considerable time in the inspection of the exhibition, and "Routledge's creel," upon which the scales of fish were still discernible, was passed reverently from hand to hand. The lecturer, who met with a very hearty reception, dealt with his subject in a most exhaustive and practical manner. His description of the various exhibits and the happy vein in which he delivered the lecture held his audience interested to the end. Although we noticed that several tackle makers were present, we are somewhat surprised that they were not there in greater numbers, because there is no doubt that not only was the collection of considerable interest from a trade point of view, but must have been of great value to those interested in the manufacture of tackle. We shall be surprised, however, if, on future occasions, the fishing-tackle manufacturers do not attend in larger numbers.

The proceedings opened with an excellently played pianoforte solo by Mr. Curtis, after which

The Chairman, who was received with cheers, addressed the meeting. He said they had been called there under the auspices of the Society for Promoting the Reading of Papers at Angling Clubs. He believed that Mr. Shrubsole, who was to lecture to them that evening, had done a great deal towards organising that society and towards promoting the reading of papers on angling topics—(hear, hear)—and he (the chairman) thought that Mr. Shrubsole's work had been recognised in the clubs as being a work that had done a large amount of good. (Hear hear.) The fact that the society had received promises from many gentlemen to read papers on numerous subjects appertaining to angling proved, he thought, that the society was being supported in the right way. (Hear, hear.) He thought the society's papers would result in a great deal of good being done, especially in the winter time when anglers had no evening fishing to engage their attention. He was glad to notice that both Mr. Walbran and Mr. Cummings had promised to deliver lectures for the society. (Hear, hear.) With respect to Mr. Cummings, he was a great salmon and trout fisherman. He had lately been fishing in Norway, and he felt sure that his lecture would prove highly entertaining. Mr. Walbran, in his opinion, was certainly one of the best trout and grayling fishermen in the North. As recently as last week, when fishing a Hampshire stream, he, although the river was in flood, killed fourteen grayling weighing 28lb., and in addition a grand fish 3lb. 9oz. (Cheers.) The grayling was taken on fine roach tackle and a very small roach hook. Coming to the creels and baskets collected by Mr. Shrubsole, he (the chairman) could assure them that such an exhibition had never been brought together before in this country. He was quite astonished with the variety of the articles, and he felt sure what the lecturer would have to say about them would be most interesting. (Hear, hear.) The chairman then passed on to congratulate the Battersea Friendly Angling Society upon the fact that they were one of the first clubs to raise the standard of fish, and said he was sorry that it was still the practice of many of the clubs to take small fish. He believed, however, that in time it would become the general thing amongst the clubs to have a recognised standard (and a good one) for taking fish, so that the small fish could be put back to grow larger. (Hear, hear.) He also expressed the hope that the London anglers would afford better support to the Preservation Society, and in conclusion he begged to introduce Mr. Shrubsole to the meeting. (Cheers.)

On rising to deliver his lecture, Mr. Shrubsole was very cordially received. He opened by remarking that the subject, upon first thought, might very excusably be considered a dry one, for—

A basket's a basket
And a creel's a creel,
You may depend on 't;
And a bag's a bag,
And you cannot make it more,
And there's an end on 't.

But he had every confidence in being able to convince his audience, before the conclusion of his lecture, that, after all, there was a great deal in it and in conjunction with the exhibition of baskets, &c., which had been so kindly lent him by friends from all parts of the United Kingdom, he hoped that his lecture would prove very interesting and instructive. Mr. Shrubsole proceeded to draw attention to the fact that it had been said that his exhibition of bags and baskets and lecture were only a big trade advertisement. He flatly contradicted that assertion—(hear, hear)—and he protested against the accusation, as it was as false as it was unkind. (Cheers.) The lecturer then, in a very happy vein, drew attention to the fact that during the past few years immense strides had been made in improving the means of carrying an angler's impedimenta and fish, but at the same time he found fault with the shape of the latter-day creels, giving as his cause for so doing the development of internal arrangements. He called attention to a creel over sixty years old, that had been made in Nottingham. This, the lecturer explained, was, in his opinion, a perfect creel, for it was so constructed as to cling to the angler's side. He spoke at some length upon the variety of materials used in the manufacture of creels, and although favouring a wicker creel himself, he acknowledged the many advantages of creels made of tin, wood, leather, &c., and he especially remarked on the advantages they possessed in keeping fish fresh. He mentioned the fact that the Cumberland fishermen swore by the wooden creel, whilst the Yorkshire fishermen thought as highly of a creel made of tin. Where so many high authorities had their own particular fad in the matter, he thought probably that each individual angler had a right to his opinion as well. (Hear, hear.) He certainly plumped for Mr. Tod's wicker creel, with an india-rubber lining, and he expressed his intention of putting his own wicker creel in the same style on the first opportunity. Mr. Shrubsole very exhaustively described the exhibits, and amongst several hints that he gave of material assistance to anglers, was a capital idea of carrying a creel, bag, or basket knapsack fashion, utilising the webbing-strap attached in the ordinary manner. In dealing with the improvement in bags, Mr. Shrubsole particularly praised the latter-day idea of having a fishing bag made, as a mere matter of fact, with two separate and independent receptacle detachable at will—one to carry fish, and in the other for tackles, lunch, and that indispensable article to anglers—the flask. (Laughter.) After some more excellent remarks, the lecturer concluded amid loud and hearty cheers.

In this necessarily brief report of the lecture we cannot do justice to the exhaustive manner in which the reader treated his subject, but as in all probability the lecture will appear in the *Fishing Gazette, in extenso* later on, sufficient has been said for the present purpose.

The Chairman, in proposing a vote of thanks to Mr. Shrubsole, he was sure they would all agree with him respecting the extremely interesting paper on the bags and creels, and the manner in which anglers carried their fish in various parts of the country. Mr. Shrubsole had said that he (the chairman) was strongly in favour of a wooden creel, as doing so much toward preserving the fish, and so he was. But at the same time he thought his friend Mr. Tod's big black creel was the best pattern the fly fisherman could take out with him. He had had one like it for some years, and owing to its being lined with india-rubber, no smell came from the fish whatever. Undoubtedly the wooden creel kept the fish much better than the plain wicker creel, and so did a leather creel, and he experienced that in about the only fishing match he had ever engaged in. It arose through a Yorkshireman declaring that he could take more trout with hair than he could with gut. He used a creel like that of Mr. Shrubsole's; the Yorkshireman's creel was made of leather—and he was sorry he did not see one amongst that night's collection—which kept his fish perfectly fresh. In the course of five or six hours he turned out his fish—he had three times as many trout as the Yorkshireman—but owing to the warm day and the open wicker creel some had rather a dried-up appearance. On the other hand the Yorkshireman's trout were perfectly fresh, but he went home saying that he had taken his fish down with him in order that he (the chairman) could beat him with gut against hair ("oh!" and laughter). Speaking of "Dickey" Routledge's wooden creel he said the Eden fishermen certainly turned out their fish much fresher than the wicker creels did, and the roach in the London anglers' boxes also proved brighter and better looking at the end of the day's sport. As regarded bags he (the chairman) very seldom carried one. He once did in Devonshire when he was lost on Exmoor, but as he had several falls over rocks the 10lb. of trout he had caught were almost converted into a jelly. (Laughter.) Therefore, he hardly thought a bag was the article for a trout fisherman. The Chairman, referring to Mr. Shrubsole's statement that salmon could be carried in a bag, said, that one day when fishing last spring in the Highlands, he killed six splendid fresh-run salmon. As each fish averaged 10lb. or 12lb. a-piece, as they had no bag or gillie, and as they were some distance from home it was a tough job to get them home. However, they slung them over a stick and carried them like the Israelites did the grapes in Canaan—(laughter)—hanging down between them. In conclusion he spoke favourably of a rush-basket like a workman carried his tools in, and said 60lb. of fish could be placed in it, as recommended by Mr. G. M. Kelson.

Mr. C. Earl Hodgson, Editor of *Rod and Gun*, seconded the vote of thanks, and said he had no idea that in all the range of angling such an interesting collection of the almost least necessary implement of their sport could be made. At first he thought the lecture would be somewhat dry, but he confessed that he had been most agreeably disappointed. Those who had read Mr. Shrubsole's articles in the *Fishing Gazette* knew that he had been at some pains to impress upon the London anglers the necessity of contributing more liberally towards the preservation of the rivers from which they hoped to fill the creels, and he trusted they would act on such good advice. (Cheers.) He was, he repeated, greatly surprised at the treat Mr. Shrubsole had given them that evening. (Renewed cheers.)

Mr. Crumplen said Mr. Shrubsole had in the course of his lecture given them many little valuable hints which, he was sure, would be very serviceable to them when they again went fishing. He thought his method of slinging the basket knapsack fashion was an admirable idea.

Mr. W. P. Thornton (of Canterbury), speaking with respect to keeping fish in good condition, said that an angler he knew (Capt. Austin, he was understood to say) wrapped each fish up in a piece of paper as he caught it; which kept them perfectly fresh.

Mr. Sachs advocated a creel without a hole in the lid, as it prevented railway porters from digging their hands into the creel and upsetting its contents when he was seeing an angler into the train. (Laughter.) He further favoured little wooden supports about half an inch thick to the bottom of a creel to protect it from getting damp. He warmly thanked Mr. Shrubsole for the intellectual *conversazione* he had given them that evening. (Cheers.)

The resolution was unanimously carried, and

Mr. Shrubsole, in acknowledging the vote, was received with musical honours. He said that that meeting went a long way to prove that the London anglers would come and listen to a paper being read in their midst. (Cheers.) He had been told that if he endeavoured to promote the reading of papers he should be simply wasting his time; his efforts would not be appreciated; but the enthusiasm and the large audience on the occasion of his friend Mr. Matthews's paper a few days ago at the Amicable Excelsior Club, whose members were working men, showed that the London anglers would attend and were interested in a meeting like the one he had addressed that evening. (Cheers.) He felt sure that the movement was required—(hear, hear)—and he believed that the Society for Promoting the Reading of Papers at Angling Clubs would go on and flourish for many years to come. (Cheers.) Its main object was to promote the reading of papers, and the committee had decided at its last meeting to institute a medal which was to be presented to the member of a club who read a paper. (Cheers) In the matter of reading the papers, he could assure them that the committee would do all in their power to avoid clashing with the visits. (Hear, hear.) In conclusion, he announced that they had papers to go on with for the next three months, and he was sure that the movement was one which was much wanted in their midst. He heartily thanked them for the kind manner in which they had received his lecture. (Cheers.)

On the proposition of Mr. Cyril E. Hodgson, a hearty vote of thanks was also passed to Mr. R. B. Marston for presiding.

During the evening, Mr, Curtis ably accompanied on the pianoforte, and many excellent songs and recitations were given by Messrs. Bradshaw, J. Parker, Johnson, E. S. Shrubsole, G. E. Simms, Bentley, Austin, and Cooper.

Mr. Shrubsole is to repeat his lecture during the winter at several of the London angling clubs.

FISH CULTURE.

THE HOWIETOUN FISHERY COMPANY.—SEASON 1891-92.

[*Extracts from the Report.*]

THE HOWIETOUN FISHERY COMPANY has the honour to report that the number of trout raised last season was largely in excess of any former year. The demand, however, for two-year-olds and yearlings more than kept pace with the increased production.

Two railway vans have been built specially for our traffic, which will considerably facilitate the despatch of large orders.

Three new yearling Loch Leven ponds, estimated to yield forty-five thousand sizeable yearlings annually, have been constructed, also two well-shaded and of extra depth are nearly complete, and estimated to yield about twenty-five thousand fontinalis yearlings annually; and three of the large Experimental Ponds, Nos. 6, 7, and 8, are being altered to rear fifteen thousand additional two-year-olds, which will enable the fishery to dispose of about fifty thousand annually of this favourite size. Next winter some forty-thousand two-year-olds can be delivered. Of these fifteen thousand are already booked, and it will therefore be necessary, to prevent disappointment, to order early, especially as in recent years the demand for these fish has always exceeded the supply.

The important question—What to stock any particular pond of water with, is constantly asked, and difficult to answer in the short space available in a price list. A new edition of the pamphlet on stocking will be issued in December.

A river, lake, or pond, may be stocked successfully, *but in different places*, either by means of ova sown in redds, or by fry, yearlings, or two-year-olds. The difficulty is to judge how the best return can be got for the cost.

If there is any depth of water, by two-year-olds there will always be the safest and the speediest mode of stocking, but in many lakes, and some rivers, the quantity of fish required is so large that, in the interest of due economy, time must be sacrificed, and some mode of stocking cheaper than by two-year-olds resorted to. If there are many small gravelly streams suitable for young fry from alevinage to six months old, and clear water in abundance, then ova sown in redds is undoubtedly the best method; if there are small streams feeding the water to be stocked, but not sufficiently clear to ensure the success of ova sown in redds, then three-month-olds fry are to be recommended; but our experience is that there is no half-way house between *ova* sown in redds and *three-month-olds* fry. Younger fry are too risky; they *may* do, but only where ova would do as well and at half the cost.

Ova will be forwarded to suit the convenience of purchasers in any stage after the eye spots are visible. It is recommended that generally, and especially for redds, ova be forwarded on the point of hatching.

Fry are forwarded three months after hatching—in April and May.

Yearlings vary from two and a-half to five inches from November to June; they are always forwarded over three inches, with perhaps the exception of a very small percentage. The earliest orders obtain the best fish, since the most advanced ponds are dispatched first. It is therefore a mistake to order in May, as, even if there then be surplus yearlings on hand (which is very uncertain), they are the *latest* and not the *largest* fish. If fish are required late in the season, order early and have them reserved.

Two-year-olds run from five to nine inches from November to June; they are always forwarded over five and a-half inches, and are recommended when sport in the shortest possible time is required.

The special price list (which can be had on application) contains our quotations delivered at our cost and risk at any railway station in England or Scotland. The date o delivery to be at option of Fishery, and also the date of re-delivery in case of loss.

The ordinary price list contains the prices on rail at Stirling—for quantities *not less* than those quoted—all further expenses of delivery being charged in addition. This arrangement offers the fullest advantages to customers of any reduction in the estimated cost of delivery, due either to largeness of order, diminution of distance, and favourable weather.

Yearlings are, *par excellence*, the size for general purposes. They are strong enough to find their own food, thus avoiding the principal cause of mortality among fry, namely, starvation; they are easily carried, and stand the journey well; they accommodate themselves with the greatest facility to new water; and they thrive so fast in ponds that they will be found a very profitable investment.

The fishery reserves to itself the right to decline any order.

The difficulty of conveying trout increases with the number of hours occupied in the journey. Intending purchasers are requested to state *their nearest railway station, and the exact distance from it to their water.* From the experience of previous years, it has been found that although there is no difficulty in carrying trout in iced water for any journey not exceeding twenty hours, unless the water which is to be stocked is of a similar temperature, some loss will arise from inflammation of the gills. Trout will therefore only be forwarded in cold weather. The fish are sent by express passenger trains in tanks of two sizes: Forty gallons, weighing between 5 cwt. and 6 cwt.; and eighteen gallons, weighing about 1½ cwt. It is particularly requested that a lorry or other suitable cart be sent to meet the fish on arrival.

Eyed ova are ready in December. The earliest eggs hatch about Christmas. Ova cannot be delivered after the first week in March. Early fry are ready in March. These are the fry of the oldest breeders, and are the best for English waters. May fry are the most suitable for Highland water. Yearlings should be sent to England in January and February; later than this the carriage is much heavier, as a large quantity of water must be carried. Two-year-olds are ready by the middle of November, and can be safely transported after the first fall of snow at the Fishery.

All communications to be addressed—

J. R. GUY, *Secretary,*
Howietoun Fishery, Stirling.

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add	30 min. for Chelsea.	Add	55 min. for Kew.
	40 ,, ,, Putney.		75 ,, ,, Richmond.
	45 ,, ,, Hammersmith.		80 ,, ,, Twickenham.
	50 ,, ,, Barnes.		85 ,, ,, Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

English and Welsh Reports.

Lower Thames.—GENERAL REMARKS.—The grand old river has been once more in condition, and the anglers have been well in amongst the jack and roach, the latter if not taken in very large quantities have been distinguished for their size and quality. The great regard which of late years has been paid to the return of small fish has without doubt tended to this result; and this was found to be the case when action was first taken about a quarter of a century ago to prevent "the slaughter of the innocents," each year afterwards the fish considerably improved in size and afforded better sport for the anglers. On this question the late Mr. Francis Francis at that period gave it as his opinion, the taking of larger and better fish had resulted from the systematic examination of takes, and the return of unsizeable fish, which he so frequently had suggested in the columns of *The Field*. It is far better to take six dozen of fine roach, than a mixture of three times that quantity, with the great bulk under the Thames standard. In this week's returns there are several takes of the number stated and in each instance described as "fine roach," many being three-quarters of a pound to over one pound each. There can be no question of doubt as to the river in all portions being well and amply supplied with roach and dace; and for general angling, those fish are the most popular in the requirements of the great body of anglers for sport, and as such ought to be the best protected and preserved. The silvery dace of the Thames which my old friend Mr. T. R. Sachs and myself took to the Southport Aquarium years ago, were regarded by the visitors unacquainted with that specie as silver herrings; and in the clear ponds in the Home Park, I have heard them put down as herrings by the holiday folk frequenting Hampton Court Palace. Each season of late years in speaking of their size, the fishermen compare them to the size of herrings. I am glad to find the great run of water has brought up the lamperns again to Teddington Weir, as it is a long time since the fishermen have had a really good harvest with them. As regards the jack it will be seen in the angling results some fair sport has been obtained, and the fish of a good size in capital condition. It is to be hoped the boisterous weather of Wednesday will not be of long duration.—B.

RICHMOND.—Job Brain, in four days, 70lb. of roach and dace, and Henry Mansell, in three and a half days 40lb. of roach and dace, and a couple of bream.

TWICKENHAM.—C. Brown in three and a-half days, 36lb. of roach and dace, and two bream; Samuel Cole in two days, thirteen dozen of roach and dace. Richard Coxen in three days, 47lb. of roach and dace, three bream and one barbel. John Coxen, sen., has been making an average of seven dozen of roach and dace each day. George Coxen in three and a-half days, 52lb. of roach and dace; John Frost in four days, 56lb. of roach and dace and four bream; Pert Hammerton in two days, 44lb. of roach and dace, four bream, and a carp of 3¾lb.; W. Holder in one day, four dozen of roach and dace; Richard Meffatt in three and a-half days, 42lb. of roach and dace and three bream; John Spong in six days, 123lb. of roach and dace, and seventeen bream; and F. Wiggins in three days, 30lb. of roach and dace.

TEDDINGTON.—W. McBride in two days, four brace of jack, the largest fish 8¾lb.

KINGSTON.—John Knight in two days, twelve dozen of roach and dace, and four chub. N. Bolton in two days, ten dozen of roach and dace; John Johnson in three days, eighteen dozen of roach and dace.

HAMPTON COURT.—William Milbourne reports: "Fishing with Mr. Leary and friend, one day six dozen of very fine roach, some of them three quarters of a pound each another day with Mr. Fisher, three jack, the largest 6lb.: James Hedger in four days, 20lb. of roach and dace; Thomas Milbourne in two days, ten dozen of roach and dace. A gentleman, fishing in his own punt during the week, twenty dozen of roach and some fine perch. The tank anglers on Tagg's Island have been making some fine shows of roach. After the heavy flood it has brought a great quantity of roach into Hampden Deep, you can see them priming in the evening from one end to the other."

SUNBURY.—Edward Clarke in his takes during the week has found eighteen brace of good perch; A. King in two days thirteen dozen of roach and dace.

SHEPPERTON.—George Rosewell has been out two days; the first day with Mr. G. W. Ellis, seven jack weighing 31lb, the largest 9¼lb., and the second day with Mr. J. Pike, four jack weighing 17½lb.

CHERTSEY.—John Poulter in one day, eight dozen of roach and dace; L. Hackett in one day, four and a-half dozen of roach and dace and one jack; and R. Gonse in one day four dozen of roach.

STAINES.—John Keene, jun., has been out four days; the first day with Mr. Dyer, five dozen of roach, the largest weighing 1lb., the second day with Mr. Mackrell six dozen of good roach; the third day with Mr. Newbury, four dozen of roach and six chub; and the fourth day with Mr. Gambler and friend, six dozen of fine roach, several of the roach weighing over 1lb. each.

Upper Thames.—The river—which had got into splendid winter angling trim—has again been seriously disturbed by the heavy rain storms of Tuesday and Wednesday, and has risen some 12in. in the last twenty-four hours. The land is so saturated, and the ditches so full, that the slightest rainfall has an immediate effect upon the condition and height of the river. Jack have lately been in the ascendant with a vengeance, some 2cwt. in two days having been had in the Henley district, and over 1cwt. in the Marlow Waters, two best fish in the latter place going 14lb. and 18lb., taken by Mr. Dimmock and Mr. Wood, and a reputed nineteen and a-half pounder by an unknown angler. Weather this (Thursday) morning fine and frosty, and if such continues the river should again be in good order for next week.—MARLOW BUZZ.

Thames (Windsor).—Just as water here was in capital condition, heavy rains have fallen, and at time of writing it is again much discoloured, and good only for worm fishing. Prospects for the jack fisher were very good, one angler, Mr. Bentley, of Windsor, had in a very short time three good fish, each weighing over 5lb., 8lb., and 9lb.; Mr. Short, of Spital, Windsor, also had a nicely-shaped fish of 5lb. 10oz. Many barbel have been caught, as many as twenty being had by bank anglers last Saturday from the Windsor Weir stream. The veteran angler, Carey, of Windsor, had during the week ten barbel, besides a number of roach. The Windsor and Eton Angling Preservation Society will net the outlying waters on or about the 13th inst.—B. R. BAMBRIDGE.

Ancholme District.—Visitors, like the swallows, have departed, and fishing is confined to hardy locals. A few small pike were taken on Monday and Tuesday in the upper waters, but thus far the big fish have not yet begun to feed. The water is well stocked, but it is in contemplation to add a king carp this season.—THOMAS FORD.

Arun (Pulborough and Amberley).—Angling on this river has been rather quiet lately, but a few good baskets of roach and bream have been had. The water at the beginning of the week was in prime order for roaching, but it is feared that Wednesday's heavy rain will interfere with it. I hope to hear of some pike being got soon.—GOOSEQUILL.

Cambridgeshire, Norfolk, and Suffolk Rivers—Splendid weather; water excellent colour, and everything in favour of the angler. I had a good turn at Brandon, on Friday, in company with Host Rolph and friend Carter (both very good fisherman). We fished hard until two o'clock and caught thirteen fish only; suddenly they came on, and for an hour we pulled them out as fast as possible (really good fish), bagging over 14lbs. They went off just as sudden as they came on, and not another fish did we get. The next day we both took about 15lb. Roach are well on at Littleport. Adelaid Bridge on the Ouse, about four miles below Ely, is also a good place now for roach all the way along the branch. Where the river Lark runs into the Ouse excellent swims all the way from the Yare, at and below Norwich in the deep water, fish are feeding well.—WILLIAM HOWLETT.

Chichester Canal and Sussex Rivers.—Since writing my last letter a marked change has taken place in the condition of the rivers. The floods have subsided, and the water is again within the banks, and in good condition. After this clearance fish should feed well, and anglers take advantage of the change. Some good roach are reported as taken from the Arun, in the Pulborough district; also from the Rother, near Fittleworth. The Adur has been patronised with success, several good roach and dace, and a few flat-fish have been taken. Chub are said to be numerous in the Isfield district of the Ouse, and a few fish up to 2¾lb., also a few good roach. Pike are not feeding well at present. A severe storm swept over the south on Tuesday night—a gale of wind with a perfect deluge of rain. The tide of Wednesday morning was exceptionally high at Chichester harbour, sweeping over the banks in the Birdham district. The canal at Chichester is in excellent order. A few good bream have been taken, and roach up to ¾lb.—GEORGE F. SALTER.

Douglas (Isle of Man).—As the river season is over, most of our local anglers are turning their attention to the allotment of the numerous and valuable prizes, numbering some fifteen, which in every instance have been presented. Some of them are gems, particularly two pictures, one presented by Mr. Colquhoun (vice-president), and the other by Mr. W. H. Claus, of Manchester. Sea fishing is very fair. Pollack and coal-fish still afford the amateur plenty of good sport, and have improved in size. Best baits: Mussel and worm, when at anchor; rag-worm when whiffing.—STORMY PETREL.

Dove and Tributaries.—Had good fishing weather up to the night of the storm, and some good bags have been made; notably one by Mr. T. Holmes, of Braelsford, who fished the Dove just below Rochester. River is fining down fast, and will be in good trim by to-morrow (Friday).—D. AND W. H. FOSTER, Ashbourne.

Eden (Carlisle).—Within the last seven days about one hundred and eighty salmon are known to have been killed with the rod. I question whether such sport has ever been experienced in the Eden before, and the fish have been extra good in quality. Among those anglers who have had more than one in a day are Colonel Sharp, Messrs. Catherall, T. Beck, Sayers, Widdar, R. Bone, Eustace Hills, W. Robinson, Henderson, Shearer, J. W. Hills, MacInnes, D. Ellwood, Sandeman, Borwick, Mackenzie, T. Bird, T. H. Hodgson, T. Robinson, Bridges, Hathest, J. Brown, S. Wright, Maude, Barlow, D. Ellwood, J. Fox, and Davidson. The heaviest fish 44lb. was killed in the Cargo Water, by Robert Bone; and the greatest number in one day was reached by Mr. Henderson and Mr. T. H. Hodgson, who each landed five. The river is to-day (Wednesday) in flood, and if there is any more rain it is doubtful whether it will be in order again before Saturday, on which day the season closes. I hope the Watching Committee of the Eden Conservancy Board will rise to the occasion and not hesitate to put on such extra bailiffs as are necessary for the protection of the immense number of spawning salmon in the different rivers.—SILVER-GREY.

Fen Waters (South Lincolnshire).—The gale has prevented anything like decent angling since Monday, but the weather has again moderated, and by the end of the week the waters should be in good trim again. Last week was very favourable for bottom fishers, but it was decidedly too mild for good pike to be banked. A few fairly good ones were taken, but majority was only small. Perch were pretty easily taken in some of the drains last week, and there were a number of tench taken; but roach are difficult to get hold of in most places. The Fortyfoot, near Donington Bridge is still a good place for bottom fishing. The bait taking best at this season is probably brandling worm, but gentles are still all right for roach and dace.—LIMPET.

Idle (North Notts).—The weather has been too stormy for anglers to try the grayling waters this week, but, from what I hear, they may be pretty easily taken when conditions are favourable if anglers will only try for them. I should imagine the present the best time of the whole year for them. Last year at this time the frost had become severe, and fishing was about over. This year the month is mild, with the nights getting cold, and the fish will doubtless be bottom feeding, consequently they should be got with brandling or cockspur worm floated near the bottom. Chub may be got out of some of the holes in the same lengths in the same way. But for the gale, roach fishing might have progressed as usual; last week some of the locals did middling, but most of these experts are going lower down the river for pike, which, however, run small.—L.

Lake District.—Without rain for the past fortnight the waters in the district have again run low, though to-day (Wednesday) rain has fallen continuously and made the prospect for the closing week a bright one. The takes reported are generally good.—WESTMERIA.

Lea.—To-day (Thursday) there is an immense volume of water pouring down the main stream, whilst the marshes are covered for miles. This will preclude angling in the old Lea for a few days, but the water soon runs down, and this, the second flood of this season, will have a most beneficial effect in clearing away all obstructions in the shape of weeds and rubbish, more especially as the late frosty nights have killed the former. I fully expect that sport will greatly improve as soon as the river regains its normal condition. I am, of course, only speaking about the objectionable state of the water in connection with the old river, for the navigation canal is in very fair fishing condition, and is likely to continue so, so that the great angling competition at Rye House, which is to take place on the 15th, is not at all likely to suffer through the water being out of condition. I hear of a pike of about 9lb. having been taken from the association water at Flanders Weir; this is good news, as captures of heavy fish from this part have been few and far between lately. At Cook's Ferry, four jack and a few roach have been taken. At Game's Fishery, Higham Hill, several nice jack have been brought to bank. At the Ferrie Boat, Tottenham, but few anglers have been out lately, but some decent sport has been had: Mr. H. T. Haslewood has had three jack, from 3½lb. to 6¼lb., and tells me that he is on the track of a monster, the whereabouts of which he has ascertained. Thursday evening.—Weather more settled, and water rapidly falling.—SPLICED JOINT.

Leicester.—Fishing at Leicester continued good untill the storms of Wednesday, which had the effect of greatly disturbing the waters. On Thursday the floods were out again above the town, and the rivers and streams were of heavy colour. Previous to the heavy gale many of the professional anglers were putting in full time bait catching, there being a demand for baits at the present time. At the latter end of last week and during the early part of this, roach and perch were caught freely at the home waters. Messrs. W. Pinnock, G. Iliffe, G. Thompson, J. Hobbs, R. Rylott, and T. Condon, being possessors of the finest baskets that were brought under notice. At Foxton, Mr. J. Billson secured a few decent pike, but items from the surrounding district are, as a rule, not very plentiful, or of very high quality.

Loddon (Earley).—Since my last report anglers have had good sport, several nice baskets of roach have been taken; also jack have been feeding, and some very fair fish have been got, one gentleman getting seven, the heaviest, 8lb.; Mr. Ameing, a few good chub. Just as the water got in good condition, we have had another downpour which will want another day or two to get right again for angling.—J. R. GOULD.

Lugg and Arrow (Leominster).—Both these grayling streams were running in fine fishing order up to Wednesday, but rain fell in the district, and has stopped fishing for a short time. Before the rain the fish were taking well.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—On Friday, Saturday and Monday last fair baskets were made on some reaches, but speaking generally sport was disappointing. Heavy storms on Monday night caused the rivers to rise very rapidly; till last evening they were nearly bank full, but are now sinking rather fast. There can be no fishing before the middle of the coming week, even should fair weather prevail, which at present (Thursday evening) appears very doubtful. Wind (strong), S.E.; clouds low, heavy and threatening.—R. T. WILLIAMS.

Medway (Maidstone).—The heavy rains we have been having will, I am afraid, again interfere with the colour of the water, to the detriment of the angler. I have not heard of much being done amongst the anglers during the past week. It was reported that a 25lb. pike was taken between here and Yalding, but I cannot get it authenticated. At present the water seems right for the angler.—W. SHRUBSOLE.

Nene (Northamptonshire).—The river is in fair trim for general fishing, and anglers can reckon on fair sport. Roach and bream are both feeding well, the roach particularly in the early morning. The worm is the most useful bait. Local anglers generally have, with few exceptions, returned home with good creels. Eels are well on the bite, and some large ones have been captured.—NENEBANK.

Ouse (Huntingdon).—The water has come down very rapid, and caused another flood, which renders it unfishable for a week or more, so it will be no use anyone coming until I report again.—H. ROUT.

Ouse (St. Ives).—There has been some capital sport here with pike this week, the two largest fish being 10lb. 5oz. and 9lb. 14oz. Rain, however, has again discoloured the water, and it will not be fit for fishing for a day or two.—SYDNEY JARMAN.

Plymouth.—SEA FISHING.—This month we look out for the herrings, and they come in the bay in great numbers. They are taken by drift-nets, which are made of fine cotton, with a suitable mesh, and from eight to twelve score meshes deep, and from ten to one hundred and twenty fathoms long. They are fixed to a head-line, which is corked to keep it floating, and the bottom of the net has a fine line running its entire length, just to keep it steady. Some people put light leads at intervals, but the majority of fishermen object to them. The nets are payed out in one continuous line, having one end fastened to the boat. By this means they hang from the surface of the water down straight, like a wall or barrier, and the fish in their movements in trying to get through this barrier get caught by their gills. It is no uncommon thing for a boat to catch enough herrings to pay for her net in one night. The pouting also in this month are in best condition, and are taken in December, and on through the winter months, and in the spring they are full of roe. Pilchards occasionally make their visit to our shores in November, and and the young school pollack about 8in., long are taken in shoals, or on whiffing lines, six or eight at a haul. The list of fish that are in season for this month are the anchovy, twaite, shad, herring, sprat, pilchard, wrasses generally, tub piper, gurnard, sole, flounder, dab, plaice, mary-sole, halibut, turbot, brill, dory, surmiller, coal-fish, hake, whiting, cod, haddock, pouting, ling, smelt, skate, Homelyn ray, sharp-nosed ray, oysters, and shell-fish in general.—WILLIAM HEARDER.

Severn and Lower Teme (Worcester).—Both streams now down to their winter level, and are in excellent condition for angling, and some grand baskets of roach have been taken in the Severn with the maggot and red worm, many of them over 1lb. each. The pike have been well on the feed after the late floods, and a goodly number have been taken with the live minnow and the spoon-bait.—R. WINGFIELD.

Severn (Shrewsbury).—Some good pike were captured early in the week, but the river became high and discoloured on Thursday, and rendered angling impracticable. A well-known professional named Frast, has had some capital sport near Burr's Ferry, and has there captured several heavy fish. A Whitchurch angler had a splendid take of perch near Atcham, at the beginning of the week, filling a creel with fish averaging 1½lb. each.—PISCATOR.

Teme (Ludlow).—The Teme in this district has been running in capital order for either fly or maggot fishing. have been clear and a nice level. On Wednesday rain fell in this part, and the water rose quickly and coloured, and has now stopped fishing for a few days.—S. LUDLOW.

Teme (Tenbury).—In this part the water is running high and coloured, and fishing is again stopped. – WORCESTER.

Trent (Newark).—A more rapid rise of the waters of the Trent was probably never before witnessed than the result of yesterday's general rain, and at time of writing (Thursday evening), probabilities of angling are very remote, for a flood is almost certain. Not much can be recorded of the general sport of the past week, for though several pike have succumbed to the live-bait in the Muskham Waters, none of heavy dimensions are mentioned. Chub have been taken with worms in moderate quantities, and on two occasions, Mr. W. Holmes bagged some good roach from the Rolleston length, with white-bread paste; but, as a rule, anglers have fought shy of the Trent banks.—TRENTSIDER.

Wharfe, Yore, Swale, Nidd, &c.—Slight freshes resulted from the heavy rains of Monday and Wednesday last, but the water is running down into nice order for grayling fishing, the worm is now the best bait to depend on, but some fairly good catches have also been made with fly, Bradshaw's Fancy, Apple Green Dun, Silver Dun, and Green Insect, proving the best killers.—F. M. WALBRAN.

Witham, &c. (Mid-Lincoln).—Up to Monday the water in both the Witham and the Fossdyke was in fine condition for angling, either bottom fishing for roach, perch, tench, &c., or trolling for pike. Bottom fishers were using cockspurs or ripe lob worms for perch, tench, and roach, and some excellent fish were banked whilst the weather allowed of it. Of late there have been complaints about perch being scarce in some of the leading streams of the county, but this is scarcely so with the Witham and its tributaries. This is particularly the case with the Barlings, where I hear they may be taken in large numbers. Several good pike were taken last week on the Witham, and possibly more would have come to hand had more care been taken. Very often the heavier fish are now lying by the banks, and anglers who do not realise this throw over them as a rule, and thus frighten them. If they would throw pretty short at first, and then proceed to cover the water further out, they would have better luck. At least, that is an opinion given to me.—LUCI.

Yare (Norwich).—This river is full of promise for pike fishermen, as I am told on the very highest authority that this has been, up to the present, the best season for years past, as good jack up to 10lb. and 12lb. have been taken in the river, trailling, and in numbers not known for seasons past. I attribute this, more or less, to the severe season of last winter, which, of course, gave a perfect rest to the jack, as far as catching goes, and also gave the fish a fair old time for feeding, without getting hooks in their jaws. I think I may fairly say that if the weather keeps open we are in for a good pike time, and that if size do not run up to usual we must remember what we have caught in past times, and they cannot all grow large at once.—ROBERT MOLL.

Scotch Reports.

Deveron (Banffsire).—Since the close of the rod fishing on the river Deveron the weather has been exceedingly dry and frosty. The water in the river was getting very low, when, fortunately, on Wednesday of this week rain fell heavily, which had a marked effect, the water becoming somewhat spaty towards evening. The fish on the spawning-beds are very numerous, and the disease, which was making its appearance, will be somewhat obviated by the rising of the river. On the upper sections spawning is almost over, but in the middle it is only beginning, and in the lower sections it will be some time before it commences.—H. W.

North of Scotland.—A mistake occurred in last report which I should like to correct. It was Capt. Pierrepont Brooke, 79th Highlanders, and Adjutant to the Deeside Highlanders, who killed the six fish in three hours on the Upper Dess Water on the closing day of the season, and not the officer of the Queen's Guard, as reported. Spawning on the upper redds has been going on for several weeks back, and by another week the redds in the main river and middle reaches will be fully covered. A more plentiful stock of fish has not been seen in the river within the memory of the oldest fisherman. The water is in capital size, being small enough to keep the fish from the more exposed shallows, but the temperature has been low, ten degrees of frost being a common reading every other morning. The Durris Hatchery, under the charge of Inspector Duncan, of the Dee Fishery Board, has been stocked with two consignments of ova from the upper waters, estimated at three hundred thousand eggs. These were placed on the grills last week.

South of Scotland.—Last week end the rivers that still remain open for angling in the South of Scotland district were unusually low for the season, and with the clear waters, smaller flies than those used for the previous three weeks had to be resorted to. Notwithstanding that both weather and water were against the angler, some splendid salmon were killed on some of the waters. In the Mount Annan portion of the Annan, where extraordinary sport has been had this back end a number of heavy fish have been killed. Since the 4th inst. to the 10th, Mr. John Bell-Irving, Mount Annan, and his keeper, have landed eighteen salmon, eighteen of which weighed 354lb. Next week I purpose giving the readers of the *Fishing Gazette* the exact number of salmon killed by this gentleman, and the total weights of his fish. At the fore part of this week Mr. Irving and his keeper had killed over half a ton of salmon since the 25th September. Mr. Dirom, of Mount Annan, and his fisherman have also had magnificent sport in this part of the Annan. On Tuesday Mr. Andrew Bell killed two good salmon, one out of Brydekirk stream, which weighed 16lb., and the other weighing 29lb., from the water below Brydekirk Canal. On the same day in the Flat Water, Mr. James Bell landed one of over 20lb.; Mr. Andrew Bell-Irving, Bankside, killed two good heavy fish, and Mr. F. Joynson, Wyseby, had also one in the same water. In the lower waters, near the town of Annan, Mr. Arthur Nicholson, St. Asaph, landed a very handsome salmon of 24½lb., out of the Brewery Pool; and on the evening of the same day (Friday) Mr. Harry Hudson, Oldham, killed one of 29lb. out of the same pool. This fish showed grand sport, and it took Mr. Hudson exactly an hour and a-half before he could reduce his fish to the gaff. A large number of salmon were hooked on Saturday and lost. Mr. James Bonner had one big fish on for half-an-hour when the hook came away. One angler landed six on Friday, and five on Saturday. Mr. W. Robison landed one of 42lb.; and Mr. W. Park one of 24½lb., out of Galabank Pool. On Monday the river was in flood, and on Tuesday fish were rising somewhat short. Mr. D. C. London killed one out of Galabank (Northfield Water), of 8lb. The Hoddom Castle Water has been affording capital sport all along. The keeper, Thomas Reed, has been killing some big fish, he had one the other day of 23lb., and another of 18lb. The Rev. James Morrilaws, of Middlebie, Manse, and the Rev. John C. Thomson, of Greenknowe, killed one each of 17lb. and 18lb.

NITH.—The Nith has been doing fairly well, and some good sport has been had on Blackwood, Elisland, and Dalswinton Waters. Mr. James Laing, jun., Speddoch, killed one of 13½lb., the other day; and I hear of a number of fish having been landed on other portions. In the lower waters a good number of weighty salmon have been taken out of the river in the neighbourhood of the canal at the town. There is a rumour that a quantity of fish have been snatched in some of the waters. The pools in the different stretches are well stocked with big fish. Heavy rains have fallen. and both the Annan and Nith have been in flood since Wednesday morning. To-day the waters are fining down, and some brilliant sport is anticipated to-morrow and Saturday, the closing days of the season.—HEATHERBELL.

Thurso (Halkirk).—The river is dead low, not a drop of rain having fallen since my report last week. The salmon are actually compelled to spawn in the shallow pools, where there is but little current. Lochmore is dead low, and no fish can get out of it to the redds on the upper reaches. There are hundreds of gravied salmon (fine large fish) still in the bay at the river-mouth, waiting a spate.—A. H.

Tweed, &c.—Salmon anglers ein the Kelso district of the Tweed, as well as those fishing the higher and lower stretches of the river, have had a most successful week, notwithstanding the fact that both water and weather have been somewhat against them. The long spell of fine weather which has been experienced for a month back—and which is something phenominal at this season of the year—had caused the river to run in very low, and many of the casts on all the fastnesses were getting nearly unfishable for want of volume of water; while the absence of a good wind made the deep-holding pools worthless. On many occasions the river has been like a sheet of glass, so clear indeed that the fish could plainly be seen lying at the bottom of the stream in many places. Luckily, however, this state of matters has now taken a turn. A falling barometer for some days past betokened a change in the weather prospects, and this (Wednesday) morning rain began to fall heavily at an early hour; and although the river was not in the slightest degree touched by the pluvial descent at 1.30 this afternoon, it began to rise shortly after, and by four o'clock the Tweedometer at Kelso Bridge marked a rise of five feet, and, with a good strong westerly breeze blowing, it was then still rising. This opportune flood has just come in the nick of time, as it will give us a fresh run of fish from the sea-coast and the lower stretches; and although there was by no means a paucity of salmon and grilse in the river, still, this much-needed rise will be of the greatest benefit to all the salmon angling waters, by further restocking them; giving tone and colour to the water, and clearing away any dirt and refuse that may have accumulated in the bed of the stream during the recent fine weather. Should the weather settle soon again, excellent sport is once more anticipated; and Waltonians are eagerly looking forward to an early commencement of their favourite pastime. To-night, however, the glass is exceedingly low, and the storm has in nowise, as yet, abated—the wind having increased very much since darkness set in. The takes got since last report are summarised below, and give a good idea of the sport that has been got. On the Pavilion (Melrose) Water since Oct. 28 to Nov. 6, eighteen fish have been got; and on the Upper Water, Mr. Baggot had nine fish, the heaviest being 23lb. The Ravenswood Water has been let to Mr. Ellis for the closing month, and last week he had two fish on it. On the Floors Castle Upper Water last week, Her Grace the Duchess of Roxburghe (who fished part of four days) had twenty-three fish to her own rod, the heaviest of which scaled 27lb. No other rods were on this water during the week. On the Lower Water (which has been leased for November by Mr. Hadden and General Cooke), excellent sport has been had by these gentlemen, they having killed forty-four fish between them from the 4th up to the 18th. (Mr. Hadden, twenty-five, and General Cooke, nineteen: the General, however, did not fish on Friday last.) The heaviest fish were 25lb. and 26lb., but the general run of the fish would he from 16lb. to 20lb. Eighteen fish have been got on the Hendersyde Water by Sir Richard J. Waldie-Griffith, Bart., and some of his friends. On the Birgham Water (Lord Home's), that nobleman and his friends have had nearly forty fish, the heaviest being 25lb., the greater portion of the fish, however, weighing from 17lb. to 20lb. On Lennel Haugh Fishery, between thirty and forty fish were also got, the heaviest being one of 24lb. Nearly a score of fish were killed on the Rutherford Water from Oct. 29 to Nov. 3, and from Nov. 2 to Nov. 7, over forty salmon and grilse were killed by various anglers. On the Makerstown Water, on Saturday last, Sir Richard Waldie Griffith killed four salmon and four grilse; but no fishing has taken place since, as the water has been let for the remainder of the season to Mr. Whitehead and Mr. G. S. Palmer, Yorkshire, who take possession to-morrow (Thursday). On the Boldsyde and Dryburgh Water, fairly good sport has also been had during the week, I am told. No fish have been killed on the Teviot since last Notes, but those who hold tickets for this river are pretty certain to have a few kills when the floods abate.—MAXWHEEL.

Irish Reports.

Lough Neagh.—The only industry now carried on is the eel fishing, and even that is declining. This is a very remunerative business in the better parts of the season, some of the fishers engaged making from thirty shillings to forty shillings per night while out. Pike and perch netting is about the average. The close season for pollen, which has just commenced, extends, according to the provisions of Irish Pollen Fishery (Ireland) Act, 1881, from November 1 to January 30 following.—J. A. B.

Suir and Tributaries (Clonmel).—The present spawning season promises to be the best we have had for many years, so far as number of fish is concerned. The river everywhere, both on the tidal and fresh waters to the uppermost reaches, is swarming with salmon which are only waiting for the next freshet to push their way up to the spawning beds in the tributaries. In many places there are signs of scouring in the shallows of the main river itself. These are doubtless made by fish that have been a good while in the fresh waters, and who are too impatient or too advanced to wait for the coming freshets. The conservators are sparing no pains or expense to protect the spawning fish by putting on an efficient staff of water-bailiffs, and are determined to prosecute to the utmost rigour of the law any attempts to destroy or disturb them. A few anglers, unwilling to tear themselves away entirely from the river, have began a campaign against the pike, and are showing good results. Some of various weights up to 10lb. have already been killed in splendid condition by spinning with spoons or other baits.—RICHARD BRADFORD.

Maidenhead,
November 10, 1891.

SOCIETY FOR PROMOTING THE READING OF PAPERS AT ANGLING CLUBS.

A MEETING, under the auspices of this society, was held on Friday night at the Citizen, Houndsditch, when Mr. H. J. Tibbatts took the chair. After the minutes of the previous meeting had been read and confirmed, the discussion turned on the arrangements to be made in connection with Mr. Walbran's forthcoming lecture at the Foresters' Hall, and upon the proposition of Mr. G. E. Simms, seconded by Mr. Smith, it was resolved that "admission to the meeting should be by reserve ticket for the platform, and by showing the privilege tickets of either the Anglers' Association or the Central Association, the reserve tickets to be two shillings and sixpence." On the same evening, and conjointly with the lecture, the prizes in connection with the Rye House Fishing Match will be distributed, and any person connected with the competition will, of course, be admitted to the lecture.

With respect to the hire of a lantern and screen, the chairman said that Mr. Mason had called upon him, and expressed his willingness to do everything that lay in his power to make the lecture a success. (Cheers.)

Mr. Shrubsole said he would see to the provision of a lantern. He further suggested that posters announcing the lecture, and calling attention to the Rye House Prize Distribution, should be got out, and that a number of reserve seat tickets should be printed.

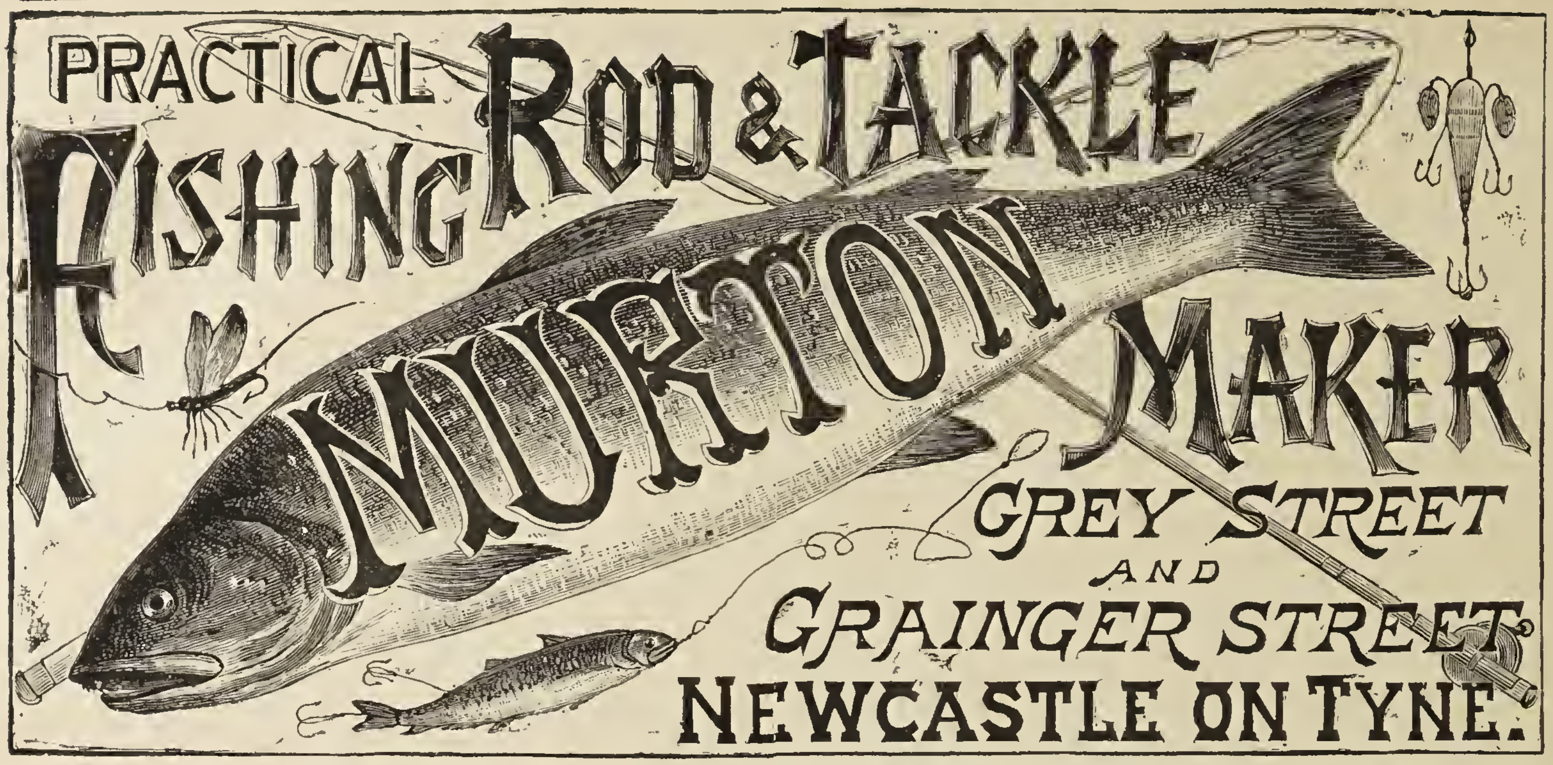
On the motion of Mr. Simms, seconded by Mr. Stretch, this part of the business was left in the hands of the hon. secretary.

The question of the institution of a bronze medal, postponed from last meeting, was then discussed, the subject being well ventilated by Messrs. Shrubsole, Macdermott, Simms, Ghurney, Dunn, Keeble, and Matthews.

Ultimately it was resolved, on the proposition of Mr. Dunn, seconded by Mr. T. Keeble: "That a medal be instituted by this society, and that the medal be awarded for the reading of papers at angling clubs at the discretion of the committee of this society."

Mr. Smith, as secretary of the Causton Angling Society, applied for a paper to be read there, and Mr. Shrubsole promised to attend on Nov. 23, and lecture on "Fly Fishing for Chub and Dace."

After a vote of thanks had been passed to the chairman, the committee adjourned until Friday, the 20th inst.



OUR SPECIALITIES.

Warranted sound manufactur
and of better value than any i
the market.

Our 'TYNESIDE'
TROUT FLY ROD
7/6, 10/6, & 12/6.

Our 'TYNESIDE'
SALMON ROD
21/-, 31/6, and upwards.

FLIES of every descriptio for RIVER, LOCH, and SE FISHING. Flies dressed t any pattern by expert hands.

IMPORTANT TO FISHING-TACKLE MAKERS AND OTHER ADVERTISERS IN *THE FISHING GAZETTE.*

WE receive inquiries from time to time from advertisers, asking if we know anything of "So-and-So," who has obtained goods from them and then decamped. We are informed that certain parties, under various names and from different addresses, have for years been obtaining goods from our advertisers in this way, and we shall be much obliged if advertisers will send us the names of any persons they have on their black lists, as we may very probably be able to give useful information about them.

AN INTERLUDE.

BY ENTHUSIAST.

A HARD morning's work at the grayling and an empty basket; but here's a certain chance, a good fish rising steadily at the slyly gliding tail of a pool; no trees, no bushes, a fair wind, and some intervening broken water to enable an effective approach. The only difficulty was to get the right morsel to tempt this dainty customer. Flies were coming over him freely, and he was as freely rising, but not one of these which were visible did he take. An attractive *menu* was placed before him of the following dishes, and in this order: *Hors D'œuvres*, various; *Potages*, Green Insect; *Poissons*, Dark Mackerel; *Entrees*, Wickham's Fancy; *Rotis*, Red Tag; *Entremets*, Mulberry Bumble. It is hardly to be conceived that the supply of such a pleasing variety would have met with not even an acknowledgment, but it was so. Is it not common experience, however, that the last dish, the ice pudding, is the fatal one? I felt it was to be so here, and I believe it would have been but for the events which I have to detail. For ice-pudding I selected one of Holland's Pale Watery Duns. The Scorned Mulberry Bumble had been sent back to the kitchen for service on another occasion, and the new dish was being carefully prepared for the table on a fresh length of drawn gut, when the sound of the sweetest music crept in my ears. It made me hold my breath to better catch every note of it. The delay saved that grayling's life, for the metaphorical ice-pudding was dropped on the grass, and who ever heard of an ice-pudding, metaphorical or otherwise, being recovered under such circumstances? But what was the music? Not the song birds' thrilling notes; these belong not to the autumn grayling angler. Neither was it the rolling tones of the adjoining church organ, nor a bonny lass's song, not even the whistle of the boy with the lunch. Sweeter by far than all these is the music of the hound in full cry to the man into whose soul it can enter. It was this that caught my ear this November day.

Now, I do not profess to be a hunting man. I knew nothing about it, and, if it be possible, still less do I know about horses, except that when I go a-riding, I and my steed generally part company at an early stage of the proceedings, *nolens volens;* but I love with the deepest love all field sports, and the sight of a well-kept pack of hounds in full cry raises in me all the enthusiasm for the sport which I imagine exists in the breasts of hunting men. They have no monopoly of it, as anglers have no monopoly of the love of their craft. A friend of mine who is a keen sportsman will watch me fish all day long, although he has never thrown a line in his life, and he will look out for rising fish, and betray an embarrassing excess of excitement when one is hooked. I plead this in extenuation of the statement that although no hunting man my spirits were genuinely aroused at the sound I have described. There was no need for me to strain my hearing. Each instant the cry became louder and louder, and I knew the pack must be coming in my direction. My due that day was a basket full of fish, for I had worked hard and carefully. Our severest labours do not, however, always meet with their just reward, and this afternoon I had to look in other quarters than my creel for my deserts. In my ignorance I expected to come across a pack of fox-hounds and plenty of good horse flesh; but before many minutes had elapsed all doubt was cleared away by my seeing a pack of beagles crossing some stubbles, two fields off, on what was evidently a strong scent. A stern chase was the only hope of seeing more of the run. It was a chance not to be missed. Fishing impedimenta were discarded, and I was off. Fortunately, I had to-day left my waders behind, and come out in knickerbockers and a moderately thick pair of boots. Time was when a mile in five minutes on a grass course was no great achievement; but years stiffen the joints and add to the flesh. Thirteen stone is not a suitable weight for the performance of the feats of "Jack the runner." Good fortune, however, was with me, and following the line of hounds for a few fields I found they had had a check at a stone wall. I was thus enabled to get up with them. The field were, like myself, on foot, and consisted of three students, one of whom was hunting the pack, and some young farmers. I asked if it would be considered interference if I joined them, and being assured that quite the contrary was the case, I made one of the party. The hounds by this time had cleared the wall, and were apparently at fault. A cast over the field had been tried and failed, but it was worth the run to see these miniature creatures spread, and try every inch of ground with the greatest care, without avail, however. The huntsman took the pack back over the wall, and made a fresh cast, first to the right and then to the left of the old trail; and after some little time the scent was soon picked up again. The hare had evidently run some distance along the wall and doubled back, and now I was in for another stiff run, without a check, to the finish. I freely confess that I availed myself of the huntsman's advice as to the line which the hare would take, and by following it and negotiating a few corners freely, I was able to keep within measurable distance, and be in creditable time for the death. This, by the way, I think is much better missed, notwithstanding that all efforts are concentrated on the attempt to be present. It is the most painful part of the whole business. We anglers are better off in this respect. A knock on the head will do all we want, and there are no more struggles. But the piercing and piteous cries of the hare as of a child in agony cannot but appeal to anyone's heart. I was inclined to call it a cruel sport, but there was a certain satisfaction in seeing the hounds allowed that for which they had worked so hard. To have taken the hare from the hounds for a gourmand's table would, to my mind, have been a cruel wrong. I wondered whether a hare was ever kept from being torn asunder, and if so, how? The huntsman told me if he was among the hounds at the death he could nearly always pick up the hare without trouble, and the use of the whip; but that if he was close at hand, and blood was tasted, he was obliged to avail himself of the latter, and sometimes freely and often lose the hare. I do not know what distance I had covered, but I felt little inclined for another run. I endeavoured to persuade myself that it was because I did not care to witness another death; but my legs were too strong evidence against that proposition, and I had unwillingly to admit that they were not ready for another four miles across country. I contented myself with watching the hounds work a few fields, and having found, I left them to go their way, and they me to go mine. That was straight back to the stream, where I found my rod and basket just as I had left them, and the best of the day gone. I had enjoyed my run, but as my blood began to cool, I could not help feeling that if I had stuck to my rod, and not attended to matters with which I had no concern, I should have done better. In fact, I wanted to have my cake and eat it too. My friend the grayling was not of a sufficiently accommodating turn of mind to have kept on rising during the interlude, but I thought I would give him a cast. The Pale Watery Dun was, as I have explained, gone, so I tried what is an unusual fly for these waters—an Apple Green Dun. It was fruitless. I reeled up, resolving to go home, and half dreading the jeers which I felt sure my empty basket would call forth. My host and his friends were not anglers, and I knew I should get nothing but scoffs in return for my earnest attempts to provide a dish of fish for his table. People who do not fish only look at results, and have no sympathy for the angler's fruitless efforts and his disappointments. No, truly; but neither can they ever taste his pleasures and the sweet results of his self-imposed labour. On my way home I had to pass a broad, gravelly shallow above a bridge, and, seeing a grayling rise, I was irresistibly tempted to have a shot for him. Who has not experienced the difficulty of having the last cast? I can never understand why an angler does not go on fishing for ever—I mean, of course, an accomplished angler. A catastrophe generally stops me. Sometimes a fly is flicked off, and it is too dark to put another on, or my cast gets hopelessly entangled, or the water comes uninvited over the tops of my waders. Any of these necessitate a full stop. But why a man who deftly places his line each cast without a fault does not solve the vexed question of perpetual motion is beyond my comprehension. I only know that if these attributes were permanently mine, I should never know when to stop, and believe I never should. But to go back to my grayling. The Apple Green Dun killed, the first time, and a fish of 1½lb. was shortly in my basket. Two others of the same size followed almost immediately from the same spot. Such are the fortunes of war. I had spent the best part of the day hard at work, and here were three fish picked up as easily as mud in a gutter. Any fool could have done it. But I was pleased; and, having no other chances, went home, in the words of the old diary writer, "Thanking God for His mercies, and mightily well content with my day's sport"; and, may I add, having kept up among my non-angling friends my undeserved reputation as an angler.

A FORTNIGHT'S HOLIDAY.

By Francis M. Walbran.

(Continued from page 274.)

There are few villages in Yorkshire, or even farther a-field, which can rival Helmsley in picturesque beauty. Neither "Redspinner" or myself had been there previously, and we were quite captivated with the place; whichever way you turn the most charming views of hill and dale meet your eye, while the grey old church tower, the lichen-covered stone bridge spanning the Rye, and the park gates, with the long avenue leading up to Duncombe House, all tend to enhance the effect. Upon our arrival at the Feversham Arms, a most comfortable hostelry adjoining the church, we found Mr. Phillips awaiting us, and he inquired which length of the Rye we would take that day? He had kindly obtained for us permission to fish on some private water in the district, and also on that belonging to the Ryedale Angling Club. After mature consideration we decided to take the first-named on that day, and accordingly chartered a conveyance to drive us to the scene of action. Our line of route lay through Duncombe Park, in front of the noble mansion, which was totally destroyed by fire some ten years ago, and which is now in course of re-construction. The morning air was fresh and crisp, rendering the drive most enjoyable. All around the timid deer bounded away at our approach, and Mr. Phillips pointed out to us a ring fence, beyond which the wild red deer might be found.

"Now then, gentlemen, you will have to walk from here to the river," exclaimed our guide, and out we got, striking down hill into a precipitous path, carpeted with fallen leaves and trailing bracken. And now we get our first glance of the river, curling in beautiful eddies under a rustic wooden bridge, and widening out below into a pool, on the surface of which were the dimples caused by several rising grayling.

"Redspinner" said that he would commence in the stream above the bridge, therefore the keeper and I made tracks some half mile or so farther up the river. He informed me that the fish had been taking the Whirling Blue Dun the best lately, so I mounted one as point fly, with a Red Tag and Blue Hawk as droppers. It was some time after starting that I had a rise, and that was from a half-pound grayling, which came boldly at the point fly, and paid for its temerity by becoming acquainted with the interior of my creel. A trout followed, and then another grayling, then a blank, after which I strolled down to where my companion was fishing, to see what he had done. I found him sat upon a mossy boulder, note-book in hand, making some of those observations on Nature's charms which have made his name famous in many lands, and which are indeed *sui generis.*

"Well, and how have you fared, my friend?" he remarked, in his cheery way, as I approached. "I can do nothing with them at present," he added; "so thought I would improve the occasion until they do rise."

I told him about the Whirling Blue, so he closed his book and picked out an imitation from his fly-box, wading carefully into the pool below the bridge. Opposite to him was a high red sand-bank, and under the lee of a thick hawthorn bush, three or four goodly fish were "putting up their nebs." "Redspinner" made a few preliminary casts in the air to measure the distance, and then despatched twenty yards of line as straight as a rule over the rising fish—a ruffle on the surface, a sudden plunge, and the reel gives indication of the capture of a good 'un. Right skilfully does my friend manage him, now here, now there, the fish rushes indignantly, rolling over on the surface after the manner of his kind, and then sinking to the bottom of the pool with the aid of his large dorsal fin; but his strength becomes less, and his rushes more feeble, until the net is featly slipped under him, and the scales announce him to be 1lb. 3oz. I go now to a pool below a small island, where the water flows gradually over a rocky shelf, and forms a deep swirly hole—a typical grayling swim. "You are sure to get one there, I think, sir," remarked the keeper, and he was right, for at the second cast I saw a silvery flash below the surface of the water, and tightening the line, I found that I had hooked a fairly good fish; he was duly landed, and proved to be ¾lb. in weight.

I had interviewed the keeper as to the probable result of our day's fishing, providing that the fish were taking. He appeared to think that twenty brace each would not be at all an astonishing result, but I had not been fishing an hour before I quite saw that, unless some merciful interposition of Providence occurred—analogous to the miraculous draught of fishes of Biblical history—we should do well if we captured half that number. There was evidently an abundance of fish, both trout and grayling, but they were rising "short" in a most exasperating manner; and if you hooked and landed one fish out of six you were uncommonly lucky. We next came to another rustic bridge, and another lovely grayling pool below, and on this piece of water I performed a feat which rather pleased me and astonished the keeper. Just below the bridge on the far bank of the river was a bush of dead thorns, which projected about a yard out into the stream, then came a distance of perhaps a yard and then another similar bush; in the little pool between the two, the keeper drew my attention to a rising trout; and although the situation appeared well nigh hopeless, I determined to have a try for him. There was only one course to pursue, and that was to drop the end fly right over him, first throw and then if he took it, to drag him through the narrow opening right into the main stream, before he actually comprehended the position of affairs. Accordingly I flicked my line in the air, until I could see that I was well over the spot, and then, light as thistledown, descended the fly; he took it in an instant, and before he knew anything, he was outside his fancied place of security and fighting in the main stream. He was a nice bright fish of about a half-pound weight, and no doubt had broken many a cast of flies in the thorns above and below him. I could see from the keeper's face that I had advanced greatly in his estimation as a performer with the rod, and I must acknowledge that I felt rather proud of the achievement myself.

On we wandered, taking stream and stream about, until we came, towards the close of the afternoon, to a weir extending across the river, which, after falling over it, ran down under the left bank, entirely overarched by trees, their branches drooping within four feet of the surface of the water. "Redspinner" took his position up below the weir, fishing towards the fall, while I crossed the stream and took stock of the water running beneath the trees; but I could "see at a glance," as Mr. Toole says, that, with my twelve-foot rod, nothing could be effected except an entanglement in the trees, so I walked down to a pool below and hooked a good trout, which, however, kicked off. Now, my friend was using a powerful split-cane rod, 10½ft. in length, which was just the thing for under-hand casting beneath the branches, and when he arrived once more in the open, his net contained a nice trout and grayling, still kicking, which he had extracted from beneath their shade.

This concluded our day's sport, which came a good deal within the keeper's estimate, being about nine brace each, and the largest fish the grayling, which "Redspinner" captured in the morning in the pool below the bridge. As we were uncertain where we should reel up, we had decided not to have the conveyance to meet us, so walked up slowly through the park. On our arrival at the hotel, we found a good dinner ready for us, and after that fishing conversation occupied the remainder of the evening.

The next day was Saturday, and as we intended returning to Leeds to spend Sunday, before commencing our Wensleydale wanderings, we agreed over-night to get away early to our fishing on the Ryedale Club water. This was acted upon, and at ten o'clock we were on the banks of the river, having, under Mr. Phillips' advice, driven down to the lower portion of the water.

I made a good commencement by killing a brace of nice grayling out of the first pool I went to, and also lost another; and then the fun ceased, not rising another fish for fully an hour. "Redspinner" came up and announced a similar state of affairs. He had basketed a brace of fish in the first twenty minutes, and never saw another. We held a consultation of war, changed our flies, tried them sunk and floating, but all to no purpose. The fish were rising fitfully at a wretched little Black Midge no bigger than a pin's head, and at nothing else would they look. By dint of very hard work, worthy of far better results, we picked up a few grayling, but nothing of any size; and I was not sorry when my friend remarked that he had experienced quite enough misery for one day, and voted that we should work back to the mill, where the trap was to meet us. It is a lovely length of trout and grayling water that belongs to the Ryodale Club, and I sincerely hope that next season "Redspinner" and I may have a red-letter day or two on it. That there are plenty of fish may be gathered from the fact that, ten days after our visit, a reverend gentleman, who is a member of the club, killed with Red Tag, Green Insect, and Apple Green Dun seventeen brace of grayling in one day, many of the fish scaling ¾lb. and 1lb. "'Twas over thus," as Francis Francis used to say; but I don't think that we ought to grumble, as the pleasures of angling do not consist wholly in catching fish, and we certainly did have a most delightful time. Besides, far better sport awaited us on the Yore, an account of which must stand over to my next article.

(To be continued.)

Notes

In reply to several inquiries, we beg to say that the statement which appeared in a Trade Journal recently to the effect that we were about to dispose of the *Fishing Gazette* is utterly untrue. It is a pity some people do not mind their own business, instead of circulating false reports about other people's.

We much regret to hear that Mr. Thomas N. Debenham, of the firm of Debenham, Tewson, Farmer, and Bridgwater, died at Cairo on the 12th inst. Mr. Debenham was a member of the Flyfishers' Club, and his loss will be greatly felt.

In Mr. Cooper's window, at 131, High Holborn, there is a dace to be seen weighing 1lb. 3oz.

Several correspondents have written to point out the very extraordinary results which are arrived at when the account of sport sent to us by Mr. Andrews, of Maidenhead, last week, is analysed. We must leave Mr. Andrews to explain, as we find our report is a careful copy of his letter to us of November 5. Here is what one correspondent says:—

Dear Mr. Editor,—What a formidable record of the catch of pike in your first paragraph of "Notes" in last week's issue! and if your contributor had not called special attention to the fact that "all fish under 5lb. were not included in the weight," examination would have been unnecessary. But the following analysis shows that very few fish of each day's specified weight could have been *much over* 5lb., or the rest must have been *under*, and should not have been included in the total; and, besides this, the average weight of *every* fish in Friday's catch was only *4lb. 10⅔oz., and should *all* have been returned to water if the limit was 5lb. The following is the analysis of each day's take, and gives an average of 5lb. 5½oz. for each of the hundred and ninety-six fish caught, not including the three mentioned in the record of 15lb., 13lb., and 16lb:—

	Wednesday.		Thursday.
	61 fish, 365lb.		41 fish, 237lb.
	Less 1, 15lb.		Less 1, 13lb.
	60 fish, 350lb.		40, 224lb.
Average	5lb. 13⅓oz each.	Average	5lb. 9⅗oz. each.
	Friday.		Saturday.
	79 fish, 380lb.		18 fish, 95lb.
	Less 1, 16lb.		—
	78 fish, 364lb.		—
Average	*4lb. 10⅔oz. each.	Average	5lb. 4½oz. each.

Yours faithfully, (Signed) G. R. Hunt.

Mr. W. Ramsbottom, fishing tackle maker, 24, North John-street, Liverpool, writes: "Dear Sir,—It is a long time since we have had such a good back-end salmon fishing in the north. I was out on the Annan last week and got nine splendid fish, weighing from 18lb. to 25lb. each, seven of which I caught with my new pattern fly, which I call 'The President.' I think it is by far the most killing fly I have seen for some years. I have much pleasure in enclosing one of them for your inspection, and hope you may have a chance to try it." The President is certainly a handsome salmon fly, and one we should have every confidence in putting over a fish. It is dressed on a square sneck-bend hook, and for salmon flies we much prefer the Limerick, and have asked Mr. Ramsbottom to make us some on that hook in different sizes.

With a year (1891) that has brought wonderfully good salmon fishing—that some time or other, about all over the country, has given more or less sport of a quality that may well be called excellent for the individual rivers in their several recognised grades of first, second, third, and fourth rate salmon fishings—it is only reasonable to expect to find the bulk of regular fishing anglers making the admission that they have been tolerably well pleased. But how few of them, it is safe to say, will be got to acknowledge that they were perfectly satisfied with their experiences and results; in other words, that they had every fair chance of fish with their neighbours and friends; that they lost few or no fish that (bar wholly unavoidable accidents) they ought to have landed; that they found sport come quite up to their most sanguine expectations; and that their seasons and best one-day's takes were such as to prove completely satisfying, leaving nothing beyond to be desired. Ah! few there be who will admit all this.

Careful observation on the part of the watchers during the past few years has shown that, on the South Esk, of the fish attacked with disease there is a proportion of nearly two females for every male, and that on the Spey it is the reverse way to an even greater extent, no less than ninety per cent. of such fish being males. But though in these rivers, in respect of the sexes, there is such a great difference in the numbers of fungussed fish, it appears, on the other hand, that in both the disease often proves not fatal, as also that of the fish taken out dead, or that appear likely to die, nearly twice as many males are spent as are not, while, in the case of females, it is exactly the reverse.

For some time past, the stocking with salmon and trout ova of the various hatcheries on the Duke of Sutherland's estates in the North has been going on. There is a prospect of the Loch Brora Hatchery being still further enlarged.

No great scores were run up on the Tweed last week, the best take in one day by a single rod being six fish. Latterly it was felt that a freshening of the water, which was getting rather low, was much needed. Early in the week this came about, and from Wednesday onward, owing to the heavy falls of rain that had taken place, angling on many of the streams was out of the question. Anglers, however, were all looking forward to finding during the "new week" sport greatly improved in consequence of the rise of the water.

The Annan season, which came to an end last Saturday, has been a first-rate one—reckoned by not a few as the best on record. Fish were numerous, of extra special quality for autumn, and averaged a greater weight than for years past. The immense number over 20lb. in weight was a feature of the season. In the autumn alone it is reckoned that about five hundred fish were killed by means of rod and line on this nice little river.

At the instance of Sir Robert Jardine, Bart., M.P., a fish-ladder has been placed on the river Milk, Dumfriess-shire, at Castlemilk Mills, superceding the caul-leap, which formed an almost insuperable barrier to the farther progress of fish up-river, and thereby occasioned temptation to not over-scrupulous fishers to snatch or "snigger." As fish will now get past quite freely, it is of the utmost importance that a staff of watchers, adequate to protect them effectually during the spawning, should look after the upper waters. Without this following on the opening up of the river, the "improvement" will be no improvement at all—rather the reverse; something like "leaping out of the frying-pan into the fire."

On the North Esk, this past autumn, Sir John R. Gladstone, Bart., of Fasque, in one day's fishing with fly from the bank and wading, had sixteen salmon, a large proportion of which were heavy fish. This *is* sport.

Rod-fishing on all the Scotch salmon rivers, except Tweed and Urr, having, on different dates, already closed, the season of 1891 is now practically on its last legs—since a fortnight hence, on the two rivers named, will see the end of it.

Anyone who has the time, the inclination, and the purse to afford it can, if he succeeds in getting water, fish in Scotland for salmon with the rod during about forty-seven of the fifty-two weeks of the year. Some of the rivers have their season opening as early as January 11, and others theirs not closing till November 30.

Scarcely a single river, even amongst the longest-seasoned ones, has a beat or fishery on it that continuously yields sport from the start of the season to the finish. And why? Because the weekly slap is too short, and in-river netting, mill dykes, and other artificial obstructions, nearly always impassable, intercept the fish on their way to the middle sections, which are naturally the longest-seasoned on the river. This statement, in one or more ways, applies to the whole of the best long-seasoned rivers in Scotland—Spey, Deveron, Don, Dee, North Esk, Tay, and Tweed.

A spent salmon, weighing 68lb., which had succumbed to disease, was taken out of the Glen Ewan Pool of the North Esk, Forfarshire, the winter before last. Before it shed its spawn this fish must have been a good many pounds heavier. Will some expert say how many?—in the case of milt, ditto ova.

Lately the "blue fish," so-called from their peculiar bluish look, have been running the Aberdeenshire Dee. These fish spawn about Christmas and the New Year, and for this purpose mostly affect the Aboyne and Ballater reaches.

On the Lochy-Spean the season this year has all throughout, from first to last, over the whole river, been one of the best ever experienced. The heaviest fish killed weighed 37lb. The spawn-beds of the Spean are almost unique, the fish being great "holers," digging quite enormous pits, and piling up huge ridges of gravel. It is hoped that the spawning season will be a good one—exempt from severe droughts or heavy floods—as spawners are forward in such numbers as have been seldom seen.

A box of salmon, according to the Billingsgate Market standard, weighs 112lb. But 140lb. is often the weight of the box sent up by Scotch consigners.

The two mile stretch of fishing on the Don, at Kintore, known as the Burgh Water, which is open to non-burgesses on payment of the primitive fee of one shilling per rod for the day, is reported to have yielded about three hundred salmon during the late autumn fishing. One day the grand catch was as high as twenty-one fish, while there were frequently days when fifteen to eighteen were got. But as proving how effectually worm, minnow, gudgeon, and prawn had the fish "put down," it is stated on good authority that the fly accounted for only one per cent. of the whole take—three fish. Langsyne it was different, the fly doing most of the work, but *then* the loaded minnow, the "naitral," the gudgeon, and the flattened-eared Devon were strangers to the "Burgh Water," and even the "wurm" was sparingly used.

Mr. Murdoch writes: "Mr. Nicol McNicol, manager on the Sandside Estate, Reay, Caithness, has stocked Mr. Pilkington's hatchery with one hundred and thirty thousand salmon ova. There are no salmon streams on the estate, only a burn, but getting down this stream the young fish by-and-by become in the sea, where the Sandside nets work—a good paying concern for the proprietor. The McNicols are a family of noted fishers, fish culturists, and fly dressers. Amongst them they have started a number of hatcheries, and otherwise done much for the improvement of the salmon fisheries in the far north. The two brothers, James and Nicol, have most come into prominence in this respect, but a son of the former's, Donald, as yet but a very young man, has already, by his management of the Westfield Hatchery on the Forss, proved himself a very capable hand. For excellence in fly dressing, half-a-dozen at least of the McNicols are well known; and as showing that the art runs in the family, Nicol's eldest son, a boy of only thirteen, carried off the first prize for fly-tying at the Highland Industrial Exhibition at Inverness, in September last.

"The other year Mr. Nicol McNicol constructed rearing ponds and formed artificial lochs at Sandside, which latter he stocked with Loch Levens, and he now writes: 'We had splendid sport with the Loch Leven trout in our new lochs this past summer.'"

The following, anent "Free Fishing," will no doubt be interesting to a good many of our readers: "There is a large extent of water on the Deveron open to the public where it is no uncommon thing to come across a 'pot hunter' with the top scare of his rod taken off, and a marvellously large hook whipped on to the middle scare. With this clumsy but potent weapon he rakes the pools where grilse and salmon lie, and thus cleans them of fish. The legitimate angler, of course, cannot compete with him, and can only grin and bear it with the best possible grace. Now, if human nature is the same in the vicinity of large towns as it is about Huntly and the Cabrach, the evils deplored would be multiplied on a scale proportionate to the number of anglers. They are few, it is to be regretted, who would be generous enough to restrict their methods of angling to that which is fair and above-board for the sake of posterity. Forty or fifty years at most would see every river within a radius of a hundred miles of our large centres of population not worth casting a line over. Between nets, clips, sieves, grapples and salmon roe used surreptiously by unscrupulous people who care for nothing but a haul of fish, our Scottish rivers would in due time be piscatorially worthless."

Eight thousand one hundred and thirty-five more boxes of salmon were sent to Billingsgate this year than were forwarded last year. Both from English and Scotch fishing stations there was an increase, but from Irish a trifling decrease. The figures were:—

	Boxes, 1890.		Boxes, 1891.
Scotch ...	18,931	Scotch ...	25,889
Irish ...	10,710	Irish ...	10,131
English ...	1,607	English ...	2,710
Berwick ...	1,285	Berwick ...	1,762

The Scotch Fishery Board, in seeking to arrive at the value of the yield of the Scotch salmon fisheries, estimates a box to be worth £5 10s., which is equivalent to saying a shilling is the price (average for the year) of a pound of salmon.

ANSWERS TO CORRESPONDENTS.

T. H.: There is good flounder fishing off Southend-on-Sea.

J. A. S.; Yes, there are many places on the Thames where you can only fish by permission.

Correspondence

HERRINGS CONFINED IN A POND TAKING A BAIT.

Dear Sir,—Adjacent to the estuary of the Humber there exists a large pond, some three acres in extent, which has been dug out in order to afford clay for the neighbouring brickyard. Communication with the Humber is effected by means of a clew, which is so contrived that water may come in occasionally, but not go out. One dull day, this November, a friend and myself had a day's fishing in it. We caught several nice flat fish, with which apparently the pond swarmed; when, tiring of this, we tried fishing with small pieces of cockle. We soon got some bites, which we could hardly understand; and changing our tackle for a light gut bottom and small hooks, what was our astonishment at catching herrings. They bit so boldly that at first we struck immediately on perceiving a bite; but afterwards, growing wiser by many and sundry misses, we gave them more time, and consequently were more successful. Once hooked they were the gamest fish it has been my lot to catch. They run up to about ten inches long. On questioning the proprietors, we were informed that these fish (which the locals term "pilchards,") got in by chance some ten years ago, and that they breed regularly in the pond. A noticeable fact in connection with them was that they refused to take other than a small bait. These fish are not pilchards, as is assumed, the pilchard being rarely found so far north, and the great distinguishing mark (the dorsal fin), is not in the centre of gravity.—Yours, &c.,

H. M. Foster.

Hull Scientific Club.

"ORCADIAN MEMORIES."

Dear Sir,—Wherever "Duine Môr's" observant eye sees, and his facile pen writes regarding trout fishing, we have an article full of vigour, clearness, terseness, and interest, whether he is describing the sport obtained by landing some 6lb. sea trout, or only excusing the unproductiveness of some sequestered loch.

His "Orcadian Memories" are very interesting, and what is better, accurate in most details. It is very unfortunate that this disciple of the rod should have visited Orkney during the worst season for good angling in the memory of man. So bad, indeed, has it been, that no reports have appeared in this *Gazette* for the season. But we must remember how ungenial the summer months were, especially the earlier part of September, when Loch Stenness is at its best. I am glad to find the corroboration of Mr. Arch. Young's report in the fifth annual publication of the Fishery Board borne out by "Duine Môr" as to the possibilities and capabilities of these lochs.

"Duine Môr" says: "There are probably more enormous yellow trout in it than in any loch in the United Kingdom." Mr. Young says: "Were they fairly fished and properly protected, they ought to be equal to any lochs in the United Kingdom. It seems to me that no amount of fair fishing would reduce the trout as they have been reduced in the Lochs of Harray and Stenness; there is such a vast expanse of water, such a good bottom and such abundance and variety of feeding. I was very much impressed with their extraordinary capabilities."

The scenery of Orkney is of itself worth a visit, the more so that the run from London to Kirkwall can be made in twenty-seven hours. The boldest and tersest, the most dignified and the most realistic description of the weird and bleak aspect of these islands and their surroundings is contained in a verse of Vedder's, the Orcadian poet, who describes Loch Stenness as the "Orcadian Windermere":—

> "Land of the whirlpool, torrent, foam,
> Where oceans meet in maddening shock
> The beetling cliff, the shelving holm,
> The dark insidious rock.
> Land of the bleak, the treeless moor,
> The shapeless cairn, the ruined tower,
> Scathed by the bolts of heaven;
> The yawning gulf, the treacherous sand—
> I love thee still, my native land."

The large yellow trout in this loch are often taken during the latter half of August and first half of September. The limpid brackish waters no doubt require very fine tackle and considerable skill, but these are the acquisitions every good angler prides himself in. My own experience in fishing this loch for twelve years is that for one month each year very good sport can be had. Not for the weight of the basket, although good baskets are often got, but for the sport derived from a 6lb. fish on a fine gut, the pleasant remembrances thereby begot, and the keen bracing atmosphere. The largest trout I secured on fly scaled 7lb.

With what "Duine Môr" says in regard to Stenness I quite concur. With his remarks on the eccentricities of the trout in Loch Harray I have to enter a mild protest—not, I hope, with the appearance of a finical disposition, but for the benefit of anglers generally who fish this loch. The Harray Loch is fresh with yellow trout, running up to 3lb., which differ in colour, compactness of flesh, and in other ways from the Stenness trout, although both lochs are only separated by a large bridge, through which the trout have free access. It is very seldom I have caught a yellow Stenness trout in the Harray Loch, and *vice versa*, spawning time excepted. Further, the access from the Harray Loch to the Stenness Loch, and from the Stenness Loch to the sea, at the Bridges of Brodgar and Waith, are such that no better places could be got for experimenting with set nets as to whether these fresh-water trout really descend to the brackish water and ultimately to the sea. Mr. Edward Hamilton proves in the *Gazette* of Nov. 7, that Loch Leven trout did leave an upland tarn and became habituated to brackish water; but we must remember that circumstances alter cases. These trout may have left the loch to find more suitable food, or on account of over-stocking; but the question is, Do trout migrate from their natural habitat, where food is in abundance, to brackish water and the sea? From long experience I doubt it very much. If they migrate, their skins, their spots, and compactness are transformed in a few days as by an enchanter's wand. Let fishermen continually set their nets in these contracted isthmuses I have named, and their testimony is, with a rare exception, against his. The passage I specially write to contradict, on account of the evil effect it may produce (however unintentional by "Duine Môr") is where he says: "The influx of salt water may certainly keep them from rising, but the supply of food which it carries in is probably the reason why it so affects them, for trout are in no way affected by salt water, and often go down to the sea."

So firmly convinced are we that the salt water does affect these fresh-water trout, that we have taken the precaution, at a good amount of trouble, to prevent the salt water getting in. The general opinion among the riparian proprietors is that sea water does sicken. So certain are we of this, that a subscription of £12 was raised, with which sluice gates have been erected on the "eyes" of the Bridge of Brodgar, for the purpose of preventing the influx of salt water in the Harray Loch. The effect the salt water undoubtedly had was this. When the first influx occurred during the spring tides—for only during dry weather and high tides does this occur—the appetites of the trout were sharpened, and they took the fly more greedily than usual, which continued for two or three days. After this they were more indifferent, and often took to deeper water. Many takes which may appear fabulous have been made in a few hours aftar the trout got their first dose of brine. After a few days more, when the influx had ceased, the normal state of affairs arrived. A month later, if the weather continued fairly dry, a fresh influx, added to that which (owing to its specific gravity) occupied the deeper parts of the lock, tainted the water slightly. The trout now abandoned the lower reaches of the loch where the salt water was finding access, and the others left the deeper parts, and crowded along the shallow shore, especially where fresh streams were running into bays and creeks. There the angler had fishing to his heart's content, over one hundred trout having often been caught in about three hours. To crown all, the farmers came in half dozens, with long sweep nets, and in one haul have been known to land three hundred trout. These were packed and salted like herrings for winter provender. There was one large burn where the trout could ascend for about a quarter of a mile. This was often literally crowded. So dreadfully hungry were these trout, that the mere glitter of a bare hook attracted them, and many were thus caught. This entirely refutes "Duine Môr's" theory.

It has been stated that these trout were diseased. The very few found dead were ones that had been wounded by hay-forks, nets, feet, &c., as they were in perfectly good condition. None, so far as we are aware, died from the effects of the salt water. In fact, we rather think that were the stream of salt water regular and in less quantities, the trout would shortly adapt themselves to their environment.

The sluice gates we have mentioned were put up about three years ago, against strenuous opposition from several small riparian proprietors, who, no doubt, desired "use and won't," sweeping, ottering, &c.; and who will only be too glad of an opinion like "Duine Môr's," as a pretext to destroy these sluices. The trout have materially increased during these three years, and now if anglers will only help us by visiting these lochs, and thereby increase the demand for boat hiring, it would act as one of the very best incentives for inducing these unpathetic and sedate old rustics to take an active part in preserving these fine trout from wholesale slaughter. Since these sluices were erected no trout have come ashore, although one season at least was excessively dry.

No doubt many will wonder if any trout yet remain to propagate their species after such destruction; but permit me to say that only during dry seasons, when an unusual amount of salt water got in the loch, did this occur, and only then within the last twenty-five years or so. Prior to that time there was a higher barrier of rock across the entrance at the Bridge of Waith, which had, at the time mentioned been deepened by some quarrying to build the present substantial bridge.

Are not these fine lochs worth our best combined efforts to preserve, when Nature has bestowed gifts of beauty and romance in such diversified grandeur, with here a fantastic cliff towering its serrated head a thousand feet towards heaven, and there a mysterious chambered mound, and romantic standing stones, bathed by the ceaseless ripples of the two finest lakes which adorn the face of Great Britain, and within a day's journey of London?—Yours, &c., M.S.

THE SLAUGHTER OF BABY JACK IN THE THAMES.

Sir,—I fully agree with "Templar's" article in last week's *Fishing Gazette*, regarding the by-law of the Thames Conservancy, which allows little jack of 18in. or 19in. to be retained. I know of one angler who has this season taken upwards of one hundred jack, none of which have been large enough to weigh in at his club with any prospect of taking a prize. Surely this ought not to be? If the Thames Conservancy would alter the standard size to 24in. to 25in., we should soon have a splendid stock of large pike in the river, and every jack would have had the opportunity of contributing at least once towards the replenishment of the stock of the river. Considering the fact that pike have been and are decreasing at a very rapid rate, something should be done *at once*, or the enjoyment of a good day's pike fishing on our grand old river will be a thing of the past.—I remain, Sir, yours truly,

Esox Lucius.

SUGGESTIONS FOR HELPING THE T.A.P.S.

Dear Sir,—You are asking this week for suggestions *re* Thames Preservation Society. I here give you mine—viz., That, instead of giving fish away, which is very often done in club rooms after a good day's sport, anglers should do as I used to, sell the fish for whatever they can get. I did not mind what I got, so long as it was something to go into the box. I generally got a penny or three-halfpence for a 1lb. roach, fourpence or sixpence for a 4lb. jack, and so on, and had very little trouble to get it. One year I collected £2 10s. for fish caught by myself. Mr. Ghurney opened the box, and I gave it to him for the Benevolent Fund, and I think this scheme would be taken more favourably than a tax.

Now, Sir, as I have proposed this same thing for the Benevolent some years ago, I do not wish to rob them, so will suggest something for them, and that is two shillings out of every member's annual subscription be sent to the Benevolent; it will never be missed, even if the subscriptions are raised, and doubtless you are aware what the Masonic body do with four shillings per annum from each member.—Hoping I have not said too much; if so, cut it out, and believe me to remain, yours very truly,

A. Brodie.

Shepperton.

[We do not at all like the idea of an angler selling his fish, even for a benevolent object; Mr. Brodie's other suggestion is infinitely better.—Ed.]

GOLD AND SILVER PLATE OR TINSEL FOR BODIES OF SALMON FLIES.

Sir,—Can you or any of your readers tell me if tinsel or plate for the bodies of salmon flies is made in sheets instead of, as one purchases it, in strips? If it is not so made—*i.e.*, in sheets—manufacturers would confer a great benefit on fly-tyers by making it in this fashion, and save us all the bother of keeping numerous reels of different breadths; as all we would require to do would be with a straight edge and knife cut off a strip of the requisite breadth.

I was once given a small sheet of gold plate, and am the happy possessor of some of it yet, but was told it was made by an amateur, and consequently not available for purchase, so I have practical knowledge of the value of this suggestion.—I am, &c.,

Poorbeah.

BIDEFORD POULTRY SHOW.

Dear Sir,—In your issue of Aug. 29 last, a Mr. F. G. Pattison informs us that there would be a class for poultry, providing feathers suitable for fly-tying in the Bideford show, to be held Oct. 22 and 23, which is just past. Can he now give us any information as to the result of this effort? I think many of your readers would be glad to hear besides myself.—Yours very truly,

Clapton. T. W. White.

A LONG-LOST RING.

Sir,—I enclose a cutting from a Maidenhead aper, dated 28th October, 1891, about a ring st twenty-one years ago:—

> "A Long-Lost Ring.—A ring that was lost no less than venty-one years ago was found the other day by a boy on e very spot where it was originally missed. It seems e late Mr. Leo Schuster, of Cannon-street, was fishing e day on the banks of the Dee, near Durris, when the ng slipped off his finger, all efforts to recover it proving tile. As the long-lost trinket was found within a yard the spot where it was supposed to have been lost, it is rmised that the earth by which it was covered for so any years was washed away by the floods of last week. he ring was shown by Mr. Morrison, gamekeeper, to ady Isabella Keane, who identified it as the one lost by r husband, and she at once handed to the finder the ward which had been offered when it went amissing."

My friend, Mr. J. W. Rope, three years since, as looking over the rail of his house-boat at enley, when his diamond ring slipped off his nger into the water. He immediately pushed a unt pole into the gravel near the spot where it ll to, and got a diving boy to try and find it, fering a sovereign reward for its recovery. The oy dived a good many times, but did not succeed. r. Rope then tied a handkerchief outside of his nding-net, and he and his man dredged for it, d after a dozen tries, and examination of the rthy contents, they recovered it. T. R. S.

FLY-FISHING FOR COARSE FISH.

Dear Sir,—Your correspondent (Mr. Alfred ardine) is deserving the thanks of all true nglers for his plain and practical hints on his ethods of angling for coarse fish. I, along with thers in this part of Yorkshire, have watched ith interest his treatment of the various subjects your columns. His remarks upon fishing for ub and dace are to my mind most interesting, d although we may find similar methods dopted even from the days of the venerable Izaak," through the pages of most of our standard books on angling—not omitting some of the ints given in good trade catalogues—of the present day; yet I wonder how many of our everncreasing number of anglers pay attention to the abits and *habitue* of these two members of what e term our "coarse fish family." They cerinly deserve it. They abound in most of the vers and streams throughout the country, and many in very large numbers. But, Sir, I am lways surprised that so little attention is paid y the regular coarse fisher of adding to his eans of sport by using, or *trying* to use, the rtificial and natural fly in the capture of several inds of coarse fish, and especially chub and ace. They are, as most of our best authorities ut it, surface-feeders and "free-risers" at lmost any form of insect-life which comes near em. Then, why so much neglect of the fly, hen good sport may be had? I am one of those hose business ties prevent my getting away mongst trout and grayling as often as I could ish, but can command an hour or two of good oarse fishing at a few minutes' notice; and let e say, Sir, that years ago, I was naturally led to e use of the fly as a means of capturing dace and hub, when other methods for the time failed. f course, I do not even hint at discarding ottom-fishing, or to cast any slur at the man ho has the patience to sit or stand for hours at time swimming or "plumbing" with maggot, orm, or paste, when he may often favour his hances of sport by resorting to the more noble, cientific, and pleasant means of casting and daping" with the fly-rod. Without going rther into this important subject at present, I ould just like to say that, besides the flies Mr. ardine has named, I would like to add my testiony to the virtues of the bloa hackles, such as artridge, snipe, and water-hen, as supplied for rout and grayling fishing by the Leeds and Bishop uckland firms. These are excellent for dace shing, but should be dressed larger for chub shing.—Yours very truly, Ronald.

BRAN IN THE CREEL.

Dear Sir,—I am inclined to think that you are ot aware, from your remarks at the discussion fter Mr. Shrubsole's lecture, on "Fishing askets, &c." last week, that an angler can, by arrying a little bran with him, keep his fish quite resh in appearance in any creel, by simply prinkling enough of it to adhere all over them hen first caught.

It is surprising how fresh a trout looks when the bran is washed off even after *three or four days*, and it is therefore one of the very best ways of packing fish to send a distance.—Yours truly,

F. G. Mackaness,

Hon. Member Hertford Angling Preservation Society.

[We have often used bran for keeping Spinning baits bright, and no doubt it would answer admirably if used in the creel as described by Mr. Mackaness, and we are much obliged to him for the hint.—Ed.]

FINE SPORT WITH THE PIKE.

Dear Sir,—Fishing this week with Mr. A. T. Ellis, of Cambridge, in the Hampshire Avon, I caught a pike weighing 26lb. Our take included twenty-three other fish, from 4lb. to 9lb., and thirteen under 4lb. (returned to water). A second edition of a heavy flood abruptly terminated our visit.—Yours faithfully, G. R. Hunt.

A TRUE HISTORY OF THE FREKE BAG.

Sir,—The following account of the Freke bag and how it came into existence may interest your readers.

In the year 1869, a Mr. Freke Williams called at 43, Ludgate-hill, to see Mr. George Richard Woolgar, offering to give us his opinion *re* a fishing bag. He brought with him an old, brown canvas sack with rings on it, similar to the old, green baize bag of my school-days, and requested us to make him a waterproof fishing bag to hold fish. I at once saw his idea was a mistake, for the simple reason that to put trout (he was a fly-fisherman) into a waterproof bag would not only spoil their beauty but their value for the table; so I advised him to have the bag made part waterproof (the front bag), but the bag to contain the fish porous. The form of the bag was good, and the first one was cut out and designed by myself, the opening allowing a heavy fish placed in with the head out at one side and the tail at the other; thus a large fish could be carried in a comparatively small space. The waterproof front when turned to the angler's back prevented him from getting his back wet, whilst the porous part, allowing a free passage of air to the fish, prevented the fish going off colour, not to say bad in hot weather, and coarse fish got in a worse state when put in a rubber bag.

It was not very long after this occurrence that Mrs. Malcom saw the principal defect, and tried several times to improve upon it without success, until she hit upon the plan of attaching a new *proofed* fine canvas bag to the waterproof front portion without altering the shape of the original Freke fishing bag. She succeeded admirably, and a splendid notice was given of it by the Editor of the *F. G.*, in 1879, with the result that over four hundred were sold the first year. This bag can be taken off, sent to a laundress, and have every bit of smell *boiled* out of it—a grand idea, I think.

If Mr. Shrubsole will take the trouble to examine the outside pages of the *first* number of the *Gazette*, he will see our sketch of the best fishing bag, in my opinion, ever yet invented.—I am, &c.,

27, Ludgate-hill, E.C. F. Malcom.

DO LOCH LEVEN TROUT MIGRATE?

Sir,—The theory advanced by correspondents in the *F. G.* may very possibly be a delusion. I am inclined to think it is. The assumption that these trout are "descended from land-locked salmon" needs justification by proof before the migratory habit of the salmon tribe can be attributed to them. Even if the supposed ancestry of Loch Leven trout were admitted, does it follow that the trout bred in an inland lock, in hatcheries, and in streams all over the land, will to all eternity be migratory and make for the sea! I fancy few persons will be found ready or willing to believe that these trout, more or less, crossed with other trout, and bred under the same conditions and in the same waters as the common, brown, or yellow trout, will for ever and ever be so dominated by the instinct of their "first parents" as to be incurably migratory. Surely this love for the sea will die out in time, if it ever was a feature in Loch Leven trout, of which there is much room for doubt. I know a tidal river into which some Loch Leven trout were placed a few years ago, and I often catch some of these trout within two miles of the tideway; and in the same river a great many brown trout are netted in the tideway. This goes to show that brown or yellow trout will go down to taste salt water, whether Loch Levens do or not. But I think that probably some trout of every strain which live in streams having access to the sea may go to the edge of the tideway, but not out to sea. I am sure some brown and yellow trout near the tideway do go into that part of the river which the tide reaches now and then, for a time, not permanently. Further, I have reason to believe that the Loch Leven trout of to-day do not stray more, or are more sea-inclined, than any other trout.—Yours, &c., H. L.

MESSRS. GUISE'S FLATTENED GRAYLING HOOK.

Dear Sir,—We observe in your last week's issue that you were good enough to express a favourable opinion of our new hook for grayling and other tender-mouthed fishes; at the same time you expressed a fear that the flattening would cause a somewhat sharp edge, which would cut its way out somewhat easily. Will you allow us to say that in adopting the form under review we trusted, and indeed believed, that we had succeeded in producing a pattern that would obviate that very defect. Our hook is wedge-shaped, and flattened in the bend, giving greater penetrating power, a firmer grip of the cartilage of the mouth, and by its extra width preventing the twisting of the hook when the fish is struggling, and transferring the twist to the gut instead, thus saving many a "break away."

Thanking you for your favourable notice.—We are, Sir, your obedient servants,

Redditch. W. Guise and Sons.

FEATHERS FOR FLY-TYING WANTED.

Dear Sir,—Would some reader kindly, through the medium of your paper, let me know where to get some Norwegian crows and other feathers for fly-tying?—Yours truly, H. Gale.

64, Glover-street, Camp-road, Leeds, Yorkshire.

THE SLIDING HOOK ON FLIGHTS.

Sir,—It is pretty evident that your correspondent, Mr. J. W. King, must have had but a very limited experience with sliding hooks on spinning flights or snap tackle; otherwise he must, before now, have found out the way in which to adjust the hook. Usually the tackle is sent out without any turn around the shank. If J. W. K. will take the tackle and pull the gimp out quite loosely *between the two eyes of sliding hook*, he can then give it as many turns around the shank as he chooses, each time passing around the loop by which the tackle is attached to trace; or if he does not happen to pass around the loop, then push the loop through the last turn and draw tightly. If the tackle (snap) *be attached* to trace then the gimp is passed around the lower triangle as many times as required. To adjust the tackle, nothing is easier: push the gimp in at either eye of sliding hook, when it immediately becomes quite loose and the hook can be shifted as required.—I am, sir, yours faithfully, J. T. Scott.

Marlow.

ELASTIC BANDS FOR FASTENING JOINTS OF RODS.

Dear Sir,—I wish to make known, for the information of brother anglers, a neat and ready substitute for the twine or soft wire ligatures used to tie together the joints of a fishing rod, when in use. Instead of using either of the above-named articles, to loop round the bits of wire at the ends of the ferrules, I have been employing for some time back the ordinary india-rubber rings sold in small boxes for a few pence—and usually used for binding bundles of letters or papers. These elastic bands will stretch to a great extent, and when one is looped over the joint of the rod, like a St. Andrew's Cross, it keeps it very firm and does not interfere with, but rather improves, the elasticity of the rod. With fair usage, too, the elastic band will last for some time.—Yours truly, G. B.

[Mr. H. S. Hall always uses these small bands, and recommended their use in our columns, many years ago; but doubtless many readers are unaware of the value of the elastic band for securing the rod joints.—Ed.]

MR. T. CRUMPLEN.

By Edgar S. Shrubsole.

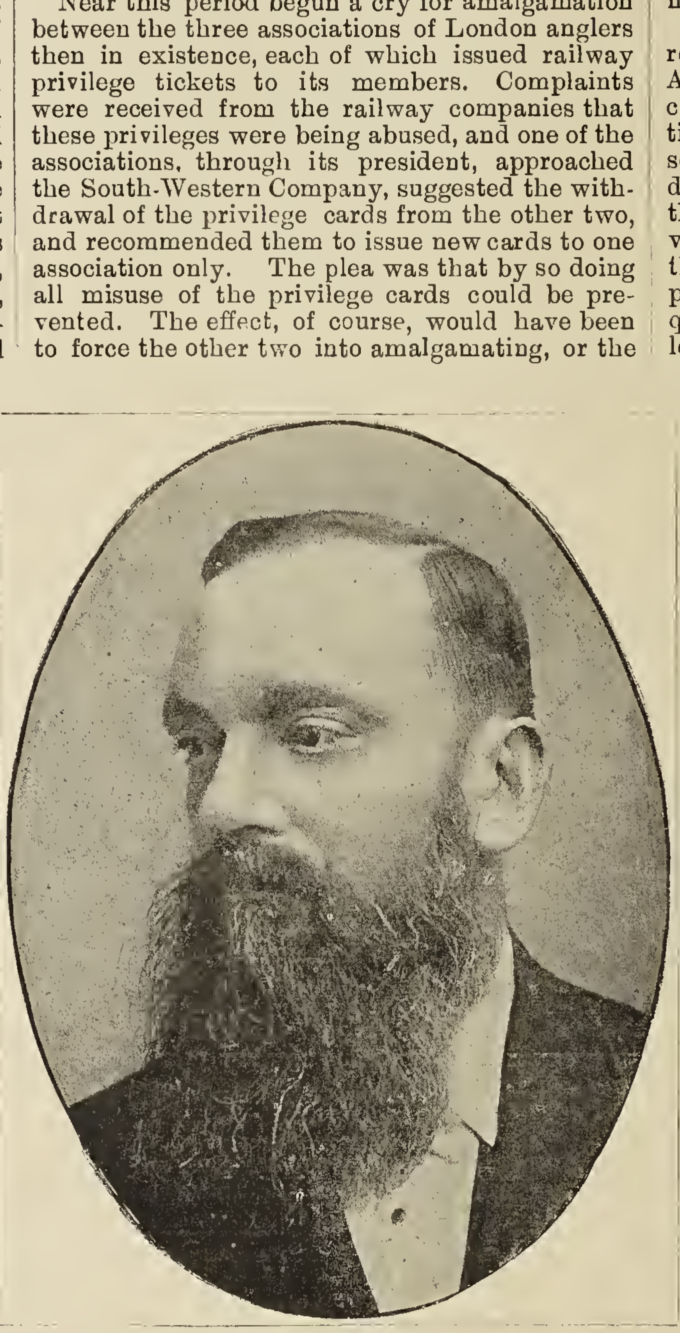
Mr. T. Crumplen, whose portrait appears in this week's *Fishing Gazette*, has so long been a prominent figure in the London angling world, that a brief sketch of his career, together with his views on what may be termed angling politics, so far as I have been able to gather them, cannot fail to be of interest to the many thousands of metropolitan readers of this paper.

Mr. Crumplen is a Londoner, and was born in the Strand in June, 1840. His father was a native of Hampshire, and passionately fond of angling, in fact he was, I believe, a member of a London club, the members of which respected him so much that they had his portrait painted and hung in their meeting-room. This occurred in the early part of the present century. He died in 1847, and rests, at his own request, in the ancient burial-ground of the Savoy, within sight of the river he loved so well. Mr. Crumplen's earliest recollections are associated with angling, and one of his first playthings, so he tells me, was an old brass winch, to which he took a particular fancy, and which had doubtless played an important part in the capture of fish in its time. It is not surprising, then, that Mr. Crumplen should have made fishing the recreation of his youth, or that later on in life he should have taken so warm an interest in anglers and angling clubs. The bent of his mind was towards scientific pursuits at one time, and for some years he was an ardent student of astronomy, and made many observations of a useful character, which have appeared in the annual reports of the British Association for the Advancement of Science; besides which many articles from his pen have seen the light in sundry periodicals and magazines. He was lecturing upon "Luminous Meteors," so long back as 1863, and his papers were so far appreciated, that they secured him the friendship of some of the most distinguished men of the day. He recalls with a feeling of pride how the late Rev. Prebendary Humphrey, one of the most eminent scholars of his time, voluntarily gave him an introduction to Mr. Gladstone, then Chancellor of the Exchequer, which, but for the threatened breakdown of his health, would have resulted in his definitely adopting a scientific career. He has, however, succeeded in the profession he has since followed, although he has still a hankering after his earlier pursuits. Many well-known medical men are, and have been, numbered among his circle of friends, but to none does he express so deep a debt of gratitude as to the late Dr. R. B. Painter (F.R.C.S., Exam.) for many hours passed in his company, wherein the wonders of the heavens and earth were mutually discussed.

Mr. Crumplen had been working among angling clubs for several years before he became so generally known by the founding of the Gresham Angling Society, which was mainly the result of his efforts. He presided at its first meeting, in March, 1881; was chairman at its inaugural dinner in June, 1881; became its first secretary, and read the first paper before it in October of the same year. In the two following years Lord George Hamilton, M.P., and Mr. Alderman Cotton, M.P., respectively took the chair at the society's banquets, then held at the Holborn Restaurant, and Mr. Crumplen's name was in each case coupled with the toast of the evening. Many of the leading representatives in the piscatorial world attended these banquets, and on the latter occasion Professor Brown-Goode and other commissioners from the United States to the Great International Fisheries Exhibition honoured the society with their presence. Correspondence poured in from various parts of the world, to say nothing of the work entailed by the ordinary affairs of the society, which put itself forward as a model one in the best sense of the word.

The thought and labour the secretaryship entailed upon Mr. Crumplen has been hardly appreciated by any except his immediate friends, who know and saw the work he did. The Greshamites of that day, at any rate, appreciated his efforts, and he was presented with a very handsome silver claret jug and two silver cups (the jug being a fac-simile of one discovered on one of the vessels of the Spanish Armada), as a mark of their respect and esteem. He was about the same time unanimously selected, in conjunction with Mr. T. R. Sachs, of the Piscatorial Society, to represent the interests of London anglers on the committee of the International Fisheries Exhibition of 1883, which he soon found no easy task, but, thanks to the hearty co-operation of Mr. Sachs, and the tact and zeal of Sir Edward Birkbeck, M.P., chairman of the executive, the difficulties that at first cropped up were removed, and a grand display of the treasures of the London clubs resulted.

Near this period begun a cry for amalgamation between the three associations of London anglers then in existence, each of which issued railway privilege tickets to its members. Complaints were received from the railway companies that these privileges were being abused, and one of the associations, through its president, approached the South-Western Company, suggested the withdrawal of the privilege cards from the other two, and recommended them to issue new cards to one association only. The plea was that by so doing all misuse of the privilege cards could be prevented. The effect, of course, would have been to force the other two into amalgamating, or the members would lose the privilege of travelling on the South-Western line at the reduced rates. The Great Western Railway Company were approached in the same manner, but refused to comply with the request. The South-Western assented, and it was then that Mr. Crumplen took up the cause of the Central Association with vigour that has never abated, and a spirit that has never flagged. Whatever difference of opinion may exist about the necessity for the *two* associations at present managing the affairs of London anglers (and I certainly differ with the subject of my article upon some points), nothing but admiration can be expressed for Mr. Crumplen having so consistently "stuck to his text." He was warmly supported by Mr. F. C. Hatfield, Mr. J. A. Fitch, Mr. J. C. Murray, and other gentlemen. The East Central joined hands, and a joint deputation, in which Mr. R. Ghurney, its secretary, and others took part, impressed again upon the company the injustice of the proceeding; but the company would not yield, and within a very little time, by pre-arrangement, the three associations held several consultations. Ultimately, the East Central Amalgamated with the West Central, as I described in my notice of the Anglers' Association, which appeared in these columns some eighteen months ago.



MR. T. CRUMPLEN
(Of the Piscatorial Society).

Mr. Crumplen, who had hitherto advocated amalgamation, now rallied the Central in opposing this scheme, and his association, determined to live an independent life, refusing, a they asserted, "to barter away their existenc even for a privilege ticket." Mr. Crumplen tell me they are as strong as ever in their determination to oppose amalgamation, even under th present improved circumstances. They are doin good work, and are rapidly increasing in numbers

The South-Western Company, who had alway worked well with the anglers, ultimately gave th Central their privileges again, and have certainl no reason to regret having done so.

This question chiefly led to Mr. Crumplen' retirement from the Gresham Angling Societ Among the papers read at that society was on called "An Angler's Parliament," to the publication of which he was strongly opposed. He himself having gone much among the anglers, wa decidedly in favour of some better organisatio than then existed, and was doing his best at tha very time to bring it about. The publication o that well-intentioned but (from Mr. Crumplen' point of view) disastrous paper hurried on th question, and, in Mr. Crumplen's opinion, clearl led up to the Waterloo visit. I believe the following passages, written at the time, would sti embody Mr. Crumplen's views, but his feelin is that, *at present*, the two associations do, an can, if they are so disposed, work best apart and that nothing is to be gained by stirring u further strife. Writing in July, 1884, Mr Crumplen says:

"What we want, if we have one associatio is a good one, not the mere stringing togethe of three weak ones, but an infusion of new me and new blood. There are a score of men wh could with dignity preside over such an institution, but the opportunity has never bee afforded them, and there are services they coul render in such a capacity which we shall a present have to do without. . . . Thi unfortunate *forcing* of amalgamation has don incalculable harm, for amalgamation of higher type and nobler character, which wa looming in the near future, has now been mad almost an impossibility. Day by day th anglers of London were uniting more closel their Benevolent Society and Fisheries' Societ were common to all, and they had agreed tha their railway privileges should be placed almos on a similar footing. Against the breaking u of this feeling of unity by the introduction of movement known to be largely objected to, th Central has made a bold and successful stan It has regained the railway concessions, it ha never knowingly misused them, and will probably soon obtain more. It has cheapened thei cost. Its members have aided many a goo work. They have contributed to river preservation, and were the first to help (after th other associations had refused) in the defenc of the rights of anglers on the Norfolk Broads Their members carried the banner of "Thame Rights" in a recent Lord Mayor's Sho (good old banner that!—E. S. S.) and fro their headquarters emanated the largest petition in favour of inquiry into the subject b the House of Commons. . . . Why, the should they be *compelled* to join another association, and unite, as they are virtually told the *must*, from necessity rather than from choice They have every privilege the new associatio has, and may yet possess more. Whatever thei numbers may have been in the past, or whateve their weakness, they are getting stronger daily and will doubtless in time form the nucleus of good and powerful institution, worthy the nam of the 'Central Association.'"

Mr. Crumplen's forecast was so far correct tha the Central Association has in the interval treble its number of members, and done much usefu work.

Mr. Crumplen has taken great interest in th question of the right of the public to fish with ro and line from recognised foot-paths, or from boat in the navigable parts of English rivers, an some three years since he became hon. sec. o "The Anglers' Rights Protection Committee," o which Mr. R. S. Fennings, hon. treasurer of th Piscatorial Society, was the chairman; and Mr Crumplen received the thanks of the Sheffiel anglers, and other provincial bodies, for th exertions then made. Mr. Crumplen—who rea a capital paper upon this subject before th

Balloon Society, Colonel C. E. Howard Vincent, C.B., M.P., presiding—thinks the right of the public will never be settled satisfactorily without an Act of Parliament, which whilst reasonably safeguarding any well-defined riparian claims, shall open to the angler the public parts of streams and rivers subject only to such regulations as may be requisite to insure order and proper preservation. He thinks a bill of that kind, properly drafted, the only remedy for the litigation and claims constantly set up; and that such a bill would meet with a large measure of support from both sides of the House is quite certain.

With regard to the present system of prizes adopted by so many clubs, he is no supporter of it, but at the same time does not see his way to suggest its *abolition*. He agrees with me that a good medal or diploma given by the clubs or associations would be more to be coveted, less expensive, and more appropriate than the many money prizes now offered. My extract from his Gresham paper, in my article upon "The Renting and Preservation of Fisheries for Club Anglers," shows him a firm advocate of river preservation, and I can hardly do better than quote here another sentence from this paper on "Fish and Fish Life," read before the Piscatorial Society last year :—

"It is greatly to be regretted," he says, "that the majority of club anglers (with few exceptions) take little interest in fish culture, and not sufficiently aid the work of river preservation. The aim of some of them is to see *how many* fish they can take from a river, without giving a thought as to how the supply is to be kept up, as if for every sizeable fish they catch another was spontaneously created to supply its place. Let us hope that, with more knowledge, better ideas will prevail and that *gross weight* competitions in the form sanctioned by some angling clubs may soon become a thing of the past—the work of Nature will go on in time to come as it has done in time past; but man by obeying her laws or disregarding them, may do much to aid or mar its progress.

As an active member of the committee of the T.A.P.S. he, in common with others, is continually urging anglers to subscribe to its funds. Mr. Crumplen joined others in appeals to the anglers to increase their standard at a time when he tells me the cry was more needful and less popular than now, and with the growing desire of anglers as a body to become truer sportsmen he has no fear for the future of our rivers if they are judiciously re-stocked, properly preserved, and fished in a sportsmanlike manner.

If Mr. Crumplen is not with me exactly on some questions, I know he is anxious to aid everything that has a tendency to elevate working men anglers, and whether it be by a good angling song, or the reading of a paper, he is always its supporter. He wrote an angling song for the Gresham inaugural dinner, and he has added a couple of verses to Walton's Angling Song. One of his papers on "A Visit to Izaak Walton," an angler's dream, has been warmly received. Another on "Pulborough and its Surroundings," has also proved popular. Of the many papers he has written two have been read before the Piscatorial Society, of which Mr. Crumplen has been for some years a member, and he has promised them a third in January, 1892, the subject of which is to be the "Story of the Thames." I very frequently have occasion to chat with Mr. Crumplen, and while holding strong views upon angling matters, I have invariably found him to be straightforward and fair in his statements, and a careful listener to "the other side of the question."

SOME NOTES ON THE BEDFORDSHIRE OUSE.

By an Old Hand.

(Concluded from page 288.)

Hemingford Pool and Mill.—It was a magnificent day; one of the very few glorious days we experienced through the singularly boisterous, wet, dull, dreary summer, and the only fine day during my stay, that, as I passed round the mill to the second weir, I saw a lady sketching in the shade of the willow tree, by the old dilapidated lock, and I had not been fishing very long before another lady rowed athwart the lasher of the weir, and dexterously turning her boat she rowed along with such ease and skill, and her attitudes were so perfect, that I instinctively ceased looking at my rod-top to watch the graceful precision of her every movement. The boat shot along the sunlight surface of the broad and spreading pool, past the bent and bowing bulrushes, swaying in the wind; the pollard willows dotting the left bank; the streak of back-water; and so across to the opposite side, past the overhanging trees, waving their graceful branches in the breeze, until the boat, with its fair and slim occupant, passed from view. An incident, you will say, simple in itself, but so thoroughly in keeping with the pool and its surroundings, and imparting such life and animation to the scene, that I make no apology for relating it. Presently a train coming along at express speed literally flew over the viaduct below. Professor Ruskin may detest seeing a lady on a tricycle as much as he does a railroad generally, but I must confess that it is under such circumstances as these that I like to listen to the deep rumbling of an approaching train, until it comes sweeping past in all the grandeur of its mighty strength, for a moment drowning the sound of the splashing seething water, until, like the noise of distant thunder, it gradually dies away in solemn and peculiar tones, a pleasing contrast to the ceaseless music of the fall; and I cannot help thinking that William of Malmesbury had the charming upland beyond the bridge in his eye when, as far back as the year 1204, he said :—

"The fens were a very paradise, and seemed a heaven for the delight and beauty thereof, in the very marshes bearing good trees, which for tallness also without kusts strived to reach up to the stars; in short, out of slough and bogs accursed they made a garden of pleasure." Substitute woodland splendours glowing in the sun for "A garden of pleasure," and in this case, at all events, he would not have been far wrong. Again, to the angler more especially, what a fascination there is about these mysterious old structures. The windows white with floury accumulations; some of the more protected portions looking like the down on an unfledged bird, and the thatched roofs of the outbuildings necessary to them, covered with moss looking like the dust of gold in the soft light of the setting sun; but once past the whitened door, what a hive of industry the interior presents. What a humming; what a rattling of chains; what a crunching and grinding; what a whirr of wheels; what a flitting to and fro; what a grappling, wheeling, and struggling with sacks; what a pouring down into the innumerable shoots; what a rumbling on the floors above; what a bawling below.

It is after passing out of such a building into the pure fresh air, that the music of the rushing waters sounds so sweetly and the scenery is so delightful; when the landscape is continually changing its aspect, and—

What about the fishing?
What about the fishing?

Destruction of Fish.—Roach Swims.—From time immemorial the devil destruction has been roaming through the land, busy slaughtering baby fish. Thousands of money and other prizes have been won at a fearful cost of fish life. I once sat on the bank of a well-known river opposite thirty or forty of these so-called anglers: when, in the course of one Saturday afternoon, over one thousand fish were caught, and the slaughter of innocents must have been tremendous.

A large number of both club and unattached anglers seem to imagine that the supply of fish is inexhaustible, but this is a woful mistake, and unless something is done to stop this wholesale destruction of small and utterly useless fish (more especially in some rivers) the work of depletion will be accomplished. This devil was present on this occasion, and it was most irritating to hear one of these destructive gentlemen grumbling and growling about the scarcity of good roach, with twelve or fifteen "scripers" lying dead and dying at his feet. Roach may generally be taken in the quiet water between the two weirs, using a good, long, light, bamboo rod, keeping well out of sight, and baiting with paste, gentles, or wheat. Try all three, for roach sometimes prefer one bait to the others. Even when fishing in the river above the Mill the native I was with had a rod at least twenty-one feet in length. He sat as still as death, sneaked his bait in the most careful manner, and there being no dearth of swims he did not stop too long in one place. The water was so clear we could see numbers of rudd between the Mill and the "Six Gates," near the surface, apparently on the look-out for flies. There are some rare harbours for pike and capital haunts for chub in various parts of this splendid pool, live-baiting for the former, and fly-fishing for the latter. *Re* best baits see previous remarks; also see report in *F. G.* for November 14, of two good pike taken in this district. Legering may be carried on in the fast water below the weir nearest to the lock, and there are occasions when splendid bream may be caught. I advise the use of as fine tackle as possible, because the water is usually so clear. Standing at the head of the pool and looking down-stream, there is a lovely backwater to the left, at the lower end, running across the meadows to another grand pool, into which the water dashes through what is locally called the "Six Gates." This pool may be compared to a huge basin, around which the water flows like an eddy, and *looks* a splendid harbour for jack, perch, chub, &c.; for there is nothing to prevent the fish from coming up this charming overflow from the main stream, or for the matter of that the pool at Hemingford.

The water in this backwater is rather deep in places; quiet, and contains some swims delightfully situated. There is such a forest of bulrushes, &c, near the outlet of the pool into the backwater, that it is difficult to see any portion of the latter when standing near the river by the flood-gates. I may just mention that there are some capital roach swims in the main stream on either side of the gates, and a little distance higher up the river is Badcock's Island, where good fishing may sometimes be obtained. From the island to Huntingdon is only a few miles distant. An immense number of eels have been taken in Hemingford Pool in one night; on one memorable occasion I believe the take weighed a ton. I was talking to an angler this week, who has been fishing much in foreign lands, who told me he has caught splendid chub in this water with the Black and Red Palmers.

Native Anglers.—There are several good anglers residing at Hemingford, and a stranger may often save himself time, trouble, and expense (taking a boat to an unlikely place, for instance), by a timely appeal to these knowing customers, whose addresses may nearly always be obtained at the inns, or failing them, the Post-office. London anglers think it worth their while to employ them, and this fact alone should be a sufficient recommendation. So much depends upon the state of the water, proper ground-baiting, swims, &c.; and these anglers being on the spot, as a rule, know where the fish are likely to be found; in short, it is to their interest to provide good sport for their customers.

Navigation, Locks, &c.—There are various rumours afloat; but supposing that the Eastern Counties Navigation Company thought of making the river navigable, say, between Earith and St. Ives, it appears to me that the chief obstacle would be the expense of cutting or dredging a channel through Swavesey and Holywell shallows, and I should think that 4ft. or 5ft. of water at most would be sufficient for the traffic. There is a great fall in the river between Bedford and Lynn, and if the locks were done away with, such a proceeding would drain all the water from Bedford. There are only four locks between Cambridge and Lynn, and the fall is about 25ft. The fourth lock is Denver, where the tide on certain occasions rises as much as 20ft.; and if the locks were removed, navigation would be impossible.

I may be mistaken, but I do not think such a work will injure the fishing to the extent some seem to imagine. The locks are intended to dam or hold up the water for traffic of barges. The water above St. Ives Locks is over 12ft., probably 14ft. higher than it is below, and the fish may to a certain extent be said to be boxed in in sections, the locks and staunches being the boundaries; for I cannot possibly see how coarse fish can work up the Hundred Foot or Bedford Level from Denver, through Over, and St. Ives Locks to Hemingford, and the fall here is very considerable. I have heard of trout (salmon, I suppose) being seen attempting to jump the fall at Over, but never accomplishing the feat. The water from St. Ives to Over Locks is rather flat, and the stream is consequently slow when at its normal height, but as far as I can recollect, even the fall at Over is 9ft. or 10ft.

Bream.—An old Ouse angler, and one to whom I am greatly indebted for many useful hints and much valuable information, says: "My own idea respecting bream is that they are not a migratory fish, as some people think, for I firmly believe that they take a fancy to a certain stretch of water and *stick to it.*" They will pass up and down this water frequently, perhaps during the day and night, but I have never seen them attempt to pass anything like a shallow, and I have frequently seen an example of this at Swavesey gravel.

"I have seen a shoal of bream working up from Over Locks past the Ferry, up to the very edge of the gravelly shallow, and immediately return back to their 'hover' in the deep water just above the locks. Another large shoal of bream can often be seen at Ducker's Hole; these will work up to Holywell shallows and back again in a similar way.

"Within half a mile of Brandon Creek they are often seen, and here again I must assert my opinion that they work up from the deep water between Hilgay railway bridge and Denver Sluice, where the water is 6ft. to 10ft. in depth, and a gravelly bottom."

Proof.—"Bream in this district are seldom seen or caught on a muddy bottom (they will pass over it in search of food), and the old bream fishermen about here always fish over a gravelly bottom, and this is why so few bream are seen in the Old West, &c.; the bottom is generally muddy." I quite agree, and this is another reason why night fishing for bream is more successful than day fishing. Bream are very shy, swim so near and sport so much on the surface that in the daytime it is next to impossible to keep out of sight enough to catch them; more especially in a gin-fine water, and to leger for them in many places is impossible.

Visitors should not forget to call at that angler's paradise, the Pike and Eel, Over Ferry, Cambs., one of the most charming spots on the river. See previous remarks *re* the fishing. Boats can be hired here; good accommodation; charges very moderate; fairly good pike fishing all through the winter. Address, Mrs. Hemmington, Pike and Eel, Overcote Ferry, near Swavesey, Cambs.

Waltoniana

Surely this is one of the most rainy years ever known. To those fond of winter fishing the weather is most exasperating, for no sooner is one flood on the point of subsiding and the water getting into good condition, than a fresh downpour comes and upsets everything. What can we poor flooded-out anglers do? Well, nothing much to our tastes, unless it be to mend our tackle and devise fresh contrivances for taking fish. Those who can tie flies need never be in want of amusement during the long evenings, and those who fly fish, but who know nothing of the fly-tyers' art, may with advantage to themselves make at any rate an attempt to construct such a combination of fur and feather as will lure a trout or salmon to his doom. There are several books which give full instruction in fly-making; but, besides a study of one of these, I would recommend a beginner to carefully take a good-sized fly to pieces, and notice exactly the order in which the different parts were put on. Of course all flies are not tied in the same way, and some thought is often required to see which portions are best put on before others. The beginner cannot perhaps do better than make his first attempt with a good-sized lake trout fly. It is by no means difficult to tie.

Another diversion for the winter evenings is looking over the bindings of fishing rods, pike tackle, &c. Many will be found to require re-tying, and all will be none the worse for a coat of varnish. Good coachmakers' varnish is the best, but at this time of year something that will dry quickly is required; and for bindings there is nothing better than shellac dissolved in spirits of wine. As to quantities, half fill a bottle with powdered shellac, and fill up with spirits of wine. The shellac takes some days to dissolve. This varnish should on no account be put on any binding which is not quite dry, and it should be put to set in a dry warm place.

Did any angler ever take a jack with a live-bait adorned with a piece of weed? I never have; possibly because I am always particular to keep my bait free from such adornments; but I have never heard of anyone who has. If a piece of weed will keep a pike from taking a bait, we can well understand how it is that a live-bait—one side of which is decorated with a couple of triangles—is not taken as often as it might be. Everyone who has pike-fished much must have, at times, felt certain that pike have come and inspected the bait and gone away without taking it. The bait may have been working quietly for a long time, when suddenly it makes most frantic efforts to get away, and one is on the *qui vive*, expecting a run every moment. Of course, a pike may not have been near, but everyone attributes these antics of the bait to the presence of a pike, and I imagine everyone is right. What I am coming to is that it seems reasonable to say that we should make our tackle for pike as invisible as possible.

With regard to the line between the bait and the float, we all know to what extent invisibility can be carried, and that the line has to be drawn at single gut; I will not say salmon gut, as for ordinary pike-fishing something less stout will usually suffice. But, with regard to the hooks and gimp, which are attached to the bait, as it may be presumed that the pike inspects the bait more than anything else, it seems reasonable to say that on the tackle close to the bait should be lavished our ingenuity. The great point seems to me to be the advisability of making this portion of the tackle resemble the bait in colour as much as possible. For that reason bronzed or japanned hooks are most objectionable for pike-fishing. On the silvery side of roach or dace, they show out almost black, and are most conspicuous. Silver-plated hooks would, I imagine, be best of all, but no doubt bright steel would be a very good substitute. Then we are told to stain all our gimp, but stained gimp, like the hooks, shows out boldly on the side of the bait. For the portion of the tackle touching the bait I would, therefore, recommend the silver gimp of commerce. These remarks apply as much to spinning as to live-bait tackle.

I have no doubt some readers of the *Gazette*, whose lines are laid in pleasant places, where jack are easily caught will say that I am far too particular, but the jack that I have been acquainted with of late years are also far too particular; and we anglers have to consult the peculiarities of the fish in matters of detail, or we should not catch much. Thames jack are getting almost as highly educated as Thames trout. How wonderfully dark those jack at Henley kept themselves! Few people suspected that the river was really well stocked with those fish, but now, after a flood, when the jack are ravening and the water is coloured, such immense takes are made as to prove beyond question that the river in that district is really well stocked with jack. Why they have not been caught before is simply because anglers have been less clever than the fish.

I always expected that, when anyone who really understood fishing with bait went to Houghton, some really remarkable takes of fish would be made. Numbers of big fish, both trout and grayling, lie in the hatch-holes where bait fishing is allowed; and in the matter of worms and minnows they are as unsophisticated as they are cunning in all that pertains to fly-fishing. Still, Mr. Walbran's take, reported last week, was a great one, and will rejoice the heart of many north country anglers. Were there not so many grayling in the Test, I would suggest to the club that they might with advantage employ a skilful London bottom-fisher to catch the fish in the hatch-holes for the purpose of returning to the river, or at least so many of them as might be worth returning, for the largest of the trout would perhaps be best knocked on the head.

Templar.

Notes and Queries

The Connon Salmon Hatcheries.—New Departure.—These were erected about a year ago, under the supervision of Mr. J. McNicol, consulting piscicultural engineer, Tain. As an experiment, Mr. McNicol substituted perforated zinc instead of glass grills. Over the zinc a thin layer of gravel was placed, on which the ova might rest without coming in contact with the zinc, the water rising through the perforations from below. The method has turned out a complete success, under the careful management of Mr. Nisbet, Inspector of the Connon District Board. Out of 100,000 salmon ova from the Tweed, which was deposited last season, 95,000 fry was turned into the Connon during the summer from the nursing ponds, the whole loss being estimated at not more than five per cent. The success of the Connon experiments has given an impetus to artificial hatching, which it is earnestly hoped will be promoted on every hand.—*G. M. M.*

Spawning Salmon "Cruelly Gaffed."—Clever Capture of Poachers in the Isle of Man.—At a special Court, on Thursday week, before his Worship the High-Bailiff of Douglas, three men, named John Corrin, Thomas Cain, and Edward Collister, were brought up under the Salmon and Fishery Act, charged with salmon poaching. In consequence of information received on the morning of the 12th, Mr. Caley, the inspector, proceeded to Port-e-Chee river, but found the birds had flown. Persevering, however, in his search, he found them coming over Pulrose Bridge, and, after a severe struggle, captured one of them, the others making off in the direction of Douglas. In the pocket of the poacher was found a large salmon, evidently just about to spawn, and which had been cruelly gaffed. Conclusive evidence was given by Mr. Peter Cadman and Mr. Caley, the inspector, against the defendants, and his Worship, in fining them each £5, or in default two months' imprisonment, commented severely on this cruelty, and regretted that it was not in his power to order them to be flogged as well. The prisoners were removed to the Isle of Man Gaol the same day. Mr. Boyd conducted the prosecution, on behalf of the Fishery Board. We are glad to see that some effort is being made by the public to assist the inspector in his sometimes difficult and dangerous duty, and we congratulate the Fishery Board on their evident determination to put a stop to the scandalous poaching which has prevailed in our rivers. The salmon, which was utterly unfit for human food, was brought into Court, and ordered to be at once destroyed.

Pike in Scotland.—"There are no pike nor coarse fish of any kind in Caithness, and if I am rightly informed there are none in Sutherlandshire either, but in the adjoining county of Ross pike are to be found, and in almost every county south of Ross. The only fish met with in the two former counties are salmon, brown trout, sea trout, eels, a few char, and *Salmo ferox*, the latter in Sutherlandshire only. I never heard of a *ferox* being caught in any loch in Caithness, but there are a few char in some of its lochs. Can anyone give a correct reason why pike never found their way into Sutherland or Caithness lochs or streams, and how they got introduced to the neighbouring counties? Not that I have any desire to see them here, as they are destructive to salmon, &c., but I ask from curiosity only."—*A. H.*

THE PISCATORIAL SOCIETY.

An enthusiastic meeting of the above society took place on the evening of the 18th November, at the Mona Hotel, Covent Garden, being the seventy-eighth birthday of their senior member, Mr. T. R. Sachs. Congratulatory speeches were delivered by Mr. R. S. Fennings, honorary treasurer, Messrs. Foreman, Adlington, and Crumplen, and the health of the chairman, Mr. T. R. Sachs, was most cordially drunk. The chairman replied and gave a short sketch of his angling life, which was received with much applause.

A smoking concert will take place at the hotel on Wednesday evening, November 25, at 8.30 o'clock. The programme, Part 1, contains nine instrumental and vocal melodies; Part 2, eight ditto. All anglers are welcome and their friends also.

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear Best quality only —East London Rubber Co., 8, Shoreditch, E.

OTES FROM BIRMINGHAM AND DISTRICT.

HE Belmont Society, which have lately been forced to nove from the Fox and Dogs Inn, Princess-street, rough a misunderstanding with the host, held a special neral meeting on Tuesday evening last at the Brunswick otel, Lancaster-street, for the purpose of taking into con- eration the position of the club, and also, if possible, cide upon a place convenient to the members to hold the ure meetings of the society at. The meeting was well ended, and was presided over by Mr. Chambers, who plained the nature of the business to be transacted. Mr. Currie, the secretary, read the correspondence received, d pointed out to the members that he was unable to call muster-roll on account of the books being detained by . Robinson, of the Fox and Dogs, but he, the secretary, d the minute-book, and he proceeded to read the minutes the last meeting held on Nov. 3. The chief portion of minutes related to the removal of the society. This atter was taken first, when, after a little discussion, it s unanimously decided to ask the committee of the rmingham Angling Association to allow them to make Brunswick Hotel the meeting-house of the club. The cond portion of the minutes dealt with the re-stocking of oseley New Pool, which is rented by the club. In speak- to this part of the minutes, the secretary informed the embers that he had been in correspondence with a gentle- an who had a large pool, and the gentleman intended ving all the coarse fish netted out of it, and to stock it th trout, and he (the secretary) had been offered the fish five shillings per gross. The report of the secretary, gether with the minutes relating to the re-stocking, was cepted, and it was further decided to expend the sum of in re-stocking the water. The trustees and auditors, gether with the chief officers, were appointed to visit the st of the old club-house for the purpose of obtaining ssession of the properties of the society. It will be seen the minutes passed at this meeting that the Belmont ciety, which is only a working-man's club, is composed the right sort of anglers. The whole of the funds are voted to the renting and re-stocking of their waters, hich are at Moseley, near Birmingham, and a portion of e river Avon at Bidford. This year the club has expended ar upon £30 in re-stocking their water and other improve- ents for the comfort and benefit of the members; and, as small club, the greatest praise is due to the members for e manner in which they go in for re-stocking their water d also setting an example which some of the greater d richer clubs would do well to follow. I hope the society ll prosper in its new quarters, and meet with the success at it richly deserves.

THE recent heavy rains that have passed over the idlands has, in some parts, put all kinds of angling com- etely out of order. The Trent, in the neighbourhood of rewas is, in some places, over the meadows, and owing the great amount of rain we have had of late the ground so saturated that it will take a longer time than usual r the water to settle down to its proper level, but I am eased to say, as these notes leave me, that the weather s changed for the better, and the barometer is rising pidly, and if the rain keeps off, the river will be all right the time these notes appear in print. The roach will be orth trying after, and will be found in the deep water. ike fishing should be good as soon as the water goes own. Some few have been taken during the past week om some of the backwaters, but none of any size worth entioning. Previous to the heavy rains some good pike ere taken at Yoxall, and some decent catches of roach, ith the gentles. No grayling have been taken lately, and e best bait on this river, as soon as the water gets right ain, will be the small red worm, as the roach in this ver are very partial to this kind of bait during the winter onths.

ON the Severn matters have been rather dull, and othing worth recording has been done by any of the irmingham anglers. Some of the Kidderminster men ave been trying for chub with the blood and brains, but ery little has been done with this favourite bait, and I on't expect it will be any good until we have had a sharp ost or two, then we shall hear of some large takes with is bait, as it is the bait that the majority of Severn chub shermen only use and swear by.

ON the Avon the water is reported to be getting into ondition again, and as soon as the water gets down again should advise the anglers who frequent this river to go for pike fishing, as there is a large quantity just now, pecially in the waters rented by the Birmingham clubs. revious to the recent rains some very decent fish were aken, but nothing over about 7lb. The roach are quiet; ut as soon as the river begins to fall some good sport ught to be had with these fish, as the rise and fall of the iver is about the only time for successful roach fishing in he Avon.

A MATCH between Mr. G. Garrett, of the Deritend lub, and Mr. H. Saunders, of the Hilly Fields Society, was shed on Saturday last in the canal at Tamworth. The onditions of the contest was only roach to count; the ime for fishing was two hours. The Deritend man had atters all his own way from start to finish, and won by our fish. The stake was for a purse of gold, subscribed to y the members of the clubs to which the contestants elonged.

I AM pleased to inform my readers that Mr. T. Coles, the resident of the Provincial and Birmingham Associations, nd Mr. R. Wingfield, the vice-president of the Provincial ssociation, have been appointed by the Worcestershire ounty Council to serve on the Severn Board of Con- ervators for the ensuing year of 1892.

FISHING from pier and rock in the Macduff harbour and icinity has been greatly enjoyed during the past week. he rough weather drove fish in shoals in-shore, and the vater in the harbour was swarming. A few tried the fly vith fair success, but over a hundred rods that used nussel bait had extraordinary takes of saithe and codling. or an hour or two's fishing the catch ranged from one ozen to three. Dredging the harbour with nets in the ark, and when the tide was ebb, was of late quite of ommon occurrence at this season of the year. Those who vere engaged made a fine thing of it, the yield having to e taken home in large baskets used for measuring errings when landed from the boats in the fishing season. Ve understand that the practice, in future, is to be put a top to, and those found transgressing will be prosecuted.

NOTES FROM LANCASHIRE.

THE lecture delivered by the Rev. C. P. Roberts, on "My Experiences in Fishing Loch Awe," to the members of the Northern Anglers' Association, in the City Rooms, 16, Cannon-street, Manchester, on Nov. 12, was a complete success. The room was comfortably filled, the attendance being a great improvement on the initial lecture of a few months ago. The rev. lecturer at once secured the sympathetic attention of his audience by declaring that all social distinctions disappeared in an assembly of anglers, and the pleasure it afforded him in being amongst those who represented every class of fishing, from the modest canal fisherman to the followers of what he considered the king of sport—viz., salmon fishing. Loch Awe has received regular attention from the lecturer for about thirty years, and after so long an acquaintance, it is no wonder that sufficient recollections existed to form subject matter for description to keep his hearers interested and attentive to the last minute. Mr. Roberts possesses a wonderful delivery, and his racy anecdotal style is very pleasing and instructive. Like many other anglers of note, he has the courage of his opinions in respect to tackle, and the manner in which he persevered against the opinion of the natives with what has come to be known as Roberts's Yellow-fly, and his success with the same was not the least interesting item of the evening. The capture of a salmon between two perch, on a fine trout cast, is an item worthy the notice of every reader of the *F. G.* The fish took the first dropper, a March Brown, and immediately made for the bottom of the loch; here the point-fly and second dropper were seized by the perch, and after two hours of exciting sport, all three fish were landed. The specimens on view during the lecture were much admired. Mr. R. Burn presided, and amongst the audience were Dr. Simpson, Messrs. R. Ramsbottom, J. Statter, J. Broadbent, J. Seed, J. Peacok, J. Johnson, and many noted anglers from Rochdale, Oldham, Bolton, and other surrounding towns. Cordial votes of thanks were accorded to the lecturer and chairman. The next lecture will be in January, 1892, on "Norway, and its Fishing," when lantern views will be requisitioned.

THE Manchester Anglers' Association held a meeting at the Grand Hotel, on November 17. The members had received an urgent whip to be present. After tea a general and interesting discussion took place on the question of introducing grayling into trout streams. An exhaustive and enjoyable consideration of the question resulted, and no doubt the different views expressed by those taking part in the discussion will give additional interest to this prominent question.

THE petition to the various railway companies has received many signatures and it now remains to be seen whether the united effort of the Northern Anglers has made any impression at headquarters. The amount of traffic behind the scheme both in passengers and goods should have the desired effect.

THE Wellington Club held a smoking concert a few days since of a most successful character. The Duke of Cambridge Club held their annual meeting on the 14th inst. Judging from the list of vocalists to hand a most harmonious evening was spent. We should have liked a list of the new officers, and perhaps the same may be forthcoming when the "Cornbrook Bait Can," containing valuable assets of the club, is again heard of. The New Islington Angling Society is passing through another phase of its career. Formed to give membership to total abstainers only, the results have not been satisfactory and it is to be at once reconstituted on a different basis. The Heaton Norris Society is a really good society, and although of only some few years of age it has a goodly roll-call, and is financially strong. In the coming year many valuable prizes will be offered for competition. The Hulme Crown held an ordinary meeting on the 16th. The greater part of the business on hand was purely club affairs, but the future of the amalgamation received careful consideration.

NOTES FROM NORFOLK.

OWING to the rain and wind of last Wednesday, all our rivers have been so thick that both pike and bottom-fishing have been out of the question during the past week. On some of the private broads some pike fishing has been done, but not with any degree of success. A friend and myself were out last Thursday on private water, which we expected to find in good condition, but it was so coloured that despite natural and artificial, live and dead bait fishing, all we succeeded in taking were two small pike, under 4lb. each.

ON the Yare a few rods have been out, only in two instances with success. On Saturday, at Rockland, one boat had three pike, and on Monday, at Brundall, one boat took two about 4lb. each.

ON the Bure more success has attended the few anglers out on this river. On Tuesday one boat had twelve pike at Wroxham. Last Thursday two stone of good roach were taken at St. Benet's Abbey, near Horning.

NOTES FROM NOTTINGHAM.

PIKE fishing has received a check. No sooner were my Notes written last week than the Trent began to rise, and on Saturday the river was running fully six feet above the usual height of summer. Since then the water has fluctuated considerably, and angling pursuits have been anything but enjoyable. Still, the winter contingents have not remained idle, for on Monday several gentlemen journeyed to Weston, where it was found the water was in fairly good condition. Frequently it happens that the river is much finer above Nottingham than below. Anglers commencing operations at Shardlow, and working upwards to Weston and so on, miss the important tributaries of the Erewash, the Soar, and the Derwent. The first-named finds its outflow at Barton, the second named immediately below Trent Lock, and the last-named a short distance above Sawley Weir. The Dove empties itself into the Trent opposite Newton Solney, above Willington Bridge, and so affects the subscribers to the Willington, Foremark and Weston Fisheries, but as the Dove is naturally a very fast-running river, the water is sometimes up and down in a day. Well, as regards the doings in Mr. T. Wood's subscription length on Monday, Mr. J. Theaker and Mr. P. Wilson, of Nottingham, both secured substantial bags of roach with the maggot; and above King's Mills Weirs good sport was met with by Mr. E. Harrington, of Radford, and myself. Some Derby and Melbourne anglers were out near Weston Cliff, but their takes did not transpire. Three or four Nottingham gentlemen visited the Colwick and Holme Pierrepont reaches below Nottingham, for the purpose of giving the pike a trial in the back eddies, but they might just as well have remained at home, for the water was of the colour of a clay pit, and totally opposed to a pike seeing a bait. I always regard pikeing in a thick water as so much waste of time, but there are ardent fishermen, especially beginners who had tasted "blood," who will not be denied. Last week, before the new order of things meteorological occurred, Mr. T. Wood killed five splendid pike at Weston. The heaviest fish weighed 9½lb., and there were two of about 7lb. each. Previously, in a take of four, the same gentleman had one of 11lb. odd As soon as the river settles down, coarse fish anglers should certainly be up and doing in earnest, for roach, dace, perch and bream ought to bite readily, not to say greedily.

I LEARN that, after a lengthened correspondence, the executive of the Nottingham Shoulder of Mutton Angling Association have succeeded in securing for the benefit of members of the society a capital piece of fishing water on the Trent, between Trent Lock and Sawley Iron Bridge. The water is in the right of the Hon G. E. Curzon, M.P., and is well stocked with coarse fish generally. Roach and bream predominate, and in the first field (there are four fields) above the ferry on the south side of the river ought, when the water is coloured, to afford an abundance of sport. The roach run unusually large, and at times bream up to 4lb. each are taken. There is perhaps a scarcity of barbel, but the runs below the Iron Bridge ought to yield a decent quantity of chub and dace, not to say pike, for the capture of which the trolling bait should be used. The society is now firmly established in the town, and I wish the members every success in their new venture. On the 9th they held a sort of inaugural day, and enjoyed themselves—that is, the members—immensely.

Apropos of the owner of the fishery, I might mention that during the week Her Majesty the Queen has approved of his appointment as Under-Secretary of State for India, in place of Sir John Gorst, Q.C., M.P. Mr. Curzon has travelled a great deal in India, Russia, and Persia, and is a most able man.

A PETITION against the proposed imposition of a tax on the rods of coarse fish anglers by the Trent Fishery Board. lies for signature in certain of the meeting rooms of our local societies. There can be little doubt that if the Board impose the tax they will give an equivalent for it. A paid water bailiff is greatly required in our district, and if, after the tax comes into operation, the Board do not give us one, there is sure to be a loud outcry against their policy. The Trent in the summer season teems with anglers, both old and young, and I pity the poor collector who is called upon to collect their subscriptions. I am afraid he would be given what the sporting prophets call "The Miller." According to the working of the present Acts coarse fish are not recognised, or rather projected. In public waters the "skull-dragger," or "snatcher," is at liberty to ply his vicious tackle *ad libitum*, and it is to protect the fish—coarse fish, I mean—that the Board are now striving to obtain a special legal enactment. Towards this end Mr. Henry Bromley, one of our local Conservators, has formulated a resolution, which has already met with the approval of the Board. It is impossible, however, to say when it will become operative through the action of the Legislature. Special Acts of Parliament are not obtained every day, and experience tells us only too plainly they are a long and often tedious process. But we must hope for the best, and trust that, until the Act is got, the Conservators will not seek to impose a tax.

HOW easily a friend may be led into hot-water—I mean angling hot-water. The other day friend J. asked friend T. to join him in a day's pike fishing, having received the necessary permit from a son of the owner of the fishery. T. killed a very good pike, and was delighted, for it was about the first he had ever landed. Friend J. told me of the capture, and of course I mentioned it in my ordinary report. The owner read the report, and has since written T. to the effect that, having seen it published, he should much like to know by *whose authority* he was angling in his waters, of which explanations have followed, and the case, I am happy to say, will not engage the attention of a police-court.

NOTES FROM SHROPSHIRE.

THERE has been a great deal of real old November weather of late, but even the risks of rheumatism and lumbago have not altered pike fishers from taking advantage of the favourable condition of the water A large number have been on the war-path, and the slaughter has been fairly great. Messrs. Craddock, Tench, and company have had some good days in the neighbourhood of Uffington, and some good sport has been obtained at the mouth of Sundorne brook.

A RATHER amusing incident is related in reference to the pike fishing at Uffington. Last week Mr. Craddock had some grand sport at the mouth of the brook, and in two days took sixteen and ten fish. His success was duly recorded in the *F. G.* and other angling papers, and the result was that on Monday there were eight or ten pike fishermen endeavouring to emulate Mr. Craddock at this favoured spot. But, alas! for human hopes, they toiled all day and caught nothing, nay, they had not even a run; and now nothing will convince them that such wonderful catches were made a day or two before.

OPERATIONS at the hatchery of the Shrewsbury Severn Angling Society have of necessity been somewhat slow of late, but the hatching season will soon be upon us, and matters will, we are promised, assume a different prospect. Trout hatching will, says Mr. J. Williams, the hon. sec. of the society, be carried on with renewed vigour, and, it is hoped with more increased success. It is intended, too, to introduce some grayling fry to the hatchery, and there is no reason why this should not have a satisfactory result. The great drawback is still the comparatively small supply of water to be obtained, but under the present conditions it is impossible to increase it. The trout in the breeding ponds thrive wonderfully well, and are all in a healthy condition. It is hoped that a goodly supply of spawn will be obtained from these in the spring.

NOTES FROM YORK AND DISTRICT.

"NOTHING doing" has been the consolatory cry from the Yorkshire streams during the past few days, and, indeed, I am sorry to say, will be re-echoed for some time longer unless circumstances change very soon. Rain has fallen in large quantities, and the rivers are now, and have been, bank-full, rendering fishing of anything like sport attached to it practically *nil*. However, we are having one or two touches of frost, which, should the streams soon run down, would materially improve grayling angling, especially with the worm. Pike fishing has been of late resorted to very considerably by anglers who must be "up and doing," and find it no easy matter to lay by their rod for a time. One or two jack have been captured in the Foss, but nothing above ordinary weight has been landed.

THE clubs in this district are now, for the most part, settling down for the coming winter. Several are holding their annual meetings, and that of the Harrogate Association, which took place on Thursday evening, the 12th inst., showed that a successful year's work had been done. The report presented gave evidence of the interest displayed in the art of angling by the members, some of the records being more than usually good. After the officers for the coming year had been elected, considerable discussion took place on the proposed prospectus for the ensuing season. Mr. G. F. Milner (president) occupied the chair.

NOTES FROM TYRONE.

THE storms of last week, which did so much mischief in England and Scotland, were scarcely felt in Ulster, except immediately around the coasts. Inland no harm was done, and the only result was the rains, which have fallen intermittently since, and which have raised all the rivers.

THE Ballinderry is high in flood, and some excellent runs of salmon have come up from South Neagh; and the same remark also applies to the Blackwater. Report speaks well on the favourableness of the spawning season in the Strule, Mourne, Castlederg, Broughderg, and Finn rivers. All of these are fairly preserved, and in addition to the staff of bailiffs, the local constabulary are detailed to watch the spawning beds, and otherwise assist the bailiffs if necessary.

THE other night a fresh filled a small stream that runs from Stewartstown Lake to Lough Neagh, and in this time of the year, during floods, the eels run down in the darkness to the large lake. A local poacher ("Johnnie") got a cobble-net, and set it in a convenient point in the stream, and was making great hauls, when the runs stopped, and he discovered that a brother chip ("Paddy") had also set a net above him, and was taking all the eels. Mad at being outwitted, Johnnie lifted his net, and crept upstream, but, to his great disappointment, could not get a suitable place to re-set it in. However, not to be done, Johnnie gathered huge wisps of weeds, &c., and set them floating down-stream, completely plugging up poor Paddy's net. Paddy ultimately had to give up his netting in disgust; nor yet has he found out what was the cause of all the "—— stuff" entering and filling up his cobble. It is needless to say that after Paddy's departure the 'cute Johnnie re-set his net, and had fine tackes till daylight.

COARSE fishing on the lakes, Eskeragh, Roan, Carnteel, Farlough, &c., has been interfered with by the heavy rains rendering the banks swampy and therefore unpleasant for shore angling. Pike are taking fairly, but perch are decidedly off, except in Stewartstown Pond and Coalisland Canal, where an odd half-a-dozen brace are occasionally taken by local anglers. This species of sport is rising in popularity (though slowly) which, no doubt, is due to the increasing scarcity in the rivers of the nobler game—salmon and trout.

AT the village of Moy—celebrated for its horse fair—there is a small lake which contains perch and pike. The country people around it allege that the fish in it are unwholesome and even poisonous, from the fact that the water of the lake is stagnant, there being neither inlet or outlet. One stout old farmer assured me that the smell of the fish during the process of cooking "wud stink the divil out of his den." Be that as it may, a line is never met in Moy Lake.

CLUB FIXTURES.

Nov. 23.—Paper at Causton, Coffee Pot Tavern, Warwick-lane, City, by E. S. Shrubsole. Subject: "Fly Fishing for Chub and Dace." Chairman, W. H. Beckett.—Central Association visit to Anchor and Hope, Canal-bridge, Old Kent-road.

Nov. 24.—Important Meeting of Liverpool East End Friendly, 150, West Derby-road, Liverpool.—Anglers' Association, Southern District visit to Bermondsey Brothers, Pitt's Head, Grange-road, Bermondsey.—Supper at Crown and Buckland, Middlesex Arms, 34, Clerkenwell-green.

Nov. 25.—Supper at Walham Green and Fulham, Stamford Arms, Fulham-road.

Nov. 26.—Paper at New Albion, Duke of Kent, Old Kent-road, by J. Tayler. Subject: "The Humane Angler." Chairman, W. F. Grimmett.

Nov. 29.—A. A. Eldridge's Competition at Pulborough.

Nov. 30.—Paper by G. H. Howard, at St. John's, Skinners' Arms, Coburg-street, Clerkenwell. Subject: "An Amateur's Experiences." Chairman, H. J. Tibbatts.—Anglers' Association Eastern District No. 2 visit same place and evening.

Dec. 1.—Paper by E. S. Shrubsole, at Good Intent, Crown Inn, Church-street, Shoreditch. Chairman, H. J. Tibbatts.

Dec. 2.—Smoking Concert at Hounsfield Otters, in aid of Anglers' Benevolent Society, King's Head, Lower Edmonton.

Dec. 7.—Paper by G. E. Simms, at Epsom, Wellington, High-street, Epsom. Chairman, E. S. Shrubsole.

Dec. 10.—Lecture upon "Two Yorkshire Rivers," by F. M. Walbran, illustrated with one hundred dissolving views. Distribution of prizes in connection with the Anglers' Benevolent Competition at Rye House same evening, at the Foresters' Hall, Clerkenwell. Chairman, R. B. Marston, Esq.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association.—The delegates met at Foresters' Hall on Monday last, the 16th inst., at 8.30 p.m., Mr. W. H. Beckett, the vice-president, occupied the chair. The minutes of the last delegate meeting, held on the 19th ult., were first read and confirmed, then the minutes of the last general committee meeting, held on the 2nd inst., and the especial general committee on the 9th, were also read by the secretary. Mr. R. Murphy, chairman of the renting and preservation committee, then read the minutes of his committee, and trusted that the members forming it would turn up in greater force. Several letters from various railway companies were read, from which it appeared that the Great Eastern Railway Company could not make the 7.28 p.m., from Ely to Liverpool-street and St. Pancras, available for anglers holding cheap tickets, but they have kindly consented to include Lower Edmonton in the list of stations from which privilege tickets can be obtained between Ponders End, Buntingford, Ware, and Shelford. It appeared that some difficulty has arisen with regard to the number of rods that might be used in the various fisheries of the society, notwithstanding that notice boards have been fixed at said fisheries some time ago, prohibiting the use of more than two rods by any member, but omitting to state that only one rod could be used for any one description of fish, thus each member can use one rod for jack fishing and one for roach, but he must not use them both for jack or roach, otherwise the second rod is merely the subterfuge for a trimmer. Mr. F. Vallis, of 1, Myrtle Villas, William-street, Slough, a member of the Uxbridge Rovers, was duly appointed honorary bailiff for the society's waters at Slough. Mr. Sims, of the Society for Promoting the Reading of Papers at Angling Clubs, announced that this society had decided to award a bronze medal to any angler who would read a paper under the auspices of this society before an angling club, also that Mr. Walbran will deliver his lecture at Foresters' Hall, on December 10. The visiting officers then gave their reports. Mr. Manning visited the Stepney Angling Society, last Wednesday, where, notwithstanding the great storm, six clubs sent representatives and filled the room. Mr. Armstrong visited the Battersea Friendly Angling Society, when seven clubs were represented. His next visit is to be at the Bermondsey Brothers, the Pitt's Head, Grange-road, Bermondsey, on the 24th inst.; Mr. Thorling visited the North London, where nineteen clubs were represented, the room being packed; Mr. Genning had attended the Allason United, where thirteen clubs sent delegates, and upon opening the Anglers' Benevolent box, found 24s., also at the Alison Piscatorials, where twelve clubs were represented, the Anglers' Benevolent box yielded nine shillings. The roll was called at 9.45 p.m., when it was found that delegates from fifty-four clubs were present. The meeting closed with the usual vote of thanks to the chairman.—HON. REPORTER.

Anglers' Association. — VISITING LIST, EASTERN DISTRICT NO. 2.—The next return visit on the above list will take place at the St. John's A.S., held at the Skinners Arms, Coburg-street, Clerkenwell, on Monday, November the 30th, when Mr. Howard will read a paper under the auspices of the Society for Promoting the Reading of Papers among Angling Clubs (the title of the paper must be nameless at present). After the paper there will be a smoking concert, and a great number of talented anglers and friends have promised to attend. A cordial invitation is extended to all, and I hope to see a bumper. Mr. W. H. Beckett, vice-president Anglers' Association, will take the chair.—F. THORLING, visiting officer.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—The next visit on the above list will take place on Tuesday next, the 24th inst., at the Bermondsey Brothers A.S., Pitt's Head, Grange-road, Bermondsey. As this club has been represented at every visit on both lists for the past six years, I hope all brother anglers will rally round and give them a bumper.—G. W. ARMSTRONG, district officer.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge with thanks the receipt of £1 1s. from the Cobden Angling Society; 10s. 6d. from J. Cuthbert, Odds and Evens Angling Society. Donations: South London Angling Society, £1 4s.; Alison Piscatorials, from their donation boxes, 9s.; and £1 15s. 8d. collected at the Rye House Competition on the 15th inst. The next meeting of the committee will take place on Friday evening, Nov. 27, at 8.30.—R. GHURNEY.

THE LONDON UNITED ANGLERS' SOCIETIES' FOURTH ANNUAL ANGLING COMPETITION, in aid of the funds of the Anglers' Benevolent Society.—On Friday, the 13th inst., the usual meeting took place, when prizes were received from Mr. G. Wood, Good Intent; Mr. Sowerbutt, Marylebone; North London, Royal Small Arms, Hoxton Brothers, Mr. Levett, Sociable Brothers; and Mr. Farebrother. On the 15th inst., two hundred and sixty-four competed for forty-four prizes. Forty-six weighed in fish as follows: G. Jolling, Edmonton and Tottenham, 2lb. 4½oz.; Bird, Waggoners, 2lb. 2½oz.; G. Wood, Hoxton Brothers, 2lb. 2oz.; J. Row, Hoxton Brothers, 1lb. 12¼oz.; E. Dewen, South Belgravia, 13¾oz.; J. Huntley, Hoxton Brothers, 12¾oz.: W. Gordon, Wellington, 12½oz.; W. Bees, Anglers' Pride, 9¾oz.; J. Adkins, Edmonton and Tottenham, 9¾oz.; Meniear, Penge, 8¾oz.; G. Stevens, Sociable Brothers, 8½oz.; R. Brockett, Original Alexandria, 8¼oz.; H. Killick, Dalston, 7¾oz.; Staines, Mildmay, 7¾oz.; Twomer, Prince of Wales, 7¼oz.; Snooks, Good Intent, 7¼oz.; C. Richardson, Dalston, 7¼oz.; G. Rodgers, Crown and Buckland, 7oz.; R. Spenceley, Sociable Brothers, 6¾oz.; W. Clark, Crown and Buckland, 6¼oz.; G. Overett, Original Alexandria, 6¼oz.; A. Barclay, Royal Oak, 5¾oz.; Good, Waltonians, 5½oz.; J. Suthill, Havelock, 5¼oz.; W. Stevens, West Ham, 5¼oz.; Russell, Hearts of Oak, 5¼oz.; Barnes, Wellington, 5oz.; Scultz, Hoxton Brothers, 5oz.; Rider, Hearts of Oak, 4½oz.; T. Harrison, Odds and Evens, 4½oz.; Marks, Sociable Brothers, 4¼oz.; H. Day, Edmonton and Tottenham, 4¼oz.; Brink, Hearts of Oak, 4oz.; A. Petty, Waggoners, 4oz.; Harris, Prince Arthur, 4oz.; E. Pleydell, Sociable Brothers, 3¾oz.; E. Billings, North Western, 3½oz.; J. Carter, Burdett, 3½oz.; H. Dodge, Waltonians, 3½oz.; A. Freeman, Dalston, 3¼oz.; Howel, Buxton Brothers, 3oz.; P. Jucha, Convivial, 3oz.; Hearts, Hearts of Oak, 3oz.; A. Millett, Duke of Norfolk, 2¾oz.; H. Wade, Tottenham and Edmonton, 2¼oz.; E. H. Clark, Golden Barbel, 2¼oz. Gentlemen and secretaries will oblige by sending in their prizes as soon as possible, at the Foresters' Hall, E.C., care of hall-keeper. The distribution will take place on December 10, 1891, a full list of prizes will be published as soon as possible.—S. MALBY, secretary.

Allason United Brothers Angling Society, Allason Arms, Uxbridge Street, Notting Hill-gate, W.—Several members were out on the 15th inst., but owing to the weather cock forgetting to turn the water off met with poor sport. Members will note that there are three prizes to be fished for on the 22nd inst.; two rods; jack, eels, and pope barred. All members must meet next Wednesday for important business; hoping members will show up at nine p.m. sharp.—B. ABRAHAMS, hon. sec.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—Several of our members fished in the Rye House competition on the 15th inst., but were unsuccessful. It is proposed we fish for a series of prizes in the river Wey, the match to take place on Dec. 5.—W. H. POTTER, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 15th inst. several of our members were out fishing for prizes at Windsor, but owing to the floods very poor shows were the result, the prizes being taken by the following members: Mr. J. Nunn, jun., first, with roach and dace; Mr. Ricks, second, with roach; Mr. Dyer, third, with roach; and Mr. Looseby, fourth, with roach.—E. R. EMBLETON, sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—Owing to the flooded state of the Thames, the fixing of punt competition was postponed until Tuesday next, when all members are requested to attend. The Christmas prizes will be fished on Dec. 13. Mr. J. W. Hopkins weighed in a nice show of roach on the 15th from the Thames.—GEO. MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—Several of our members took part in the Anglers' Benevolent Competition on the 15th, but none of them were successful. A few nice roach were weighed in by Messrs. H. Patman, J. Smith, and J. Warman on same date. On the 22nd the members fish a competition for the November series of prizes, place and conditions to be decided at the meeting on the 20th. On Tuesday, the 24th, a visit on the Anglers' Association List, Southern District, will be paid to the society, when a most hearty welcome will be given to any brother anglers that can make it convenient to pay us a visit.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—On the 15th inst., some of our members were out, and brought in some good shows of fish. Mr. J. Barker, some very fine dace; Mr. Rouzilier, ditto; Mr. F. Barker and Mr. Farmer, roach and dace; several others also weighed in. On the 29th we fish a match at Sunbury. Train leaves Waterloo at eight o'clock. I hope to see a good show of members on this occasion. Mr. Holden has been elected a working member of this society. The date of the reading by Mr. Crumplen I will give next week.—F. ROBERTS, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—The next return visit on the Clerkenwell United Visiting List will take place at the above on Monday, December 7.—D. WARREN.

Bostonian Angling Society.—Our return visit will take place on Monday next, the 23rd inst., when all brother anglers will be welcomed. Messrs. Halsell, Clark, and Brown, have had roach during the past week.—J. H.

Brothers Well Met Angling Society, Berkeley Castle, Rahare-street, Goswell-road.—On the 15th inst. some of our members competed for our daily prize, which was won by Mr. A. Field, with 11lb. 15½oz. of roach; Mr. W. Alderton second, with 9lb. 2oz. of roach; Mr. W. Harris third, with 2lb. 7oz. roach. On Thursday evening, Nov. 26, we are giving a smoking concert at the above house, for the benefit of the widow of the late Mr. Sutcliff, a well-known London angler. On which occasion I should like to see as many friends as possible.—HY. TAME, sec.

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—Since my last report the following weighed in: Messrs. J. Mearring, Tucker, Watkins, roach; Messrs. Tucker and Wilson, jack; Mr. Watkins, chub; Messrs. Tucker, Hawkes, and Watkins, dace; and Mr. Tucker, bream. On the 10th inst. we had a very good meeting for the benefit of "Old Buff," one of our members, for which we beg to return our thanks to those clubs who were represented, or took tickets. Any club or gentleman still having tickets out, please give in returns at your earliest convenience, so that we may close the account. On Tuesday next, Nov. 24, we hold a special meeting to arrange for our Christmas prizes. Will our members please show up in force, as time is now short? There will also be laid before the meeting a question of allowing a member to use one or two rods when out fishing. As this will affect all members in the future, I should advise all who possibly can to be present, so that we may have the matter thrashed out, as it has caused a great deal of friction amongst some members of late.—T. HAWKES, secretary.

Burdett Angling Society, 118, Hackney-road.—We had a few jack on the 15th inst.: Mr. D. Flint had one jack, 3lb. 11oz.; Mr. Gurney also had a small jack, 2lb. 5¾lb.; Mr. Carter, perch, 3lb. 0½oz.—J. PETHER.

Caledonian Angling Society.—The members of this society have been well to the front lately with some good shows of roach from the Thames, the secretary leading the way with 14lb. 11oz.; Messrs. Mills and Knock 6lb. each, besides smaller catches by Messrs. M. George, Rooke, &c. On Thursday last a competition for four prizes took place at Bourne End, resulting as follows: Mr. A. George, first; Mr. A. Knock, second; Mr. W. R. Turner, third; and Mr. M. George, fourth. We fish on Saturday, the 21st inst., at Hertford, for two prizes.—A. GEORGE.

Cambridge Friendly Angling Society, Mason's Arms, Titchborne-street, Edgware-road, W.—Owing to the condition of the water, our pegged-down is further postponed. A member recently weighed in a fine show of roach from the Thames—13lb. 2oz.—W. R. MORRIS, sec. *pro tem.*

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—Since my last report, several members have weighed in, Messrs. J. Tanner, Hiscock, Colman, Smith, Sheppord, and Pickett being the most successful. Members will please take notice that the prizes left from last match will be added to the December outing. At our last meeting we were presented with a handsome set of fish trays by our esteemed member, Mr. G. Last. A hearty vote of thanks was accorded him for his kindness.—E. W. WOOD, hon. sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City.—Under the auspices of the Society for Promoting the Reading of Papers Among Angling Clubs, Mr. Edgar S. Shrubsole will, on Monday, the 23rd inst., at 8.30, read his paper, "Fly-fishing for Chub and Dace." Mr. W. H. Beckett (Good Intent) will preside on that occasion, ad any brother rod who may favour the Causton with a visit will receive a very hearty welcome.—John Smith, hon. sec.

Central Visiting List.—The next return visit on this list is to the Anchor and Hope Angling Society, held at the William the Fourth, Canal-bridge, Old Kent-road, S.E. on Monday next, 23rd inst. Anglers and friends will be cordially welcomed on this occasion.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—On the 15th inst., we fished a friendly competition for a supper, between Penton Hook and Chertsey, which ended very satisfactorily, notwithstanding the state of the river, which was very much swollen. Members are requested to attend on meeting nights in full force, as we have a good number of Christmas prizes to fish for.—A. Trowbridge, sec.

Clapton Angling Society, Wayland Hotel, Dalston-lane.—The usual weekly meeting was held on Monday last, Mr. G. Colls in the chair. A very handsome jack, weighing 12¾lb., was exhibited by Mr. Colls, having been captured by him last Saturday at King's Weir. He also captured, on the same day, the smallest jack that he ever landed—viz., one of about 2oz., which was lipped while endeavouring to swallow a bait larger than itself.

Clerkenwell and District United.—A successful visit on the above list was paid to the Islington Brothers on Monday evening, Mr. Stretch, jun., in the chair, faced by Mr. Stretch, sen., the following societies being represented: Great Northern Brothers, Lincoln, St. John's, Convivial, St. Andrew's, Crown and Buckland, City of London, Independent Brothers, Seymour Brothers, Eustonians, Amicable Waltonians, Funny Folks, Islington Brothers, Bloomsbury Brothers, Alma, Burton Piscatorials, North London, Camden, Bostonians, Piscatorials, Bermondsey Brothers, and Patriotic, being a total of twenty-three. The next visit will be to the Bloomsbury Brothers, another good visiting club, held at the Rose and Crown, Broad-street, Bloomsbury. The angling competition in connection with the above will come off on February 7, 1892, from the Great Western Railway bridge at Windsor, to Bray Lock. The tickets will be ready next month.—F. Castell, hon. sec.

Cliftonville Angling Society, Cliftonville Hotel, Alderton-road, South Bermondsey.—We were saved a blank on the 15th by Mr. Lewin weighing in some roach from Ware. We fish a roving-match at Ware on the 22nd. All members are requested to show up on Wednesday. We had some good roach and dace from the Thames, caught by Mr. C. Morgan and Mr. J. Snow, one fish going 1¼lb.—P. Gardner, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—Several of our members took part in the competition at Rye House, on the 15th inst., but were unsuccessful. We had a nice show of roach weighed in by Mr. G. Percival from the Thames, weight 7lb.; B. Colman, dace.—A. Smith, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 15th inst. several of our members competed at Rye House, Messrs. Killick, C. Richardson, and A. Freeman, were successful. On the 22nd inst. we fish a boundary match at Windsor, from Clewer Lock to Surley Hall, members to go down by the nine and 9.20 from Paddington.—S. Malby, sec.

Earlsfield Angling Society, Half-way House, Earlsfield, S.W.—The members of this society have decided to hold their next outing from Molesey Weir to the Surbiton Swimming Baths, two rods, all fish to weigh; Middlesex side only. Train, 8.40 from Earlsfield. I am very glad to say that some of our members have been having some sport lately, notably Mr. Biederman, junr. I wish to remind all members that the time of meeting is 8.30 on Wednesday evenings, and I hope that members will turn up a little earlier than usual.—R. W. Bird, hon. sec.

Eclipse Angling Society, Ledbury Arms, 40, Ledbury-road, Bayswater.—Our annual Christmas outing will take place at Windsor on the 22nd inst.—F. Reynolds, sec.

Eustonian Angling Society, King's Head, Swinton-street, King's Cross.—On the 15th inst. several of our members fished at Rye House for the A.B. competition, but we had no sport; still the Brothers Pitt saved us a blank with a handsome show of roach and perch, not one perch weighed less then 8½oz.—R. Neall, sec.

Funny Folks Angling Society, Rose and Crown, 1, Goswell-road.—On the 15th inst. we had a few roach weighed in by Mr. Biggs and Vanhegan. Mr. A. A. Eldridge's competition will take place at Pulborough, on the 29th, special train from London Bridge eight o'clock. All members are requested to attend on Thursday next.—J. W. Biggs, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—A smoking concert will take place at the above club on Tuesday next, 24th inst., in aid of the A.B. fund, when I expect to see a large muster of members and friends present, as our splendid case of nine roach weighing 5lb. 1oz. will have arrived back from Mr. Gibson, the naturalist, and will be in the club-room. On the 15th inst., we were saved from a blank by a few roach taken by myself and the old veteran. I am sorry to have to mention the death of our old and esteemed member, Mr. S. Snow.—A. Payne, sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road, W.—On the 15th instant, the following weighed in: Mr. Monk, dace, gudgeon, and a nice barbel of 3lb. 2oz.; Mr. Roach, gudgeon; Mr. Jones, 11lb. of roach; Mr. De Perrion, a nice jack of 3lb.; Mr. Chapman, a show of barbel and dace; Mr. Green, roach and gudgeon; Mr. Bryant, dace and roach. I hope to see many members present on Tuesday next, as we have very important business to bring forward. Members who have not joined our Christmas sweepstake, to take place on Dec. 6, from Bolter's Lock to Cookham Ferry, will oblige by doing so as soon as possible. The prize list, which is exceptionally large and substantial, can be seen at the club-room. Entries up till the 24th inst.—A. Stokes.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—Mr. J. Lyte brought in a nice show of roach on the 15th inst. Mr. Parker also brought in roach: Mr. Snook and Mr. Wade was successful in the competition at Rye House. Mr. E. S. Shrubsole has kindly consented to give a lecture at our club house, on Tuesday, Dec. 1, when he will exhibit his large collection of fishing baskets, creels, and bags, &c. I hope all members will be present on the occasion, and members from other clubs will be welcome to attend. Mr. H. J. Tibbatts will preside. Chair taken at 8.30 sharp. I trust all members will show up next Tuesday. to decide for having another outing for prizes before Christmas.—R. Murphy.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—On the 15th instant the members of the above club were out, when Mr. J. Grande weighed 2lb. of dace and roach, saving the club a blank for the second time this season.—G. F. Weaver, sec.

Great Yarmouth Piscatorials.—The annual dinner of the society was held on Tuesday evening last, the Mayor (Mr. F. Burton) presiding, Mr. C. G. Baker occupying the vice-chair. Nearly fifty were present, our host catering in splendid style. The Foulsham challenge cup was presented to the winner, Mr. R. Scarborough; and prizes for specimens to Messrs. W. Johnson, W. Platt, A. C. Vaughan, and M. A. Simpson. The dinner was a great success, and a most enjoyable evening was spent.—Wm. Kirby, hon. sec.

Gresham Angling Society.—The Gresham Society had their first smoking concert of the season last Tuesday, which was presided over by Dr. Brunton. A varied programme of vocal and instrumental music was got through, and afforded great enjoyment to a full meeting, among which were many visitors. A new member was elected and another proposed. On Tuesday next, the 24th, Dr. Brunton will read a paper, when members of other societies will be welcomed.—James Tayler, sec.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On the 15th inst. several of our members were at the competition in aid of the A.B.S., and I am pleased to state that some were successful—viz., Messrs. Brink, Russell, Hart, and Rider, the first three also taking prizes that had not been won in the previous pegged-down, it being arranged to allow the members to win them if possible under the same conditions as the competition.—W. Fenner, sec.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—On the 15th inst. we had a fine show of roach and dace from the Cam, by Mr. Rutherford, and Mr. Shaw. I shall be pleased if some members will kindly give me their support for the smoking concert that is in contemplation, of which due notice will be given.—J. T. Griffiths, sec.

Hoxton Brothers Angling Society.—Eight of our members fished in the Rye House competition on the 15th inst., four winning prizes: G. H. Wood, third; J. Row, fourth; J. Huntley, sixth; and P. Schulze, all with perch.—R. Ghurney, sec.

Independent Brothers Angling Society, Three Doves, 24, Berwick-street, Oxford-street, W.—At our last meeting, Mr. G. Bigsby was made a working member of our society. On the 15th inst., the brothers Morgan weighed in roach and gudgeon.—Snap.

Islington Angling Society, Jubilee House, Hornsey-rise, N.—We had a microscopical evening on Monday last. Several highly interesting subjects were exhibited by Mr. C. S. Bently. The meeting terminated at a late hour, after a hearty vote of thanks to Mr. Bently. The next meeting will be held on November 30.—C. Downing, hon. sec.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—The following weighed in on the 15th inst.: Mr. Croker, roach, 7lb. 6oz.; Mr. Willsher, roach, 5lb. 5¼oz.; Mr. Holder, roach, dace, and gudgeon, 2lb. 9½oz. Several of our members fished in the match at Rye House, but resulted in a blank. Our return visit on C. U. L. on Monday last was a success, the room being packed. On the roll being called, twenty-three clubs responded, to whom, on behalf of the Islington Brothers, I return my sincere thanks; also that we shall return the compliment. The next visit of the C. U. L. goes to the Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, when I hope they will have a bumper. We have room for a few more members. Our worthy secretary having sprained his foot, was unable to attend on Monday night.—J. H. Herbert.

Izaak Walton Angling Society.—The half-yearly distribution of special prizes took place on Wednesday last. Mr. C. Hayward occupied the chair, Mr. W. Worcester the vice-chair. To celebrate the event the members and friends had a supper, which was served in a very nice manner by our hostess, Mrs. Rogers. After the cloth was cleared, the president presented the prizes—which were numerous—to the different winners, at the same time, in his usual affable manner, congratulating each upon their success. There were a good number of special prizes given to be competed for during the remainder of the season. After this ceremony the party went in for harmony. Votes of thanks, awarded to the president, vice-president, pianist (Mr. T. Harris), our hostess (Mrs. Rogers), and secretary, brought a very pleasant evening to a close. The members competed for a series of Christmas prizes on the 15th instant, but only one was taken, Mr. G. Bliss being successful; the remainder are to be competed for previous to Christmas Day. Competitors to choose their own fishing waters, but must not leave London before the morning of the competition. There are also a series of special Christmas prizes to be competed for on the five Wednesdays previous to Christmas Day; same condition. Mr. T. W. Garrard weighed in roach on the 15th instant; Mr. H. Butt had roach and perch on the same day.—H. B.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—At our weekly meeting on Friday the members mustered in force. Several had been out with varied success. Messrs. Carter, Turner, Salter and others weighed in. Mr. Cotton had a fine show of chub from private waters, the largest turning the scale at 2¾lb. Members are reminded that the 22nd instant is the pegged-down competition at Sunbury Lock Cutting.—T. Salter, hon. sec.

Leeds Woodhouse Carr Angling Society.—On Tuesday evening, November 18, the members of the above society met together to hear Mr. F. M. Walbran deliver his lecture, "The Four Seasons of Angling." There was a good attendance. Mr. A. Wood occupied the chair. The hon. sec., Mr. G. Hodges, at the close of the lecture, proposed a vote of thanks be given to Mr. Walbran, asking him to accept, as a slight mark of their esteem, a handsome filled cigar case. Mr. Walbran replied, thanking them for the kindly feeling they had displayed towards him, adding that he was at all times ready to render any assistance in advancing the interests of anglers. A vote of thanks to the visitors was proposed by Mr. W. Oliver, and seconded by Mr. Roberts. Mr. A. Williams, of Redditch, responded, saying that it was his first visit to a Leeds angling club, but he hoped that he should come among them on some future occasion, having thoroughly enjoyed the evening. Some excellent selections were given during the course of the lecture by the St. Michael's Glee Party, who kindly volunteered their services.—Geo. Hodges, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On the 15th inst. several members were out, the following showing some good roach: Messrs. Webster, Watling, and Stanton. Messrs. Belton and White, dace. On Wednesday, the 18th inst., Mr. Moro, a nice of roach, 8lb. Our Christmas outing will take place at Cookham, on December 13, for several good prizes.—W. Watling, sec.

Liverpool Angling Association, held at the Bee Hotel, 5, Queen's-square, Liverpool.—There was a very fair attendance of members at our meeting last week. Mr. J. W. Johnson read his promised paper on our "Rented Waters: Are They Worth Keeping on at the Price?" Mr. J. W. Johnson argued they were not, as although much money had been spent on stocking, the return in fish was precarious and disappointing. Eventually the secretary proposed to write a reply paper, and, after considerable discussion, it was agreed to defer further discussion upon the matter until Dec. 10, when the reply paper will be submitted and read. Mr. Johnson promised to prosecute a vigorous campaign in the meantime in the direction of obtaining information as to new waters.—Rd. Woolfall.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 15th inst. our members were at various waters, but, owing to the floods, the sport was very bad, Messrs. Penfold and Milburn being the only members to show up to weigh in, with a few roach and dace.—W. F. Pearce.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—Owing to the state of the waters we have not had very grand shows of fish, though our members have been out a great deal. I hope all the members who were not up last week will take notice of the roving competition at Hatfield Peverel on the 29th inst., for several prizes.—J. Comber, sec.

Mitre Brothers Angling Society, Mitre Tavern, Kingsgate-street, Holborn.—The members of the above club, on November 1, weighed in fish—roach and dace—from the Thames. On the 8th inst., Mr. Richardson weighed in roach from Ware; Mr. Ryan, roach and dace from the Thames on the 15th; Mr. Crocker and Mr. Ryan, roach and dace from the Thames. A smoking concert will take place on the 30th inst., at the Turk's Head, East-street, Theobald's-road, for the benefit of Mr. J. Irish, who met with an accident at Elstree. All members and friends are requested to attend.—J. Joliffe, hon. sec.

New Albion Piscatorial Society, Duke of Kent, Old Kent-road, London.—Mr. J. Tayler, of the Gresham Society, reads his paper on the "Humane Angler" at this club on Thursday evening next at eight sharp, when the chair will be taken by Mr. W. F. Grimmett. Admission will be by ticket, which can be obtained on application to me at 75, Wells-street, Camberwell, and all anglers will be very welcome. As the paper is a very interesting one, it is to be hoped that Mr. Tayler will be well supported. The reading will be followed by a smoking concert, Mr. E. Ruston Odell at the piano. The first and second prizes at to-day's (Thursday, Nov. 19) outing at Windsor were taken by Messrs. Newbury and Matthews.—A. E. Baldwin, sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland-park, N.W. — Important business was transacted on half-yearly night; Mr. Goodman being elected chairman for the ensuing quarter, Messrs. Billings and Pritchard, auditors. Our forty-eighth half-yearly supper and prize distribution takes place on Thursday, November 26 (Mr. Holman in the chair and Mr. Billings in the vice-chair). Any gentleman who can give us a visit on this occasion will be highly entertained, our worthy hosts Messrs. F. and H. Roper being indefatigable in their efforts to ensure a success. On November 15, Mr. Billings had roach, from Rye House. winning a prize in the Rye House Competition.—G. S.

Peckham Brothers Angling Society, Prince Albert, Rosemary-road, Peckham.—Our members fished an open match on Nov. 15 for a series of five prizes, but owing to the heavy rains of late the shows were very poor, but four of the prizes were taken. The following were the successful ones: Mr. Kemp, first; Mr. Brancher. second; Mr. Williams, third; Mr. Stidolph, fourth.—E. A. Fautley, secretary.

Prince of Wales Angling Society, the Globe, Lisson-grove.—On the 15th inst. very few of our members took part in the competition in aid of A. B. S. at Rye House, and I am pleased to record that Mr. Twomey was successful. From other waters: Mr. Porter, roach; Robbins, roach; Hayden, roach; Brett, barbel; Scott, jack; Twomey, perch. There will be a special meeting of the above on Wednesday next to consider outing.—Wm. Bowyer, sec.

Rodney Piscatorials, Rising Sun. Harper-street, New Kent-road.—The visit on the S.L.U.V. List came to the above society on Tuesday, the 17th inst., when a most enjoyable evening was spent. On the roll being called nineteen clubs responded. Our monthly outing takes place at Henley, on the 29th inst.; all to go by the first train, and to return by 5.30 p.m. train. We had some very nice shows of roach weighed in on the 15th inst., as follows: Messrs. E. Pyne, roach; J. Wigley, roach; F. T. Lamberton, roach; T. Lines, roach and dace; P. Martin, roach and dace; F. Lamberton, roach and dace; Mr. J. Davies, weighed in, on Wednesday, evening dace.—F. T. Lamberton, sec.

Rochdale Walton Angling Society. — The annual dinner of the Rochdale Walton Angling Society was held at the Clock Face Hotel, on the 13th inst. Songs were given by Messrs. J. J. Taylor, E. Carter, and W. Taylor. Mr. J. Thomas was the accompanist, and Mr. R. Barnish gave "The Lifeboat' and other recitations in capital style.—A. Stansfield sec.

Royal George Angling Society, Queen's Arms, Bateman-street, Soho-square, W.—Our smoking concert took place on the 11th inst., and proved to be a great success. A vote of thanks was duly given to Mr. Phillips (chairman), and Mr. Gibbons (vice-chairman). Only two members weighed in on the 15th inst.: Mr. Gibbons and Mr. H. Holder, with a nice show of fish from the Upper Thames. I beg to remind members that next Wednesday is quarterly night. Our Christmas outing for prizes will take place on December 6, at Cookham, from Cookham Bridge to Bourne End Bridge; one rod; bank only; jack barred.—F. C. Longland.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow, E.—On the 15th inst., several of our members fished in the Rye House competition, but the only member who was fortunate to obtain a prize was Mr. A. Barclay, who came in somewhere at the tail-end. Sport has been very poor with us the last two weeks, but I hope will soon improve. Members will oblige by attending in round numbers on November 24, as there is important business to transact. We fish for four prizes at Roydon on 29th inst., further information can be obtained at the club-house. I beg to remind members that Tuesday, Dec. 1, is quarterly night.—A Barclay, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—On the 15th inst. Mr. Wink was the only member who weighed in, and he had tench. The remaining eight prizes will be fished for on the 22nd inst., roving, between Rye House and Lock at St. Margaret's, go by the 8.2 a.m. train from Liverpool Street Station, and return from St. Margaret's at 7.12 p.m., and not in the Chelmer, as was proposed on the 11th, as the water is not fishable. I trust that the members not present at the club-house, on the 18th inst., will see this and fish for the prizes as proposed and carried this night, the 18th.—J. Wright

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 15th inst., nine members fished for four prizes at Bourne End, with the following result: W. North, first, roach, 3lb. 2oz.; E. Wright, second, roach, 1lb. 10½oz.; S. Lovibond, junr., third, roach, 1lb. 8¾oz.; C. Holmes, fourth, roach, 1lb. 7½oz.; C. Lumby, roach, 1lb. 4¼oz.; J. Petrie, roach and gudgeon, 1lb. 4oz. On Tuesday last we had a fair muster of members present, when some very important business was brought forward, and Mr. Unglec kindly gave us a prize to be fished for (a tobacco-jar). Members are requested to attend, clear the books, or be subjected to rules. Another committee meeting will take place on Monday, November 23 at nine sharp, when all are requested to attend.—S. E. CANE, sec.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—Mr. Fountaine, the president, has captured a specimen perch of 2¼lb., which he intends having set up. He also caught a pike, 8lb. 12oz., and twelve roach, weighing 6lb. 12oz. Several members have been out, but Mr. Holloway only was successful.—C. B.

Silver Trout Angling Society, Bedford Head, Maiden-lane, Covent Garden.—On the 15th inst., Mr. Mengles had a jack just on 6lb.; Mr. Mason a smaller one; Mr. Smales had about 4½lb. of roach, and Mr. Massey had two going just on 2lb. On Tuesday, Mr. Massey had a splendid dace going 10¾oz., besides roach. Our next outing will take place at Moulsford on Nov. 29. Members will go down on Saturday evening. Further particulars will be announced next week.—PELICAN.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—The members weighing in on the 15th inst., were Mr. Stevens, dace; one scaling 8½oz.; R. Spenceley, perch; Pleydell, perch; M. Marks, perch. At Tedding, on the 22nd, I hope to have the pleasure of meeting all the members. Our return visit will take place on Monday, Nov. 30. —R. SPENCELEY, sec.

South London Angling Society, George and Dragon, 235, Camberwell-road, S.E.—Since last reporting, we have had some capital shows of fish from the Essex, Stour, and Thames, jack and roach predominating. One new member elected at last meeting. We hope to see as many members as possible on Wednesday next for business of some importance.—J. J. F., sec.

South London United Anglers' Visiting List.—A visit of the clubs enrolled on the above list was paid to the Rodney A. S. on the 17th, when a most jolly evening was spent. On the roll being called by Mr. J. Wright, vice-president. Mr. J. H. Field, president, I am sorry to say, having to leave (through indisposition). The following nineteen clubs responded: Bermondsey Brothers, Second Surrey, South London, Anchor and Hope, Peckham Bros., Wellington, United Brothers, Anglers' Pride, St. Alban's and Excelsior, Waggoners, Blackfriars, St. George's, Clapham Junction, North Lambeth, St. Thomas's, Cliftonville, City of London, Amicable Waltonians, and Rodney. The next visit will be to the Cliftonville A. S. held at the Cliftonville Tavern, Ilderton-road, South Bermondsey, on Tuesday, Dec. 1, when I hope to see every club on the list represented.—A CONN, hon. sec.

St. George's Angling Society, Prince of Wales, St. George's-road, Peckham.—We fish a series of prizes on the 22nd inst., at Staines, members to leave town same morning. Several of our members have had good takes of fish from the Thames. Messrs. Etherington, and Long, weighing in some nice bream and roach.—G. ETHERINGTON, sec.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith.—On the 8th inst., the following members weighed in: Mr. Hare, roach; Mr. Hill, roach; Messrs. Carpenter and Reeves, dace. There was an excellent muster at the meeting on the 10th inst.: one new member was elected and one nominated. During the meeting it was suggested that every member weighing in fish from the Thames should pay a sum of not less than one farthing per pound, for every pound or part of a pound of such fish, the same to be placed in a box provided by the T.A.P.S. This was suggested by the chairman, Mr. J. Harwood, and was carried unanimously on being put to the meeting.—H. REEVES, sec.

Sussex Piscatorial Society, Arch 104, King's-road, Brighton.—At the usual weekly meeting of the above society, held on the 11th inst., the hon. sec. Mr. Wm. F. Booth, read a very interesting and instructive paper, on the "Fresh Water Aquaria." The paper was listened to and thoroughly appreciated by those present. The hon. sec. in the course of his remarks alluded to the large tank at the Brighton Aquarium, which the directors have placed at the disposal of the society, and which at the present time contains some fine specimens, all of which have been caught by the members, including tench, carp, roach, perch, rudd, bream and pike. The society will find these fish invaluable for stocking purposes. Members wishing to see the large pike (17½lb.), which was caught by Mr. Fry, will probably have the opportunity at next meeting, as it is expected back from the taxidermists shortly.—W. C. F. GILLMAN, assist.-hon. sec.

United Brothers, Deptford.—Several members of the above were out on the 15th inst., with the following result: Mr. R. Lawes, roach; W. Windred, roach; F. Drage, dace. The members of the above have a jack and perch match fixed for the 22nd inst. in the Medway, but owing to the weather I think it would be better to fix a later date for the said match.—H. TYLER, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—Only a few of our members fished in the match at Rye House, on the 15th inst., and two of them got prizes. Mr. Bird, sen., took second prize; and Mr. Petty, a prize. I wish to remind members that an important meeting will take place on Tuesday next, when I hope to see all present.—H. C., hon. sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—On Wednesday last we had a good muster, Mr. W. J. Crisp in the chair. Result of competition was declared as follows: Mr. H. Lees, first with roach; Mr. Risden, second with roach. It was proposed that Mr. Prolaine should be secretary *pro tem* during the illness of Mr. C. Hibble, who we hope will soon recover and be among us again.—R. BAILEY.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 15th inst., Mr. G. Herbert weighed in a nice show of roach; Mr. G. Boyd, bream and perch; Mr. Field, perch and roach; Mr. Gordon, roach; Mr. F. Barnes, roach: Mr. Martin, roach. On Wednesday last, Mr. W. Palmer and Mr. W. Warde were proposed as members. Ballot to take place on Wednesday next.—R. J. DARTNALL, sec.

Wellington Angling Society.—The members of this society held their first smoking concert, on Wednesday evening, the 11th inst., at their headquarters, Wellington Inn, Mosten-lane, Blackley, Manchester. Mr. J. Hay (president) took the chair. The meeting on the whole seemed to be a very enjoyable one, and we hope to have another soon.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—On the 15th inst. the following members weighed in: Messrs. Heir, jack; Anderson, jack; Parslow, roach; and Blyth, roach. I hope all members will attend on next meeting night for to arrange about the Christmas competition; there will be upwards of twenty prizes. Member's friends may compete, tickets two shillings each. Full particulars next week.—W. M., sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on the 15th inst. and the following weighed in: Mr. C. Wadsworth, jack, 3lb. 3½oz.; Mr. Homer, jack, 2lb. 5oz.; Mr Goodrich, roach; Mr. W. Stevens, perch. I hope our members will not forget our match at Witham on the 29th inst all to go down by the first train same morning, leaving Stratford at 7.50.—R. LOWTHER.

Ye Pluckie Perche Piscatorial Society, the Ear Derby, King Edward-road, South Hackney.—A specia meeting will be held on urgent and very importan business, on Wednesday, the 25th instant, at nine p.m sharp; the attendance of every member is earnestl requested.—H. RICHARDSON, hon. sec.

West London Angling Club, Dartmouth Castle Hammersmith.—Members are requested to note that ou quarterly meeting is called for Thursday, Dec. 3, and t attend the club-house at 8.30, as it is desired to arrange th last match of the season, and to elect a chairman and vice chairman for the ensuing three months.—J. J. HUNTER hon. sec.

Newly Built, Fitted with Electric Light, &c., &c.

A few vacant dates open, for which early applications should be made.

SEA FISHING AT WATERVILLE, 1891.—The sea fishing in the district may be considered to be practically at an end for the year. The spring mackerel season was decidedly below the average, and the fish of a small size and rather inferior in quality. Angling with hand-lines began on the 1st May, and was really first-class up to the end of July. The principal fish taken were whiting, bream, gurnet, and pollack. As many as six hundred and forty of all kinds was had one day at the Hogg Head by a party of four anglers. Nets of different kinds were used on the bay during the summer, and the captures recorded show that the fish taken were of a larger size than usual, but not so numerous as in 1890. This is particularly applicable to the herring fishery. The herrings this season were in most cases once and a half the size of the ordinary herring taken on the coast. Whiting also were very large this year, and I saw one which measured exactly two feet in length. Trawlers had a poor season, but unfavourable winds was the principal cause of this. Bass anglers also had only indifferent success. From July to September, fishing of all kinds was very poor and was practically given up during the latter month. Towards the end of October matters improved and several boats met with much success in the small bay and other points of Ballenskellege Island. Whiting were caught in large numbers chiefly by fresh mackerel bait. I counted as many as twenty-seven boats engaged at bottom fishing one evening between the heads, and learned next day that all did well—some of them making remarkable scores. The opening days of November also found sport first class—pollack, whiting, and gurnet being well on the feed. Since then bad weather terminated all kinds of fishing. Netting, however, is still carried on in the Portmagee District.—T. J. DENNEHY.

OYSTERS! OYSTERS!

Norton's Oyster Rooms,
ALBION STREET, LEEDS.
ESTABLISHED 1826.

For Royal Whitstable and other native oysters this establishment stands unrivalled in the North of England.
Fresh supplies *daily* throughout the entire season.
Oysters sent to all parts of the United Kingdom and the Continent, packed in barrels of the requisite size.
Quality—unequalled. Despatch—immediate.

ONE TRIAL WILL CONVINCE.

ROYAL LETTERS PATENT, No. 10424.
Important to all Anglers!
WALKER'S
PATENT IMPROVED DISGORGER
No Angler should be without it; most usefu and necessary. Will go into ticket pocket. Very ingenious and effectual. Protection to dressing o artificial flies. POST FREE, 7d.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, NOVEMBER 21, 1891.

THE FISHES OF SWITZERLAND.*

As more than eight years have elapsed since the publication of the last volume of the "Faune des Vertébrés de la Suisse," I may preface this notice with a few words as to the general scope and progress of this important work. The first volume, published in the year 1869, was devoted to a detailed account of the mammals of Switzerland; the third (1872) to the reptiles and batrachians; and the fourth to a part of the fish (Acanthopterygians and Cyprinoids); the second volume, which will contain the birds, being still in course of preparation.

The part now published, which is the fifth of the series, treats of the remaining half of the fishes, notably the Salmonoids, which take up nearly two-thirds of the volume, and whose study has probably occupied the author by far the better half of the eight years which he has devoted to its preparation.

As regards the plan of the work, the thoroughness and originality with which the author treats his subject, and the fairness of his criticism of his predecessors, I may be allowed to refer to what I have said in my notice of the first volume of the Swiss ichthyology (*Nature*, vol. xxvii. p. 220); stating again that "this work rises far above the level of a local publication, and is of as great value to the student of European freshwater fish as to the Swiss naturalist."

The species treated of in the present volume are the following: Three loach, two shad, eight Coregoni, one grayling, one salmon, one trout, one char, one pike, one Silurus, one eel, one burbot, one sturgeon, three lampreys. These bring the total number of Swiss freshwater fish to fifty-one.

The hydrographic system of Switzerland comprises the head-waters of four rivers—viz., the Rhine, Rhone, Po, and Danube. The first contributes the largest contingent to the Swiss fish fauna—viz., forty-two species; however, this number is reduced to twenty-eight in the upper course of the river, above the falls of Schaffhausen. At an altitude of between 600m. and 900m., the majority of the Cyprinoids, and between 1,000m. and 1,100m. the perch, salmon, eel, and burbot disappear. Only five species remain at that altitude—viz., the miller's thumb, minnow, loach *(N. barbatulus)*, grayling and trout—species which likewise have the greatest horizontal range in a northward direction. Between 1,800m. and 1,900m., first the grayling and the loach are lost, and then successively the trout, miller's thumb, and minnow. The trout, however, can still subsist in lakes up to 2,630m., into which this fish has been introduced. The Rhine contributes five types of fishes to the Swiss fauna which are not found in the other hydrographic systems—viz., *Acerina* (the pope), *Rhodeus*, the salmon, the sea lamprey, and the stickleback. The absence in the southern and eastern waters of the four first is readily accounted for by their distribution generally; but it seems very singular that a fish like the stickleback, which in the west of Europe extends far southwards, and reaches even Algeria, and which is supposed to be capable of easy transportation by aquatic birds, should not have made its way into the other river systems.

The fishes contributed by the Rhone fall into two categories—one comprising those of the part of the river Doubs which is within the political boundaries of Switzerland; the other including the species of the Rhone proper above the "Perte." The latter are computed to be twenty in number, and do not call for special remarks.

The fishes of the Po showed a marked difference from those of the Rhine and Rhone. This system is represented in Switzerland by the tributary Ticino, into which twenty-three species enter, out of a total number of forty-four Po species. Although there is no mechanical obstacle to their ascent, the fish of the Po, used to a warmer climate, avoid ascending into the cold waters from the Alps; and M. Fatio observes, also, that generally these southern fish do not ascend to the same high altitudes as those of the Rhine. Eight of the Ticino species are strangers to the rest of Switzerland—viz., a goby *(Gobius)*, which has ascended from the sea; five Cyprinoids, which may be regarded as southern representatives of northern forms; *Cobitis tænia* and *Alosa finta*.

Of the sixty-eight species belonging to the fauna of the Danube, only four find their way into Switzerland through the river Inn—viz., the miller's thumb, minnow, grayling, and trout. This is owing to the great elevation of this river at its entrance into the country (1,000m.).

Ichthyologists will turn with particular interest to that part of the volume which contains Dr. Fatio's views on, and his treatment of, the Salmonoids; for my own part, I could not help feeling some surprise at what appears to me a somewhat inconsistent mode of dealing with this subject. Whilst the author distinguishes no less than eight Swiss forms worthy of binominal designaton in the genus *Coregonus*, he admits, besides one species of char (*Salmo umbla*), two equivalent forms only in the genus *Salmo*—viz., the salmon and the trout, for which latter the collective term *Salmo lacustris* is chosen. If a student of the European fauna, or any part of it, arrives at the conclusion that the various forms of river, lake, and sea trout cannot, and should not, be held to be deserving of specific distinction, no one will deny that there are very strong arguments in favour of this view. In my own experience, it does not seem to be desirable to adopt that course—first, because there are certain well-characterised and well-localised forms which the practical fisherman will always distinguish, and of which the naturalist has, somehow, to take notice; and, secondly, because the ichthyologist who goes beyond the narrow limits of a fauna, and has to deal with the trout of the whole northern hemisphere, is compelled by technical considerations to admit those distinctions. I myself go a step farther, and consider it a mistake not to separate, specifically, from the extremely variable *Salmo fario*, such strongly differentiated forms as *Salmo lemanus*, *S. marsitii*, *S. venernensis*, or the Loch Leven trout of the older authors. But if, as is Dr. Fatio's opinion, no taxonomic value is to be assigned to the characters by which those forms of trout are differentiated, then I cannot see why in *Coregonus*, a closely-related genus of the same geological age and distribution, similar organic modifications should be considered to have a different bearing.

As is well known, there are some very obscure facts in the life-history of Salmonoids, which greatly contribute to the difficulties of their study. Dr. Fatio discusses them very fully; but we must pass over the deductions he draws from them, with the exception of the phenomenon of sterility as a cause of change in the outward appearance of a fish. Sterility among Salmonoids is apparently much more common in Switzerland than in British waters; but over since Siebold has drawn attention to it, its effects seem to me to have been exaggerated. At any rate, I have received specimens as, and, indeed, with all the outward characters of, the so-called sterile trout of Lake Constance, which had fully-matured ova.

Like errata, appendices of works are only too often overlooked; I would, therefore, mention that the present volume concludes with important supplements to those which contain the Mammalia and Reptilia.

The volume is illustrated with four plates—one representing the *Bondelle* of the Lake of Neufchâtel, the others various details of structure, chiefly of Salmonoids.

I trust that before many years Dr. Fatio will be able to complete his work, for which, not only his countrymen, but every student of the European fauna, owe him a debt of gratitude.—*Albert Günther in "Nature."*

VIRGINIA WATER.

[Mr. Bambridge writes: "These lines were found, recently, amongst effects of that well-known local fisherman, the late George Holland ("Nottingham George"). Must be very old.]

No merry lay I sing! yet let me tell
The woes and trials that two wights befel,
Who, fishing bent on, gave their desks a spell,
And hurried to Virginia Water.
And now behold them sitting at their ease,
Discussing Windsor ale and bread and cheese,
Wind ominously howling through the trees
And o'er the water.

Obsequious landlord, waiter, boots, and all,
Who gladly greet them in the lighted hall
Of Wheatsheaf, known to fishermen who call
In that famed quarter.
Yet better known than liked, as we may see.
Says waiter, "Coffee, gentlemen, or tea?"
Oh! "Tea be blowed," quoth one, "no more for me!"
The other, "Come! some rum and water!"

Then Morpheus exerts his gentle sway;
A damsel brings two candles on a tray—
Thirty! I swear, no more, if she's a day,
The landlord's daughter.
Where were the bait next morning? Where the lot
Of lively dace? Dead, in some pail or pot,
Of course—the charming creature had forgot
To change the water.

Where were the worms? The bag looked damp, she
And so she'd aired it, ere she went to bed, [said,
Before the fire; and they, too, all were dead
As bricks or mortar.
Enough is said, so here I drop my pen;
Yet ere I lay it down, give ear, all men;
May I be blow'd if e'er I'm caught again
A fishing in Virginia Water.

Meeting of Anglers at Auckland.—The annual general meeting of the members of the Bishop Auckland and Wear Valley Angling Association was held at the Wear Valley Hotel, on the 11th inst., Mr. Hoyle presiding. In spite of the inclement weather there was a good company present. The secretary (Mr. Albert Foster) read the third annual report, which stated that the association had a balance on the right side of £12 9s. 9½d. The number of 5s. "authorities" issued exceeded last year's total by forty-three; 2s. 6d. "authorities" had decreased by six, and 1s. "authorities" had increased by one. The number of prosecutions for offences against the Fishery Laws was twenty-five, against eighteen of last year, of which number sixteen were due to the able manner in which Watcher Lambert had fulfilled his duties. Five hundred stakes had been put in the Wear, between Escombo Bridge and Nunfield, at a cost of £18, which would no doubt check netting to a great extent. The total amount received by subscriptions from certain members of the committee and others was £25 13s. 6d. Mr. J. T. Proud had again prosecuted in the whole of the Auckland cases, and four at Stanhope, and made no charge against the association. The total amount of fines inflicted, exclusive of costs, was £14 6s. 10d., the whole of which would be paid over to the Fishery Board. Application had been made to the Bishop Auckland Local Board for leave to place a grating at the West Mill Race, to prevent the entrance of fish into the race; but nothing yet had been decided in the matter. The report was adopted. The balance-sheet was also passed, showing that at the beginning of the next season there would be a balance of £25 1s. 9½d. Considerable discussion took place as to the disposal of this balance, and eventually, on the motion of the chairman, it was decided to carry it forward as a reserve fund. It was also decided that the association should be authorised to devote a sum, not exceeding £10, if deemed expedient, to a fund for stocking the river with Loch Leven trout. A motion, proposed by Mr. Harburn, that trout fishing should commence on the 2nd of March, bull-trout fishing to commence on the 2nd of February, as usual, was negatived by a considerable majority. The election of officers was then proceeded with: Mr. Pattison, of Witton-le-Wear, was re-elected treasurer, and the former committee was also re-appointed, with the exception of Mr. Candler, Crook, whose place was taken by Mr. Thompson, of Hunwick.

Holloway's Pills.—In cases of chronic indigestion, disordered liver, and general debility, these Pills are wonderfully effective. They indeed have so general and powerful an effect on the whole system that they clear away or ward off most of the ills that flesh is heir to. They cleanse the bowels, purify the blood, correct the bile, give tone to the stomach, excite a healthy appetite, produce sound sleep, and impart increased energy to both mind and body. The admirable properties of these far-famed Pills are too highly appreciated to require any encomium here, as they are resorted to by rich and poor of every nation. The cures they effect are not temporary or imperfect, but they bring about a marvellous and most beneficial change throughout the entire body, and enable it with renovated powers to resist the approach of all future attacks.

SPINNING FOR SALMON WITH THE PRAWN.

The ranks of the old school of anglers whose motto is "Salmon with the fly or no salmon" are thinning fast. Season after season witnesses new defections to the side of the latter-day angler who is always on the look-out for and ready to take advantage of those occasional substitutes which often prove so valuable in bringing a fish to the gaff when wind, weather or water, are dead against sport with the fly. Among others the prawn comes to the front as a most successful supplementary lure under certain conditions. Mark! the prawn is not to be used as a substitute for the fly. Like the natural minnow and Phantom to which it may be said to rank next in order of merit as a lure, it has its time and place, and may only be called into requisition, as a general rule, when a decided change is needed. The fly is the lure of lures, and, if the utmost is to be made of a stretch of water, it should be more *en evidence* than all other substitutes combined. The natural minnow, gudgeon, Phantom, and kindred lures yield best results in spring and autumn, when the water is about its average temperature, or rather rising to the average. This is but a general statement in the main; but it is given on the strength of several years' observation on the Dee (Aberdeenshire), where special arrangements have been faithfully and fully carried out for making such. The conditions under which the prawn works best are more frequently met with in July and August; yet it may be introduced at any season, and often fetches the wished-for prize when all else has failed. A fresh-run salmon—newly from the sea—will take almost anything; but, when he has been in the river some time, when the water has gone down, and the fish become "*potted*," as the saying is in the north, and the efforts of the angler to fetch the stale fish with the fly have proved futile, then the prawn is called into the "council chamber," and inevitably furnishes the exasperated sportsman with his revenge.

Should the water rise slightly, so as to shift the fish, so much the better, for there is nothing "works the oracle" like the prawn, with red or potted fish after a slight freshet. It is to be preferred to the worm, unless the water be slightly coloured; under such conditions, and should the prawn fail, the angler may give over the effort to get sport as a hopeless task for the time being. Opinions differ greatly in this, as in all other such-like matters, as to the time and place, and the extent to which the prawn may be used without injury to the after chances of the angler; but the general practice in the north is to reserve the prawn as a last resource—from the opinion, no doubt, that should the fish be off the take, this will make them the more so. Certainly nothing is more distasteful to a neighbour on the opposite bank than to have the water he is about to fish over with the fly raked "fore or aft" with the prawn, or any other trolling bait.

Many elaborate descriptions of prawn tackle and the mode of dressing it are given in books on angling, filling whole chapters. The Dee and Don anglers have a very simple method of dressing, which is in every way preferable to that requiring complicated tackle, and may be described in one or two sentences. All that is needed is a flight of two triangles and a stocking-needle. The stocking-needle is first inserted longitudinally from tail to head, as the prawn is fished head downwards. The loop of single gut, on which the triangles are whipped, from an inch and a-half apart to two inches, is run through the eye of the stocking-needle, and the triangles are fixed, one into the belly of the prawn and one on the back, the whole being whipped in wide coils by a piece of red silk thread. Should the water be heavy, the spinning-trace may be leaded to suit. The rod, reel, and line, are just what may be used at any other time in searching for fish with the Phantom or live minnow. From the Malloch reel the bait is thrown across the stream—more down than across—and is worked round with a somewhat slower motion than when spinning with the natural minnow, and much after the fashion of a large, well-sunk salmon fly. Instantly the fish are felt they must be struck sharply to ensure a hold. Now just a word about the procuring and preserving of this bait. There are prawns and prawns, and, as much of its success depends upon its colour, this should be particularly attended to. After many experiments, it has been found that the best prawns are those which are boiled immediately they are caught, and bottled in diluted glycerine almost immediately they are boiled. Freshness is the secret of the colour when the crustacean is in season and well-matured, and no imitation of this enigma of enigmas or sickly substitute will fascinate the eye or tempt the dainty palate of *Salmo salar* like the veritable "Simon Pure" *in propria forma*.—Dod.

Unlawfully Fishing for Trout.—At Barnard Castle, on the 11th inst., before Major Hodgson (chairman), Mr. W. T. Scarth, and Mr. W. H. Ralston, Mr. M. B. Dodds, Stockton, clerk to the Tees Salmon Fishery Board, said that on the 30th September last he appeared at that Court to prosecute, on behalf of Mabon, the chief inspector of the Tees Fishery Board, in a case brought against three gamekeepers for unlawfully fishing for trout with a net in Grand Beck, near Raby. After hearing the case, their Worships had thought that considerable doubt was involved, and that they would not be doing their duty other than by giving the defendants the benefit of the doubt, and the charges were consequently dismissed. Application was made for a case, which was granted. Subsequently a meeting of the Finance and Watch Committee of the Fishery Board was held to consider what proceedings it would be advisable to take with reference to the case, and at that meeting Mr. Scarth, the chief agent of the late Duke of Cleveland, was present and explained the circumstances of the case. Mr. Scarth, practically as the employer of the defendants, regretted the matter, and said he was now satisfied that fishing for trout with nets was an illegal act, and as such would not be allowed in the future. Previously, he had no notion that the practice was illegal or it should not have been done, and he gave an assurance that it should be discontinued. A resolution embodying those facts was passed by the committee, and Mr. Dodds now asked to be allowed to withdraw his application for a case and that the recognisance which had been entered into should be discharged. He hoped the Press would observe that the practice was illegal, as it might be that the recent decision of the Bench might cause an impression to be made that netting for trout might be done with impunity. Mr. W. J. Watson, on behalf of the defendants, assented to the present application, which the Bench granted without comment.

English and Welsh Reports.

Lower Thames.—GENERAL REMARKS.—I was afraid the boisterous storm of rain and wind of Wednesday in last week would do something for the Thames that would not be very agreeable to either fishermen or anglers, and the result proved to be so. Some portions of the river suffered very much and especially in the upper portion, as the reports from Kingston to Staines, have been a complete blank as far as punt-fishing is concerned, but in some places the bank anglers have been doing very well and getting some very fine specimens of roach. It will be found from the returns in the Tideway, there has been a little business done. After I had sent my report last week, I was informed by one of my neighbours he had been fishing at Twickenham and brought away over 20lb. weight of fine roach and dace, and in addition a nice carp of 5lb., which he has sent for preservation. I mention the circumstance now because some people are apt to doubt the accuracy of such takes, and I am always pleased to have them confirmed by the anglers themselves, as it places the result beyond doubt. I must just refer to the letter of "Liberia' in last week's *Fishing Gazette*, to say if I wrote the return of "thirteen dozen of fine jack," it was an error of putting "of" for "and," which rendered it liable to his interpretation. I hope we shall be none the less friends for what has been said. There is another letter which gave me very much pleasure from that good old angler, Mr. Harwood, to whom I have written personally and sent him a collecting box; and I sincerely hope the "Sundial" members will make a good example for other clubs to follow, and the river will afford them abundant sport to make their result the more substantial. I am also pleased to state I have had other applications this week for collecting boxes, and all this affords me the most satisfactory evidence the clubs are beginning to feel desirous to assist in the work of Thames preservation. In my declining days there is nothing that will cheer me up more than to find the Thames Angling Preservation Society, to which I have been attached for nearly thirty-three years, has fully enlisted the support of the angling clubs of London and the suburbs. I cannot say all of the former, but to the latter it has a direct and substantial claim as being in the neighbourhood of the Metropolitan river. I do not want to appear selfish, but I may be allowed to remark, when I was elected a member of the committee of the T.A.P.S. on February 5, 1859, I am the the only survivor.—B.

RICHMOND.—Job Brain, in four days, 35lb. of roach and dace; Henry Mansell, in two days five and a half dozen of roach and dace, and two bream, and Christopher Brown in the same time, 34lb. of roach and dace.

TWICKENHAM.—John Spong, in two days, 26lb. of roach and dace; Charles Brown in one day, five dozen of roach and dace, the largest roach, 1lb.; John Coxen, in one day, five dozen of roach and dace; and J. Frost, in two days, 15lb. of roach and dace, and a couple of bream.

TEDDINGTON.—B. Stevens, in one day, three barbel, weighing 12lb.; and W. McBride in two days, seven jack. One of the netsmen below Kew Bridge, in his net, caught a trout of fourteen inches in length in a very good condition. He at once sent a message to the head river keeper of the T.A.P.S., who on Tuesday last got possession of the fish and took it over to Mr. Alfred Nuthall, J.P., chairman of the society, and the trout was safely turned in the river again at Town's End Hole, Kingston. The netsman received the usual reward.

Upper Thames.—THURSDAY EVENING.—The river during the past week has once again been in high flood, and with the exception of a few good takes of roach, and some small jack from Eddies, not anything worthy of record has been done in the upper waters of the Thames. As I write the river is rapidly getting back into its old groove, and as it even now is in excellent colour, without any additional contribution of rain, good business should be done next week amid roach and jack. The weir tackle at present is all out, and until put down anglers per force must seek Eddies and even fresh fields and pastures, for there assuredly the fish are locality. Weather bright and cold with every indication of frost. A sharp frost just now would be real jam to the Thames anglers.—MARLOW BUZZ.

Thames (Goring).—Water going down and getting in good condition, would do well for roach at time of writing. About Tuesday or Wednesday it would be in good jack condition.—G. BARTHOLOMEW.

Thames (Windsor).—An extremely heavy water is still passing through the Thames valley, and too discoloured for anything but worm fishing. As might be expected, though very late in the season, a great many barbel have been caught, but can hear of none over 4lb., this being the weight of one taken with others by Mr. Windsor, of Windsor. A few good roach have been taken with worms, largest 1lb. 2oz., and a specimen of that scarce fish in the Thames, the tench, was caught by a Mr. Miles, of Windsor; it weighed 1¾lb. On the 12th inst., the Windsor and Eton Angling Preservation Society made an attempt to net the out-lying waters; but the result of the principal piece near Dorney being so poor, it was decided not to proceed with it till the water has run off more. Compared with the last netting, when fifty-six jack, besides a quantity of smaller fry, were caught, the result of this last trip was extremely poor. Large quantities of fish are known to be out-lying, but cannot be rescued whilst so much water is out.—B. R. BAINBRIDGE.

Ancholme District.—Waters are now of the colour and almost consistence of pea-soup. Angling is therefore well-nigh out of the question, and there has been a general abstention this week. The taking of trout ova has commenced at the Mauve Fishery, Caistor.—THOMAS FORD.

Arun (Pulborough and Amberley).—The river has been in flood again this week. At several places it has overflowed its banks, and only a few anglers have ventured out. I can hear of no takes worth mentioning being made. This (Thursday) afternoon the weather looked more promising, and I trust the river will again be in condition for Mr. Eldridge's competition, on the 29th inst. —GOOSEQUILL.

Brighton.—(SEA FISHING).—Silver whiting have come into the bay, and when the sea has been calm enough, several of large size have been taken. To-day (19th inst.) the sea is too rough for boat-anglers to venture out, but is calming down again. A cod-fish, weighing over 15lb., was taken off the Black Rock ground the other day.—H.

Chichester Canal and Sussex Rivers.—The heavy storm of last week had the effect of clouding rivers, and in some districts the water was again over the banks; but rivers are now in good trim and sport during the week has been fairly good, despite the dull and foggy weather, a few good chub and roach have been taken from the upper waters of the Ouse, and early in the week pike were feeding but 8½lb., is the heaviest fish notified me. The patrons of the Adur have secured good dace and roach—this water holds no pike in the lower district; and from the Arun a few bream, and fair baskets of roach have been made. But few anglers patronise the Rother in the Selham district, where may be obtained some of the finest roach in the county. A visitor on Tuesday, secured 10½lb. of roach, nine fish weighing 7¼lb.; a perch of 2lb., and a pike of 4½lb. Some good roach have also been taken near Fittleworth. Chichester Canal is fast filling, some tons of water from the Lavant flowing in daily. The water is in good order—bream, roach, perch, and a few small pike have been taken but no specimen fish.—GEORGE F. SALTER.

Douglas (Isle of Man).—The rivers have been in heavy flood, and plenty of spawning fish running up. The poachers have been busy, and have an idea (carefully fostered by our plucky inspector and a few more in the swim) that they could do as they liked. But little good might have accrued from catching one or two of the poachers; but owing to the pluck, strength, and perseverance of Mr. Caley, some of the most unmitigated scoundrels which disgrace our island will spend their next two months in jail. SEA FISHING.—Not so good, as the weather is too bad, and bait scarce.—STORMY PETREL.

Dove and Tributaries.—Weather has been wet almost incessantly since our last, and we have heard of nothing having been done. Water will be right in a couple of days for grayling or pith if no more rain comes.—D. AND W. H. FOSTER, Ashbourne.

Eden (Carlisle).—On the 15th inst., the rod fishing season closed. Unfortunately, owing to the heavy rain, the last week was almost a blank. On the 15th inst., the last day, the river was in splendid order, and several fish were killed by anglers in private waters, who were not afraid to ignore the undoubtedly strong feeling there is in the north against Sunday fishing. The season has, on the whole, been a prolific one for salmon and grilse, and a poor one for sea trout. In the spring the yield was not above the average, but the summer and autumn migrations were very heavy, and both netters and anglers had a good harvest. We never can arrive at the number of salmon taken in the nets, but nearly every fish killed with a rod gets into the newspapers. I quite expect there will be an outcry from the Solway about anglers killing so many breeding fish. What a narrow-minded lot these fishermen are! Their one idea is wholesale slaughter as a means of livelihood, and yet they begrudge a few fish fairly taken with the rod by the men who find spawning ground and protect the fish for another year. There need be no jealousy between them. It is to the interest of all alike to keep up the supply of fish from year to year.—SILVER GRAY.

Fen Waters (South Lincolnshire).—Since last writing angling in the rivers has been impeded by the floods. Some of them—the Glen, the Nene, and, I believe, the Welland—have overflowed their banks, and from what I learn, it will be several days, even with favourable weather, before the sport can be resumed. The drains are better circumstanced, as the water can be got away more rapidly, and the chief impediment is the rapid stream of water towards the pumps. Prior to the heavier rains, anglers seem to have been doing very well. Many splendid pike have been banked, and anglers were well satisfied. Among the specimen fish mentioned was one taken by a gentlemen in the North Forty-foot, which scaled 16lb. This is the best fish I have heard of so far this season; but it is full early for the big fish. In some of these drains, fish up to this weight are caught several times in a season. Mr. Fancourt, of Billinghorough, caught a six-pounder the other day in the water against Donington Bridge of the old Forty-foot; and Mr. Dunn, of the same place, last week, in two days, landed six fish, sealing 23lb. Plenty of other fish were taken up and down the district. Natural bait is the most effective; but anglers often have to resort to spoon and artificial minnow, because live roach and dace are not procurable at the tackle and other dealers. Fishing for them is often a tedious process, and not always agreeable in this weather.—LIMPET.

Idle (North Notts).—Anglers do not seem to have troubled the Idle much since last writing. It has been out of order they say by the storms, but the upper waters have not I fancy been quite unfishable. It was expected early in the week prospects would improve, but there has not been any great change until to-day (Thursday), which has been a really beautiful day. By the end of the week it would be worth while trying again for grayling, with gentles or brandling worms. Roach, dace, perch, and chub, ought to be available.—L.

Lea and Stort.—In consequence of the heavy floods of last week and the almost incessant drizzle since, the rivers are still too much discoloured and too high to admit of the chances of much sport; therefore there is but little angling news to report. What sport has been had has been principally with perch and pike: the former have at times and at some places taken worms well; indeed it is the only style of fishing worth following, in the present state of the water. On the 15th I saw a good one taken from above Rye House, it weighed a little over 1¾lb. For pike-fishing, just now, a spinning-bait will be found to be the most killing; a Spoon-bait or Phantom-minnow should be used as artificials, or a bright dace as natural, but in any case the bait should be larger than usual to prove attractive in thick water. Mr. H. T. Haslewood had a jack of 5¼lb. from the Ferrie Boat Waters at Tottenham, on the 15th. This gentleman will not be denied, and seems to bid fair to be the Lea champion pike fisherman, having killed more and bigger fish, both this and last season, than anyone else. I have heard that a very large jack was shot in the above neighbourhood last week. I cannot tell whether it is true or not, but considering the numbers of lads and men to be met with on the marshes every Sunday, I should not be surprised if there is some truth in it. It is absolutely dangerous to go about on that day, so numerous are these gunners, and I think if an inland revenue officer were to drop down on to them, he would find the majority were without licences. During the competition on the 15th inst., Mr. Ashmore, of the Eagle Angling Society, met with a curious incident. He was fishing between Rye House and St. Margaret's, and using worms on two hooks, about eighteen inches apart, he saw a pike near his float, and for a bit of fun struck at it, when he found both hooks had fastened, one near the head and the other near the tail. After a tussel he got it out, but returned it uninjured. He says it would weigh about 8lb. This morning I found the old river too much out of order for anything except as described above. The Canal is much more fishable.—SPLICED JOINT.

Leicester.—The floods in all parts of Leicestershire have been so extensive this week that angling has been entirely out of the question. Both above and below Leicester the country for mile after mile presents large sheets of water. Immense damage has been done, and many of the roadways have been rendered impassable. Previous to the heavy rains a few good roach were taken at the Leicester town waters, fish up to 1lb. being the heaviest among the few score landed. With the cessation of the downpour on Thursday reports to hand show the waters to be subsiding, but the streams are pouring down their volumes of water at a tremendous speed.

Loddon (Earley).—The floods have gone down, and the river is in good fishing order. Five good jack have been taken to-day by Mr. Richards—the largest scaling 8¾lb. Mr. Wilson landed 20lb. of chub, also some good perch. If the weather continues fine I hope to report next week of good sport, as there is a grand show of fish this season, and the river is thoroughly cleared of all rubbish by the flush of water.—J. R. GOULD.

Lugg and Arrow (Leominster).—These streams are running out of order for fishing, heavy rain having made the water rise and coloured. The water is going down, and with a few days' fine weather fly fishing should be able to be resumed. No sport done in them of late. The Pinsley is out of fishing order.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—On Friday last these rivers rose again to nearly bank-full, since which they have been slowly sinking, the weather being very unsettled. By Monday, should weather be moderately fair, they should be fishable with bottom, though perhaps rather high. It will be the second half of the week before the fly will be available. This (Thursday) evening, wind S.W.; heavy clouds on the horizon; looks likely for more rain.—R. T. WILLIAMS.

Medway (Maidstone).—The river has been again running in flood, but is now coming right for the angler; there has been a quantity of roach taken, and they are biting freely at the worm. All other kinds the reports are very meagre. The large pike taken was weighed at the railway station; its weight was 23¼lb.—WM. SHRUBSOLE.

Nene (Northamptonshire).—We have again had a lot of rain, which has caused the river to rise considerably. At Elton several pike have been taken, but, speaking generally, sport has been very tame. Some large eels were captured on Saturday, near Peterborough; and one city angler obtained a decent creel of fish just out of town, after angling for over three hours. Prospects will brighten considerably when the river regains its normal condition. A couple of pike were last Saturday taken at Caudle.—NENEBANK.

Norfolk, Suffolk, and Cambridgeshire Rivers.—Most of our rivers and streams in these counties at the present are too full to fish, and very high coloured. I should advise anglers to wait for a few days before making a long journey down here. If we get no more rain the rivers will soon settle down, and roach come on; red worms will then be the bait.—WILLIAM HOWLETT.

Ouse, Derwent, &c. (York).—Rivers in flood yet. Nothing doing.—RONALD.

Plymouth.—SEA FISHING.—The gales, floods, and hail-showers have taken leave this week, and we have had some delightful weather. A friend of mine, on the whiting ground, had thirty dozen the day before yesterday. Some small pollack have been taken whiffing, but as these fish are out of season for a few months, they are hardly worth the trouble of catching. The favourite sport now and during the crab and lobster season is with the hoop-net, which is a net bag about four feet deep and three or four feet in diameter, with large mesh, say, three inches, that is, one and a-half from knot to knot, and made of stout twine. This is sewn on to an iron ring, which has two strings fastened across the diameter. In the centre of these strings is fastened the bait, which might be a hake's head or any fish garbage. The ring is slung by three cords, which terminate in a knot or loop, and it is lowered to the bottom by means of a line. Several of these nuts are used around the headlands and wooden pile piers, and they are hauled about once an hour. Besides taking crabs and lobsters, flat fish are very often taken in them. Nets on the same principle, only with very much finer mesh, are used here for catching prawns, shrimps, white-bait, smelt, or fresh-water eels, and they are very effective. Herrings are now being caught in abundance.—WILLIAM HEARDER.

Scarborough.—Sea angling has only been poor for a week or more. A large whiting-pout of some 10lb., taken off the far pier, is all worth recording at present.—H.

Severn (Shrewsbury).—Anglers have had a fairly good time during the past week, and the river having been in good condition, some fine pike and perch have been taken. The best capture was that of Mr. Edwards of Pride Hill, who landed below Atcham, a 13lb. pike, in splendid condition. Many pike anglers have been trying their luck at Uffington; but, although one or two fish of a few pounds weight were taken, they were by no means so successful as Craddock, the professional a week before. Tench caught a fine perch of 1¾lb. near Atcham. On Tuesday, Craddock who was fishing with him hooked, but lost, a very heavy pike.—PISCATOR.

Teme (Ludlow).—The Teme in this part has been running high, and bank full and quite out of order for fishing. The weather has been unsettled, and the water is gone down. If the weather would take up grayling fishing should be good in a short time. At the beginning of this week a few anglers were out with the maggot; but sport was limited only a few roach being landed. On the 15th inst., at Ashford, a pretty sight was to be seen at the Weir, where the salmon were jumping the Weir to get up to the Upper Water to spawn. The Ony, Corve, Clun, and Ledwyche are all coloured—no fishing done in them.—S. LUDLOW.

Teme (Tenbury).—In this district the Teme is coloured, but a nice level. The water has been very high, and fishing has been quite at a standstill, and is likely to remain so as long as the weather keeps so unsettled. No anglers have been out. The Rea, Kyre and Ledwyche are all out of fishing order.—WORCESTER.

Wimbledon Park Fishery—The following gentlemen have had some very good luck with the jack. The lake is in capital order and nice colour for jack or bottom-fishing: Mr. Woods, Putney, jack 4½lb.; Mr. Smith, Walham Green, jack 5¼lb.; Mr. Bovie, Wimbledon, jack 6lb.; Mr. Cloat, jack 3lb., and perch 1lb.; and several other rods had various takes of roach and bream.—W. BUCKETT.

Witham, &c. (Mid-Lincoln).—No sport of moment is reported from the Witham district. though such as the Fosdyke waters have been fairly fishable. A good deal of water has been going down the Witham, but it is now fairly off. Visitors have been very scarce of late, but this is usual in winter. I often wonder more do not go for the purpose of pike fishing, which is really often very good. Some of the best points are Dogdyke, Kirkstead, and the stations towards Boston. Chapel Hill and Mount Pleasant are also good localities.—LUCI.

Yore, Wharfe, Nidd, and York.—These are now getting into fairly good condition, but the weather must be colder before grayling fishing will improve. Bradshaw's Fancy, Green Insect, Apple Green Dun, and Blue Hawk will be best flies to depend on for a week or so.—FRANCIS M. WALBRAN.

Usk (at Usk).—The season for salmon angling in the Usk ended on Nov. 1 last, and, during the whole time, not a better has been remembered by anyone here. Several anglers took over a hundred salmon on the Lower Association waters, and there is little doubt that over two thousand salmon have been killed on the whole of the association waters. The greatest number taken by a single angler was one hundred and fifteen by Major-Gen. Mignon, of Usk. Mr. Thomas Rees, on the limited water, caught one hundred and twelve; but the most successful fishing was by Mr. W. H. Browne, who, in seven weeks, landed one hundred and seven. Mr. Crawshay, on his private waters, took close upon three hundred salmon to his own rod. Mr. H. E. Cole, of Usk, caught one hundred and eight; Mr. W. H. Pride, fifty-three; Colonel Waddilove, sixty-one; and many others from fifty to eighty each. Had it not been for the three weeks' incessant floods at the end of the season, the above numbers would have been greatly enhanced. Local anglers are now busy fishing for coarse fish, such as dace, and good sport is being had. Last week one angler caught ninety-four dace, weighing 35lb.

Scotch Reports.

Dee, Don, &c. (Aberdeenshire).—The spawning season on the upper reaches of the Dee, Don, Deveron, and their numerous feeders is now well over; but on the main stream the fish are just taking to the redds. The rivers are not so much flooded as one would suppose from the amount of rain which has fallen, the heavy rains having given place to a continuous succession of lighter showers. The streams are in good volume, and from the estimate made of the numbers of fish in the river, the amount of spawn deposited will be far in excess of any recent record. The Durris hatchery, now in the hands of the Dee Fishery Board, is gradually being fully stocked by Mr. Duncan and his assistants, who have entered with great zeal upon their duties as artificial breeders of salmon. The excessive rain-water, however, has been causing some trouble, on account of the foreign matter it contains.—DEESIDER.

South of Scotland.—CLOSE OF ANGLING.—The angling in the Annan and Nith, which remained open at the despatch of my report last week closed for the season on Saturday evening.

ANNAN.—On this river the year will long be remembered among anglers as the very best on record, both on account of the large quantity of salmon falling to the rods in the autumn, and for the number of big fish weighing over 20lb. each. At the opening in February, the spring salmon fishing was above the average, more especially in the lower waters, where many fine fish were caught with fly. Sea trout made a middling show in the early season, and they were under the average in weight. As the season advanced the trout came on better, and rose fairly well to the fly. A few of 4lb. and 5lb. were killed, but the general weight was 1¾lb. to 2lb. each. One very fine one of 12lb. was caught in the Solway nets. Grilse made a poor appearance, and from an angler's point of view, the season for these fish was a decided failure. In the months of July and August the herling, or what may be here termed the grilse of the sea trout, afforded splendid sport with fine tackle and small flies. During the summer months the Annan ran unusually low and clear, but still capital baskets were had, more especially in the lower waters. When the wet weather set in and the floods came, extraordinary catches of sea trout and herling were made with worm in the floods. For weeks together anglers filled their creels daily, and it is not lending colour to the report to say that hundreds of those fish were caught daily in the lower and middle water. The river was in flood for two consecutive months, and only on occasional days was fly-fishing at all practicable. As soon as the nets were withdrawn for the season in the Solway on Sept. 9, the salmon commenced to run to the river. With a free passage to the pools, some became well stocked with fine salmon. The continual floods that prevailed induced the fish to run to the higher waters. On this date Mr. T. Reid, keeper, Hoddom Castle, landed the heaviest fish of the season—viz., a salmon of 43½lb., and a few days before the close, one of 42lb. was killed with the same lure fly. On Sept. 25 a great run of salmon came on, the like of which had not been seen for many years. During the first twenty days of October the river was almost in daily flood. Thereafter the floods subsided and the river came into excellent ply for fly-fishing. For three weeks the sport was so exceptionally good, that the oldest fisherman living never remembered anything approaching it. In Mount Annan portion of the river Mr. John Bell-Irving and his keeper killed from Sept. 25 till the close, sixty-five salmon, weighing 1,162lb. (over half a ton). On one day of three hours, Mr. Irving killed six salmon, and his keeper four, which weighed 185lb.; and on a second day the keeper killed ten. From the 4th November to the 14th, Mr. Irving and his keeper killed twenty-one salmon, some of them weighing 29lb. and 30½lb. each. Mr. P. A. Pasley-Dirom, of Mount Annan, has had really splendid sport, and as he stuck exclusively to the fly the record he made was all the more creditable; with his fisherman he killed forty-one salmon, weighing 780lb.; Mr. Dirom's heaviest fish was 29½lb. Neither of the above gentlemen fished the water close. Mr. Crawford's fisherman killed seven salmon, weighing 140lb. The total catch in this short portion of the river for the back-end was about one hundred and twenty salmon, weighing as near as possible 2,300lb. Mr. Dirom, and Mr. Bell-Irving, with their two keepers, killed about one hundred and five salmon, weighing nearly 2,000lb. Mr. Dirom's most successful killing fly was the Black Doctor, which accounted for fully one half of his salmon (twenty-two). In the lower waters the best individual catch was made by Mr. Arthur Nicholson, a visitor, from St. Asaph, North Wales, this gentleman killed twenty salmon and a grilse, weighing 420lb., all with fly; two or three of his fish weighed over 30lb. each. The next best catch was fifteen salmon. In the Hoddom Castle portion, the highest catch was made by the keepers; Mr. Reid killed eighteen salmon; while three of the keepers had forty-two salmon, all heavy fish; two rods had ten each, and some nine or ten other rods killed from five to ten each; Mr. Ramsbottom, and Mr. T. B. Johnstone, Liverpool, paid a flying visit for three days and killed thirteen salmon, not at all a bad record. It is calculated that two hundred salmon were killed on this portion. Altogether since the close of the nets some five hundred salmon have been killed in the Annan with the rod, and apparently the fish weighed about 20lb. each. The river was in part flood during the greater part of the closing week. Still on odd days a good number of salmon fell to the rods.

NITH.—This river never gave better sport. From the beginning of October until the close capital angling was had when the water allowed of fly-fishing. In the Cowhill District and Mid-Nitsdale, a large quantity of salmon were killed, but the total was nothing like that obtained out of the Annan. Mr. Ferguson, of Isle, and friend, killed forty-three salmon, weighing 756½lb. an average of 17½lb. each. This was the best record by far on the river. The Elisland and Blackwood portions afforded fine sport.—HEATHERBELL.

Tweed, &c.—During the past week this river was much out of order for the prosecution of salmon angling, the flood mentioned in last week's notes being the cause assigned thereto, having kept the stream in a partially unfishable state nearly all the week. The floods at its largest height last week, reached fully 6 feet, and since then a further pluvial descent as kept the river rising and falling in turns, the gauge at Kelso Bridge during the week registering from 1 foot to about 3 feet at times. Last night (Tuesday) both Tweed and Teviot rose about one foot, so that to-day it was not in the best of ply, while to add to the dismay of the Waltonian have also had a deal more rain, with a stiffish wind, and a further rise is imminent. As was to be expected, there has been a very large run of fresh to the upper waters since Wednesday last, and hundreds of salmon and grilse, besides bull trout, have been observed ascending the various caulds in this neighbourhood, and all the fastnesses have thus once more received a further stocking, which should be conducive to excellent sport during the remainder of the season, if the weather would only take a turn for the better. All through the week the votaries of the rod and line have been on the alert, and whenever a chance has been afforded them between the almost daily rises of the river, they have been busy, never missing a chance. Their efforts have been well repaid, and, all things taken into consideration, the disciples of Old Izaak have had nothing to cavil at since during the week. To-day (Wednesday), although the river was not in the best of order, angling was participated in on the main river; but Teviot was unfishable. On the Ednam House Water, since Friday last, Major Wilson and Mr. Drummond have had nine fish. On the Wark Water, from the 6th to the 11th, nine fish were also got; while between thirty and forty have been got on the Carham Water between the 5th and 10th. On the Hendersyde Water, Sir Richard Waldie Griffith, and Mr. Tayler, of Chipchase Castle, have had a score of salmon and grilse; while on the Birgham Water; between the 9th and 13th instant, Lord Home and his friends have had a score. On Monday, on the Dayburgh Water, Mr. Arkwright killed four fish. From the 2nd to the 9th, nearly a score of fish were got at Makerstown Water; and on the grand casts on lower Floors Castle Water, Mr. Hadden and General Cooke have had twenty-five fish between them. On the Rutherford Water, nearly a score of fish have been killed; while satisfactory reports are also to hand of the waters farther up the river. On the Teviot, several fish have been killed lately, the fortunate anglers being: Mr. Robertson, mason, Kelso, one, of 26lb.; Mr. Richard Ormiston, Haybank House, Kelso, two fish; Mr. J. O. Wilson, stationer, Kelso, one; and Mr. James Chisholm, one salmon. The barometer is again on the downward move, and there are slight indications of more broken weather; but it is to be hoped that the elements will soon clear up, and give a few more days' sport before the season closes.—MAXWHEEL.

Irish Reports.

Ballinderry (East Tyrone).—The late rains have swollen the river and enabled salmon to ascend higher up stream, but the greater part of thepresent run spawners are lying on the redds below Coagh Bridge. It wouldseem that at this time of the season the smaller fish are on the redds. The heaviest coming up about Christmas, when from their golden colour they are called locally "red salmon" in distinction from the silver coloured fish of the earlier part of the season. Poaching is well kept down by the bailiffs and constabulary.

Lough Neagh.—The eel fishing of the lough is very good. Lining at night is practically over, as this way of taking the eels is not very successful in the cold weather. The nets and weirs now account for the greater part of the fish taken. The weir on the Bann—which is rented by Colonel Bruce, D.L., for the nice sum of £2,000 per annum—is making enormous takes, and, the price for the eels being greater about Christmas than any other portion of the season, as they are taken they are put in tanks sunk for the purpose in the lough, and kept till that time. At present the price of eels around the lough is seven shillings per stone (14lb.).

Waterville (County Kerry). — Satisfactory accounts continue to be received from the spawning grounds. The salmon and white trout are reported to be very numerous on the redds. Poachers, however, are beginning to work. The watchers are on the alert, and the constabulary are assisting them in guarding the waters at night. Sea angling for pollack and whiting has been very good on a few favourable days during the week. Weather mild, with light frost. —THOS. J. DENNEHY.

TROUT FISHING NEWS FROM NEW ZEALAND.

AUTHENTIC news is now to hand of the success anglers met with on the opening day at Rangitata river—Mr. A. Hope got seventeen trout, which scaled 82½lb.; Mr. C. Nicholas, twelve, weighing 53lb.; Mr. C. K. Meredith-Kaye, four, scaling 30lb.; Mr. Holwell, four, scaling 21lb.; Mr. Bowman, five, which went 21lb. Several Ashburton anglers were also successful at the Rangitata. On the Temuka river sport with the fly was fairly good. Messrs. T. Oliver, D. Findlay, and J. Findlay, among the local men, and Colonel Bailey, Dr. Thomas and friend, of the visitors, had capital sport with the fly; while Mrs. Hayhurst, the only lady angler at the river side, grassed a beauty weighing 2lb. At the Winchester streams fishing was good early in the day, Mr. Gardner, a visitor, landing eight very fine fish. Among the flies used we hear that the Hare's Ear, March Brown, Blue Upright, and Light Gnats have been most successful in killing.—*Timaru Herald*, Canterbury, New Zealand, 25th September, 1891.

THE FISHING SEASON.—The fishing season for trout opened in the North Canterbury district yesterday. A considerable number of anglers left Christchurch for the Selwyn, the Cust, and other streams in the country, and a few paid their attentions to the Avon. One fisherman took thirteen fish out of the last-named stream, none of them over 2lb. in weight. One of the first of this season's trout was exhibited in Mr. W. J. Alpe's window, in Colombo-street, yesterday afternoon. The fish, which was in the pink of condition, weighed 3lb. 10oz., and was caught by Mr. Taylor, near Hereford-street Bridge.—*Timaru Herald*, Canterbury, New Zealand, Oct. 2.

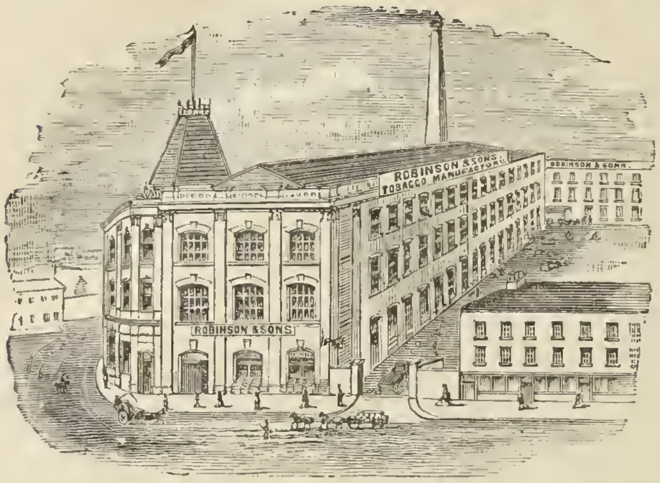
ANGLING.—From Ashburton we learn that on the opening day of the fishing season some really good sport was obtained, as will be seen from the results given below: Rakaia River—Mr. Pilbrow, thirty fish, weight 171lb. 12oz. (the four largest weighing 39lb. 12oz.; this is about the record for one day's fishing); Mr. Stephens, eight fish, 50lb.; Mr. Kidd, six fish, 16lb.; Mr. Fox, eight fish, 29lb.; Mr. Cambridge, one fish, 8lb. Rangitata River—Mr. Huston, nine fish, 53lb.; Mr. W. F. Somerville, ten fish, 50lb. (including two of 8lb. each); Master Tancred Somerville (his first day), two fish, 10lb.; Mr. Shury, one fish, 3lb.; Mr. Moss, one fish, 4lb.; Mr. M'Keage, one fish, 8lb. Ashburton River—Mr. Simpson, one fish 1½lb. Several five shilling visitors' licences have been issued to enable Christchurch anglers to fish before the Rakaia is in flood.—*Lyttelton Times*, Canterbury, N.Z.

THE CENTRAL ASSOCIATION OF LONDON ANGLING CLUBS.—The monthly delegate meeting took place at the headquarters of the association, the Bedford Head, Maiden-lane, Covent Garden, W.C. Mr. C. A. Medcalf, president, in the chair; Mr. J. Kelly, vice-president, filling the vice-chair. The business was somewhat limited, and after confirmation of minutes and routine matters had been gone through, comparatively little was left. A member, who had committed himself by taking eels, perhaps unknowingly, from a trap, when on an angling excursion, was severely censured and expressed his deep regret. He was long a member of the Anglers' Association, and the complaint is therefore matter of regret to both. Mr. Wade incidentally made reference to the movement in favour of angling in the public parks of London, and suggested sundry impediments in the way, which rendered their opening difficult, if not altogether undesirable; but pointed out that they might contribute to the angler's enjoyment if the fish they contained were taken due care of, afterwards netted, and from time to time transferred to the Thames or other waters free to all anglers. Eventually it was decided to present a petition to the London County Council, asking them to preserve, as far as possible, the fish in waters under their control, and allow them afterwards to be transferred to such open waters as might be deemed desirable in the interest of anglers generally. A similar request was to be made to other public officials having water under their control. A hearty vote of thanks to Mr. Medcalf, Mr. Kelly, and Mr. Wade, brought this short, but interesting, meeting to a close.

REVIEW OF PAST SEASON'S SPORT ON THE CARRON, EASTER ROSS.—The sport obtained with the rod has been by far the best experienced for a great number of years. The waters in connection with the Balnagown Arms Hotel, Ardgay, yielded well on to one hundred salmon and grilse in the course of the season. On these waters, Mr. and Mrs. R. T. Coupland, of Cresswell Gardens, South Kensington, were the most successful. On March 23, they grassed four salmon and lost two; on April 6, they landed three and lost two when almost ready for gaffing; and a few days thereafter they caught four salmon, including a beauty of 18lb.; in one week during that month, they landed fourteen salmon. Amongst other successful anglers on the hotel waters, were Mr. Landale, Dr. Eley, Mr. Eley, Mr. King, Mr. Mervyn King, Mr. Crewdson, and Messrs. Woodroffe and party. The Braelangwell Lodge Waters yielded famous sport to the Messrs. and Miss Crewdson; from the middle of April to the middle of May they grassed forty-eight salmon, weighing in all, 459lb.; on April 8, Miss Crewdson had three fish to her own rod, while Master Douglas Crewdson got two, one of which weighed 18lb., and took the young angler—who is only in his teens—three and a-half hours to play. During the last week of May, the Braelangwell party had sixteen salmon, aggregating 128lb., which made a total for them, of eighty salmon up to that date. Fishing was later than usual in commencing, the first sport of the season being obtained on March 20, when Mr. and Miss Littlejohn, of Invercharron, landed four salmon on the Invercharron Waters. The Craigs Water is also attached to the Invercharron estate, and both beats yielded a number of fine fish, including two of 13lb. each on June 1, and a clean-run 23lb. salmon on July 18. On the upper reaches, Mr. W. Allis Smith, of Glencalvie, had splendid sport from the end of May onwards; on May 28 he grassed five salmon, and on the 29th, four; the same angler landed six salmon on June 4, and five on the 5th. Splendid sport was got on the Grumards Water in the early part of the season by Captain Maxwell, and subsequently by other anglers. The Gledfield Waters and the Amat Waters did fairly well. Altogether it is estimated that fully four hundred fish, including salmon and grilse, were landed in the course of the season.—McB.

*** **Club and River Reporters will oblige by sending in their Reports early in the week.**

SMOKE "ORIEL" NAVY CUT.



THE HIGH CLASS TOBACCO,

MADE FROM PICKED LEAVES OF THE FINEST QUALITY.

Extract from the "FISHING GAZETTE" of February 21st, 1891:—

A GOOD SMOKE.

DEAR SIR,—Knowing how much you enjoy your pipe when out a-fishing, may I ask if you, or any of your friends, have ever tried "The Oriel" navy cut, manufactured by Robinson's, of Stockport? If you have not, do so at once, and I venture to say that you will be well pleased with it, being very cool and lasting, with an exquisite flavour. I have no interest in the matt whatever, but simply recommend it as my *be ideal* of what a fisherman's tobacco should be.—Yours truly, SMOKER.

Sold at 5d. per ounce, in 1 and 2 oz. Packets, and 4oz. Tins. Any Smoker having difficulty in obtaining it from his usual Tobacconist can obtain it direct from the Manufactory

POST FREE. 2oz., 10d.; ¼lb., 1s. 8d.; ½lb., 3s. 4d.; 1lb., 6s. 8d. **POST FREE.**

Sole MANUFACTURERS: ROBINSON & SONS, TOBACCO & SNUFF MILLS, STOCKPORT

CRICKETERS HOTEL

CHERTSEY.

Within a few yards of the River Thames.

Headquarters Chertsey Angling Association.

Club Room to hold 50 persons and Grand Piano. Good Bed-rooms. Hot and Cold Luncheons. Liqueurs, Wines, Spirits & Ales of the best quality

The Proprietor having fished the immediate district for upwards of 20 years, can assist Anglers to the best swims.

Punts and Fishermen engaged at the shortest notice, and all requisite bait kept.

IN DAYS BYGONE.

BY MAC.

THE object I have in writing this paper is to ount a few angling experiences and observations rsonal to myself. That they are startling or ry wonderful, I do not seek to claim, but I do im for them the merit of being new, fresh from mint so to speak, since never before has any of them related by me appeared in print.

"THE BEEF EATER."

Though I do not know that I blush to own it, wn all the same that when a youth I did, at nes, do a bit of poaching *of a kind*. This was I may let out the secret) to set off in the dusk the evening, with a confidential chum or two, to river to set night lines—a reprehensible actice which I now most vigorously condemn. those days, salmon and sea trout fishing was t "the rage" and so carefully looked after as now is on the smallish low country river near ose banks I resided for the twofold purpose of *rection* and training by the village master who ght his little school! Thanks to a generous oprietor, anyone could fish without the apprension of molestation, or being brought up in rt, provided only it was done by the rod in a r and square manner. But nowadays there is his stead a proprietor "who knew not Joseph," l the whole complexion of matters is entirely nged. But to proceed. It was because I could not get fishing in the legitimate way to my heart's content that I went in for setting these lines. It was only in October that the "muckle" fish came up, and, with having under the old rural system of schooling, only the Saturday half-holiday of leisure (from one o'clock), I had merely about three hours in the week to fish with the wand, as the other nights of the week it was too dark for rod fishing, before I got out of the charge of the dapper little "maister," with his florid face, frock coat and sneeshin mull. Usually it had become about dark ere I ventured to go away with my companions to set the lines; and usually it was before daylight had declared itself that I returned to draw them. One year, in particular, I remember there was a good fall of snow during the last week of October; and in the keen morning about five o'clock it was very chill, chilpy work hauling in the frozen lines. The fish, too, had a marvellously cold feel with the snow upon them, amongst which most of them had walloped a bit before we got hold of them. It was a case during these snowy days of dearth of bait. The snow-storm was quite unforseen, and we had made no provision against it. Lob-worms, which we gathered at night by lantern light we baited with, and these after a few days ran done. Our little game, therefore, we felt was up for a time. By luck, however, through my meeting the kindly old parson of the place, who I now imagine must once have been a hand at the job himself, we were put in the way of a substitute for the lobs. This reverend worthy, to whom I was much attached, and with whom I think I must have been a special favourite—for he took me much into his confidence—was in the way of asking me frequently up to the manse to spend the evening with him. Often I had the pleasure of making him a present of a few good sea trout, and so, as he knew well it was interesting to my young mind, fishing was generally the most prominent topic chatted about by us when we forgaithered. One evening, during the time of this snowstorm, the subject of baits for the muckle fish came up, when the parson, who in his younger days had been a keen fisher, and the companion of many a regular two-footed "otter," told me that he had once or twice been "told for a fact," that a piece of red beef fished like a minnow killed fish at times; that even when set—set that it did not sink to the bottom, but kept moving in the water—it had proved deadly, if he was to believe what he had been told by "old John the Miller." The exploits of "Old John" and other local worthies were enlarged upon, and I heard enough about the "beef" business and how it was done to make me acquainted how to proceed should I determine to try—which really, there and then, I had formed the resolution to do, though I kept my counsel to myself, young as I was. I had my doubts, however, about its success, since I had not the successful experience of the parson himself, who told me that he had never tried the thing once in all his life, to strengthen my belief in it. However, the "beef" I would try next night, and the beef "red and raw," was got and cut in little long slices, and away to the river, with my bosom cronie whom I met on the bridge, I duly hied. We set in the broad, sandy runs our usual lines for sea trout—three or four I think—and then proceeded to put out our beef-baited Stewart tackle. These, like the others, were secured by means of a "baikie," or pin, which we easily got firmly planted in the rich deep soil of the bank. Nowhere was the water over a dozen yards wide, but as the fish—sea trout, which we generally got—ran heavy, up to 6lb., 7lb., and 8lb., we never used less than thirty yards of line. The "baikie" held the line at the end, but as seldom more than six or seven yards length was put into the water, a stone of some weight was placed at the end of this length, and when a fish having gorged the bait, set off to run, the stone was displaced as the line run out from below it, but there still was a lot of line to be taken out before the fish got to the end of his tether, which often likely he never did, but kept jiggering about in the little pool, trying to free himself, instead of dashing to the end of the line and breaking. By this means we often held fish which would have broken right away with their first wild rush on feeling themselves hooked, had our lines been short—seven yards or so in length, and tight from the "baikie," instead of having the twenty or thirty yards of loose in reserve to let them dance with after striking themselves from the stone. Osier twigs we suspended our beef tackle over, and weighted it sunk a foot or two in the water, but being where there was a current, it was kept moving, and so, as the parson had said, had the chance of proving deadly. Next morning we were down early—half an hour sooner than usual. All the lines were drawn in great haste, and with an eager expectancy, but while we got sea trout of small size on the lines set for them, baited with the last and poorest of our lobs, we got nothing on the "beefers," which were all still fishing just as we had set them the previous night. Our lobs now done, we had more lines to use the beef on, and so the next night we had quite a half-dozen of "beefers" out. Back in the morning we went, and drawing all the lines one after another very hurriedly, we had got over them all—all but the last one, when coming to it, we saw by the tight line and the way it was drawn down quite close along the bank, that something must have been at it, if something was not still on. Eagerly we pulled in line hand over hand, when presently we felt a tug—tugging, and anon saw appear, first the head, then the tail, then the whole of a good large fish, which very soon lay on the bank—a fine bright autumn salmon of 11lb.—to us, urchins that we were, no more than fourteen, a monster fish—caught with a strip of red, raw beef.

HE'S OFF LIKE JEHU.

I once, though it was no credit to myself, got hold of a fish which I cannot in anyway more accurately describe than by calling him a perfect flyer. Fishing with fly in the autumn a long sharp stream which tailed off into a dub quite half-a-mile in length, I was holding the point of my rod down quite close to the water to make the fly sink deep and bringing it over the stream towards the side I was on without any movement, as was, and is, the recognised fatal style of "flying" on the river in question, when I felt something drag the line as if a shrub or bough below water had caught the fly. Tightening, but not hurriedly, my action was responded to by a violent jerk, and the next instant up straight out of the water, three feet anyway, leaped a fine fish, which three or four times performed this feat, each time with a violent shake, and twisting lash of his tail as he fell on the water. Then without further preliminary, and absolutely no warning of his intention, he bolted off down river at a speed to me quite astonishing. I was not the least flustered, being rather a cool and tried hand at the salmon, but this fish did make me, for once, wonder a bit though time for wondering there was little. Before I got up on to the level bank he had about the whole of my one hundred and twenty yards of line run out, and so it was a case of pelting in after him instanter or breaking in a jiffey. I am rather a fat stodgy individual, but for my weight and height I can cut the pace with most of like calibre for a good bit when put to the test. All my activity, however, was called into play to keep up with this maddened fish, going like the wind, and as if he would not stop till he had got back to the sea. Down through the whole stream he went in this fashion, and the whole of the long dub below he left behind ere ever he slacked an inch of his surprising speed. But the collapse came at once, and welcome indeed to me it was that it did, for I could not have held on much longer at the rate I was going, albeit I had only the encumbrance of light stocking waders. Really I was puffed; but the fish had fairly run himself out of the last iota of energy in him, for without a struggle I drew him on to a small sand spit and there without a movement he lay, till my man Davie came up and lifted him on to the grass, well away from the water. He was a new-run cock fish of 16lb., foul hooked close up to the back fin, and with the line looped round his body. The distance of this one interrupted burst, at the fastest speed I ever saw a fish make, was half-a-mile and ninety yards according to my measurement. I am told that "sniggerers" often get wonderfully exciting runs with fish which they foul-hook, something like this recorded, but I do not make the remark to encourage sniggering as the means of getting out of the fish the grandest, wildest, most exciting play that they can afford.

A FROSTY MORNING'S WORK.

I think it must be a very rare event to get sea trout to take the fly well in spring during severe frost. Often I have had this subject up in a chat with anglers, but never once to find it stated that anything like such sport as I once had had been obtained by any one of them under pretty similar conditions. The chance, however, does not often or in many places occur, as sea trout, fresh-run, are scarce in the rivers early in spring. Plenty of finnock are found—and such finnock, many of them—faugh! But the real prime new-run sea trout is a scarce commodity in the waters to the Englisher "ayont the Border." Often we hear of salmon taking the fly during a blizzard, more often when snow lies deep all round, and not unfrequently in a pool which has been rested a short time after the ice covering it is broken. But for sea trout in the early morning to waken up and greedily take the fly when the ground is like iron, the water "colder than charity," and the margin all ice, is a thing, I venture to think, but rarely heard of. Yet that they do sometimes, *when they are there*, so behave, my after remarks will show. About the middle of March, 1882, I went down to the river, at seven o'clock in the morning, to take a cast to keep my hand in for the salmon fishing, which was just about to commence. The morning, as I describe it, was intensely frosty, with that chilling white frost which soon makes one's nose look blue, the hair get tipped with white, and the hirsute adornment of the upper lip depend small icicles! Handiest for me was a nice, quick, but even paced shingly-bottomed stream, which, to make the circumstances fully understood, I remark was not over half-a-mile above a long tideway. I put on sea trout flies because I wished to have, along with my practice, a run from a finnock or two, which were numerous about, and I thought might come "up," as often before I had found them do, though always to be returned to the water, as not till a fortnight later did any ones in fit condition appear, and even then they were few and far between. Above, the air was clear, though the white haze hung below along the valley. I worked away, improving, as I thought, in my casting, and fast getting into my old knacks of making the line go out straight, just as I wished it, whether near or far, but my practice brought up no finnock, much less sea trout. A good hour I must have spent in this amusement, when, just as the sun rose over the hill and his first beams lighted on the water, making it look red like himself, a fish of apparently a good weight took me with a splash. I landed him after a little play, and found to my astonishment that he was a *real* fresh-run sea trout of 2lb., or thereby. As the sun got higher the haze wore away, and in about three-quarters of an hour it had entirely gone. The most perfect quiet of the earlier morning gave place to a breeze, and with that my sport ended. But sport *it was* while it lasted, for it amounted to twelve runs, with nine sea trout landed as the result. The heaviest of the lot weighed 2½lb., the lightest 1½lb., and the average was close on 2lb. How those fish came there, and how they were in such a mood for taking puzzles me, and all the more that never before nor after, either to me or anyone else, often as it was tried about the same time of the year and under pretty similar conditions, did the same water yield any fishing of the kind.

(*To be continued.*)

THE FISHERIES AT THE WORLD'S FAIR.

By J. W. Collins.

It is doubtless safe to assume that all who are prominently identified with commercial fishing, with angling, with fish culture, or with the scientific study of questions relating thereto, will feel an interest in that section of the World's Columbian Exposition, which will be specially devoted to an exhibition of all that pertains to them. It may well be a matter of special gratification that the fisheries will receive more consideration at this Exposition than has ever been accorded them elsewhere under similar circumstances. And it should be all the more satisfactory to Americans because heretofore there has never been adequate and suitable provision made at any exposition in this country for a fishery exhibit, and all attempts in this direction have been limited by small appropriations and inadequate space.

It is true that there have been numerous fishery expositions in different European countries, some of which have been national and others international. It is also well known that the United States has participated in two of these, and that the highest honours were awarded to America and Americans at Berlin and London. But, while the National Fish Commission succeeded so well in securing recognition for our fisheries abroad, and though all honour is due to Prof. G. Brown Goode, who so ably represented this country on those occasions, it nevertheless will be apparent to all that, while it was then practicable to illustrate the principal features of American fisheries and fish culture, it was not possible with the means and time available to make a thoroughly exhaustive presentation of them.

Never before has the occasion presented itself to do this, and, as has been stated, it should be a matter of much satisfaction that the management of the World's Fair have arranged to construct a group of buildings specially designed for the purpose of a fisheries exhibit—an action which should result in the most hearty co operation of all who are interested in fishing and the industries dependent thereon, and the inauguration of such an effort on their part as will result in making this section of the Exposition equal to any in completeness and attractiveness.

Before proceeding to a more detailed consideration of these buildings, permit me to say that the exhibit of the U.S. Fish Commission, illustrative of its work and functions—including scientific exploration, fish culture and fisheries, but exclusive of live fish—will be located in the Government building immediately opposite the centre of the main fisheries buildings, with which it will be connected by a bridge crossing the ornamental lagoon.

For the reception and accommodation of general exhibits of fish, fisheries and fish culture, both domestic and foreign, there will be a group of three buildings, most admirably and appropriately located on an island in the lagoon at the northern part of Jackson Park near the outlet to Lake Michigan. These buildings have been designed in the Spanish style by the well-known architect, Mr. Henry Ives Cobb. They will be somewhat unique, but exceptionally graceful and pleasing to the eye, while their ornamentation, form and dimensions have been considered with the special object of adapting them to the purposes for which they will be erected.

The main or central structure is rectangular in form, four hundred and fifty feet long and one hundred and fifty feet wide. This will be the great central hall, where will be displayed all that pertains to commercial fishing and fish culture, including apparatus of capture, boats, vessels, products, models of fish-breeding establishments, ponds, &c.

Connected with each end of the main hall by an elegant curved arcade, is a circular building about one hundred and thirty-five feet in diameter. The one at the east, nearest the lake shore, will be devoted to an exhibit of living specimens of fish and other forms of aquatic life. Let me say that this building will have a grand central rotunda one hundred and eighty feet in circumference, around which will be placed the largest aquaria that is practicable to use; while in the centre will be a pond twenty feet in diameter, with a beautiful fountain, beneath the spray of which will disport many ornamental fishes. Entering the galleries near the side of the building, the visitor will pass between two rows of large aquaria, in which, as in those previously alluded to, there will be representations of the fauna of the Atlantic, the Gulf of Mexico, the Pacific and interior waters, including the Great Lakes. No words of mine will, I believe convey anything like an adequate idea of the beautiful architectural effect of this aquarial building to the construction and equipment of which the Exposition authorities have very generously contributed. I will not, therefore, attempt a description, but will content myself with the hope that all present will be there to see it in the summer of 1893.

In this building the U.S. Fish Commission will make a great national exhibit of fishery resources, embracing many varieties of fish, marine invertebrates, &c. And right here, let me say, that is the purpose of the Commission, as it is of the Exposition Management, to give consideration to species that are economically important, while the occasion will be improved to call attention to the great work that has been done by the State and National Governments in the artificial propagation and acclimatisation of fish and other aquatic species, thereby restoring and maintaining abundance in waters that had become depleted by over-fishing or other causes. It is impossible to over-estimate the consequence of this work, either in the present or future, and it is beyond question desirable that this opportunity should be improved to make the public better acquainted with it than ever before.

The western building of the group is similar in form and construction to that devoted to the live fish display. Here it is expected there will be assembled a magnificent and exhaustive exhibit of all that pertains to angling, and let us hope that the thousands of enthusiastic and public-spirited anglers in America and other countries, as well as all those interested in the manufacture and sale of anglers' outfits, will join hands in making this the grandest display of its kind that has ever been seen. For never in the world's history has there been such satisfactory provision for showing all the details of the gentle art. Not only will there be ample room for installation of exhibits, but here, right in the shadow of the building, fly-casting and bait-casting tournaments can be held, and the art of the angler may be tested, from shore or boat, in friendly trials of skill, and in the exhibition of the various modes and methods of angling.

As to what may be embraced in this fisheries exhibit, I believe the classification adopted is sufficiently broad in its scope to permit the inclusion of anything which will be strictly germane to fish or fishing. This seems to cover the whole field, and under it not only will it be proper to show living and mounted specimens of all forms, from microscopic animals to whales, together with aquatic or marine vegetation, and the apparatus for their capture; but it will also include the products of the fisheries and their manipulation in all their varied forms of methods and material. Besides this, there will be ample opportunity to illustrate angling of every description, together with fish culture and the literature of fishing, and all that pertains thereto. Indeed, I can think of nothing which would be of value to the fisheries exhibit which cannot properly be included under the classification referred to.

I have thus briefly outlined what has been and will be done by the Exposition Management to provide for a great fisheries exhibit. It now remains with others to make this one of the most attractive and successful features of the World's Fair, as I believe it will be, for it must be fairly assumed that those who are interested in fishing and all that pertains thereto will not permit this grand opportunity to pass unimproved. From information now at hand, we have reason to expect marked enthusiasm in this matter on the part of all the fisheries interests in this country, and that as a result there will be gathered at Chicago in 1893 a magnificent and exhaustive display illustrative of angling, commercial fishing, fish culture, and the science of the seas. It will thus be possible for the citizens of other countries who are our customers to find there an infinite variety of fishery products—the harvest of the seas, lakes, and rivers—and the whole world may see object-lessons, which will convey in the most emphatic manner information concerning the methods and magnitude of our fisheries, and their history and development from the earliest settlement of the country. In the same way, the world may learn what has been done in America by the States and Federal Government to maintain and increase the supply of fishes by artificial propagation, &c., and may become familiar with the results which have been achieved here by scientific exploration of our inland waters and the ocean depths.

I have reason, also, to believe that the fisheries of several foreign countries will be fairly illustrated. It is not necessary to speak of how much this will add to the interests and importance of this part of the Exposition, since I am sure this will be understood by all. But it is certain that it must be of great moment to us as a nation to gather here the arts and appliances which are used for the capture and preparation of fish in other lands, for, in addition to the interest we may naturally feel in seeing the exhibits of foreign countries, and comparing them with our own, it must be assumed that our fishermen can learn many things of value and importance to them by a study of such exhibits.—"*American Shooting and Fishing.*"

Notes

It is to be hoped that all who have any influence with the Corporation of the City of London will support the appeal to them, a copy of which we give in another column, from Mr. J. Granville Layard. Our readers who are interested in Thames angling know what a splendid fight Mr. Layard has made for ten years, single-handed, against wealthy landowners on the Thames.

We are glad to hear that such an influential gentleman as Mr. Andrew Pears has joined the committee of the Thames Angling Preservation Society.

Pursued as a recreation and a study, angling will be found to be unequalled by any other pastime for beneficial results.

On the Tweed there was some good fishing last week, scores of eight, seven, and six fish, being obtained by individual rods in one day's fishing. All round, however, the sport was very far below that obtained three weeks to a month ago. Neither were any fish of a weight worth being specially noticed got. Monday next sees the end of the business, and however the last two days may turn out, Tweed certainly has done grand—more than kept up its autumn fishing reputation—and generally those who have fished "her" will have reason to congratulate themselves on their good fortune.

With regard also to the autumn angling all over the country. So good has it been that we believe there is scarcely an angler who will not heartily join us in wishing that "soon may there be another such season."

Mr. John MacIntyre, manager, Balnacoil, Brora, writes: "While my son was on his rounds, the other day, he saw two cormorants alight and begin to dive in a salmon pool about a mile above Loch Brora. He stalked and shot them both. One had nothing in its pouch, while the other had two char about size of well-grown herring, a trout nearly ¾lb. weight, and a full-grown salmon par! I never knew char were in the river—never saw one caught in it. Do you think they come there to spawn, or do they frequent the river all the year? In the loch they are plentiful, but seldom take the fly. There are more salmon on the spawning beds here than for many seasons past, and the weather up to now has been favourable."

It looks as if salmon disease will become epidemic to a frightful extent this winter. Of all the autumn salmon rivers in Scotland there is scarcely one in which it has not already shown. Generally it appears that the immense number of fish lying together is causing it to spread, but even where this is not the case it is breaking out and spreading fast. In several rivers vast numbers of fish have succumbed during the present month, and this is the more to be regretted in that but few of them were spawned. The loss in the future to the fisheries through the fish dying after spawning is but a mere trifle compared to that which is brought about through their being cut off before having spawned.

An agitation over the "lunch and flask" business, a gillie fortifier provided by Highland's hosts, at the expense of "ta shentlemans," is spreading amongst the tourist class of anglers, many of whom desire to see it abolished, or else its equivalent in "clink" made optional.

That grilse never become salmon is the opinion held by most of the rod and net fishers and river watchers on the North Esk. Curious; wonder what the resident member of the Scotch Fishery Board thinks?

We learn that many of the Scotch salmon rivers are flooding repeatedly, and so are altogether too unsettled for the season being a good one for the early spawning fish depositing their spawn in safe redds.

The heaviest fish caught by rod on the Aberdeenshire—this past "back-end"—a forty-six pounder got by Mr. Fortescue, younger of Kingcausie, exceeded by no less than 9lb. the weight of the second heaviest, which only came up to 37lb. But of this weight two were got—one by Miss Fortescue and one by Mr. T. Turner Farley.

Of late little has been heard regarding the proposed hatchery for the rivers at the Kyle of Sutherland. Apparently it hangs fire. Without a doubt a well-managed salmon hatchery, on an extensive scale, would enhance to a vast extent the value of the great ramification of fisheries, rod and net, connected with the kyle. But it would scarcely be fair that those most anxious to see it set a-going should have all the expense to bear. In that case there would be proprietors reaping a benefit without paying for it. It is hardly to be expected that the concern will be floated until the whole of the owners of fishings come forward and signify their willingness to meet the maintenance rate on the full assessed value of their fisheries.

The salmon hatchery on the Conon river, near Dingwall, is in good hands, and is likely to be kept up. But it would much sooner bring about a return of the river's prosperity to stock the hatchery on a far greater scale, and make ample rearing ponds, if they can be afforded, an adjunct. Without the latter, more than half the improvement a hatchery can bring about is neutralised.

There has been a regular riot, which threatened to become a serious affair, at Berwick-on-Tweed, by more than a hundred fishermen and others of the place, over the seizure by the bailiffs and crew of the preventive boat of a number of nets which it was suspected had been used for the illegal capture of Tweed salmon.

We regret to hear that "grappling," or "sniggering" salmon in the autumn by means of two or three flights of Stewart tackle (hooks) of enormous size has become notorious of late years on a certain salmon river not far north of Aberdeen.

Our correspondent, "Mac," reports that in twenty minutes one day, during the autumn fishing this year, he rose nine salmon, all of which hooked in some shape or other, but only in the case of two to hold on to the end. At the time there was a soft drizzle (without any wind), which ended in a tremendous downpour, previous to which, for a few minutes, the whole of the quieter water looked as if covered with oil. An almost similar experience was had by other anglers for a few miles along the same river.

The well-manned preventive "cruiser" of the Aberdeenshire Dee Fishery Board has been doing good work in overawing the less scrupulous of the fishermen of Fittie and Torry, who were wont at night, during the close season, to net great hauls of clean salmon in the estuary and along the coast.

Half of the important, largest, and naturally most productive rivers of the North-east of Scotland have now got artificial salmon propagation going on on their banks. These are Spey, Deveron, and Dee. Those still without it are: Findhorn, Don, and North Esk. There can be no question that Findhorn and Don stand greatly more in need of a hatchery than either Don or Deveron. The rod-fishing proprietors should spur up, and not lag behind the times.

It is reported that on the river Ythan, in Aberdeenshire, fully more than a hundred salmon, of over 20lb. in weight, were landed during the seven weeks of the past autumn angling season. This is a wonderful yield of large fish for so small a river. A great many grilse and small salmon were forward, which brought the average weight down to about 11lb. None of the heaviest fish caught came up to the usually best weight for autumn, the heaviest fish being 33lb., followed by 32lb., 30½lb., 29lb., and 28lb. fish. Some of the rods having complimentary tickets for Lord Aberdeen's extensive fishery had rattling good sport.

ANSWERS TO CORRESPONDENTS.

E. Carnegie: You will see an announcement respecting some photo-reproductions of fish paintings by Rolfe in our Christmas Number. We shall probably issue some coloured by hand.

Correspondence

RE SLAUGHTER OF JACK IN THE THAMES.

Sir,—I wish to ask "Esox Lucius," Why trouble to protect such destructive fish as pike, or their youngster jack, in a river that affords sport for better fish—viz., trout, roach, &c.? Given a hungry jack, and any novice can kill it; exterminate them if you wish better sport is the wish of Anti-Esox Lucius.

PIKE IN SUTHERLAND AND CAITHNESS.

Dear Sir,—Harvie Brown ("A Fauna of Sutherland and Caithness, 1887," page 283) says: "*Esox lucius* pike used to occur at Loch Migdale, the only loch in Sutherland where it is found." Sheriff Mackensie writes us: "He has never seen a specimen from this loch; so the species may have died out. They were introduced at least sixty years ago by the then Mr. Dempster, of Skibo, and were caught in Loch Achilty, in the east of Ross-shire, by Peter M'Aulay, the keeper at Coul, for that purpose." Mr. Peach says he has just heard of one being caught in the Wick river.—Yours, &c., E. H.

LARGE ROACH—A QUERY FOR "GIANT."

Dear Sir,—Will "Giant," or anyone who, like him, keeps a valuable record of all specimen fish taken, kindly tell me (with dates, place and names if possible), of any well-authenticated instances of roach weighing over 2lb., taken during the last ten or fifteen years?

I could never get to hear of any true roach in Ireland (where the rudd which abound is called "roach"). Am I correct in supposing there are none in that country? Will any Scotch angler kindly tell me how far north the roach is found?—Your obedient servant, Inquirer.

TO SECRETARIES OF TROUT AND GRAYLING FISHING CLUBS.

Dear Sir,—I am anxious to join a good trout and grayling club about forty to seventy miles from London. If you will be kind enough to give me some information on the subject in your Correspondence columns, I shall feel extremely obliged to you.—Yours faithfully, C.

[We shall be happy to forward to "C." any particulars sent us from secretaries of clubs which may have vacancies.—Ed.]

LOCH LEVEN TROUT.

Sir,—I am most interested with your accounts of Loch Leven trout. The fishing association here obtained fry at the beginning of this year, and intended turning them into the river Teme at the beginning of next year. Are they likely to stay in the river? It is a fast-running stream, with deep, long flats and holes. I am doubtful on the matter, and should be very pleased to any of your numerous readers who would kindly give any more information in your valuable paper about them and their habits.—Yours, &c.,

W. Woodward.

HOW TO BREED AND REAR TROUT.

Dear Sir,—I observe with much pleasure that you have commenced to publish some papers on trout culture in last Saturday's *Gazette*, and I beg to thank you for the same. I would suggest that, before the papers, Mr. Andrews would inform the angling public the best kinds of weed and vegetable matter most suitable for trout streams, and the best means of introducing them. This is a matter of special interest to me, as, living near to the river Churnet—a splendid little trout stream—but owing to pollution from the Leek Dye Works, all vegetable matter has been destroyed, and also consequently the fish food in the shape of animalculæ; this pollution is now all or nearly all kept out, consequently I am wishful to get my portion of the river well stocked with ret and other vegetable matter. Any information you may give on this subject in your valuable paper will be thankfully received, at least by, yours sincerely, J. E. SMITH.

Cheadle.

THE FREKE BAG.

SIR,—A little error crept in the letter last week *re* the Freke bag. Of course, one could not boil a *new proofed* bag without spoiling it; it should have been "the bag to contain the *fish* is made of *unproofed canvas*," no leather or anything else that boiling would spoil.—I am, &c., F. MALCOM.

22, Ludgate Hill.

A QUERY.

DEAR SIR,—Would you be kind enough to let me know if there is any Sunday fishing allowed at Warner's Park, Walthamstow? Also, is there any jack or perch fishing? If you do not know would you please put my inquiry in the *Gazette*.—I am, Sir, yours respectfully,

Nov. 23, 1891. STEPHEN MASTERS, Jun.

ORCADIAN WATERS.

DEAR SIR,—I am pleased that my stray notes on Orkney should have met with the approval of your courteous correspondent "M. S.," who is evidently well acquainted with the fishing, the antiquities, and general characteristics of the Orcadian group. It is six years since I visited Orkney, but the season of 1885 was quite as bad an angling season as last season seems to have been in Orcadian Waters.

With regard to "M. S.'s" remarks on what I said with reference to salt water affecting the trout of Loch Harray, I can lay no claim to any special knowledge, such as your correspondent manifestly possesses, as to its operation on the trout of that particular loch; but it is at the same time contrary to my experience elsewhere to find yellow trout or brown trout at all affected adversely by salt water, or, at least, by brackish water. I gave merely the opinion which at that time was locally current—namely, that salt water sickened the trout of Harray. On looking over some of the reports in the *F. G.* of the fishing obtained in Lochs Stennis and Harray, I found, in more than one instance, high tides given as an excuse for indifferent sport. I do not wish to analyse your courteous correspondent's argument, which he says refutes my *obiter dictum* (for it was no more than that, and not a theory which I advanced), but I would submit that his evidence is contradictory to the local belief that the salt water sickens the fish, and to the excuse often given by your local reporter for poor takes, and that, in any view, the effect of salt water, on his own showing, varies with circumstances. In any case my theory only amounted to this, that if the local belief were well founded as to the effect of salt water, and the trout did not take after an influx of it, then the true reason was not because the trout were sickened, but because they had more food than usual. I do not believe, however, that salt water affects loch trout adversely in such lochs as Harray, and your correspondent admits in one part of his letter that if the influx were more regular the fish would soon "adapt themselves to their environment." I am no believer in disturbing the established order of Nature in a negative direction, and all barriers imposed upon the free and natural movements of fish, or calculated to artificially alter the normal conditions of their existence, will, I am persuaded, in the end, be proved to be dangerous experiments. It is a strange anomaly that the penalties attached to trout poaching in all its forms are not more rigidly enforced in Orkney. In this lies the real danger to the future prospects of Orcadian angling. The large number of small riparian proprietors (for trout fishing being a strict pertinent of the land goes with it, and the ownership of one square inch of land *ex adverso* of a loch, carries with it the right to angle over square miles of water), and the consequent want of joint action are probably the causes of the indifference of the community to poaching. In other words, it is the class, which should guard against poaching, that is the greatest sinner; but it should be noted that illegal methods of capture when used by those in the right of angling are not thereby legalised, for at common law any proprietor in the right can interdict any other proprietor in the right and recover damages, if he can show that injury is being done to the fishing by such illegal methods. The Acts 8 and 9 Vic., c. 26, and 23 and 24 Vic., c. 45, which together prohibit net-fishing, cross-line, or set-line fishing, the use of the otter, &c., do not unfortunately apply to proprietors.—Yours truly, DUINE MÔR.

PUBLIC RIGHTS ON THE NORFOLK BROADS.

SIR,—Your readers may recollect that, at a meeting convened at the Bush Hotel, Shepherd's Bush, by the Association for the Defence of Public Rights on the Norfolk Broads, the chair was taken by General Goldsworthy, member for the borough of Hammersmith, and one of the patrons (?) of this club. As I considered his speech on that occasion not at all in sympathy with the feelings of the conveners of the meeting, I attended a meeting at the Athenæum, Shepherd's Bush, where he was announced to meet his constituents, for the purpose of asking him the following question: "Whether, in the event of a measure being introduced in Parliament, making the County Councils the conservators of all common rights, public rights of way, fishing rights, &c., he would pledge himself to actively support such measure?" The chairman of the meeting appeared to fear some embarrassing questions being put to the honourable member, and declined to allow any questions at all to be put; but I mention the facts for the guidance of fellow-anglers and electors, as it appears to me that the only way to ensure the defence of public rights is to make some public body responsible for their maintenance, and I trust that other anglers will take similar steps with better results in order to expedite the arrival of that "consummation devoutly to be wished."—I am, Sir, yours truly,

West London Angling Club. W. H. ROGERS.

A SUGGESTION.

DEAR SIR,—As a constant reader of your interesting publication, the *Fishing Gazette*, it has appeared to me that it might be a benefit to many of your subscribers if you were to set a column aside for offers of, or inquiries for, fishing appliances (rods, tackle, &c.).

I should think a considerable number of people would avail themselves of it in order to dispose of rods, &c., which they find, for some reason or other, do not suit them or are no longer required; and doubtless there would be others who would gladly take the opportunity of purchasing a rod by a reliable maker at less than first cost if offered through the medium of your paper.

I merely suggest this: possibly others have done so before me; if so, and there are difficulties in the way of its accomplishment unknown to me, please do not take any notice of this.—I am, yours faithfully, WILLIAM LEA.

"Ardeer," College-road, Reading.

[We have for some time past had a column of this description in the *Gazette*, and have instructed our printers to give more prominence to it. Our only objection to the "exchange" business is that it may open the door to rogues.—ED.]

ANOTHER FINE PIKE FROM THE THAMES.

SIR,—Whilst fishing with Smith, of Molesey, last Thursday, in the neighbourhood of Hampton, I had the good fortune to kill a very fine specimen pike, which turned the scale at 18lb. 14oz., and measured 40in. long, in good condition, and is now being preserved by Messrs. John Cooper and Sons, St. Luke's.—I am, yours truly,

ALFRED KELLAND.

THE RECENT REPUTED CAPTURE OF PIKE AND PERCH IN NORFOLK.

DEAR MR. EDITOR,—Referring to the large catch of pike and perch mentioned in the *Fishing Gazette* "Notes" of Nov. 14, and recorded on the authority of Mr. Edward Andrews, of Maidenhead, as being caught in Norfolk waters by two anglers fishing "Thames style," by which I suppose is meant "spinning," and possibly (as *three* rods were used) "snap" and "live-baiting," I wrote, at the request of yourself and other gentlemen, t Mr. Andrews the early part of this week (the 16t inst.), asking him to be kind enough to say i there was any mistake in his report, as from a analysis of the figures (as given below—a copy o which I sent him) it seemed impossible that suc a *miraculous* quantity and weight of fish could b caught by rod and line in the time stated—viz. fourteen and a-half hours. For some reason h has *not* replied to my letter up to the present date.

ANALYSIS.—Wednesday (four hours), 61 pike, 365lb.; 16 perch, 20lb.; Thursday (four hours), 41 pike, 237lb.; 3 perch, 2lb.; Friday (four hours), 79 pike, 380lb.; 16 perch, 22lb.; Saturday (two and a-half hours), 18 pike, 95lb. Total: fourteen and a-half hours; 234 fish; 1,121lb.

According to Mr. Andrews, "all pike under 5lb. were returned to the water, and not included in the above weights."

Through a long lifetime's experience, and numerous opportunities of fishing very splendid pike preserves, in rivers and lakes, I have always observed and "noted" that when fish *only over 5lb.* are allowed to be retained, a very large number of smaller ones—from 2lb. to 4lb.—are (or *rather should be*) returned to the water; and where the *minimum* for retainable fish is 5lb., the proportion of takeable ones is not more than three out of every five caught. But, supposing these fortunate fishermen replaced *only seventy* jack under 5lb. in the water, they would have been catching at the rate of *one fish every two and three-quarter* minutes (within a fraction) for fourteen and a-half hours, irrespective of the time taken up in putting on and casting out the baits, "working them," and *finding their pike*, whether "spinning" or "live-baiting on snap tackle" (for I don't suppose they fished "live gorge"), playing and landing the fish, replacing broken hooks and tackle, and in addition to all this, remembering the *extra time* that would be occupied in playing and landing the 16lb., 15lb., and 13lb. pike (to say nothing about the eight and nine-pounders), it would reduce the *average* time to *less than two minutes per each fish captured*. Verily, good sport for three rods during fourteen and a-half hours' fishing.—Yours, &c., ALFRED JARDINE.

November 21, 1891.

P.S.—Since sending the above letter to the *Fishing Gazette* a reply has reached me from Mr. Andrews (as given below). I would merely remark, Is it sportsmanlike, or even fair, to deplete waters at the rate stated by Mr. Andrews? Do the owners approve of it, and is it not the frequent cause of fine fisheries being closed for years to even those anglers who are content with moderate "bags," instead of "cartloads" of pike, which, after all, are useless, unless for "gross weight" club competitions? A. J.

[REPLY.]

SIR,—In reply to yours, I can only say that, if anything, I am under the weight of fish captured, and there is not the slightest mistake whatever in the figures, unless it be that every fish taken averaged when first weighed 6lb. each all round, a few, as you say, reaching 8lb. and 9lb. We fished in two boats and with three rods, and we landed the fish on several occasions two at a time. If we had fished more hours, "Marlow Buzz's" record of "ten tons" would not hold a shade to our capture, as I *can hardly believe ten tons of pike* were ever captured in "*Three Days Fishing on the Thames.*"

Returning once more to our capture in Norfolk: Mr. Wheeldon, writing in the *Sportsman* of November 19, mentions a large take, in which he took a part. I can, in reply, state, that had we fished an equal number of hours, and not returned any fish, we could easily have made one of the largest records of fair rod and line angling, as I could find no difficulty in landing and baiting hooks, casting out, &c., every two minutes.—Yours obediently,

EDWARD ANDREWS.

THE BIDEFORD POULTRY SHOW.

SIR,—A letter asking for information on the above show is in your paper of the 21st Nov., 1891. There were many birds shown, but I regret to say, that the colour was not mentioned, but I understood the prize was for the best hackles, and the result showed that colour was the aim of the gent who gave the prize and judged himself.

The first prize was given to a cross-bred Andasian blue, which most fly-makers put down as orthless; the second to a ginger blue perfect pered feather and Honey Dun Game Hen; the ird to a ginger freckled Game Cock and Honey un Hen; the fourth to a mongrel-bred. The econd and third were game bred, likewise a comended bird; but the judge liked colour; and the est feathers were not so much esteemed as they hould have been. I believe the first prize was old; but the breed is certainly no use to a flyaker.

Should you wish, I can refer to some breeders f game blues, gingers, Honey Duns, &c., which understood was the intention to unearth the ost valuable breed and colour, not Andalusian olour.—I am, Sir,

A Judge of this kind of Poultry.

Sir,—In answer to your correspondent, T. W. White, in your issue of last Saturday, to which my ttention has been drawn, I beg to say the class eferred to produced seven entries. The merits of he birds competing are not within the scope of oultry fanciers, but the gentleman who judged he class being a *practical* and successful fisherman or a very long stretch of years, makes it a cerainty that he knows what is wanted. He is not dealer in the trade, nor did he undertake the ask with a view to self-advertisement, but acting n concert with the gentleman who provided the rize money, his desire and effort was to promote he culture of birds that *are* suitable. Personally am unable to provide further information, but hould anyone interested desire to have more, I hall be pleased to act as the medium of communication between them and the judge.—I am, Sir, yours obediently, F. G. Pattison, Hon. Sec.

GOOD SEA-FISHING TWO-AND-A-HALF HOURS FROM LONDON.

Dear Sir,—I have often seen the sea fishing at Deal mentioned in your columns, and it may be of nterest to your readers if I record my experience. My friend (Mr. Henry Ball) and myself, left Victoria, at ten o'clock on Monday morning, arriving at Deal about half-past twelve, when we were soon informed of some good catches during the past week; this naturally made us very anxious to get afloat. We hurried over our luncheon, and just managed to have an hour in the day-light, being rewarded with thirty-three whiting, one plaice, one cod (11lbs.), and some dog fish. Next morning we started out at eight o'clock and finished at half-past eleven, our catch was forty-eight whiting (some very large), four cod average 12lb.), three conger eels and four dog fish. We were fishing with a rod, Nottingham winch and line, a twisted gut paternoster, with two hooks; when the tide was running, an extra tailhook, with a large bait, was added to attract the cod. Any one going there between now and Christmas, will find the fishing very good, provided the weather is favourable. I must mention our host, Mr. Hanger, at the North Star Inn, who provides comfortable accommodation, and is most willing to answer any inquiries as to state of weather and prospect of sport. Mr. Hanger is a good host—a capital fisherman, and being the second coxswain of the Lifeboat Crew, can spin a few interesting yarns over a pipe and glass of whisky, which is by no means an unimportant part of the programme in fishing, at Deal, this weather.—Yours truly, A. W. Stratton.

63, Haymarket, S.W.

AUTUMN SALMON FISHING ON THE EDEN.

Dear Sir,—In case a few lines may interest you, *re* the autumn season in the middle waters of Eden, when the floods ceased about Oct. 25, we hoped to get a good three weeks to the closetime, but frosty nights brought the river very low, within little more than a week, and many fish showed signs of disease, so perhaps, except for the last week's angling, the re-appearance of continuous rain was the best thing that could have happened. Although there were any number of fish, it was anything but a good back-end for us, as the middle stretches do not fish well in high waters.

Personally I was fortunate in getting some nice fresh-run fish, amongst them the three largest takes in the middle waters—viz., 28lb., 28lb., and 30lb.; a 28lb. she and the 30lb. male being perfect fish, and as good as you will see in Bond-street in the spring, and this was lucky, as I should say that, generally speaking, the fish this autumn were two or three weeks earlier than usual towards spawning, in fact some were already on the gravel beds, and the trout up the burns.

The storms this autumn all coming from the south-west, naturally affected the Eden more than the other Solway rivers, which rise from the northward, and kept them to a nice size, while inundating us, however, I suppose this southern origin causes the Eden to boast of a better run of spring fish than any other Solway river.

I enclose you water-colour sketch of the fly (one of my own patterns), which I dressed myself and killed the three largest fish with, on a size larger hook, also two quarter-plate views, which, while not pretending to be gems of photographic art, may recall to your mind Armathwaite, looking up and down from the bridge.—And remain, yours very truly, Fraser Sandeman.

[Here is the dressing of the fly as given by Mr. Sandeman: Tag—Gold tinsel; blue silk. Butt—Peacock herl. Tail—Summer duck; golden pheasant tippet. Body—Silver braid (flat); purple silk, blue hackle, orange silk, brown hackle, gold tinsel (flat). Throat Hackle—Gallina. Wings—Four bold strips gled hawk, two bold strips argus pheasant, two bold strips red macaw, four narrow strips (three fibres each), of blue and yellow macaw. We are much obliged to Mr. Sandeman for the views, which recall pleasant memories of the Eden, in some respects the most delightful of English rivers.—Ed.)

THE READING OF PAPERS AT CLUBS.

Sir,—I know you are aware how delighted I am at the result of the movement to promote the reading of papers. lectures, &c., at our working-class angling clubs in London.

It is a decided success, and the efforts of "the society with a long name," are duly appreciated, and the meetings, so far, have been "bumpers."

I want to make use of a part of one of your correspondence columns this week for two purposes, and I feel sure you will not "crowd out" my request.

First, Mr. Francis Walbran delivers his lecture upon "Two Yorkshire Rivers," at the Foresters' Hall, on Thursday, December 10 (R. B. Marston in the chair). The lecture will be illustrated by one hundred dissolving views. During an interval your humble servant will give a recitation, entitled "'Ow Bill Adams Won the Battle o' Waterloo," and this will also be illustrated with thirteen instantaneous photos projected upon a 15ft. screen. The lantern for the lecture and recitation are by Watson and Son, of High Holborn, the same as are used at the Crystal Palace, and for Mr. Harry Furniss's lectures. The same evening the distribution of prizes in connection with the late competition at the Rye House, in aid of the Anglers' Benevolent Society, will take place. Admission *free* on production of an angler's or Central Association ticket.

Secondly.—Of course all these meetings we are holding, and other matters we have in hand—of which more anon—cost money—postage, printing, hire of hall, hire of lanterns, &c., &c., so we have decided to print and offer for sale a few reserved seat tickets, at 2s. 6d. each, and the committee wish it to be distinctly understood that purchasers of these tickets are really subscribing to the funds of the Society for Promoting the Reading of Papers, and not merely buying the right to a reserved seat at Mr. Walbran's lecture.

Now, Sir, I have been told that our object is a worthy one and that it deserves to succeed, but we must have the sinews of war, and I feel sure that many of your readers (and yourself) will help us in our work. 2s. 6d. is not much, and I believe there are many readers of your paper who will willingly help us to this amount.

All communications should be sent direct to me. Donations to our society can be made by P.O., cheque, or stamps.

I may add, the society hold meetings for business at the Citizen, 70, Houndsditch, the first and third Friday in the month, and papers are read every week (two this week) at some club in London.—I am, &c., Edgar S. Shrubsole, Hon. Sec.

16, Montefiore-street, Battersea Park Town.

SPORT ON LAKE WINNIPESEOGEE.

Professor Ben and I were spending a week bass fishing on Lake Winnipeseogee, New Hampshire. The day about which I am going to tell you was the fourth of our stay. So far we had obtained more experience than fish. The night we arrived we hastily swallowed our suppers and rushed down to get a boat and try the fishing, expecting, from all the stories we had heard of the lake, that it was so full of fish as to impede navigation. It was dark when we started, but the Professor actually pulled in a good-sized black bass in less than five minutes. That settled it; we must start early in the morning. We ordered our breakfast, put up and went to bed, expecting to catch more fish the next day than there are in the whole State of Connecticut.

We started at half-past four in the morning. It was mighty cold, but one of us kept warm rowing, and the other was still warmer from trying to steer our young canal boat and keep it from advancing sideways. After the sun came up we ate our breakfast and began to fish. We fished down the shore five or six miles and didn't get a bite. We tried all sorts of bait and all sorts of places, but apparently there wasn't a fish in the lake. By this time we were both cross enough to bite a nail. It is astonishing how cold air, cold water, and a cold breakfast, no luck, eight miles of rough water and a strong head wind on an empty stomach, will change a man's mind about the fun in fishing. We got home about three o'clock in the afternoon, filled with a strong desire to lick the man that told us there were fish in Lake Winnipeseogee.

The next day it was too rough to fish if we had wanted to, but towards night we took a row in the harbour and had a little adventure.

Between Blueberry Island and the shore there is a stone causeway and a bridge. We rowed down towards this bridge and unintentionally intruded on a young couple, in a Rushton pleasure boat as cranky as a canoe. They rowed through under the bridge and we the other way. Professor Ben said he sympathised with the fellow and hated to spoil his chance; I suspect he must have been there himself. Well, we rowed a little way and then floated. It happened that we could see under the bridge, and just as we looked, the fellow, who was sitting very close to the young lady, facing her, stood up and tried to take her in his arms and kiss her, but she pretended she didn't like it, and pushed him off, and he sat down just as though he thought she meant it. Just then they both looked and saw us, and we rowed away towards Pine Tree Point. Before long we saw a boat going at a tremendous speed for the bridge, and the Professor said he guessed the girl's old man must have been using a field-glass. When we came home the whole village was greatly excited about the young man and woman, who had capsized just the other side of the bridge. No one knew how it happened except Professor Ben and myself; the couple said they didn't know.

After supper we started out to do the town. We decided to begin by going to see the noted Whittier Pine, on Sunset Hill. In order to visit this historic spot in style we secured a two-seated waggon, and a horse which looked all right; but we soon found the latter had a shattered constitution and the former was sadly out of repair.

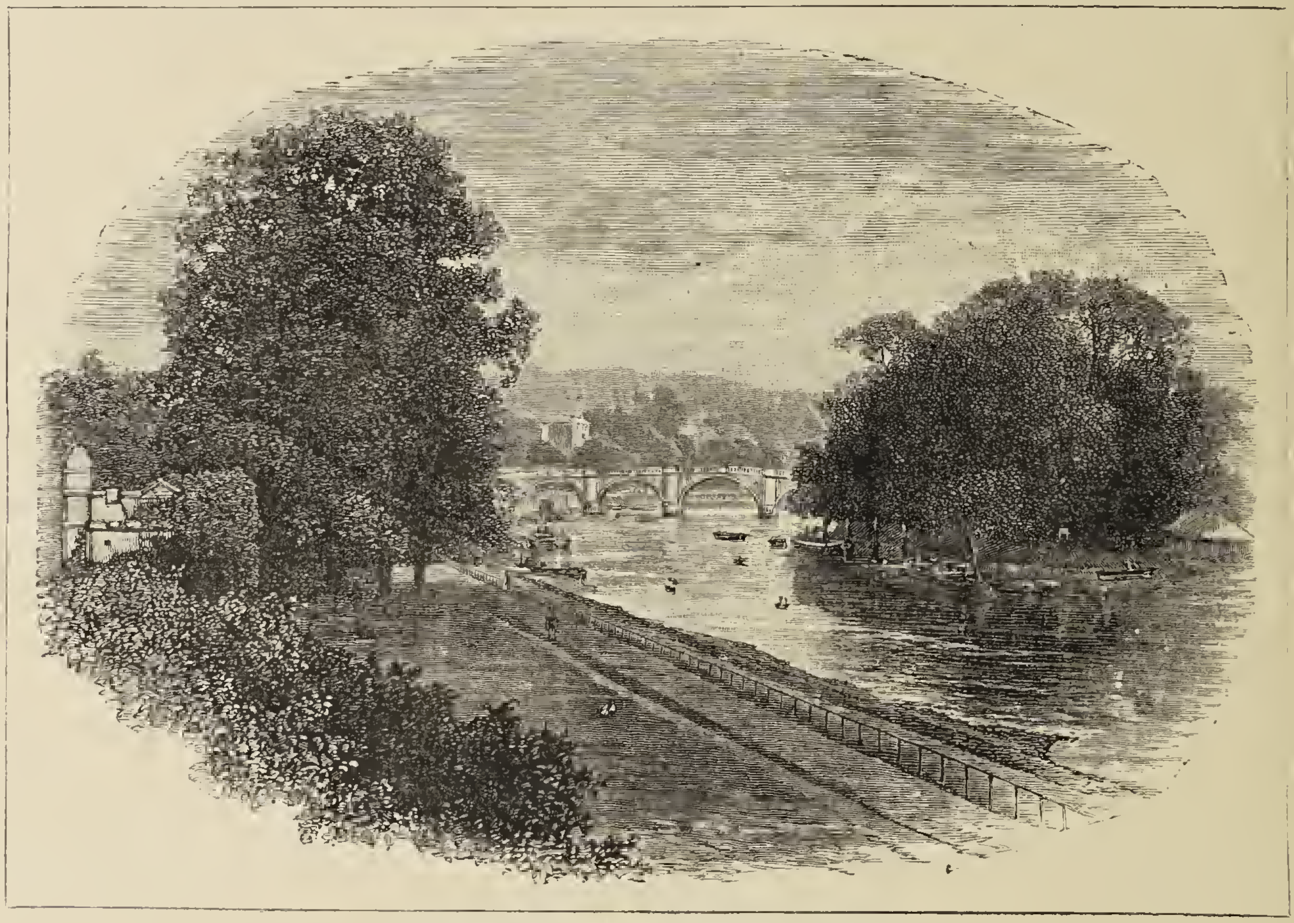
The animal had a habit of gesticulating fluently with his tail, particularly over the lines. We also found afterwards, that the owner had charged a price for the outfit based upon the probability of the speedy dissolution of the motive power.

We entered the capacious vehicle just abaft of amidships, deposited our feet on the front seat, and discovered that the horse also resembled a steamer from the fact that he backed before he went ahead.

Finally we reached the top of a hill, and passing through a gate entered a piece of woods. At this point, I attempted to find out if the horse was alive, by a judicious application of the whip, on an entirely new spot of his epidermis, and the effect was wonderful. He gesticulated more violently than ever with his tail, and jumping out of the rod jerked the waggon over a large rock. All that prevented the vehicle from overturning was the ballast on the front seat. I was so delighted with this sign of returning consciousness in the animal, that I continued the treatment until Professor Ben hit me on the side of the head, and then brought the horse up-standing, a-straddle of a large rock, in a perfectly conscious condition. From that position we carefully watched the sunset, but didn't notice anything peculiar about it, and then started back as soon as possible, for we were anxious to get the horse home before it was too late, lest he should die on our hands.

But to return to our fishing experiences. On the next day we got up very early. Our enthusiasm had revived. We had firmly resolved to catch some fish if possible. It would never do to go home and say we didn't catch anything, and we didn't like to lie unless it was absolutely necessary. We were going to have a guide, and were going over to the Neck, an inlet twelve miles long and not much visited. We were so excited at the prospect that we got up at intervals all night to see if it was morning.

About five o'clock we got up to stay, notwithstanding the fact that we could not have breakfast until seven. Professor Ben and I can learn by experience, and we don't go fishing now without a good warm breakfast. We had to get our traps ready, to wet our helgramites, and give our frogs fresh grass. The folks up there never saw a helgramite before. The guide called them "tarnal critters," and when he tried to put one on his hook he didn't take hold of it right. The helgramite clapped its pincers into his finger and grabbed him with its sixteen legs, and jabbed him with its tail. He flung it away and swore a streak that left blue marks on all the nickel rings on my rod.



THE THAMES AT RICHMOND BRIDGE.
("The Thames, from Source to Sea.")

At the house where we boarded were a maiden lady, a fat woman, a lean woman, a consumptive young man, and a French-looking artist, with a stunning wife; but they were none of them up at breakfast; only the man who knew all about fishing and could tell you where to go. He deliberately drew a rubber frog, painted green, out of his pocket, and said in slow emphatic words: "Do you want to know the best bait a man ever used? There it is. That's the killing bait. That takes 'em. I'll show you boys a string to-night." We told him we preferred the genuine article, the kind that scared the folks half to death down in Windham, Connecticut, in 1754.

We went over to the Neck in a two-seated waggon; we like to go fishing in style, and we sat on the back seat. We stopped at the store and got two quart bottles of nerve tonic and a dozen of ginger ale, and sarsaparilla and lemon soda. Our guide, who looked like a half-breed and had a greasy, grey moustaçhe and goatee all twisted to sharp points, said such stuff was too light, so he put in a gallon of cider. We were in a hurry, and told the boy who drove that he was the best driver we ever saw, upon which he got so much speed out of the old horse that he threatened to wreck the whole concern, and constantly kept about a foot of air space between our trousers and the waggon seat. A rock in the road a foot high is nothing to a New Hampshire boy when you tell him he is a "James Dandy" driver.

After going through the woods a mile and encountering only six rail fences across the road, we reached the lake and found the nice dry boat we were to use full of water. One of the advantages of having a guide is that he does the rowing while we can lie back, drag our hands in the water and wear our flannel shirts *decolleté*. The first place we went to was a large bare rock out in the lake. Most of the rocks and islands are covered with trees and snakes. The guide said he had counted three hundred snakes one day, and he hadn't been drinking, either. We found this rock was wanted by other parties. A man can't keep both feet in the air and fish at the same time; neither does he like big black ants up the legs of his pants. I gave it up and got into the boat. Professor Ben wanted to try a frog, but frogs are no use, they are always either at the bottom in the mud or out of the water or something, and when Professor found his frog out on the rock eating ants he came into the boat too.

The guide fished all the time, when he wasn't busy getting the snarls out of Professor Ben's line, or getting the hook out of a fish's tail when it had swallowed it too far, or asking us what the Governor of North Carolina said to the Governor of South Carolina, and then showing us what they did afterwards. He used a big bamboo pole about twenty feet long, and ten feet of very heavy silk line with a cork and a cod-hook. He said:—

"When I hitch to 'em, if the britchin' holds, they've got to come in, or else I go out."

He would lay his pole down on the water and when the cork began to bob, would leisurely pick it up, all the time saying: "Chew away, chew away, will ye?" Then he would put the butt down by his knee and derrick him out. The first time we saw him do this his pole doubled up and he seemed to have hitched to a log, when—swish—up in the air came a pickerel two feet long, and as he grabbed it around the body, he said:—

"There, ding ye, I got ye, didn't I?"

We had relatively as good luck this day as on previous ones it had been poor. We had the best luck off beds of lily pads, on a sandy bottom and we landed at night with seventy pounds of black bass, beside four pickerel and countless perch We didn't have to lie when we got home, but the whole crowd came out to stare at the mass of fish the biggest catch there that season. The artist's stunning wife came out and said in the sweetest tones:—

"Oh, my! oh, Will, just look! Oh, Professor Benjamin, are those really bass? Did you really catch them? Oh, how funny!" We thought she was rather frivolous. She told us one night she was twenty-three years old, and the next morning she made a point of telling the whole company she was just twenty-one, whereupon her husband said:—

"Ha! you grow younger as you grow old, don't you?" But she never blushed.

The man who knew all about fishing came out and nearly fainted. He hadn't had a bite all day and he excitedly asked us if he could buy some We told him we would give him some, and invited him to help himself; upon which he filled three water pails with the largest, and then went out behind the barn and threw his green rubber frog a long distance down the side of Garnet Hill.

In the room where Professor Ben and I slept there was a nice soft single bed and a small cot which closely resembled the soft side of a board. The question who should sleep in the bed and who in the cot, or rather which of us should sleep and who should not, was daily submitted to arbitration. Sometimes we threw up a cent for choice, and sometimes the winner was the one who caught the next fish.

The Professor and I like to be original, and we settled the matter in a new way every day. After supper we went out and set up a small stone on a boulder, away down the hillside. After throwing about three tons of small rocks, Professor Ben knocked it off, accidentally I think, and I slept on the cot that night.—*By Howard A. Giddings, in the "American Field."*

"THE THAMES, FROM SOURCE TO SEA."*

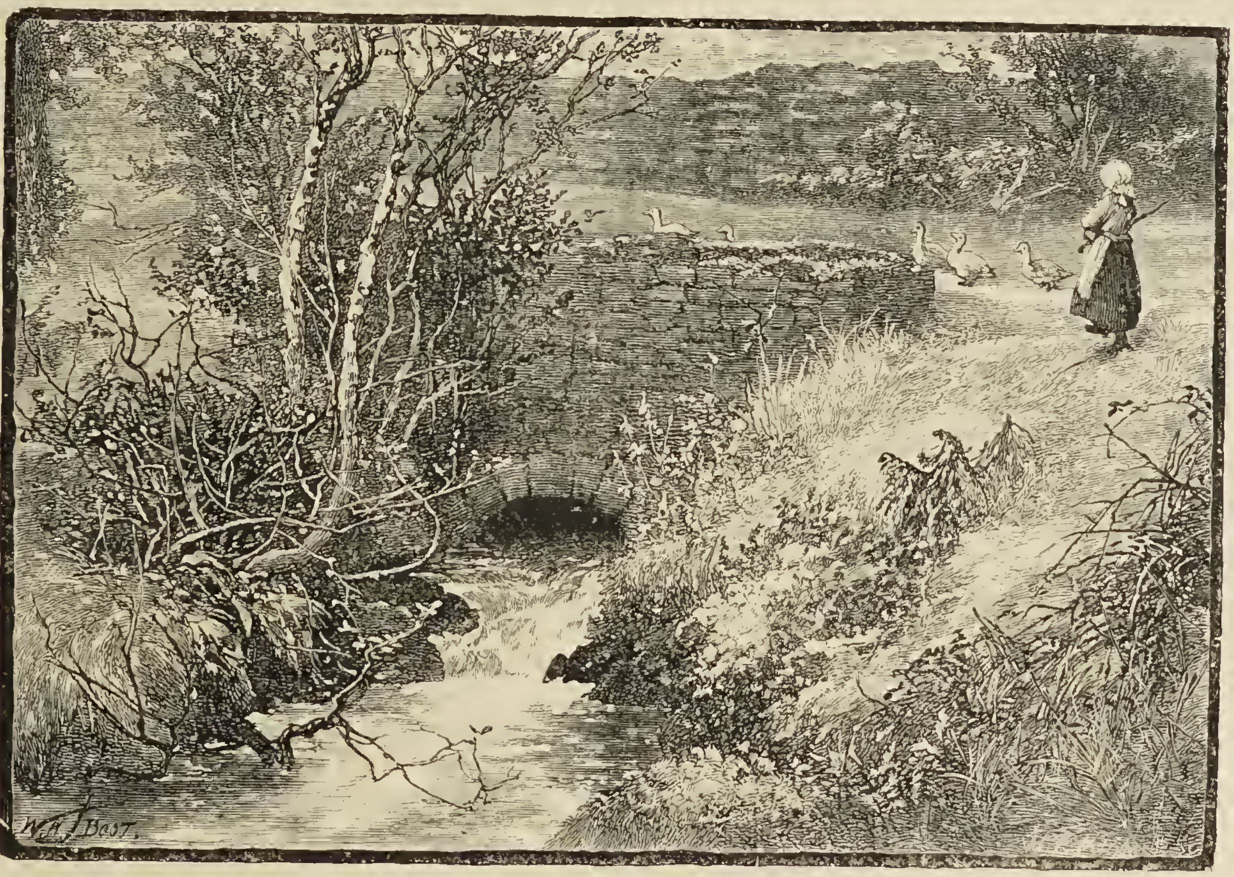
A valuable contribution to Thames literature has just been made in the publication, by Messrs. Cassell, of "The Thames, from Source to Sea." This handsome and profusely-illustrated volume is full of information—historical, descriptive, and otherwise—regarding the famous river itself and the innumerable places of interest and of beauty throughout its course. In perusing its pages the thoughts of the reader are carried back to the times of Alfred and Canute, of Ethelred, of Harold and William the Conqueror; to spots where the Dane, the Saxon, and the Norman fought, and where Cavalier and Roundhead met in fierce conflict; to ancient abbeys and nunneries —strongholds of that Church which bluff King Hal treated so roughly; through scenes of rural beauty and peace and rest; through that mighty agglomeration of peoples of wealth, of poverty, of human passions, and of incessantly busy life, which we call London, to where at last the waters which have beheld so many fair and wondrous scenes find rest—like other waters less famous in history—in the ocean.

---

* "Rivers of Great Britain." The Thames, from Source to Sea. Descriptive, historical, pictorial. Cassell and Co., Limited, London, 1891.

In very pleasant fashion Mr. Senior writes in the first chapter, "Above Oxford," anent the sources and upper reaches of the stream, with the sleepy hamlets and villages on its banks, its farm-houses with their rick-yards and orchards, and country seats with their paddocks and gardens.

"The oldest, and in truth the oldest-looking, stone bridge on the Thames" we learn is called "Newbridge," and this we approach below the place where Alfred held his Parliament. The bridge is an excellent sample of old English masonry. It has been Newbridge for at least six hundred years now, yet its groined arches and projecting piers seem as strong to-day as they have ever been." Amongst the prettiest of the illustrations included in this chapter are those entitled "The Ferry, Bablock Hythe," and "Stanton Harcourt Church."



THE FIRST BRIDGE OVER THE THAMES NEAR TREWSBURY MEAD.
("THE THAMES, FROM SOURCE TO SEA.")

At Oxford commences a very different phase in the life of the Thames; and in the chapter devoted to that portion of the river from the University Tower to Abingdon, Mr. D. S MacColl, in graphic language, describes the innumerable places of interest contained in the former, and of rural beauty on the stream below. "Oxford from Headington Hill," "Magdalen Tower from the Cherwell," and "A Bump at the Barges," are the most noticeable illustrations of the great University town; "Iffley Mill," and "Church," and "The Bridge and Cottage, Nuneham," of its immediate neighbourhood. One of the many spots of interest in the beautiful stretch of river between Abingdon and Streatley, described by Mr. T. Penderel-Brodhurst, is Wallingford.

"The town was of consequence," he writes, "in Roman times, and a line of splendidly-preserved earthworks, thrown up by Latin-tongued warriors, is to be seen in a field near the railway station. The Castle of Wallingford underwent sieges innumerable, since its comparative nearness to London rendered its possession of importance to each side in the dynastic wars of the Middle Ages. It was held for the Empress Maud; it resisted stoutly in the behalf of that clever scoundrel, John Lackland; it was garrisoned for Charles I., but was compelled to surrender, and the Parliament made short work of its keeps and battlements." "Moulsford Ferry" and "Streatley Mill" are two of the prettiest sketches pertaining to this chapter. "The village" (Streatley), quotes Mr. Senior, at the beginning of the next chapter, "swarms with geniuses and their æsthetically-dressed wives." From this point downwards to Hampton Court may be said to be the part of the river most popular with the vast number of the inhabitants of the Metropolis who love to take their pleasure on the water, whether it be in the form of rowing, sailing, steaming in launches, or fishing. Goring, Whitchurch, Pangbourne, "object of worship to London anglers, as Streatley is the haven of desire to the artist"; Mapledurham, with its old Manor House and magnificent avenue of elms and delightful old mill; Caversham; Henley, of regatta fame; Medmenham; Cliefden Woods; Maidenhead; and incomparable Windsor, are only a very few of the places described and illustrated in this interesting volume.

A charming picture of Cliefden Woods has deservedly the place of honour at the beginning of the work, and there are many others of great merit, of which "Windsor Castle from Romney Lock," and "Bisham Abbey" and "Church," are perhaps the most attractive. The angler will peruse with interest Mr. Senior's remarks on the various forms of Thames angling, its times and seasons, its past, its present, and its future prospects. He will also derive encouragement from the information given in regard to the various experiments in pisciculture made at different points on the river.

The numerous scenes and buildings of vast interest, historical or otherwise, on the banks of Thames within what may be called the Metropolitan area are fitly described, and are as fitly illustrated. To single out the finest of the illustrations is no easy matter, but "St. Paul's from the Thames," "Billingsgate: Early Morning," "Woolwich Reach," and "Plumstead," are among the best. I cannot do better, I think, than end this brief notice by quoting the concluding words of Mr. Runciman: "Sometimes a Cockney sceptic may be found who shudders and speaks of the lower river as a place of horror. He sighs for the glades of Cliefden, for the mossy chestnuts of Hampton Court, for the sloping gardens of Sunbury. But let a wise sportsman take the sceptic's education in hand; let his wayward mind be disciplined by merry days among the swarming saltings, and he will acquire a taste that will be lasting. If he is judiciously taught he may come at last to feel the true ecstasy, the mysterious poetry, that touch the soul on shining nights, when the moon-silvered roll of the water is gladsome, and the shadowy ships steal away to the sea. Then the sordid flats are touched into beauty by the cold gleam; and the winds and the waters, and the sailing clouds, and the quiet ships pass like a mystic pageant—fleeting, fleeting ever eastward. The veriest townsman that ever waked the echoes under Kingston Bridge with his clamour will own at such a time that few sights in England are finer than the noble outflow of our splendid river."

HOW THEY CATCH STURGEON WITH MAY-FLY LARVÆ ON THE DANUBE, AND ANOTHER GOOD STORY.—"I have always read and heard that it was impossible to catch sturgeon with a hook on account of their mouths, but it seems it is not so. Here they dig up mud from the Danube with a long scoop and get out the May-fly grubs and use them on hooks sunk to the bottom, and the sturgeon suck them in. Another way is to put a cork on the water with a hook sticking out, and the sterlets (young sturgeon), or 'Shega,' as they call them, here flip at the corks with their tails and get hooked. This sounds rather like a Yankee tale, but I see it going on almost every day."—E. CARNEGIE, Brailo, Roumania.

AN IMPROVED SPOON.—Mr. E. Fenn, of Highland Cottage, Redditch, sends us a new spoon bait of his make, which we like very much indeed, and can strongly recommend to all who use spinning baits. By a very simple and strong contrivance which entirely does away with the dangerous split-rings, one can change the swivels and triangles very easily, and yet they are perfectly secure when in use.

HUBBARD'S SOUTHERN CROSS SMOKING MIXTURE.—Messrs. Hubbard, who advertise this tobacco in our columns, send us a packet to notice, and after trying it for a week, we can, with confidence, state that we believe it is a mixture which will find favour with the majority of smokers, being fragrant, cool, and in every way pleasant to smoke.

THE English Edition of Bonvalot's "Travels in Thibet," is in a forward state of preparation, and will be shortly published by Messrs. Cassell and Company in two volumes, under the title of "Across Thibet."

Waltoniana

So far as the state of the water is concerned, anglers cannot do better than visit the Upper Thames just now. What the weather may be during the short interval which elapses between the time these lines are written and put into typo, no man knoweth; but if it is at all respectable I shall be very much surprised if both grayling and bottom fishers do not have some capital fishing for a day or two.

The November number of *The Journal of the Marine Biological Association* contains one paper of great interest to the salt-water angler. It is on the production of artificial bait for sea-fishing. Mr. Frank Hughes, a chemist—who has been provided with funds for the purpose by Mr. Bayly, of Plymouth—has been endeavouring to discover a bait-extract, the scent of which shall be attractive to sea fish. Without meeting, so far, with entire success, he has made extracts which, when mixed with a suitable medium formed bait which sea fish would take, and there is some reason to suppose that before long he will find exactly what is required. One great difficulty at present is to discover some substance which may be impregnated with the odorous oils obtained from various baits. Mr. Hughes states that the substance must be exceedingly strong, and not easily pulled to pieces. For some kinds of fishing such a substance is, doubtless, very desirable; but it must not be forgotten that two of the most valuable baits used by sea fishermen—the mussel and the lug-worm—are weak things, and most easily pulled to pieces.

The methods of obtaining the extracts were various. Ether was used as a solvent in an extracting apparatus with good results, especially from worm baits, which give off an extract attractive to turbot, rockling, and pouting. Other extracts were obtained by soaking the baits in a liquid of a temperature about 50 C. Olive oils and fats took up no smell, and distillation in water or in a current of steam only gave a smell of cooked fish. Mr. Hughes also made extracts from some of the coarse fish, using the intestines of hake and ling. But nothing worthy of note resulted, and he sums up by saying that if any efficient extract is to be prepared, it must be from squid, mackerel, or pilchard. He finds that the most attractive extracts are those prepared with glycerine, but they have the disadvantage that the solvent cannot be recovered or got rid of; but, on the other hand, they can be kept for any length of time if some boracic or salicylic acid be dissolved in the glycerine.

With regard to the medium, various substances were tried, such as pieces of flannel and bags of butter-cloth. But these did not retain their smell more than a few minutes. Slices of turnip were tried, but these gave off a vegetable odour, and were useless. Gelatine seemed just the thing, but to use it heat was necessary, and heat destroyed the smell of the extracts. Liquid extracts being so difficult to use, Mr. Hughes tried making a mash of the bait, using boracic acid and glycerine to prevent decomposition. Squid and mackerel treated in this way were attractive to the congers in the aquarium, but no fish were caught in the sea with them, though some of the bags containing the mixture were sucked off the hooks. Conger also eat pastes made with flour and those mashes, but that mixture was no use in the sea, as it would not keep on the hooks. Roach fishers who read this may at once think of the well-known plan of mixing cotton-wool with paste to keep it on the hook. Possibly among the readers of the *Gazette* are some who may be able to suggest a suitable medium for his extracts to Mr. Frank Hughes, whose address is, I presume, the Marine Laboratory, Plymouth.

Mr. Goschen has recently delivered himself of a definition of some interest to anglers. "A lively imagination," is, he says, "a mental habit, which, departing from fact, expatiates on what is contrary to fact, and scarcely escapes from untruth."

This reminds me of the old kettle story, or, rather, a new kettle story, coming from Sutton Coldfield, a place I imagine to be somewhere in the Midlands. In a small well in a kitchen (a queer thing to start with, but I have seen something similar in a cellar) lived for some twenty years or more a small trout. It did not grow much, and had a quiet, peaceable, and uneventful existence. One memorable day a member of the household dipped a kettle into the well in the course of the usual preparations for the evening meal, and put it on the fire. After a few minutes there was an outcry that the devil was in the kettle, so great was the commotion. Someone braver than the rest lifted the lid and there behold was the poor trout at its last gasp. You would think the story might reasonably end there, but it goes on to say, that, on being returned to the well the long-enduring fish quickly recovered and is now as lively as ever. Moreover, I will tell you the name of the house—namely, Manorial Farm, Hill Wood, Sutton Coldfield, of which worthy Master John Sadler is the tenant. Mind, I don't say the story is true, but, one generally looks for truth in wells, which is in its favour.

Templar.

THAMES FISHING RIGHTS.

PETITION FROM AN ANGLER WHO HAS FOUGHT IN THE INTERESTS OF THE PUBLIC FOR TEN YEARS.

To the Right Honourable the Lord Mayor, the Aldermen, and Commonalty of the City of London in Common Council Assembled.

The humble petition of John Granville Layard, of 27, Chancery-lane, in the County of Middlesex, solicitor, showeth:—

(1) That in September, 1882, your petitioner was prosecuted before the Magistrates of the Borough of Maidenhead, by a Mr. Tyrrell Lewis, for angling in the river Thames, at Maidenhead, which he alleged was his private fishery. Your petitioner defended the case, and the charge against him was dismissed with costs. Thereupon the prosecutor appealed, by way of special case, to Her Majesty's High Court of Justice, Queen's Bench Division, which appeal failed.

(2) In November, 1883, your Honourable Court, taking into consideration that the rights of the public in the river were involved in the case, and that the innocent recreation of angling therein, which had been enjoyed by many thousands of citizens of London and others for centuries, was jeopardised thereby, was pleased to grant a sum of £100 to your petitioner, in aid of the very serious costs and expenses to which he had been put.

(3) In the year 1885, an association of wealthy gentlemen, owning property abutting on the Thames, was formed, which styled itself "The Riparian Owners' Association," and the secretary thereof inserted a notice in the public press, challenging some person to angle in the river without permission, with the view of raising a test case. Your petitioner, encouraged by the support so graciously afforded to him by your Honourable Court, and being determined not to allow the public rights and enjoyments to be prejudiced, accepted the challenge, and angled in November, 1885, in a reach of the main stream of the river Thames, at Mapledurham, which is claimed by Mr. John Darell Blount as his exclusive fishery.

(4) A writ was thereupon issued by the said Mr. Blount against your petitioner in the Queen's Bench Division, and the action came on for hearing and was tried before the Lord Chief Justice and a Special Jury, on the 6th, 7th, and 8th days of December, 1887, with the result that the jury disagreed, and were discharged without verdict.

(5) Thereupon the plaintiff, Mr. Blount, appealed to a Divisional Court, and ultimately to the Court of Appeal, to have judgment entered for him; but his appeal was unanimously dismissed by the last-mentioned Court, constituted of the Master of the Rolls, and Lords Justices Bowen and Lindley, on the 4th May, 1888.

(6) The plaintiff thereupon set his case down for rehearing, and amended his pleadings, which amendment considerably complicated the questions at issue in this very difficult and expensive litigation. Whereupon your petitioner again applied to your Honourable Court for assistance in continuing the contest, and your Honourable Court was pleased to grant to him a further sum of £100 in November, 1888.

(7) In March, 1889, the case came on for rehearing before Mr. Justice Field and a special jury, who found a verdict against your petitioner, and judgment was given against him for forty shillings damages and costs.

(8) The plaintiff proceeded to tax his costs of suit against your petitioner, which were abnormally large, owing to the second trial, consequent upon the disagreement of the jury on the first hearing, and to the numerous ancient documents, some of which bear date anterior to the reign of Edward III., and which had to be produced, transcribed or translated, and the total judgment amounted to no less a sum than £1,018 5s.

(9) For the last two years and a-half your petitioner, who is only a struggling solicitor, has endeavoured, without applying to anyone for assistance, to liquidate this heavy amount, and has already succeeded in paying off a sum of £250, and he has also insured his life on the sum of £800, and has assigned the policy to the plaintiff, with the view of securing the balance due to him.

(10) Your petitioner is now indebted to the plaintiff in the sum of £896 3s., after allowing interest and incidental costs on the judgment, and the plaintiff has recently intimated to your petitioner that bankruptcy proceedings will be instituted against him for such balance. Your petitioner having, however, pointed out the hardship of these proceedings, and the real effort he has made to honourably fulfil his obligations, has been informed by the plaintiff that if he pays the sum of £250 within a short period, and continues during the remainder of his life to keep up the insurance policy, further proceedings will not be taken against him.

(11) Your petitioner is utterly unable to find the sum of £250 so required, and, therefore, will be made bankrupt, and ruined professionally, unless he is assisted to obtain such sum.

(12) Your petitioner's action in this matter has received the very general support and approval of the public Press throughout the country.

(13) In consequence of his connection with this litigation, your petitioner has been twice examined before a Committee of the House of Commons, on the last occasion being the first witness on behalf of the Conservators of the river Thames, who were promoting, and obtained, an Act for the better regulation of the river.

(14) Your Honourable Court is respectfully reminded that the case has been litigated twice in the Queen's Bench Division, twice in the Divisional Court, and once in the Court of Appeal, and, therefore, your petitioner submits that he has used all reasonable efforts to maintain the interests of the citizens of London and the public in the Thames.

Under these circumstances your petitioner respectfully asks your Honourable Court favourably to entertain his prayer for some pecuniary assistance, to save him from ruin for contesting for some eight years what he believed, your Honourable Court believed, and many thousands of the public believed to be their rights in the river Thames.

And your petitioner will ever pray, &c.

November, 1891. J. Granville Layard.

NOTES FROM BIRMINGHAM AND DISTRICT.

A special general meeting of the Birmingham and District United Angling Association was held on Thursday evening last, Nov. 19, at the Birmingham Arms Hotel, Smithfield, Birmingham. Mr. T. Coles, the president of the association, presided, and Mr. J. A. Dance occupied the vice-chair. The roll-call showed that forty-six societies were represented. The president pointed out to the delegates that the object of the meeting was for the purpose of electing the officers, in order to facilitate the printing of the travelling cards for the ensuing year of 1892, as the railway companies desired the names of the chief officers to be printed on the inside pages of the new cards, and the Midland cards having to go to Derby to receive the official stamp of that company, it was desirous that the chief officers should be elected as soon as possible, so that the cards would be ready for issuing before the present year was out. The election of officers was then proceeded with, when Mr. T. Coles was unanimously re-elected with acclamation, upon the motion of Mr. R. Gumbley and supported by Mr. Hughes, to again occupy the position of president. Mr. Coles, in reply to the hearty manner in which he had been elected, said that it was a great source of pleasure to him to know that he had the good wishes of the delegates present, and that it would be a great incentive to him to try and make the association bear the good name that it now possessed, and help to make it one of the most flourishing in the country. Three vice-presidents were next elected, the retiring gentlemen being Messrs. Dance, Gumbley, and Hiley. Five gentlemen were nominated—namely, Messrs. Dance, Hughes, Hall, Gumbley, and Holding, and the vote being taken, Messrs. Dance, Gumbley, and Hughes were elected. Mr. E. F. Simkiss, the treasurer, having sent in his resignation, Mr. A. G. Hall, the president of the St. George's Society, was unanimously elected; Mr. C. White was elected as secretary, being unopposed. Messrs. R. Holding and Mr. J. Allen were appointed auditors, and Messrs. Buller and Cross, of 1, Waterloo-street, Birmingham, were appointed solicitors to the association. This concluded the election of the chief officers, the election of the working committee being deferred until the next general meeting, which will be held on Dec. 10 next. Several notices of motion dealing with the care of the monies of the association were brought forward, which were allowed to stand over until the next general meeting.

We are at last having a little dry weather, and the rivers are beginning to settle down and become fishable, but many anglers have been prevented from going out on account of the dull and foggy weather that we are just now having. On the Trent I have heard of nothing particular being done, as very few of the Birmingham contingent have visited their waters. Some of the St. George's members have been to their water on the Avon at Bidford, and they report the river to be getting into good condition. The pike are on the move and one or two runs were obtained; but, owing to the fisherman's luck, none were captured, the largest fish taken being a chub of near upon 3½lb. This was taken by Mr. L. Robinson. The Severn is also getting into condition, but very few anglers have been out, but with a continuance of the dry weather, this river will well repay a visit, and some fair catches ought to be had, as the recent rains have done much towards benefitting the fishing. From the waterworks' reservoirs at Gravelly Hill I have heard of the pike feeding well, and hope that some of my friends will take notice of this, and see if they cannot capture something worth recording, as this water contains some first-class fish. The other pools, both public and private, should also command attention.

A committee meeting of the Birmingham Angling Association will be held at the headquarters on Thursday evening next, Dec. 3, when the applications of two new societies who have applied for admission into the Birmingham and provincial associations will be considered. Both the new clubs are in the neighbourhood of Sparkbrook, the one being held at the Turners' Arms Inn, Turner-street, and the other at the Junction Inn, Highgate-road. There will be other business of great importance to be decided, and I am requested to ask the committee-men to use every endeavour to attend this important meeting, which will be the last committee meeting of the year.

A committee meeting of the St. George's Club will be held shortly, when the important matter of re-stocking the river Anker at Tamworth and Amington will be discussed, and, from what I can hear, the members are greatly in favour of the project, which, if carried out, will give great satisfaction to the members, and also be an inducement for other persons to become members, as the Anker is very convenient for the Birmingham anglers to get to, and if the fishing was improved, it would be the means of a large increase of members.

The members and friends of the Tenby Society, held at the Tenby Restaurant, Tenby-street, will have a supper on Wednesday evening next, Dec. 2. The supper will be laid at eight o'clock. After the cloth is drawn, a smoking concert will be held, when the company of any of the anglers in the district will be esteemed a favour, and they will receive a welcome from the Tenbyites.

NOTES FROM LANCASHIRE.

The annual meeting of the affiliated clubs forming the Manchester District of the Amalgamated Anglers' Association, was held on November 19, at the headquarters of the Royal Walton Club, the Farm Yard Inn, Harpurhey. Previous to the meeting, Mr. James Kay, the genial landlord, entertained the district officials and the officers of the club at dinner. At eight o'clock the president took the chair, and without any delay called upon the secretary to read the minutes of the last meeting, which were passed as read. The balance-sheet next received attention, and proved of a very satisfactory character. It is a matter of congratulation to the present executive that since they took office two years ago the muster-roll has risen from 380 to 691, and the balance in hand in similar proportion, although many heavy demands of an extraordinary nature have been made upon the funds, consequent upon the reforms instituted and carried out during their period of office. The minutes of the amalgamation were next read, and also the balance-sheet. The former were of an uninteresting nature, and with the exception of the item "correspondence," were passed as read. Some very plain speaking was indulged in respecting the action of the delegates in passing and printing a resolution on a private letter sent to their secretary. The balance-sheet also produced a lengthy discussion not favourable to the amalgamation generally. Proposals were made to the effect that the Manchester District withdraws its two delegates; but, at the suggestion of Mr. Spence, the question was deferred for a month, and in the meantime the various clubs are asked to consider the desirability or not of secession from the parent association. Mr. George S. Smeeth was again elected president: Mr. Peacock, treasurer; and Mr. Chadwick, secretary, all being unanimous elections. The ballot for the special sub-committee resulted in the following being elected: Messrs. Kay, Yates, Oliver, and Butterworth. The executive were urged to acquire fishing for the district. After the further consideration of finance and salaries, the meeting stood adjourned for four weeks. A cordial vote of thanks to the host and hostess concluded the business of the evening.

The promoters of the memorial to the various railway companies are to be congratulated on the success attending their efforts in the preparation of the same. Already abundant proofs of the popularity of the movement are to hand in the number of sheets returned filled up with valuable signatures.

The annual dinner of the Shakespeare Club, held on the 18th, was of a most enjoyable kind. Mr. Walker presided, and the musical and other attractions being supplied by Messrs. Issott. Reed, Wolstencroft, Newton, Wheeldon, Robinson, and Livesey. The Openshaw Club at their annual meeting elected the following as officers for the year: President, Mr. Chadwick; vice-president, Mr. Yates; secretary, Mr. C. P. Milnes. Both these clubs have just completed the season in a satisfactory manner.

The roll-call of the N.A.A. has just added to its strength the Cambrian Club. How long are the outstanding clubs going to hold aloof? The St. George's dinner—or rather one of them—was a great success, Messrs. Johnson, Green, Kelly, Taylor, and Radcliffe being responsible for the harmony which usually follows these social gatherings.

The results of the limited number of rods out during the past week are not of an exciting character. Pike are being taken every day, and coarse fish are contributing a moderate amount of sport. One exception to the usual uninteresting state of things was a fine basket of grayling. in grand condition, and averaging ¾lb. each, taken in private waters by Mr. W. George. One of the Salford clubs is negotiating for additional fishing, and if successful will then have some really good waters at its disposal.

NOTES FROM NORFOLK.

On the Yare nothing worth reporting has been done during the past week. Several anglers have been out after pike, but only a few of them caught fish, and they were very small. With the water fining down as it is, good sport may be anticipated next week.

On the Thurne, at Heigham Sounds, some fair sport has been obtained. Two gentlemen staying in the neighbourhood took, in four days, sixteen pike, weighing from 4lb. to 15lb. each, and one splendid perch of 2¾lb.

The Bure has been productive of some good sport. Two friends of mine took, at Wroxham, last Thursday, seventeen pike. Last Friday, a catch of about 14lb. of perch was made near Salhouse Little Broad, and six pike, of sizes varying from 3lb. to 6lb., were taken near St. Benet's Abbey.

A curious incident was witnessed on South Walsham Broad, on Monday afternoon, about four o'clock, by a man who was rowing home from work. He saw a pike of about 8lb. strike at a large fish, and noticing that the pike seemed to have more than he could manage, he stayed and watched it. In a few minutes the pike came to the surface, and lay motionless, with his prey still in his mouth, and the man rowed up to it, and caught it by the tail; but it darted off out of his grasp, and swam into a clump of reeds, where it was lost sight of. On Tuesday morning the man, who felt sure that the pike could not swallow so large a fish, and at the same time was convinced that it was so far gorged as not to be released, went again in search of the pike, and found him about three yards from where he left him. lying at the bottom, in about three feet of water, and seeing he was helpless, put an oar under him, lifted him gently up, and then threw him under the reeds. He sent the pike, with the fish—a fine tench of, as far as can be judged by several old anglers, about 3lb., firmly fixed in his jaws, of course, quite choking the pike—up to Norwich, and it is now shown in his window by Mr. A. J. Rudd, fishing-tackle maker, London-street. The pair were seen by several gentlemen directly they were caught. one of the gentlemen mentioning the fact that night at the annual dinner of the Norwich Angling Club. This incident is interesting, as it shows that pike, at any rate, when pressed by hunger, will take tench, though the latter fish is supposed to enjoy an immunity from death by swallowing.

NOTES FROM NOTTINGHAM.

It is surprising how quickly the Trent, after the heavy rains, has run down, and already a big flutter exists amongst pike and chub fishermen to renew their connection with the fish. Pike anglers were, in fact, out on Monday, and in the centre portion of the Weston subscription length, Mr. W. Harrington, of Radford, landed a choice fish of something like 6lb. One of similar weight was taken on Saturday in the "Black Pool" at the foot of Weston Cliff, by the veteran Mr. Humber, of Derby. This gentleman, who is an old and valued servant of the Midland Railway Company, by whom he is allowed a superannuation, is above seventy years of age, and is, in spite of his years, as hearty in the cause of angling as when he was a young man. He has always held his own amongst the *Esox lucius* family, and has, in his day, killed a large number of remarkably fine salmon, not only in the Trent, but in the Dove, up which the late spawning fish are now making headway. It is the opinion of the water-bailiffs of the Trent Fishery Board that this season the fish will push beyond Tutbury for the purpose of depositing their ova, and of late they have been carefully watched. At Weston, on Monday, a friend of Mr. Harrington caught several splendid bream with the worm, and odd specimens were got at Barton with the same class of bait. On Tuesday, below King's Mill Weirs, Mr. Walter Marshall, of West Bridgford, enjoyed some extraordinary sport amongst chub, using pith (bullock's pith and brains) as a lure. In very rapid water he speedily landed seven, weighing in the aggregate within a few ounces of 20lb. The two heaviest weighed 7lb., and one of these was recorded on the books of the Nottingham Wellington Association, of which the angler is a member. I hear, however, there is one weighed in of nearly 4½lb. On the same day I caught some big roach in the same fishery, and on Wednesday bagged six chub of 14lb. in the Wilford water. Singularly enough, Mr. Marshall supplied me with the bait he had left over night, and at times the fish actually seized it lying on the bottom. But it must not be inferred by this that I am an advocate for tight floating with pith. The fact is the swims, through extra water, were almost unfishable at Wilford, and I was compelled to hold "hard" on them. Chub are bold feeders in a fine water, and it is a treat to get amongst them with fine tackle and a plentiful supply of brains. These are indispensable, and should be used in proportion to the depth of the swim operated upon. Many small pike have been caught during the week above our new Trent Bridge, and fish of fair size have been met with in some of the lower backwaters. On Monday, Mr. Geo. Hall, an old and persevering "splodger," took thirty-one roach with the cockspur worm above the bridge named, and on the following day he supplemented the take with a less number, although the fish ran larger. At Wilford, on Tuesday, Mr. J. Taylor, Nottingham, had a grand lot of roach, dace, and chub with the maggot, and I hear that of late roach have been in a feeding humour in the deeps in Clifton Grove.

At the last meeting of the committee of the Nottingham Wellington Angling Society, a variety of questions of considerable interest were brought forward. I should be sorry, however, to attempt to divulge any secrets or confidential communications. I am at liberty to state that a sub-committee was appointed, and that ere long some most welcome news, as regards the status of the society, will be laid before the members. Meanwhile the angling contingent are on the strict war-path, and specimen fish in the various classes open for competition continue to be weighed in. Great things amongst *Esox lucius* are expected during the next few days. No fish under 5lb. are recognised by the executive, and in this respect they certainly set a splendid example to the other clubs in the town. Chub (essentially a winter fish) are not tolerated under 2lb., and throughout the classification a high standard of weight is happily maintained. We have none of Mr. Shrubsole's "tittle-um daddlers" to contend with, and already that gentleman's exposure of such miserable specimens appears to have done a power of good amongst the London clubs.

In the early part of the week a portion of the Nottingham and Beeston Canal was run off for repairs to one of the locks, and the bait catchers were busy in the small hours of the morning. I am afraid, however, their takes would not be over profitable, for the water seemed as black as ink, and too impure for fish to live in it. But I hear they got a decent number of bleak, gudgeon and dace, and of course these were quickly secured by the dealers in pike baits. No matter how large the supply, the baits are speedily disposed of when the Trent is in anything like pikeing condition. I have known one well-known dealer (Mr. J. Theaker) to sell as many as twenty score in a couple of days. Dace are always in eager request, but of late a re-action has set in in favour of bleak, and judiciously rigged up on light pike tackle they prove an admirable substitute; whilst for trolling purposes they have no equal.

Another local fish story! Have any of my readers ever heard related the tale of a fighting pike effectually curing a case of deafness? I heard it told the other day after a fishing outing, and the veteran who told it pledged himself that it was positively true. In the village of Normanton-on-Soar (and the Soar joins the Trent only a few miles above Nottingham), a retired doctor, who was deaf, passed most of his leisure time angling for pike when the fish were in season. One day, whilst live-baiting, he hooked a veritable monster. The fish rushed madly about, the doctor grew intensely excited, and finally, in the height of his excitement, the line broke and the prize escaped. He ejaculated a great big "D.," and at the same instant was astounded at recovering his hearing. He instantly packed up, hurried home, and amazed the household by answering every question put to him in the most fluent manner. The incident quickly spread into the village, and the villagers flocked in a body to the doctor's residence to congratulate him on his pike mystery. As the teller of the tale said, "The excitement of losing the fish was too much for him. It *bust* the wax in his ear sockets, but he never forgot that day's fishing."

The same old warrior asked me whether I had ever killed any chub with a spinning bait. I replied that I had killed occasional fish whilst spinning the Devon minnow for salmon. "But," said he, "have you ever killed a bream with the spinner?" I replied, "No; they are not a fish of prey." "Well, then," he retorted, "you are not in it. I have killed two this very summer." "What," I queried, "with the spinner, and the fish hooked in the mouth?" "No," he answered, "through the back fin. I ne'er thought you would have asked me that."

NOTES FROM SHROPSHIRE.

This week brings a frost, a keen, bitter, nipping, and biting frost, which makes its presence unpleasantly felt to the angler, and reminds him that golden autumn has passed the gate of time and has paid the toll. It brings home to his mind the fact that unless he be possessed of a more than usually robust constitution, he must oil his rods and lay by all his instruments of torture until the advent of gentle spring. The majority of local anglers have already carried this out, and few, except the professional pike fisherman who seems impervious alike to hail, rain, and sunshine, pike fishing, either in the pools or the river, will at this time be found to produce excellent sport, but the streams are too fine for heavy takes. Good sport may also be obtained with the perch and roach.

The decision of the Severn Board of Conservators not to extend the close-time for salmon fishing, has caused a good deal of dissatisfaction and irritation among the representatives of the Upper Severn, who have been so long agitating for a better supply of "the king of the Severn," in the districts above Shrewsbury. By their adverse vote against the resolution to extend the close-time, the Board on Thursday practically showed that it existed not to act fairly and justly to every interest, but on the other hand to protect the commercial industry of the lower waters at the expense of those interested in the fishing. For the fishing industry of the lower waters to have been deprived of a week or two of their fishing, would, as it was freely argued, have been a matter for regret, but at the same time it was the duty of the Board not to consider this one special industry and neglect the common interests of the river, to say nothing of the angling and netting rights of those on the upper waters. For years the number of fish annually taken in and above Shropshire have been decreasing; the revenue derived from the licences in these districts has decreased. The take of salmon generally has become less, and still the Board remains blind to the fact that unless the mature fish are permitted to pass to the spawning grounds in the upper reaches. the supply must necessarily become smaller and smaller. Not only is it but just and reasonable that the people in the upper districts should receive their fair proportion of fish, but it is most expedient that they should do in the interests of the lower water fishing industry as well, for if the fish are not given every facility for spawning, how can it be expected that year after year they can reap the harvest that they have not sown? It is greatly to be regretted that the scheme to extend the close-time was not, at any rate, given a fair time, for the resolution of the Board will greatly increase the irritation that is strongly felt by such powerful public bodies as the Shropshire and Montgomeryshire County Councils as well as by private individuals. There is no doubt, however, that the representatives of the upper waters will not allow the matter to rest, unless something is done to satisfy their just claims.

NOTES FROM EAST TYRONE.

After the broken weather of the past fortnight, we are now enjoying a kind of second-hand summer in Tyrone Occasionally the thermometer rises to 58 deg. Fahr. about noon, but the nightly frosts are the more bitter. However. these frosts are doing good service in clearing the small pike streams of the weeds and vegetable matter, which would otherwise interfere with spinning, not that much of the latter is done in Tyrone, except in the small burns that only hold pike. The luce is often found in the most unlikely places. A few evenings ago, while walking along the Mullgloss burn, I saw a brace of pike on a shallow. Inquiries showed that no local person was aware that the stream held pike. Since then I have taken half-a-dozen brace out of it.

The rivers are scarcely yet down to the autumn level since the recent floods. The Ballinderry is swollen, and a great rush of water is going over the "carries." This is very favourable for the salmon running from Lough Neagh to the spawning-beds. Some very large fish have crossed the Lough Carry this season, and with each flood the runs are increasing. Close observers inform me that "spawn-gathers" are in multitudes around the spawning-beds, and much damage is resulting from this. Poaching is not prevalent as compared with other years, but occasionally salmon are gaffed going over the "carries," or when on the shallows. The Blackwater is high, and some good runs of salmon have recently been observed.

From the Upper Bann, which divides the neighbouring counties of Derry and Antrim, a daring outrage by poachers is reported. During the eclipse of the moon on Sunday night, the 15th inst., a gang of poachers attacked a watch-house, erected by the Foyle and Bann Fishery Company, at Mulloghmore Carry, for the shelter of the keepers on the river, and who were then about on duty farther up the river. The windows, although protected by stout shutters, were smashed by large stones, hurled with great violence, and other damage was done to the building. The police are investigating the matter. About ten years ago the watch-house was similarly attacked, and partially demolished. Fortunately such occurrences are extremely rare in law-abiding Ulster.

About ten years ago a mysterious disease appeared among the spawning perch in Stewartstown Lake. Hundreds of fish died, and up to two years ago this scourge came annually. At the time mentioned, Mr. C. R. Stevenson and I, alarmed lest the perch should be entirely destroyed, caught large numbers of healthy perch, and placed them in neighbouring pools and ponds, where they bred. Since then we have put some hundreds of young perch into the lake, with the result that the disease has disappeared apparently. It may be that the introduction of new or purified blood has something to do with this.

Holloway's Ointment and Pills.—Shortness of Breath. Coughs, and Colds.—Thousands of testimonials can be produced to prove the power possessed by these corrective remedies in cases of asthma, incipient consumption, and all disorders of the chest and lungs. The Ointment, well rubbed upon the chest and back, penetrating the skin, is absorbed and carried directly to the lungs, where, in immediate contact with the whole mass of circulating blood, it neutralises or expels those impurities, which are the foundation of consumption, asthma, bronchitis, pneumonia, and similar complaints. On the appearance of the first consumptive symptoms the back and chest of the patient should be fomented with warm brine, dried, with a coarse cloth, and Holloway's Ointment then well rubbed in. Its absorption will subdue advancing symptoms, and baffle this formidable foe

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* Fishing Gazette, *St. Dunstan's House, Fetter Lane, London," and marked* Club Report *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association. — Visiting List, Eastern District No. 1.—The next return visit will be to the Sociable Brothers, the Hope, Pollard's-row, Bethnal Green, on Monday next, November 30, when I hope to have the pleasure of seeing a good meeting.—G. Manning.

Anglers' Association.—No. 2 Eastern District Visiting List.—The next return visit on this list will take place at the St. John's Angling Society, Skinners' Arms, Coburg-street, Clerkenwell, on Monday, Nov. 30, when Mr. G. H. Howard has kindly consented to read a paper under the auspices of the Society for Promoting the Reading of Papers among Angling Clubs. After the reading, there will be a smoking concert. The chair will be taken by Mr. W. H. Beckett, vice-president of the Anglers' Association, at 8.30 sharp.—F. Thorling, visiting officer.

Anglers' Association.—Southern District Visiting List.—The return visit on the above list took place on Tuesday, the 24th inst., at the Bermondsey Bros. A.S., Pitt's Head, Grange-road, S.E., when a most enjoyable evening was spent. On the roll being called, the following eighteen clubs answered: Anglers' Pride, Anchor and Hope, Blackfriars, Battersea Friendly, Bermondsey Bros., North Lambeth, Peckam Bros., Rodney, Second Surrey, St. George's, United Bros., City of London, Clifton, Eustonians, Lady of the Lake, Funny Folks, Islington Bros., North London. The next visit will take place at the Blackfriars A.S., Winchester Arms, Southwark-street, the date I will give next week.—G. W. Armstrong, district officer.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge with thanks the receipt of twelve shillings, donation from the Edmonton and Tottenham Angling Society.—R. Ghurney, sec.

The London United Anglers' Societies' Fourth Annual Angling Competition, in aid of the funds of the Anglers' Benevolent Society.—In my last report the number of prizes promised should have read forty-five. Postal Orders received from Amicable Excelsior, Amicable Bros., Anglers' Pride, Bermondsey Brothers, Bostonians, Cambridge Friendly, Crown Perseverance, Clissold, Cobden, Duke of Norfolk, Ealing, Eclipse, Edmonton and Tottenham, Fustonian, Golden Barbel, Great Northern, Hearts of Oak, Highbury, Jubilee, Kilburn Piscatorials, Lincoln, Mitre Brothers, Penge, Reform, South London, St. John's, Waggoners, West Ham Brothers, Pluckie Perch, Alma, Lady of the Lake, Queen's, and Prince of Wales, with thanks. I shall be glad to receive the prizes promised as soon as possible.—S. Malby, sec.

Alison Piscatorial Society, Golborno Liberal Club, Portobello-road, Notting Hill, W.—We fished a match on the 22nd inst., and the following members were the winners: Messrs. C. Severn, first; C. Turner, second; C. Hamnans, third; W. Boyce, fourth; Pilgrim, fifth; Newell, sixth; the fish were not on feed so our bags were not heavy. I wish to call the attention of all the members that the Christmas match has been proposed for Dec. 13, and I hope that all members will turn up on Tuesday next, to propose where to go as the time is now short.—W. Miller, sec.

Allason United Brothers Angling Society, Allason Arms, Uxbridge Street, Notting Hill-gate, W.—The members of the above met as usual and important business was done, Mr. Morgan had jack, from Langley, 1lb. 14oz.; Mr. Probert, jack, from Langley, 2lb.; Mr. B. Abrahams, roach and dace, from Twickenham, 2lb. About twelve members are going to try their good fortune on 29th inst.—B. Abrahams, hon. sec.

Alma Angling Society, Crown Distillery, Vere-street, Clare Market.—On the 22nd inst. our trays were fairly filled with perch and jack by the following members: Messrs. J. Windsor, H. Wilson, and J. Drew. I wish to remind members that our next outing takes place at Ware, from the Engine-house to the Bridge, on Dec. 13; one rod only to be carried.—J. Pailes, sec.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—On the 22nd inst., Mr. Moir weighed in perch. I trust members will turn up on Wednesday next, as it is proposed that we fish an outing, on Dec. 6, for a series of prizes, the match to take place at Byfleet.—W. H. Potter, sec.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Our eighth match this season came off on the 22nd, at Twickenham, when the prizes fished for were all taken as follows: Mr. D. Cooper, first, with 3¾lb. of bream, winning a handsome shade of flowers; Mr. J. Bell, second, winning a very nice rod, presented by Mr. Reade, of the Angel, King-street, Twickenham; and Mr. G. Rich, third; and several others weighed in fish. Members and friends are informed that on Tuesday next, Dec. 1, there will be a grand smoking concert at the above hotel for the benefit of Mr. H. Lovett, our chairman, when I hope to see a good muster, as it is a deserving case.—J. Rich, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 22nd inst. several of our members were out, but only a few members were successful. Mr. Wright having a very nice show of roach. Mr. Recks having a good show of roach, dace, and chub; and Mr. Lambarth, jun., also had a nice show of roach. On the 29th inst, several of our members compete in the Pulborough competition, weather permitting. — E. R. Embleton, sec.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The usual weekly meeting was held on Wednesday night. On Wednesday next a special general meeting will be held, and I hope all the members will kindly attend, as there will be a lot of important business to transact. On Monday night we received a visit on the Central Association List, and I am pleased to report that twenty-two clubs answered to the roll-call, and for which I tender them our best thanks for their attendance. I hope our members will kindly attend at the visit to the Cliftonville Angling Society, on the South London Visiting List, on Tuesday next, Dec. 1, this being their first visit, so I hope they will receive a bumper.—A. G. Smith, sec.

Barbican Angling Club, White Bear, St. John-street, Smithfield.—The members of the above club will fish for prizes given by the landlord (Mr. Gorey), on Dec. 6, at Teddington Tidal Waters; roving. On Monday, Dec. 7, the above club receive their return visit on the Central Association List, when they will welcome all anglers and friends who can conveniently attend.—W. Ryan. sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—We were saved a blank on the 22nd inst. by Messrs. Pindar and Morris, with a nice show of roach from the Thames. We fish a punt competition, at Staines, on December 6, for five prizes, value £3. The Christmas prizes will be fished on Dec. 20. Prizes not taken will be drawn for; to take place at Kingston. Members are requested to attend next Tuesday, to give names for punt match.—G. Mumford, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—The members of the above society fished a competition on the 22nd inst., for their November series of prizes, conditions: Roving anywhere on the Thames bank only, with the following result:—J. Warman, fifteen roach, 9¾lb., first; Mr. Pocock, five roach, second; G. Armstrong, roach, third; Messrs. J. Smith, D. Dodson, H. Metcalfe, and H. Patman also weighed in, total gross weight, 31½lb. On Tuesday, the 24th, a visit from the clubs on the Anglers' Association List [Southern Division], was paid to this society, when I am pleased to say eighteen clubs were represented on behalf of the Bermondsey Bros. I return sincere thanks to those societies who were represented; and the B.B. will not forget to return the compliment on the occasion of future visits.—A. Conn, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—Only two of our members weighed in last week. Mr. J. Forster had a fine show of roach, perch, and dace, Mr. J. Barker, the same. The next visit on the Anglers' Association (Southern District), will be to this society on Tuesday, December 8. I hope to see a good muster on this occasion, for I am sure they will get a hearty reception from the "Old Blackfriars." We fish our match on the 29th inst., train leaving Waterloo for Sunbury, at eight o'clock.—F. Roberts, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C. — On the 22nd inst., our trays were well filled by the following: Mr. Fairhead, 14lb. 2oz. of roach, this being his maiden weighing in; Mr. T. Davis, jack (heaviest 5lb.); Mr. Rich, jack; Mr. H. Davis, jack; and Mr. C. Davis, roach: making a nice show altogether.—D. Warren.

Bostonian Angling Society.—Our return visit was held on Monday, the 23rd inst., our worthy treasurer, Mr. Jennings, chairman; Mr. Carter, of the Lady of the Lake Angling Society, in the vice-chair. It was a successful visit, and an enjoyable evening was spent, some excellent songs and recitations being rendered by the visitors and friends. Our Benevolent box was opened and the substantial sum of £1 15s. was found within, this is the second opening with twelve months. On the roll being called twenty-two societies were found to be represented, and Bostonians will show their appreciation by attending every return visit whenever notified. The following clubs were represented: Allason United, Cambridge Friendly, Cobden, Camden, Campbell United, Independent Brothers, Jubilee, Kilburn Piscatorials, Lady of the Lake, Marylebone, North - Western, Phœnix, Waltonians, City of London, St. Johns, Good Intent, Islington Brothers, North London, Funny Folks, Bermondsey Brothers. The following members have had fair takes since my last report: Messrs. Taylor, Spalding, roach, dace, and bream; Halsell, roach; Brown, roach. Members will oblige by attending meeting nights a little more regularly.—J. H.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On Wednesday evening Mr. Sewell had a nice show of roach, the largest fish weighing 1lb. 10½oz., and Mr. Avis a nice jack. Members will please remember that the competition for the brewers prizes and other prizes will take place at Cookham on the 29th inst.; all competitors to meet the train which arrives at Cookham at 9.45; two rods, all fish to weigh according to club rules.—H. Roach, sec.

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—We have had weighed in since last report, jack, roach, and, dace, by Mr. J. Watkins. Our meeting last Tuesday, was very poorly attended, but the following arrangements for Christmas prizes were arrived at: Six prizes of the value of five shillings each, given by the club, to be fished for on the Chelmer, between Little Baddow Mead and Boreham Bridge, on December 6; three of them for jack, and three for bottom fishing; members to declare beforehand which they intend fishing for, and must then adhere to that class until the prizes are won; two rods allowed for this series; all to leave Stratford Station on the morning by the 7.48 train to Chelmsford. I also remind members that the half-guinea prize given by the club for jack, close on Monday next, and as there is plenty of chance to top the weight already weighed in. I should like to see a good competition to the end for it; one rod only allowed for this prize.—T. Hawkes, sec,

Burdett Angling Society, 118, Hackney-road.—We had a nice show of jack last Sunday, also roach, dace, and perch. Mr. D. Flint had a nice show of jack, 8lb. 1oz.; Mr. Gurney, perch, 1lb. 14¾oz.; Mr. Pether, roach and dace, 1lb. 13oz. I hope members won't forget next Wednesday is quarterly night, and our distribution of prizes will take place on Wednesday, December 16. I hope all prizes promised by members will be in the club-room on that night, so that we can have a jolly night.—J. Pether, sec.

Burton Piscatorials, Globe, Derby-street, King's cross.—Members not being able to attend on meeting night and wishing to take part in our sweepstakes at Cookham, on the 29th inst., can meet secretary on platform at 8.25 a.m.—C. Roberts, hon. sec.

Caledonian Angling Society.—The members of this society mustered in good force at Hertford on Saturday last, the 21st instant, to compete for two prizes, but as usual with these contests on the Lea, the takes were very small, the first prize being won by Mr. R. Mills, and the second prize by Mr. W. R. Turner. We admitted two new working members at our last meeting. I also desire to acknowledge the receipt, by post, of a very handsome silver pencil case, as a prize, by Mr. H. S. Mead.—A. George, sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On the 15th instant the following members weighed in: Mr. Marshall, roach; Mr. King, roach; Mr. Langton, roach; Mr. Sharp, dace; Mr. Scurtin, roach and dace. On the 22nd instant, Mr. Boxall, jack; Mr. A. Chapman, jack; Mr. King, roach.

Campbell United Angling Society. Sir Colin Campbell, High-road, Kilburn.—Members will please take notice that Wednesday next is quarter-night, when all arrears should be paid. Rule III. will be strictly enforced —E. W. Wood, hon. sec.

Causton Angling Society, Coffee Pot Tavern, Warwick-lane, City, E.C.—On Monday last, a large and appreciative audience assembled at the club-house of this society to hear Mr. Edgar S. Shrubsole, hon. sec. of the society for promoting the reading of papers among angling clubs, read his paper on "Fly-fishing for Chub and Dace." According to an excellent custom here Mr. H. A. Sharp opened the meeting with the "Angler's Song," from Izaak Walton, and Mr. Shrubsole was then introduced by Mr. W. H. Beckett, chairman, and his paper proved to be an exhaustive one upon the subject, "Fly-fishing for Chub and Dace." The ability of the reader was manifest throughout. Mr. W. H. Beckett, Mr. G. H. Field, Mr. G. Manning, and Mr. Godfrey Cooper were elected life hon. members. A vote of thanks to Mr. Shrubsole for his reading, and Mr. Beckett for presiding, concluded the meeting.— John Smith, hon. sec.

Central Visiting List.—The return visit to the Anchor and Hope Angling Society on Monday last was a decided success. Mr. A. G. Smith presided. Mr. Wade, in returning thanks, urged the anglers present to see that their own clubs gave a more general support to the T.A.P.S.; and intimated that collecting-boxes are to be obtained, one of which was handed to the Cliftonville Angling Society; three other clubs also applied for one to be sent. It was announced that the next visit would go to the Barbican Angling Society, on Monday, Dec. 7, held at the White Bear, St. John's-street, Smithfield.—Charles Watling, visiting officer.

City of London Angling Society, White Bear, Bride-lane, Ludgate-circus.—On the 8th inst., Mr. Castell weighed in roach and dace from Sunbury. On the 15th inst., four of our members fished in the Rye House Competition, but without success. On the 22nd inst., Mr. Macdonnell weighed in 5lb. of roach from Pangbourne. Our club-house having changed hands, we intend having a complimentary meeting on December 14, to give our new landlord a house-warming.—Cas.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—On the 22nd inst., we were saved from a blank by Mr. Chapman, with a dace, minus its dorsal fin. On the 24th inst., Mr. Wilson weighed in a splendid take of roach and dace (bank fishing), weighing 32lb. 14½oz., largest roach, 1lb. 6½oz. On the same evening the committee met to arrange prizes for Christmas outing, with the following result: "That the competition shall be a roving one, to take place on the 6th December. Members must not leave town before the morning of competition, and jack barred; and in the event of the prizes (of which we have twenty-three) not being taken on that day, they shall be competed for on the 13th and 20th December. Winners to choose their prizes according to weight of fish taken; only one day's take to reckon."—A. Trowbridge, secretary.

Cliftonville Angling Society, Cliftonville Hotel, Ilderton-road, South Bermondsey.—The next visit on the South London United List will take place at this society on Tuesday, Dec. 1. This being a new club, we shall take it as a favour if brother club anglers will show up in full force, as we have attended every visit on the S.L.U. List and a good few on the other lists. Conveyances are available from all parts. Nearest station (L.B. & S.C.) South Bermondsey or Spa Road (S.E.R.). Trams from Westminster or Blackfriars Bridge to Canal Bridge. Chair will be occupied by Mr. J. W. Huxley at eight p.m.—P. Gardner, sec.

Crown and Buckland United Piscatorial Society, Middlesex Arms, 34, Clerkenwell-green, E.C.—The half-yearly supper took place at the above on Wednesday evening, great credit being due to Mr. Pratt for the capital repast he laid before us, every gentleman present doing ample justice to it. M. J. Penn occupied the chair. G. Rogers, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 22nd inst., twenty members competed for ten prizes. Result: Messrs. A. Freeman, first; Pumfrey, second; Baldwin, third; C. Richardson, fourth; Killick, fifth; Malley, sixth; Spong, seventh; Thornton, eighth; Webber, ninth; Messrs. T. Midson and Lucas, a tie. On Tuesday, Dec. 8, our half-yearly distribution of prizes will take place. Gentlemen who have promised prizes, please send them in immediately.—S. Malby, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—Our smoking concert, in aid of the Anglers' Benevolent Fund, on Tuesday last passed off very well. We had a full room, and spent a very enjoyable evening, and collected the sum of 14s. 2½d. for the above fund, and added it to that in our boxes. I may also inform members that Monday, Dec. 7, is quarterly-night, when all subscriptions should be cleared off the books. On the 22nd inst. we were saved a blank by a few roach taken by Mr. Payne. Could any of your numerous readers inform me whether I can get our cases of fish insured against accidental breakage.—A. Payre, sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road, W.—On the 22nd inst. a few of our members weighed in, Mr. Lambert having two handsome trays of roach from the Thames; Mr. De Perron, barbel; Mr. C. Bowring, roach and chub; Mr. Green, roach; Mr. Ellins, a capital show of roach, dace, and chub. On Tuesday, the 24th inst., Mr. Bishop had a fine display of carp, roach, and perch. On Tuesday evening we had a large attendance of members and friends to witness the ceremony of presenting our secretary with a presentation consisting of a purse subscribed for by the members of our club, in recognition of his valuable services in conducting the affairs of the club generally. After a short speech by Mr. Green, the purse was presented by Mr. Brady to Mr. Roach, who thanked the members for the present.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—There was a good show of fish at our club on the 22nd. On Tuesday it was decided to fish for ten prizes on Dec. 6; boundary from St. Margaret's Bridge to Ware Bridge; roam of water. The auditors gave their report, and read the balance-sheet, when it showed the worth of the Society was close on £100. Considering the large amount that is granted to every deserving case that comes before us, we stand in a sound position. On Tuesday next, Dec. 1, Mr. E. S. Shruhsole will give a lecture at our club, under the auspices of the Society for Reading Papers to Angling Clubs. I trust all our members will come, and I should be glad to welcome any angler that would kindly pay us a visit on that occasion.—R. Murphy.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—On the 22nd instant some of the above club were out when Mr. F. Bates weighed jack and roach; W. Carr, roach; J. Grande, roach; and G. F. Weaver, roach and dace, 6lb.—G. F. Weaver, sec.

Greenwich Angling Society, Prince Albert, Royal-hill, Greenwich.—Members and friends are requested to show up in full force on Wednesday, 2nd December, at our musical evening, when a capital evening's amusement is promised. Mr. Orr in the chair, Mr. Dowsett in the vice-chair.—G. J. Toynbee, hon, sec.

Gresham Angling Society.—The Rev. E. Meyer presided on Tuesday evening, when there was a very good attendance. Two new members were elected. Dr. Davidson reported having fished with a friend at Deal and caught a hundredweight of whiting and cod, and Mr. Birch caught 17lb. of flounders at Southend. Dr. Brunton read a paper dealing with the reports of fishing published in the angling papers, and a discussion took place, in which the chairman, Mr. G. E. Simms, and others, took part.

Havelock Angling Society, Royal Oak, Whiston-street, Haggerston.—Owing to our removal to the Royal Oak, we have unavoidably been compelled to put our usual November outing off until December 6, when members will fish for six special prizes, from Rye House to St. Margaret's, leaving Hackney Downs Station by 9.15 train. We should like to see some of our members attend more frequent, as the club at the new house bids fair to be a great success.—W. Young, sec.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On the 22nd inst. a goodly number of our members were out, the following being successful in weighing:—Russell, roach and dace; Rider, perch; Bagshaw, jun., chub; Calcutt, roach and dace; and Hart, perch. On the 29th inst., the members start to fish for Christmas prizes, a number of which is promised and I hear there is some talk should there be a little prize left of making it a present to—W. H. Fenner, sec.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—On the 22nd inst. several of our members were out, and a fine show of roach was to be seen at the above club, by Mr. Monty, from the Thames; Messrs. Gibbs and Rutherford also out, but too late to weigh in.—J. T. G.

Hounsfield Otters, Lower Edmonton—On the 22nd instant we had some more jack weighed in, among them being one of 7lb. 8oz. by Mr. Simmons, and one by Mr. Aswood of 5lb. 13oz. Mr. T. Smith had some nice roach (best 1lb. 5¾oz.) and dace; Mr. J. Cornwell, dace. Our annual smoker, in aid of the Anglers' Benevolent, will take place on December 2, as already notified, at the King's Head, Lower Edmonton, where anglers and friends will be very welcome.—F. S. T.

Hoxton Brothers Angling Society.—A few members were out on the 22nd instant. G. H. Wood had a pretty jack, 5½lb., taken with a worm on a tight line and roach rod. H. Da Costa weighed in jack and perch; and S. Cole dace.—R. Ghurney, sec.

Independent Brothers Angling Society, Three Doves, 24, Berwick-street, Oxford-street, W.—At our last meeting it was decided that we fish at Kingston for our Christmas prizes, and to commence on Dec. 5. Mr. Alfred Morgan weighed in some dace on the 22nd inst.—Snap.

Izaak Walton Angling Society.—The members will compete for three special prizes on Wednesday, December 9. Competitors may choose their own fishing waters, but must not leave London before the morning of the competition. There are still a number of the Christmas special prizes not yet taken. Mr. C. Layton had a nice take of roach on the 22nd inst., the heaviest one scaled 1lb. 1½oz.; he also had some fine dace, the heaviest one 13¾oz. Messrs. Daniel and Harry Auburn, had perch on the same day. Mr. J. Poole also weighed in perch; Mr. G. Manning had perch on Wednesday, 25th inst.—H. B.

Junior Piscatorial Society, New Cross Inn, New Cross-road, S.E.—Several members fished at Byfleet on the 22nd for the November series of prizes, but owing to the force of the stream, only one (Mr. James Steer) was successful in finding an eddy that was fishable, where he had some good sport with the bream, bringing home the largest fish, which scaled 3lb. 6oz. This fish carries 42·16 points in the competition, thus beating the previous best fish by 1.54.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—A Grand Smoking concert, will be given on Friday evening, December 4, at the above address, at eight p.m., when all members are invited. Programme for admittance will be sent to members. The Pegdown competition took place on the 22nd inst., and was a grand success. Among other members that weighed in were Messrs. Master, Carter, Mason (who had a very nice perch weighing 1lb. 7oz.), Newcombe and T. Salter.—T. Salter, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville, N.—On the 22nd inst. several members were out. Mr. Holmes, a nice show of roach and perch, 9lb.; Messrs. Belton, White, Warner, Palmer, W. White, Webster, Nelson and Watling, some good roach and dace, on Wednesday, the 25th inst., Mr. More, roach. I must request all members in arrears to turn up next week, or they will not be able to compete in the Christmas outing.—W. Watling, sec.

Liverpool Angling Association, held at the Bee Hotel, 5, Queen's-square, Liverpool.—At our last week's meeting notice of motion was given by Mr. W. Morgan:—"That members wives and sons, on payment of a small fee be permitted to fish in the society's waters." Mr. W. J. Johnson was elected Chairman of the Social Evening, Dec. 3. A paper will be read at the meeting of Dec. 10, on our "Rented Waters, are they worth the rent paid for them, and cannot other and better waters be got for the same money;" and full and free discussion is invited.—R. Woodfall.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 22nd inst. our members were at various waters, but the sport was very bad. Messrs. Milburn and Penfold were the only members to show up with a few roach from the Thames.—W. F. Pearce.

North London Angling Club, Tap House, Holloway.—On Nov. 18, the secretary brought up the half-yearly balance-sheet, and it having been certified by the auditors as correct, it was passed by the members, and I am happy to say that we start the next half-year with a fair amount in hand. I wish to call the notice of secretaries of clubs to the paper which will be read at the above, on Tuesday, Dec. 15, by Mr. G. E. Simms, under the auspices of the Society for Promoting the Reading of Papers at Angling Clubs, entitled "Coarse Fish Hatching," after which there will be a smoking concert, when a good array of talent have promised to attend.—H. Stretch, hon. sec.

Midland Angling Society, Prince of Wales, King's-road, Camden Town.—We fish for our pegged-down match, at Windsor, on the 29th inst., for prizes amounting to £3 10s.—A. Appleby, sec.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—We had a good attendance of members on Tuesday, several having been out, but returned with empty creels, owing to the bad state of the water. Mr. Garratt was out on the 22nd inst., but did not have much sport, only weighing in a small quantity of dace. I hope the members that were absent this week will not forget that we have a roving match, on the 29th inst., for several prizes, at Hatfield-Peverel, all starting from Liverpool-street Station by the 8.15 train.—J. Comber, sec.

Park Angling Society, Tottenham.—The first concert of the above society, will take place at the Park Hotel. Park-lane, on Saturday, December 5, to commence at 7 30 p.m., chairman Mr. C. Roberts, vice-chair, Mr. J. H. Mackney. All brother anglers will be welcome.

Peckham Brothers Angling Society, Prince Albert, Rosemary-road, Peckham.—Several of our members were out on the 22nd inst., but only one weighed in, namely—Mr. Gardham, with a nice show of roach, weighing 5lb. 3½oz. Our next series of prizes will be fished for on December 6, roving at Reading; members may leave town on Saturday night. All members must be clear of the books as they are club prizes.—E. A. Fautley, sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—Members will please take notice that a special meeting will take place on Wednesday next, Dec. 2, for important business. The match will be continued at Langley on the 29th, when I hope all the remaining prizes will be taken. Mr. Harris was declared the winner of the first prize in the above.—J. W. Harris, sec.

Prince of Wales Angling Society, the Globe, Lisson-grove.—On the 22nd inst. the following weighed in: Robbins, roach; Neal, roach; Brett, roach; Matthews, roach; and a splendid show of perch by Mr. Hayden. At a special meeting held on Wednesday, it was decided to fish for a series of prizes from the funds of the society, to take place on December 6, at Uxbridge, from the Swan Bridge to Denham Lock, all to start by the first train and return by the first train after six p.m.—W. Bowyer, sec.

Rising Sun Angling Society, The George, Brook-street, Holborn.—On the 18th inst., we had a complimentary concert, which was very poorly attended, owing to the wet, the only club represented being the City of London, by our old friend, Mr. Castell. We spent a very enjoyable evening.—F. Bradley, sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The outing takes place on the 29th inst., at Henley; all to go by the first train—nine o'clock; return by the 5.30 p.m. Our next supper takes place in December. I will give the date next week. All members wishing to join us will give their names in as soon as possible. We had some very nice shows of roach weighed in on the 22nd inst., as follows: Messrs. T. Lines, roach; E. Pyne, roach; F. Lamberton, roach; F. T. Lamberton, roach; J. Wigley, roach; W. Tidmarsh, roach.—F. T. Lamberton, sec.

Royal George Angling Society, Queen's Arms, Bateman-street, Soho-square, W.—On the 22nd inst., several of our members were out, but only Messrs. Harris and Gibbons weighed in, Mr. Harris with bream, roach, and dace; Mr. Gibbons, roach and dace. On the 25th inst. was our quarterly night, when the officers for the ensuing quarter were elected. Mr. Trotter (chairman), Mr. Webber (vice), Mr. Webber (treasurer), Messrs. Holder and Gibbons (auditors), Messrs. Holder and Longland (delegates). Our Christmas outing takes place at Cookham on Dec. 6th; bank only.—F. C. Longland.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow, E.—On the 22nd inst. the following members weighed in fish: Mr. Wells, jack; Mr. Barrow, roach; Mr. J. Yeo, roach. I beg to remind members wishing to compete for the five prizes at Roydon on Nov. 29 that the train leaves Coborn-road at 7.30, change at Broxbourne. We are still open for a few good working members. Gentlemen living in this neighbourhood cannot do better than join this society.—A. Barclay, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—Result of fishing at St. Margarets for the series of remaining prizes: Mr. Stone, third prize; Mr. Wink, fourth; Mr. Green, fifth, the other five prizes will be fished for at Pulborough on the 29th, so that the members who wish can fish in the competition, of Mr. Eldridge's. Mr. George was very unfortunate fishing at St. Margaret's on the 22nd, he had caught one roach and two dace, and had hooked a very good roach. He had just taken the hook away and had the fish in his hand, when two gentlemen, standing behind him, said, "You have a very good fish there; he said, "yes," and holding it out for them to see it closer, it gave a sudden spring, and went back to its native element, thus losing Mr. George a prize.—J. Wright, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 22nd inst., several members were out, with the following result: Messrs. W. North, roach, 6lb. 1oz.; J. Petrie, roach and dace, 3lb. 5½oz.; T. Lovibond, jun., roach, 4lb. 10½oz.; G. Giles, roach, 2lb. 5½oz.; and E. Wright, dace. We had another prize given to us on Tuesday last. Members will greatly oblige by attending on Tuesday next to arrange time and place to fish for it. A committee meeting will take place on Monday, Nov. 30, when I hope the committee will attend in full force.—S. E. Cane, sec.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—On Wednesday last the president saved the club from having no catch of fish to record during the week, by bringing in a capital show consisting of one chub, 2lb. 5¼oz.; four perch, 4lb. 10oz.; eight roach, 4lb. 8oz., and one tench, 1lb. 11½oz.—C. B.

Silver Trout Anglers' Association, Bedford Head, Maiden-lane, Covent Garden.—On the 22nd inst., Mr. Smales had roach, 4¾lb.; Mr. Mengles, jack, 5¾lb.; Mr. Clark, barbel, 1lb. 6oz. Our next outing will take place at Moulsford, on the 29th inst. Members will go down on Saturday afternoon, and the fish will be weighed the next evening. Tuesday next being quarterly night election of officers and several new members to be ballotted for, a good muster is requested.—Pelican.

South London Angling Society, George and Dragon, 235, Camberwell-road, S.E.—Last Friday a member weighed in two handsome jack, going 12lb. 7oz., largest, 6lb. 5oz. On the 22nd inst., two catches from the Thames weighed over 23lb., mostly roach and bream, amongst them one jack of nearly 6lb., caught on roach tackle, No. 9 hook. On Wednesday next we fish for three prizes, at Kingston.—J. J. F., sec.

South London United Anglers' Visiting List.—The next visit on this list will be to the Cliftonville Angling Society, held at the Cliftonville Tavern, Ilderton-road, South Bermondsey, on Tuesday, Dec. 1. Although this is a new society, only being enrolled on the list in May last, yet they have turned up at every visit since their enrolment. I trust the other societies will return the compliment, and give them a bumper, so as to encourage them to continue visiting in the future, as they have done in the past. For the information of those who have not visited this society, their club-house is about five minutes' walk from South Bermondsey Station, on South London Line, or seven minutes' walk from the Canal Bridge, Old Kent-road, and the same distance from Old Kent-road Station, Canterbury-road.—A. Conn, hon. sec.

St. George's Angling Society, Prince of Wales, St. George's-road, Peckham.—Several of our members were out on the 22nd for prizes, which, I am sorry to say, was nearly a failure; only two prizes were taken—Mr. Beard, first, and Mr. Etherington, second. Members are requested to turn up next meeting night; we have important business on.—G. Etherington, sec.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith, W.—The punt match has been postponed, owing to the state of the water, until Dec. 6, the conditions of the match will remain the same. Members intending to take part in above will kindly oblige by sending in their names on or before Tuesday, Dec. 1.—H. Reeves, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—Mr. Petty was the only one to weigh in on the 22nd inst., he saving us from a blank with a nice show of roach. Those members who are in arrears are requested to bring themselves within limits, so that we can get to business, as we have a lot of prizes to fish for.—H. G., hon sec.

Walham Green and Fulham Angling Society, Stamford Arms, Fulham-road.—The members of the above held their usual weekly meeting on Wednesday, the 25th inst., Mr. Templeman presiding. The minutes of the previous meeting were read and confirmed, and general business transacted, and the meeting was declared closed at 8.45 p.m., after which Mr. G. Smith took the chair, and was faced in the vice by Mr. Warner, and the tripe supper, fished for by the members at Staines on the 8th inst., was then placed on the table by Host Mallows, to which about thirty members and friends sat down and did ample justice. After the table was cleared the chairman gave the toast of the evening, "Success to the Walham Green and Fulham Angling Society," coupled with the name of the secretary, who suitably replied; the only other toast being "Success to our worthy host," drank with musical honours, who also responded during the evening. Mr. C. Mallows, vice-chairman Metropolitan Wine and Beer Trade Asylum and Benevolent Fund, was duly elected a honorary member. The chairman also had the pleasing duty to present to the members a magnificent plaster cast of a bream, presented by Mr. A. Cecil. The remainder of the evening, up till twelve p.m., was spent in songs and anecdotes of members' past experience of a day's fishing. A vote of thanks to the chair and vice-chair brought a most enjoyable evening to a close.—E. Sutchall, sec.

Waltonian Angling Society, the Cape of Good Hope, Albany-street, Regent's-park.—Two of our members who fished in the Rye House Competition were successful in winning prizes—Mr. R. Dedge and Mr. Good. On the 22nd inst. we had a fine show of fish from Mr. Miller (23lb. 4oz., roac, and also a jack, 3lb. 2oz.); Mr. Good, roach, 7lb. 6oz.; Mr. Waltham, roach, 3lb. 3oz. This is, I think, the best show we have had this season.—J. Packman.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—On Wednesday last we had a good muster, Mr. H. Bayley in the chair. Mr. W. J. Crisp weighed in jack, 6lb. 1oz. Wednesday next is quarterly night, when I hope all members will attend.—R. Bailey.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 22nd instant Mr. G. Herbert weighed in roach and jack; Mr. E. Enever, dace; and Mr. W. Gordon, roach. On Wednesday last Mr. W. Warde was duly elected a member. On Wednesday next, December 2, will be half-yearly night, when the half-yearly balance-sheet will be presented, and officers elected for ensuing quarter. The auditors for same are Mr. C. Wyer and Mr. W. Turnbull; also the place and conditions of December competition has to be decided. I shall also bring before the members a new subscription card for their approval.—R. J. Dartnall, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—On the 22nd inst., the following members weighed in: Mr. Harden, sen., jack; Mr. Fullbrock, jack and roach; Mr. Casey, roach; Mr. Whitby, roach. A special meeting will be held on December 3, when I hope all members will attend.—W. M. sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford. I wish to remind our members that the match takes place on the 29th instant, at Witham, and all to go down by the first train same morning, leaving Stratford Station at 8.50 a.m.—R. Lowther, secretary.

West London Angling Club, Dartmouth Castle, Hammersmith.—Members are requested to attend the club-house on Thursday next, Dec. 3, at 8.30 sharp, as we have to elect a chairman and vice-chairman for the ensuing three months, and to make arrangements for the next club match. Being our quarterly-night, all subscriptions must be paid up.—J. J. Hunter, hon. sec.

CLUB FIXTURES.

Nov. 29.—A. A. Eldridge's Competition at Pulborough.

Nov. 30.—Paper by G. H. Howard, at St. John's, Skinners' Arms, Coburg-street, Clerkenwell. Subject: "An Amateur's Experiences." Chairman, H. J. Tibbatts.—Anglers' Association Eastern District No. 2 visit same place and evening.

Dec. 1.—Paper by E. S. Shrubsole, at Good Intent, Crown Inn, Church-street, Shoreditch. Chairman, H. J. Tibbatts.

Dec. 2.—Smoking Concert at Hounsfield Otters, in aid of Anglers' Benevolent Society, King's Head, Lower Edmonton.

Dec. 7.—Paper by G. E. Simms, at Epsom, Wellington, High-street, Epsom. Chairman, E. S. Shrubsole.

Dec. 10.—Lecture upon "Two Yorkshire Rivers," by F. M. Walbran, illustrated with one hundred dissolving views. Distribution of prizes in connection with the Anglers' Benevolent Competition at Rye House same evening, at the Foresters' Hall, Clerkenwell. Chairman, R. B. Marston, Esq.

NEW PATENTS.

The following is a weekly list of New Piscatorial Patents, specially complied for the *F. G.* by Messrs. Hughes, Eli, and Hughes, Patent Agents and Engineers, 76, Chancery-lane, London, W.C., authorised Attorneys for the procuration of English and Foreign Patents, Designs, and Trade Marks:—

18,874.—William Sleep Hearder, of 196, Union-street, Plymouth, Devon, for "An automatic fish striker."

19,431.—Henry Milward and Sons, Ltd., and Thomas Perry, of London, for "Improvements in the manufacture of artificial fishing bait."

19,484.—George Philip Araularius Gunther, of London, for "Improved fish tank or aquarium."

THE PRESERVATION OF THE STOUR.

A MEETING of the joint board of the Suffolk and Essex Conservators of the Stour was held on Saturday at the Town Hall, Colchester. There were present: Sir J. T. Rowley, Bart., Captain Pretyman, Colonel Barnardiston, Colonel Burke, Mr. A. T. Cobbold, Mr. W. J. Catchpole, the Rev. C. J. Steward, Messrs. T. S. Furniss, Edward Packard, H. H. Almack, H. S. Oliver, J. F. Hills, W. Garrard, J. W. Potter, E. Clover, H. R. Edwards, H. C. Pratt, H. Brittain, and E. Barnes. Mr. A. D. Berrington (Chief Inspector of Fisheries), attended on behalf of the Board of Trade. Captain Pretyman was unanimously voted to the chair. The proceedings opened with the reading, by Mr. H. C. Pratt, of documents that had been addressed to the Board of Trade. In these papers stress was laid on the fact that the navigable portion of the Stour is subject to the jurisdiction of the Norfolk and Suffolk Fisheries Act, whilst the non-navigable portion—including all tributaries, &c.—is subject to the jurisdiction of the Freshwater Fisheries Acts. It was further mentioned that a Board of Conservators from the Essex side of the Stour was appointed at Chelmsford Quarter Sessions in April, 1889, to confer with the committee chosen from conservators appointed under the Norfolk and Suffolk Fisheries Act, but it was pointed out that considerable difficulty would be experienced in the making of bye-laws, owing to the river being subject to the conflicting jurisdiction of the two Acts. Netting was carried on to a very large extent between Mistley and Sudbury by bargemen, and large powers were needed to successfully overcome this illegal act. It was suggested that the substitution of the Freshwater Fisheries Acts for the Norfolk and Suffolk Act would be a decided practical gain in protecting the waters of the eastern district; but that if such a desirable result could not be attained, the river Stour might possibly be placed under the first-named Acts. Mr. Pratt concluded by reading the following resolution, which was carried unanimously at a meeting of the Joint Committee of the Suffolk and Essex Conservators, held on the 22nd November, 1889:—

"That in consequence of the great difficulties which have arisen (through the divided jurisdiction of the Norfolk and Suffolk Act and the Freshwater Fisheries Acts) on arranging for the preservation of the river Stour, a strong representation be made to the Board of Trade, praying that the evil may be remedied by a special Act of Parliament or otherwise."

The draft certificate of the formation of the Stour Fishery District was then read. The Board of Trade therein stated that they had, by virtue of the powers conferred upon them by the Fisheries Act, 1891, formed a fishery district for the river Stour, its estuary, and its tributaries, and all such waters and coasts as lie within the area comprised within:—(1) A straight line drawn from Landguard Point to the beacon at the seaward extremity of the breakwater at Blackman's Head, Harwich; (2) a line drawn from the said beacon along the said breakwater, and continued along the watershed of all the rivers and streams flowing into the said estuary, or into any estuary connected therewith, until it reaches the said Landguard Point.

The Board fixed the number of the Board of Conservators at twenty-seven, six to be appointed by the County Council of the eastern division of Suffolk, and six by that of the western division; twelve by the Essex County Council, one by that of Cambridgeshire, and two by the Council of the county borough of Ipswich.

The reading of these documents was followed by a very technical discussion, in the course of which the Chief Inspector (Mr. A. D. Berrington) remarked that there were certain bye-laws of the Norfolk and Suffolk Board in existence, but he did not know that they were of much use to this board. He thought the better plan would be to make a series of bye-laws for this district, and repeal the former bye-laws. The question as to what bye-laws would be best suited to the district was a matter of which he thought the members of that board could judge better than he could. The great difficulty was that there were no statutory funds available, and the board would have to find money in some other way. There might, perhaps, be gentlemen willing to accept appointments as water-bailiffs themselves. But if so, he (the chief inspector) might perhaps be allowed to warn the board against an accident that happened to a friend of his. This gentleman got himself appointed honorary water bailiff, and for convenience sake he put his warrant into the crown of his hat. One day he saw a man poaching, and going up, he took off his hat to show his warrant, and he was hit over his bald head and very seriously hurt. The chief inspector mentioned that it was within the power of the board to impose a licence on trout fishing, and added that they might receive from the Board of Trade the powers of a local Fisheries Committee.

The Chairman asked if that board was sufficiently representative of salt-water interests to constitute a committee on sea fishery questions.

Mr. H. R. Edwards thought they ought to have some representative from Harwich and the coast where the Act would apply.

The Chairman said that if they assumed jurisdiction over a large sea-water area, anyone whom they might happen to displease would say, "Here are a lot of landsmen passing laws which affect our livelihood." They might, however, if they became a local committee, pass bye-laws preventing the destruction of immature fish, and the County Council, if it thought they were doing good, could vote them funds.

Upon the matter being put to the meeting, it was found that no one was in favour of making application at present that the board should be constituted a local committee.

Col. Barnardiston, in proposing the appointment of Capt. Pretyman as chairman for the ensuing year, remarked that he was a sportsman in every sense of the word, and would be of great service to the board.

Mr. Berners seconded the resolution, which was carried unanimously.

The Chairman proposed, and Mr. J. F. Hills seconded, that Mr. H. C. Pratt be appointed honorary clerk and secretary.

Col. Barnardiston supported, remarking that Mr. Pratt had been of great service to them, and had borne all expenses voluntarily.

The Chief Inspector of Fisheries observed that Mr. Pratt had taken immense pains in the matter.

The resolution was carried unanimously.

Mr. A. T. Cobbold announced that the Gipping Angling Society would contribute a donation of £5 towards expenses.

The Chairman having suggested that members of the board might induce fishery associations in their neighbourhood to give small subscriptions, proposed that they should open a credit account of £25 at the Bank.

This was agreed to, the Chairman and Mr. Berners becoming guarantors.

The following gentlemen were appointed members of the committee: Capt. Pretyman, Rev. C. J. Steward, Mr. A. T. Cobbold, Mr. E. Clover, Mr. Catchpole, Mr. Hills, and Mr. J. W. Potter. It was resolved to recommend the Essex County Council to appoint Messrs. Groom, Nockton, and F. Johnson to fill up vacancies that had occurred on the board.

The meeting closed with a vote of thanks to the Chief Inspector of Fisheries and to the Mayor of Colchester (Mr. Wilson Marriage) for the use of the Town Hall.—*East Anglian Daily Times.*

THE PISCATORIAL SOCIETY'S SMOKING CONCERT.

THIS took place on Wednesday, the 25th inst., at the Mona Hotel, Covent Garden, under the presidency of Mr. R. S. Fennings, the treasurer, assisted by Mr. R. C. Blundell, in the unavoidable absence of Mr. R. E. Booker. It would be invidious to praise one artist more than another when all so distinguished themselves, and the numerous encores that were demanded and the salvos of applause that greeted each singer and reciter testified to the warm approval of a sympathetic and appreciative audience. So attractive was the programme, containing as it did the names of some of the best singers in London, that the room was crowded to overflowing, and a number of members and friends were unable to obtain admission and had to go away. Amongst the artists were Mr. Richard Green and Mr. Joseph O'Mara (of the Royal English Opera House), Mr. F. S. Broadbent, Mr. Graham Gordon, Mr. E. Foreman, jun., Mr. Gordon Craig, Mr. R. Fennings, Mr. Frank Moore, and Mr. G. Blackmore. Mr. Kinkee accompanied in his usual efficient manner. At half-past eleven o'clock Mr. T. Crumplen rose and proposed the health of the chairman, the vice-chairman, and the artists. This was drunk with musical honours. The chairman having responded, called upon Dr. Brunton to lead off "Auld Lang Syne"; this the Doctor did in a right hearty manner, being well supported by those present. "God Save the Queen" brought this pleasant evening to a close, and all agreed that it was one of the most successful smoking concerts ever held by the Piscatorial Society. R. S. F.

DR. J. E. TAYLOR ON "THE SENSES OF FISHES."

AN enthusiastic meeting of the Gipping Angling Society was held on Saturday night, under the presidency of Councillor W. J. Catchpole, in the society's club-room, at the Great White Horse Hotel, to listen to an address by Dr. J. E. Taylor, F.L.S., &c., curator at the Ipswich Museum, on "The Senses of Fishes." The lecturer's illustrations were simple enough, consisting of the regulation blackboard and coloured chalks, which were used in the production of "lightning sketches" to assist him in the anatomical and physiological details of his subject. It is to the credit of the club that, of all its subscribing members, only one was absent, and that, we believe, through ill-health. In addition, many had brought their friends, and supporting Mr. Catchpole were Mr. A. D. Berrington, Chief Inspector of Fisheries, and Mr. J. F. Hills, of Sudbury.

Dr. Taylor rivetted the attention of his hearers (all of whom were anglers, and had, therefore, had some practical experiences of fishes), for over an hour. He first introduced them to the pedigrees of existing fishes, giving an outline of their geological ancestry. Next followed a description of the conditions of life under which fishes were obliged to live. It was shown that a dense medium, like fresh water, and a denser still like sea water, affected the breathing organs most particularly: next the organs of smell; then those of hearing. Possibly the organ of taste in fishes, he said, was lowest of all, for he had himself known an adult pike to be fool enough to take a bait of red flannel. He showed that fishes were the earliest of all vertebrate orders of life, and pointed out that many of them retained a sort of ancestral memory of their ancient marine home, as for instance, some species of eels, which travelled down the rivers in order to spawn in the sea. On the other hand, the highest order of fishes, which were perhaps represented by the *Salmonidæ*, had reversed this experience; they were explorers and left the sea to pass up the rivers and deposit their spawn in fresh water, whilst many nearly-allied species, like the trout, had assumed a purely fresh-water existence in rivers, and even in deep fresh-water lakes, all over the world. In a rapid generalisation, Dr. Taylor sketched forth the oceanic fishes swimming on the surface, and introduced a graphic illustration of the deep sea fishes which live at the bottom under conditions of intense aqueous pressure, and surrounded by a darkness that we know not of. He showed how such fishes had availed themselves, so to speak, by a process of natural selection, of a phosphorescence easily secreted, so that these deep-sea fishes formed along their medial line phosphorescent patches of comparatively brilliant light, and how their eyes were adapted to perceive this kind of light, and thus to seek each other. Sketches of the eyes of these deep-sea fishes were introduced, with an explanation of the peculiar structure of their optic nerves. The hearing of the fishes was similarly dealt with, illustrated by sketches of their auditory bones; the structure of such bottom fishes as rays, soles, flounders, plaice, &c., was dealt with, and a *resumé* was given of the pupæ stages undergone by these remarkable forms. The nervous structure of the brains of fishes was detailed, coupled with a description of how in such well-known kinds as the cod, there were barbules at the front part of the mouth, richly supplied with nerves, which enable them to have delicate feeding organs to search for their food along the bottom of the sea. Practical reference was made to the knowledge gained by all anglers of the natural history of their captures, and the lecture, which was intently listened to by a company who knew something of this part of the subject, concluded amidst sustained acclamation.

CLOSE OF SALMON FISHING IN THE LAKE DISTRICT.

SALMON fishing closed generally throughout the Lake District, on Saturday the 14th inst., and up to the last hour maintained in most rivers the unprecedented run of successful sport, for which the latter portion of the season has been conspicuous. Many remarkable takes—hauls might, perhaps, be a more appropriate term—were made last week, and the year 1891 will long be remembered as a red-letter period in the experience of many north country anglers. The heavy rains at the end of the summer caused the rivers to be full, which in other years have been fordable their lengths or their breadths, and as a consequence salmon have abounded where at other times they were few and far between. This would seem to point to the conclusion that fish abound along our western sea coast in autumn, and only want the opportunity afforded by a full flow of water to ascend the rivers in large numbers as has been the case this year. Certainly the rain was not an unmixed blessing, but the anglers had nothing to complain of.

It would probably be impossible to discover the number and weight of salmon taken from any particular river; but if reliance can be placed on the statements of anglers —and I know not why not—the Derwent seems to claim the palm this year. Mr. W. Fletcher, chairman of the Derwent Fishery Board, states that the past season has been better, probably, than any in living memory, and facts bear out that assertion, both in regard to that river and most others in the district.

An unfortunate sequence to the abundance of fish is the increased amount of poaching; and there are those who are not afraid to insinuate—and insinuate in pretty plain terms, too—that many anglers are themselves no great sticklers to lawful means when favourable opportunity presents. For the credit of the gentle art, may this aspersion be disproved, so far as the *bona fide* angler is concerned.

In view of the large numbers of salmon now in the rivers additional watchers are being put on during the spawning season; and one gang of poachers has already been detected at their nefarious work, resulting, however, in the capture of one of a gang of six men. The fellow has been fined £3, with an additional penalty of £1 for each fish taken, and the magistrates ordered the net to be destroyed.

RICHMOND PISCATORIAL SOCIETY.

ON Friday next, December 4, at the Greyhound Hotel, the above society intend giving a complimentary supper to their chairman, Mr. Montague Davenport, C.C., to welcome him back after a painful and prolonged illness. Mr. R. B. Marston has kindly consented to take the chair for the evening, and the musical arrangements will be carried out by Mr. F. Perkins. Members intending to be present should communicate with the hon. sec. at once. Tickets 3s. 6d. each. The supper hour is fixed for 7.30 p.m. Friends of members will be welcome.

A smoking concert is being arranged by Mr. C. W. Potter, and will take place on Friday, December 18, in the Masonic Hall of the Greyhound Hotel. NOTTINGHAM REEL.

FISH CULTURE.—We have received from Mr. T. Andrews, of Westgate House, Guildford, his annual circular from which we make the following extracts: "My stock of breeding fish of the favourite varieties of *Salmonidæ* is now sufficient to produce from five to six millions of ova, and I have again added very considerably to the hatching and rearing capacity of my fisheries; several new rearing ponds having been made during the year. The stock of two and three year old fish is limited, and as all orders are booked in rotation, it is advisable to order early, even if the fish are not required immediately. Although I will endeavour to suit my customers as to time of delivery, the convenience of the fishery must also be considered. If the water required to be stocked contains no fish of any kind, fry may, with comparative safety, be turned down. In some places this is found the more economical plan; but if the water already contains a few fish, yearling or older fish should be introduced, the mortality at these stages being practically *nil*. Fry may also be placed in tributary streams leading to the main water; and as these are now to be had at such a low price, and travel so well, good healthy feeding fry, of seven or eight weeks old, can be recommended. Purchasers of ova should mention if they have appliances for hatching, as I can send them to hatch in a day or two, or in fourteen days. Ova for abroad would, of course, have to be packed in a much earlier stage. Yearlings, and larger fish will not be supplied later than April 30, as there is risk in transit when the weather becomes warm. My yearling fish run from four to seven inches long, and two-year-olds from seven to twelve inches. The delivery, alive, of all fish is guaranteed; on condition that instructions with regard to meeting a certain train with a suitable conveyance, are strictly carried out. Special arrangements for conveying live fish have been made with all the railway companies.—THOMAS ANDREWS.

DROWNING OF A NEW ZEALAND ANGLER.—The body of Mr. James Pilbrow was discovered off the Ninety-mile Beach, at four o'clock on Monday afternoon, by Mr. William Cooper, who immediately sent for Constable Warring. The constable at once went to the beach, and had the body conveyed to the Royal Hotel, Southbridge, where an inquest was held yesterday afternoon, before Mr. R. B. Willis, Coroner. Mr. R. Webster was chosen foreman of the jury. Edward Pilbrow, brother of the deceased, said the latter was fifty-four years of age. He was a very good swimmer in his younger days. Arthur Pilbrow, thirteen, son of the deceased, said that on Monday morning about eight o'clock, his father was fishing from the shingle spit at the mouth of the river. Witness was about a hundred yards away, and had his back to his father. On one occasion when he turned round he discovered that his father had disappeared. Shortly afterwards he saw him in the water trying to swim. He had his rod in his hand. There was not much water where he was, but the tide was running out very fast. Witness ran down the spit, and Mr. Moss, who had been fishing some distance up the river bank, came down also. Witness's father went down and came up again close to the breakers. He then went under, and witness never saw him again. The sea was washing over the spit where witness's father had been standing. C. G. Moss said that young Pilbrow had originally been at the end of the spit. Witness helped him to land a fish, and while so doing a wave came in which would have washed the boy away had not witness put his arm round him. Witness told Mr. Pilbrow that it was not safe for the boy to remain on the spit, and deceased then changed places with his son. The tide was then coming in, and the waves were washing over the spit; even at low tide waves washed over the spit. Witness did not see the accident happen, but his attention was attracted by young Pilbrow running down the beach. Witness followed and saw Mr. Pilbrow in the surf. He appeared to be endeavouring to strike out to sea, but the surf was too strong for him. No assistance could be given. Thomas Henry Pilbrow, a son of the deceased, who had been fishing about three-quarters of a mile up the river, also gave evidence."—*The Lyttleton Times*, Canterbury, New Zealand, Oct. 30.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, NOVEMBER 28, 1891.

REPORTS FROM RIVERS, LOCHS, &c.

☞ *River Reporters who want forms and envelopes should send a post card to the Manager of the* FISHING GAZETTE, *St. Dunstan's House, Fetter-lane, London.*

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add	30 min. for Chelsea.	Add	55 min. for Kew.
	40 ,, ,, Putney.		75 ,, ,, Richmond.
	45 ,, ,, Hammersmith.		80 ,, ,, Twickenham.
	50 ,, ,, Barnes.		85 ,, ,, Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, Nov. 28	—	0. 5
Sunday, ,, 29	0.26	0.41
Monday, ,, 30	1. 2	1.20
Tuesday, Dec. 1	1.37	1.55
Wednesday ,, 2	2.12	2.29
Thursday, ,, 3	2.45	3. 3
Friday, ,, 4	3.22	3.42

English and Welsh Reports.

Lower Thames.—GENERAL REMARKS.—There has not been much done in the way of angling this week, although the water has somewhat improved in condition; but the anglers have had no disposition to be on the move, and the club-rooms, instead of making a show of fish, have been occupied in smoking concerts and the reading of papers. I think the latter is so good an institution that, rightly used, will become profitable and attractive to the members, and the movement which has been set on foot to help the clubs in that direction is a most commendable one. It has almost inspired me with a desire to write a paper on Old Father Thames, in connection with fish preservation and fishing achievements; but whether I shall be able to carry it out remains to be seen. I have had a long association with the river, and in obtaining permission from the committee of the Thames Angling Preservation Society, at their meeting on Tuesday last, to get up another river-keepers' dinner, I had to state it would be the twenty-fifth anniversary of my work in that direction, and by holding it on a certain day in the early part of the coming year, it would commemorate my thirty-third year's connection with the society. I need scarcely add it was cordially agreed to, and if I am spared to the celebration, it will be on an occasion in which I have always felt great interest and pleasure in carrying it out. My usual application for half-crowns or five shillings, where it can be spared. will soon be in circulation, and although I cannot reach everybody with a circular, I am sure the *Fishing Gazette* will, by its publicity, open the pockets of those who are ready to contribute without a direct application, and the donors will receive my hearty thanks. In voting the usual rewards on the recent convictions at the meeting referred to, I could not help feeling that whilst the movement is one in the right direction, there is a great reflection on the number of anglers who regularly fish the river, and never give one farthing towards the protection and preservation of the fishery. The society is always weak in its funds at this time of the year, and a stretch of liberality on the part of the anglers at this especial period will be doubly welcome.—B.

RICHMOND.—Mr. Morgan, of the Barkworth Arms, South Bermondsey, and Mr. Snow, fishing with H. Mansell, in one day, caught six dozen of nice roach and dace. The same fisherman, in four other days, caught from 14lb. to 15lb. weight of roach and dace each day; and Job Brain, in three days, 50lb. of roach and dace.

TWICKENHAM.—C. Brown, in two and a-half days, twelve dozen of roach and dace, and a couple of bream; John Coxen, in the same time, 24lb. of roach and dace, and four bream; George Coxen, in three days, 36lb. of roach and dace, and four bream; John Coxen, sen., has been making an average of eight dozen of roach and dace each day, with a total addition of ten bream; Richard Coxen, in three days, 50lb. of roach and dace; John Frost, in one and a-half days, 26lb. of roach and dace, and six bream; W. Holder, in one day, seven dozen of roach and dace, and three bream; Richard Moffatt, in three days, 24lb. of roach and dace, and two bream; and John Spong, in four days, 50lb. of roach and dace, and nine bream.

TEDDINGTON.—The fishermen are still getting a few lamperns at the Weir. One of the bank anglers between Teddington and Kingston caught a tench of 2½lb.

KINGSTON.—John Johnson, in four days, thirteen dozen of roach and dace, one brace of jack, and nine bream; N. Bolton, in one day, four dozen of roach and dace; and J. Knight, during the week, fourteen dozen of roach and dace.

THAMES DITTON.—A gentleman, fishing in a punt by himself, got a jack of 4lb., four roach, and four perch.

HAMPTON COURT.—John Smith, in the Hampton Water, has landed a fine pike of 19lb.; James Hedger, in one day, seven dozen of roach and dace, and another day, four dozen.

SUNBURY.—Edward Clarke has been getting a few perch.

STAINES.—John Keene, jun., one day with Mr. Edwards, four dozen of fine roach, the largest weighing 1lb. 6oz., and another day, with Mr. Newbury, three dozen of roach and one brace of chub.

Upper Thames.—The Upper Thames has dropped down from flood into grand winter angling trim. The subsidence of the water has been so gradual that the outlaying fish, with their natural instinct for safety, have all, more or less, fallen back from the meadows and ditches into the bed of the river. Of course, many roach, jack, and perch will not have realised their danger, and have been left the prey of poachers and other birds of ill omen. When there are protection associations on the Thames, the "waifs and strays" will be duly looked after and returned to the river; but, from personal knowledge, there are miles of unprotected waters between Oxford and Staines, and, consequently, where the carrion is, there will be found the loafing kites. Within the past few days, since the water has got well back into the bed of the river, immense quantities of jack and roach have succumbed to local anglers, who, of course, are in the know about the trim of the water daily and hourly, and have the pull of fishermen who wait for letters and wires, and then possibly take days before arrangements can be made for a blow on the "grand old meanderer," and in the meantime the men who call themselves "fishermen" have taken the cream off the milk for sale, and left their patrons very washy skim. Why is it thus? Answer echoes, "Greed and ignorance." Thursday Night.—River well in bounds, in excellent colour and winter trim, and as the weir tackle is gradually now being closed, good all-round business should accrue in those parts of the river where the wicked poacher ceases from troubling and the patient angler can be at rest.—MARLOW BUZZ.

Thames (Datchet).—The river is getting in good order again, shall be able to do a bit of jack and chub fishing in a day or so, bank anglers caught a great many barbel during the mild weather.—G. LUMSDEN.

Thames (Pangbourne).—Water getting in first rate order for all-round fishing. There are a great many fish being taken now.—W. H.

Thames (Windsor).—The water here, which has considerably subsided since my last, is, at time of writing, looking in capital condition for jack fishing, having a very slight colour in it. Next week, if weather remains favourable, quantities of jack will be caught throughout the Upper Thames. During the past week many barbel have been caught, but water getting now too clear and weather oo cold for them. Mr. Young of Windsor, has had nine during the week, largest, 4lb., one fish which broke away, he caught half an hour after with the first hook in his lips. Mr. Carey, of Windsor, has had four barbel. Some very handsome roach have recently been caught, the best falling to the rod of Mr. A. Brown, of Eton, who had four, going a little over 4lb., besides many others. The Royal Windsor and District Piscatorial Society gave a smoking concert at their rendezvous, the New Inn, Eton, on the 24th inst., when just upon ninety anglers of the neighbourhood and friends sat down and listened to some excellent songs, recitations, and instrumental pieces, dispersing at eleven p.m., after having spent a most enjoyable evening.—B. R. BAMBRIDGE.

Ancholme District.—It has now come in quite raw and cold, attended by a slight frost and fog, which make it quite unpleasant by the waterside. Anglers have, therefore, been taking holiday indoors this week.

Brighton.—(SEA FISHING).—We have had a fairly calm sea during the present week, and Markwick (boatman, of White Hawk-road, Kemptown) has been catching some very nice cod fish on herring bait, some two miles off "Black Rock." I have weighed several of the fish he has taken, and find they run from 9lb. to 12½lb. each, and in splendid condition. A few small conger, silver whiting, and plaice are also being caught. It is, however, cold work for boat angling just now.

Chichester Canal and Sussex Rivers.—The Canal at Chichester, one of the best angling waters in the south, bids fair to change ownership, as an application will be made to Parliament in the ensuing Session for a Bill to transfer and vest that portion of the canal. from Chichester to the sea—in the Corporation's hands. Whether arrangements can be made for the preservation of fish and restocking it, is a matter for future consideration. The water is now overstocked, but all classes of fish, bar carp, seem to deteriorate year by year, and fresh stock would doubtless prove beneficial. The water is now in excellent condition. Quantities of small roach and bream have been taken, but the four-pounders are not now met with. The rivers have run down considerably, and at present there is every prospect of the closing competition at Pulborough on the 29th being brought off successfully. A few bream and fine roach have been taken from the Arun during the week, and from the Rother; both at Selham and Fittleworth, good takes of roach are reported. The Adur is in good order and will repay a visit among the dace and roach in the Steyning district. The recent frosts have put the pike on feed. A few good fish have been taken from the Ouse, near Isfield, the heaviest 9¼lb. Roach have given sport, several fish weighing upwards of 1lb. A few chub have been taken with pith and brains. As I write (Thursday), there are indications of a change in the weather.—GEORGE F. SALTER.

Douglas (Isle of Man).—I am sorry not to be able to report such a grand haul (not of fish but of poachers) as I did in your last issue. Thanks for giving Mr. Caley's clever capture such prominence in the *F. G.*, he well deserved it. He has his eye on several more of the fraternity, who will perhaps spend their Christmas in gaol. Salmon unfit for human food would be a good Christmas dinner for them. SEA FISHING.—Much improved, plenty of bait, and big pollack, and coal-fish, although a trifle scarce are taking well. I hope to be able ere long, to send Mr. Hearder, of Plymouth, a pollack of 30lb., to prove the *F. G.* reports (at all events, from the Isle of Man) are accurate.—STORMY PETREL.

Dove and Tributaries.—This week has proved Novemberish so far as winter has been concerned; but at midday we have had several hours of brightness and freedom from mist, and what few fishermen have been out have not done amiss on the Birdsgrove and Uttoxeter lengths. The latter club have just had their half-yearly meet, and the association has been just given a new lease of life—a new secretary has been appointed, and a stock of trout fry are about to be put in the water, at the private cost of the newly-formed club.—D. & W. H. FOSTER, Ashbourne.

Fen Waters (South Lincolnshire).—There is still a good deal of water about the Fen district, and in the Cowbit Wash and other similar localities it is seldom that there exists so much water as at the present time. This speaks well for the skaters, for these stretches of water are utilised by them as soon as frost sets in to make them bearable. Last year the Cowbit Wash was almost without water at this time. Among anglers, chief attention has been devoted to trolling. Some have spent considerable time at it, and some very good fish have been landed. A fish of 12lb. was taken from the Fortyfoot Drain, south of Swineshead Bridge; and another farther down the water, in the direction of Donington Bridge. In the neighbourhood of Billingborough, local anglers have done very well, chiefly with natural bait. Mr. Dunn, last week, secured a brace of fish, 4lb. and 3½lb. respectively; and Mr. Smith caught four, scaling in the aggregate 14lb. Some of the Fen waters have been in heavy flood, but the sport has not been largely interrupted, as on the rivers. On the contrary, the discolouring of the water has improved the roach fishing. Perch fishing is also pretty good.—LIMPET.

Idle (North Notts).—The recent storms have kept the river up at flood level for some time, and in some places there have been fears of disaster. Gradually, however, the waters are falling, and are toning down in colour, and as a consequence prospects are improving. Possibly by the end of this week fishing will have become good. After floods like those passing away there is always a chance of getting some good fish, as the flush brings many fish from the carefully preserved waters up stream, in spite of all that can be done to keep them at home. This is one reason why the Idle affords such good fishing when in anything like decent condition. As soon as the drains or dykes are available, trolling will recommence with spirit. There are plenty of fish, and we are now having the requisite frost to stir up the heavier ones.—L.

Ilfracombe.—SEA FISHING.—There has not been so many herrings caught this week owing to the clearness of the water. A quantity of large fish has been caught, one boat hauled in their nets and to their surprise they hauled nearly four hundred dog fish. Those fishing with ground lines have had fine sport, each boat bringing large quantities of prime cod and conger. The best catch of herrings for the season was 7,500 at one haul. Anglers have had very poor sport from the jetties, the weather being too cold for them to stand the bleak east wind. Weather squally.—E. COMER.

Leicester.—The weather this week has been quite up to the November standard, rain and fogs predominating most days, rendering fishing anything but a pleasant vocation. The continuous rains kept the waters at a great height, although near the town the facilities are so good for getting heavy volumes of water away, that fishing can be indulged in under almost any circumstances. Anglers have been out in good numbers, and have met with decent sport among the roach, two fine lots being shown by Messrs. H. Prime and W. Pinnock, and Mr. J. Castle was fortunate in securing three score of nice dace. Two and a-half brace of chub fell to the share of Mr. W. South, and the best lot of perch landed this week from the L. A. S. waters, were those taken by Mr. J. Parsons, being close upon 1lb. Pike fishing has not been to the mark, and sport away from the town has been but moderate, the majority of the baskets being light. The waters showed greatly improved condition on Thursday.

Loddon (Earley).—The river here has fined down, and is in splendid condition for angling. Some good baskets of roach have been taken up to 25lb. weight. Chub are feeding well, and some fine fish were taken on Wednesday with pith and brain. Mr. Wallace, six jack, the heaviest 10lb., and some fair perch. Several other anglers have done well this week.—J. R. GOULD.

Lea and Stort.—The rivers are now in the best possible fishing condition, and the weather for November has been generally favourable, we have had but a few really foggy days, and the fogs have been partial, as the upper portions of the Lea Valley have escaped the visitation at times when London has been in darkness; this shows fishermen that they ought not to be deterred from going a fishing by adverse weather at their starting point. There is nothing special to report in catches this week, either as to big baskets or large fish, but sport has been fairly good at most places. The roach are now beginning to feed better than they have done for many weeks; the Lea roach fisher will stick to the orthodox paste for bait, and taken altogether it accounts for most of the roach caught; but still some nice fish have been taken with small red worms, and anglers should bear in mind that when fishing with worms, there is always a chance of catching specimens of every other kind of fish. I am glad to notice that spinning for jack seems to be getting more into favour. I have seen several fishermen trying it lately, and I am pleased to be able to say that moderate success has followed their efforts; the great advantages of spinning are, that a far greater extent of water can be covered than by any other means, it is by far the most pleasant, sportsmanlike and artistic style, requiring sufficient exertion to keep the body in a glow during the cold weather; and last but not least, it does less damage to the fish big or little than any other method. Pike and perch have been taken, at most or all of the fishing stations. In the Ware and St. Margaret's districts some good specimens of both kinds have been had; also, at Waltham Abbey, Enfield, Cook's Ferrie, Games, Higham Hill, and Ferry Boat, Tottenham. I am pleased to notice that the question of allowing more than one rod, has again cropped up amongst the clubs. There may be occasions where a roach fisher should be allowed to use a jack rod as well as his pole, but anything beyond this should be barred; last season I heard of a case of a man fishing using no less than five rods at one time; such practices should be stopped.—Thursday evening, the water has cleared nicely, and will be all right on the 29th inst., if no more rain comes. The weather is inclined to be more settled, with prospects of frosty nights.—SPLICED JOINT.

Lugg and Arrow (Leominster).—Both these noted grayling streams are now in good order for angling, being clear and a nice level. The Pinsley is now in good order for grayling fishing.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Rivers sink but slowly. Bottom fishing was resumed on Friday last; each day since very fair baskets have been made, in some cases very good, and the fish large and in prime condition. After three days fine, with sharp frosts at night, this (Thursday) afternoon the wind has suddenly chopped to S.W., with lowering clouds, and every appearance of rain, a little of which has already fallen. With fine weather the chances of sport in the coming week are hopeful. The season is now so far advanced, the fly is good only between eleven and three. Willow, Red Palmer, Red Tag, and Mid Blue should be best.—R. T. WILLIAMS.

Norfolk, Suffolk, and Cambridgeshire Waters.—Our rivers and broads now at the time of writing are in capital order for angling. I had a try in some of our Norfolk Broads on Thursday and Friday last, and took a nice lot of fish; Thursday I bagged 76lb., principally rudd; and on Friday, 84lb., roach, and rudd, with a few perch. The weather was wet and rather windy, had it been still, I think, I could have taken a boat full. Many of the rudd weighed over 1½lb. I do not remember having a much better day or two than this. I once took ninety-three roach from the Ouse near Prickwillow, that weighed 44½lb.; Andrew Antony fished that day with me. The Ouse at Littleport is now in good order, so is the Lark at Mildenhall and Barton Mills, the Yare, also at Cantley, and Buckenham, is good now for big roach. Red worms are the bait to use, and it does not matter where you try you will get fish, quite different to last year, when everything was frost and snow up to your knees. Pike are fairly well on, I took sixteen on Monday and Tuesday, none over 7lb. Weather at time of writing, clear and mild, wind south-east.—WILLIAM HOWLETT.

Ouse (Brandon, Norfolk).—The roach are now getting into their winter quarters—viz., the deep holes and the staunches. Woolsey, the waterman, assures me with suitable weather (middle day), for two or three hours good catches are and must be had, for they are there. The dace, which are excellent on this river middle day if the sun is out, should be fished for just at the end of the staunches. The perch are coming well at the gudgeon, and small artificial spoon. Lower down stream a native angler has had them. Now as to the pike, all I can say is during the past two weeks a few stray fish have been had (average 3½lb. each) by the natives. Roach anglers now do not want to go for six or seven good swims with plenty of fish, farther than fifty or sixty yards from the Town Bridge, but it must be fished from the boat; plenty on the spot. Small brandling worms will be useful now. Live-bait for pike can be had at the headquarters of the angling, Ram Hotel. Anglers should be well supplied with gentles, and take them with them, they being scarce here. River and water in good order, with wind time of writing south-west. All free water and gravel bottom. Now a word on the lamprey eel. For some years past in your paper I have mentioned that the North of England (cod fishermen) send for and prefer them from this water; they being a more attractive bait than any to be found, because of their excellent colour. I find ladies as well as gentlemen are coming here catching them, especially for investigation. I should be pleased to give further information respecting this peculiar something which has been said to have killed a king. But allow me to ask the editor of *F. G.* are they good for human food, and would he eat one if sent? There are plenty of them to be had here. Anglers will find the railway service excellent for a few hours middle day on this popular free water.—JOHN O. GEORGE.

Ouso (Huntingdon).—The water has got in prime condition once more, and jack are feeding well after the flood we have had. The locals have been out, and returned with some good fish. Two rods were at work to-day (Wednesday), and killed eleven good ones, and had five more runs, all taken in about three hours. No one should miss this opportunity, as there is every chance of good sport.—H. ROUT.

Ouso (Offord)—At time of writing water in good condition. Jack appear to be well on the feed.—H. COLLINS.

Ouse (St. Noot's).—The water is now in splendid condition for jack fishing, and some good catches have been made. Five fish weighing 2½lb., 6lb., 7lb., 8lb., and 17½lb. respectively have been taken, just opposite the Half Moon by one local angler in the last three days. The largest is just over a yard in length and in splendid condition. Several others up to 13lb. or 14lb. have also been taken lately.

Ouse, &c. (York)—The rivers in this part of Yorkshire are running down fast into a better condition for angling, but perhaps the raw cold weather has prevented many turning out yet. Monday being fine, with pleasant sunshine, saw a fair muster of rods in the Fulford and Bishopthorpe swims, but I saw nothing but a few good roach. The day was a blank for the bream and chub, for which these parts of the Yorkshire Ouse are so famous. Some fair pike fishing is being had in the Pocklington Canal, especially the length rented by the York Angling Society, but nothing of extraordinary size has come under notice yet this season. A few gentlemen have visited the Costa, Rye, and Upper Derwent in quest of the grayling, but somehow with indifferent success of sport. Should these streams continue to fine down, we may expect hearing of good sport, both with the fly and swimming the worm.—RONALD.

Plymouth and the South-West Coast.—PLYMOUTH.—The wind from the north-west always gives us a smooth sea, which is very nice for amateur fishing. The last few days it has been almost like spring weather, fine during the day with sun; and frosty at night. At Plymouth there has been plenty of fish of all sorts, hakes, rays, gurnards, whiting, and conger, on the outer grounds; and mackerel, pilchards, and herrings, on the inner ground. Some of the boats had as many as 60,000 pilchards, and many others nearly the same number; catches of mackerel from 4,000 per boat down, have been very common during the week. Consequently fish has been very cheap.

EXMOUTH.—Here the weather has been dull and bitterly cold, and nothing has been done much, except by the Herring boats and they came in with catches varying from 10,000 to 4,000.

BRIXHAM.—This is a celebrated harbour for trawlers, and there is an old rhyme that—

> "When Brixham men are earning their bread,
> The Plymouth men are home to bed."

They certainly do not mind some dirty weather, for a week or two since, whilst I was at Teignmouth, the seas were so big that the Teignmouth boats could not venture out, yet I counted sixty-eight boats that had come out from Brixham, and they were all rewarded with good catches.

MEVAGISSEY.—These boats seem very fond of using our Plymouth grounds, and they returned with fair catches of pilchards, herrings, mackerel, and whiting, other kinds of fish seem very scarce.

ST. IVES.—The boats here had catches of herrings from 30,000 to 10,000.

FALMOUTH AND PENZANCE.—All kinds of fish have been taken, but in very small quantities. At the former place are the celebrated oyster beds, that provide millions of these delicacies for the various markets.—WILLIAM HEARDER.

Scarborough.—(SEA FISHING).—Pier anglers are again having good sport, and during the past week some heavy takes of billet and plaice have been made. Four score of plaice were landed by three rods the other day, and Mr. Daniel (a local angler) caught over 40lb. in weight of billet, &c., on Monday last. Billet are now in splendid condition, and large in size. Cod run rather small, but continue fairly abundant over the rocky grounds in the bay.

Teme (Ludlow).—The Teme in this district is now running in good order for grayling fishing, having lowered and cleared. The weather has been frosty at night, with cold, foggy mornings, and has made the grayling more on the feed. Sport in the Ony has been good.—S. LUDLOW.

Tomo (Tenbury).—The Teme in this part has now run into capital order for fishing. Cold and sharp frosts have been had, which has brought the grayling more on the feed. The fish have been taking the fly, grasshopper, and maggot well, and some very nice grayling landed. The Rea, Kyre, and Ledwyche are all in good order, but very few grayling in them; sport quiet.—WORCESTER.

Trent (Newark).—Genuine November weather, and although the Trent has fallen to near an ordinary winter level, its condition is not indicative of successful bottom fishing, and no lure appears sufficiently tempting. Live-baiting for pike has been the chief pursuit of the angler, and during the week Mr. W. Mountney secured ten fish from these private waters at Balderton. The piscatorial club-room has been all but deserted and accepting a single specimen roach of 1lb. 3oz. by Mr. W. Holme, the book records a blank and angling pursuits were probably never less indulged in in the Newark district than at the present period.—TRENTSIDER.

Witham, &c. (Mid-Lincoln).—The Witham and other streams in connection with it, have been running down gradually, and operations among the pike are possible of being resumed. Fishermen are not very eager to run the risk of travelling twenty, thirty, or even fifty miles, on the off chance of getting fish, and as a consequence visitors are now very scarce. Most of the work is done by local men, or men who come short distances. When the conditions are favourable they often come in force, and I should not be surprised, seeing we have had some keen frosts, if we have a goodly number this week end. I would advise the use of live bait now especially, and anglers should bring them with them, or come prepared to catch them. In their absence, spoons or minnows (artificial) will catch fish as soon as the water clears sufficiently.—LUCI.

Yoro, Wharfc, Nidd, and Swalo.—All the above are now in excellent order for grayling fishing, and some fairly good baskets have been made, chiefly with the worm. Apple Green Dun, Silver Dun, and Blue Hawk are the best flies to use at present.—F. M. WALBRAN.

Usk (at Usk).—Angling for coarse fish is carried on very briskly, and some very large baskets are taken. Mr. J. Pitt, of Usk, has had excellent sport with the gentle, having caught in five days' fishing over 1cwt. of dace. Very few roach are caught here, this specie of fish being nearly extinct, although some years ago it used to be numerous. Here at the present time appears to be numbers of salmon travelling for spawning purposes, and according to report extraordinary quantities are on the redds at Brecon and vicinity.—T.

Scotch Reports.

Doo, Don, &c. (Abordeenshiro).—The distant hills are coated with snow, while a severe frost has succeeded the wet weather of last week. The volume of the rivers, however, has not been much affected, and spawning is progressing favourably. The pollution of the Dee has more than once been forced upon the attention of the County Council by the Aberdeen Town Council, who are interested in securing pure water, as regards the reaches above Cairnton, about twenty miles from the sea. Several schemes, costing in the aggregate thousands of pounds, have been proposed for the various centres of pollution, in order to secure the necessary certificate under the Act. The pollution is really more fanciful than real where these alterations are suggested at such cost; but the Dee Fishery Board might take the matter up at the point where the County Council leave off, and do some real practical good to the lower half of the Dee. It is to be hoped the Donside people will follow suit.—DEESIDER.

South of Scotland.—The Kirkcudbrightshire Urr is the only remaining south of Scotland river that is still open for angling. Some capital sport has been had during the past fortnight with fly. The pools are teeming with fish, and they have been taking pretty well on favourable days. Three or four heavy fish were killed on Tuesday in one pool, and on the previous day, and also on Saturday, other fish fell to the rods. The season closes on Monday night, 30th November.—HEATHERBELL,

Thurso (Halkirk).—There was a high flood in the river on the 12th inst., and it has kept in good volume ever since. The spate did not come a day too soon as the salmon in Lochmore were fully ripe a week prior. As soon as the spate came they made a rush for the redds on the upper reaches, and by the 17th, the greater number had finished spawning. Sufficient ova has now been got for stocking the new hatchery, and the eggs have been successfully laid down in the breeding boxes. A good many spawning fish are still on the redds, on the different sections of the river. Owing to the absence of coarse fish in this county there is no angling of any kind carried on in any of our lochs or streams at this time of year.—A. H.

Irish Reports.

Ballindorry (East Tyrone).—Sport is confined to pike spinning in the tributaries, nothing having been done on the main stream. Last Monday I counted ten very heavy salmon crossing the Lough Carry to the spawning-grounds while there was a slight freshet in the river. At the Barmouth, perch have ceased to feed, and both bream and pike are said to be scarce. The lower and more important reaches are being well watched against the designs of a party of itinerant poachers who are known to be in the locality.—J. A. B.

Lough Noagh.—Eel fishing at the weirs is pretty fair but the takes are diminishing as the floods fall down. The eels run down the inland rivers from the swamps, bogs, and lakes during the autumn freshets to the sea near the Lough. "Night lining" is not doing much. Pollen are reported to be gathering towards the shallows, but it is rather early yet for spawning. In the small burns spawning trout are numerous, and fresh runs of salmon have come up the Bann to the spawning beds in the Blackwater, Ballinderry, Lower Bann, Main, &c. Among the mill owners on the Antrim side of the lough, there is a strong agitation in favour of the assimilation of the Irish Salmon Fisheries Laws with the English Statutes.

Watervillo (County Kerry).—Poaching is reported from the Cummeragh. The other night a gang of poachers attacked the watchers with stones, and drove them off the river. Since then a party of constabulary are stationed at the headwatcher's residence, and nightly guard the river in conjunction with the watchers. Sea fishing has again commenced here. The weather is very favourable, and hand-lines are doing well at whiting, gurnet, and bream.—THOMAS J. DENNEHY.

SOCIETY FOR PROMOTING THE READING OF PAPERS AT ANGLING CLUBS.

LAST Monday evening, at the Causton Angling Society, the Coffee Pot Tavern, Warwick-lane, City, Mr. Edgar Shrubsole read a paper under the auspices of the Society for Promoting the Reading of Papers at Angling Clubs, entitled "Fly-Fishing for Chub and Dace." The chair was taken by Mr. W. H. Beckett, who, in introducing Mr. Shrubsole to the meeting, said he was a member of the Society for Promoting the Reading of Papers at Angling Clubs. They proposed to do a little towards raising the tone of angling societies and to show those who belonged to them that there was something better than their harmony and general procedure. The society had already done a great deal of good, and he hoped that it would meet with the support it so thoroughly deserved. (Applause.)

Mr. Shrubsole then delivered his lecture, which proved of a very interesting character. He said that fly-fishing opened out the most fascinating branch of angling; and he believed that if the London club anglers would take out fly tackle with them they would not return with empty baskets so often, but in all probability would be able to show a goodly catch of chub and dace, and very likely roach. The outfit necessary for fly-fishing was obtainable at a small figure, and the lecturer recommended the use of a 10ft. 6in. rod, not too whippy in action, made of greenheart throughout. He preferred flies for chub upon eyed-hooks and for dace upon hooks attached to the finest drawn gut. Mr. Shrubsole told in an entertaining manner of his chub fishing days on the Medway and Beult, and recommended a trial of his Min-flies for those fish on any waters. The best months on the Medway for fly-fishing were July and August. Referring to fly-fishing for dace, Mr. Shrubsole contended that one must use fine tackle, have a keen eye, and a quick hand. The great secret in hooking a dace, he averred, was to have no line under water. His favourite fly was a Black Gnat with light starling wing and white kid tag. In conclusion the lecturer said he had caught perch and bream with a fly; and he urged them to try at their earliest opportunity what fly-fishing was like. (Applause.) If they did he hoped they might derive as much pleasure from it as he had done. (Applause).

Mr. Dunn, as chairman of the Causton Angling Club, proposed a very hearty vote of thanks to Mr. Shrubsole for his kindness in coming there that evening to read a paper. He felt sure that they would all agree with him that the reader had dealt with his subject in a most effective manner. (Hear, hear.)

Mr. Smith, secretary of the club, seconded the proposition, which was unanimously adopted; and

Mr. Shrubsole, in replying, said he was very much obliged for the kind reception they had given him. There were, he said, occasions when the weather was hot and the river stale that they could not catch fish midwater or on the bottom. Then was the time when he could recommend them to bring forth their fly rod and go for the chub, dace, and roach under the bough. (Applause.) He felt sure if they did so they would be well rewarded.

Mr. Manning asked Mr. Shrubsole if he thought his Min-fly would be as successful on the Lea as it had been on the Medway. He had friends who had often whipped the Lea, but seldom caught a chub. They were generally taken with cheese paste on the leger.

Mr. Shrubsole said if anyone would show him some chub in the Lea, he would endeavour to show them how to catch them with his Min-fly.

Mr. G. E. Sims said he was up the Lea recently, and saw a small brown fly on the water, and the chub simply lying under the bough and sucking them down. He believed that if anyone had had a fly rod they would have filled a big creel with the fish.

In the course of the proceedings Messrs. Beckett (the chairman), G. H. Field, Manning, and G. C. Cooper were elected honorary life members of the Causton Club. The meeting was well attended, and an enjoyable "smoker" was held upon the conclusion of the lecture.

THE New Albion Piscatorial Society's club-room, at the Duke of Kent, Old Kent-road, was crowded to its utmost capacity on Thursday night, upon the occasion of a paper by Mr. James Tayler, entitled, "The Humane Angler." The chair was occupied by Mr. W. F. Grimmett, and amongst those present were Messrs. J. P. Wheeldon, R. La Feuillade, W. Bassett, Gilbert, May, Edward, Close, Shonfield, R. Mudd, C. Newbury, J. Read, W. Fowler, R. Turnham, J. H. Pugh, Pyne, Watkins, Hearn, G. E. Simms, H. Dunn, W. J. Crisp, Brown, A. E. Baldwin (secretary New Albion), and Arthur Matthews (assistant hon. sec. Society for Promoting the Reading of Papers at Angling Clubs, under whose auspices the meeting was called). Mr. Tayler was strongly supported by members of the Gresham Angling Society, of which club he is the hon. sec., and the other club members present included, amongst others, those belonging to the Greenwich, Rodney, Anchor and Hope, Wellington, Marlborough, Causton, Cliftonville, South London, Walworth Waltonians, &c. Prior to the commencement of the meeting the visitors had the opportunity of inspecting the fine collection of specimen fish possessed by the New Albions which, it goes without saying, was greatly admired. Mr. Crisp's three bream—one of which scales 6lb. 4oz.—received special attention, as did also the ferocious bull trout killed by the late lamented Mr. Tom Hughes. Mr. Turnham's 11lb. 12oz. pike, caught this August, likewise came in for a good deal of praise.

The chairman, in opening the proceedings, said the Society for Promoting the Reading of Papers was doing a good work. It was showing the London anglers that they had something better to look forward to than pot-hunting, and he was sure that such a social evening as they were about to indulge in would prove as interesting as it would instructive. He strongly condemned the taking of undersized fish, and urged London anglers to raise their standard, as ultimately the law would demand it of them. Mr. Tayler then proceeded to deliver his lecture, and in the course of a most interesting paper spoke of the way in which the angler could make much of the cruelty which attended the taking of fish, not only with regard to the fish themselves, but with reference to the use of particular baits. He contended that live-baiting and live gorge baiting ought to be done away with. In conjunction with the march of civilisation, and the growing tendency to prevent cruelty to animals, he had no doubt that the anglers would become more humane in their pastime. Dog-fighting, cock-fighting, and prize-fighting were now almost defunct, and he trusted that, in the course of a few years, live-baiting by anglers would follow in their trail. In proposing a vote of thanks to Mr. Tayler for his excellent paper, the chairman observed that his opinions were well worthy attention, especially with regard to live-baiting with snap tackle and the paternoster, which he considered were very cruel indeed. He very earnestly urged anglers to go in for spinning. (Hear, hear.) Mr. J. P. Wheeldon seconded the vote, which was carried with acclamation. A short discussion followed. Mr. Payne (of the Cliftonville) said he believed fish had no pain. ("Oh!") Mr. J. P. Wheeldon begged to differ. Live gorge baiting was, he contended, the cruellest of sport. (Hear, hear.) The way in which some anglers threaded their bait created excruciating pain to the fish. (Hear, hear.) He also strongly condemned the way in which some barbel fishermen used worms, throwing them down on a punt bottom first, and after threading them up the hook. When barbel fishing himself he used a small roach hook made of stouter wire than usual, and stuck the worm through the centre. Subsequently a grand smoking concert was held in the spacious billiard saloon, which was crowded. Mr. E. Rushton O'Dell accompanied on the piano; and amongst the artistes were Messrs. T. B. Angliss, A. Shonfeld, Arthur Court, Thornton Wynne, Hillier, F. G. Read, G. W. Todd, &c.

SATURDAY, DECEMBER 5TH, 1891.

"ANGLING SKETCHES."*

y a fortunate chance I have just had the ortunity of reading these sketches, a book r my own heart, and I am constrained to send a little gossip about it. Of all the men and ıen who have angled, or who have written ıt fishing, from Job to Dame Juliana, to Izaak ton and the Editor of the *F. G.*, there are only to be found who have had the courage of their ost convictions to boldly pronounce themselves ıffers." Of these two men, one is the writer hese lines, who was the first to make this ession in print, and the second is the writer his book.

have mentioned Job. I don't suppose that he the first angler, by any means (for fishing is ve to the human race), but undoubtedly he an ardent fisherman. Many a time and oft he wander with pole and cord and iron hook the side of those lovely streams in the land Jz (wherever that land may be), fishing for athans, for there were giants of fish in those s, but it is not recorded that he ever caught His many comforting friends would call a Duffer as they saw him sitting under a py of wild roses and sweet-scented oleanders ently baiting his hook. It was in those early s, and by those dreamy streams where, for ever ng and never catching, he learnt so well invaluable lesson of *patience*, which in the equent evil days stood him in good stead n his adversaries derided and laughed at . Then it was that in bitterness he cried, that mine adversary had written a book!" that case he says, "I would bind it as a vn to me." A modern critic would have said, ouldn't I slate him!"

any a "Duffer" has written books about ling since those days, and now, last of all, es Andrew Lang, proudly wearing on his t "*The Confessions of a Duffer.*" I do not re- l him as mine adversary for having done it. ould, indeed, be proud to call him my friend; Job, "I would bind his book as a crown tome." ar, indeed, as the Confessional is concerned, I claim him as my brother. "Arcades Ambo," "contented Duffers both." But if my friend is not, or pretends not to be, an expert with the rod, he is a giant with the pen, and, consequently, what a delightful book he has written. "Success with pen" he has long since achieved in every department of literature. There he is far out of my humble reach, but I am with him heart and soul when he says, "Success with rod may be beyond one, but there is the pleasure of the pursuit, the rapture of endeavour, the delight of an impossible chase, the joys of Nature—sky, trees, brooks, and birds."

But what right have I any longer to call myself even a Duffer in the gentle art? It is thirty long months since I last attempted to cast a fly upon the water, and scarcely six times have I done so in the last six years. Now, alas! alas! the years roll on: the grasshopper—though excellent bait as I found in the Rocky Mountains—is gradually becoming a burden. Now, I fear me much, the continued wielding of a ten-foot rod would soon bring me to rheumatic grief. I remember well how, in the days of my boyhood—and this chapter, called "My Border Boyhood," helps me to recall them—my own wanderings by a lovely river, through green woods and bosky dells, with supple rod and dainty killing flies, furnished to me by an old gamekeeper; the ardour with which I thrashed the stream; the rapture of endeavour; the excitement of a rise—always ending in blank failure. How I used to envy that old keeper; the deftness with which he would throw my line across the wide stream, in the teeth of the wind, and right into the mouth of a big trout, just to show me how to do it! How I envied that great lubberly lout, Jack Brunt, who would hide himself up in the thick foliage of an orle (or alder) bush overhanging a deep pool, and with a short stick, two yards of gut, and a bluebottle on his hook, which he *bobbed* gently on and off the water, would pull out half-a-dozen big fat trout in no time. I could never do it, though many a time I've tried to imitate the inimitable Jack, but Jack had a knack —a quick eye, a rapid wrist, and immeasurable patience. I think I am sadly lacking in the last of these qualifications, which is the real cause of my lucklessness. The truth is that I, too, like A. L., am a born angler. I possess the instinct, but the skill is wanting. Here, I think, heredity comes in: somewhere in the remote past I had an ancestor who possessed both skill and instinct —the instinct was born again with me—the skill passed me by, and both have descended to Piscator Major. Thus it comes about that, like the enthusiastic writer of this lovely book, "my labours are devoted to fishing rather than the catching of fish."

But why pursue the subject? Have I not elsewhere told the story of my failures? Let us return from this digression to our book.

Our author's story of his "Border Boyhood" has led me astray. This naughty boy dreamed of catching a trout, and often thought of him in church. In a moment of profane confidence his younger brother asked, "What do *you* do in sermon time?" "*I*," said he, "tell stories to myself about catching trout!"

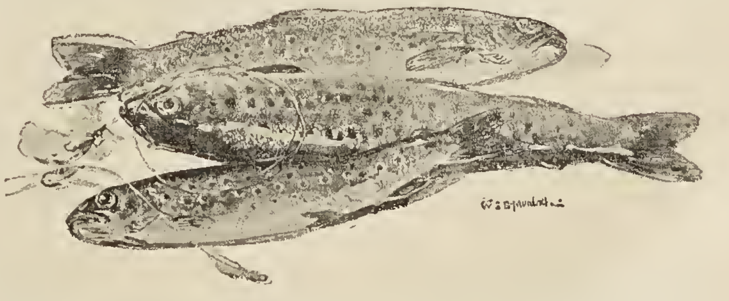
By the time I have got to the end of this boyhood chapter, I begin to perceive that my author has deceived me: we are no longer brethren: he is no such a Duffer, after all: he knows what's what, and is "up to snuff" in all manner of angling matters. During those boyish days on the Ettrick, the Tweed, the Leader, and the Yarrow, and the Lowland burns, he rapidly develops into a skilled fisherman, and it does one good to read so pleasant a story of boyhood. "These," says he, "are the waters with which our boyhood was mainly engaged; it is a pleasure to number and name them. Memory brings vividly back the golden summer evenings by "Tweedside, when the trout began to plash in the stillness, brings back the long, lounging, solitary days beneath the woods of Ashiesteil—days so lonely, that they sometimes in the end begat a superstitious eeriness. One seemed forsaken in an enchanted world. . . . They are all gone now, the old allies and tutors in the angler's art; the kind gardener, who baited our hooks; the good Scotch judge, who took us with him on his salmon fishing expeditions, and made men of us, with real rods and 'pirns' of ancient make. The companions of those days are scattered. . . . But the scene is very little altered, and one is a boy again, in heart, beneath the elms of Yair, or by the gullets at Ashiesteil. However bad the sport, it keeps you young, or makes you young again; and you needn't follow Ponce de Léon to the western wilderness, when, in any river you knew of yore, you can find 'The Fountain of Life.'"

In the following chapters the author has become a man, and has put away boyish things; henceforth he discourses wisely of all that pertains to the angler's art on Loch Awe, Loch Beg, and Loch Leven, and he gracefully seasons the serious part of his discourse with some lively stories of murder and tragedy pertaining to these lochs, together with old-world legends, gathered once more and afresh from the mouth of his faithful boatman, a Highlander (or Lowlander) by the way, who never says "whateffer." This important word has been discussed before, I think, in these columns; it may not be high Scotch nor low Scotch, but scores of times have I heard a Welshman say, "It's a fine day, whateffer!".

It pleases me to find that my "contented" friend is "no salmon fisher"—so he modestly says —but then he discourses as pleasantly and as learnedly on salmon flies and salmon fishing as he does on any other subject; whatsoever he touches, that he adorns. He prefers trout fishing—so do I—but then I never fished for salmon, I never even saw a salmon caught. I remember—it is many months ago—the last time I ever went a-fishing, it was on a lovely curve of the beautiful Herefordshire Wye. I was casting my fly along the fringes of a wide, deep pool, in the careless hope of catching here and there a small trout, or perchance a lively perch or minnow. When suddenly there came up from the great depths of the pool a lordly salmon. A thundering splash, and I caught a glimpse of the "purple and azure," as he flopped down—a forty-pounder if an ounce. I shouted to the major, who hastily made some artful but futile casts, and that is the beginning and the end of my salmon adventures. I may here say that I never go a-fishing without the major. I try his wonderful patience a great deal; when I am dry-fly fishing I have a way of swishing off my flies in trying to dry them, to say nothing of constantly getting caught in the opposite bank, or in a tree, or else I leave my flies a mile or two behind me, stuck fast in thistle or grass, whilst I have steadily fished on, unconscious of my loss. The major always comes to my aid and puts me right for a fresh start, in fact I could never fish at all, but for his ever-ready help at hand.

All this is neither here nor there; let us get back to our book.

There is a delightful chapter called "A Tweedside Sketch," which tells the tragic story of how this truthful narrator hooked and lost his first and second salmon—which whoever wants to know more about must buy the book. To my mind the chief of the many charms of this volume is its artless (*ars celare artem*) transparent truthfulness; and where is the other writer (except myself, be it modestly said) whoever dreams of telling of his defeats and failures? In justification of my own apparent boasting in thus linking my own small efforts with his, I may say that, if I had *not* told the truthful story of my many failures, I might have cried, with Canning's knife grinder, "Story? God bless you, I have none to tell, Sir!"



There are many gems and nuggets in this book, which I have not in this rambling gossip even hinted at; and perhaps not the least thing to be admired about it is the pretty way in which it has been produced. There are a lot of characteristic little wood-cuts, of which the accompanying is a specimen, and quite a number of

'Angling Sketches," by Andrew Lang. London: Longmans.

full-page wood-cuts, and three most charming etchings by Mr. W. G. Burn-Murdoch. This is a book which no gentleman's or angler's library (the terms are synonymous) should be without.

AMATEUR ANGLER.

IN DAYS BYGONE.

By MAC.

FROM certain positions, and under certain conditions of light, one who fishes a great deal for salmon, grilse, and sea trout cannot, occasionally at least, in water which is clear and not very deep, but have the opportunity of observing how the fish behave when or after the fly passes over them. It is from banks high above the water and when the sun is shining out well that opportunities for such observations most frequently present themselves. This remark, I have no doubt, will be accepted by most anglers as strictly correct; but I hedge myself by stating that it is not put forward as the experience of others but as my own.

Not very often have I seen fish which previously I had noticed in their "lies" in the water come at the fly. Only of two cases of the kind have I a distinct remembrance. But the number of fish that I have put up and distinctly seen come at the fly is very great. To speak, however, at length on their many and varied ways of showing is not my purpose. I remark, however, that in streams it is the rule to see them rise much more smartly than in slack water. In water of any depth, on a dull day, a momentary glimpse of something appearing and disappearing almost before it is seen is usually all that is noticed. But on a bright day a flash of the silvery sides of a fresh-run fish is very discernible, and this may be observed both when he pounces upon the fly and whilst he is making the wriggle after he seizes it. In slow water the rise is often made with great caution. As if to inspect, sometimes the fish come from a good distance; sometimes they follow a long bit; often they up-rise almost straight from the bottom, slowly at times, more quickly at other times; but, as a rule, unless the fly should be dancing merrily or going fast, the lay-hold is not made in such a haste and hurry as it is in streams. That the fish pounce upon the fly because they take it for food, says one; that they wish to *do* for it because it irritates, provokes, annoys them, says another; and that they behave and act from either of the two motives according to their caprice and humour, says a third, with whom I rather incline to agree. On two or three different occasions I have seen a fish come at the fly and go right over it. Twice on one occasion I saw this done by the same fish within a few minutes' time; and observations something similar which must have been made by many others, may account for the idea, widely prevalent, that the fish which swims over, rolls over, or comes with a rush, splash, and smack over (above) the fly, is seeking to drown it and put it out of the way because of the annoyance it has caused him. These remarks having been made by way of preface, I now proceed with my experiences of a still out-of-the-way character.

ONE LOST; ANOTHER CAUGHT.

On a charming summer day I was fishing a model of a mountain stream for grilse and sea trout, and with no small success. The water, still a trifle brown, was in perfect fettle. The best of the season was on, and very plentiful were fresh-run fish which had come up with a heavy flood but a couple of days before. Some eight or nine pools and streams having been gone over, I had arrived at the "Rocks." Here I felt almost certain of scoring. From where I stood, well above the water, I had to pitch my fly into the deep dark part of the pool a score or so of yards off. A rock rising sheer up about twenty feet kept off the sun's rays for more than half-way across, and, besides being into the shade, and looking darker in consequence, the water here was very deep. Moreover, it was quite still. So, as is my custom under such circumstances, I cast to the very farther bank, and having given my fly time to sink, that it might not create a surface wake as I worked it towards me, I began to pull it across, first with moderately long draws, then with somewhat shorter ones, and finally with rapid jerks. Two or three yards I had worked over in these different ways, and was begun with the long, slow, draw style to fish a spot above ledges of rock, with deep, black holes between them, that sloped gradually down outward from the side on which I was standing. I noticed a fish—apparently a grilse of 7lb. or 8lb.—come out from the dark water at the second or third cast and follow my fly. I kept it moving, and for five or six yards the fish followed—as I moved the fly he came at the same pace, but never did he approach nearer than a foot or so, as I judged, and when I halted the fly, he too halted. In this way the interesting performance went on till the fly got into shallow water on the rocky ledge, when the fish turned right round and dived away back down over the ledge into the deep black water whence he came. I cast again, but he did not respond. By fishing the rest of the pool I gave him a rest, and then went back to give him another trial. The result was that he responded in exactly the same way as before. No success for me, and back he went "Scot free" to his hold. Yet another time (after a while) and I tried for him, being determined to catch him. I had made up my mind that I would try new tactics. Over the fly went, and presently I once more saw my fish following it. This time I would avoid bringing him into the shallow water above the rocky ledge, and, instead, would draw the fly slantwise up into one of those rifts in the ledges where the water looked dark and deep, fancying he might take it as I drew it in there. I sunk it more than hitherto, by working it more slowly, and it must have been at least four feet below the surface, just as, with the fish but a foot or so from it, I smartly pulled it in with a long swift draw below the corner of the ledge, when, all of a sudden, seeing this new movement—hurry to escape him—the fish dashed at it and down with it, showing a flash or two of his bright side. But momentary this was, and he was gone. He, however, must with his wriggle have startled another fish, which below the ledge had been unseen by me; for the moment my hold of him gave way, I was tight in something else, which in a second came to the surface with a splutter, and revealed a good fish, which turned out to be foul-hooked by the side. Some may incline to believe that the fish I saw close on the fly was the fish I got out, that he shook the fly out of his mouth only to hook himself by the side; but this idea I demur to *in toto*, since the two fish appeared to be not at all of a size.

"KEEPING HIM COMPANY."

Pretty clearly two things, not uninteresting to anglers, are proved by the foregoing. In the first place, that an entire change of the fly's motion, or rate of travelling, from slow to quick, will sometimes make a fish, which before had only followed the fly, come at it briskly and lay hold. In the second place, that many fish never seen by the angler follow the fly—probably more than the combined number of those that touch it and are brought to the bank. What rate the fly should travel at or how be worked in order to prove most fatal it is a difficult thing to say. Circumstances operate, of course, and these must be reckoned with. Often I have found it pay to reverse the plan mentioned above, that is to change from working the fly "fast" to working it "slow." Oftenest in spring and autumn have I had evidence of the benefit of such a change. Nor is this at all surprising. In spring—early spring especially—the fish, affected by the very cold water, neither rise very smartly nor play very briskly; and in autumn, heavy with spawn, they are inclined to be sluggish. Any way, the plan of fishing "deep and slow" is generally the most fatal one at these seasons. But that with light tackle, fine—almost surface—fishing, and a quick travelling fly, the active grilse and the lithe salmon of the summer are lured most successfully, the experience of the majority of anglers I doubt not will confirm. As a rule these fish, if fresh run, are extremely lively, and the manner in which they both rise and play is clear proof that from no cause, as in spring or autumn, is their natural activity subdued or impaired. As to the great number of fish that, never seen by the angler, follow the fly, everyone of any experience as a salmon fisher must know a deal more than all I have said. Wading, or when standing about level with the stream, we cannot see what goes on, but from a high bank well above the water sights of interest to the observant angler must frequently present themselves. And not only are they likely to be of interest to him, but he should profit by them. This I would
emphasise, because personally I have turned to g
account many of my observations. One wrinl
would give, with good wishes for luck to those
are limited in the extent of their fishing wate
is: fish in different ways the whole water o
The hooking of the fish mentioned above is t
mony to the value of this advice. From
positions sufficiently high above the water to
the fish come at, or follow the fly (or other lu
anglers should constantly keep on the outl
From such a position, what I am about to re
was noted by me in days no longer bygone t
the summer before last. On a very bright c
forenoon in June, I was fishing a clear-botto
sharp run of one of the best of our larger sum
rivers in the north. For most of the other cas
the fishery the water was too low, and no cle
than it looked to me, is the supply from a m
tain spring. Yet I had "moved" a fish, and
I had come to this, the best, cast in the wate
the time—a dashing rapid run, bottomed
boulders and flagstones of a lightish colour
the most part, like the pebble shingle and
about them. I had not long fished before I
on a "beastie," which took me, after a tur
two through the stream and up it a bit, awa
down into the shallow quiet water of the
below, probably over two hundred yards.
I played him about for a while, all the
distinctly seeing him, and the more easily
he was not going fast. After this he made
stream, as if to return to the "lie" he had
in before rising to the fly. A little dark, or de
bit of water than the rest of the pool, he cro
when on this tack, and now as he bore steadil
stream like a fish on the run, I observed ano
fish, to appearance about the same size, kee
him company. Seeing this I did not strain
and up and up stream they travelled toget
sometimes side by side, and sometimes one a
ahead of the other till they had gone qui
hundred yards, when putting on strain the fi
had on was caused to show "signs" which
the other move off a bit. Yet though the ho
fish struggled his companion twice came
quite close to him, and not until the one
turned and worked down-stream by me did
other part company with him and altogether
appear. As when not numerous, fish often ru
pairs, what I deduce from this incident is that
played fish, working as he was steadily up-str
started the other one, which had been waitin
run, to head up along with him as a compa
fish.

The substance of two more observations, br
related, and I shall bring to an end my rem
about seeing or sighting fish after the fly.

"UP IN THE MORNING EARLY."

A fortnight I fished a piece of water on a s
river which regularly every morning had the cr
taken off it by my neighbours on the other
Never a fish did they take that I could see, y
a few days I came to learn that almost every
they had something. Inquiring further I g
know that it was always in the morning befo
got out that their sport was obtained. Us
when I got to the water there was nobody o
but in half-an-hour after two rods generally c
on on the other side. It did look selfish of m
be always the *first* rod to run over the whol
the pools, and had I not become aware of
facts I should have accused myself on this s
but as it was there was no need. Hints ha
effect with my neighbours—they went on as be
Now, I would call over to them; "well, it is
bad of me to be always the first to run over
whole water"; then I would suggest that we m
arrange for turns of the pools, but they were
deucedly generous, unselfish, good fellows,
they would not hear of this at all. "Go you
they would say, "come whenever you like,
are quite pleased." "We should like you to
some fish." "*In the evening* after you leave
generally get a fish, so it's hard *you* don't get
thing. Pray do not think of waiting for us in
morning." This was so plausible and so
but I was determined that next week I woul
upsides down with them. An immense advant
however, they had over me in that they hung
close by the banks of the river, whereas I ha
drive a distance of six miles to get to the
pools. Sunday came round at length, when
a slight rise of the water and a strong br
down-stream all day, a grand head of fish
to the river. In the evening I arranged with

to awaken me at 4.30 next morning, and to the hotel dog-cart ready to start with me ive prompt. Duly as arranged everything about. At twenty minutes to six we had n to fish. It was a nice grey morning with a breeze. The first pool—not a pool but a m—was the Crags Pool, so-called from the h precipitous crags on either side of it. A here came at my fly just at the overgo of the r, where commenced a rough seething, ng, tumbling rapid. When he rose, though id not break the surface, he was distinctly both by my gillie and myself. Old Rory ously "titted" at my jacket tail, saying, ere he was, rest him a moment, sir; that's the , sir." "It puzzles me," I replied, "how can be the place for him, as I cannot see a fish could hold himself there—the current very powerful." "That's verra true, sir," ed Rory, "but the 'oer-gang' has aye been the e place here. Let's rest him a moment and try him again." Presently I was told by my uctor to start again. Obeying him I worked and again the fish came exactly as before. e more times the performance was repeated oth angler and fish in every way exactly ical. I now changed my fly—a Durham ger—for a Jock Scott of the same size, and more worked down on the fish when smartly fore he came up *yet* again to miss the fly. trials, now," I said; "I'll have a seventh; d, I'll cast for him as long as he continues se." Saying this I started still another time ver him. He had got the same rest as before, t a minute and a half, and I began the usual or four yards above him. These with a few I fished and now I was over him. He did ome. I was past him with my next cast t half-a-yard and was saying so to Rory, and rking "He won't come now—I have put him at last," when he flashed through the water aught the fly just as I was in the act of ing it up finally, previous to leaving the pool y neighbours. In all my experience, I never nother such keen rising fish. I've seen one as often, but never so boldly each time or n a space of time double the length. There not have been much over ten minutes een the time when I first rose him and when ked him—and each of the seven rises within time looked a bold meaning rise.

"HE WOULD HAVE IT."

out noon on a scorching July day I was sit- n the grateful shade of some "arns," watching nd, who was not beyond need of a little in- tion in salmon fishing, fish a broad, flat stretch ter with a fairish current. The tyro tired at h, and asked me to take his rod, and give a hint or two. I complied, and started at ead of the cast, using a pretty long line, was necessary. I fished carefully, though no belief that I would do anything, as the had been most unmercifully thrashed. Yet the same fly as had done all the pelting, I ar out, after a few casts, a good grilse. He d; but I did not pull away the fly, kept it moving away, fishing properly. most marvellous, that fish followed, uring the one sweep of the fly rose no than six times, hooking at the sixth Each time, as I was fishing light, he broke rface when he made the rise. When he did he hooked well—only too well—for he ran ith the fly and most of the gut. But it was ult of mine. The rod of my friend's, the el, who, alas! no more is an angler, was but altogether out of keeping was the line, was only 40yds. in length! After a few quite within the line's compass, the fish full tilt down a rush on the opposite side river, and smashed the whole rick-ma-tick.

(To be continued.)

A FORTNIGHT'S HOLIDAY.

By Francis M. Walbran.

(Continued from page 318.)

N our return to Leeds, on Saturday night, nd that a friend of mine from the Midlands rived, and intended to accompany us to the and it is unnecessary for me to say that we relate to him all the proceedings of the week, and give graphic descriptions of our sport. That department I assigned to "Redspinner," and right well he performed the task. After that, friend W. gave us the details of a great day's sport he once had on the Costa. It appears that he and a friend were staying in the district, and obtained a ticket each for a day's fishing. The Green Drake was just beginning to show, but only a few stragglers, and the fish would not look at the artificial. W. mounted, therefore, a couple of small flies, one of which was a Blue Upright, and immediately began to catch both trout and grayling, eventually filling his pannier and several of his pockets as well. This led to the narration of other record day's sport in various parts of the country, the time passing so quickly that Monday morning came before we were hardly aware of the fact. Now, up to then, the weather had been perfect, but on looking at the glass in the hall before retiring on Sunday night, we saw a change was indicated. During the night I awoke to hear the pattering of rain against the window-panes, and when I drew up the blind, on Monday morning, it was to gaze upon a prospect blurred and blotted, with the rain descending in torrents. However, that was not going to deter us, and assuming the most cheerful aspect we could under the circumstances, we left Leeds at 9.5 a.m., *en route* for Leyburn. The weather brightened up a little after we passed Bedale, and by the time we reached our destination it was almost fine, for which small mercy we were devoutly thankful, as we had a two miles drive thence to Middleham, noted for its training stables and also its castle. Middleham Castle is far more picturesque than the neighbouring one of Bolton. The inner portion is older and more varied in its structure, more beautifully designed and built, though not so large In this castle Falconbridge, captain of the Earl of Warwick's navy, was beheaded by an order of Richard, in September, 1471, although he had King Edward's pardon, for an act of treason. In 1484 Richard visited Middleham for the last time, and at Bosworth, on the 22nd of August, 1485, manfully fighting in the midst of his enemies, Richard fell in the field, as the old chronicle says "like a bravo and most valiant prince." On our way from Leyburn to Middleham we crossed the Yore, and saw at once that it was rising fast from the effects of the heavy rains overnight; this caused me some little uneasiness, as I never like an unsettled state of the water for grayling fishing. After planting our *impedimenta* at the White Swan, arranged for beds, &c., I sallied forth to interview friend J. E. M., who is the local correspondent to the *Field*, and ask his opinion as to what we should do that afternoon. I found him at home, and in his hearty way he insisted on me returning for my companions, and bringing them in for a bit of lunch. We also had a look round his gardens, which, even at that late season, were bright with flowers, and then I ventured to hint to my friends that our ostensible object in coming to Middleham was to fish, and that nothing had yet been decided respecting that afternoon's work. It had now commenced once more to rain, and appeared likely to continue. "Redspinner," therefore, avowed his intention of taking an umbrella in place of his fishing-rod, and watching the performance of myself and W., J. E. M. said the Yore would not do, but he thought one of the tributaries might. So after donning our waterproofs, we set off across the fields under his guidance. "Just right height and colour," exclaimed our guide, as we descended a somewhat steep hill, and came to a narrow wooded stream, which was running what I term "a pale ale water." "Why, the grayling are actually rising," exclaimed "Redspinner," as a nice fish came up at the edge of the pool below where we were standing. "Just like my luck to leave my rod behind," he continued. I decided to commence with the fly, and W. said he would try the maggot in the eddies. I accordingly mounted a cast of three flies—viz., Red Tag for point fly; Blue Hawk, first dropper; and Brown Ant at the top. My very first cast over the rising fish settled his fate, and three or four minutes later he was reposing in my creel, a nice grayling, about ¾lb. Another soon followed, and then it became apparent that we were going to have some fun. A row of stepping-stones crossed the river just above where I was fishing, and by the advice of J. E. M., I crossed the stream, and commenced fishing a long deep flat, overhung with trees, wading carefully along the edge, and throwing underhand towards the opposite bank. Not knowing the kind of place I was going to fish, I had brought my 12ft. fly-rod, which was rather too long for that kind of work. I rose a great number of fish; but, owing to the branches overhead, could not strike them properly. I killed four more grayling and a trout before I came to another open space, and there I found W. swimming the maggot, and two nice ¾lb. grayling laid on the bank beside him. J. E. M. now appeared at the other side of the stream, in a little coppice of nut bushes, and shouted to me to make my way through the wood, until I came to a pool at the head of a stream, in the centre of which was an island. He added that it was round the next corner, a quarter of a mile farther up. I have done some pretty rough bits of wading in my life, but I do not remember anything much worse than the length that intervened between me and the aforesaid pool; now in the waters tumbling about all round, slippery boulders which afforded anything but secure foothold, now struggling along the bank through a perfect network of branches; but there was this comfort, I met with my reward when I did get there. The pool at last, and before commencing work on it, I laid down my rod and net on the gravel bed, lit my pipe and repaired a damage to my cast of flies which had occurred through getting hung up in the wood. I then looked around me to take stock of the situation. It was indeed a lovely spot; the pool itself was about fifty yards in length, and at the head of it a strong rushing stream, with a vista of overhanging greenery beyond; below was a splendid rapid trout stream, with the island in the centre of it; on the opposite side of the river a row of willows fringed the edge, with an opening through which I could see an expanse of open ground covered with nut bushes and bracken; at my own side was a gravel bed on which I was standing, and a mass of towering foliage came down right to the margin of it. Suddenly I heard a shout, and looking up-stream, I could see that "Redspinner" was using W.'s rod, and was evidently contending with a heavy fish. At the conclusion of the encounter, he said it was a grayling over a pound, and that he was just "swimming the worm" for a short time; he added that as he and W. passed the pool I was going to fish, the grayling were rising well. Upon turning my attention to my own fishing again, I found such was the case, and for the last hour of that wet September afternoon I was kept busy; almost every cast that I made towards the deeper water under the willows I either hooked or rose a fish, and some of them really good ones. The last that I hooked led to disaster. I just hooked this fish as "Redspinner" and W. came up behind the willows to watch me, and I found at once that he was a good-un. At first he dived in under the willow branches and sulked, shaking his head occasionally, after the manner of his kind, then all at once he ran down-stream, taking fully fifteen yards of line off the reel, and luckily for me just stopping before he reached the rough water; then he came back again and turned gyratory somersaults all over the pool. All at once I saw that he meant making another rush down-stream, and shouted to W., who had his waders on, to come in and net him as he passed. This he did, but just at the critical time his foot slipped on a round stone, and the next moment he was laid full length in the river. He soon was up, however, and was just in time to net the fish, which proved to be a fine grayling, 1lb. 3oz. It was now almost dark, and as the road home was a rough one, we thought it best to retrace our steps; besides, both my companions were fairly well soaked, one by his immersion in the river, and the other by the long, wet grass and brushwood that he had passed through. Before starting I turned out the contents of my basket, and found that between two o'clock and 4.30 I had killed twelve grayling and a brace of trout, besides losing at least another dozen after hooking them. My friends had taken half-a-dozen, all good ones, with maggot and worm. We were none of us sorry when we saw the lights of Middleham twinkling below us, and entering the market-place by a lane leading past the Castle, we were soon ensconced before a good fire, and forgot our troubles, when doing justice to a substantial dinner, which was awaiting us.

(To be continued.)

Notes

THE salmon fishing in the river Tees during the past season with rod and line has proved the most successful for some eight years past; a total of six hundred and fifty-two fish have been caught. The largest single fish weighed 23lb. Three hundred and eleven were caught above the tidal water, between Yarm, Darlington and Gainford; above Gainford to High Force, three hundred and forty-one.

THE new harbour at the mouth of the river Thurso is progressing rapidly towards completion. The river, owing to the new building, is now confined to its proper channel, and the recent high spate swept away all the stones and gravel which had been accumulating there for years, making a fair passage for salmon, even at ebb tide. It cannot get silted up again while the harbour stands tho storms of the North Sea, thus leaving a "fair way" for the salmon coming up at any time, independent of high tides, if there is enough water in the river to take them over the shallows.

To prevent the pollution of the mouth of the river Thurso by the sewage of the town of that name entering the river (as it has been doing for the time gone by), the superior (Sir J. G. T. Sinclair) has given legal notice to the authorities to divert the sewage from the river to the back of the town, where it would enter the bay at the back of the new harbour. This step will be a benefit to the fishery of the river Thurso.

DOUBTLESS many of our readers remember Alfred Jarvis, a very civil man, who was for many years foreman to Messrs. G. Little and Co., fishing-tackle makers, when that firm was in Fetter-lane. Jarvis was for over forty years employed by the late Mr. G. Little and his successor, Mr. Richardson. For the last few years he has had very bad health, and he died at the end of last month. His widow "appeals to members of the trade and others to send her a little assistance, to get a few things together, having lost her home (after being tenant for thirty-one years) through arrears of rent, caused by her husband's want of employment and long and painful illness." Mr. H. Westbury, 1, Watson-street, South Hornsey, London, has kindly consented to receive any sum sent for Mrs. Jarvis. We shall subscribe, and hope others will do the same. We notice Mr. Samuel Allcock has already done so.

MR. JAMES MCRAE, who lives on the banks of the river Wandle, at Beddington, writes: "My dear Marston,—The fish are looking wonderfully well, but not yet spawning. I thought they had gone mad about ten days ago. I was by the upper water near the mill when I saw quite a commotion on the water, just as if the fish were rising in all directions. I soon discovered it was a flight of swallows—I suppose on their journey to a warmer clime—and, crossing the river, they stopped to have a drink. They then went nearly out of sight and away. It struck me that they were unusually late, and only a few days ago there were a few about. The thrushes, too, are singing every day. Arkcoll thought you would like to hear this. On Sunday morning I was crossing the bridge in the garden, and saw a lot of fly on the water—quite as many as our best day in the summer. How do you account for it?"

BY means of figures indicating the takes obtained on most of the fisheries, and an approximate in cases where returns were not to be had, it has been ascertained that nearly seven thousand fish (salmon and grilse) were killed by rod on the Aberdeenshire Dee during the angling year now ended. This beats all recent years, and even 1883, when the number somewhat exceeded six thousand.

THERE having been many and frequent complaints from proprietors, lessees, and tacksmen, of salmon fishings about the paidle and other nets, in the Solway, used for the capture of white fish, injuring the salmon fishings of the districts by catching salmon, a Commission of Inquiry, presided over by Sir Herbert Maxwell, Bart., M.P., was held last week, when the evidence of a large number of witnesses was taken. One of the principal spokesmen for the fishermen said it was desirable to have somebody with power to regulate the position of the paidle-nets, but that it would be difficult to find an authority that would command the confidence of the fishermen and of the salmon proprietors. Several women who have personally followed the fishing, were examined, when some amusing evidence was given. One deposed she had fished a paidle-net for about thirty years, and never saw more than one or two salmon in it. She had also used the shrimp and sparling nets, and had fished with a halve-net. The Chairman: "What, yourself?" Witness: "Yes." The Chairman: "Standing up to your middle in water?" Witness: "I did that, sir; and I catched a good big sawmon, too, betimes. I had the sawmon leecense." The Chairman: "It was cold work, was it not?" Witness: "Oh, no; it was nice wark." Truly the salmon is an *animal* that creates much rumpus among people. Never have the men of the Solway been at peace about him. Sir Walter Scott, in "Red Gauntlet," gives some superb descriptions of Solway salmon spearing, and fishing riots.

ANGLING on Tweed and Urr, the latest in closing of Scotch salmon rivers, was wound up for the season on Monday last.

WE gave, in our issue of November 14, a notice of the death of Mr. Henry Dickinson, of Kingston-on-Thames, member of the Thames Angling Preservation Society. We now give a portrait of the deceased gentleman, kindly furnished by his son, Mr. Harry Dickinson.

MR. IRVINE, younger, of Drum, on Drum Castle Water of the Dee, had two grand days' fishing one week in October, killing each day twelve fish, while other days of the same week he ran these scores pretty close. From the bank or wading, and with the fly, the whole of his fish were caught.

NOTWITHSTANDING that the water was a trifle unsettled, the angling last week on the Tweed proved very good. Takes by individual rods of ten, ten, ten, nine, nine, eight, eight, seven, seven, seven fish in a day were got. The largest fish—a thirty-one-pounder—fell to the rod whose catch, including this fish, was the heaviest obtained by any angler in one day during the week—viz., nine fish, 182lb., average about 20¼lb. Lady Marjoribanks one day had three fish; but few were the lady anglers that were out, the colder weather not being inviting to them to visit the river. Mr. Forrest, the tackle maker at Kelso, was amongst the successful rods, getting ten fish in two days. It is reported that a grilse of 1lb. weight was caught during the week. For such a fish to be got at this time of the year is passing strange. It must be pronounced a dwarf of its kind!

WITH reference to the disappearance of Loch Leven trout from rivers and lochs, between which and the sea there is no obstacle to prevent free passage of fish either way, a correspon writes: "The embankment of an artificial l whose overflow runs into the river Ythan, b some five or six years ago, and a great many of Loch Leven trout passed out and went down the river. The same year anglers on many p of the river frequently had a few Loch Le trout making up part of their takes. The fol ing year captures were also effected along greater extent of the fishery, although much frequently. The year following that not m than half-a-dozen trout that could be identifie Loch Levens were got. Whether the Loch Le have lost their identity by crossing with the trout and yellow trout, or whether they hav turned migratory, it is not for me to prono the opinion; but certain it is that for two y past not one Loch Leven trout, actually pr to be such, has been got from the Ythan. may afford some assistance to the fish scien who will take up and so thoroughly investi this important and vexed subject as to arriv facts enabling him to give an authorita pronouncement."

SOME years ago it was proposed by severa the Deveron proprietors and members of Deveron Fishery Board to have a large nu of Loch Levens put into the river Deveron, the idea, after a time, was abandoned in co quence of objections being put forward by ot interested.

GOOD work has been done by the water ba on the Don in staking and otherwise renderin capable of being netted, during the close seaso nets, a number of the pools on the lower rea of the rivers, where, in former years, poachin a frightful extent of clean as well as gravid went on, despite all the precautions then exis Mauch hunters are still on the go; and those diseased fish they carry away "do fine," as say, "mashed up with fried potatoes!"

FULL returns of the autumn angling on North Esk, Forfarshire, show that from a nine miles of water (to which the fishing confined because of the barrier called the "L of Aigel,") 1,432 fish were taken by rod du the months of September and October; that five heaviest fish weighed 42lb., 39lb., 35lb., and 33lb. respectively; and that from the and wading one angler had sixteen fish in day. Far and away the heaviest fishing yielded by the Morphie beat, fished by Sir Gladstone, Bart., of Fasque, who was the successful rod on the whole river, and to w fell the sixteen fish mentioned. Not for very m years has the "Northie" fished anything so well.

THE Aberdeen Amateur Rock Fishers Ass tion must have had a successful season. the annual gathering—a social meeting concert—held one evening last week, it stated that the fish caught at competit that were weighed in for prizes, came to weight of 11cwt. 93lb. The successful rods handsome prizes, of which there were abo score, including silver cup, silver medals, s tea service, &c., with tackle galore. The ass tion, formed three years ago, has now one hun and fifty of a membership.

HALF-A-DOZEN proprietors in Aberdeen have artificially formed lakes stocked with t and the enterprise in nearly every case proved successful beyond expectation. Of being quite aware, several other proprie it is pleasing to know, have resolved to f suit this coming year or the following.

EITHER of spring fish, or of fish barren fo year, two captures were effected on Tay Tweed by the rod before the season e Several such fish were caught in the Dee d the last week of the rod-fishing.

OVER most of the Highlands of Scotland the first time this winter, the higher moun last week had a real wintry look, and s frost, for several days in succession, prevai

SUNDAY SALMON; OR, THE FIFTY-POUNDER.

FEW years ago I was proceeding home ı India on three months' privilege leave. ent private affairs called me to the old country, I calculated on settling the purely business of them in a few days, and on having five ks of fun and amusement. The only thing I etted was that I should be at home in the ng, and not in the autumn, when I might have some sport.

n mentioning this to my chum, Jack McAlister, said: "You'll come in for the best of the ıon fishing; but I forgot you were a Cockney, I suppose never saw a line thrown. It's not ing you can pick up in a day; no fluking about ike letting off a gun and chancing the bird to e down." Jack had been an enthusiastic ler at home, and out in India the *mahseer* had the dire consequences of his skill and perse- ınce. He was a Scotchman to the backbone l cheek-bones too), and could not believe in a tsman coming out of any other country but own. We were great friends, and had made ıy shooting expeditions together; but I was led at the tone in which he spoke. True, I a Londoner, and had never seen a salmon ooked) away from the fishmonger's slabs; but ncied I could hatch one in its own element, if d the chance, and set my heart on it. I told k so, and he replied by a scornful laugh, and aying I had better try when I was at home, ing that if I were to fish till I succeeded, don and its delights would not see much of during my leave. I answered that I would k myself for £50 to catch a salmon in any ıted river he liked to name before my return. snapped up my bet at once, and named the dy, a stream of renown, as he said, in the tern wilds of Scotland. He added dryly that ight invest the £50 for him in a new double xpress," by Henry. Then we turned in for night, after an extra whisky and soda, to wish a pleasant voyage. The next day I started old England.

ome was reached without adventure, and my iness was soon transacted. Then I was free enjoy myself as I pleased. The season was ımencing, and for an idle man with money in pockets, and to whom, after a long exile, the pleasures and amusements of home were bly attractive, London was a paradise.

he weeks slipped away, and so, in truth, did eal of money, and I had almost forgotten my ı wager. I had said to myself, when any ught of it crossed my mind, that there was e enough. Any fool could catch a salmon if ıad the mind to, whenever he wanted.

t last I found myself within ten days of the iration of my leave, and still detained in town. ained! did I say? No! that implies con- int, and few young and healthy Anglo-Indians d much pressure to make them stay there. I uld have said I was still linked to London with light-lying chains of gaiety and pleasure. But id not like to return without some effort to ke good my undertaking. I did not relish the of having to listen to McAlister's grim ıour, as he chaffed me dryly on the difficulties salmon fishing, and especially on the im- sibility of a Cockney learning to throw a fly cessfully unless *entered* young. Besides, was £50 fifty pounds?—goodness knows how ıy hundreds of the retrograde rupee!

ccordingly I started for the North without her delay. At Edinburgh I equipped myself h a salmon rod and tackle. I got a book stling with flies with all sorts of queer names, ch sounded strange to my unaccustomed ears. seemed a tremendous number wherewith to ıpass the death of a solitary fish, but the shop- a told me that I must have a large variety if I hed to be successful. So I bought in faith, soling myself with the thought that the £50 ıld cover all expenses and leave me to the good.

t last I started for the Highlands by the early l. The only other occupant of my carriage a girl. I had seen her walking on the plat- n before the train came up, and I had hoped t we were to be travelling companions, for was very nice-looking. I was delighted when ıw her come to my carriage and have her ps placed on the seat opposite mine. I flattered myself that she wanted my company, as there were many empty carriages into which she might have gone. Farewell was said to the friends who had come to see her off, the whistle sounded, and we moved out of the station. I was able to have a good look at her as she put her face against the window for a last smile to those she had left behind.

She was a tall, straight girl, of about twenty, with fair hair and blue eyes. Blue was evidently her favourite colour, for she wore a travelling dress of blue serge; her tie was blue; and she had a turquoise ring on her finger. I could also see a very nice ankle and instep sheathed in the same hue—sheathed I think is a good word, for what a dangerous weapon, when properly wielded, is a pretty foot and ankle!

But, despite the colour of her hose, I was sure my travelling companion was no blue stocking. Her face was full of good-temper and mischief, and her healthy colour and lithe vigorous frame showed that she lived a country life and rejoiced in an out-door breezy existence.

So we travelled on for some hours, and nothing had happened to better our acquaintance. I was not shy with women, but hesitated to speak to one who was a stranger to me, unless I could do her some service. At last I took courage and made a beginning. I had noticed that she had begun to be very restless, as though the confinement of the carriage was irksome to her. Her hands kept pulling at the buttons of her dress; she put on her gloves, and then took them off; she examined the contents of her hand-bag, and then shut it with a snap; her feet kept posing about here and there as if longing to break into a reel step; in fact, she evidently was tired of doing nothing. Finally, I saw her—over my newspaper—take up the label of my hat-box, which was in the compartment next her and read the name. She smiled. Now, my name is an uncommon one, but not, I thought, so ridiculous as to make a girl laugh to herself. It is "Bohemian Jones." I believe it was originally "Bohea Jones," from an ancestor who made money in the tea trade and laid the foundations of our fortunes, but some later descendant had improved it into its present form.

"Well," I thought, "she has chosen to know my name, perhaps she'll like to become acquainted with its owner." So I offered her a bundle of illustrated papers to read. She accepted them with a gracious smile and was deep in the pictures at once. Suddenly she bent over towards me and pointing to one, said: "Isn't that splendid? Just like the reality!" I looked at the picture. It represented a man bringing a salmon to the bank, while the gillie bent over the edge of the stream watching for a chance to let it have the gaff. I knew nothing about the subject in those days, so made some general reply, being unwilling to show my utter ignorance.

"But," she persisted, "isn't it natural, the way the fish is lashing with its tail and the gillie holding on to the bush with one hand? I don't much like the gaff myself. I think a man should *tail* his fish. What do you think?"

Luckily, I had the courage to speak the truth and confess that I knew nothing about salmon fishing. Otherwise, I should probably have made myself ridiculous by saying that I recommended a frequent change of the gaff, believing it to be a name for one of the many lures with which the tackle-maker had bewildered me.

"Oh! I thought you were a fisherman on your way North," she said, looking at the netting where my rod and other piscatorial paraphernalia were placed.

"Well! I'm not exactly an angler; but I hope to catch a salmon," I replied.

"You ought to get plenty at this time of year, if you can throw a straight line. But do you mean that you've never fished before?"

"Never," I said, "and one fish will be enough for me; I don't want any more."

"Oh! wait till you've caught one and you'll want to go on fishing for ever; you don't know how exciting it is."

"I couldn't, even if I wished, for I have to sail for India next week."

"You've put off your sport till very late, sir," said she; "it was hardly worth while buying a new rod and tackle on chance, especially when you are only a beginner"—the last sentence with a slight look of disdain,

Now, I didn't care about being called "only a beginner" by a young girl, however pretty, so I replied that I fancied I could catch a salmon as soon as most people, and as to its not being worth while, I thought £50 was a good price for a fish.

"£50! who'd give that? Is he a fishmonger? Where does he live?"

"No, he's not a fishmonger; and he lives in India."

"What in all the earth does he want with it? It would never keep good all that distance!"

"Oh! he doesn't care about the fish. It was only a friend who bet me £50 that I wouldn't catch a salmon in a stream he would name before I returned to India."

"What fun! What river did he say?"

"The Ruddy; a very good one, isn't it?"

"Yes! a very good one. May I ask your friend's name?"

"Jack McAlister; he's stationed at Whisoda."

"Oh!"

"Do you know him?" said I.

"I've relations of that name. We're all cousins in Scotland, you know."

Then she went on, "And he bet you £50 you wouldn't catch a salmon in the Ruddy? How much time have you got?"

"I must leave the first thing on Monday morning. This is Wednesday, so I have only three days clear, as I shan't arrive in time to-day to have a cast."

"If I were a man," she replied, "I shouldn't mind making you the same bet over again."

Then she rose up, and, taking down my new rod from the netting, pulled it out of its cover, and after examining it, said, "I think this rod would suit me; would you like to lay it that you'll win your bet? Anyhow, it won't be much use to you when you go back to India."

"Certainly," I said, entering into the spirit of the thing. "I don't mind at all, but against what am I to lay the rod?"

"We'll, I've a new fly-book, if you like that, or here is a silver-mounted flask," and she took one out of her bag. "Or perhaps you'd prefer a sky terrier pup?"

I said I didn't care for them, but would stake the rod against the blue ribbon she was wearing round her neck. I thought, perhaps, I had gone too far, for the girl coloured and drew herself up, and seemed about to drop the subject altogether. However, she pulled a small pocket book out of her bag, and without looking at me, said coolly: "We'll book the bet."

Then she began to write down, speaking as she did so: "Mr.——?"

"Jones," I said.

"Mr. Jones lays his salmon-rod against my tie that he will catch a salmon in the Ruddy before he returns to India."

"That's all right," I replied. "I've only got till Monday morning."

"Sunday doesn't count."

"Of course not," said I.

Then she closed the book with a business-like snap, and remarked: "You'll put up at the Royal Hotel, I suppose, at Crankie?" I said that was my destination.

"Then you can leave the rod there when you go. I'll send for it."

I wanted to know her name, and remarked that if she gave me her address I would send it, and save her the trouble—that is, supposing I failed in my attempt.

She only replied that it was no trouble, and then drew herself up into her corner, and kept looking out of the window till the train stopped at the station for Crankie.

There was a waggonette and pair waiting for her with an elderly gentleman in it. As she approached he got out and embraced her. I could hear him say: "Glad to see you again, Mary." Then they drove off, and I was left to put my things in the dog-cart, which had come for me from the hotel at Crankie, where I found myself after a long drive.

I found three anglers besides myself at the hotel. We had a snug little dinner together and a quiet rubber afterwards, and when, a stiff tumbler of toddy finished, I went to bed, everything seemed to be going smoothly, and I was soon dreaming of monster fish lying in heaps by the river's edge. But, alas! for my dreams. Soon after midnight the rain began and continued to come down in floods. I knew nothing of it till morning, and when I woke, my eyes were greeted by rain driving in sheets past the window, and my ears by the hoarse roar of the Ruddy in spate.

Nothing but rueful faces inside and draggled gillies waiting at the door scanning the heavens in hope of seeing some sign of the weather clearing up. Breakfast was eaten in mournful silence—a prolonged meal, for, in the first place, it was very good; in the second, we feared all hope of fishing that day was over, and were unwilling to withdraw from the pleasure and sociableness of being together round the table when there was nothing to look forward to except the resourceless hours in a Highland inn. Shon, the oldest of the gillies, and reputed the most weatherwise, was called into council, but gave us no hope whatever of sport that day. "The water's clean ower the yellow stane," he said, "an' ye might as weel fush in a toddy ladle as cast a flee the day." So there was nothing to be done but to comfort ourselves with hope and tobacco and to wait for the morrow. If the rain were to stop, the stream would go down as quickly as it had risen.

By nightfall the weather had greatly improved, and when we went to rest the stars were beginning to peep out. This was some satisfaction; but I had lost a day, and the odds against winning my bet were increased.

Friday morning was fine—at any rate, the rain had stopped. Breakfast was soon over, for the welcome news had come that the river was rapidly falling, and that the "yellow stone" was already half uncovered. Rods and gear were quickly got together, lunches prepared, and flasks and bottles filled. Soon we were off in a large waggonette bound for the stretch of water over which the hotel-guests had the right of fishing. Each angler had a gillie told off to him for special service. My retainer was a crabbed-looking old fellow, with a blue nose and a very austere, perpetual-Sabbath-looking countenance. He was a poor hand at talking, but had an excellent taste for whisky. He was commonly called "Blue Peter," why, I know not, unless from the colour of his nose.

When we reached the fishing ground, we found the stream still running rather heavy; but I was anxious to begin, in order to get some practice in throwing the line. Accordingly my rod was put up, and I marched down to the water's edge, with Peter behind me carrying the gaff. If I had been wise, I should have waited till the others had commenced, for then I should have been able to see how a fly ought to be cast; but I foresaw no difficulty about it, and was eager to make my bet safe as soon as possible.

Well! I made my first throw, and the result was horrible to contemplate. Imagine a dozen snakes in different styles of knots and combinations of coils falling splash on the surface of the water. Again and again the same result, and the more force I used the greater the number, and the more fearsome were the gyrations and convolutions of the line. At last I had to desist, in order to allow the tangles to be unravelled, Peter meanwhile preserving an unbroken silence, but with *such* a look of grim contempt on his features, that I could not help making excuses for myself, saying that I had been a long time in India, and was out of practice. He then showed me how to do it—he seemed to make no effort—he allowed the line to go well behind him; then it appeared to come back almost of its own accord, as straight as a telegraph-wire, and as light as a snow-flake. I improved under his teaching, and after whipping off some half-dozen flies, I was getting along pretty fairly. Indeed, in the *drumlie* swollen state of the river, I had almost as good a chance as anyone of *hooking* a fish. To land him would be a different thing.

But I flogged on the whole day without any result. Fish came tumbling over in the water near my fly, but would not take it. They were still on the move up-stream, and had not settled down to business. My companions were more fortunate, for one of them had two salmon, and both the others one a-piece. I was grievously disappointed at my own non-success, and drove home not in the best of tempers, for the chance of winning my wager was again much diminished. If the next day were wet and the river in flood, I might as well calculate on a certain loss.

Next morning, however, dawned most propitiously, mild and not too bright, with a gentle breeze from the west. We were all in high spirits as we bustled round the waggonette, putting our rods and gear into it, and congratulating ourselves on the fineness of the weather. At the last moment I found I had forgotten my tobacco-pouch, and went to my bedroom to get it. Just as I was taking it up, I heard the sound of wheels below. Thinking that the party were leaving without me, I rushed to the window and looked out. It was a carriage which had just arrived, and which, I saw, contained my young companion of the train. The same elderly gentleman was with her who had been at the station to receive her. He got out and commenced chatting with the landlord, while the girl beckoned to Blue Peter and began talking to him. Whatever they might have said, they seemed to be in earnest about something. Of course, I could not hear at the distance I was from them, and when I came downstairs the carriage was gone. We started for the river immediately afterwards. It was in splendid order, having that ruddy tinge which is so dear to the fisher's eye. As Peter was putting up my rod, I asked him who the gentleman in the carriage was. He replied in his usual short manner:—

"The laird."

"Who's he?"

"Sir John."

"Sir John who?"

"Oo! we just ca' him Sir John."

"And who was the young lady with him?"

"The laird's niece."

"Do you know her name?"

"Miss Mary."

"What's her other name?"

"Oo! we just ca' her Miss Mary," said Peter, who was evidently getting irritated under my cross-examination, and he added, with emphasis:—

"*She* knows how to throw a line."

He then remarked that I had better be quick and begin fishing if I wanted to get a *fush*, and took me down to a place where he said I should commence.

It was a stream past which, on the preceding day, Peter had hurried me, saying it was of no use at all. However, I followed his advice and fished it, supposing that its merits might depend on the volume of water in the river. I did not stir a fin. Peter made me fish it again and again, and I did so in blind faith, but with no better result. He then took me on to other casts, at which also I had no success, and by lunch-time I was in despair, especially as the others had been very lucky, all having got more than one fish. One of them asked me why I had missed over a certain pool, naming it, and I told him that Peter had taken me past it, saying there was a better cast above. He replied that Peter ought to know best, as he had lived all his life on the river, but that he himself had always considered it one of the most likely places on the stream.

I mentioned this to Peter when we resumed work, but he only snorted angrily and spoke about *fule* strangers and Englishers presuming to know better than himself how to fish the Ruddy. I subsided at once, and threw my fly wherever he told me—but no salmon ever came near it.

Half-past five and no result! The waggonette would be here in another hour, and my £50 would be nowhere, not to mention my fishing rod. I was desperate. I sat down to think and have a meditative pipe. I had a long pull at my flask; I offered none to Peter, I thought he ought to have got me some sport; I was disgusted with him and everything and everybody. But I resolved to make a last effort, and, in spite of Peter's protestations, I stopped at a stream where I had seen a salmon landed the day before. It was just at a bend of the river where it almost touched the road, which was the principal thoroughfare of the district. At my second cast I saw a dash of something silvery, and the line began to race out of the reel, while my rod was bent into a semi-circle. At last the great moment had come! Luckily I kept my head, and remembered to hold the point of the rod well up, while the fish dashed about and performed all sorts of vagaries. Peter looked on sulky and silent, and never offered me a word of advice. I supposed he was annoyed at my having hooked the beast at a spot where he had said there was no use in trying. The salmon never seemed to tire, and I was getting quite exhausted with the excitement and the struggle. Another gillie came up, and, after a few minutes, suggested that it was time to try to land it. Foot by foot I brought it near the bank; now we could see the brute; it was getting, tired and maki great *swirls* with its tail, and rolling about in a he less fashion.

"Twenty pund good!" said the gillie.

"Fifty!" I ejaculated in my excitement, thinki of my money and watching Peter as he stoop over the edge of the stream waiting for a char to use the gaff. There was no quiet nook i which to lead the fish, the stream was runni pretty swiftly, and it needed a practised hand strike with certainty. But now the brute is his feet, almost motionless. "Quick," I shout and Peter made a plunge with the iron. I felt line slacken; I saw a wild wallop and splash the water, and my salmon—my fifty-pounde was gone, after being so nearly *spent*—or earne

"Ye daft fule," cried the other gillie to Pe "ye catched the line. I never see ye do before."

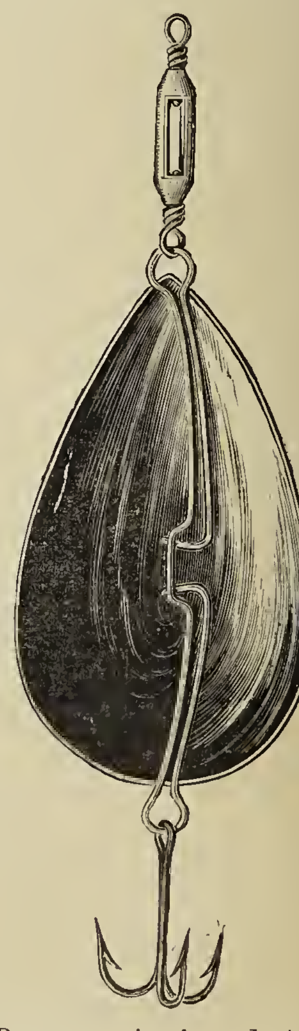
Sickened with disappointment I turned to cli the bank, and saw on the road just above m carriage which had stopped there. "Miss Ma as Peter had called her, was in it, accompan by the same gentleman as I had seen her w before. Both were standing up. They eviden had been watching me playing the fish.

As I came near, Sir John—I shall call him after this—stepped out and said to me: "H lines losing a fish like that!" Then he walke few paces aside to ask how it happened and ab Peter, who was well known to be an extra cle man with the gaff at ordinary times. I was standing beside the carriage, where my you friend remained regarding me with a look of m chievous delight. She was about to speak f when I interrupted her, and said:—

"You needn't say you're sorry, for I see you very glad. Here's your rod; you've won the b and I took it to pieces and placed it under box-seat before Sir John had turned round come back to the carriage. Then I lifted hat, and walked away without giving her a cha of replying. (*To be continued.*)

AN IMPROVED SPOON.

MR. E. FENN, of Highland Cottage, Reddit sends us a new spoon bait of his make, " Heureka," which we like very much indeed, can strongly recommend to all who use spinn



baits. By a very simple and strong contrivan which entirely does away with the danger split-rings, one can change the swivels and angles very easily, and yet they are perfec secure when in use. The price of the bait is o one-shilling, trout or pike size.

THE MANUFACTURE OF ARTIFICIAL FLIES IN REDDITCH,

AND

MESSRS. J. WARNER AND SONS' SPECIALITIES.

BY EDGAR S. SHRUBSOLE.

I SUPPOSE it is because many neatly "got up" cards of absurd productions of the fly-dresser's art (!) are still sent out from the important Worcester village, and accepted and stocked as correct patterns by some tackle sellers, who hardly know a May-fly from a milk-can, that, when particularly bad artificial flies are exposed for sale, some knowing anglers are wont to remark, "Oh! they were made in Redditch, I presume!" And yet those "in the know" are perfectly aware of the fact that many really excellent specimens of artificial flies quite "up to date," and correctly dressed, are turned out daily from several Redditch houses.

Messrs. J. Warner and Sons, whose specialities I propose to draw attention to in this article, are noted for the all-round excellence of the goods manufactured by them in their extensive factory *yclept* Hewell Works; but especially are they deservedly famous for the neatness, strength, and artistic finish of their salmon and trout flies. Their floating flies for the modern style of dry-fly fishing are especially good; no *wholesale* house in the world produces better; and many well-known retail dressers have admired the workmanship and material employed in their production. For many years past Messrs. Warner have made these flies, and although other houses now are vastly improving their productions, those sent from Hewell Works still hold a position in the front rank of all the markets in the world. Their salmon, grilse, and sea trout flies have been favourably noticed again and again, as have also their flies for the Continental and Colonial markets. I purpose making a few remarks about their trout flies, as dressed for the "home" trade.

First of all, then, I would draw attention to the excellence of the hooks. They are *all* tested before being handed to the fly-dresser, and a keen eye is kept upon their shape. It is very seldom indeed that you see any of Warner's flies dressed upon malformed or badly-tempered hooks. Why on earth some firms still allow badly-shaped and brittle or soft hooks to be used by their fly-dressers I am totally at a loss to understand. The cost of a hook is very small indeed compared with the cost of dressing a fly on it, and yet how often is it the case that a really well-dressed fly is of no use to the angler because the hook is a "wrong 'un"! Far better condemn a gross of hooks than send out a gross of flies dressed on them that are sure to gain for the firm they come from an unenviable reputation. Too much stress cannot be laid upon the importance of *really* testing hooks before the fly-dresser's time and materials are *wasted* upon them, and I was very pleased to notice this was done in Messrs. Warner's case.

Secondly, the gut attached to the flies. Although eyed-hooks have found favour with many fishermen of late years, anglers by hundreds still have a sneaking fondness for hooks to gut, and in my opinion the day is very far distant when they will be entirely discarded, even if it should ever be. Frequently it is the case that flies, excellent in other respects, are attached to gut that no decent fish would get within a mile of, or it may be that if a silly one took it on, a smash would be inevitable. Too much care cannot be taken in the selection of the strands of gut, too little is far too often taken. As in the case of the hooks, if the gut is not right the hook and the fly are absolutely *wasted*, no matter how good they may be. In this matter Messrs. Warner are as careful as they are about their hooks, and their flies will be found to be attached to gut of a suitable thickness and of excellent quality. Of course if their clients give special instructions, Messrs. Warner act up to them; what I wish to draw attention to, is the general excellence and usefulness (*from an angler's point of view*) of their, what I believe is known in the trade as, "stock orders."

Thirdly, the material, and with this I shall also include the dyeing of the various feathers, silks, &c. Many of us know the importance of having good quality hackles and wings to our flies. I verily believe a nice glossy hackle has an extra attraction for a wary fish, and certainly if we wish our floating flies to really float, superior feathers are of first importance. Messrs. Warner use excellent materials and they are constantly on the look-out for feathers, &c., of a superior quality. They can always "do" with some, but it is no use communicating with them with the idea of selling feathers of an inferior quality. Of equal importance to the quality of the materials is the manner in which—when necessary—they are dyed. I have seen Olive Duns that had the appearance of having been dipped in some patent park paling paint, and Yellow Duns that positively must have been immersed in some chrome yellow dye *after they were dressed*. And in this connection I will tell you a little story, although it scores a chalk against myself.

Two summers ago I invited an enthusiastic amateur to accompany me upon a day's trout fishing. The offer was accepted and he wrote asking what flies he should bring with him. I sent him a list of a few I thought would be useful, and emphasised the fact that he should not forget some Yellow Duns. When I met him upon the water he proceeded to show me his purchases, and you never saw such an array in your life. I've seen a few flies in my time, but never a collection to approach that! "Where are the Yellow Duns?" I queried; and he produced some flies that fairly dazzled my eyes. "But they're not Yellow Duns," I remarked. "Well, they're yellow enough, I reckon (and Great Scott, they were too!) But if they are not Yellow Duns, what do you call them?" he returned. "Oh!" I answered; "there are so many different fancy flies, one gets a bit mixed with their names, but I believe that is 'Colman's Fancy.'" He didn't see the joke, and after I had fitted him up with a few of the "right sort," we proceeded on the war-path. Towards the middle of the day I tried several changes over a good fish, without any result, and just as I was shifting ahead my friend came up on the opposite bank and smacked his fly bang at the fish I had been unsuccessfully trying my most delicate Yellows and Olives over. I saw something bright fall with a "flop" within a yard of the fish, and the next instant there was a rush. My friend struck and was into a pound and a-half trout, which he soon after had in the net and on the bank. The river at that part was broad and deep, so that I could not wade over to him, but I shouted my congratulations and inquired what fly he had on; the reply came back—"Colman's Fancy!" And so he had!

But of course ninety-nine times out of a hundred the correct yellow would be taken by the fish and not the one of mustard hue. It is the same with most of our English trout flies. Messrs. Warner have carefully studied the art of dyeing their hackles, &c., and their colours are not only delicately correct but also *fast*.

So far as the dressing of the flies is concerned, especially the winging, several Redditch houses have some capital dressers. Messrs. Warner have some in their employ that would be very hard to beat, and as I have pointed out, careful attention being also paid to the hooks, gut, materials and dyeing, the result is eminently satisfactory. Two other little things and then I am done with the flies. So many dressers wing some of their flies all a-one-side, and these specimens never float as they should do—with their wings cocked up. It is also frequently found that far too much hackle is employed—good quality and less of it is the right thing. I am quite aware that a little extra hackle is necessary for floating flies, but then, as our Editor once happily put it to me, "Some fly-dressers seem to think a fly should have as many legs as a centipede!"

Tackle sellers generally drive off ordering their flies until the spring, and then they have a trouble in getting them. Messrs. Warner inform me that this is a matter they would like me to draw attention to; all I can say is, now is the time stock orders should be placed with the wholesale houses, and with every confidence I recommend Messrs. Warner for artificial flies and the few other specialities I shall now proceed to draw attention to.

The firm have been at some pains to work out the ideas and improvements of that well-known and excellent angler whose *nom de plume*, "John Bickerdyke," is familiar to my readers. These include the "Bickerdyke" rod-end rings, creel, fly rod, combination rod, pike rod, adjustable snap tackle, triangle snap hook, &c. The rod-end rings, creel, fly rod, pike rod, and combination "All-round Angler's" rod have already been noticed favourably. I merely wish to say that the "Bickerdyke" combination rod is one of the best of its sort I have ever seen; the difficulty in getting a really good rod to answer several purposes is well known, and Messrs. Warner (acting under instructions received from the designer of the rod) have certainly succeeded admirably in doing so.

The adjustable snap tackle (Fig. 1) is *the* tackle in my estimation. The illustration speaks for itself; in practice I prefer this to the Jardine Snap, or Jardine Bickerdyke Snap. The triangle snap hook, in which a long thin barbed wire is gently inserted beneath the skin of the bait (Fig. 2) is also a good idea. The hook lies so beautifully close and snug to the bait, and remains far more secure than the one fitted with the tiny ordinary hook, as in the Jardine Snap. Messrs. Warner make some grand May-fly hooks, and one of the best patterns of May-fly I know of is the "Bickerdyke" Wet May-fly, as made by them.

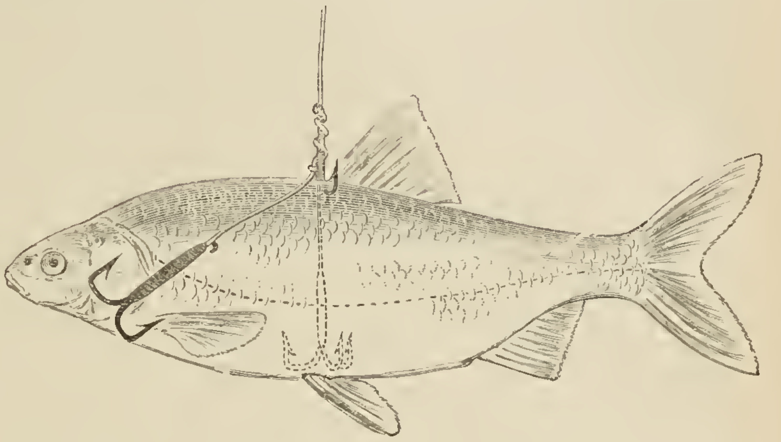


FIG. 1.

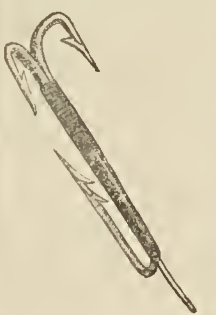

FIG. 2.

The "Geen" patent Combination swivel and lead is probably well known to my readers; those who have not used it should give it a trial, its simplicity and perfect action stamp it as one of the best ever produced, and in combination with Messrs. Warner's new spring link swivel (Fig. 3), it is very easily attached to the spinning trace and flight. These new links take my fancy wonderfully, as I believe they will anyone's. The old spring hook swivel is a fearful nuisance, and many of the modern so-called improvements are very little better. This one is attached *instantly* by passing the gimp or gut loop down between the spring loops, and is detached just as easily; further, the risk of fraying or cutting of gut or gimp is reduced to a minimum.

FIG. 3.

By-the-by, speaking of gimp, Messrs. Warner have an excellent stain they use. It is their secret, and as it is done in a dry composition, it does not penetrate to the silk, and only colours the outer coating of wire. Most gimp-stains either rot the inner core of silk, soon wear off, or get rusty. This is about the best, so far, brought out; but even this is by no means perfect. The real means of permanently staining gimp without rotting the silk core has yet to be devised.

Warner's patent brazed-eyed salmon-hooks, single and double (Fig. 4), are really splendid specimens of the hook-makers' art. The makers claim for them that they are the very best and most perfect eyed-hook in the world, and, further,

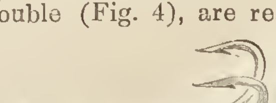

FIG. 4.

that they have brought them as near to perfection as possible. I have never seen better-made hooks, and probably it requires no word of mine to recommend them to salmon fishermen generally. The hooks recommend themselves, and from all parts of the world the makers are constantly receiving unlimited praise for their production. They say, "You should never prophecy unless you know"; but in this case I dare assert that now Messrs. Warner are prepared to supply these hooks in large quantities, they will soon find innumerable friends. These hooks are also supplied with extra long shanks, specially made for short-rising fish, and, I am given to understand, they answer the purpose admirably.

Messrs. Warner supply a dropper cast for white trout fishing. There is nothing very taking about it, but a well-known sea trout fisherman, who used it through a season's salmon and white trout fishing in Ireland, spoke very highly of it. The parts are simply looped together and the fly inserted between the ends of the loops. The advantages claimed are: by pushing the loops apart a new fly can be instantly inserted, and will never draw out in use, and the fly is kept well out from the cast. Whether it would answer as well for *fine* trout and grayling casts I don't know, but see no particular reason why it should not.

In addition to the ordinary spinning flights for pike, this firm make a capital one, which they call the "Davies." I am a rare supporter of the ordinary Thames flight, I can always make a bait spin with it to suit me, and its a dead certainty on hooking a fish that strikes it. Still, there are undoubtedly many anglers who prefer others, and they should at any rate give the "Davies" a trial.

Messrs. Warner mount all their pike tackles on either the ordinary stained gimp, or their patent phosphor bronze wire centred gimp. The latter is marvellously strong, and you can use it much smaller in size with confidence. It is very little stiffer than ordinary gimp, in fact the difference is hardly noticeable. They also send out pike tackles with wire whippings; "the only fault," they assert, "of which is the dealers' complaint that 'they last too long.'" These wire whippings Messrs. Warner have taken a lot of pains with; as now done, *i.e.*, with a whipping of fine silk first, so that the wire has something to cling to, they are certainly very neat, and without doubt form a protection against the teeth of *Esox Lucius*.

Other specialities of this firm are the "Kelsou Gaff," "Warner's Wedgefast Fitting," "Patent Brake Reel," "Registered Dry Fly Case, 'The Test'" (a very neat and excellent arrangement for carrying eyed-flies), the "Carlisle Wood Case" (made from the original pattern carried by old Dicky Routledge, and which I include in my collection of baskets, bags, and creels), the "Hi Regan" landing-net and handle, several new artificial baits, and last, but not least, some very handsome angler's badges, and lady angler's brooches; the last-named being a well-tied salmon fly (generally, but not necessarily, a Jock Scott), dressed upon a silver or gold hook, with a safety pin attached; the point of the hook is protected with a small knob, and the brooch makes a very handsome present for an angler's wife. I shall get it warm for making this suggestion, so close for fear if I go on longer matters will only be made worse.

A complete One-volume Story, entitled "Wyhola; the Rose of Corve Dale," by Evelyn Everett Greeu, author of "Dorothy's Vocation," &c., is the *pièce de resistance* in *The Quiver* Annual, "Christmas Arrows," to which the Rev. P. B. Power and the Dean of Ripon also furnish seasonable papers.

L. T. Meade has written a new serial story, entitled "Out of Fashion," which will be commenced in the December Part of *Cassell's Magazine*, forming the first part of a new volume. The same number will contain the first instalments of two other serial stories, entitled "You'll Love Me Yet," by Francis Haswell, and "Had He Known," a story of the New Zealand Gold Thirst. The author of "How to be Happy though Married" will furnish a paper "In Praise of the Early Worm;" "A Trip to Jupiter's Moonlet," is the subject of another illustrated contribution; and Mr. J. F. Sullivan provides drawings for a complete story, entitled "The Woes of Mrs. Caractacus Brown,"

Waltoniana

I am sorry to say that the heavy rains of last Saturday night again threw the Thames out of order. At the time of writing it is a bad colour, and only fit for worm fishing. The weather appears so unsettled that it is hard to say whether it will be worth fishing for some days to come.

Here is an interesting fact, or I prefer to call it a statement, not having taken the measurements myself. The Thames drains an area of sixty-five square miles. When an inch of rain falls, an acre of land receives one hundred tons of water. Sixty-five square miles of land, therefore, receives four million tons of water when an inch of rain falls, and as that amount of rainfall sometimes occurs in one day, it is easy to understand why we occasionally have a considerable flood in our chief river. Our rainfall is nothing to what they have in India, where in certain districts as much as fifty feet of rain has been known to fall in the year. Something under thirty inches is, I believe, what we may reasonably expect in England during the year.

Anglers should watch the progress of the American rainmakers with peculiar interest. Imagine what the power of bringing rain means for us. No more low water and sickly bad-rising fish; no more "gin clear" streams in which the finest tackle is observed and remarked on by the fish; no more money wasted in Scotch hotel bills while waiting for the water to rise; and, above all, a thorough defeat of the netsmen in a manner I will presently explain. Everyone who knows anything about netting for salmon knows that once a week the nets have to be taken off to allow a few fish to ascend the river for breeding purposes, and to afford sport to the upper proprietors. In that weekly close-time, or just previous to it, anglers with fiendish glee will set the rainmaker at work, down will come the spate and every fish lying in the estuary will pass to the upper reaches, and during the rest of the week the netsmen will have less and the anglers more. I declare I ought to have kept this idea to myself and patented it. It might bring in a princely fortune. There are many who would give a great deal sometimes to get a few fish past those deadly nets.

But—alas! that there is always a 'but' in these happy auguries—in many places the "rainmakers" have signally failed, and the idea of making a big noise in the sky and so causing the heavens to weep, has not been a signal success. I read indeed of rain being brought down in the neighbourhood of the Croton reservoir, which is somewhere in America, and live in hopes that the story is true. Two hundred pounds of dynamite were sent up into the clouds by means of a balloon, and there exploded, and according to the telegram which was sent two hours afterwards, rain fell and was still falling. At least, that is part of the telegram, for at the end of the message is the statement that James Pain and Son conducted the experiment with their own patent rainmaker, a bomb filled with a new explosive, and weighing 5lb. It makes one's head go round to read telegrams of this kind. Let us hope that there were two successful experiments. By the way, the rainmaker will surely give work to the lawyers. Doe will certainly be bringing actions against Roe for intercepting clouds which were passing over Doe's land, and would have emptied themselves on Roe's estate had not Doe sent up a new explosive and taken all the rain out of them.

Politics are very properly barred in these columns, but, without infringing rules, I think I may venture to advise all our readers who care twopence about the welfare of our fisheries to obtain, whenever they can, pledges from those foolish persons who seek the doubtful honour of representing us in Parliament concerning the support they will give to much-needed legislation respecting our fisheries. For instance, there is the river pollution question. Most stringent laws are required to save our rivers from destruction. I say destruction advisedly, for after a stream becomes badly polluted it no longer remains a river, but at once becomes a drain or sewer. Then there is the Thames question, which urgently requires settling, and public fishing rights should be assured in many waters, where they have been enjoyed unquestioned for ages. Many alterations are required in our salmon and other fishery laws. Now is the time, remember, to obtain pledges. It is much easier to get what you want from the candidate than the member.

Among the various suggestions which have been made recently on the subject of typhoid, are two which should certainly be encouraged. One writer attributes autumnal typhoid to Thames water, which in autumn is a saturated solution of decayed leaves. We should encourage that idea, because two much water is stolen from the Thames, and if it can only be proved that one of the results of the theft is typhoid, water may be obtained elsewhere. Another theory is that many cases of typhoid might be traced to sewage-fed oysters, and a physician who withholds his name (being anxious to "avoid the appearance of courting notoriety") has come forward with remarkable evidence on the subject. He says that a friend of his traced a most grave attack of typhoid fever to a luncheon of oysters served to him in a well-known tavern in Dublin. The oysters were, it seems, brought from a distance and "set forth upon a bank" a few miles from the city. The sewage of a certain town is carried over the bank, with the result that the usually wholesome and dainty shell-fish were dangerously affected. Now this second theory is also one to encourage, for if we can only show that all the famous oysters in the famous beds lying in the mouth of the Thames are more or less infected with the germs of fever, we shall very quickly see "something done;" something effective, I mean, for the great ones of the earth love oysters—particularly natives. Templar.

The Late William Henderson.—A correspondent who read our notice of the late Mr. William Henderson, an old acquaintance of his, with sympathetic interest, agrees with the writer of the genial article that anglers frequently have curious adventures, especially at country inns, where they occasionally have to pass the night. Many years ago our correspondent formed one of a holiday fishing party which fished up to the head of the Wear, and then crossed over the mountains to the head of the Tees. There were four of them—he, a comparative novice in the sport, acting as secretary and paymaster for the company. On Teesside they repaired to a lonely public and farmhouse in Forrest-of-Teesdale, for the purpose of procuring the necessary tickets issued by the Duke of Cleveland's steward, without which they were liable to be treated as poachers. At this—surely the most hospitable inn at which travellers were ever entertained!—they had tea, a whole boiled ham being placed before them. The good host and hostess were "fat sonsy folk," and treated them royally with "the best they had," and were genuinely grieved that they could only "put up" three of their guests. It was arranged that these three should sleep in a double-bedded room, and the other at the schoolmaster's. The evening was spent together very jovially over their whisky, the old gentleman joining in the festivity with honest heartiness; but as ten struck the old lady told them they must all go to bed, "like good bairns," allowing them, however, to sup off the remains of her delicious boiled ham. The next morning they had breakfast together, and succeeded in demolishing the ham, and the three more eager sportsmen left to fish down the river, leaving their accountant to "settle up." On inquiry of the buxom servant lass, it was found that the landlady was "upstairs making the beds," and on her coming down to see "what was the matter," she exclaimed: "Bill, hinny—there's nae bill at aall; for ye've been very welcome to the best we had, all on ye; for ye've kept us all alive, aa's sure." And nothing would the good dame take, either — the old fellow beaming approval upon her from his chair at the "door-cheek"; and a half-crown slipped into the girl's hand was all these travellers paid for their comfortable night's lodging and sumptuous entertainment—the whisky, of course, being "an extra." That fishing party never found any more resting-places like that.—*Newcastle Journal*,

Correspondence

[*We do not hold ourselves responsible for opinions expressed by our Correspondents.*]

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. Pritt.

PIKE FISHING EXTRAORDINARY.

Sir,—I am pleased to find that Mr. Jardine has followed up my analysis of Mr. Andrews's miraculous draught of fish, and clearly proved, from an experienced angler's point of view, the impossibility of such a number (irrespective of weight) being caught in the time specified; and I am much surprised that Mr. Andrews should still persist that there was "no mistake" in his figures, and that every fish taken averaged 6lb. *when first weighed.* These figures were: one hundred and ninety-six fish, 1,033lb., together with one each 15lb., 13lb., and 16lb.; giving an average of only 5lb. 5½oz. each, not including the three specially referred to. A 6lb. fish must be kept a very long while before weighing to lose nearly ¾lb. But apart from this he does not say why the seventy-eight fish caught on the third day, and averaging 4lb. 10½oz. each, were included in the take, if, as he asserted, all fish under 5lb. were returned to the water. If these weighed 6lb. each when first taken, they were past being fly-blown when weighed to have lost 1lb. 5½oz. each.—Yours faithfully, G. R. Hunt.

Dear Sir,—I have been very much interested with the correspondence relating to the great take of pike and perch by Mr. Andrews, of Maidenhead, and particularly with Mr. Jardine's letter in the *F. G.* of Nov. 28. I look upon Mr. Andrews's take of pike as a "miraculous one." Only fancy! two hundred and thirty-four fish, in fourteen and a-half hours, and a lot of jack returned to the water beside. Mr. Andrews must be a past and present grand master of the gentle art, to be able to bait the hook, make a cast, play a jack, and land it in two minutes.

I have the credit of knowing how to fish; the best bit of jack fishing I ever did was with my old friend, Mr. Tucker, fishing in the great Ouse, near St. Neot's, when in one hour and thirty minutes I caught twelve jack, paternostering. This was one in every seven minutes; I can assure you I had not a moment to spare. I have thought many times I should be a good candidate for honours, but now, having seen Mr. Andrews's reply to Mr. Jardine, I have comfortably settled myself in a back seat.—Yours very truly,

Alfred Mackrill.

P.S.—Will Mr. A. now go in for the cake and copper kettle?

FISHING IN THE MEDITERRANEAN.

Dear Sir,—I purpose spending the first three months of next year in the Mediterranean, calling at most of the principal ports. If any of your readers would give me some information about the fishing to be done (fresh and salt water), I shall feel very grateful. I am anxious to limit my luggage as far as possible, so do not want to take a lot of rods and tackle, and find there is no use for them; at the same time I would not like to miss a chance of sport.—Yours faithfully, C.

Constitutional Club.

A CORRECTION.

Sir,—Your correspondent who supplies the "Notes from Lancashire" got rather mixed in his kindly description of my lecture to the members of the Northern Anglers' Association on Nov. 12, as reported in your issue of Nov. 21. It was a *trout* (not a salmon) which I landed between two perch whilst fishing with fly in Loch *Leven* (not Loch Awe); and it was a salmon only which I landed on a small fly with fine trout tackle in Loch Awe, an account of which appeared in the *F. G.* of June 20.

Ananias is credited with having many direct descendants amongst anglers. If the above incidents, which your correspondent rolled into one, are allowed to go unexplained as reported, I am afraid that I may be credited with an ancestor in my pedigree whom I am anxious to disclaim.—I am, yours, &c., C. P. Roberts.

St. John's Rectory, Longsight, Manchester.

RE SLAUGHTER OF JACK IN THE THAMES.

Sir,—In reply to "Anti-Esox Lucius," I do not think myself that the extermination of pike in the Thames would make any noticeable difference in the number of roach, &c., in the river; and even if it did, surely the addition of a few roach, &c., would not compensate us for the loss of so game a fish. Your correspondent says, "that given a hungry jack, any novice can kill it;" that may be so when the fish is mad on the feed, but does not that apply to most other fish? And, after all, if the fish are not feeding well, I think that there is quite as much credit in taking a good basket of pike, as there is in making a good catch of roach, &c. We do not want to exterminate any of our fish, but increase them by every means in our power.—I remain, Sir, yours truly,

Esox Lucius.

[And so say most of us.—Ed.]

Dear Sir,—If all the pike in the Thames are to be exterminated because "Anti-Esox Lucius" has so low an opinion of pike fishing, we shall have the late Frank Buckland's mighty salmon-fisher, who declared there were only two kinds of angling—salmon and gudgeon—insisting, if he be yet alive, on the destruction of all the trout and perch as well. Surely we may be thankful that in this wicked world there are pike as well as carp and gray mullet.—Yours, truly,

Plymouth. C. G. D.

Sir,—"Anti-Esox Lucius" wishes to know why trouble to protect pike or jack in the Thames which affords sport for better fish. I think the pike is one of the best to give sport, and should be protected quite as much as any other class. The pike in a river like the Thames does not destroy the number of trout that it is given credit for, as it does not frequent in any number the same haunts as a trout; and even supposing it did, being a well-known fact, the trout is one of the quickest fish we have, and given the space of water the Thames affords it is long odds on the trout escaping if pursued by a pike. Referring to the remark that, given a hungry pike, any novice can kill it, that may be true should the novice be successful in getting a run with tackle that would tow a small boat; but let a novice try and kill a pike of 9lb. or 10lb. spinning with a single-gut trace and hooks dressed on finest gimp, and he will find he will have some good work, not mentioning sport, to laud it.—Yours faithfully,

Eton. J. C. Howlett.

EELS.

Dear Sir,—Would not Stewart tackle with the three hooks on the same side, be more killing for eels than a single large one, baited in either case with a lob-worm? It seems to me that small fish have a great difficulty in getting the large hook into their mouths. By small fish, I don't mean mere boot-laces, but any eel up to ½lb. I should say that bristles would do well for mounting such Stewart tackle.

It is perhaps curious that in Suffolk "bobbing" for eels is called "babbing," whilst in Devonshire "clotting" is called "clatting."

Books on sea fishing insist that baits for conger must be soft, the backbone and principal bones of fish-baits to be taken out, and so on. If a conger draws the line at the rib of a herring, how is it he doesn't draw it at the big hook partially concealed in the bait? As a matter of fact, we know he swallows the hook first, and then begins to draw the line! A large hook, baited with beaten squid, hardly looks a soft morsel, and the conger who takes it is the soft, to the thinking of yours truly,

Plymouth. C. G. D.

[The great objection to the Stewart tackle for eel fishing is the difficulty of getting even one hook out of the mouth of an eel.—Ed.]

LARGE ROACH.

Dear Sir,—In reply to "Inquirer" of last week's *Fishing Gazette*, I beg to state that the Sussex Piscatorial Society have in their possession a roach weighing 2lb. 3oz. It was caught by Mr. W. J. Holland (one of our members) on the 4th of February, 1889, in the Ouse, whilst legering with lob-worm. The river was in heavy flood at the time.—Yours very truly, W. C. F. Gillam,

Assistant Hon. Sec. S.P.S.

THE POULTRY SHOW AT BIDEFORD.

Dear Sir,—In answer to your correspondence in the last two weeks' *Gazette*, there were seven entries in Class 35 for fowls, the plumage of which is suitable for manufacturing flies. J. D. Bastard, Torrington, took the first prize with a cock and hen slate colour Blue Duns. They were bought by Mr. Thornton. Mr. Bastard has six pullets, splendid birds; and two cockerels, bred from the first prize Stag. The best colour young Stag in the show was in the selling class, which has since been purchased by

Practical Angler.

STEEL FISHING RODS.

Sir,—I have been looking anxiously in the *Fishing Gazette* for some time past for some notice or correspondence about steel rods, but have been disappointed to see no mention of them. They have already appeared in Vienna, and are of American make, and as far as I could judge from handling them in the shop, have many good points. They are made from the small-sized fly rods to the larger-sized spinning rods. The parts are of steel tubing, and are extremely light. The spinning rods are telescopic, with the line running through the middle. The fly rods are joined in the ordinary way, and have rings for the running line.

I should be extremely obliged if you, or one of your correspondents, would inform me how these rods behave in practice.—I am, &c., W.

[We have used an American steel rod once or twice this season as a fly rod. We found it not so bad as might be expected, but not to be named with wood rods for this purpose. An English gentleman called on us recently with a steel rod of his design, which we consider the best thing of the kind we have yet seen.—Ed.]

FLIES FOR CEYLON FISH.

Sir,—A friend, who is stationed in *Ceylon*, writes to ask me if I can procure for him flies suitable for catching a fish there called "lulee," also another somewhat like a grayling.

He says in a river near where he is these two fish rise well to a fly, and are good eating.

I have never heard of them; therefore I venture to ask if you, or any of the numerous readers of the *Fishing Gazette*, can help a fellow fisherman in that far-off country by informing me what *pattern* and *size* of fly is most suitable for the rivers of Ceylon, and *for these fish in particular*, and where I can procure them.—I am, Sir, yours faithfully,

A. B. Wallis.

50, Forest-road, West Nottingham.

NOTES FROM WORCESTER AND DISTRICT.

The Severn is in good order for fishing, and during the week many anglers have been out, and had good sport among the coarse fish. Some capital baskets of roach have been taken, and a grand lot of flounders, many of them 8oz. to 12oz. weight; the pike also have been going well at both artificial and natural baits, no doubt being hungry after the late floods.

Foggy nights, with frosts, and a bit of sunshine in the middle of the day, have just suited the grayling, and sport in the Teme has been good, though no great takes have been made, about three brace of grayling being about the average, with some fine dace in addition.

The decision of the Severn Fishery Board, at their recent meeting, not to extend the close time of salmon, has given great satisfaction in this neighbourhood, as it was felt that it would be wrong to deprive the public of this splendid fish when in its best condition, while it would be most disastrous to the welfare of that needy body of men, the fishermen, whose condition in the last few years has been far from good.

The Worcester United Angling Society held their sixth annual dinner at the Union Inn on Friday, when a capital spread was provided by Host Halley, to which about fifty members sat down, the duties of the chair being divided between Mr. Haycox and Mr. R. Wingfield, in the unavoidable absence of Mr. E. H. Bowen, the president of the district, who was to have presided. The secretary (Mr. A. Glover) looked well after the comfort of those present. A letter of apology was received from the Hon. G. H. Allsop, M.P., who enclosed a cheque for a guinea. The usual toasts followed. The chairman gave "Success to the Worcester United Angling Society," which was responded to by the hon. sec., who said the club had had a very successful season, and was in a flourishing condition. He thanked Mr. Bowen for his splendid present to the club, through the district secretary, and referred to the competitions they had enjoyed through the Editor of the *Fishing Gazette*. Mr. Wingfield distributed the prizes. Among the winners were Messrs. R. Gardner, T. Williams, and J. Slade, the former taking the challenge cup for the second season. Some excellent harmony was contributed by several of the members, and a very pleasant evening was spent.

NOTES FROM YORK AND DISTRICT.

ON Saturday the heart of many a gallant angler beat high for the Yorkshire streams—which have of late been in a somewhat adverse condition to good fishing—were reported, on every side, to be in "right trim." The grayling season is, indeed, quickly slipping away, and so far, taken as a whole, it cannot correctly be said to have "broken the record." However, on the two or three closing days of last week, the rivers for a brief period assumed, once more, their normal level, and anglers "turned out" to their favourite pastime. Grayling and pike fishing on the Yore has been fairly satisfactory, although in some instances the former fish has been somewhat backward at allurement. Two or three slight frosts have also materially improved matters. The Swale, at Richmond; the Nidd, at Pateley Bridge; and the Derwent, at Hackness and Malton, have also been productive of better sport. More heavy rains have, unfortunately, this week again interferred with our chances of any very exceptional sport with the grayling, for with flood after flood the fishing is absolutely worthless.

As regards the Ouse, it cannot be said that the latter part of the season has been successful. But then there has been an exceptionally heavy time for roach, and many are the baskets which had been taken by local piscators. I would not like to give an estimate of the amount of fish which have been extracted during the last three months, but I should confidently state that it would go into tons. Of course during the period that floods have been on the rise—and there have been many this year—coarse fishing had to be practically suspended; but, taken altogether, the season 1891 can boast as being the best on record as regards roach, and a fairly good one in respect of other kinds.

THE Wharfe was evidently in capital trim on the closing days of last week, and the fish in an equally amiable mood. The following very interesting paragraph, as evident proof of my statement, I abstract from Tuesday's *Yorkshire Evening Post*, the authenticity of which no angler who knows the gentleman concerned will, I think, be inclined to doubt. "That well-known Yorkshire angler, 'Max' Walbran," says the paper, "seems to be just at present amusing himself by breaking angling records. After visiting the famous club water in Hampshire and catching their heaviest fish, he returns to Yorkshire, and on Friday last, on the Upper Wharfe, takes twenty-eight grayling, weighing 23¼lb.; following this up the next day with ten more fish, scaling 8lb.; making 31¼lb. in two days. A curious coincidence is that on the same water, on the corresponding two days in the same month two years ago, he caught forty-four grayling, weighing 28½lb."

THE memorials which have been signed by nearly all York anglers, with reference to anglers' fares on the Lancashire and Yorkshire, and London and North-Western Railways, were discussed at a meeting of the Northern Anglers' Association, held on Saturday last at Manchester. Amongst those present were Messrs. J. W. Addyman, Leeds; J. Walter Sykes, Huddersfield; and J. W. Blakey, Scarborough. It was pleasing to find that the memorials had been signed by 5,791 anglers residing chiefly in Lancashire and Yorkshire, as it shows that great interest was taken in the movement. The three schemes, which have been given at length in the *F. G.*, were discussed, and will be laid before the officials of the companies. Under them the society will become responsible for the honesty of the rodster who travels at special rates, and I shall be glad to hear of either one of them being adopted.

THE salmon fishing season in the river Esk this year would seem unprecedented in local annals, for, according to the report presented at a statutory meeting of the Board of Conservators for the Whitby Esk fishery division, held on Saturday, no less than 1,316 salmon has been taken out of the river by the rod; one angler being credited with having himself caught one hundred. This is the largest number ever known, and about four times more than that of last season. Large quantities have also been taken at sea by net fishermen. Mr. W. H. Rhodes rose to move a resolution restricting the time of the weekly close season for net fishing at sea. In doing so he said that the Whitby Esk as a salmon river was now second to none in the north of England, and, unlike so many of the great rivers, quite free from pollution. It was their duty as a board to protect the fishery as much as possible, both in the interests of the sea fishermen themselves, of the visitors, of anglers generally, and of owners. Certain concessions had been allowed to sea fishermen, but, as had been proved in the Police Court, they had been abused. He therefore moved that the concession granted last year be withdrawn. As against the motion, it was argued that the river was never more plentifully stocked with fish than at the present time, and as only one isolated case of poaching had been proved, it would be a pity to punish the whole of the fishermen for the delinquencies of one or two. On a vote being taken the motion was lost by a majority of one. Mr. Rhodes further proposed to prohibit the use of nets on each side of Whitby Harbour, measuring a mile each way. The motion was again lost, but it was generally conceded that there should be some restriction in this direction, and Mr. Robinson gave notice that at the next meeting he should move that a playground of 400yds. be reserved for sea salmon. Mr. J. H. Barry was appointed to represent the board on the North-Eastern Sea Fisheries Board.

AT a meeting of the Tees Fishery Board, held at the Darlington Police Court, on Monday, the Right Hon. James Lowther, M.P., in the chair, the question of repairing Dinsdale Dam came up for consideration. Plans had, it was stated, been laid for the removal of the timber, &c., in the existing pass, and it was considered to be an experiment worth trying. A letter, however, had been received from Messrs. Surtees, approving the suggested experiment, subject to the Board being responsible for damage direct or indirect, and the renewal of the work if required, if the timber and steps were removed. The finance and watch committee, however, thought if the work were carried out, it should be at the expense and risk of the owners of the dam. Some considerable discussion followed. Mr. J. H. Bell explained that the committee were anxious not to commit themselves in regard to the matter, seeing that the dam was such a detriment to the river. They hoped to get it swept away altogether, and therefore were anxious not to compromise their position. Mr. Brewis stated that the committee were under the impression that Messrs. Surtees were bound to provide such a pass as the Board of Trade wished. He thought they had got nearly to the time when negotiations should cease. The chairman doubted whether they should give up all attempts at negotiation, and embark on a litigious process. He should be sorry if that were done. It was ultimately resolved to leave the matter open by withdrawing the latter part of the committee's resolution. The chairman next called attention to the financial position of the Board. They must either raise the income or lessen the expenditure, and he suggested they should lessen the paid watchers on the river. A circular had been sent requesting the co-operation of riparian owners, by means of their gamekeepers, and this plan, he said, was adopted on the Derwent and other rivers. Mr. Chayton was of opinion that private watching was not effective, and preferred higher licence rates for rod and line to dismissing watchers. Colonel Scurfield said that formerly fish could get up. Now the Dinsdale Dam prevented them, and they could not get up to spawn. They wanted the dam away and the sewage kept out of the river, to improve fishing. Mr. Brewis thought that they might right themselves without diminishing their watchers, and after further discussion the matter dropped. Mr. Chayton was re-elected on the North-Eastern Sea Fisheries Committee, and the Board adjourned.

NOTES FROM TYRONE.

THE frequent and heavy rains have raised all the rivers, and so discoloured them that pike spinning is impossible.

ON the Lakes Roan, Carnteel, Eskeragh, Farlough, &c., very little has been done among the perch and pike, both at present being feeding very indifferently.

AT the last Crumlin Petty Sessions, two fishermen named Andrew Moore and John O'Hare, respectively, were prosecuted by Mr. William Savage, Inspector of Fisheries, for that on the 9th ult., they had a number of stake nets set on the shores of Lough Neah, for the purpose of taking fish during the annual close season. Evidence of the case having been given, the Bench fined the defendants in £2 each. At the same Court, George McCord, Ballinderry, was fined in £2 10s. for carrying a gun without a licence.

THERE is no accounting for the taste of trout in taking lures. Some time ago I heard the following anecdote. An angler, Mr. Robert Simpson, who, I regret to say, has passed over to the great majority, was fishing the Kingsmill tributary of the Ballinderry. Several times he rose a heavy fish at a small blue fly at the tail of his cast, but he failed to hook it. Finally, losing patience, he plucked a full-blown *Pea Blossom*, and put it on, and at the first cast fastened into the trout. A sharp five minutes' play followed, and at the expiration of that time, Mr. Simpson landed his fish, which proved to be a prime ten-pounder. Often and often afterwards, he tried to induce the trout in the Kingsmill Brook to take the Pea Blossom, but never was successful.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly meeting of the General Committee will take place on Monday evening next, Dec. 7, at 8.30.—R. GHURNEY, sec.

Anglers' Association. — VISITING LIST, EASTERN DISTRICT NO. 2.—A return visit on the above list was paid the St. John's Angling Society on Monday, Nov. 30, and was a success, as twenty-eight clubs were well represented. Many had come a long journey to hear Mr. Howard read his promised paper, but unfortunately Mr. Howard was too unwell to attend, so the promised treat is still in store. Mr. Simms kindly gave an interesting lecture on "Coarse Fish Hatching," which was listened to very attentively by the company, after which the remainder of the evening was devoted to harmony. A vote of thanks, with musical honours, to the chairman, Mr. Tibbatts, brought a most enjoyable evening to a close.—F. THORLING, visiting officer.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—The next visit on the above list will take place on Tuesday next, the 8th inst., at the Blackfriars A.S., Winchester Arms, Southwark-street, Southwark Bridge-road, where I hope to see a good muster of brother anglers.—G. W. ARMSTRONG, District Officer.

Anglers' Association. — WESTERN DISTRICT. — A successful visit was paid to the Bostonians on the 23rd ult. Upon the roll being called, twenty-two clubs responded. The A. B. box was opened, and found to contain £1 15s. The next visit will be paid to the Camden Angling Society, on Monday week, Dec. 14, at the Royal Exchange, Hartland-road, Camden Town, when I hope to see a good muster.—J. JENNINGS.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge with thanks the receipt of £1 15s. from the Bostonian, and 14s. from the St. John's Angling Society from their donation boxes; also a donation of 2s. 6d. from the North Lambeth Angling Society. The next meeting of the committee will take place on Friday evening, Dec. 11, at 8.30.—R. GHURNEY, sec.

THE LONDON UNITED ANGLERS' SOCIETIES' FOURTH ANNUAL ANGLING COMPETITION, in aid of the funds of the Anglers' Benevolent Society.—On Thursday, the 10th, the prizes will be distributed at the Foresters' Hall, E.C., after the lecture by Mr. F. M. Walbran. Gentlemen who have won a prize must attend by eight o'clock. Winners to have their choice by rotation. Any winner absent will lose his choice; the next one present to choose. List of prizes: A tackle case (fitted), presented by Mr. Sowerbutt; a roach rod, presented by the late Mr. Sowerbutt; porcelain figure, presented by Mr. G. Wood, Hoxton Bros. A.S.; helmet (under shade), presented by Mr. C. Slade, Dalston A.S.; fishing box, presented by Mr. Webbe, Dalston A.S.; marble clock, presented by the Globe A.S.; a tobacco stand, presented by Mr. Hewett, Good Intent A.S.; ebony walking-stick, presented by Mr. Abrahams; gold signet ring, presented by Mr. Abrahams; roach box, presented by Mr. Medcalf; gold pin, presented by Mr. Farebrother; cardigan jacket, inkstand, electro biscuit box, electro butter dish, album, twelve spoons, carving knife and fork, and tobacco stand, presented by the Langley Competition Committee; hook book (fitted), presented by Mr. P. Wood, of Huntingdon; ink stand, presented by the Sociable Bros. A.S.; half-a-dozen knives and forks, presented by the Prince Arthur A.S.; telescope handle net and ring, presented by Mr. Patman; electro coffee service, presented by the South London A.S.; electro tea-pot, presented by the Dalston A.S.; electro cruet, presented by the Dalston A.S.; silver watch, presented by the Izaak Walton A.S.; cardigan jacket, presented by the Bermondsey Bros. A.S.; a pair of fret cut brackets, presented by Mr. Smith; prize, presented by Mr. Teazle; a walking-stick, presented by Mr. Titford; set of carvers in case, presented by the Campbell United A.S.; a tea urn, presented by Mr. Levett; prize, presented by Mr. Shrubsole; prize, presented by a Friend; a pair of lustres, presented by the Hoxton Bros. A.S.; pair of boots (to measure), presented by the Original Alexandria A.S.; a bottle of whisky, presented by Mr. Carter; reel and line, presented by the Ealing A.S.; gentleman's umbrella, presented by the Royal Small Arms A.S.; a tackle case, presented by Mr. Burwash; prize (value 10s. 6d.), presented by the North London A.S.; jack rod, presented by the Marylebone A.S.; marble clock, presented by the Good Intent A.S.; prize (value 5s.), presented by Mr. Cuthbert. The committee to be present at 6.30 p.m. P.O.s received from Marylebone, Hoxton Bros., Convivial, Havelock, and Camden Angling Societies.—S. MALBY, sec.

Aberdeen Amateur Rock Fishers Association.—This most interesting association of sea anglers held their annual social meeting and distribution of prizes on Saturday last, under the presidency of Mr. Worling. The association numbers one hundred and fifty members, and they had secured many mutual advantages such as reduced railway fares, fortnightly competitions, &c. The weight of baskets sent in for competition last year aggregated 1,323lb., or 11cwt. 93lb., and this is only a part of the produce, and a very small one gathered from the sea off the rocks round the Aberdeen Coast by artizans and others chiefly on Saturday afternoons. Such a large addition to the dietary of the working man deserves every encouragement over and above the other advantages which accrue to the toiler in the mill, &c., by having his sporting proclivities indulged in without let or hindrance. Next year there is to be a new departure, and the prizes given at the fortnightly competitions are to be shared with the ladies. The prizes won last season were distributed as follows: Silver cup, presented by Mr. R. Bruce, St. Andrew's, to James Wilson; silver medal, by Mrs. Falconer, to George M'Leod; silver medal, by Mr. Bruce, to Alexander Moir; silver medal, by Mr. W. Laing, tacklemaker, to Mr. Andrew Angus; silver tea service (four pieces), by the association, to Mr. P. Robertson, along with a tablecloth and hook-book; silver albert and reel by the association to Mr. James Robertson; hook-book and hooks to Mr. Charles Massie; fishing basket, &c., to Mr. J. Woodman; horn jug and hooks to Mr. P. Webster; reel and line, to Mr. J. Brown; basket and hooks, to Mr. G. Ritchie; walking-stick and hooks, to Mr. E. Riddel; fishing-rod and bait can, to Mr. J. Campbell; hook-book, to Mr. Andrew Mackie; fishing lines, to Mr. William Geddes; hook-book, to Mr. George Garvie, &c,—G. M.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting Hill-gate, W. —Several members met as usual, and it was announced by the secretary to meet next Wednesday at nine p.m. sharp, to arrange a match for our Christmas prizes, and also we form a slate club the same evening; any member can join. There is a silver cup under shade for a specimen jack. Hoping the dear old disciples of Old Izaak will be on them. Several out at Langley on the 29th ult., but no luck. Don't forget Forester's Hall on the 10th December. A grand night; all be there in shoals.—B. ABRAHAMS, hon. secretary.

Alma Angling Society, Crown Distillery, Vere-street, Clare Market.—On the 29th ult., H. Wilson saved us from a blank with jack. I wish to remind members that we hold a special meeting on Tuesday, December 8, when some special business will be brought forward. Also that our next outing takes place on the 13th, at Ware, from the engine house to the bridge; one rod to be used.—J. PAILES, secretary.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—I wish to remind members that the business relating to our proposed match at Byfleet, which should have taken place on Dec. 6, will stand over till Wednesday next, when I trust some of the members will try and put in an appearance.—W. H. POTTER, secretary.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Members are requested to attend next Wednesday to arrange our next outing. Several of ours were out on Nov. 29, the most successful of them being Mr. D. Cooper, who took the 3rd prize at Pulborough, also taking a special prize for the largest bream. The smoking concert, which took place on Tuesday last for the benefit of Mr. H. Lovett, was a grand succes.—J. RICH, secretary.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 29th inst. several of our members were out, and a very good show of fish being the result. Mr. Reed had a very nice show of roach, dace, and chub; Mr. Humphreys, bream; Mr. Embleton, junr., bream; Mr. Lambarth, junr., bream; Mr. Whitebread, bream; Mr. C. Irwin, roach, dace, and bream; and Mr. Loosly, a very nice show of dace; Messrs. Humphreys, Whitebread, Irwin, and Lambarth, junr., being the successful members in the Pulborough Competition.—E. R. EMBLETON, sec.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The special general meeting was held on Wednesday, with a full room. Members are notified that we shall decide next Wednesday where to fish for the December series of prizes, so I hope they will attend early. The next visit on the South London United Visiting List, will be to the above society on Monday, December 14, when I hope to have the pleasure of a good reply to the roll-call.—A. G. SMITH, sec.

Anglers' Pride Angling Society, the City Arms, Great Dover-street, Old Kent-road.—Several members were out on Nov. 29, but the show of fish was not great. I wish the members would strive to attend more regular on meeting nights. I hope they will bear in mind Dec. 16, quarterly night, when books must be cleared, or be fined. We fish for our monthly prizes on Dec. 13, at Windsor, all to start by first train.—J. TUCKER, hon. sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—The members of this club will fish a punt match, at Staines, on the 6th inst.; all to go down by the train leaving Clapham Junction at 8.45; five prizes. The Christmas prizes will be fished on Dec. 20, and those not taken will be drawn for; open to honorary members.—GEO. MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—Several of our members took part in Mr. A. A. Eldridge's Competition, at Pulborough, on Nov. 29, two of them (Mr. H. Patman and Mr. D. Dodson) being successful. On the same date Mr. J. Warman weighed in a nice show of roach, 10lb. 2oz., largest fish, 1lb. 5½oz. The competition for the December series of prizes will take place on the 6th inst.; place and conditions to be decided at the meeting on the 4th inst.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—Only a few of our members, ten in number, went to the match at Sunbury on the 29th ult., with the following results: Messrs. Foster, Farmer, and Hacker, trying for first prize with roach, dace, and perch; Mr. F. Barker, dace, and Mr. J. Barker, roach and dace. On Wednesday we started with our list of Christmas prizes to be fished for on the 20th December. I hope to see a good muster next Wednesday to settle one or two questions. The next visit on the Anglers' Association List (Southern District) takes place on Tuesday, Dec. 8, at this society.—F. ROBERTS, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 29th ult., the following weighed in: Mr. T. Davis, jack and perch, heaviest perch 1lb. 6oz. I hope the anglers on the Clerkenwell District Visiting List will not forget that it is our return visit on Monday next, Dec. 7, as I see there is another club enrolled on the Clerkenwell. Our members will fish for Christmas prizes at Windsor, from Boveney Lock to Surly Hall, on Dec. 13. All those who wish to compete must put their names down on Wednesday next.—D. WARREN.

Brompton Angling Society, Grove Tavern, Beauchamp-place, S.W.—On Nov. 29, the competition for the brewers' prizes took place at Cookham, only fourteen members turning up. The result was as follows: Myself first, Mr. F. Briggs second, Mr. Robson third, and Mr. Coombes fourth. I saved a blank this evening, with a few roach and perch.—H. ROACH, sec.

Brothers Well-Met Angling Society, Berkeley Castle, Rahare-street, Goswell-road.—Some of our members competed on Nov. 29 for our daily prize, which was won by Mr. Elderton, with 10lb. 8oz. of roach and perch; Mr. Harris being second with 5lb. 2½oz. of roach and dace. The concert on behalf of the widow of the late Mr. Sutcliff did not turn out as well as I expected. I did not see any of his old angling friends there. We have not been able to settle the gifts, as of the tickets sent out hardly any have been returned. If any club or friends have any they must be sent in to the Berkeley Castle by Tuesday evening, Dec. 8, or they will not be entitled to the gifts, which will be ready for the winners by Thursday evening, Dec. 10, after nine o'clock.—HY. TAME, sec.

Brunswick Brothers Angling Society, Cherry Tree, Brunswick-road, Bromley, E.—Since last report Mr. Watkins has weighed in chub, roach and dace. Mr. J. Mearring, jack, and Mr. Wilson, perch. We fish for six Christmas prizes on Dec. 6, on the Chelmer, from Little Baddow Mead to Boucham Bridge; all to leave Stratford by 7.45 train.—T. HAWKES, sec.

Burdett Angling Society, 118, Hackney-road.—Only two of our members weighed-in, on Nov. 29, several of our members were out, but met with bad luck. Mr. D. Flint had 7lb. of jack, and Mr. W. Eaton had a very fine chub, weighing 2lb. 12½oz., and in its prime. Our distribution night is on Dec. 16. I hope members won't forget.—J. PETHER, sec.

Burton Piscatorials, Globe, Derby-street, King's-cross.—The sweepstakes at Cookham on Nov. 29 were a decided success. All the prizes were won with an excellent show of fine roach and dace, contributed by the following winners: C. Roberts, 1st, 1lb. 10¼oz.; W. Hill, 2nd, 1lb. 12¾oz.; A. Richards, 3rd, 1lb. 10½oz.; J. Wilson taking 4th prize. Messrs. Field and Sturman also weighed in. The handsome book presented by Mr. J. Roach, the esteemed secretary of the Golden Barbel A.S., was won by C. Roberts; and a bound volume of the *Fishing Gazette* by A. Richards, for the best two roach taken during the day.—C. ROBERTS, hon. sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On 29th November, Mr. King had a nice show of roach; Mr. Sartain, roach. Members will greatly oblige by showing up in full force on Wednesday next, as we have some very important business to dispose of. The next return visit on the Western District Anglers' Association, will take place at the above, on Monday, Dec. 14, when we shall be pleased to welcome all anglers and friends that can make it convenient.—E. T. WHITE, sec.

Canning Town Angling Society, Marquis of Salisbury, Hermit-road, Canning Town, E.—Several of our members were out on Nov. 29, but met with poor sport, Mr. G. Cooper, jun., saving us from a blank with a nice little tray of roach from the Stort. I should like to see our members attend the meetings a little more regularly. I should like to see a good muster on next meeting night, to arrange for our Christmas prizes.—O. JONES, sec.

Central Association.—The monthly delegate meeting will take place at the Bedford Head Hotel, Maiden-lane, Covent Garden, W.C., on Monday next, 7th inst., at 8 30 p.m.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—On Nov. 29 the following members weighed in fish: Messrs. A. Turner, 11lb. roach; T. Jameson, 1lb. 6½oz. roach; A. Chapman, 2lb. 9oz. roach; and A. Painter, 4lb. ½oz. On the 26th ult. we sat down to a supper which was competed for on the 15th ult., and am pleased to say it was a success. Members are requested not to forget the Christmas outing.—A. TROWBRIDGE, sec.

Clerkenwell and District United.—The next visit on the above will be to the Bloomsbury Brothers, held at the Rose and Crown, High-street, Bloomsbury, on Monday evening next, December 7, they deserve a good meeting as they are one of our best visiting clubs. I beg to call the attention of the Barbican Angling Society to the fact that this date was published in *Fishing Gazette*, on Nov. 21.—F. CASTELL, hon. sec.

Cliftonville Angling Society, Cliftonville Hotel, Ilderton-road, South Bermondsey.—The visit on the S.L.U. List on Tuesday last was a grand success, fourteen clubs being represented notwithstanding the bad weather. The committee wish me to express their thanks to those gentlemen who so kindly gave their services, especially Mr. Pinchback, who presided at the pianoforte; also, to Dr. Dugon for his violin solo.—G. GARDNER, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—The following members weighed in on the 29th inst.: Messrs. G. Percival, roach, 2lb. 12oz.; A. Duncan, roach, 1lb 12oz.; T. Twyman and A. Smith, dace, Mr. G. Percival winning the November gross weight of roach from the Thames, total weight, 11lb. 6oz. I hope members will attend and settle up for concert tickets.—A. SMITH, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 29th ult., several of our members were out, but the only gentlemen who had any sport were Messrs. Webber, Legge, Parram, Wild, and Wright, who had a very nice show of roach, perch, and dace.—S. MALBY, secretary.

Epsom Angling Society, The Wellington, High-street.—Two of our members were out on Tuesday, and weighed in a nice take of roach and two bream, weighing 23lb. We are looking forward to a good muster on Monday evening next, when Mr. G. E. Simms will read a paper on "Coarse Fish Hatching." The chair will be taken at 8.30 by Mr. E. S. Shrubsole, and several gentlemen, well-known in the angling world, will be present. An instructive and enjoyable evening may be anticipated.—G. M.

Eustonian Angling Society, King's Head, Swinton-street, King's Cross.—On the 6th inst. we fish at Cookham for two prizes, first ten shillings and sixpence given by Mr. Farner; second, a handsome cup given by Mr. E. Marshall, sen. On Nov. 29th, very little fish was weighed in.—R. NEALL, sec.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On Nov. 29, four of members weighed in the Pulborough Competition, Mr. G. Watling winning first prize, and Mr. F. Vanhegan last. Mr. S. Hill would have won the first, but was too late to weigh in. This makes the fourth first prize that has come to this club this year. Mr. G. Watling wishes to thank those anglers and friends who so kindly assisted him on the occasion of his benefit. There are still two or three prizes not claimed, and if not owned by Dec. 12 will be forfeited.—J. W. BIGGS, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, We were saved from a blank, on Nov. 29, with a few roach, taken by Mr. Stebbings. Other members were out, but no luck. Monday next, Dec. 7, is quarterly night, when I hope to see a good muster.—A. P., sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road, W.—The following members weighed in on November 29: Mr. J. Porter, a fine show of roach; Mr. Jones, roach and dace; Mr. Bryant, roach, chub, and dace; Mr. Stokes, roach; Mr. Ellins, a fine show of roach, dace, and chub; Mr. Deperron, jack; Mr. Monk, dace; and Messrs. Clark, Chapman, Fellons, Green, and Park, roach, perch, and dace. On Tuesday it was decided to go by the nine o'clock train to fish for our Christmas sweepstake; one rod only to be taken, and all to meet at Bolter's Lock on Dec. 6.—J. STOKES.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—The members will fish for ten prizes on December 6, at St. Margaret's; all start by the nine o'clock train a.m. On the 1st inst. Mr. Edgar S. Shrubsole gave a very interesting lecture on creels, bags, and baskets, at our club. Our large room was filled with a very attentive audience, the lecture lasted over an hour, there was a large quantity of bags and baskets and creels, close on one hundred in number displayed on a raised platform that showed them off very nicely. At the finish a hearty vote of thanks was accorded to the lecturer, who under the auspices of the Society for the Reading of Papers at Angling Clubs, was highly appreciated by all present. Mr. H. J. Tibbatts presided in his usual able manner, and was also accorded a very hearty vote of thanks; also Mr. Simms of the *Rod and Gun*, who is also doing such good work among angling clubs, was accorded a hearty vote of thanks. Everyone was highly pleased, with the interesting proceedings.—R. MURPHY.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—Several members of the above club were out on Nov. 29, but sport was bad. Mr. J. Grande only weighed perch and roach, saving a blank.—G. F. WEAVER, sec.

Gresham Angling Society.—The usual weekly meeting was held on Tuesday, with Mr. G. H. Field in the chair. A new member was elected. Mr. Close reported having fished at Flander's Weir, and Dr. Davidson at Deal. Mr. Gilbert weighed in twenty-one roach, caught in the Thames, one weighing over 1lb.; and Mr. Parker had been having some sport with whiting and flounders at Burnham. Mr. Close informed the meeting that the late exhibition of mounted fish tackle held at this society had been so much appreciated by some of the visitors, that an effort was about to be made by some other societies to get up a similar exhibition, which might remain open for a considerable period, probably three months. Mr. E. H. Bramley, on behalf of the subscribers, presented the society with a splendid album, designed to contain two hundred and fifty-four portraits, and on the motion of Dr. Brunton, the secretary was desired to ask the president, vice-presidents, and other officers and members, to send in their photographs for insertion. A unanimous vote of thanks was accorded to Mr. Bramley for the trouble he had taken in getting such a magnificent book at a very small cost. Next Tuesday, the 8th, there will be a paper by Messrs. Norman and Fletcher, on "Angler's Dodges and Contrivances;" and on Tuesday, the 15th, a smoking concert.—JAMES TAYLER, sec.

Havelock Angling Society, Royal Oak, Whiston-street, Haggerston.—*Re* prize competition on December 6, Rye House to St. Margarets Bridge. All members competing in the above to be eligible must meet by 10.30 a.m., at the Old Highway Tavern before starting to fish; also return to same house by five p.m. to show all fish that may have been taken.—W. YOUNG, sec.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On Nov. 29 several of our members were out for the Christmas prizes at Rye House, ten of them being taken, all with perch. Messrs. Blink, first; Bagshaw, sen., second; Hunter, third; Holt, fourth; Pleydell, fifth; Russell, sixth; Rider, seventh; Davis, eighth; Geeves, ninth; Bagshaw, jun., tenth. Not much chance left for the poor secretary.—W. H. F.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—On Nov. 29 our trays were well filled with chub from the Thames by Mr. Monte, the largest weighing 4lb. 13oz., in all five fish; Mr. Rutherford, a fine show of roach, 7lb.; Messrs. Shaw and Giles, some roach and dace; Messrs. Glover and Webb and several others were out, and met with some fine sport.—J. F. GRIFFITHS, sec.

Hoxton Brothers Angling Society.—A few members were out on Nov. 29. Messrs. J. Row weighed in 13lb. 3½oz. jack; G. H. Wood, a nice show of perch, 6lb. 9½oz.; J. Dingley, a show of roach; heaviest fish, 1lb. 2½oz.—R. GHURNEY, sec.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—Weighed in on November 22: Mr. Croker, 7lb. 11oz. of roach; Mr. Leach, 1lb. 12oz., roach and dace; Mr. Willsher, 1lb. 8¼oz., roach; Mr. Holder, perch and dace. On November 29, Mr. H. Herbert, 3lb. 13¼oz., roach, dace, and perch; Mr. Willsher, 3lb. 6oz. of roach; Mr. Leach, 1lb. 12oz., roach. We have a smoking concert on Monday, December 14, in aid of the Anglers' Benevolent Fund, when I hope to have a good muster of anglers and friends.—J. H. HERBERT, hon. sec.

Izaak Walton Angling Society.—The members will compete for three special prizes on Wednesday, the 9th inst., also for four special prizes on the 13th inst. Competitors may choose their own fishing waters for these prizes, but must not leave London before the morning on the days of the competitions. There are still six special Wednesday Christmas prizes not taken. Mr. N. Martin weighed in jack on the 29th; Mr. G. Washington had roach and perch; Mr. T. Harris had bream on the same day.—H. B.

Jubilee Angling Society, Portobello, Kensal-road.—On November 28, Mr. Wheeler weighed in 7lb. of nice roach from Bures, and on the 29th, Messrs. Warner and Sadgrove weighed in roach and chub from the Thames.—A. IDE, sec.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—Members are reminded of the following competition—viz., for the heaviest fish weighed in between 1st November and 31st January, 1892. First prize, value £3 3s.; for the second ditto, £1 1s.; third ditto, £1 1s. The following members have weighed in during the week: Messrs. C. J. Carter, 15lb. 12oz. roach and dace; T. Salter, 9lb. 14oz. roach and dace; Mason, 5lb. 7oz. roach and dace; and Newcombe, 3lb. 9oz. roach and dace.—T. SALTER, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville-road, N.—On the 29th ult. several members of the above fished in the competition at Pulborough, Mr. More and Mr. Watling each taking a prize; the following also having fish from other waters: Messrs. Belton and J. White, roach and dace. I hope to see a good muster of members on Wednesday next—quarterly night. Some good prizes have been added to our list, all to be decided next week.—W. WATLING, sec.

Liverpool Angling Association, held at the Bee Hotel, 5, Queen's-square, Liverpool.—A party of our members had a few hours' jack fishing the other day in a private water. The weather was fine and warm, and twenty-one jack and five perch were taken. Strange to say, two days afterwards another party of members fished the same water, and did not get a fish. On this latter occasion the weather was also fine, but the wind was bitterly cold from the north-east, whilst on the first occasion a soft southerly breeze was blowing, and this apparently made all the difference.—R. WOOLFALL.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On Nov. 29th our members were at various stations on the Thames, when the sport was better than the previous weeks; Messrs. Sansom, Penfold, A. Clark, and Bartlett, weighing in some fine roach over 1lb. in weight.—W. F. PEARCE, sec.

Midland Angling Society, Prince of Wales, King's-road, St. Pancras, N.W.—At our pegged-down match at Windsor, on November 29, the following gentlemen weighed in for prizes: T. Hull, roach, chub, and dace; W. Westmore, roach and dace; G. Wright, a very nice show of roach, weighing 5lb. We fish for the remaining prizes on December 6.—A. APPLEBY, sec.

Mildmay Angling Society, Radnor Arms, King Henry's-walk, Balls Pond-road.—Several members fished for prizes on November 29, at Hatfield Peverel, but did not take any fish up to our club standard. Messrs. Jermy and J. Osborne were out on Tuesday, and weighed in a very fine show of roach, some of the fish scaling over 1lb. each. I wish to remind the members that we fish for Christmas prizes at Pangbourne, on Dec. 13, all to start by the first train from Paddington on the morning. I hope all members will show up on Tuesday next as there is a little matter to settle.—J. COMBER, sec.

North Lambeth Angling Society, 108, Westminster Bridge-road.—The competition for Christmas prizes will commence on December 6 and finish December 20, on which night all prizes will be paid. Conditions of match—roving.—F. WALLIS, sec.

North London Angling Club, Tap House, Holloway-road.—On Tuesday, December 15, Mr. G. E. Simms will read a paper at the above on "Coarse Fish Hatching," after which there will be a smoking concert, Mr. F. Thorling in the chair; vice, Mr. W. Stretch.—H. STRETCH, hon. sec.

North-Western Angling Club, Lord Southampton, Southampton-road, Maitland-park, N.W.—On Nov. 19, Messrs. Billings and Schultz, jun., weighed in a nice lot of roach, several scaling 1lb. each. On the 22nd, Mr. Holman, jack, 2lb. 4½oz. On Nov. 26 our half-yearly supper and distribution of prizes took place, Messrs. Billings and Schultz, jun., having a fine show of roach that night, the former having 3lb. 7½oz., the latter 13lb. 13½oz., several fish going 1lb. each. The supper turned out a grand success; harmony reigned supreme, and great credit is due to our pianist, Mr. Frood. The principal toasts were, "Success to the North-Western Angling Society," "Our Worthy Host," "The Press," and "The Visitors," all being most ably responded to by the following gentlemen: Messrs. Weaver, H. Roper, Smythe, Crumplen, &c. The prize winners were Messrs. Billings (winning two), Goodman (one), Schultz, jun. (two), Lambert (two), and one other member a prize. We have prizes for the coming half to the value of £20 9s. 6d., for which I hope our members will be more successful, and do credit to our old standing motto, "Go in and Win." Members please attend to arrange the prizes, so as to enable us to get the list out.—G. S.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—On Nov. 15, from the Rye House, Messrs. Neville and Harrison secured fish, when each obtained a prize; Mr. Bygrave also a few dace from elsewhere. On Nov. 22, Mr. Neville brought in a couple of small dace, saving us from a blank. On Nov. 29, however, we had no fish brought in, none of our members going out.—J. CUTHBERT, sec.

Peckham Brothers Angling Society, Prince Albert, Rosemary-road, Peckham.—The match that was proposed to take place at Reading, on Dec. 6, is cancelled, and will take place at Staines, from the railway bridge to Laleham Ferry; the hook to be included.—E. A. FAUTLEY, sec.

Prince Albert Angling Society, Prince Albert, Lincoln-street, Bow-road.—Our members were out on the 29th ult., with the following result: Mr. E. Impey, weighed in 3lb. 2oz. of roach; Mr. C. Toye, roach. Any gentleman wishing to join will be heartily received by the brother members.—F. PIGNATELLI, hon. sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—On Nov. 29, several members went out to try their luck, when the following weighed in: Mr. J. Isaacs, a nice specimen roach, 1lb. 1½oz.; and several others. I beg to remind members that a match has been arranged to take place at Windsor for six prizes on Jan. 10.—J. W. HARRIS, sec.

Prince of Wales Angling Society, the Globe, Lisson-grove.—There were splendid shows of roach on Nov. 29, by the following members: Messrs. Porter, Hayden, Robbins, Brett; and jack by Mr. Twomey. We intend having an outing on Dec. 20, in aid of the A.B.S., with a small entrance fee, the whole of the proceeds going to that deserving society.—W. B.

Rising Sun Angling Society, The George, Brook-street, Holborn.—A special meeting is called for Monday, the 7th inst., when I hope to see all members present as something of great importance will be brought before them.—F. Bradley, sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—The supper takes place on Thursday evening, 10th inst., all members that wish to join us will give their names in as soon as possible. I hope members will note that last Wednesday was quarterly night. Mr. Davis was elected chairman for the month. A committee meeting will take place on Wednesday, 9th inst., when I hope all the committeemen will be present, as there is some special business to go through. Mr. E. Pyne weighed in a splendid show of roach, winning the silver cup for gross weight for the month. The result of the outing at Henley, on 29th ult. was a success. All the prizes being taken as follows:—Messrs. W. Lamberton, roach, 1st; T. Lines, roach, 2nd; H. Mitchell, roach, 3rd; F. Lamherton, roach, 4th; F. L. Lamherton, roach; G. Best, roach; J. Wigley, roach. J. Davis weighed in dace on Wednesday.—F. T. Lamberton, secretary.

Royal George Angling Society, Queen's Arms, Bateman-street, Soho-square, W.—On Nov. 29 several of our members were out, but only Messrs. Holder (roach and dace), Harris (roach and dace), and Jerquit (jack) weighed in. On Dec. 6 we fish an outing at Cookham for our Christmas prizes. Tow-path; one rod; jack barred.—F. C. Longland.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow, E.—On the 29th ult., we competed for five prizes at Roydon, the successful competitors were Mr. Stanley, largest roach, and first gross weight of roach; Mr. Day, second, gross weight of roach; and Mr. G. Yeo took first gross weight of jack; Mr. I. Yeo, also weighed in roach; Mr. A. Barclay, roach and dace; Mr. Holden also had roach in the competition, but did not weigh in. On Tuesday we made two new members.—A. Barclay, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lamheth.—We fish for the remaining five prizes on Dec. 6, roving from Kingston Bridge to the Lock at Teddington; no member to go before the first train on that date from Waterloo.—J. Wright, sec.

Serapis Angling Society, Nevill Arms, Nevill-road, N. The above newly-established club celebrated their first outing on Nov. 29 at Pangbourne, where some fairly decent roach were taken, the first prize falling to Mr. Tilbury, sen., second to Mr. H. Gaffer, and third to Mr. G. Orchard.—John Peck, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 29th, Nov. several members were out, and weighed in some nice fish Messrs. J. Petrie, roach, 8lb. 10½oz.; W. North, roach, 13lb. 14oz.; H. Bigsby, roach, 9lb. 15½oz.; (one roach 1lb. 4¼oz.); G. Giles, jack. On Tuesday last we had a far better attendance of members than of late. A Christmas outing will take place on the 15th December, at Pangbourne, when three prizes will be fished for, given by our Hostess, Mrs. C. Brown. Members must attend for further particulars.—S. E. Cane, sec.

Sheffield Anglers' Association.—The annual meeting of this body was held in the Co-operative Hall, Sheffield, on Wednesday night, Mr. C. Styring, the president, occupied the chair, and there was a large gathering of the more active members of the clubs connected with the association, as well as the officers and committee. The chairman, in opening the meeting, referred to the past as a most successful season, in respect of finances and the number of members, but as far as sport went, he believed it was below the average. There were upwards of eight thousand members' tickets issued to the different clubs, and the association had, on behalf of clubs and others, supplied upwards of twenty thousand excursion tickets. The railway company were to be congratulated on having taken these, and perhaps an even larger number of the general public to and fro without accident or hitch. Allusion was also made to extended facilities for fishing, and it was stated that an effort had been made to take the friends of the association on two or three occasions to waters in the neighbourhood of Wisbech and Lydd, on the borders of South Lincolnshire. As yet the arrangements were scarcely so satisfactory as they should like them, the railway journey being too long, but if they could get to this district and back in reasonable time, the society would arrange for more extended fishings in that locality. The district was known to be a good one. After referring to some other matters, the chairman moved that the thanks of the meeting be given to the patrons of the association, the owners of fishing rights, &c., for their privileges, and to all who had contributed to the enjoyment of the members. This was carried amid applause. The secretary, Mr. T. Walker, read the report and statement of accounts, both of which were deemed satisfactory; the auditors stating that the books were well kept and the meeting adopted them. The chief features in the latter were £3,282 18s. 3d. received for railway excursion tickets, which seem to have cost the association £3,211 18s. 2d., thus giving a profit to the association of £71. £129 14s. 8d. had been received from members for privilege tickets, and £64 15s. had been paid for angling privileges. Over the annual match the members got £32 more than they paid in entrance fees, and the balance in hand had been increased from £170 to £208. The chief officers were afterwards re-appointed, as well as the committee, and during the evening several matters interesting to the association were discussed, the meeting ending with a vote of thanks to the chairman.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—At the meeting on the 29th of November, a specimen jack of 10lb. from the Thames, in first-class condition, was weighed in by Mr Collins. Mr. Josiffe, who was with Mr. Collins, caught a small one; they both had the misfortune to be smashed up, losing their tackle. Messrs. J. Warsap and Edwards went to Moulsford, but had poor sport owing to the state of the water. Mr. Parkhurst weighed in two jack, 6lb. 14oz.

Silver Trout Anglers' Association, Bedford Head, Maiden-lane, Covent Garden.—On November 29, several of our members were down for the outing at Moulsford, but in consequence of the state of the water no competition took place. Mr. Clark weighed in dace, from the tidal waters; Mr. Smales also had about 4lb. of roach, from the Thames. Tuesday last being quarterly night, the election of officers took place, Mr. O'Callaghan was elected president; Mr. Williams, vice-president; and the retiring auditors, Messrs. Phillips, Kelly, and Black, were re-elected; Messrs. Mann and Abbott were elected unanimously.—Pelican.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—Our return visit on Monday was a success, eighteen clubs responding to the roll call. Members showing fish on November 29, were Mr. Manning, with a splendid show of bream and roach; T. Jones, bream and roach; Mr. Rigg, bream; Mr. Pleydell, a handsome show of perch.—R. Spencely, sec.

South London Angling Society, George and Dragon, 235, Camberwell-road, S.E.—On November 29, a fine show of roach and bream from Richmond, totalled 16lb. First prize was taken by Mr. Boorman. On Wednesday next we fish at Dorking for two prizes, go by first train in the morning.—J. J. F., sec.

South London United Anglers' Visiting List.—A return visit of the clubs on the above list was paid to the Cliftonville Angling Society on the 1st inst., when their spacious clubroom was fairly well filled, and I think all present spent a most enjoyable evening. On the roll being called at eleven o'clock by Mr. J. Wright, vice-president of the list, the following fourteen clubs responded: Bermondsey Bros., Second Surrey, Rodney, Anchor and Hope, Peckham Bros, Wellington, United Bros., Anglers' Pride, St. Albans and Excelsior, Blackfriars, St. George's, North Lambeth, Marlborough, and Cliftonville. The next visit will be to the Anchor and Hope, held at the William the Fourth, Canal Bridge, Old Kent-road; due notice of date next week.—A. Conn, hon. sec.

St. Thomas's Angling Society, Waterman's Arms, Paris-street, Lambeth, S.E.—The members of the above visited Harlow on Nov. 29 to fish for their club prizes, but unfortunately returned with empty baskets, so have decided to fish at Kingston (roving) on Dec. 6, when it is trusted that the members will be more successful than last week.—G. Morton, sec.

Sundial Angling Society, Plough and Harrow, King-street, Hammersmith, W.—The punt match postponed from November 22, will take place at Staines on December 6. We had a full meeting on Tuesday, December 1. Mr. Couldrey was unanimously elected an honorary member.—H. Reaves, sec.

Sussex Piscatorial Society, Arch 104, King's-road, Brighton.—During the last few days members have been fairly successful, Mr. W. Fry weighing in three pike from club waters, 11½lb., 6lb. 10½oz., and 4lb. (spinning with spoon); Mr. W. C. F. Gillam, three pike, from private waters, 5¾lb., 5lb., and 3¾lb.; Mr. W. J. Holland, from the Ouse, two bream, 2¼lb. and 3¼lb., and one roach, 1¼lb.; Mr. E. J. Ash, also from the Ouse, three bream, 3lb. 14oz., 2lb. 2oz., and 1lb. 8oz. The club water is now in grand condition for pike fishing. Weeds are well rotten.—W. C. F. Gillam, assistant hon. sec.

United Brothers, Deptford.—On November 22, Mr. W. Windred weighed in some roach and a nice chub weighing 3lb. 8oz.; F. Beak, roach and perch; and F. Drage, bream. Several members of the above were out on the 29th, with the following result: Mr. W. Windred, roach; Mr. W. Bennett, roach; Mr. W. Tyler, roach. The members of the above have voted one guinea to the Thames Angling Preservation Society.—H. Tyler, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—Several members were out on Nov. 29, the following weighed in, Mr. Petty, roach; Mr. Bird, sen., roach and dace, the later taking second prize in the Pulborough Match, on the 29th Nov., Mr. Bird, jun., a prize in the same match with roach. Nothing of importance was done on Dec. 1, owing to members being away. I wish to remind members that only those will be able to compete in our next match when arranged who are eligible.—H. C., hon. sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—I hope all members will attend on Wednesday next to make arrangements for the next competition, which takes place on December 13.—R. Bailey.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On Nov. 29, Mr. G. Boyd weighed in dace; Mr. W. H. Bryant, bream; and Mr. W. Gordon, roach. Mr. Bryant took the fourth prize in the Competition promoted by Mr. A. Eldridge, at Pulborough. Wednesday last was half-yearly night, when the balance-sheet was presented and passed. The officers elected to serve for the ensuing quarter were: Mr. C. Wright, chairman; Mr. C. Groom, vice-chairman; Messrs. C. Wyer and R. Dartnall, delegates to Anglers' Association. Mr. G. Calder was proposed as a member; ballot to take place on Wednesday next. The December competition will take place on Dec. 6; from Staines Bridge to Chertsey Bridge; all to go by 8.35 train, Waterloo; 8.40, Vauxhall; show fish at Pigeon and Wheatsheaf at four o'clock; return from Staines at 5.17; all fish to weigh.—R. J. Dartnall, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—On Nov. 29 we had several members in the competition at Pulhorough, but were unsuccessful. Mr. Mercer weighed in jack, thus saving us from having a blank. Our Christmas competition will take place at Witham on the 13th inst., all to go by the first train from Liverpool-street, returning by the 6.48 train home.—W. M., sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on Nov. 29 to take part in the match, but it turned out a failure. The following weighed in: Mr. Hunt, two jack, weighing 13lb. 8oz., one fish weighing 8lb.; Mr. R. Lowther, one jack, weighing 5lb. 13½oz.; Mr. Bickell, jack and roach; Mr. J. Newton, roach and dace. I wish to remind our members that it is quarter-night on Wednesday, the 9th instant.—R. Lowther, sec.

West London Angling Club, Dartmouth Castle, Hammersmith.—Our quarterly meeting took place on Thursday last, a large muster of members attending. Mr. Rogers was elected chairman and Mr. Lidgard, vice-chairman for the ensuing three months. The members voted that the sum of 2s. 6d. should be sent to Mr. Brougham for the Thames River Keepers' dinner entertainment. Arrangements were made for the last match of the season, to take place on the same conditions as before. The meeting adjourned after a unanimous vote of thanks to the chairman and vice chairman for their past services to the club.—J. J. Hunter, hon. sec.

Wear Angling Association.—This association has now fairly got on its legs, and bids to be one of the most energetic in the county. It has done considerable good so far in checking the wholesale poaching on its waters, which reach from Stanhope to Newfield Crag. It has also staked the pools and streams for some miles, and is encouraging in every way fair and legitimate angling. Mr. James Widdas, one of its members, is at present erecting a fish hatchery for the purpose of putting some thousands of young salmon in the streams. The society have a balance in hand, and are working with the Wear Fishery Board to bring the Wear into its former condition. It may be interesting to mention the late W. Henderson, whose death was recorded in the columns of the *Fishing Gazette*, first learnt the art of angling on the banks of the Wear.—Blue Dun (Bishop Auckland).

⁂ Club and River Reporters will oblige by sending in their Reports early in the week.

SOCIETY FOR PROMOTING THE READING OF PAPERS AT ANGLING CLUBS.

For some weeks an announcement has appeared in the *Fishing Gazette* to the effect that a paper would be read by Mr. G. H. Howard, at the St. John's Angling Society, the Skinners' Arms, Coburg-street, Clerkenwell. Last Monday night was the date fixed, and a crowded audience assembled, anticipatory of hearing some highly amusing and entertaining things, as the title of the paper was "An Amateur's Experiences:" but we regret to state that Mr. Howard was attacked with bronchitis a day or two previous to the meeting and lost his voice, and was unfortunately prevented from fulfilling his engagement. Mr. Howard wrote apologising to the meeting for his absence, and expressing his intention of reading the paper as soon as he had recovered his voice. The chair was taken by Mr. H. J. Tibbatts, who was supported by, amongst others, Messrs. W. H. Beckett (vice-president Anglers' Association), Ghurney, Murphy, O'Callaghan, G. E. Simms, J. Close, MacDermott, Smith, Malby, Thorling, Jennings, Wood, Butler, &c. During the evening Mr. G. E. Simms gave an interesting address on coarse fish hatching, and received a hearty vote of thanks for the same. A "visit" was paid to the society in the course of the proceedings, the Eastern District (No. 2) clubs being well represented. An excellent programme of songs and recitations had been arranged in connection with Mr. Howard's paper and the "visit," and a most enjoyable time was passed. The proceedings eventually closed with a vote of thanks to Mr. Tibbatts for presiding.

A paper was read by Mr. E. S. Shrubsole, at the Good Intent Angling Society, on Tuesday evening last, entitled "Fishing Bags, Baskets, and Creels." Mr. H. J. Tibbatts, trustee of the Anglers' Association, occupied the chair. The large club-room was crowded, and amongst those present we noticed Mr. R. Murphy (sec.), Mr. R. Ghurney (sec., Anglers' Association), Mr. Wood (Hoxton Brothers), Mr. Midson (Dalston), Mr. Thorling, Mr. Pattison, sen., and Mr. Pattison, jun. (St. John's), Mr. Imey da Costa (Hoxton Brothers); &c. The chairman, in opening the proceedings, said there was very little need for him to introduce Mr. Shrubsole, as he was already very well known to the members of the Good Intent having been present in the club on many previous occasions. Mr. Shrubsole, who was received with cheers, said he had been accused of organising a big advertisement for the tackle-makers, but he could conscientiously say this was not the case. He was actuated with a genuine desire to get at the best creel or basket for the benefit of anglers, and, he thought, by a careful study of the exhibit, it might be possible to suggest improvement on improvements. He considered creels with separate compartments for lunch, tackle, and fish a desideratum. A simple, but valuable, suggestion was thrown out as to carrying either creel, basket, or box knapsack fashion, the wonder being that it had not been universally adopted long before, as by this method the weight is equally distributed, and there is the great advantage of having both hands free. Wicker creels, with tin linings and india-rubber linings, were shown, the owners of each claiming that the arrangement kept fish fresh and bright. Creels also with the lid opening on the opposite side to those usually made were shown, and it was generally agreed this was a great advance on the old style, also with the tackle-hook fitted on the inside of the lid. Bags of all sorts, kinds, and materials—some with inside linings, some with internal bags easily detachable—were handed round for inspection, the comments upon them being very original. Altogether the reading was most instructive and amusing. At the close the chairman invited anyone present to put questions to Mr. Shrubsole. Mr. Murphy (secretary, Good Intent) said he was delighted with the reading, and he was sure everyone present would join with him in thanking Mr. Shrubsole for his valuable paper. On looking at the exhibit in the early part of the evening, he had wondered how it would be possible for anyone to give such an interesting lecture as they had just listened to, and he begged to propose a hearty vote of thanks to Mr. Shrubsole for the trouble he had taken in coming there and delivering the lecture. Mr. Ghurney seconded, and the vote was carried with acclamation. Mr. Shrubsole, in reply, said he was pleased and proud to come to a *bonâ fide* working-men's club and read a paper, as only two years ago he was told he would find it impossible to get an audience; but the crowded state of that room, and the rivetted attention of those present, showed that working-men did thoroughly appreciate any really good effort that was made for their benefit. He explained in detail the objects of the Society for the Promotion of Reading Papers, and begged of them to encourage the members of their clubs to read papers, and so earn the medal which the society proposes to offer for the best papers. He invited anyone present to attend the committee meetings held on the first and third Fridays in the month, at the Citizen, 70, Houndsditch, opposite Bishopsgate Church, assuring them of a hearty welcome. Mr. Simms *(Rod and Gun)* proposed a vote of thanks to the chairman, which brought a most enjoyable evening to a termination.

NEW PATENTS.

The following is a list of Piscatorial Patents, which is supplied to us by Messrs. Hughes, Eli, and Hughes, Registered Patent Agents and Attorneys for Colonial and Foreign Patents, Designs, and Trade Marks, 76, Chancery-lane, Holborn, W.C., All inquiries answered by them free of charge to our readers:—

19,949.—Henry Angus Murton, of London, for "Improvements in and relating to fishing creels."

20,169.—Joseph Ball, of London, for "Improvements in the construction of ground ropes for trawl nets for deep sea fishing."

20,276.—Paul Gerhardt, of London, for "Improvements in fishway, especially suitable for eels and the like."

Holloway's Ointment and Pills.—Dangerous Chest Complaints.—The enumeration of these diseases is scarcely necessary, as, unfortunately, most Englishmen know them to their cost. Coughs, common colds, influenza, bronchitis, asthma, pleurisy, inflammation of the lungs, and even consumption in its early stages, are best treated by rubbing Holloway's Ointment upon the chest and upon the back between the shoulders. It penetrates internally, checks the cold shiverings, relieves the over-gorged lungs, gradually removes the oppression from the chest, and restores the obstructed respiration, hitherto so distressingly disagreeable and highly dangerous. In treating this class of diseases, Holloway's Pills should always be taken while using his Ointment; they purify the blood, promote perspiration, and allay dangerous irritations.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, DECEMBER 5, 1891.

NOTES FROM BIRMINGHAM AND DISTRICT.

THE monthly meeting of the Birmingham Anglers' Benevolent Society was held on Friday evening last, Nov. 27, at the headquarters of the association. Mr. T. Coles presided, and Mr. C. White occupied the vice-chair. The attendance of the committee was not up to the average, which was commented upon by the chairman. Mr. White stated that he had succeeded in coming to terms with Mr. Hall, and that that gentleman was willing to grant the free use of the Museum Music Hall band and company, to be used for the purpose of a concert on behalf of the society, for the small sum of two guineas. The secretary was requested to write to Mr. Hall, thanking him for his generous offer. The date of the concert was fixed for the third Thursday in February. This will allow the people to get over the holidays. Popular prices will be charged for admission, and as the hall will accommodate near eighteen hundred people, the committee look forward to a golden harvest, and nothing will be left undone in order to make the concert a gigantic success.

A SPECIAL committee meeting of the Birmingham St. George's Society was held at their club-house on Nov. 26, when some very important business was transacted. The first item on the agenda was to fix a date for the general meeting, when Monday evening, Dec. 7, was decided upon, when the election of officers will take place, and also certain recommendations made by the committee will be brought forward, the chief items being that a certain portion of the river Auker, which is rented by the club, be re-stocked. Another important matter will be the proposed increase in the fortnightly subscriptions, in order to establish a fund for the preservation of specimen fish. The committee were unanimous upon both these important matters, and will use their best endeavours to get the two motions carried, which will make the club rank as one of the foremost in the city. A further recommendation from the committee was to the effect that a contest take place during the Christmas holidays (Dec. 28) in the upper water of the Auker, at Amington, the other arrangements to be left over until the general meeting, on Monday evening next.

MR. T. ROBINSON, the proprietor of the Fox and Dogs Inn, Princess-street, called upon me, on Thursday last, to explain his position with the Belmont Club, which has lately removed from his house through a misunderstanding between him and certain officers of the society. He informs me that the club left his house without taking the books, and had they have asked for them he would have given them up at the time. The deputation appointed by the society to wait upon Mr. Robinson have received the books and the other properties of the club, and everything is amicably settled, to the satisfaction of all concerned.

A GENERAL meeting of the Birmingham Angling Association will be held at the headquarters on Thursday evening next, Dec. 10, for the election of the working committee for the ensuing year. The minutes of the committee meetings held during the quarter will also be read for confirmation, together with the last quarter's balance-sheet. The chair will be taken at 8.15 prompt, when the executive hope to see the whole of the delegates in their places, as there will be a great amount of business to be got through.

I BEG to inform the secretaries of the Birmingham Angling Association that the half-yearly subscription will become due on Saturday, Dec. 12 next, when the general secretary will attend at the Birmingham Arms Hotel, Smithfield, between the hours of 7.30 and ten o'clock, for the purpose of receiving the same. Any club failing to forward their subscription on or before the date mentioned, will be fined two shillings and sixpence. Secretaries who live at a distance will oblige by sending postal orders, upon receipt of which an acknowledgment will be forwarded.

MR. THOMAS COLES, the president of the Provincial and Birmingham Associations, desires me to inform the members that he has removed from Vaughton-street South, to 86, Belgrave-street, Balsall Heath, where in future all communications are to be addressed.

NOTES FROM LANCASHIRE.

THE General Council of the Northern Anglers' Association held a meeting at the Grand Hotel, Aytoun-street, Manchester, on Nov. 28. The principal business before the council was the memorial to the various railway companies on the question of greater facilities for travelling, which now lies ready for presentation. This duty has been entrusted to the principal officers, viz., Mr. Pritt (president) Rev. C. P. Roberts (vice-president), and Messrs. Addyman, Burn, and Paley, the joint hon. secs., who well have added to their number Mr. T. W. Redford, of Bolton. The result of this united effort of the anglers in the North of England cannot with any certainty be foreshadowed, but in the interests of those on whose behalf such strenuous exertions have been made, we cordially wish success to the undertaking.

AN attempt to draw the "red herring" across the question now before the members of the Manchester District should end in a failure to the instigators. The simple question is, whether to continue membership of the amalgamation or not. If the members think their interests are served, and they are getting value for their money, by all means let them remain where they are now; if not, then follow Bolton's example.

A SHORT time since, a 26lb. pike was reported as taken in Poynton Pool. All particulars as to capture and captor were missing. Now, the said fish is reported as on view at Stockport. Can any reader of these Notes give reliable information as to captor, method of capture, and when captured?

CANAL fishing is certainly not of an attractive kind, and, with the exception of a few places, no sport worth mentioning has been obtained for some little time; even bait-fishing is disappointing.

REFERRING to the various streams in Cheshire, locally popular, we would remind anglers that streams like these, which daily receive more or less attention, are not to be expected as providing really good sport whenever a demand is made upon their resources.

HEAVY fishing in the meres is again being left severely alone; only one decent fish is so far reported killed.

CLUB meetings in Manchester are numerous and lively. The Wellington, Merry Anglers, and Openshaw are three very strong clubs in numbers, and their double-voting power at the adjourned meeting on the 17th inst. may largely influence the various decisions. It is to be hoped that the good order now so prominent at these meetings will continue to be present, and that the future meetings will be marked by active measures in favour of working men.

THE first of the series of smoking concerts was held at the Hop Pole Inn, Warrington, on Friday, November 27, as a means of uniting the anglers of the district in one body. Songs, comic sketches, violin solos, and selections of music were contributed by members and friends, and a very enjoyable evening was spent by the large audience present. A second concert will in all probability be held before Christmas, and steps will also be taken to induce many anglers in the district who are not members to become supporters of the parent association for the coming year. The splendid work being undertaken by the Central Council for the benefit of northern fishermen, ought to ensure the hearty co-operation of every angler in the northern counties. A present of a valuable timepiece and bronze figures was made to Mr. Peter Knight for his services as secretary since the formation of the centre.

NOTES FROM NOTTINGHAM.

ANGLING pursuits in our district have of late suffered to some extent through the inclemency of the weather, combined with the fluctuating state of the Trent and its tributaries. On Tuesday the water was beginning to fine down nicely, and both pike and chub anglers were busying themselves with obtaining a supply of baits; but in the evening more rain fell, and when writing these Notes (on Wednesday night) the river was again rising rapidly. The weather, however, was beautifully fine, and during the day roach and dace fishermen were active, especially in the free waters of the Borough. What is better, roach were found to accept maggots and bread-paste freely. Several very good takes were made, the best being that obtained by Mr. George Hall. Last week I called attention to the splendid lot of chub killed by Mr. Walter Marshall, of West Bridgford, in the King's Mills Fishery, and on Thursday he again tried the same stretch of water with Mr. George Wood, of Nottingham. The two were armed with a plentiful supply of bullock's pith and brains, and the very first swim Mr. Marshall hooked and landed a very game fish of 3¼lb. This augured well; but singular to say, the two throughout the day only succeeded in getting another, which weighed something like 2¾lb. They had the privilege of a punt, and my experience of chub-fishing is that one can kill a greater quantity of fish without one. Chub, as is well known, are one of the shyest fish that swims, and the least vibration in a boat drives them away in an instant. At Wilford the veteran, Mr. John Boyd, of Nottingham, bagged several heavy fish (chub) at Wilford, on Saturday morning; and on the previous day a number of pike were taken with the live-bait in the grove above. Pike of small size were also taken in the Stoke and Shelford subscription waters. Roach and bream fishing does not seem to have engaged much attention at Weston, and of late very few subscribers have taken the trouble to patronise the Shardlow length. Here, however, one cannot have the water too low. Sundry lots of roach have come to hand from Barton and Trent Lock, and whilst the river continues discoloured, both these places ought to turn out fish. Lamprey catching is being actively carried on above Colwick Weir head, and I learn that during the last few weeks large quantities of these valuable fish have been consigned to Grimsby and Hull, there to be used for bait for taking cod, ling, &c.

I MUST, through the columns of the *F. G.*, publicly congratulate Mr. Harry Spray, the popular and hard-working hon. sec. of the Nottingham Wellington Angling Society, on the capture of an extraordinary pike. I am not permitted to divulge the scene of the capture beyond stating that the lake is situated on the confines of South Nottinghamshire and Leicestershire. Privilege permits are rarely issued, but a friend of Mr. Spray used sufficient influence to obtain one. The outing was celebrated on Thursday, Nov. 26, and, soon after getting to work, Mr. Spray's float disappeared with a perfect thud. Due time being given, he struck, and found himself fast in a big 'un. The party were in a boat, and the task of getting the fish near the side was no light one, and, to add to the difficulty, the lower part of the rod gave way. Skill, however, gradually prevailed, and finally the fish was hauled into the boat by the aid of the gaff. In the evening it was weighed at the Wellington Society's rooms, and was found to exceed 18lb. It was, I learn, 39in. in length, and measured 19in. round the girth. "Our Harry" was warmly congratulated on his success, and the fish is pretty certain to secure the leading prize of its class, in the society. Others were caught during the day, but none ran into the teens. The next day another gentleman killed one, 8¼lb.

WHILST pike fishing with a neighbour (Mr. J. Taylor), the other day, I enjoyed a very novel experience with a small fish. We were trying a narrow backwater with live-bait, and during the afternoon a fish suddenly began to chase the fry above us. I threw my bait over it, but to no purpose. Presently I noticed a tail flopping upright in the water near the side. I approached it quietly, and then discovered a pike endeavouring to gorge a small fish on the bottom amongst some weeds. Waiting until the fish had been gorged, and standing perfectly still I dropped my bait behind the pike, and in a second it turned round and "set" it with a glaring pair of eyes. Then darting at it the fish seized the head and shoulders and remained motionless. Finally, I stamped my foot on the bank, and in an instant it disgorged the bait and dashed away. I was using the Jardine snap tackle and plainly saw the first set of hooks had disappeared with the head and shoulders of my bait.

I LEARN from a report published by the secretary of the Nottinghamshire Piscatorial Society, which is held at the Alexandra Inn, Carrington-street, Nottingham, that of late the members have been weighing in pike from 10lb. downwards. Unfortunately for the travelling members of this society they have not the winter privilege tickets. I am responsible for the issue of these tickets; and some time before the summer clubs expired I notified the various secretaries by post-card as to their requirements for the winter, or present travelling term. The secretary of the Piscatorials was amongst the number, but from some cause or other I failed to receive his order until it was too late to comply with it. A limit line must be drawn; and if the members think that I have been hard upon them, they will now know where the blame lies. The railway companies are not likely to entertain single fishing club applications every day. They have something better to do. We, as anglers, must feel deeply grateful to both Midland and Great Northern for what they concede already.

NOTES FROM SHROPSHIRE.

DECEMBER opened with milder weather, and there has been an absence of the keen frosts which characterised the close of dull November. That Shrewsbury anglers are fine-weather fishermen, there seems to be little doubt, for very few are to be seen on the river banks.

A REWARD! consisting of the thanks of Shropshire anglers and readers of the *Fishing Gazette* will be given to any person or persons who can give any information as to the whereabouts of the mysterious body, y-cleped "The Shropshire Severn Angling Association, a society which was formed with every promise of success to promote trout and grayling fishing in the Severn within the limits of the County of Salop. Ushered into the world with a flourish of trumpets, and an abundance of press notices, with a number of influential county gentlemen at its head, it was thought that the new body would become a power for good to anglers; but alas! the whole thing seems to have died and been forgotten, without even having had a decent burial. At least that is the conclusion that Shropshire anglers have arrived at. The last they heard of the new society was that the executive was busily engaged in obtaining the consent of the riparian owners to the preservation of the river, and the protection of their angling rights. In the hands of a body which had the welfare of the angling public at heart, and not the hidden motive of seizing and defending the rights of riparian owners to the detriment of anglers, such power could have been used for the common good, and the fishing of the river greatly benefitted thereby, but, unfortunately the new body seems to have departed this life without a kick or a struggle; without an eddy to mark the spot where it disappeared, for not a word has been heard for months of its existence. However, as far as the anglers of Shrewsbury and Ironbridge are concerned, the need of a body like this will not be felt while they have such institutions as their respective angling societies to guard their interests.

IT is proposed that a joint conference of the members of the Severn Board of Conservators who represent the upper waters, and those who guard the interests of the fishermen around Gloucester and below for the purpose of discussing the question of the decrease of salmon, and if possible to come to some amicable arrangement, which while enabling the upper water anglers and fishermen to obtain their fair share of fish will at the same time act beneficially to the whole of the river, by allowing the fish greater facilities for spawning in the more favourable reaches in the Upper Severn and its tributaries, and giving them and the fry a better protection than heretofore. It is obvious that the more fish reach the splendid spawning grounds of the upper reaches, the better it will be for all interests. It is to be regretted that the lower water representatives could not agree to extend the close-time for salmon fishing, as this would have given the mature fish a far better opportunity to reach the upper waters, and by the increased number of fry, they would in a few years reap an abundant reward. Their present policy of taking "all fish that come to the net," cannot but act disastrously to the whole of the river. The members of the Montgomeryshire and Shropshire County Councils, as well as those members of the Board who represent the Upper Severn, are in one accord as to the necessity for taking immediate steps to remedy the evil, and there is no doubt they will leave no stone unturned to secure for those whom they represent a fair proportion of the fish that they now practically breed for the benefit of the netters below. Not a few of those interested simply desire rod and line salmon fishing in the upper reaches, and it is by no means the desire as has been suggested, that the riparian owners desire to make a clean sweep with their nets as soon as the fish are allowed to make their appearance up-stream. In fact this, from the peculiarly broken nature of the river-bed, and the many natural obstructions that exist in the upper waters—difficulties which do not beset the fishermen of the estuary—would be an impossibility. The salmon fishing by nets in the upper reaches could scarcely be made a profitable pursuit, were the fish ever so abundant, and at the present time there are not half-a-dozen fishermen who obtain their livelihood by this means above Shrewsbury.

CLUB FIXTURES.

Dec. 7.—Paper by G. E. Simms, at Epsom, Wellington, High-street, Epsom. Subject: "Coarse Fish Hatching." Chairman, E. S. Shrubsole.—Central Association visit to Barbican, White Bear, St. John-street, Smithfield.

Dec. 8.—Anglers' Association Southern District visit to Blackfriars, Winchester Arms, Southwark-street, Blackfriars, S.E.—Half-yearly distribution of prizes at the Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.

Dec. 10.—Lecture upon "Two Yorkshire Rivers," by F. M. Walbran, illustrated with one hundred dissolving views. Distribution of prizes in connection with the Anglers' Benevolent Competition at Rye House same evening, at the Foresters' Hall, Clerkenwell. Chairman, R. B. Marston, Esq.—Paper at Liverpool Angling Association, Bee Hotel, Queen's-square, Liverpool.

Dec. 15.—Paper at North London, Tap House, Holloway, by G. E. Simms. Chairman, F. Thorling.

REPORTS FROM RIVERS, LOCHS, &c.

☞ *River Reporters who want forms and envelopes should send a post card to the Manager of the* FISHING GAZETTE, *St. Dunstan's House, Fetter-lane, London.*

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add	30 min. for Chelsea.	Add	55 min. for Kew.
	40 " " Putney.		75 " " Richmond.
	45 " " Hammersmith.		80 " " Twickenham.
	50 " " Barnes.		85 " " Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

TIME OF HIGH WATER AT LONDON BRIDGE.

	Morning.	Evening.
Saturday, Dec. 5	4. 2	4.23
Sunday, " 6	4.43	5. 5
Monday, " 7	5.29	5.55
Tuesday, " 8	6.24	6.56
Wednesday " 9	7.27	8. 2
Thursday, " 10	8.36	9.15
Friday, " 11	9.50	10.23

English and Welsh Reports.

Lower Thames.—GENERAL REMARKS.—When I was over at Hampton Court and Kingston on Monday last I found the water in capital condition for angling, and during the progress of my visit I heard nothing but exclamations about the good sport of the bank anglers amongst the roach. On arriving at Hampton Court Station, one of the Conservancy river-keepers came out of the same train, and he was full of the sport the bank anglers had been getting. He said he had seen a youth at Thames Ditton, the previous day, with a barbel of about 5lb., and a splendid roach of 2lb. I was also told by another person who had been watching the bank anglers on the Sunbury side of Hampton, and had seen the bank anglers getting such fine roach, they had their nets constantly in the water to land them. In other places it is reported this class of anglers have been doing some good business, and, as I expect most of them are members of angling clubs, there will be some good news from the club-rooms, and I hope the claims of the Thames Angling Preservation Society will not be forgotten. I have received a long and interesting letter from our good friend, Mr. James Howard, of the Sundial Angling Society, on the subject of supporting Thames Preservation, and one of his suggestions is that of placing collecting-boxes at some of the river-side hostelries, and this I have for some time been able to carry out. I may as well mention there are collecting-boxes at the Castle Hotel, East Moulsey, for the Hampton Court anglers, the Cricketers Hotel, Chertsey Bridge, the Park House Hotel, Staines, and the Swan Hotel, Egham, Hythe, and I hope anglers after a good take will give one of the houses a call, to drop in a trifle towards Thames Preservation. There are so few river-side houses who support the T.A.P.S., and I would urge upon Thames anglers to support only those who take an interest in the river. There are the Ship Hotel, Halliford, and the Mitre at Hampton Court on the list of our oldest supporters, and I have no doubt when I ask them they will receive a collecting-box. Mr. Harwood is sanguine of his original idea of putting a tax on the takes, which his club has adopted, but that is a matter, not for my dictation, but for the clubs themselves to determine. Anything they may desire to increase our funds will be accepted.—B.

RICHMOND.—Henry Mansell, in four days, 45lb. of roach and dace, and eight bream; Job Brain, during the week, 60lb. of roach and dace; H. Wheeler, in four days, 40lb. of roach and dace; and Christopher Brown, in one day, 17lb.

TWICKENHAM.—Samuel Cole, in three days, 21lb. of roach and dace and two bream; Pert Hammerton, in three days, 8lb. of roach and dace and four bream; C. Brown, in three days, 30lb. of roach and dace and five bream; J. Coxen, in two and a-half days, 27lb. of roach and dace; Richard Coxen, in the same time, 30lb. of roach and dace; George Coxen, in three days, 28lb. of roach and dace; J. Dunn, in two and a-half hours, 8lb. of roach and dace and two bream; John Frost, in three days, 35lb. of roach and dace and two bream; John Spong, in three days, 40lb. of roach and dace, and another day with Mr. Westley and Mr. Hold, members of the Larkhall Angling Society, 30lb. of roach and dace and a carp of 3lb. 6oz. In one of Coxen's punts eighteen of the roach weighed 18lb. Richard Moffatt, in two days, 14lb. of roach and dace and three bream.

TEDDINGTON.—Joseph Baldwin in the day one brace of jack.

KINGSTON.—John Johnson, in four days, nine dozen of roach and dace, and twelve bream, most of the latter being 4lb. and 5lb. each, the largest weighed 5¼lb. J. Knight, during the week, thirty dozen of roach and dace. The bank anglers have been doing well with roach, dace, and bream.

THAMES DITTON.—One of the bank anglers in the day caught four barbel.

HAMPTON COURT.—William Melbourne, writes: "The bank anglers have been getting the best of it amongst the roach; the punts have been catching three and four dozen a day. I saw on the 29th ult. some roach caught from the banks facing the waterworks, weighing over 1lb. each. There has been some fine perch taken at Long Ditton, one man got over thirty, some weighing 1¼lb. each. John Poulter one day took over forty, all sizeable fish. We want two or three fine days as the stream at present is very heavy." James Hedger, one day, seven dozen of roach and dace, with Mr. Butterworth; and the same quantity another day with Mr. Horton.

SUNBURY.—Edward Clarke, in one day, five dozen of roach and dace, and three brace of perch. One of the bank anglers got eighteen fine roach.

SHEPPERTON.—George Rosewell, one day with Mr. Porter, three jack, the largest 5lb.; and another day with Mr. W. Yarborough, a fine jack of 11lb.

STAINES.—John Keene, jun., has been out six days and done well with the roach and chub; one of the days with Mr. Wilson, 40lb. of roach, the largest 1½lb., and several of the others weighed over 1lb.; two other days with Mr. Newbury, of the New Albion Piscatorials, 60lb. of roach and chub; and another day with Mr. Moins, 25lb. of roach and chub, many of the roach weighed over 1lb.

Upper Thames.—Very heavy rain fell on Tuesday night, and again on Wednesday. This downpour has had the unfortunate effect of again popping up the Thames to flood height. The ground in the Thames Valley is so thoroughly saturated, that the slightest downpour has an immediate effect upon the river. The present influx of water may be gleaned from the fact that on Wednesday in twelve hours the gauges at the various locks registered a rise of nine inches. The river at the end of last and the commencement of the present week was in fair winter angling trim and fish on the feed, but now the water is getting over the banks, and for days or weeks all will again be chaos; and my advice to anglers Thamesward-inclined is to stay at home, and as Old Izaak has it, "mend their tackling." At Marlow, Mr. R. Shaw has lately been very busy amid the jack but babies only were in the ascendant, the paters and maters declining to be beguiled. In the Medmenham Waters, Bob Young has recently piloted Mr. A. Barnett, and Mr. Lee, amid jack and perch; but even in these excellent domains the infants had it. Thursday Night.—Raining fast as I write, and from barometrical readings likely to keep on-long to rain over us. Thames out of all comfortable and successful angling order.—MARLOW BUZZ.

Thames (Windsor).—As I look from my window on to the river what a change from yesterday, when it was perfect for jack, but is now like soup. The earth being so saturated with water can hold no more, and like a Scotch river, receives the water directly after rain. Anglers for barbel are perhaps in the best spirits over this sudden change, as this fish, whilst thick water and mild weather continues, will be caught under the banks in eddies and lay-bys near a good stream. I omitted, in a previous report, just before water cleared, to mention thirty-nine barbel, which were caught by Messrs. Stewart and Cowling, of Windsor, and eleven by Mr. W. E. Major, of Windsor, the largest, by the latter angler, going 4½lb. Roach are now in fine condition and inclined to feed, at least were before this very thick water, Mr. Snow, of Windsor, in two hours and a quarter, having a fine dish, comprising forty fish from the neighbourhood of Surly Hall. Jack, too, are looking well, and I can hear of none diseased, as was the case last winter. Mr. H. Manning, the well-known local pikeist, started his winter campaign on the 25th ult., and in three days had seven fish, going 23lb., four 18lb., and four 14lb., having to return only one undersized. What may almost be termed as an angling *feat* was performed on the 27th ult. by Mr. Elliott, of Eton, who hooked, on roach tackle, and landed a fine-conditioned jack of 5½lb.—B. R. BAMBRIDGE.

Ancholme District.—Waters greatly discoloured by recent rains, and nothing doing.—THOMAS FORD.

Brighton.—(SEA FISHING).—A few nice-sized cod fish were taken early in the week on herring bait. The sea is rough again to-day (3rd) and half a gale blowing from the south-west. A porbeagle shark, about seven feet in length, was caught off Brighton in a herring net on Tuesday last.

Chichester Canal and Sussex Rivers.—With the wretched weather we have experienced during the week the angling record is but meagre. The thermometer has rarely been up to 50degs., and cold damp fogs have prevailed. The closing competition at Pulborough was brought off on the 29th; over one hundred and thirty members competed in a roving contest, and all the prizes were taken, but the weather must be accountable for the light baskets. A few enthusiasts have tried the Rother, and secured a good few roach, both in the Selham and Fittleworth portions of the river. Bream and roach have been taken from the Arun. But few anglers have tried the Adur or Ouse, but on the 29th ult. several good roach were taken above Barcombe. Fish are feeding badly at Chichester, and the recent rain storms have clouded rivers considerably, and the water is again rising.—GEORGE F. SALTER.

Douglas (Isle of Man).—The rivers are in good order for spawning purposes, and there is no doubt that most of the fish up have already done their duty. The trout (particularly in the streams on the south of the island) are usually somewhat earlier, but as there have been no heavy floods, and always a fair amount of water, future seasons should benefit. A consignment of poachers who are anxious to enjoy cheap lodgings and the *warmest* of welcomes would be thankfully received, as nearly all ours are used up and their working capital confiscated. Poachers please copy. Sea Fishing.—The weather is rather unsettled and but little can be done. However, the tides are good, and bait plentiful.—STORMY PETREL.

Dove and Tributaries.—Weather still wet every other day about. Mr. Holmes got a few fish with a hackle made of Little Pale Blue tied with a quill body. We hear of good sport amongst the bottom fishers down stream. We also hear rumours of another club being formed to fish the side of the river between Rocester and Uttoxeter not owned by the Uttoxeter water, of which more later.—D. and W. H. FOSTER, Ashbourne.

Fen Waters (South Lincolnshire).—During the past week the waters in the Fen district have been in splendid condition, and anglers have had the chance of doing well. Unfortunately the number of visitors, and even anglers generally, are only limited, and doubtless that is one reason why roach and perch are the more easily caught. Time, however, is also limited, and the days are but small ones. Pike fishing is the great attraction, and those trying livebait do well. But artificial baits are not to be despised. Among the captures mentioned was a pike, among others, from the Fortyfoot, scaling 10lb., caught by Mr. Green, and on the same water, Mr. Dunn, Mr. Dexter, and Mr. Smith have done well. On Aslackby Fen, Mr. Meach and a friend have been pretty lucky. One afternoon they caught four pike and also a perch of 1¼lb. among other fish. The pike and perch were taken with artificial spinning tackle. Prospects are capital owing to the frost, which at one time threatened to seal up the drains, but it has all gone now.—LIMPET.

Idle (North Notts).—Anglers are scarce, the majority of visitors being detained at home by press of business for Christmas. The water has during the last few days run into fine condition, and those gentlemen who did try their luck had no cause to grumble. The frost should have improved the pike fishing of the lower waters as well as the grayling higher up. The present is perhaps the best for catching grayling, and it is rather unfortunate they are so scarce in the water where the general public may fish. Each flood brings some down, however, and these often fall to those who try at this season with the small worm for roach or chub.—L.

Lea.—The recent rains which have occurred principally during the hours of darkness have of course brought down a push of water, but nothing to seriously interfere with angling interests; for a couple of days will most certainly find the river in fishable order, that is of course if we do not have any more serious downpours. There is nothing special to record in the shape of heavy takes this week, although fair sport has been the rule by those fishermen who have braved the elements. November went out in a fog on Monday night, and it is devoutly to be hoped that we have seen about the last of this detestable weather; for of all sorts and conditions of afflictions that beset the path of the patient angler, there is nothing more to be dreaded than a dense fog, which so suddenly comes on, on the low lying grounds of the Lea valley; true it is, that it is not the blackness that pervades that which envelopes the city and suburbs, but it is by no means pleasant to find oneself lost in a white fog in the marshes; a circumstance which has happened to me this season already. The Hounsfield Otters had a crowded smoker on the 2nd inst., the same being their annual one for the benefit of the funds of the Anglers' Benevolent Society; Mr. Ghurney stated that the A. B. S. were in such a prosperous state as to have a sum of no less than £335 on the credit side. Numerous clubs were represented, amongst them being the Eagle, whose vice-president, Mr. Haslewood, was well to the fore; Mr. Harrington, the treasurer, and genial host of the Edmonton and Tottenham Angling Society's house of meeting, the Bell at Edmonton; Mr. Hasler, the chairman of the above, and a host of other well-known anglers and club representatives. I cannot give a list as the roll was not called.—SPLICED JOINT.

Leicester.—At the time of writing (late on Thursday) floods are again out in this locality, and the waters are rushing down in immense volume. Evidently there is not chance for successful angling. For some days it has only been in the sheltered spots that any fishing has been done. The continuous demand keeps the bait fishers out daily despite the miserably bad weather, and some few have managed to take fair average baskets of fish. Mr. Hobbs was again conspicuous with a decent basket of roach, and Messrs. Castle and Prime have also shown good lots of this specie. Mr. Rylott succeeded in getting a few chub from the Aylestone Brook, best fish, 2½lb., and Mr. W. South also landed a brace. The resorts in the surrounding district have met with but scant attention, the waters everywhere being in a constant state of flood.

Lugg, Arrow, and Pinsley (Kingsland).—At the end of last week these rivers were getting into good order for grasshopper and bottom fishing, with which baits some fair baskets of fine fish were made—saw several grayling 1½lb. each, and the average size was large. On Tuesday rain again set in, rising the waters about nine inches, which, in the soddened state of the ground, that causes all falling rain to find its way into the watercourses, will take till the beginning of the coming week to lower sufficiently for bottom fishing. Fly-fishing may be said to have ended for this season. Weather this (Thursday) evening: wind strong S.W.; squally; rain at intervals.—R. T. WILLIAMS.

Medway (Maidstone).—The river is again in good fishing condition, and anglers have been having some good catches of roach with the worm. An angler took a jack of 3lb., and run a large one, but lost it through fouling a bush. Prospects are good for all-round fishing under present state of weather.—WM. SHRUBSOLE.

Norfolk, Suffolk, and Cambridgeshire Waters.—All our rivers are now in a good state for pike, the floods have cleared away the weeds and fish are very well on the feed. Good pike can now be taken along the Brandon River, also the Lark, from Mildenhall to Prickwillow. The Yare is now in capital order, some good fish were taken at Buckenham and Cantley on Tuesday last. I hope some of our London anglers will have a turn in the Waveney, at Eccles, shoals of big perch there and plenty of good pike. I took a nice lot of dace at Westrom, on Thursday, on the river Lark. Roach are feeding fairly well. I took a basket of 13lb. this day from Barton Mills. Weather mild, and wind south-west.—WILLIAM HOWLETT.

Ouse, Derwent, &c. (York). — The more settled weather continues, and the rivers in this part of Yorkshire are showing fair trim for the time of year. Some good kills of coarse fish continue to be made in the Ouse, particularly of roach. On the lower lengths of the river between Naburn Lock and Fulford, on Monday, I managed to basket a fine sample of these fish in about two hours, with small red worm and maggot, and using very fine tackle. The Derwent fished well up to Saturday, when a heavy shower of rain altered matters a bit. Several journeys have been made to the Derwent and Rye districts with fair results. A few good grayling and jack pike have been taken in the Malton district.—RONALD.

Plymouth.—SEA FISHING.—The weather has been very changeable, but still we have had some good takes of various fish. I don't know that I remember such fine cod being taken. I suppose they come closer inshore, after the shoals of herring and pilchards that abound on our coast at this time of the year. The pollack fishing has dropped because they are out of season at this time of the year, and our fishermen, both amateur and professional, are getting alive to the fact that fish out of season is very tasteless stuff. The "store pots" for lobsters and crabs, are pretty full, and still we are taking large numbers in the trawls daily. I saw some nice crabs last week in a shop in our principal thoroughfare, marked eight-pence each. The rod fishermen off the piers and jetties, are still catching bass and mullet, and they are taken at night principally. Smelt are taken in the same way at the Commercial Wharfe and at the exit of the Waste Teat, where also some very fine fresh-water eels can be had with bottom lines, baited with large lob-worms.—WILLIAM HEARDER.

Scarborough.—Good catches of billet are being made by pier anglers, and parr (young billet) abound, and afford good sport to those who care to fish for them. They are just now taking the small white fly very freely. Small cod are plentiful in the bay, and are generally taken on mussel bait. Intending sea anglers on a temporary visit to Scarborough would do well to give Messrs. Jones, fishing tackle makers, Eastboro', a call. They keep a large stock of sea tackle, and Mr. William Jones is a thoroughly practical sea angler, and always ready to give a novice the best advice in his power.

Severn (Shrewsbury).—The damp and dreary weather that we have experienced during the last week has deterred anglers from seeking the river-side; but those who have braved the elements have been fairly well rewarded. Mr. Edwards, of Pride-hill, has recently had some successful pike fishing, the best of his captures weighing 14lb. This fish, together with a few smaller ones, was taken in the Tern. A Midland workman has had some excellent takes of roach, while fishing with paste at Underdale. The secret of his success has been the use of fine horse-hair tackle and good judgment in the choice of swims.—PISCATOR.

Teme (Ludlow).—The Teme in this part is now running coloured, and has rose considerably since last week. The

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear Best quality only —EAST LONDON RUBBER Co., 8, Shoreditch, E.

weather has been changeable, and heavy rain fell on Tuesday. Before Tuesday, the water was in good order, and the fish moving well at the fly and taking grasshopper and maggot well. The flies used were the Green Insect, Willow, Red Tag, and Silver Twisted Blue. The water above the Castle was fished on Saturday, and some fine perch were landed with the maggot. On Monday, Mr. Pratt tried the water at Burway, and with the grasshopper and maggot landed thirty-four good perch and grayling. Mr. J. Pugh caught some good grayling with the maggot. The Ony, Corve, Clun, and Ledwyche are all stained since the rain at the beginning of the week; fishing in them quiet. In the Corve some good grayling were landed on Monday with the grasshopper.—S. LUDLOW.

Trent (Newark).—The Trent rose rapidly yesterday, and is now on the verge of overflowing its banks, and again rendering a cessation of angling compulsory. Roach and dace have succumbed to worms and gentles, and on Wednesday morning, Mr. W. Mountney secured over forty of the latter; but the rapid flush proved a spoil-sport for the fish ceased to feed. A good bag of roach came from the top length of Mr. David Slater's, Rolleston water, on Monday, and one of the Nottingham subscribers is credited with a brace of excellent pike from the same length; but the fluctuating waters have given this latter class of anglers but few opportunities so far as the season has progressed.—TRENTSIDER.

Witham, &c. (Mid-Lincoln).—Very few people are now going into the Witham district, and particularly to the waters below Lincoln; but any one desiring good sport with the Witham pike should not let the present opportunities pass. The weather has now turned mild after the unsettlement, but the few nights frost have had the effect it is said of setting the heavier fish on the move. Big pike 16lb. and upwarps say, are now getting very scarce in the Witham, though they may be occasionally met with. I understand, however, that there are fish of fine quality in some preserved water not far from Boston, and reachable through tickets, which I think are moderate in price. —LUCI.

Yare (Norwich).—I suppose my two last reports have been late, but each contained items of interest relating to jack fishing. Since last week several parties have been out, and some more good fish have been captured. I had the pleasure of seeing some of 9lb., 10½lb., and 12½lb. I heard of a good catch one day of five jack, 11lb., 8lb., 8lb., 7½lb., and 6lb.; and also another catch, number not stated, but largest fish about 14lb. The foregoing will show that sport still continues good, and pike seem very plentiful on most of our waters, though not always to be caught. Advantage should now be taken of the open weather, as it is quite possible we may have a repetition of last winter's severe and continued frost. To-day (Thursday) it is quite warm; wind, south, fine. A few frosts would do good in killing the weeds.—ROBERT MOLL.

Yore, Wharfe, Nidd, and Swale.—The weather and water was perfect for grayling fishing during the early portion of the past week, and the hopes of anglers were in the ascendant. On Friday and Saturday, November 27 and 28, fishing a preserved length on the Wharfe, I killed thirty-eight grayling, weighing altogether 31¼lb. On Saturday a well-known Yorkshire angler had six fish about ¾lb. each, and another, fishing the Ripon Club Water, had fifteen, weighing 5lb. All these were taken by swimming the worm. The weather has again broken and prospects look very poor for the next week.—FRANCIS M. WALBRAN.

Tenby (South Wales).—Some good takes of cod, conger, and sea bream have been made; but both takes and weather are variable.—H. S. HARLAND.

Scotch Reports.

Dee, (Aberdeenshire).—The spawning season is now well finished on the upper reaches, and a very good one it has been all through. The river is smaller in volume than is usually the case. There is a grand show of fish on the mid reaches, but the numbers of diseased fish are on the increase, while a very high percentage of dead fish are also being met with. The Durris Hatchery is giving ample satisfaction, 500,000 ova having now been deposited on the grills. A new hatchery is being spoken of lower down the river, and this in all probability will take shape before long. Admiral Fane will not now fish the Borrowstone Water, having recently received an appointment at Portsmouth, and leaves in January.—DEESIDER.

Deveron (Banffshire).—Some time must elapse before it can be ascertained how the spawning season will turn out on the river Deveron. Owing to the spates since the net and rod fishing ceased, it is impossible to estimate the number of fish on the some six hundred beds in the river. From reports, however, it is clear that there are more fish in the river than there were the previous year, which was considered a good one. In the upper part of the Cabrach spawning has been proceeding for some time, and is almost at a close. From Glass to the mouth of the river, it is only in its embryo stage. In the middle sections, a good commencement has been made, but on the lower sections, although there are plenty of gravid fish, it will be some time before spawning is general. Lately, frost has been pretty severe; but little harm is expected, and, with the fine weather at present experienced, and favourable size of the river, good prospects are looked forward to in the meantime. Disease has not been very prevalent on the whole course of the river. A few dead fish have been taken from the water and buried, but nothing to what have been taken by the bailies on former years. Mr. Bisset, lessee of the fishings, is preparing his hatchery on the banks of the river with the intention of carrying on the experiments in salmon culture, which he has been doing for the past four seasons. Some hundred thousand ova are secured every season, and when maturity is reached, they are put into the river, which, of course, cannot fail to have a beneficial effect on the supply of fish.—H. W.

South of Scotland.—URR.—Salmon angling in the South of Scotland closed on Monday, when the Urr (Kirkcudbrightshire), brought the season to a close. The Urr is a small and unimportant river, and affords little sport until November. It opens for angling far on in the season, and goes out along with the Tweed. During the past fortnight some good heavy salmon were landed with fly. The fish, however, are not such handsome looking salmon as some of the other Solway rivers. Last week the river was disturbed with a flood, otherwise the sport would have been better. Among a few of those who had catches were several Annan anglers, and mention may be made of Mr. Boyd, Annan, who landed one of 10lb; Mr. Swanson had one of similar weight; Mr. Coburn, Barnbarroch, one of 5½lb.; Mr. Sinclair, one of 21lb.; Mr. J. Ferguson, one of 16lb.; Sergeant Ferguson landed a good fish of 24lb.; Mr. James Johnstone, one of 20lb.; Sergeant Flynn, one of 20lb.; Mr. Thomas Johnstone, a capital salmon of 26lb., and another of 18lb.; two other gentlemen had fish of 20lb. and 17lb.; while one hooked seven or eight fish and lost everyone. On the closing day a good number of anglers were out, and a few salmon were killed in the different pools. The salmon disease is reported as having made its appearance in some of the district rivers.—HEATHERBELL.

Thurso (Halkirk).—An extremely favourable spawning season is now drawing to a close. There are still a few fish on the redds, but by the end of this week they will probably all have finished spawning. The ova is well deposited in the bed of the river, so that it is pretty safe from severe frost; and, seeing that the number of spawning fish this year is considerably above the average of the past ten years at least, the improvement ought to be very marked within a few years. Some of the earlier spawned fish have already gone down to the sea, and allowing them three months to make up their lost condition, they ought to be ascending the river again in Feb. and March in prime condition, and afford good sport to the early spring anglers. The fish on the upper reaches of the river above Lochmore have quite finished spawning operations, and have dropped back to the loch where they usually remain all winter, and do not migrate to the sea till April or May according to the state of the weather; if mild they go earlier, if cold and stormy they remain later. When they remain late they play havoc among their own offspring (the smolts), and devour great numbers of them. Haddock fishing has proved a failure on the Caithness coast. This is all the worse owing to the herring fishing having been a failure last year. It is to be hoped the winter herring and cod fishing will turn out better. A number of unusually large salmon for this river were seen on the redds lately.—ARCHIBALD HARPER.

Irish Reports.

Ballinderry (East Tyrone).—The Ballinderry and its tributaries are greatly swollen by the heavy rains, which have rendered the water so muddy as to effectually put a stop to all kinds of fishing for this week. However, no one regrets the losing of a brace of pike, or a few perch or bream, when these floods bring up runs of fresh salmon to the spawning beds above the villages of Coagh and Ardtrea. Axcept when the river is high, spawners cannot cross the "carries," which bar the course of the stream. No perch or bream are found above Coagh as the falls prevent them from ascending to the higher reaches. Both keepers and constabulary are watching the river closely against the designs of the poachers.—J. A. B.

Waterville (County Kerry).—A large number of the earlier salmon have spawned and are now returning to the lake. So far the spawning season has been satisfactory, if a little poaching be not taken into account. Sea angling has been very good during the week, and some phenomenal scores for this time of the year have been made at whiting. Gurnet and bream also have afforded much sport.—T. J. DENNEHY.

MATLOCK AND CROMFORD ANGLING ASSOCIATION.

THE above flourishing association held their annual dinner on Friday, Nov. 27, at the new Bath Hotel. The dinner was laid in the new ball-room, and was attended by some fifty or sixty members and friends of the association. An interesting feature in the programme of the evening was the introduction of a party of trained vocalists: Messrs. Melrose, Bambridge, Dodd, Lazenby, and B. Prince, who, with Mr. A. J. Stoneman, contributed an excellent and choice selection of glees, duets, and songs in a most artistic and enjoyable style. A most excellent dinner was provided by Mr. Tyack, and was thoroughly enjoyed. After the cloth was withdrawn, Mr. F. C. Arkwright took the chair, and proposed the usual loyal toasts, which were duly honoured. Mr. Eddowes, of the Trent Board of Conservators, then proposed the toast of "The Matlock and Cromford Angling Association," remarking that the association possessed within itself all the essentials of success, though he thought the chief drawback, perhaps, was the deficiency of feeding streams for spawning purposes. He believed that one of the chief objects of the association was the artificial breeding of fish to assist in stocking the river, and further to protect the fish from poachers, and thus to provide sport for the members of the club and their friends. He could see no reason why the Cromford and Matlock Water should not become one of the very best angling streams in the kingdom, and at the same time be a distinct benefit to the neighbourhood of Matlock.

Another useful object of the association was the weeding out of coarse fish, such as the pike, so destructive to small and also sizeable fish. The association should become one of the most successful institutions of its kind in the kingdom. (Applause.)

Mr. Hodson, of Derby, responded, saying that it was unfortunate the tributary streams for breeding purposes were few, and these more or less polluted, hence the importance of the operations of the association in providing at their model hatchery thousands of young fish to replenish the river, and provide good honest sport for the lovers of angling. During the last few years tens of thousands of young fish had been reared at their hatchery and turned into the Derwent, thus very appreciably improving the sport for their members and friends. The balance-sheet showed they were £1 2s. 11d. on the right side, and that they had a reserve fund of £28 12s.

Mr. T. Clark proposed the health of "The Trent Conservators," and Mr. Eddowes responded.

Mr. Hodson, at the invitation of the chairman, then rose and said that he had a most pleasing duty to perform in asking their secretary, Mr. Arthur Clark, to accept a testimonial, consisting of a chaste and valuable silver tankard, and a purse containing £50, as a recognition of his many acts of kindness towards the members of the association and their friends of the angling fraternity, as also of the assiduous and unselfish attention he had given to the duties of his secretaryship during the time he had been connected with the association. This testimonial had been subscribed by a few friends and admirers, and he was sure that all present would join with him in hearty good wishes to Mr. Clark, along with the presentation.

The President said he had very great pleasure in asking Mr. Clark to accept this testimonial to his sterling worth as hon. secretary of the association, and it was contributed by a few sincere friends in this locality and other parts of the country, who were most happy to testify to the excellent work Mr. Clark had accomplished for the association.

Mr. Arkwright having handed the testimonial to Mr. Clark, the latter, in feeling terms, returned his sincere acknowledgements to the contributors, and said that whatever he had done had been done without expectation of fee or reward, and in the interests of sport. He would highly value this substantial mark of their esteem, and referred to the pleasant manner in which he had at all times been treated by the members of the association. The tankard bore the following inscription: "Presented with a purse of gold to Arthur Clark in appreciation of his valuable services as secretary to the Matlock and Cromford Angling Association, by a few members and friends, 27th November, 1891."

The Rev. R. M. Jones then proposed the health of the president. In very feeling and impressive terms he spoke of the Arkwright family, and bore eloquent and well-merited testimony to the many sterling qualities of the president of the association.

Mr. Arkwright returned his sincere thanks for the generous and kindly way Mr. Jones had proposed the toast of his health, and said that he should be glad at all times to do all he could to improve the sport and to further the best interests of the Matlock and Cromford Angling Association.

FISHING MATCH ON THE ARUN.

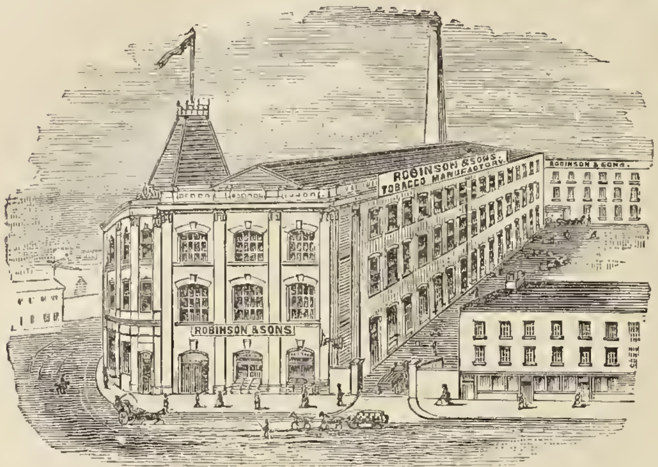
LIST OF THE PRIZE WINNERS.

ON the 29th ult., Pulborough, Sussex, was again visited by a considerable number of London anglers, who assembled there for the purpose of taking part in Mr. A. A. Eldridge's competition. The contest, which was the last of a series of three, was originally fixed for Oct. 25, but on account of the heavy floods it had to be postponed until the day named Almost every day last week news was received in London as to the condition of the river Arun; and on Friday the report was to the effect that it was never looking better for winter angling. Between Friday night and Sunday morning, however, a remarkable change took place. Rain fell heavily during Saturday night, and another high tide prevailed. The result was that when the London fishermen made an inspection of the river on Sunday morning, instead of finding the clean, mignonette-looking water of Friday and its quiet eddies, they were treated to a stream running like a mill-race, whilst the water was the colour of mud, and from the first a poor day's sport was prognosticated.

The visitors arrived at Pulborough, by special train about 10 o'clock, and as soon as the tickets were stamped the competitors were started. They numbered about 130, but the rainy unsettled weather on Saturday deterred many from entering. The conditions of the match were that only one rod was to be used, and that all jack, eels, pope, bleak, dabs, and gudgeon would not be recognised at the scales. The weighing in commenced at the Swan Hotel, at four o'clock, but owing to the unfavourable conditions small baskets were the order of the day. Mr. Charles Watling officiated as clerk of the scales, assisted by Mr. Vaneghan (Funny Folks Club), Mr. Phillips, Mr. Taekley, and Mr. Reynolds. There were also present Mr. T. Crumplen (of the Piscatorial Society), Mr. E. L. Nutt, Mr. Hoyle (President of the North London Angling Society) and Mr. Arthur Matthews (assistant hon. sec. of the Society for Promoting the Reading of Papers at Angling Clubs.) In all thirty dishes of fish were weighed in, including a fine specimen of the Pomeranian bream or "bream-roach." It was noticed that the majority of the fish were alive when placed on the scales and inquiries elicited the fact that many of the anglers had only succeeded in scoring during the last hour, when the water commenced to go down and the tide to change. There were no specimen bream or roach caught. The largest bream was a fish of 1lb. 14oz., which secured the "special bream prize" (a fishing rod) for Mr. S. Cooper. Mr. Sam Hill (Funny Folks Club), would have carried off first honours with 4lb. of roach and bream, but he arrived too late to weigh in, after running all the way from Amberley, a distance of about five miles. The prizes, numbering twenty, ranged in value from £2 2s. to 3s. 6d. The largest catch was 3lb. 6¼oz.; the smallest 14½oz. The prize list is appended:—1, G. Watling, Funny Folks, 3lb. 6½oz.; 2, Bird, sen., Waggoners', 2lb. 11½oz.; 3, S. Cooper, Amicable Excelsior, 2lb. 5¾oz.; 4, Bryant, Wellington, 2lb. 3oz.; 5, H. Watling, Gt. Northern Bros., 1lb. 15¼oz.; 6, C. Russell, do., 1lb. 13oz.; 7, Whitehead, Amicable Waltonians, 1lb. 11½oz.; 8, Lamburth, do., 1lb. 11½oz.; 9, Humphreys, do., 1lb. 11½oz.; 10, Pattman, Bermondsey Bros., 1lb. 11¼oz.; 11, Irwin, Amicable Waltonians, 1lb. 10¼oz.; 12, Cartwright, Gt. Northern Bros., 1lb. 7½oz.; 13, W. Watling, do., 1lb. 7¼oz.; 14, W. Bird, jun., Waggoners, 1lb. 7oz.; 15, T. Moore, Lincoln, 1lb. 5½oz.; 16, Richardson, Dalston, 1lb. 4¼oz.; 17, Socks Bermondsey Bros., 1lb.; 18, Porter, Izaac Walton, 15oz.; 19, Vaneghan, Funny Folks, 14½oz.

TADDY'S MYRTLE GROVE CIGARETTES

SMOKE "ORIEL" NAVY CUT.



THE HIGH CLASS TOBACCO,

MADE FROM PICKED LEAVES OF THE FINEST QUALITY.

Extract from the "FISHING GAZETTE" of February 21st, 1891:—

A GOOD SMOKE.

Dear Sir,—Knowing how much you enjoy your pipe when out a-fishing, may I ask if you, or any of your friends, have ever tried "The Oriel" navy cut, manufactured by Robinson's, of Stockport? If you have not, do so at once, and I venture to say that you will be well pleased with it, being very cool and lasting, with an exquisite flavour. I have no interest in the matte whatever, but simply recommend it as my *beau ideal* of what a fisherman's tobacco should be.—Yours truly, Smoker.

Sold at 5d. per ounce, in 1 and 2 oz. Packets, and 4oz. Tins. Any Smoker having difficulty in obtaining it from his usual Tobacconist can obtain it direct from the Manufactory

POST FREE. 2oz., 10d.; ¼lb., 1s. 8d.; ½lb, 3s. 4d.; 1lb., 6s. 8d. **POST FREE.**

Sole MANUFACTURERS: ROBINSON & SONS, TOBACCO & SNUFF MILLS, STOCKPORT

IN DAYS BYGONE.

By Mac.

That many a time fish give evidence of a taste which like the Heathen Chinee "is peculiar" there is no gainsaying; and that often for their preferences and dislikes no reason nothing more satisfactory than mere conjecture, can be assigned by us is equally indisputable. At least we imagine that most anglers who have for long gone after the *Salmonidæ*, must some time or other have had some experiences in this way which all their powers of reasoning were unable satisfactorily to account for. Everything decidedly outside the compass of the usual order of things is more or less remarkable. But what would strike the novice or the non-angling individual as something remarkable—nay, perhaps, wonderful—would be considered by the experienced as nothing at all unusual. We think nothing about a small salmon ignoring a small fly in spring, and taking a huge fly in preference; nor do we wonder why a large salmon lets a large fly pass him in summer, and comes with such keenness to "collar" a small fly. And why? Because it is the usual order of things. Then again it is not thought at all strange by those who have moved about a good deal that—in summer especially—larger flies are required to bring up the fish in many small streams than are needed in the case of some large rivers. Facts like these, all which would seem wonderful to the stranger to the rod, could be strung out at great length; but for our purpose the foregoing, merely given by way of illustration, are sufficient.

In the earlier part of spring, kelts in many rivers have a particular liking for very gaudy flies, usually of a large size. My most common experience has been that a real dandy, more yellow than anything else, is the deadliest. Generally, when sport with clean fish is not forthcoming and I want, for some amusement, to get on a kelt for a run I mount first of all a fly of this description. But as spring wears on, getting into April, when the kelts, still in the fresh water, are lying waiting for the first "rise," occasioned by fresh rain, to let them get away down to the sea, I seldom find it of much use to use such a fly in order to secure a run. Yet why it is so I cannot tell. I, however, venture to think it not improbable that it may arise from a taste developing in them to prey keenly upon natural food then becoming abundant. While they took the fly, there was as yet nothing else—or little, at least—to attract them; but now the minnow goes more abroad, the smolt having donned its silvery coat becomes more alluring, and the early flies come out in swarms on mild days. The clean fish still take the fly, but for the minnow and gudgeon they are far more keen. But the most singular thing of all is, that while both kelt and clean fish can readily be caught with these lures, clean fish, in the case of flies, will seldom take anything but the salmon size of fly for the time of the year, whereas kelts often very greedily "go" for the natural size imitations of the flies on the water. In my own experience, only one imitation of the natural fly do the clean fish look at—to wit, the March Brown, and even in its case the size has to be larger than that of the natural insect. Often on mild evenings in April and early in May, hours after all the flies had disappeared for the day, have I hooked in dead-calm pools kelt after kelt, fishing with artificial flies of even a smaller size than the natural ones for the season. Yet during this time of the year fishing such water—or any water—and with such flies, it has never but once been my luck to hook a clean fish. And this naturally leads me to ask—Have kelts a greater discrimination than clean fish in respect of fly food? So far as my own experience goes, it would look that they have—in spring, at all events—since they take the trout fly representing the natural insect, whereas the clean fish take much more readily a salmon fly representing nothing in insect life found on the water at the time.

When fish have been long in the fresh water (and especially about one place) and a great deal fished over, it is generally necessary, in order to secure sport, to keep, as time moves on, reducing the size of the fly. Yet this, like many others. is not a rule to which there are no exceptions. Now and again everyone of us must have had our preconceived notions of what was the correct thing upset in such a way as to cause us to wonder, and if of an inquiring turn of mind, to seek for a reason. Sometimes we find wonderful changes brought about in the course of a day or two, and this too in the absence of any appreciable alteration in the volume of water. Such changes, for example, as the fish turning from having anything to do with large flies, go in for nothing over half the same size, and *vice versa*. On large early rivers, about April, this caprice (or call it what we may) on the part of the fish, is most frequently and commonly observed, and is due I should imagine to a sudden change of temperature. But from the very fact of its being general in its scope nothing is thought about it by those anglers used to it. Far different, however, is it when we find a fish taking a lure which we know is nothing like the correct size for the time of the season—a lure for instance many times larger or many times smaller than those of the same nature, which is doing all the killing work along the same river. We then experience something to cause us surprise, and set us casting about in our mind for a reason. An example or two to show exactly what I mean I may here give.

Once for the better part of June and July, I fished a stretch of water, which (when in its normal volume) I did best on by using flies about inch-size. Different patterns, of course, I had, and used, according to my fancy, to suit the lighting conditions. As to size, however, a fly about an inch proved all round the best. Inch and a quarter I sometimes used in the evenings after eight o'clock, and it was while evening fishing that I first moved a fish, which, by his curious behaviour, led to the somewhat novel (to me) experience to be mentioned. I cannot remember the evening of the week that I had the first rise from this fish, but I recollect distinctly that five evenings in succession I rose him in identically the one spot. Every time he came at my fly with a boil, just as I was about to draw it out of the water from behind a big boulder, part of which only was covered. But once I got a rise from him during the day; his nightly movement was a dead certainty: still merely the one time would he come, no matter how long or with what variety of flies I tried him. The last evening of the performance I went down, and, as previously, got him, when the fly came to the right spot, to show that he was still there by making the well-known boil behind the boulder. The few more tries I made for him were useless; apparently he had sulked, and would not come again. I then sat down on the green grassy bank to smoke a pipe, gaze on the beauties of the evening sky, and the charming effect thrown on the landscape by the now low westering sun; drink in with my ears the music of the woods and the waters, and have the pleasure of receiving the very desirable attention of myriads of midges! Soon of the latter I had quite enough, and I started to my pins. I cannot tell what made me think of it—the absurdity of the thing was so apparent; but I put on a fly about three inches in length—a great, gaudy Brown Eagle—and stepped down the bank, and threw it over the part where my cunning fish I knew was lying. Like the angler who, when he couldn't get a fish, got mad, and pitched his fly-book and fly-filled cap into the river, I said, or perhaps I did not say, "Take that." I forget now; but certain, whether I said anything or nothing, when I got to the right spot, my erstwhile so 'cute fish came bouncing at the huge fly, and nicked it neatly.

Not so remarkable (in my estimation) as the foregoing, but, as illustrative of *Salmonidæ* caprice, still a bit out of the common order of experiences, are the particulars now to be given concerning the two following catches.

Fishing for a "mixed basket" on a grilse, sea trout, and trout stream which was in good order, I once killed two grilse and three sea trout in a forenoon with the very smallest of flies. Had the stream been low, which it was far from being, my getting of those five fish with such tiny fly would not have surprised me a bit. But as I had on three kinds of flies—all real nailers and the very best size each of them at the time for the three different kinds of fish—it was indeed surprising to me that not the fly intended for the grilse nor that intended for the sea trout did either of these fish take but the tiny fly—a black hackle with silver body, for which the yellow trout had a special liking. Another time (on a different river) I had an experience of something of a like nature, fishing with very wee flies, when I caught in succession within half-an-hour a sea trout and a couple of grilse—all fresh-run. But on this occasion the pattern of fly was different—pale wing and gold body. Lots of fish were in the water and rising according to angler's idea, in a taking manner. Yet for a couple of hours, though I fished with the right sizes of the approved local patterns, I could not move a fin. Neither was the water low nor the fish long up and potted, and this considered such a departure from the "use and wont" of the stream was rendered all the more remarkable.

Not often in streams which are running a good size—say their best fishing size for the migratory fishes—do grilse or sea trout, more particularly the former, deign when they are fresh-run to seize anything so insignificant as a small trout fly. But get the water low and clear, and the fish long up, brown, and stale, and then more likely with tiny fly than anything else will captures both of grilse and sea trout be effected. Accordingly, I ask, do the potted fish feed more on the natural food, insect food, found about the waters where they sojourn—strictly speaking, feed more like the yellow trout than do their fresh-run brethren? It seems to me that in this respect there is some parity between them and the kelts. The remarks made in this paper and in the two preceding ones, will, I venture to hope, lead to some interesting and useful discussion. The more freely opinions are exchanged, and the more closely matters looking puzzling or mysterious are inquired into, the more do we get—or ought to get—enlightened.

Notes

REQUISITIONS numerously signed by ratepayers in Earlston, and anglers in the neighbourhood, have been presented to several of the landed proprietors in the district, requesting them to put in fish passes at certain points in the Leader in accordance with the Tweed Act of 1860. Lady Reay, Carolside, has favourably considered the matter, and others, says the *Kelso Mail*, are taking it into consideration.

SOME parties are agitating for getting minnow, gudgeon, and other spinning, and bottom fishing for salmon made lawful on the Tweed in autumn.

FOR a good while now both Tay and Dee have been running rather on the high side, for the spawning of the fish being done in the safest redds.

ON tributaries and upland reaches of Scottish North East coast rivers, "black fishing" raids have been pretty frequent of late. The sturdy hielanmen with blackened faces go out in bands, and on these nights the one or two local bailiffs think it wise enough policy not to be too officious in the exercise of their duties. They know that come what will, the glen and hillmen *must* become possessed of the kipper necessary to tide over the long winter before them, and they have hair enough on their heads not to put themselves in the way of getting a "crackit croon."

WITH regard to the Spey Salmon Hatchery, at the Railway Bridge, near Garmouth, we have been informed that "The reports reaching the public of the small attempt at artificial salmon propagation were of quite an exaggerated nature. The hatchery was put together in the very crudest form, and was designed simply to experiment with, and see if it would be practicable and desirable to proceed in this direction, in order to increase the supply of fish in the Spey. The attempt last year—under the care of Mr. John Rae, of Tugnet—proved, however, a success, and he is of opinion that some fifty thousand young fish were added to the Spey stock from this source. This season the experiment is to be repeated in the same hatchery; but there is a proposal to have a far more elaborate establishment set up at Fochabers, where the process can be carried out with greater care, and with greater attention."

SOME heavy floods towards the end of last month swilled away out of sight and probably out of the river a great many of the North Esk diseased fish. Up to the middle of November five hundred diseased fish had been taken out of this river by the water-bailiffs. And *still* the whole of the spawning-beds are perfectly crowded with fish.

A LOCH TAY correspondent writes regarding the Loch Tay salmon, which we think may rightly be called "winter salmon": "My observations incline me to believe that the fish that come up into Loch Tay in January and February, go up the Dochart in May and June, spawn there late in November and during December, leave the Dochart with the floods early in the year, get to the sea in spring and the beginning of summer, and return to the river in November, December, and January, making their way back to Loch Tay. It takes the bulk of them nigh two months to get from the foot of the loch to the top."

FROM the Laxford and Loch Stack we hear that there is a better stock of spawning fish this year than there has been for several years back, which is no doubt due to the bagnet fishing of the Laxford estuary having been bought up by his Grace the Duke of Westminster and discontinued. "The season, too," our correspondent remarks, "has been very favourable, so far, the water being neither too high nor too low, hence the beds ought to return a good percentage. Salmon, grilse, sea trout, and yellow trout, are all but little more than about half-spawned out yet. The Badcall Hatchery has been stocked with imported ova."

MR. DONALD WATSON, tackle maker, 19, Inglis-street, Inverness, writes, saying: "I am pleased to say the fishing on the river Ness, during the past season, proved the best we have had for twenty years. Upwards of seven hundred and fifty salmon and grilse were taken from middle of July to close of season (October 15), all with the rod." This is very good when we consider that there is not more than one and a-half miles of fishing water.

THIS past autumn, the only important salmon rivers in Scotland that did not fish better than during their best autumn season of comparatively recent years were Spey and Findhorn. Alas for the poor Findhorn!—once so famous. It seems going to crockaneeshing.

THE Don spawn-beds, for over thirty miles, are packed with fish; the like has not been seen for full a dozen years past. To this the improved facilities for the fish getting up must have largely contributed.

WE are informed that some time ago, when the Tay was being netted for gravid fish to procure ova from for the Dupplin Hatchery, a clean-run fish of over 40lb. was brought ashore. Of course it was returned to the river, and by this time it may be in Loch Tay.

LOCH TAY, Loch Ness, and Loch Oich are the only lochs in Scotland for very heavy salmon early in spring. The latter, for its size, affords much the best angling, which now, through the death of Mr. Wilson, for many years lessee, has passed into the hands of Mr. John Balfour, of Balbirnie, Fife.

FOR the back-end season, the Duke of Roxburghe's Floors Castle Water of the Tweed, gave between seven hundred and eight hundred fish, and the Birgham Dub over three hundred. The Tweed fisheries, taking them all round, have not done so well for twenty years. The only beats that did not show up to the standard were Sprouston Dub and Ednam House. The season was notable as being one for scarcity of very big fish; 41lb. was the weight of the heaviest caught; 39½lb. of the second heaviest. It is believed that the river's total yield of salmon and grilse during the autumn exceeded three thousand. As a one day's score, the Duke of Roxburghe's seventeen fish stands unsurpassed. Two rods on the Floors Castle lower water—one fishing twenty days, the other fourteen and a-half days—accounted for one hundred and ninety-four fish, which is reported as the best that was done in such a short time.

Notes and Queries

THE EVOLUTION IN PRIZE OFFERING.—Probably before the end of the century the young club anglers who have become expert wielders of the fishing-rod might deem the sport its best reward. The "gentle art" is comparatively new to many Londoners proper; and we cannot expect that when young men subscribe to an angling club, and incur the extra expense of joining in distant fishing trips by railway, that these aspirants shall become so enthusiastic as those who as mere boys went down to the local stream with a lithe stick and a little bit of line as naturally as newly-hatched ducks take to water. Things must settle down in modern angling clubs, as in other forms of sport which have become popular. The time will be pretty sure to come when amateur fishermen will decline to contest for articles for the kitchen, or even for money prizes. When a few leaders "look up," so to speak, other clubmen will follow their example; and the outcome might be in the London as well as that leading Provincial Angling Clubs, that "Challenge Cups," emblematical of the art, might be paid for out of the common fund of each club, and be competed for as the majority in each case might determine. For London anglers, and those provincial angling clubs, the members of which fish the Thames, a gold cup for trout would naturally arise. The Lea and the Colne might be included; and the angler who was successful in winning the first "Challenge Cup" for the best trout taken in either river might indeed be proud of such a prize; then a cup might be given for pike, for perch, and barbel—in short, for each fresh-water specimen fish, because each club might fix the weights below which fish were not eligible for the challenge cups. The Midland and Northern city and large town angling clubs would of course offer the best cup of all for salmon; the next challenge cup for trout, and so on. Then if the condition precedent were made that the fish which won the respective challenge cups be "set up" at the club's expense, the club-rooms would in time become ornaments to the cities and towns. Something analogous to the scheme suggested would be the means of improving the *status* of each angling club; each member would also feel his *prestige* improved; and if any friends and sympathisers of anglers who, in addition to offers of valuable tackle as additional prizes, might even still further extend their generosity by adorning the annual dinner and supper tables with presents of "feather and fur," after the good custom which years back was common among noble lords and cheery squires at the annual dinners after the ploughing matches and such like events.—*W. F.*

GILLIES' "DRAMS."—It would be interesting at this juncture to know what is the death-rate of Scotch gillies, who act as boatmen, &c., to anglers, in view of the movement promoted by Mr. Auberon Herbert and his friends to induce the hotel-keepers at Loch Awe to commute the "dram-sum" into a money-payment of eightpence, one shilling per day being the usual charge for the whisky. M. Bertillon says that gamekeepers are the longest livers in France. Does the like rule apply to the angling gillies of Scotland? However this might be, a good many English anglers who annually repair to the rivers and lochs of Scotland—many for their holiday—might question whether some intermediate plan would not be more likely to promote Temperance than stopping Sandy's whisky while "afloat," with which to "toast" the first good fish, or to drink with his luncheon. English mowers in the hot weather in the hay-fields have been given a mixture of thin oatmeal, milk, sugar, and water, and this, taken to the field warm in biggish jars, is drunk by the men, and carefully wrapped up, so as to keep the mixture "mulled." The writer had himself found that very weak cold gin and water was a good drink in the hot days early in September. Tea, again, is exhilarating; but from whisky to cold tea is a "drop" which would be scarcely acceptable to the intelligent boatmen, while some fly-fishers were drinking whisky; because it can hardly be expected that all gentlemen fishing Loch Awe will themselves observe the rule laid down by Mr. Herbert, or any other person, however well-intentioned their motives might be. Besides, if the change were to be carried to its logical conclusion, steps might in time be taken to induce hotel-keepers to refuse to serve the gillies with the national spirit after the day's sport was over. Nothing short of chronic intemperance on the part of those most concerned would justify such an interference with the liberty of the subject; indeed, some gentlemen, observers of moderation themselves, might take this new departure as an indirect reflection on themselves; and when "toasting" a good capture, naturally desire that their intelligent pilot and friend for the nonce should share in the success. Sandy is the last man to be urged to be economical; and where he is also a moderate drinker, might deem the change an intrusion, while being perhaps indifferent to a certain extent, for few hotel-keepers at Loch Awe, and beside any other Scotch loch, could consistently refuse to serve boatmen in the evening, or it might drive the men to illicit sources for their tipple, without the restraining influence of a "licensed victualler."—*F.*

[When salmon fishing in the Highlands last spring, we one day tried the experiment of taking a flask of cold tea, and our experience is that it's very bad stuff to fish on; in fact, if we had not prudently taken a flask of whisky also, which counteracted the effect of the tea, we should have been poisoned, and our gillie would have died of thirst. The time when Scotch gillies will prefer cold tea or barley-water to whisky will not be before the Millennium—if then.—ED.]

HOW TO BREED AND REAR TROUT.

By T. Andrews, Guildford.

SECOND PAPER.

Now, I have occasionally heard it hinted that trout bred and reared artificially are useless for turning out into rivers and lakes where there would be no possibility of feeding them by the same means; and I have been told that the fish having been accustomed to have their food brought to them for a year or so, will not care to look for natural food and so will not rise to the fly. There never was a greater mistake. I have introduced very many millions of trout into various waters, and I could give endless instances of the fish thriving well on the natural food, and affording splendid sport with the fly when they attain a killable size. Turn a well-fed fish out from a nursery, and his past experience will have shown him what a comfortable state of things a tolerably full stomach will induce, and if there is food in the water his instinct will teach him to find his "daily bread"; but a few days "out in the world" will very soon make him uncommon wild, and it would be a difficult matter to persuade him to come close enough to take any more artificial food. A few trout in the open are often tamed and fed at some *favourite spot;* but I am speaking of the impracticability of feeding trout artificially on the *entire length of a stream, or over the whole area of a large pond.*

There are very few sections of any of our trout streams which have not been stocked during the last ten or fifteen years with artificially-bred fish by some pisciculturist or other; and I think one reason why there is not such sport now as there was twenty to thirty years ago is simply that there are so many more fishermen after them, and so their education is now of a higher standard. Does not this plainly suggest some kind of *memory* in a trout? The increase in the number of anglers can surely have but this effect on the fish—viz., to make them more chary of feeding when they see the human form divine by the river-side, or of feeding *on the surface* at all. Perhaps a trout has the power of remembering the struggles he has had to free himself from something (he knows not what) by which he was ruthlessly dragged twenty yards down-stream and on to the bank, to be not over gently unhooked and returned to the water, having been admired—perhaps execrated for not being sizeable. I am strongly inclined to believe that a trout *has a memory*—or, at all events, a very strong power of observation and discrimination—which is retainable in some instances for a considerable length of time. I am not going to say how long; as it has often happened that a fish which was hooked in the morning, and broke away with a foot or more of gut, has been taken in the evening with the fly and gut still in him. And will not this call to mind many a story of the enormous fish of at least 5lb. which was lost by one angler, and caught a few hours after by another weighing just 1½lb.? But the fish we lose are *always* so much bigger than any we have landed until a few days have passed, when those we have killed seem to have grown remarkably. This may be only "artist's licence"; but a steel-yard and a little memorandum-book will stop this sudden growth in a very effectual manner.

I was saying that the power of observation in a trout is very strong, and it is more readily seen in a trout-breeding farm than in the wild state. If I catch a fish or two with a rod or a net to examine its condition, or to show friends, the others in the same pond most undoubtedly profit by the experience; and my keeper often remarks that I have been "hooking on 'em," as they will not collect to feed or show themselves for some time after: and this is peculiar to fry of three months old, as well as to mature fish. There *is* a device whereby a great number of the fish can be tempted; but I have discontinued the practice, and am not going to divulge the secret, as it has nothing to do with trout rearing. There are times, too, when trout get exceedingly silly, and will rise madly at anything.

Without going further into the causes of fish becoming more shy after being pricked occasionally, and only noting the fact that there are fewer fish to a rod—or rather *more rods to a fish*—on some waters than there used to be, I will leave the matter to abler brains than mine to clear up, and proceed to give some account of the commencement and development of my trout fishery.

About the year 1866 our annual invitations to fish fell off very considerably, so much so that I began to think my trouting days were gone for ever. Letter after letter came, saying, "The fishing is now let, so that I shall be unable to ask you to come in future"; or, "I have transferred my right of fishing to So-and-so," &c. With these pleasant reflections I prepared to "hang my harp—no, my rod—on a willow tree," when my amiable and practical life-partner hinted that I should "make my own trout fishing, by breeding some fish and finding some water to stock." Happy thought! I was not long in acting on the suggestion, and purchased a book or two on the subject—one in French, which puzzled me fearfully, as I had allowed my knowledge of the language to get exceeding rusty; I also went to the South Kensington Museum, and spent a few hours at Frank Buckland's hatching trays; and from what I saw and read I felt quite sure that I could do a little in that way myself.

By-the-by, I wonder what Frank Buckland would think if he could see Howietoun or Crichmere now. His idea of economic fishculture would surely be realised! Not that these are by any means the only places in Great Britain where fishculture has been carried right through to self-supporting fish-farms, as there are several other establishments (both amateur and professional), where highly satisfactory results have been obtained. Mr. Armistead, Mr. Ford, the Marquis of Exeter, the late General Goodlake, Colonel Custance, Colonel Hood, Mr. Grenville Neville, Mr. T. Mann, Dr. Wickham (at Houghton), and many others whom I have not the pleasure of knowing, have done excellent practical work; and have not such men as Mr. R. B. Marston, Mr. W. Senior, Mr. H. Ffennell, &c., by their writings, and admission into the press of all matters connected with fishculture, done an immense service?

I soon fitted up half-a-dozen slate boxes and the necessary water supply; but my first difficulty (in 1867) was to obtain permission to take ova, as I found owners of fisheries very unwilling to allow their fish to be handled, a good many accidents having already occurred in the artificial spawning operations. At last, after much coaxing, I prevailed upon the late Lord G. to allow me to take ova from trout in his lovely ponds near Guildford. I never liked the idea of netting a stream, as I saw at once the uncertainty of hitting the exact time, and the risk of finding the water too big or nets unsuitable. I saw, too, after one or two attempts, that river netting was very expensive, and that it was necessary for me to be economical; for about five thousand ova which I took from a celebrated little stream near Odiham cost me very nearly £20, as many as three journeys having to be undertaken.

There was great fun over my first attempt at trout spawning. The keepers were sceptical, and their remarks discouraging in the extreme. One man who had looked after his master's fishing for over fifty years worked himself up to a fearful pitch of excitement when we ran the pond off for the first time, observing that he was sure his lordship would be very angry if he knew I was going to take *all his fish away.* I kept the game alive till we had stripped the pond of every fish; and separating males from females in large tubs, I said to my assistants, "Now we'll begin!" and our beginning was comical. It was nearly dark when the water had run off. We had to fetch each other out of the mud. The fish were slippery; they would not stay still to be operated upon; they wriggled out of our hands, and fell about everywhere, and in the attempt to pick them up the eggs poured from them on to the grass and mud. We scraped the eggs up with our numbed hands as we best could—mud and all. In carrying the egg-can across a soft place I got mired and fell over, the eggs, of course, being spilt. We lost one of my assistants—he had turned faint, and we found him with his head in a ditch; fortunately I had asked a medical friend to go with us, and he was promptly shouldered and taken into the keeper's cottage and restored. But we managed to take home about forty thousand eggs on my first day's spawning, which everyone considered a very good beginning. The keeper's facial expression while we were spawning the fish was like no other I have ever witnessed; and after we had taken some ten thousand or fifteen thousand eggs, he remarked that he "knowed summat about trouts, and it worn't no use telling he that them eggs was a-going to 'atch, 'cos he knowed better." I invited him to come and have a look at them in my hatchery after six weeks had elapsed, and he then repeated his former belief that they would not come to trout. Yet another six weeks passed, and he paid me a second visit at the time when the fish were just hatching. Still "they worn't trout. He didn't know wot they wos, only they worn't trout—that's all." And so, in a few weeks more, I sent (as I had promised) his lordship about five thousand fry, and the poor old fellow was obliged to admit then that "they moved like trouts." These five thousand fry were placed according to my instructions in a nice place prepared for them, and I went over in August to see how they were getting on; and on my taking a couple of three-inch fish with a small fly the old gentleman candidly expressed his belief that "they wos trout, but he would never have beleft it." From that year to last season—with the exception of one year, when the ice in that neighbourhood completely beat us—I have spawned the fish every winter and returned fry or yearlings and a very pretty stock of trout those ponds now contain.

No sooner had I made a good start than there were many people interested in the work, who begged to be allowed to see my eggs; and amongst the first was a servant of the late General Goodlake, who came one day to see if I would part with some. I said I should be very happy to give him some; but he replied, "I think, sir, that I want more than you would care to give me." "How many do you want?" I said. "Twenty thousand," said he. "Oh, I am sorry I cannot give you so many as that," I replied; and he then said that he was prepared to pay me for them. But I was ignorant of the market value at that time, never having sold or bought any; so I asked him what he proposed to pay for them. "Three pounds per thousand, sir, I am to offer you." So, in 1867 my first little business transaction was effected, and I thought I could not do better than lay out the money in extending my hatchery. Since 1873 till the present time (and I do not suppose I have done yet) I have been digging ponds and extending my fishery until I have possibly as pretty and as useful a place as one would wish to see. I always regret that I did not from the very first make rearing-ponds, as time has shown that yearlings are the mainstay of a pisciculturist's business, and the demand for these and two-year-old fish is constantly increasing; and I may as well confess at once that I do not remember the season from the time I made the first sales of my fish that I could not have sold many thousands more than I had reared.

There used to be, until later years, some known causes (which, however, we *did not know in time to prevent*) which seriously affected the numbers of the fish in various stages. Sometimes my hatching water would play tricks, or someone about me would be careless; at another time we did not succeed in clearing a pond from every yearling, and the loss of next year's stock was too dreadful to think of. And one peculiarity of fish breeding is that if any such accident does happen the produce of many seasons is seriously affected. It is as fatal as the loss of a big tree in the park. No writing a cheque for another, and "have done with it," will avail. Nothing but years of waiting will replace the tree; and nothing but waiting (perhaps several seasons) will do in the case of loss of a trout breeder's stock. But by degrees we ascertain the cause of the losses, and endeavour to prevent them in the future; still there are plenty (too many) which *will* crop up with all our care, and although one fault is corrected, another can soon be found. It is, therefore, necessary that a man who contemplates going in for trout breeding on an extensive scale—or, in fact, at all—should be prepared to hold himself ready at a moment's notice to "tackle" anything which may be going wrong, and also to make up his mind that nothing will prevent him or his qualified manager (when he can find one) from giving his whole time when necessary to the subject; for that which we have read in almost all works on fishculture is perfectly true—viz., that failure to be on the spot at the critical time (and there are several such) may be the means of losing a very large proportion, if not the whole lot, of eggs, fry, yearlings, or older fish. As in the case of fire, a bucket of water at hand may be worth untold gold; but a few moments later all the water in the Thames may be of no avail.

I remember a very narrow escape I had some years ago with five thousand yearlings in one of my dispatching tanks on account of one pipe robbing another, and yet we had used the same for years and it had never occurred before. I think if I had not been on the spot (and it was nearly midnight) I should have lost nearly the whole of the fish. Ten minutes later the greater part would have died. A small proportion would not have been affected, as there was still sufficient water passing through the tanks to supply the necessary oxygen to a few, as the numbers decreased through death. On my turning on a greater volume of water, and getting rid of the *air in the pipe* which I found was the cause of the stoppage, the fish, of course, very quickly recovered, and next morning were none the worse. A trout will recover with proper attention, although to all appearance it is too far gone. If there has been no injury through rough handling the fish will in most cases come round, as in the case of a drowning man; but the only restorative applicable to a fish is to hold it with its head upstream in fresh water, first ascertaining that no foreign substance is in the gills or throat. If a fish is partially suffocated with mud or weed it is a good plan to hold it in the air for a few seconds, when anything not absolutely fixed in the throat is generally expelled.

In the early days of my spawning I once found that a huge male fish had been left in a can while we went a few yards higher up the stream to look for his wife. I suppose we were gone half-an-hour, and I repeatedly begged one of the keepers to go back and see how that fish was getting on. The keeper assured me that he would be all right; but on my return to the bait-can I found him "all wrong"—viz., wrong side uppermost, gills extended, colour changed, and to all appearance dead. I fancied, however, that I saw a spasmodic movement of the mouth, and I instantly went into the river with him (*à la* Briggs), and there I stayed for an hour nursing the fish. At the end of that time I noticed that his nose regained colour, and after a while I saw him draw one breath. The end of it was that the fish swam out of my hands on to the shallows. I went after him; but—"No, thank you! I feel extremely obliged for your careful nursing for the last three hours, but I have no wish to renew your acquaintance." There had been a little crowd of villagers watching, and some of them were not indisposed to taunt me, and to cast ridicule on the whole thing; but the inn was close at hand, and most of my audience retired to get a warm, for there were ten degrees of frost at the time. Now and then one would come out to see how I was getting on; but all had come to the conclusion that I might stay there till Doomsday, but "that fish was a gone-er." I got them all out of the public-house in time to show them the fast-recovering fish, and was rewarded by a hearty "Bravo!" and "You *did* stick to him, sir!"

And I may say that it is the sticking to most matters—fishculture not excepted—which in the end means success. By "sticking," I mean a persistence and determination to persevere, even though a succession of failures may occur and it may seem waste of time to continue. Sometimes it may be hopeless and useless to continue under the existing arrangement of water or (more likely still) *management;* but if it is found that the appliances or the water are not suitable, all this may be altered in the future. But this often means beginning all over again, which sickens some men; and sooner or later (usually *sooner*) the operations are discontinued—perhaps just at the point when a trifle more "sticking" would lead to success. Yet with fishculture how few have succeeded so far as to warrant a continuance and enlargement of the work. An eminent American fishculturist (Seth Green) is said to have remarked (on the very first page of Livingston Stone's "Domesticated Trout") that "one man in a million would succeed." These are great odds, and the words can scarcely have been intended in a literal sense; and Stone, in the next few pages of his excellent book, gives distinctly the reasons why success in fishculture is so difficult to command—viz., the dealing with *running water*—"to make it go *as* you would have it, and *where* you would have it, from one year's end to another." Water being possibly the most important factor in fishculture, I will endeavour to give, for the guidance of any who feel disposed to practise the art, some of my experience with regard to it.

(To be continued.)

A TREATYSE OF FYSSHYNGE WYTH AN ANGLE.

BY DAME JULIANA BERNERS.

WRITTEN FOUR HUNDRED YEARS AGO.

(*Continued from page 218.*)

NOW I haue lernyd you to make all your harnays. Here I woll tell you how ye shall angle. Ye shall angle: vnderstande that there is vj. manere of anglying. That one is at the grounde for the troughte and other fisshe. A nother is at y^e grounde at an arche, or at a stange where it ebbyth and flowyth: for bleke: roche: and darse. The thyrde is wyth a flote for all manere of fysshe. The fourth wyth a menow for y^e troughte wythout plumbe or flote. The fyfth is rennynge in y^e same wyse for roche and darse wyth one or two heeres and a flye. The syxte is wyth a dubbyd hoke for the troughte and graylyng. And for the fyrst and pryncypall poynt in anglynge: kepe y^e euer fro the water fro the syghte of the fysshe: other wyse kneele on the londe: or ellys behynde a busshe that the fysshe se you not. For yf they doo they wol not byte. Also loke that ye shadow not the water as moche as ye may. For it is that thynge that woll soone fraye the fysshe. And yf a fysshe be afrayed he woll not bite longe after. For alle manere fysshe that fede by the grounde ye shall angle for theym to the botom. Soo that your hokys shall renne or lye on the grounde. And for alle other fysshe that fede aboue ye shall angle to theym in the myddes of the water or somdeale byneth or somdeale aboue. For euer the gretter fysshe ther nerer he lyeth the botom of the water. And euer the smaller fysshe the more he swymmyth aboue. The thyrde good poynt is whan the fysshe bytyth that ye be not to hasty to smyte nor to late, For ye must abide tyll ye suppose that the bayte be toke in the mouth of the fysshe, and thenne abyde noo longer. And this is for the grounde. And for the flote whan ye se it pullyd softly vnder the water: or elles caryed vpon the water softly: thenne smyte. And loke that ye neuer ouersmyte the strengthe of your lyne for brekynge. And yf it fortune you to smyte a grete fysshe wyth a smalle harnays: thenne ye must lede hym in the water and labour hym there tyll he be drownyd and ouercome. Thenne take hym as well as ye can or maye, and euer bewaar that ye holde not ouer the strengthe of your lyne. And as moche as ye may lete hym not come out of your lynes ende streyghte from you: But kepe hym euer vnder the rodde, and euermore holde hym streyghte: soo that your lyne may susteyne and beere his lepys and his plungys wyth the helpe of your croppe and of your honde.

Here I woll declare vnto you in what place of the water ye shall angle. Ye shall angle in a pole or in a stondinge water in euery place where it is onythynge depe. There is not grete choyse of ony places where it is onythynge depe in a pole. For it is but a pryson to fysshe and they lyne for y^e more parte in hungre lyke prisoners; and therefore it is the lesse maystry to take theym. But in a ryuer ye shall angle in euery place where it is depe and clere by the grounde: as grauell or claye wythout mudde or wedyse. And in especyall yf that there be a manere whyrlynge of water or a couert. As an holow—bake: or grete rotys of trees: or longe wedes flortyng aboue in the water where the fysshe may couere and hyde theymself at certayn tymes whan they lyste. Also it is good for to angle styffe stremys and also in fallys of waters and weares: and in floode gatys and myllepyttes; And it is good for to angle, where, as the water restyth by the banke: and where the streme rennyth nyghe thereby: and is depe and clere by the grounde and mony other placys where ye may se any fyssh houe or haue ony fedynge.

Now we shall wyte what time of the daye ye shall angle. From the begynnynge of May vntyll it be Septembre the mornynge tyme is erly by the morowe from foure of y^e clocke vnto eyghte of the clocke: And at after none from foure of the clock vnto eyghte of the clocke: but not soo good as in the mornynge. And yf it be a colde whystelyng wynde and a derke lowrynge daye. For a derke daye is moche better to angle in than a clere daye. From the begynnynge of Septembre vnto the ende of Apryll spare noo tyme of the daye.

Also many pole fysshes woll byte in the nonetyde, and yf ye se ony tyme of the daye the trought or graylynge lepe: angle to hym wyth a dubbe acordynge to the same month. And where the water ebbyth and flowyth the fysshe woll byte in some place at the ebbe: and in some place at the flood. After y^t they haue restynge behynde stangnys and archys of brydgs and other suche maner places.

Here ye shall wyte in what weder ye shall angle, as I sayd before in a derke lowrynge daye whanne the wynde blowyth softly. And in somer season whan it is brennynge hote it is nought. From Septembre vnto Apryll in a fayr sonny daye is ryght good to angle. And yf the wynde in that season haue ony parte of the Oryent: the wedyr thenne is nought. And whan it is a grete wynde. And whan it snowith reynth or hayllyth, or is a grete tempeste, as thondyr or lightenynge: or a swoly hote weder: thenne it is noughte for to angle.

Now shall ye wyte that there ben twelve manere of ympedymentes whyche cause a man to take noo fysshe w^t other corayn that maye casuelly happe. The fyrst is yf your harnays be not mete nor fetly made. The seconde is yf your baytes be not good nor fyne. The thyrde is yf that ye angle not in bytynge tyme. The fourth is yf that the fysshe be frayed w^t the syghte of a man. The fyfth yf the water be very thycke: whyte or redde of ony floode late fallen. The syxte yt the fysshe move not for colde. The seventh yf that the wedyr be hote. The eyght yf it rayne. The nynthe yf it hayll or snow falle. The tenth is yf it be a tempeste. The eleventh is yf it be a grete wynde. The twelfyfth yf the wynde be in the east, and that is worste. For comynly neyther wynter nor somer ye fisshe woll not byte thenne. The weste and northe wyndes ben good, but the south is beste.

And now I haue tolde you how to make your harnays: And how ye shall fisshe therewyth in alpoyntes. Reason woll that ye knowe wyth what baytes ye shall angle to every manere of fysshe in euery moneth of the yere, whyche is all the effecte of the crafte. And wythout whyche baytes knowen well by you all your other crafte here to form anayllyth you not to purpose. For ye can not brynge an hoke in to a fysshe mouth wythout a bayte. Which baytes for every manere of fysshe and for euery moneth here folowyth in this wyse.

For by cause that the samon is the moost stately fyssh that ony man maye angle to in fresshe water. Therfore I purpose to begynne at hym. The samon is a gentyll fysshe: but he is comborous for to take. For comynly he is best in depe places of grete ryuers: And for the more parte he holdyth the myddys of it: that a man maye not come at hym. And he is in season from Marche unto Myghelmas. In wyche season ye shall angle to yx hym wyth thyse baytes whan ye maye gete theym. Fyrste wyth a redde worme in the begynnynge and endynge of the season. And also wyth a bobbe that bredyth in a dunghyll. And specyally wyth a souerayn bayte that bredyth on a water docke. And he bytith not at the grounde: but at ye flote. Also ye may take hym but it is seldom seen with a dubbe at such tyme as whan he lepith in lyke fourme and manere as ye doo take a troughte or a graylynge. And thyse baytes ben well prouyd baytes for the samon.

THREE DELIGHTFUL DAYS.

BY EDGAR S. SHRUBSOLE.

THE first of the three occurred several years ago, the second only a few short months back, and the third within twenty-four hours of the second. How the first led to the second and third, and why the three stand out so prominently from among the many pleasant days I have spent by the river side, intent upon the sport that (in my estimation) is far superior to all others—I allude to fly-fishing for trout—I will endeavour to tell in this article.

I was sitting at home one morning satisfying an appetite that is enjoyed by those young men who live in the country, and think nothing of a ten-mile run with the "Hare and Hounds" Club, a long day's cricket under a broiling sun, a two-miles spin in an out-rigged sculling boat, a rough-and-tumble at a game of football, or a twenty-five or thirty mile walk on a "day off," and having disposed of a breakfast that would well serve me twice now, I turned my attention to an important letter lying by my side. It *was* an important one, and no mistake. Looking back through the years that have passed, I would emphasise this assertion, and say it was a *very* important letter, and being of such importance it is necessary I should tell how it came to be sent to me.

Notwithstanding my great love for cricket, &c., I had developed an enthusiasm for trout fishing, and being happily privileged to fish a well-stocked preserve, my opportunities for "trying my hand" were many. But somehow I could not get on to my satisfaction—something always went wrong, and I had seldom more than a brace of trout to take home after a hard day's fishing. The fish were there, it was no use disputing that fact, but, as the keeper frequently told me, "They are artful, they are, sir, and very sly." Thus, probably unconsciously, repeating the words of one famous Joey B.; Sir! True, very frequently a silly 4oz. fish would dash at my fly, and shortly after lie quivering upon the bank; but the owner of the water had informed me very emphatically that no small fish might be retained, and so the troutlings had to be returned to their native element. Nothing but the artificial fly was allowed, so I was debarred the satisfaction of luring pound trout to their death by means of the humble worm.

My want of success would not have "needled" me so much, had others, who also had the privilege of fishing, been equally unsuccessful; but this was not the case. Although the water was kept very select, I, at times, met others upon it, and, in one or two cases, the easy manner in which these individuals managed to successfully negotiate the capture of those fish it was only my privilege to gaze upon with longing eyes and inward conviction of never-ending non-success, fairly maddened me. My applications for information and instruction, made humbly to these successful anglers, were generally received with a pitiful shrug of the shoulders, sometimes the gift of a fly, and occasionally with a few really useful hints. But I soon became convinced that if I ever acquired the art of fly-fishing for trout it would not be through their kindness or consideration of the woes of a beginner, and the hunger he has for instruction.

Books I devoured eagerly, but their assistance was limited; a book upon trout fishing is of use *after* you have gained the knowledge of how to cast a fly decently, &c., but the one has yet to be written from which a *bonâ fide* beginner can gain the knowledge necessary in the preliminary stages. I consulted with boon companions, and tried to learn something from their conversation, but mostly they were wrapped up in recounting their own exploits, they either could not or would not explain to me "how to do it." In this connection I would remark that I was not *quite* a duffer, but such skill as I possessed was not sufficient for the purpose I had in view, and it was a matter of important consideration with me how I was to acquire that coveted preliminary knowledge of the never-completed art of fly-fishing for wary trout. But all this was shortly to be altered. In the course of a conversation I had with a bosom friend of mine, who knew no more about fishing than a garden rake does, but was otherwise anything but "dull," I detailed to him my difficulties, and he struck a very happy idea.

"That bit of water you fish," said he, "is one of the best in the South of England, you say. Now plenty of really good fishermen would avail themselves of the offer of a day or so's fishing on it. And wouldn't they in return show you a few wrinkles?"

It did not take me long to arrive at the conclusion that this was not only possible, but very probable; and having satisfied myself upon this point, I determined that I would approach some master in the gentle art, and trust to the enjoyment he got out of the day's fishing inducing him to take pity upon me. The owner of the water was communicated with and the necessary permission for myself and a friend obtained. Armed with this document, I wrote to one who, at that time, held a position of prominence in the angling world, and who has since become more and more popular each succeeding year as a right good sportsman and successful angler. In my letter I explained just how matters stood, and, as I had determined to leave no stone unturned that would be likely to assist me in gaining a knowledge of the art, I further requested him to provide me with an outfit that he could recommend, "as I fancied the one I had was not just the thing for the purpose."

It was a bold stroke, and I awaited with some eagerness the reply to my communication. At that time I little knew the kindly consideration the angler I had approached had for every amateur; and so I was agreeably surprised when I received a letter informing me he would be very pleased to join me for a day and that he would bring down a rod, &c., that would doubtless suit me. This was the letter I alluded to in the opening of this article, and it helped me to make a good breakfast! The instant I read it, I felt assured that at last I should meet an angler who *would* show me "how to do it." There was a genuine ring about it; and I may add here, that I have had cause since to know that in this estimation of my new friend, I was not mistaken. I date from the receipt of that letter my success in fly-fishing for trout, and I would further assert that very few fishermen would trouble with an amateur as he has done with scores; for I am not the only one who has to thank him for many useful lessons and thoroughly enjoyable days "on the warpath."

The arrangements for time and place of meeting were made, and a delightful June morning found me at the little local station adjacent to the water we were to fish. My train arrived a few minutes after his, and I caught a glimpse of him awaiting my arrival. As soon as the train had cleared away from the platform on its journey to London I crossed the line.

"Mr. Shrubsole?"

"Yes. Mr. Marston?"

"Yes."

And the next instant I warmly wrung the hand of the Editor of the *Fishing Gazette* for the first time.

In one of his delightful gossips about angling, the "Amateur Angler" thus speaks of Mr. Marston ("Piscator Major," as he happily styles him): "I may here say that I never go a-fishing without the Major. I try his wonderful patience a great deal. When I am dry-fly fishing I have a way of swishing off my flies in trying to dry them, to say nothing of constantly getting caught in the opposite bank, or in a tree; or else I leave my flies a mile or two behind me, stuck fast in thistle or grass, whilst I have steadily fished on, unconscious of my loss. The Major always comes to my aid, and puts me right for a fresh start; in fact, I could never fish at all, but for his ever-ready help at hand."

This is certainly my experience; and I am sure I never can sufficiently thank him for his "wonderful patience" and "ever-ready help," not only upon my first day with him, but upon many subsequent occasions also.

We left the pretty little railway station and made our way towards the water, chatting as we went. Arrived at the spot where we intended to start our day's sport, my companion soon had "my" rod put together, and a little beauty it proved to be. I have since killed many trout with it, and it is still brought into requisition at times, and has a place of honour in the room I pen this article in. The winch, line, cast, and a fly were attached, and then my friend remarked, "I think it will do; shall I christen it for you?"

I nodded, and in a few seconds about fifteen yards of line shot straight as a gun-barrel in the direction of a rising fish. As soon as the fly got within feeding distance there was a quiet movement on the part of the trout, just a perceptible response from the angler; and turning round with the quiet but well-satisfied smile I now know so well, he remarked—

"He's there; take hold!"

I accepted the rod from his hand, and with a quickly palpitating heart, played and ultimately landed a pound fish.

"Well done!" exclaimed my companion, "*very* well, done; you must not call yourself a duffer after that!"

And the hearty tone of his congratulations half-convinced me that I *had really caught that fish myself!*

I do not propose to tire my readers by detailing the many hints and the kindly advice I received from Mr. Marston that day. Sufficient it is for me to say, that he soon put me into "the way to do it;" quietly corrected my erratic casting. and showed me "how not to do it"; and that as I had ample opportunity of watching "how he did it," when the evening came I joyfully realised that at last I had a chance of becoming a fly-fisherman.

Not until he had seen me fitted out did my companion start to put his own rod together, and then we strolled by the side of the river some distance, he on the way picking out a trout or two which he returned to the water, tutoring me the while. I was not so selfish as to wish to occupy the whole of his time and spoil the day; so at my urgent request he went to a part of the river that I knew held big fish and plenty of them (had I not looked at and longed for them many a time?), and I started seriously to work with a better heart, and more hope of success than had hitherto possessed me.

This was not only my first day with Mr. Marston, but also my introduction to the remarkable killing powers of the Yellow Dun. It was the Yellow that the fish I played succumbed to, and I still had it attached to the end of my cast; I also had a few spare ones that had been handed to me with the characteristic smile of my friend, and the quiet remark, "Perhaps you will want them!"

Presently I noticed a fish rise just outside an overhanging bush, and with the confidence of a veteran I proceeded to work out the necessary length of line and cast my fly in the desired direction. The Yellow Dun alighted with the gentleness of a flake of snow on the bush. Instead of losing my temper and tugging fiercely at the fly, I adopted the advice of my new friend and *very gently* whisked it free. It fell softly upon the water, and in a tick was seized by a trout, who, before I had time to realise the fact, had *hooked himself*, and with a rush gone into a bed of weed. I lost my head, tugged hard at the line, and lost my fish.

My friend had told me to "take it quietly" if I lost a fish; in fact, "never to get flurried" Very good advice, but very difficult to follow under these circumstances! However, I sufficiently controlled my feelings, and with a sigh of resignation, proceeded to repair my dilapidated cast and attach another Yellow from my reserve stock.

I had not long to wait before another of the rising fish I had been particularly instructed to "spot" showed upon the scene. Very carefully this time did I approach my quarry. This part of the river was rather open, and I had to "lay low" for fear of disturbing the trout. To my delight, I managed to work out the right length of line quite to my own satisfaction, and then, bracing myself for the effort, I made the cast—or rather half of it. The second half did not "come off," for the fly had firmly embedded itself in a "horse daisy" behind me! I am afraid the expression I made use of is not generally heard in a drawing-room—more frequently probably it proceeds from a sufferer from the gout—but it came with emphasis from me then! I resumed an upright position, scared all the trout in the river for a hundred yards, disengaged my fly from the daisy, and resumed my journey up-stream, whistling a stave of—

"If you don't at first succeed, try, try, try again."

In the distance I saw my friend's rod bending to the fruitless efforts of a big fish to escape. I saw him stoop down, and knew that fish was in the net, and fired with fresh enthusiasm I once more watched the surface of the stream for the tell-tale rings.

In an open piece of water at the tail of a rather strong stream a fish rose, and after a few preliminary preparations I made a cast over him. It was *not* a successful cast, in fact it was a "wrong un;" the line fell in coils upon the water, but I noticed the gut extended itself decently, and the fly came floating down with the stream. Now, my friend had told me when a fly was coming down like that to let well alone; so I let it float. Not so the trout. He came at it with a rush, and I struck, and could not help shouting loudly, "I've got him!" although at that very minute I had by no means made sure of my capture. In the end, though, I proved too much for his troutship, and when he lay gasping on the bank my cup of happiness was brimming over.

And so I went on, scaring a fish here, hooking and losing one there; still by mid-day I had something to look at, and when I overtook my friend, who was lying upon the bank enjoying a pipe, in answer to his inquiry, "How have you got on?" I turned out my creel—four fish, from three-quarters of a pound to a pound each, and eyed my catch proudly.

"What have you done?" I queried.

"Oh! I've caught a few," he answered, the while he shut one eye and looked comically at me out of the other—another little way he has, by-the-by—and turning out *his* creel he exposed to my astonished gaze four brace of trout, every fish evidently being well over a pound, and three weighing at least 1½lb. each.

"I have had to turn back a rare lot of half-pounders," he remarked. "Where *are* the big fish?"

But the merry twinkle in his eye betrayed the fact that he was satisfied with his sport so far. He had been using the Yellow Dun; and I may here remark that we used no other fly throughout the day. The day was very hot in the mid-part, and being bright as well, we gave the fish a rest, and lolled on the bank, chatting over matters appertaining to fly-fishing. We also discussed a very fine and large veal and ham pie. My companion took a great fancy to the pie, in fact, and upon subsequent occasions he has had the coolness to assert that if it wasn't for the pie that usually accompanies me upon fishing excursions, he should stop away! Be this as it may, I am convinced of the vast importance of a properly-made pie; without it I never consider a day's fishing perfect. The right place to eat a pie is by the water-side. Who dares assert that a pie at home tastes as nice as it does when the river runs murmuringly by your feet, and the plash of a rising fish divides your attention?

We lit our pipes, and my companion showed and told me many wrinkles in connection with the art of dry-fly fishing. In the midst of our conversation a splendid trout started feeding, about 30yds. up the river. My friend soon had the Yellow over him, and a few minutes later a 1¼lb. fish was added to our catch. At my suggestion, I walked by my friend's side and watched him as he neatly put his fly over the rising fish we met with in the next mile of the river. I should think that more than half-a-dozen fish, well over half-a-pound were returned to the water during the next hour or so, and two of about 1¼lb. each were retained. You may be sure I closely watched "how it was done"; and without doubt, that afternoon was a very instructive one to me. When we reached a part of the river that runs slow and deep, and is fearfully weedy—where the angler must fish very fine and far off to be successful—then did my companion prove himself a master hand. Then also did we find the big fish. In an hour's fishing at this part, Mr. Marston had two brace of trout, between 1¼lb. and 1½lb.; and they had to be *fished* for! When hooked—and this had to be done at from 15yds. to 20yds. distance—the way they bolted into the weeds was a caution. But the angler knew what he was up to, and being handled as they should be, all their efforts availed them nothing. At the present time I can remember no better fishing than I saw that afternoon and evening.

So far my companion had seven and a-half brace of fish; the evening was drawing near, and so we put our rods at rest, and retraced our steps. Much as I had seen and learned that day, the "staggerer" was yet to come! Arrived at a very fine pool, we noticed several good fish rising in one particular part of it. I knew the spot well, and knew it was deep there. Mr. Marston wanted me to have a cast over them, but I preferred to watch him. Quietly he waded out through the shallow water, and put the Yellow over the rising fish, and then occurred one of the finest exhibitions of fly-fishing it has ever been my lot to behold, and one of the best bits of sport I can remember. My readers must not forget that my companion had a very fine cast on, and that the evening was far advanced.

(To be continued.)

SALMON disease is said to be making headway in the Aberdeenshire Dee. As yet it seems to be pretty much confined to kelts of the small spring fish, known locally as "supples," or "slingers."

THE FLYFISHERS' CLUB.

ANNUAL DINNER.

MR. BASIL FIELD presided, on Wednesday night, at the annual dinner of the Flyfishers' Club, which was held in the Royal Venetian Chamber, at the Holborn Restaurant. The vice-chairmen were Mr. R. B. Marston and, in the unavoidable absence of Mr. W. Senior, Mr. C. H. Cook. There was a large attendance of the members of the club, and the visitors also showed up in large numbers, amongst the company being Sir J. R. Somers Vine, Mr. T. E. Pritt, Mr. G. J. Chatterton, Mr. John Paterson, Mr. E. Marston ("The Amateur Angler"), Captain Thackeray, Mr. W. T. Boydell, Mr. W. Rowley, Mr. G. L. Dickson, Dr. Wyman, Dr. Brunton, M.D., Mr. H. E. Gribble, Mr. J. W. Willis Bund (Chairman of the Salmon Fishery Board), Dr. Hamilton (author of the "Riverside Naturalist"), Mr. Wm. Black (the novelist), Mr. F. G. Morten, Mr. W. Q. Orchardson, R.A., Mr. P. St. Quinton, Mr. R. C. Blundell, Dr. Orton, Mr. F. M. Halford ("Detached Badger"), the Rev. H. G. J. Veitch, the Rev. E. Mackie, Mr. F. R. Ohlson, Mr. J. R. Boyd, Mr. H. H. Holt, Mr. J. H. Poulter, Mr. D. Wilson (hon. secretary of the club), Mr. R. B. Marston (Editor of the *Fishing Gazette*, and treasurer of the club), Mr. J. G. Bolding, Mr. N. Lloyd, Mr. R. W. Walker, Mr. Watson Lyall, Mr. W. Earl Hodgson (*Rod and Gun*), Mr. L. W. Bangs, Mr. W. F. Lawrie, Mr. H. Coulter, Mr. J. T. McLachlan, Mr. A. Strachey, Mr. J. McLaren Smith, Major Sergeant, Mr. R. B. Lee, Major Carlisle ("South West"), Mr. G. E. Cook, Mr. F. M. Walbran, Mr. H. F. Norris, Mr. Arthur Price, Mr. J. Wilson, Mr. W. T. P. Pechey, Mr. F. Howse, Mr. M. W. Morton, Mr. R H. W. Leach, Mr. C. L. Nichols, Mr. J. Welch, Mr. J. T. Shaw, Mr. C. F. Clay, Mr. H. E. Gilman, Mr. R. Pinkney, Mr. J. Wilkinson, Mr. W. Thomas, Mr. R. A. Smith, M.D., Mr. G. Pritchard, Mr. H. W. Seaton-Karr, Mr. A. W. Cooper, Captain Dunne ("Hi Regan"), Mr. T. Andrews, Mr. H. Landan, Mr. John Pettie, Mr. C. T. Todd, Mr. D. N. Samson, Mr. J. S. Halliday, Mr. A. Paget, Mr. L. B. Sedway, Mr. H. Mackrell, Mr. H. M. Pike, Mr. J. W. A. Calkin, Mr. Radcliffe Walters, Mr. J. H. Easterbrook, Mr. Francis R. Russell, Mr. W. G. Sribble, Mr. Thomas Ruston, Mr. F. H. King-Hall, Mr. A. B. Winstone, Mr. W. J. Shaw, Mr. W. J. Thompson, Mr. J. Henderson, Mr. Thomas W. White, Mr. H. Hay Stuart, Mr. H. R. Ker, Mr. A. Sclanders, Colonel Bolton, Mr. Anthony Carlisle, Mr. C. Michell, &c., &c.

After grace had been said by the Rev. H. G. J. Veitch,

The Chairman proposed "The Queen and the Royal Family." He said: Gentlemen,—Loyalty to Crown and Throne is a monopoly of no one nation, but the characteristic of British loyalty is the strong personal affection we feel towards the Sovereign who rules over us. (Cheers.) This sentiment, however, is too delicate for my rough and untutored tongue—(cries of "No, no")—it is best expressed by "magic numbers and persuasive sound," and cannot be better expressed than in the words and melody of our National Anthem—(cheers)—which, I am sure, Mr. William Nicholl (whether it be in obedience to Royal commands at Windsor, or in obedience to his own good nature to oblige his friends here) is ever ready to give. Gentlemen, I give you the "Queen and the Royal Family." (Cheers.)

The toast was drank with enthusiasm, amid the singing of the National Anthem, the solo part being taken by Mr. W. Nicholl.

The Chairman next rose to propose the toast of "The Flyfishers' Club." He said: Gentlemen,—I now rise to propose the toast of the evening, and to ask you to join me in drinking success to the Flyfishers' Club—(cheers)—and, paradoxical as it may appear, the chief difficulty with which I have to contend is the transparent simplicity of my task. The success of the Flyfishers' Club is as certain as death and taxes; and is as sure to increase as the rates under the London County Council. (More laughter.) And what more can be said on the subject? If proof be required of our social success, look round this room. (Cheers, and a voice: "Good!") If proof be required of our financial success, my appearance in the chair to-night affords that proof, for if the careful custodians of the club's welfare had foreseen the slightest danger or difficulty in the near future, this chair would have been occupied by one of those happy men who can at will—by a pleasant gift of speech and charm, and by a sympathetic voice—rouse to enthusiasm, provoke a smile, beguile a tear, and even search the hidden depths of our breeches pockets. (Cheers and laughter.) But, gentlemen, with a good balance at the banker's and a steadily-increasing number of members, our committee consider that they may economise their available stock of eloquence, reserve their skilled orators for some other time, and give respectable mediocrity a chance. (Cheers and laughter.) Now, as to the success of the club. No doubt you will listen to me with the proverbial patience of anglers. (A laugh.) If I were to reiterate the early history of this club, it would be as tedious as a twice-told tale, dull as ditch water, flat as a flounder—(laughter)—and as unprofitable to you as it is for an angler to watch his float when every morsel of bait has been taken off the hook. (Laughter.) We all know that gallant little band of men to whose enthusiasm and great patience we owe the existence of this club—men in whose vocabulary failure was not to be found. (Cheers.) We know their names, all of us here. In our hearts we cherish those names, and with all our hearts we thank them. (Cheers.) But behind them lies a power greater than their own power—the power of love, of infinite, irresistible love—the power of love the angler has for his charming and enchanting sport. (Cheers.) Charming!—Why, he who has never felt that charm is not a true angler. Is not a fly-rod ten times more potent than the wizard's rod of old? It is to this mysterious magnetic power—a power which I most sincerely hope will draw us together like the roach are drawn together by a ball of ground-bait—(laughter)—that we most look to the future of our club. (Hear, hear.) It becomes, I think, a matter of necessity to us to know what this mysterious instinct must be that prompts us all to meet together. And now I come to the proudest part of my subject. I have a revelation to make, a mystery to announce, a great truth to proclaim. I am dying to impart this great secret to you, and to do so I must give you some small outline of the circumstances which led to this great discovery. I will give it in a dramatic way. (Laughter.) Scene: Second-class compartment in an express train on the L. and S. W. Ry., supposed to be a through train between Putney and Waterloo, but actually stopping nowhere in particular, yet somewhere between the stations to give the engine an opportunity of whistling at leisure. (Laughter.) The characters are a patriarchal professor of mental philosophy—(laughter)—and metaphysics, a small boy, and myself, with the butt-end of a fly rod, taking it to Farlow's, to have new winch fittings put on it. The professor looked with considerable curiosity on the rod, and I ventured to waive the usual conversation about the weather and plunged *in medias res* at once. (Laughter.) I said, "Sir, I am an angler." (Laughter.) He bowed stiffly. "The angler is by nature shy and retiring," I said. "Obviously," remarked the professor. "Do you know," I asked the professor, "what this mysterious agency is that draws together those who by nature shun society?" "Certainly," said the professor; "it is the attraction of cohesion between piscatorial affinities.' (Laughter.) What a wonderful thing is science. (Laughter.) Well, this was all very beautiful; but, after all, it was only the definition of a force. It gave me no information what brought this force into activity; so appealing to unsophisticated nature. I asked the little boy if he knew what it was that made the shy and timid angler go to his noisy and crowded club. He replied: "It's cos he wants to meet some other Johnnies to tell his lies to." (Loud laughter and cheers.) I think, gentlemen, that it was very shocking that this little boy's mind should have been thus poisoned by base calumny originally invented by a bungler, who found it easier to throw mud than to cast a fly. (Hear and laughter.) But there is a higher power of nature working within us, as anglers, gentlemen. It soothes, elevates, and refines us; it subdues the bitterness of party politics; it silences the strife for greed; and it softens social prejudices. (Cheers.) Under its influence have I not heard a clergyman of the Church of England listening to an Irish Roman Catholic Home Ruler on the union of two strands of salmon gut? (Laughter.) After some further humorous remarks, the Chairman proceeded: Such is our club; such may it long remain. Our local habitation may change; our *personnel*, alas! must change, for that grim fisherman, Old Father Time, is ever and ever winding us all surely and steadily in, nearer and nearer to the fatal landing-net of death; but the Flyfishers' Club, satisfying and fulfilling an instinctive want, must go on for ever. (Loud cheers.) Gentlemen, I ask you to join me in wishing continued success and prosperity to the club—(cheers)—and to associate with the toast two typical members, one who we are all glad to see—a member whose name has been, from the very first, most intimately connected, not only with the success of the club, but with the existence of the club—our excellent hon. treasurer—Mr. R. B. Marston. (Cheers.) The other gentleman is a country member—(hear, hear)—a staunch and sturdy supporter of our club, who has never deserted his post here, at least, though he may have been missed elsewhere at times. Need I say I mean Mr. Pritt? (Cheers.) Gentlemen, I give you the "Flyfishers' Club," coupled with the names of Mr. R. B. Marston and Mr. T. E. Pritt. (Loud and prolonged cheers.)

The toast was most enthusiastically pledged; and, in replying for the club,

Mr. R. B. Marston, who was very cordially received, said: Mr. Chairman and Gentlemen, I shall not detain you very long, as I am suffering from a cold, besides which we have some excellent musical talent with us. As regards the position of the Flyfishers' Club, I am sure the chairman told you all about it, and I can only repeat that the club is going along very favourably. (Cheers.) We have more than three hundred members—(cheers)—and at the bank we have a balance of over £300. (More cheers.) As long as we have a balance in hand, I have, as honorary treasurer, got an easy place, but I pity the poor treasurer when the balance comes to be on the wrong side. (Laughter, and voice, "It never will.") I should like here to refer to our last dinner, which was of a very successful character, especially with regard to the making of new members. We then secured, amongst others, Mr. William Black—(cheers)—and Mr. W. Q. Orchardson, R.A., and I have heard a whisper to night that another eminent gentleman connected with the art-world desires to join us, and I hope, before the evening is over, that he will do so. (Cheers.) I regret that a number of gentlemen have been prevented from being with us through illness or other causes. Among them are the Hon. Sir Ford North and Mr. Senior, of *The Field*, gentlemen who have always supported this club in a very handsome manner. We are all deeply indebted to them for their splendid assistance, and we all feel extremely sorry they cannot be with us to-night. (Hear, hear.) Gentlemen, I should not like to sit down without referring to the work performed by our hon. sec., Mr. Wilson. (Cheers.) He is really the man who ought to respond to this toast, as he does most for the club. We all know how he sends out these notices, inviting us to dinners and smoking concerts, and how he informs us when our subscriptions are in arrear. (Laughter.) As regards the club meeting nights last season, when they were not so successful as they might have been, I should like to say that is to be entirely put down to the influenza. (Laughter.) At least that is what a well-known physician says—that the influenza chiefly affects those who belong to clubs, and don't go home till late at night. I now beg to thank you most heartily for the way in which you have received this toast. (Cheers.)

Mr. T. E. Pritt, who was received with loud cheers, said: Gentlemen, our chairman has made it pretty warm for me. (Laughter.) I can also say something about the work of Mr. Wilson, and when I received a letter from him informing me that the toast of the "Country Members" to which I have responded more or less for a generation—(laughter)—had been eliminated from this year's programme, I felt considerably relieved. He said I was instead to inflict upon you the response for the Flyfishers' Club. Well, I felt like the man who lost half-a-sovereign and found sixpence. (Laughter.) It reminds me of the words of a distinguished clergyman which I heard at a dinner in the North. He said that when a man was called upon to say something without notice he could only make a fool of himself, but when he had had ample notice he could make fools of the whole company. (Laughter.) On that account I wish our friend Wilson had given me a more limited warning. (Laughter.) Well, I can assure you, I find it as difficult to say anything new as it would be to reduce the hump on a dromedary's back by putting a linseed poultice on it. (Laughter.) It is said that it is an angler's bounden duty to believe everything that a brother angler tells him. I recollect that at a recent dinner, a gentleman who had been fishing in Norway, told how he used a salmon fly with a tag, on which were his name and address. (Laughter.) A salmon rose, was hooked, and went off with the fly. Two years afterward the same angler hooked the same salmon, having in its possession the same fly with the same tag on, twenty-five miles from the original spot. (Laughter.) An old gentleman who was amongst the company sighed deeply, but no one questioned the thing. (Laughter.) A rev. canon then rose, and he told us that whilst he was fishing an Irish lake he hooked a salmon 24lb. He played it for some time, but at length it made one last, despairing rush and ran off the line, which it was found had not been fastened to the roller. Four hours later, at a spot ten miles distant, some weed was seen to move, and the line with the salmon still on was found to be entangled. The line was secured, passed down the rings to the reel, after which he said he played the fish for one and a-half hours and then landed it. (Laughter.) A youthful angler challenged this; but the business proceeded as usual. (Laughter.) The clergyman also told us that they rose a very fine trout about 15yds. from the boat, and into the circle made by the fish one of the anglers threw his tail-fly; but the angler badly missed his fish. Said the boatman: "There be a foine fish for you; you'll not see the likes on him again; he was a good fish." The clergyman asked the boatman, "Well, how big about do you think the fish was?" "Truth, I can't tell," replied the boatman. "Well, tell me the weight, then," added the clergyman. "Oh," replied the man, "yer honour's clothes wouldn't fit it." (Laughter.) It seems to me that there is no pleasanter thing than to meet at these annual gatherings to talk about catching fish or to exchange one's views. I have very many happy reminiscences of annual gatherings in many pleasant places; and is there anything more delightful than to see that the old angler, with the snows of many winters in his hair, still carries with him the sunshine of eternal spring wherever he goes (Cheers.) Something there is in the sport of angling which keeps these men like merry-hearted boys to the finish. (Hear, hear.) The very last thing they do is to die. (Laughter.) Then there is the delight of getting away from town life, and from the rush for gold, to some place where you may exist without the restraints of civilisation, and do as you like—where top hats are unknown, and you can wear knickerbockers without having unkind remarks made about the size of your calves. (Laughter.) Solitude is part of the stock-in-trade of the angler, in spite of the fact that commerce is extending up the valleys and the remotest of water-courses. The angler still pursues his recreation in the country as God makes it, and long may it be before there remains only the practical side of it. (Cheers.) I should like before concluding to call your attention to what Richard Jefferies said of the country-side: "I linger," he says, "in the midst of the long grass, the luxury of the leaves, and the song in the very air. I seem as if I could feel all the glowing life the sunshine gives, and the south wind calls to being. The endless grass, the endless leaves, the immense strength of the oak expanding, the unalloyed joy of finch and blackbird; from all of them I receive a little. . . In the blackbirds' melody one note is mine; in the dance of the leaf shadows the formed maze is for me, though the motion is theirs: the flowers with a thousand faces have collected the kisses of the morning. Feeling with them, I receive some at least of their fulness of life. Never could I have enough, never stay long enough. . . . The hours when the mind is absorbed by beauty are the only hours when we really live. So that the longer we can stay among these things, so much the more is snatched from inevitable Time." (Cheers.) Gentlemen, I thank you for giving me the privilege of responding to this toast. Long may we flourish to sustain, through advancing years, the best traditions of the gentle craft which is our true heritage. (Loud cheers.)

Mr. C. H. Cook next submitted the healths of "The Visitors," from the vice-chair. He said: It is my pleasant duty, in the unavoidable absence of Mr. Senior, to propose this toast. Mr. Senior has asked me to express his great regret—a regret that we all share, too—at his being unable to be present at our annual dinner. Amongst our guests, whom we right gladly welcome, I see many connected with science, art, literature, and law. There is a great bond of sympathy between artists and flyfishers. (Hear, hear.) Both are lovers of Nature; and the only difference between us is, that whilst they work their oils, we work our waters. (Laughter and cheers.) I say, on behalf of the members of the club, that we don't want to see the same visitors here next year, because we hope that the visitors on the present occasion will have joined the Flyfishers' Club by the time the next annual dinner is held. (Cheers.) I can assure you it is a great pleasure to me to give the toast, and to couple with it the name of Sir J. R. Somers Vine, the secretary of the Savage Club. (Cheers.)

Sir J. R Somers Vine, in acknowledging the toast, said: Mr. Chairman and gentlemen, I am feigned to think that as time rolls on, I find it increasingly difficult to reply to this toast. ("No.") I respond to-night for the second time this week to the toast of the visitors, and I should not be surprised if I had not to respond a third, if not a fourth time. (Hear, hear, and laughter.) I thank you for inviting me to come to your hospitable board. Since I sat down at this table and discovered, by the agency of my dear old friend Wilson that I had to have my digestion impaired, and that I had to speak when I had no thought of being called upon, I have been developing in my own mind—and painfully so—in what way I shall so garnish this reply as to make it appropriate to the gathering I see before me; and I am sure I shall have your commiseration when I have utterly failed to produce one single qualification in justification of me being placed in the position I now find myself. (Cheers and laughter.) I bethought, in the first instance, of ingratiating your sympathies if I alluded to the pleasure which it gives the other visitors and me to dine amongst "a multitude of enthusiastic disciples of Izaak Walton." (Laughter.) Well, I thought you might think that a little far-fetched, if not a little ancient, so I was inclined to say that I would describe you as "a band of devotees of the gentle craft." (Renewed laughter.) Then it occurred to me that you had seen that in print before, and that there was nothing in it. (Laughter and cheers.) Very luckily for me, Mr. Cook has supplied me with the very material which I was lacking when he was good enough to speak of my earnest support of all that appertains to fishing. Not that he spoke a great truth. (Laughter.) The Alpha belongs to that period when, about the age of nine years, I purloined, without shame, the family clothes-prop, appropriated my father's best ball of twine, and, without any attempt at remorse, confiscated my mother's best wire pin for the purpose of becoming acquainted with the art of knowing how to barbarously impale a worm upon a bent pin. (Laughter and cheers.) The Omega must be relegated to a date within the last eighteen months, when I languidly dropped over the side of a ship in the tropics a lump of fat pork for the purpose of beguiling the wily shark. (Loud laughter.) Of the interregnum between those periods I would prefer not to speak. (Laughter.) I think I should consult your feelings if I say, on behalf of the visitors, that we have had a most excellent dinner, agreeable companionship, and a delightful entertainment. I don't know what more the visitors can want, except that they hope you will give them the opportunity of coming again to share in all these good things. (Cheers and laughter.)

The toast of "The Artistes," proposed by Mr. G. J. Chatterton, followed. He said: It goes without saying that we are immensely obliged to the gentlemen who have treated us to such excellent musical talent this evening. (Hear, hear.) The members of the Flyfishers' Club are always famous for the harmonic song—(hear, hear)—and I think I may safely say that on no previous occasion have we had such an excellent entertainment vouchsafed as we have had this evening. (Hear, hear.) The songs and music have a particular charm and a particular value for us flyfishers, in that they have afforded us reminiscences of that great symphony of Nature which we anglers appreciate—a symphony that has for its primary movement hope; for its middle movement joy; and for its *finale* thankfulness. (Cheers.) May they be yours for many years to come, and may grace be vouchsafed to us to acquire all three by means of a well-spent life. (Hear, hear, and cheers.) Remember, a good day's fishing is the forerunner of a good life. (Hear, hear.) Gentlemen, by way of a peroration, I will read to you a few words; they apply to the sentiment: "And the briefer you make your speech, the better the company will like it." (Loud laughter and cheers) Gentlemen, with these few words, I will ask you to drink to the health of the artistes, and to couple with the toast the name of Mr. William Nicholl. (Cheers.)

Replying on behalf of his *confrères*, Mr. William Nicholl said: I know that whatever pleasure we may have given you, we have enjoyed our evening most thoroughly, and I beg to thank you for your very enthusiastic response. (Cheers.)

Mr. John Paterson next rose, and said: Gentlemen, the last (but not the least) toast I have now the pleasure of proposing, it is that of our worthy chairman. (Cheers.) In his speech he reminded me very much of our old friend, Izaak Walton. We don't know him personally; we have never seen him except in his book. But one thing about Izaak Walton struck me. It is said that although he lived in Charles First's time, if you read his book there was not the slightest allusion to it. He was such a philosophic fellow that he did not care a jot for politics. The chairman is just such another philosophic angler; he is also a jolly good fellow—(hear, hear)—and it is on that account that I ask you to drink his health. (Cheers.) To me a yellow trout is a yellow trout—(laughter)—and nothing more, but to our chairman it is something far different. (Laughter.) He has written all kinds of articles upon invisible bodies. He tells us of invisible bodies of trout. When I go out to a particular river I certainly know where to expect to find the trout, but the chairman tells me something more—that the trout move in an invisible line. He also tells me about the birds that fly in the air and move in an invisible line. (Laughter.) Well, gentlemen, I don't know anything about the matter, but I ask you to read the article by our worthy chairman in the *Gentleman's Magazine*. He is a good angler, scientific, spiritualistic, jolly, and nice; therefore I ask you to be upstanding and to heartily drink his health. (Cheers)

The Chairman, who was enthusiastically received, in acknowledging the compliment, said: Gentlemen, the first unwritten law of all true sport forbids us to inflict unnecessary pain—(hear, hear)—so I shall spare you the pain of listening to a second speech from me. I trust, therefore, that the depth of my gratitude may not be measured by the number of the words in which it is expressed. (Cheers.) I thank Mr. Paterson for the kindly way in which he has proposed the toast, and I thank you one and all, visitors as well as members, for the way in which you have received my health, and still more for the kind indulgence—sorely needed by me, and so readily accorded by you—for all my shortcomings in the chair to-night. Gentlemen, I thank you. (Loud cheers.)

During the evening a capital programme of music, recitations, and violincello solos was rendered, and a most enjoyable evening was spent. Mr. Septimus Webbe made a really brilliant pianist, and the musical and dramatic treat furnished by Messrs. William Nicoll, Arthur Oswald, Charles Harding, Bantock Pierpont, H. A. Bronsil, and E. J. Odell, received the highest praise at the hands of both members and visitors; but where each and everyone of the artistes excelled themselves, it would be invidious to particularise. We may add that the dinner was again an unqualified success.

FROM several districts in the Northern Highlands come reports that the trout spawning season is about over, and that there has been no better one for five or six years. Generally fish, apparently somewhat more numerous than in average years, were forward, and most of the time the water kept a fine height,

Waltoniana

FISHING may be possible in the Thames by the time these lines are read, but the prospect at present is not an inviting one. The water is still bank high, and more in places, but the nasty muddy colour has almost disappeared.

IT is proposed to send a memorial, signed by English anglers who fish in Norway, to the Norwegian Storthing, on the subject of salmon river preservation. Last year the Storthing passed a Bill which provided for a weekly close-time of three days, and for larger meshed nets than some of those which have hitherto been used. The netsmen are up in arms, and are likely to make a determined attempt to induce the Storthing to repeal their excellent measure. The memorial is to beg them to do nothing of the kind; and those who wish to sign it should communicate with Mr. F. A. Wolryche Whitmore, Kingslee, Farndon, Chester.

A WRITER in *The Field* opines that one of the chief advantages of being Governor-General of Canada is the excellent opportunity afforded by the country for salmon and trout fishing. How Lord and Lady Dufferin availed themselves of those advantages may be gathered from the recently published journal of their experiences, written by Lady Dufferin. Therein is related their first attempt at salmon fishing and many other interesting incidents of the sport. Lord Dufferin, after hooking a salmon, fell into the water, but pluckily held on to the rod, and landed the fish. Lady Dufferin showed herself a thorough sportswoman, camping out with the rest, and in her own words, getting "up at seven, had a cup of tea and a bit of bread, and went out fishing."

THE journal contains a very curious instance of clairvoyance. A footman went out fishing and was drowned. Lord and Lady Dufferin hurried up to the spot and only to see lying on a rock the remains of the poor fellow's luncheon. On that very day the man's sweetheart, who was living in quite another part of the dominion, dreamed that her lover was drowned, and eight days afterwards a letter came from her to the deceased man describing her dream. Lord Dufferin opened and read the letter, and the incident seems to be well authenticated. The body of the unfortunate man was found upright in the water, the hand still clutching the fishing rod.

THE question of the desirability of pike in rivers containing trout, is a very interesting one. Where there are practically no other fish in a river, except pike and trout, the pike should, as far as possible, be exterminated, but it is not clear to me that in large rivers, like the Thames, which swarm with all kinds of coarse fish, that to get rid of the pike would so vastly improve the trout fishing as some people imagine. The suggestion that pike injure the roach fishing, is absolutely without foundation. As a matter of fact, our best roach waters are also our best pike waters. Two instances which occur to me, on the spur of the moment, are the Bedfordshire Ouse and the Hampshire Avon. I should say that both those streams, in parts, hold their full limit of roach, and that if there were more of those fish there might not be a sufficient supply of food for them, and a result would be a falling-off in the average size of the fish after a few years. Beyond question, pike take a certain number of trout in any stream containing both species; but I believe that in a river like the Thames, where the small trout live for the most part in rapid, shallow water, the pike do not feed on them to any appreciable extent. Perch and chub, and probably barbel, in the spring of the year, seem to me (from what I know of their habits) more likely to destroy a large number of young trout in the Thames than are pike.

IN the case of streams like the Test, Itchen, Lambourne, and Upper Kennet, there is only one good word to be said for master pike—he destroys the weakly and sickly fish. But a good river-keeper can do that almost equally well. I can, however, imagine a stretch of a chalk stream, a piece of private water—very rarely fished, and swarming with trout, where the presence of a few pike would be a decided advantage; but the same advantage could be obtained by a little judicious netting occasionally. In big rivers and lakes where there are pike, the trout nearly always run large; and from my experience of such waters as the Thames and Shannon, it seems to me that pike eat many more coarse fish than they do trout. For these reasons a general war of extermination against such a fine sporting fish is surely undesirable.

TRANSVAAL justice is a peculiar thing. According to our views on the subject, it may almost be said not to exist. A Dutch woman and a Kaffir girl tied a girl to a tree, and kept her there for two days, varying the monotony of the position by occasional lashings. The girl died, and the two brutes were tried for murder. The jury found the prisoners guilty of a common assault (such assaults appear to be "common" in the Transvaal), and the sentence was three months' imprisonment. A day or two before the trial, a Bill was passed for the protection of fish from dynamite (a truly laudable proceeding), which gave rise to the following rhyming comment on Transvaal justice:—

"If you slaughter with dynamite one or two fish
Six months, with hard labour, your portion must be;
But if only to wallop your nigger you wish,
Three months (if you kill him) you serve, and you're free."

TEMPLAR.

ANSWERS TO CORRESPONDENTS.

G. MASSY: The grayling is a distinct species, and is not found in Ireland—as far as we know.

Correspondence

"*One of the charms of angling is that it presents an endless field for argument, speculation, and experiment.*"—T. E. PRITT.

FLY-CASTING TOURNAMENT AT THE CHICAGO WORLD'S FAIR.

DEAR SIR,—Having read in the *Fishing Gazette* the week before last, an article by J. W. Collins, on the Fisheries at the World's Fair, especially concerning the facilities for holding a fly and bait-casting tournament there, I think a word from you to the United States Fish Commission would go far to further that object, as you know exactly how to advise on such matters. If substantial prizes were offered so as to induce competitors from all nations, it would be a sight well worth seeing, and no doubt would be a great attraction in the exhibition.

I hear a casting tournament is to be held at Perth next year.—Yours truly,

Sprouston-on-Tweed. JAMES A. KERSS.

[We have no doubt Dr. Henshall, who has charge of the angling department of the Exhibition, will do all he can to induce competitors from Great Britain and Ireland to take part in the fly-casting.—ED.]

PIKE FISHING AT KILLALOE.

SIR,—"Pike Fishing at Killaloe" is the title of a full-page sketch (or rather sketches—for there are five pictures in all) in the issue of *The Illustrated Sporting and Dramatic News* for Nov. 21, from the pencil of that genial and accomplished artist, Mr. James Temple. More truthful or more charming pictures of pike fishing scenes on our lovely lake I have never beheld. I think the picture, "The Monster Nearly Done For," is simply perfect; whilst "Guessing Weight" is beyond all conception delightful. What can equal the beauty of the scene where the boat is drawn up on the shore of the island, the anglers handling and admiring the big pike, the group of boat attendants doing the looking on, the lake, the hills, &c.? I have, during a long lifetime, spent many happy days on Lough Derg, along whose fascinating shores I have met anglers from almost every clime; but never have I so thoroughly enjoyed myself as I did in the company of the distinguished artist, Mr. Temple, during his visit to the Shannon at Killaloe.—Yours truly,

S. J. HURLEY.

SALMON TROUT.

SIR,—A good specimen of a salmon trout was caught in the river Waveney, some distance above Beccles, on December 3, weight 14½lb., length 35in., girth 18in., sex female. The fish is now in the hands of Mr. Harry Tilney, Beccles, for preservation.—Yours faithfully,

KENNETH METCALFE.

DEAR SIR,—We have an exceeding fine specimen of a *Salmo ferox* on view at our establishment; its weight is 16lb., taken on Lough Neagh (near Belfast) last April by one of our customers.—Yours faithfully, F. T. WILLIAMS & CO.

10, Great Queen-street, W.C.

ROLFE'S PICTURES.

SIR,—I do not gather from your answer to your correspondent, "E. Carnegie," in last week's *Fishing Gazette*, whether you wish to have photos of Rolfe's paintings. I have two signed pictures by this artist, which are considered good specimens of his work, and have been much admired. They have not been photographed, but if you would like to have photo reproductions, I would have them done and send you copies. Do you not think it would be of considerable interest if the Flyfishers' Club would form a loan collection of the artists' works and exhibit them for say a month, in the club-room? If this suggestion should meet with approval, I should be happy to send my pictures for exhibition for that time.—I am, Sir, yours, &c, HENRY G. GREEN.

Southampton.

[We shall be very glad to have the photographs. Doubtless the hon. sec. of the Flyfishers' Club will note Mr. Green's suggestion.—ED.]

A LEA EXPERIENCE.

DEAR MR. EDITOR,—I should much like to be informed whether you have ever had, or heard of any one having, an experience like unto that which, with your kind indulgence, I will proceed to relate to you. I am in the practice perhaps twice a week during the season of roaching in the Lea, and sometimes have tolerable sport; but last week I caught nothing. The day (Tuesday) was foggy, and although I caught the early train to Waltham, and thought I should be the first to get among them, I found a gentleman already hard at it about fifty yards off my favourite swim. Observing that he was a comparatively young man, and probably very amateurish, I passed him without remark, and duly commenced operations on my own account. As before stated, nothing resulted from these, as during the whole day I didn't have a knock; it was therefore only natural, that getting rather tired of it, I should knock off, and as I could not get a rise out of the roach, I should go and try to obtain one out of my young friend on the bank. I walked up to him and asked him, "What luck?" He said, "Only a small deformed perch." Feeling much relieved that his fortune was so little better than mine, I went back to my rod, and fished on; but with no better success, however, until it began to get dark, when I packed up and began making tracks for the station. Passing my brother of the rod on my way, I found him just in the act of landing a good-sized fish (about three-quarters of a pound), and to my surprise it had only half a tail; the part that was left having a creamy appearance. I said to this piscator, "How is it you catch fish like that?" He said, "Oh, it's my luck; I always catch that sort of fish." I observed that in my experience it was very unusual, but he replied that it was not so in his, as all the fish he caught were more or less damaged or deformed.

I thought it very singular; but, as it was then getting dark, and the fog thickening every moment, I felt too "mistified," if I may say so, to make any comments upon this gentleman's strange experience; and leaving him to it, pursued my way to the station. Having (as I knew) plenty of time for my train, and naturally needing refreshment, I turned into the house facing the station, to wile away the time, and fortify the inner man against the insidious attacks of the fog fiend now pervading the whole country-side. Here I was presently joined by my friend of the Lea side, and after a friendly glass or two together we both journeyed home in the same compartment, which we had to ourselves. On the way he retailed various anecdotes and stories, all more or less marvellous, of his angling experiences, all of which he assured me had been of the same kind as I had witnessed that afternoon. This, indeed, constrained me to believe his statements, although I must admit they fairly knocked me.

Their result, however, has been to leave me in a rather uncomfortable state of doubt upon the following points, that is to say—supposing all is true as this brother of the craft relates, ought he to be allowed or encouraged to fish at all? Looking at it from one point of view I should say that he ought, for he catches all the bad fish, and leaves the good for somebody else. But, regarded in another light, it seems to me that his strange fortune on the bank is calculated to have a depressing effect upon some of his brother rodmen, and to spoil their taste for our popular river, the Lea. And, above all, I "want to know, you know," if he is altogether singular in his strange persistency in landing ill-shaped fish? or whether a similar experience in some remote time gave rise to that familiar and hackneyed phrase—

"ODD FISH."

"OLD HAND'S" ARTICLE.

SIR,—It has given me much pleasure in reading the letters of "Old Hand" on the Ouse. In his description of the river at Holywell, he alludes to a piece of water near that place, which has had my name given to it. The cause was as follows: The late Mr. Thomas Metcalf, of Holywell, was netting that piece of water one Friday afternoon, thirty-six years ago, when I was walking on the bank. He said he expected to catch a ton of fish, principally pike and bream, for "the hole is full of them." When he drew the net to the bank, the expression of his countenance was something to be remembered, for he had not five shillings' worth of fish in the net. I bought some baits of him, and went the next day to spin the same water, when I killed twenty good fish, and during that winter I took out of the same place a little over two hundred jack. Ever after that he called it "Ducker's Hole."—Yours, &c.,

W. DUCKER.

THE TROUT AND THE PEA BLOSSOM.

SIR,—In "Notes from Tyrone," in last week's *F.G.*, I notice an account of a 10lb. trout taking a pea blossom, which was the means of luring him to his end. It reminds me of a story which an old companion of mine was in the habit of relating with great earnestness. It was as follows: "While standing on a bridge which spanned a famous river (Thurso) he saw several salmon in the pool below. 'Sniggling' was soon the ruling thought, and home he went for the poaching tackle, which consisted of a strong line and reel, and three strong hooks tied back to back and made fast to the line. The water being deep and not very clear, a piece of white cotton rag was tied to the hooks so as to show when they were across the fish's back. The murderous tackle was thrown out in the pool and was being drawn slowly towards one of the fish, when another salmon which was lying farther down the pool, seeing the strange thing (as it were) crawling along the bottom, made a sudden rush, seized and swallowed the three hooks and the rag! A lively fight followed, but the fish was soon landed, much to the surprise of the captor and others. The dodge was tried repeatedly with the other fish, but without success."—Yours, &c.,

Halkirk, N.B. ARCHD. HARPER.

LOCH LEVEN TROUT.

DEAR SIR,—In answer to your correspondent, Mr. W. Woodward, I think Loch Leven trout will do very well in the Teme; but it will depend in what part of the river they are placed. Should it be in the Worcester division, I am afraid that many of them will go down to the Severn after a time.—Yours, &c., EDWARD HAMILTON.

RE PIKE FROM POYNTON POOL (26LB.) ON VIEW AT STOCKPORT.

DEAR SIR,—I am informed that this fish weighed nearer 16lb. than 26lb., and that the keeper saw it on the surface of the water (apparently dead) and intended to take it out, but was forestalled by some "enthusiastic anglers," who were not angling, but using trimmers.—Yours truly,

MEMBER OF THE STOKE ANGLING SOCIETY.

THE GREAT TAKE OF PIKE.

SIR,—In his letter on the great take of pike by Mr. Andrews, my friend, Mr. Alfred Mackrill has made three mistakes. It was not Mr. "Tucker" who was with him, but myself. It was not near St. Neot's where he caught his twelve pike, but near Great Paxton; and it was not one hour and thirty minutes, but one hour and fifteen minutes. It was near St. Neot's where he caught twenty good jack in five hours. I was with him on both occasions, and they were all caught in the open river by fair, good fishing. I think the above is a better record than fishing in a pond, or small lake, where they are as thick as cocks and hens in a farmyard.—Yours, &c., W. DUCKER.

["Tucker" was a printer's error.—ED.]

AN OBVIOUS ERROR.

DEAR SIR,—There is an obvious error in your second par of "Waltoniana," in which it is stated "the Thames drains an area of sixty-five square miles." What was doubtless intended is *six thousand five hundred square miles*, a sum not greatly in excess of the figures usually given. According to Professor Huxley, the Thames really drains six thousand one hundred and sixty square miles, or more than one-seventh of all England, and the average rainfall over the area affected by it, is twenty-six inches per annum.—I am, yours faithfully, T. CRUMPLEN.

DEAR SIR,—I notice that "Templar," in his article in this week's *Fishing Gazette*, makes a statement that the *Thames drains an area of sixty-five square miles*. This is incorrect, as it drains about six thousand one hundred and sixty square miles; therefore, supposing that all the water found its way into the Thames, one inch of rain would mean three hundred and ninety-four million two hundred and forty thousand tons.—Yours truly, A. E. WILSON BROWNE.

Dec. 7, 1891.

ANNUAL DINNER OF RIVER AND LOCK-KEEPERS.

SIR,—I would now venture to make my annual appeal to the readers of the *Fishing Gazette* towards the above entertainment, and as it includes fishermen and others who have assisted in the preservation of the fishery, I hope the response will be more general, as I think from the recent convictions, and preventing the river from being netted during the recognised poaching season, there is a claim for more extended support.

I only ask for half-a-crown, although some contribute larger amounts, and the forthcoming dinner, which will take place at the Castle Hotel, close to Hampton Court Station, on Friday, February 5, 1892, will not only complete my thirty-third year in connection with the society, but be the twenty-fifth anniversary of the dinner which I first originated.

I have already to acknowledge the receipt of contributions from the following of sums from half-a-crown to half-a-guinea each: The Lord Mayor of London, the Piscatorial Society, West London Angling Club, Capt. H. B. Scrivener, Dr. Coates, Messrs. Alfred Northall, J.P., W. A. Crump, H. Calcutt, J. T. Davenport, Montague Davenport, T. Plews, R. S. Fennings, E. Clarke and Sons, W. M. Johnson, Edward Foreman, Arthur Price, Capt. Harrison, H. W. Davis, W. E. Edwards, W. A. Herring, C. H. Woodall, A. Woodroof, W H. Jackson, H. Ellis, W. A. Mitchison, John Mazo, Curtis and Harvey, W. H. Nichols, G. Bishop, W. G. Barnes, George Evans, George Newson, Gurney and Co., T. Hiscock, James Powell, and Thomas Crumplen.—Yours truly, W. H. BROUGHAM,

Pownall Gardens, Secretary.

Hounslow, Dec. 8, 1891.

⁂ Club and River Reporters will oblige by sending in their Reports early in the week.

Holloway's Pills.—This purifying and regulating Medicine should occasionally be had recourse to during foggy, cold, and wet weather. These Pills are the best preventive of hoarseness, sore throat, diphtheria, pleurisy, and asthma, and are sure remedies for congestion, bronchitis and inflammation. A moderate attention to the directions folded round each box will enable every invalid to take the Pills in the most advantageous manner; they will be taught the proper doses, and the circumstances under which they must be increased or diminished. Holloway's Pills act as alteratives, aperients and tonics. Whenever these Pills have been taken as the last resource, the result has always been gratifying. Even when they fail to cure, they always assuage the severity of the symptoms and diminish the danger.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association, Foresters' Hall, Clerkenwell-road, E.C.—The general committee met at the Foresters' Hall, on Monday last. The vice-president, Mr. W. H. Beckett, occupied the chair. A letter was read from the Thames Angling Preservation Society with regard to the annual dinner to be given to their keepers, and it was resolved to refer it to the next delegate meeting. The secretary announced that three substantial bridges, with hand-rails, had been fixed at Enfield Lock Fishery, which will afford greater facilities to those members who desire to fish there. —HON. REPORTER.

Anglers' Association, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly meeting of the Renting and Preservation Committee will take place on Monday evening next, at 8.30.—R. GHURNEY, sec.

Anglers' Association.—NO. 1 EASTERN DISTRICT VISITING LIST.—The next return visit will be to the Stoke Newington Angling Society, Mr. Godfrey's, Dun Horse, Kingsland-road, on Wednesday next. This being the last visit this year, I hope we shall have a big meeting.—G. MANNING.

Anglers' Association.—SOUTHERN DISTRICT VISITING LIST.—A return visit on the above list took place on Tuesday, the 8th inst., at the Blackfriars Angling Society, Winchester Arms, Southwark-street, S.E. On the roll being called, the following ten clubs answered: Anglers' Pride, Bermondsey Brothers, Blackfriars, North Lambeth, Rodney, Second Surrey, St. George's, Causton, City of London, and Eustonians. The next visit will take place at the North Lambeth Angling Society; the date I will give next week.—G. W. ARMSTRONG, district officer.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting Hill-gate, W.—We had a good show of members present, and we fish for six prizes till won, in December, roving. E. Gibbs weighed in perch and bream, on the 6th inst. We formed our slate club on the 9th, and we had the good fortune to make thirty-two members, and a greater number are going to join next Monday; we meet at eight p.m. All fishing club members can join, entrance fee one shilling, sevenpence per week; share out at end of year. All particulars at the above club. All gentlemen are welcome.—B. ABRAHAMS, sec.

Alma Angling Society, Crown Distillery, Vere-street, Clare Market.—On Tuesday we had a good muster of members present, when some important business was gone through. On the 6th inst., W. Thornett weighed in jack; and H. Jefferies, roach. I wish to remind members that we fish for five prizes at Ware, on the 13th.—J. PAILES, secretary.

Amicable Excelsior Angling Society, the Greyhound Hotel, High-street, Battersea.—Several of our members were out on the 6th inst., and the following weighed in: Mr. D. Cooper, roach and dace, and a nice little barbel of 2½lb.; Mr. J. Bell, 3lb. 14oz. of roach and dace; Mr. Jones, 2½lb., roach and dace; Mr. King, roach and dace, largest roach, 1¼lb.; Mr. Roberts, roach and dace; Mr. A. Knowles, roach and dace. Our next match will take place at Windsor, on Dec. 20; tow-path only; jack barred; all to go over-night.—J. RICH, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 6th inst. a few of our members were out, and succeeded in putting on the trays a very fine show of fish, Mr. Whitebread having a very fine show of roach and bream; Mr. J. Nunn, sen., having a fine show of roach; Mr. Wright also having a nice show of roach; Mr. Reeks, with some good roach; and Mr. Dyer with dace. During the evening a friend of Mr. Nunn, sen., placed a nice show of jack on the table, which were much admired by the company present.—E. R. EMBLETON, sec.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The usual weekly meeting was held on Wednesday evening with a good attendance. Mr. Wade gave a good report of the business done at the Central Association. I hope the societies will respond to Mr. Brougham's invitation to subscribe to the river-keepers' dinner. I shall have much pleasure to forward the half-crown on behalf of our society, and hope they will enjoy their spread. We hold our visit, on Monday next, Dec. 14, of the clubs enrolled on the South London U.V. List, and I hope we shall have a good muster of clubs on that night. —A. G. SMITH.

Anglers' Pride Angling Society, the City Arms, Great Dover-street, Old Kent-road.—Members please note quarterly night is Dec. 16, when important business will be brought forward for members to settle. We fish our monthly prizes on Dec. 13 at Windsor, all to go by first train.—J. TUCKER, hon. sec.

Barbican Angling Club, White Bear, St. John-street, Smithfield.—The return visit on the Central Association took place last Monday, and on the roll being called at 11.30 (rather late in consequence of the non-attendance of the district officer) by the secretary, there were twelve clubs answered to the call, the district officer, Mr. Watling, showed up at 11.45 and two or three others with him. The members of the B.A.C. return their thanks to those that were there on this occasion. We had plenty of talent, and enjoyed a pleasant night. We met with a blank on the 6th inst. at Teddington, and have postponed fishing for the same prizes till after the holidays.—W. RYDER, sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—The punt competition is postponed until next month. On Dec. 6, Mr. J. W. Hopkins weighed in 9lb. 12oz. roach, one 1lb. 3½oz.; Mr. Hines, roach; Mr. R. Morris, roach. The Christmas prizes, twenty-one in number, will be fished on Dec. 20, at Kingston; train 9.12 from Clapham Junction.—GEORGE MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—Several members weighed in on the 6th inst., but the takes were not up to the average of the preceding weeks: Messrs. H. Patman, J. Smith, P. Allum, G. Hamp, and J. Warman; total gross weight, 30½lb. On Dec. 13 we fish the annual competition for Christmas prizes, at Twickenham; radius, from Eel-pie Island to Teddington Lock; members to leave Waterloo by the eight a.m. train.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—On the 6th inst., some of our members were out, two getting very nice fish, Mr. J. Barker, some beautiful roach and dace, one dace going 13½oz., and Mr. J. Smith had some very nice dace. Last Tuesday the visit on the Anglers' Association was held at this society, ten clubs answering to the roll, and we passed a very enjoyable evening, the following gentlemen contributing to the harmony: Mr. Wallis, of the North Lambeth; Mr. Mitchell, Rodney A. S.; Mr. Lang, St. George's A. S.; Mr. Wheelhouse and Mr. Renzilier, Blackfriars A. S.; Mr. Sharp, pianist; and several other gentlemen. On Wednesday night we agreed to have a match at Windsor from Town Bridge to Surley Hall, one rod only to be carried, all fish recognised by the club, to weigh, leave Waterloo at 8.20 a.m., cease fishing at four o,clock. It was also agreed to that we fish for our Christmas prizes the same day. Honorary members will be invited to participate in the competition for Christmas prizes, only gentlemen giving prizes will be able to compete.—F. ROBERTS. hon. secretary.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C.—On the 6th inst. the following weighed in: Mr. Rich, roach; Mr. Fairhead, dace, heaviest dace 9oz. On the 7th we held our visit on the Clerkenwell list, which was a great success, twenty-two clubs answering the roll. The Silver Trout showed up after the roll was called. I must thank all those who were present on that occasion for contributing to make it a great success.—D. WARREN.

Brothers Well-Met Angling Society, Berkeley Castle, Rahare-street, Goswell-road.—The winning numbers of the gifts for the benefit of the widow of the late Mr. Sutcliff are 938, 207, 995, 835, 1.237, 1,625, 494, 1,287, 998, 209, 931, 1,075, 496, 990, 1,062, 681, 989, 734, 786.—HENRY TAME, secretary.

Burdett Angling Society, 118, Hackney-road.—Our distribution night takes place on Wednesday next, when I hope all members will come up as early as they can. We have had a few fish weighed in, Mr. D. Flint had jack, 6lb. 8oz.; Mr. Gurney, roach and perch 1lb. 4oz.—J. PETHER.

Caledonian Angling Society.—Messrs. A. Knock and W. R. Turner, in spite of the bad state of old Father Thames, have been out trying their luck, the former gentleman weighing in upon one occasion 11½lb. of roach, and upon another occasion 7¾lb. of the same fish, all over our standard of 8in.; the latter gentleman had two barbel from Maidenhead, besides losing several others owing to the foul state of the bottom of the river. He (Mr. Turner) says it is little short of marvellous how the fish find the bait with the water so thick as it then was, and also a terrific stream running.—A. GEORGE, sec.

Cambridge and Ely Angling Society.—The annual dinner and meeting of the members of the Cambridge and Ely Angling Society was held last week at Littleport. Mr. W. Duncan, Conservative candidate for the Ely division of Cambs., attended, and said he possessed that characteristic of Englishmen—love of sport. Angling and other sports contributed to the health and pleasure of mankind, and he most heartily supported them. The chairman (Dr. Cooper, Cambridge) remarked that when the General Election took place, they might find that some other gentleman would land the fish which Mr. Brand caught at the last election. The gathering was a most enjoyable one.—W.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—On the 6th inst., we had a fine show of roach and dace from the Thames. Mr. King, roach; Mr. Longton, roach; Mr. Sharp, dace; Mr. Marshall, dace. On the 13th inst. we fish a match at Cookham, for our Christmas prizes. The next return visit on the Anglers' Western District will take place at the above on Monday next, the 14th inst., when we shall be pleased to welcome all brother anglers. Secretaries, who have not received notice, will please accept this invitation.—E. T. WHITE, sec.

Campbell United Angling Society, Sir Colin Campbell, High-road, Kilburn.—Members will please take notice that our next outing for prizes takes place on the 13th inst., roving from Richmond Railway Bridge to Teddington Lock; two rods; bank only; all fish to weigh. All to start from Brondesbury Station (N.L.R.) first train in the morning or any following train.—E. W. WOOD, hon. secretary.

Canning Town Angling Society, Marquis of Salisbury, Hermit-road, Canning Town, E.—Since last report the following members weighed in: Messrs. O. Jones, J. Riley, and G. Cooper, jun., roach, dace, and bream; Mr. C. Riley, hooking a 5oz. roach foul, which was in good condition, and deficient of a mouth. Our Christmas prizes will be fished for on Dec. 20, where to fish to be decided next meeting night.—O. JONES, sec.

Central Association.—The monthly delegate meeting was held at the headquarters of the Association, Bedford Head, Maiden Lane, Covent Garden, W.C., on Monday last, Mr. John Kelly, V.P. in the chair. There was a good attendance. Mr. C. A. Medcalf, the president was unavoidably absent, suffering from a severe cold. The minutes of the previous meeting having been read and confirmed—a communication from Mr. W. H. Brougham in reference to the river keepers' annual dinner was dealt with, and the usual contribution of half a guinea voted to the fund. The most important feature of the evening's business was the welcome announcement that the association had succeeded in renting a capital stretch of water at Byfleet, near Weybridge, on the S.W.R., and of which very favourable reports were given by several of the delegates. The water is that known as Morris's, about one and a-quarter miles in extent, and the user of additional water in the neighbourhood has been secured, thus making about a couple of miles good fishing open to members of this association, in addition to the splendid fishery they already have at Pulborough. The water just rented is about two miles from Weybridge, which is the best station to alight at, as trains are frequent, and the road to Byfleet very picturesque. Mr. W. H. West, of the Blue Anchor, Byfleet, who is himself a practical angler, will afford every information, and those who are strangers to the locality, cannot do better than give him a call. The new water will be particularly convenient to some of the South London clubs, and promises to become a valuable acquisition to the association in course of time. A hearty vote of thanks was accorded to Mr. T. Crumplen, and also to Mr. Williams, of the Silver Trout, for the trouble they had taken in the matter, the latter gentleman having first brought the water under notice. Mr. J. Wade made a powerful appeal on behalf of the various preservation societies, particularly the Thames Angling Preservation Society, and quoting some figures furnished by Mr. Brougham, showing how little anglers relatively subscribe to its funds. He was glad to find the collecting boxes were being taken up, and felt sure the clubs belonging to the Central would do their best to fill them, if they did not subscribe in any other way. Mr. George Watling expressed the opinion that much harm was done by professional fishermen, fishing on their own account, as they knew the best spots, and the best time, and very often secured large takes, taking fish from the river, instead of trying to keep them for the angler; which he thought one reason why the preservation societies did not get better support. A general discussion followed, in which Mr. Wade and several delegates took part, Mr. Crumplen remarking that he thought the practice not often indulged in, and only by very few men. Speaking for himself he thought it very reprehensible, and he was sure the T.A.P.S. committee would gladly prevent it if they could, but it was no reason for withholding funds, as it was a matter they could not possibly control. They were all obliged to Mr. Watling for bringing the question forward, as it was desirable for these matters to be well ventilated. Mr. C. Watling, visiting officer, reported having visited the Anchor and Hope, when twenty-two clubs were represented, and a very enjoyable evening spent. A hearty vote of thanks to the chairman and vice-chairman closed the proceedings. Mr. Kelly, in responding, wished the delegates all seasonable happiness, and long continued prosperity to the Association.

City of London Angling Society, White Bear, Bride-lane, Ludgate-circus.—Our complimentary meeting will take place on Monday next. Any angler or friend who can make it convenient to attend will oblige their old friend—CAS.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—We started our first competition on the 6th inst. for Christmas prizes, and nineteen prizes were taken in the following order: Messrs. E. Wilson, A. Bowater, A. Turner, T. Jameson, E. Wakeford, Tringham, jun., C. Cooper, J. Collis, H. Moore, Tringham, sen., R. Chapman, W. May (T. Marchant and E. Pyne, tie) (A. Trowbridge, A. Ellis, and A. Painter, tie), S. Aplin, and J. Willgoss. The remaining prizes will be competed for on the 13th inst. The presentation of prizes will take place on 23rd inst., all prizes to be at club-house by that date. I beg to remind members that the 17th inst. is quarterly night.—A. TROWBRIDGE, sec.

Clerkenwell and District United.—A successful visit in connection with the above was paid to the Bloomsbury Brothers, on Monday evening, Mr. Wilshaw in the chair, faced by Mr. D. Warren, the following twenty-two clubs being well represented—viz., Great Northern Brothers, Lincoln, Barbican, Crown and Buckland, City of London, Independent Brothers, Seymour Brothers, Eustonians, Amicable Waltonians, Funny Folks, Islington Brothers, Bloomsbury Brothers, Alma, Burton Piscatorials, North London, Camden, Patriotic, Mitre Brothers, Anchor and Hope, Bermondsey Brothers, Golden Barbel, and North Western. We had great difficulty in finding room, the company filling the house. The next visit will be to the Alma Angling Society, held at the Crown Distillery, Vere-street, Clare Market, soon after Christmas.—F. CASTELL, secretary.

Clissold Angling Society, Free Trader, Edwards-lane, Stoke Newington.—A few of our members were out on the 6th inst., but sport was very poor, the club being saved a blank by Mr. Parsons, with roach.—E. J. MALLETT, sec.

Cobden Angling Society, Cobden Club, Kensal-road, W.—We had fish weighed in on the 6th inst. by the following members: Messrs. A. Tucker, barbel, 6lb.; T. Marsh, barbel and chub, 5lb. 15oz.; G. Percival, roach, one specimen fish, 1lb. 4¼oz., from the Thames, total weight, 3lb. 10½oz.; T. Twyman, roach and dace.—A. SMITH, sec.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 6th instant a few members were out, Messrs. Wright, Newsome, Thornton, Killick, Parram, Baldwin, W. Midson, and Legge having a fine show of perch, roach, and dace. On Tuesday, the 8th, our half-yearly distribution of prizes took place. The prizes were taken by the following: Killick, four; Wild, three; Baldwin, three; Webber, three; Freeman, two; Robinson, two; Slade, Eagles, Towndrow, F. Woods, Wright, Pumfrey, C. Richardson, Malby, Spong, Thornton, and Lucas one each. After some excellent harmony was indulged in, all were loth to part.—S. MALBY, sec.

Eustonian Angling Society, King's Head, Swinton-street, King's Cross.—On the 6th inst. we fished at Cookham for two prizes given by Messrs. Tavener and F. Marshall, senr. Mr. Abbott took first prize with a nice show of roach; second taken by Mr. Tavener, with roach; also Mr. Neall and Mr. B. and H. Pitt weighed in from same water. R. NEALL, sec.

Funny Folks Angling Society, Rose and Crown, 21, Goswell-road.—On the 6th inst., we had a nice show of fish. Mr. F. Vanhegan, roach; and Biggs, roach, dace, bream, and perch. Members are requested to attend, as there is a lot of prizes still to be fished for.—J. W. BIGGS, secretary.

Gipping Angling Club.—A smoking concert will take place at the club-house, the Great White Horse Hotel, Ipswich, on Saturday evening next, Dec. 19, the chair to be taken at eight o'clock sharp by Mr. A. Townshend Cobbold. A good programme has been arranged, and the admission is by ticket only, price one shilling.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We had a good show of fish on December 7: 13lb. 4oz. of roach and bream, taken by Mr. Slade; also a few roach taken by Mr. Stebbings.—A. PAYNE, sec.

Golden Barbel Angling Society, York Minster, Foley-street, Portland-road, W.—We had a good muster on the 6th inst., at Tapton, twenty-seven answering the call. The following members were prize winners: Mr. A. Porter, first; Mr. Fowler, second; Mr. Bailey, third; Mr. Clynham, fourth; Mr. Ellins, fifth; Mr. Barnett, sixth; Mr. Hall, seventh; Mr. Roach, eighth; Mr. Bryant, ninth; and Mr. Chambers, tenth. Twenty-three had fish, all prizes being taken.—A. STOKES, sec.

Great Eastern Angling Society, Castle Inn, Leyton-road, Stratford New Town.—On the 6th inst. the trays were again well filled with fish. Mr. F. Bates weighing 27lb. of jack, largest fish, 10lb. 8oz.; Mr. J. Grande, 2lb. 8oz. of dace and roach; Mr. B. Edwards, bream and roach; Mr. A. Wheeler also had roach.—G. F. WEAVER, sec.

Greenwich Angling Society, Prince Albert, Royal-hill, Greenwich.—On Wednesday evening, Dec. 2, there was a crowded attendance of members and friends, the occasion being the first musical evening of the season. An excellent programme was duly carried out. The chair was occupied by Mr G. H. Dowsett, and the vice-chairman was Mr. J. B. Orr. A thoroughly enjoyable evening was spent. —G. J. TOYNBEE, hon. sec.

Gresham Angling Society.—On Tuesday evening last, under the presidency of Mr. C. H. Bramley, a very able paper—the joint production of Messrs. Norman and Fletcher—was read by Mr. Fletcher. It was full of fun, angling tales and incidents, and gave great delight to a large and appreciative audience; and a hearty vote of thanks was afterwards given them. The Gresham album is now ready for the reception of portraits of the officers and members, and those wishing to appear in it should communicate with the secretary. A smoking concert will take place next Tuesday, at eight p.m.

Havelock Angling Society, Royal Oak, Whiston-street, Haggerston.—The five prizes left over from Dec. 6 will be fished for on Dec. 13; from the Rye House to Ware Bridge. Members, to be eligible, must meet at Mr. Foxall's, St. Margaret's Bridge, by 10.30 a.m., and show fish at same house six o'clock p.m. sharp. We have made fifteen new members since moving to the Royal Oak, and should be much pleased to see our old standards rally around us as in days of old.—W. YOUNG, sec.

Hearts of Oak Angling Society, Portobello, Turville-street, Church-street, E.—On Dec. 6 our members fished for the remainder of the Christmas prizes at the same place and conditions as before, four out of five being taken—viz.: Messrs. Holmes, roach, first; Glover, roach, second; Hart, dace and perch, third; and Jones, perch, fourth. Messrs. Brink also weighed in roach; Rider, perch; Russell, roach and dace; Bagshaw, jun., perch.—W. H. FENNER, sec.

Highbury Angling Society, Hornsey Wood Tavern, Seven Sisters-road, Finsbury Park.—Since my last report several of our members have been out, but owing to the floods, the result has not been up to the average. On the 5th inst., Mr. Rutherford, in the Thames, at Pangbourne, had a few roach; and Mr. Monte, on the 6th inst., 4lb. of roach, from the same place; but the river is too thick to do any good; but we had close on 5lb. of roach, from the Stour, by a friend. The notice for the reading of paper by Mr. Taylor will be announced as soon as possible.—J. F. G.

Hounsfield Otters Angling Society, Lower Edmonton.—Our takes, I regret to say, have not been so good during the past fortnight, and beyond a nice jack (Mr. W. Jones), a chub, 2lb. 6oz. (Mr. J. Cornwell), some good roach and dace (Messrs. W. F. Liddle, Ashwood, Lane, and S. Smith), there has been nothing worth recording since my last report. Our smoking concert on the 2nd inst. was a great success; the Anglers' Benevolent box on being opened producing the respectable sum of £3 towards the funds of this most excellent institution, and I take the present opportunity of thanking the members of those clubs, and other friends, who so kindly supported us on that occasion.

Hoxton Brothers Angling Society.—On the 6th inst., A. Hattemore weighed in a few nice roach from the Lea; S. Cole, roach and dace; and T. Haycox, roach and perch. The presentation of Christmas prizes will take place on Tuesday, Dec. 22.—R. GHURNEY, sec.

Independent Brothers Angling Society, Three Doves, 24, Berwick-street, Oxford-street, W.—On the 6th inst. we fished our Christmas competition, at Kingston, with success, all the prizes being taken. The following were the winners, with bream, roach, dace, and gudgeon: Messrs. A. Pain, Arthur Morgan, W. Gray, Alf. Morgan, A. Pope, and J. Bigsby. The following came close up: Messrs. Wilson, F. Pain, Pocock, Gordon, Norman, Davis, and Liversage. The prizes will be distributed on Christmas Eve. At our last meeting I am pleased to say we proposed four new members, Messrs. O. J. Holder, H. R. Helder, W. D. Holder, and W. Warrell. I shall be glad to nominate any gentleman who wishes to join our society. We have vacancies for a few more.—SNAP.

Islington Brothers Angling Society, Myddelton Arms, Canonbury-road.—We had few fish on our trays on Dec. 6: Mr. Willsher, 4lb. 11¼oz. of very nice roach, saving the club from a blank. I hope anglers and friends will not forget our smoker on Monday next, 14th, when we hope to spend a very enjoyable evening.—J. H. HERBERT, sec.

Izaak Walton Angling Society.—The members will compete for four special prizes on the 13th inst. Competitors may (excepting private waters) go where they choose. A discussion on the last meeting night was upon providing funds for the preservation of different fishing waters. It was resolved that the club have a box for such purpose, and that the result of the collection be disposed of at the discretion of the members. Messrs. H. and D. Auburn weighed in perch on the 6th inst., and Mr. G. Washington had roach, perch and dace. Mr. W. Wilshere had a tray of handsome dace, on Wednesday, the 9th inst., the heaviest one scaled 14½oz. The secretary would esteem it a great favour if all members that can possibly attend on next meeting night will do so, as business of importance will be submitted to the meeting.—H. B.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—Our club-room was very comfortably filled on the 4th inst., when the first smoking concert of the season took place, a very enjoyable evening was spent. Many of our members have been out during the week, the most successful being Messrs. Prole, Carter, and Mason. News has just come to hand that Mr. Tame has successfully landed a very fine specimen of a Thames pike, weighing 18lb., in the pink of condition, which is being set up.—T. SALTER, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville-road, N.—On the 6th inst., several members were out, Messrs. Wallis having two good jack, largest fish, 9lb. 1oz.; Holmes, 6lb. roach and perch; Webster, Watling, and Belton, roach and dace. On the 13th the above society fish their Christmas outing at Cookham for fourteen prizes. All to start by 8.30 train from Paddington same morning.—W. WATLING, sec.

Liverpool Angling Association, held at the Bee Hotel, 5, Queen's-square, Liverpool.—There was a fairly good muster of members at our last week's meeting. After the business was got through Mr. W. J. Johnson took the chair for the remainder of the evening, being the second of our winter social and harmonic gatherings. The room was now pretty well packed and a couple of hours were very pleasantly passed indeed.—RD. WOOLFALL.

Liverpool East End Friendly Angling Association, 150, West Derby-road, Liverpool.—It was decided at our meeting on the 8th inst. to have our first annual dinner at Eve's Restaurant, Lime-street, on the 17th inst. Several musical gentlemen have promised to be present to make it a most enjoyable evening. Several of our members have been out, and have had fair takes of roach, &c. We have a special meeting on the 15th, when I hope members will clear the books. The distribution of prizes for specimen fish will take place on the 22nd inst.—T. C. SEGAR, sec.

Marylebone Angling Society, Pine Apple, Carlisle-street, Edgware-road, W.—On the 6th inst. our members were at various waters. The only members that weighed in was Messrs. Barnard and A. Clark with some nice roach from the Thames.—W. F. PEARCE.

Mitre Brothers Angling Society. Mitre Tavern, Kingsgate-street, Holborn.—The benefit for Mr. Irish took place on the 30th ult., when it was well represented by the following clubs: Burton Piscatorials, Alma, Wenlock, Seymour Bros., Golden Barbel, and Bloomsbury Bros. Angling Societies. On the 6th inst. Mr. Richardson weighed in a nice show of dace and roach from the Thames; also Mr. Crocker and Mr. W. Talbot; Mr. Ryan, on Monday, roach from the Thames.—J. JOLLIFFE, hon. sec.

New Albion Piscatorial Society, Duke of Kent, Old Kent-road, London, S.E. — Several of our members were out on Thursday last, but owing to the gale and floods all over the country, only two were successful, Mr. Hearn winning the first prize, £2 2s., presented by Mr. Baldwin; and Mr. W. F. Grimmett, a box of cigars, given by Mr. J. Cook.—A. E. B., sec.

North Eastern Angling Society, City Arms, 9, Blomfield-street, London-wall, E.C.—On the 6th inst., Mr. Goll had four nice jack from the Thames, weighing a little over 22lb. Thursday next, the 17th, being half-yearly night, all members are earnestly requested to be in attendance by 8.30.—G. T. FLETCHER, sec.

North Lambeth Angling Society, 108, Westminster Bridge-road.—Some of our members were out on the 6th inst. to compete for the Christmas prizes, but on arriving at their destination, unfortunately found the water unfishable. The club wish to return their thanks to those societies who have, up to the present, replied on behalf of Mr. E. Burton. I am sorry to state that letters have been sent, addressed to Mr. E. G. Roe, to the Wellington, South-street, which is the address of the Original North Lambeth, thereby causing great inconvenience to us and to those who sent to us. I hope anglers will in future kindly remember our address, and so save any future *contretemps*.—F. WALLIS, secretary.

North London Angling Club, Tap House, Holloway-road, N.—On Tuesday next, Mr. G. E. Simms, of the Gresham Angling Society, will read a paper, entitled "Coarse Fish Hatching," after which a smoking concert will take place. Mr. F. Thorling in the chair; vice, Mr. W. Stretch. Any society not receiving notice please accept this as an invitation.—H. STRETCH, hon. sec.

North-Western Angling Club, Lord Southampton. Southampton-road, Maitland-park, N.W.—On Dec. 6, Mr. Goodman weighed in three jack from the Lea, and Mr. Schultz, jun., roach from the Thames, the heaviest going 1lb. 4¾oz. Members, please note that we have a special general meeting on Dec. 17. I hope members will turn up in full force, as we have business of importance to settle.

Park Angling Society, Tottenham.—The first smoking concert in connection with this society took place at the Park Hotel on Saturday last, and was in every way a success. Other angling societies were well represented, including the Edmonton and Tottenham, Enterprise, Antwerp, and there was, besides, a large gathering of general friends. The duties of chairman were most admirably fulfilled by Mr. C. Roberts, assisted by Mr. J. H. Mackney in the vice-chair. During the evening, the chairman, in a few well-chosen words, pointed out the advantages to all lovers of angling of connecting themselves with societies such as this, and so, through them, the real boon of the railway privilege tickets, the Benevolent Society, &c., secured through affiliation with the parent society. The programme, consisting of songs, humorous speeches, instrumental quartettes, &c., was got through most successfully. The presence of the very genial host and honorary treasurer, Mr. J. G. Finch, was acknowledged with musical honours.

Peckham Brothers Angling Society, Prince Albert, Rosemary-road, Peckham.—The members of the above fished their December series of five prizes on Dec. 6, at Staines, from the railway bridge to Laleham Ferry, including Penton Hook; but owing to the river being in flood the takes were not very large. The following successful members were: Mr. Parsons, first, with barbel; Mr. Holt, second, with barbel and dace; Mr. Bonsall, third, with roach and chub; Mr. Steadman, fourth, with barbel. The fifth prize not being taken will be left open for members to go where they please.—E. A. FAUTLEY, secretary.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—On Wednesday we had a very large meeting, when some very important business was done in reference to our next outing. I hope members will attend at the return visit of the Camden Angling Society, on Monday, and give them a bumper.—J. HARRIS, sec.

Rising Sun Angling Society, The George, Brook-street, Holborn.—On the 6th inst., Messrs. Comley and Afflett had a nice show of roach, I must remind members that we fish for our Christmas prizes on the 20th inst.—F. BRADLEY, sec.

Royal Oak Angling Society, Coborn Arms, Coborn-road, Bow, E.—On the 6th inst. several of our members were out, but the only gentlemen who had any sport were: A. Barclay, 13lb. 8oz. roach; F. Barrow, 7lb. 9oz., roach; J. Yeo, 3lb. 7oz. roach; and Mr. G. Yeo, jack. Mr. Silverlock, of the General Gordon Angling Society favoured us by exhibiting a nice jack, 11lb., which he had taken that day whilst paternostering for perch at St. Margaret's. The fish was taken on fine gut bottom, and fine silk running line, and after thirty minutes' play he had to call the assistance of another angler to gaff it, as a barge was approaching. After gaffing once, and the gaff breaking through the jack's side, another attempt was made, and the fish safely landed. Members please note we compete for three prizes at Harlow on the 13th inst.; all go down by the 7.30 from Coborn-road station; book to Harlow.—A. BARCLAY, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—Result of fishing for the prizes on the 6th inst.: Mr. H. R. R. Wright, sixth prize; Mr. J. Wright, seventh prize; Mr. G. George, eighth prize. The ninth and tenth prizes will be fished for on the 13th inst.; from Rye House to the locks at St. Margaret's. Next Wednesday, Dec. 16, being quarterly night, the prizes will be handed over to the various winners. I hope the members who have promised prizes for this quarter will bring or send them up on that night only.—J. WRIGHT, sec.

Seymour Brothers Angling Society, 32, Chalton-street, Euston-road.—On the 6th inst., a few members were out with the following result: Messrs. J. Petrie, roach; W. North, roach; H. Bigsby, roach. On the 13th Christmas prizes will be fished for at Pangbourn; all to go by first train on the morning only.—S. E. CANE, sec.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—Members are reminded that the competition on the 13th, is between Cookham and Maidenhead Railway Bridge from bank or punt. No competitor to go down except on the day. Prize of £1 1s. for heaviest catch as per rule. There will be a dinner at the club-house for members and friends as usual. I congratulate the members on the increased attendance at the meetings where a pleasant hour or two are spent in discussing fishing matters. Mr. Snell had a grand catch of roach and dace of 20lb. on the 1st inst. since then he has had 6lb. 12oz., and 7lb. On the 6th inst., Mr. Parkhurst weighed in one bream, 1lb. 2oz., roach and dace 3lb. 10¼oz. The president brought in five bream, weighing 8lb. 2oz., the heaviest, 2lb. 6½oz. Mr. J. Warsap, who had been with him, also had five bream, 6lb. 6oz., the heaviest 1lb. 13¼oz.; the trays of fish were much admired. Two members were elected at our last meeting.—C. B.

Silver Trout Anglers' Association, Bedford Head, Maiden-lane, Covent Garden.—On the 6th inst., Mr. Smales brought up two roach, 1½lb.; Mr. Curtiss had just on 12lb. of barbel, besides roach. I hope members will endeavour to turn up a little earlier next Tuesday, as we have to settle date of smoking concert and reading.—PELICAN.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—The members weighing in on Dec. 6 were: Mr. F. Jones, bream and roach; Mr. Manning, bream and roach; Mr. Stevens, jack; Mr. A. McDunn, roach. All members having promised Christmas prizes will forward name as soon as possible.—R. SPENCELEY, sec.

South London United Anglers' Visiting List.—The next visit on this list will be to the Anchor and Hope A.S., held at the William the Fourth, Canal-bridge, Old Kent-road, on Monday, the 14th inst. As this club is easy of access by tram from all parts of the South of London, I trust they will be well supported, and that every society on the list will do their best to be represented.—A. CONN, hon. secretary.

Stoke Newington Angling Society, the Dun Horse, Kingsland-road, E.—The next return visit of angling clubs (No. 1, Eastern District), will take place to the above society on Wednesday next. The attendance of clubmen and friends on that occasion will be esteemed a favour.—T. GRETTON.

St. Thomas's Angling Society, Waterman's Arms, Paris-street, Lambeth, S.E.—The members visited the Thames from Kingston Bridge to Hampton, on the 6th inst., to fish for their prizes, but was again unsuccessful, and owing to the strong currents have decided to postpone fishing for the prizes until after Christmas.—G. MORTON, secretary.

Sundial Angling Society, Plough and Harrow, King-street, West Hammersmith.—The members of the above fished their punt match as arranged on the 6th inst., at Staines. Twenty took part in the match, but the river being in bad condition very few fish were taken. There were seven prizes, of which six were taken: Mr. Hill, 1st; Mr. Pocock, 2nd; Mr. Lewis, 3rd; Mr. G. Boreham, 4th; Mr. H. Reaves, 5th; Mr. Pocock also took a prize given by Mr. Holmes for the largest dace.—H. REAVES, sec.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—Only a few of our members were out on the 6th inst., and had fish but did not turn up at the club-house. We had a very interesting meeting on the 8th, Mr. Petty in the chair, faced by Mr. Smith. It was proposed and carried that we fish for our Christmas prizes on the 20th, and only those who are eligible will be able to compete. I hope to see all present on Tuesday next to make the final arrangements.—H. C., hon. sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—On Wednesday last it was decided that the outing arranged for the 13th inst. should stand over till the 20th inst., in consequence of the bad state of the weather. Members who have not paid this quarter's subscription, are requested to do so as soon as possible.—R. BAILEY.

Wellington Angling Society, Prince George, Hill-street, Walworth.—On the 6th inst., the December competition was a failure, not any of the prizes being taken; it will be fished over again on December 13, from Richmond to Teddington; bank or punt; members to go to Twickenham by 8.5 from Vauxhall; show fish at the Swan from four until 4.30. Mr. R. J. Dartnall weighed in 6lb. 15oz., roach; Mr. Fred Hailey, 4lb. 15oz., roach.—R. J. DARTNALL, sec.

Wenlock Angling Society, Clothworkers' Arms, Arlington-street, New North-road.—The following members weighed in on the 6th inst.: Messrs. Sullivan, perch; Parslow, roach; and Kirtland, roach. I hope all members will attend, so as to get the books clear for next balance-sheet.—W. M., sec.

West Ham Brothers Angling Society, Swan Hotel, Broadway, Stratford.—Our members were out on the 6th inst., but sport was poor. The following weighed in fish: Mr. Goodrich, 1lb. 6oz. of roach; Mr. Maxted, roach; Mr. G. Bowls, 1lb. 9oz. of roach; but from private waters. I hope our members that are elected for the committee will be in attendance on Monday night next, Dec. 14, at eight p.m.—R. LOWTHER, sec.

SOCIETY FOR PROMOTING THE READING OF PAPERS AT ANGLING CLUBS.

LARGE numbers of the London club anglers attended the Foresters' Hall, Clerkenwell, on Thursday evening last, to hear Mr. F. M. Walbran, of Leeds, lecture on "Two Yorkshire Rivers." The occasion was also set apart for the distribution of prizes won in connection with the recent competition on the Lea in aid of the Anglers' Benevolent Society. The prizes, consisting of tackle cases, fishing boxes, umbrellas, vases, a handsome roach pole and a serviceable pike rod, a silver-plated tea and coffee service, walking sticks, and the proverbial copper kettle, were displayed on tables, and prior to the meeting commencing they were duly inspected by the audience. In the absence of Mr. R. B. Marston (president of the society) through a cold, Mr. C. H. Cook ("John Bickerdyke") occupied the chair, and amongst those present on the platform were Dr. Brunton, Mr. Medcalfe (president of the Central Association of London Anglers), Mr. R. Ghurney, Mr. G. Murphy, Mr. H. J. Tibbatts (chairman of the society), &c. By the time the meeting was opened the hall was crowded.

The chairman, in opening proceedings, read a letter from Mr. R. B. Marston, expressing his regret at being unable to be present, and the following telegram, which was productive of loud cheering: "Leeds, 7.41 p.m., chairman, Foresters' Hall, Clerkenwell, London. Hearty good wishes to meeting. Success to southern anglers, not forgetting our Yorkshire representative, 'Max.'—J. Marston for the anglers of Leeds."

In introducing Mr. Walbran to the notice of the meeting, the chairman gave a short history of his angling career, and said that he was one of the most skilful fishermen in the North Country. There was no man who fished finer, and on one occasion using 4/x fine drawn gut he killed twelve grayling, weighing 22lb., and a day or two afterwards a specimen grayling of 3lb. 9oz. (Cheers.) His best basket of trout had been one of 28lb. from the Eden; and his best day with the grayling resulted, rather singularly, in the capture of another 28lb. weight of fish, from the Ure. (Cheers.) The chairman proceeded to refer to the Society for Promoting the Reading of Papers at Angling Clubs, under whose auspices they had met that night, and said that its principal object was to make better men of them as far as was possible. He asked the London anglers not to fish for the sake of catching fish to weigh in for prizes, but for the love of the sport. (Cheers.)

Mr. Walbran then proceeded to deliver his lecture, which was illustrated by one hundred dissolving views. From start to finish it proved of a most interesting and entertaining character, and the audience were unstinted in their applause. Many beautiful scenes on the Wharfe and the Ure were reproduced on the canvas—picturesque waterfalls, charming pools, old ruins, castles, and country seats, and lovely woodland glens, and, in the course of his paper, the famous Yorkshire angler gave some of his experiences when fishing these rivers. He said that the Ure was a dangerous river for waders. Loud applause greeted the lecturer at the conclusion of his address, which has already appeared in the *Fishing Gazette*. Later on it is our intention to reproduce several of the views relating to the Warfe and Ure, in these columns.

Mr. Shrubsole, in proposing a hearty vote of thanks to Mr. Walbran, who, he said, had come up from Leeds purposely to deliver the lecture, remarked that his presence amongst them was a good augury for the future success of the society. (Hear, hear.) He had endeavoured to interest and help the London working man angler, and he was a right good fellow for so doing. (Cheers.) He thanked him especially for having supported the idea of the reading of papers like one he had just delivered, and he believed the time was not far distant when they would not only receive Yorkshiremen and Northumbrians in London to read papers, but have to consider who they should send back to return the compliment. (Cheers.)

Dr. Brunton seconded the resolution, which was carried with acclamation.

Mr. Walbran, in replying said "he had delivered the lecture in many parts in the North, but he could honestly say that he had never met with a more enthusiastic reception than that which the London anglers had accorded him that night." (Cheers.) In theatrical parlance the present was the first time he had made his appearance on any stage in London—(laughter)— but if they desired it, it should not be the last. (Hear, hear, and loud cheers.) He asked them to always observe the true spirit of angling, and to learn to love it for the sport's sake and not for the sake of greed, or in order to win a prize. (Hear, hear.) In conclusion he again heartily thanked them for the manner in which they had received him. The chairman then proceeded to distribute the prizes in connection with the Rye House Contest, and a list of successful competitors is appended:

1, G. J. Klein, Edmonton and Tottenham, 2lb. 4½oz.; 2, Bird, Waggoners, 2lb. 2½oz.; 3, G. Wood, Hoxton Brothers, 2lb. 2oz.; 4, J. Row, Hoxton Brothers, 1lb. 12¼oz.; 5, E. Dewin, South Belgravia, 13¾oz.; 6, J. Huntly, Hoxton Brothers, 12¾oz.; 7, W. Gordon, Wellington, 12½oz.; 8, W. Bees, Anglers' Pride, 9¾oz.; 9, J. Adkin, Edmonton and Tottenham, 9¼oz.; 10, Menieces, Penge, 8¾oz.; 11, G. Stevens, Social Brothers, 8½oz.; 12, R. Brockett, Great Alexandria, 8¼oz.; 13, Kellick, Dalston, 7¾oz.; 14, Staines, Mildmay, 7¾oz.; 15, Twomer, Prince of Wales, 7¼oz.; 16, Snooks, Good Intent, 7¼oz.; 17, C. Richardson, Dalston, 7¼oz.; 18, G. Rodgers, Crown and Buckland Angling Society, 7oz.; 19, R. Spenceley, Sociable Brothers, 6¾oz.; 20, W. Clark, Crown and Buckland, 6¼oz.; 21, G. Overett, Original Alexandria, 6¼oz.; 22, A. Barclay, Royal Oak, 5¾oz.; 23, Good, Waltonians, 5½oz.; 24, J. Tuthill, Havelock, 5¼oz.; 25, W. Stevens, West Ham, 5¼oz.; 26, Russell, Hearts of Oak, 5¼oz.; 27, Barnes, Wellington, 5oz.; 28, Scultry, Hoxton Brothers, 5oz.; 29, Rider, Hearts of Oak, 4½oz.; 30, T. Harrison, Odds and Evens, 4½oz.; 31, Marks, Sociable Brothers, 4¼oz.; 32, H. Day, Edmonton and Tottenham, 4¼oz.; 33, Brink, Hearts of Oak, 4oz.; 35, Harris, Prince Arthur, 4oz.; 34, A. Petty, Waggoners, 4oz.; 36, E. Pleydell, Sociable Brothers, 3¾oz.; 37, E. Billings, North Western, 3½oz.; 39, B. Dodge, Waltonians, 3½oz.; 38, T. Carter, Burdett, 3½oz.; 40, A. Freeman, Dalston, 3¼oz.; 41, Howel, Buxton Brothers, 3oz.; 42, P. Jucha, Convivial, 3oz.; 43, Hearts, Hearts of Oak, 3oz.; 44, A. Millett, Duke of Norfolk, 2¾oz.; O. Wade, Good Intent, and E. H. Clark, Golden Barbel, tie with 2½oz. each.

A vote of thanks to the chairman, proposed by Mr. H. J. Tibbatts, and seconded by Mr. Medcalfe, eventually terminated the most successful meeting ever held at the Foresters' Hall.

A MEETING was held on Monday night, at the Wellington, Epsom, the club-house of the Epsom Angling Society, when Mr. G. E. Simms, of London, read a paper on coarse fish hatching. Mr. E. S. Shrubsole presided. The Epsom Angling Society bids fair to have a most flourishing and successful career. Established in October, its sixtieth member was enrolled on Monday night, and other gentlemen have expressed their intention of joining the club. Mr. T. T. Bucknill, Q.C. (the Conservative candidate for the Epsom Division of Surrey) is president of the society, and the club is further influentially supported by Dr. W. C. Daniel and Mr. Pantia Ralli (vice-presidents), and other well-known local gentlemen. In Mr. E. W. Hailes, the club has an excellent secretary, whilst Host Dix, of the Wellington, himself an enthusiastic angler, has provided about one of the snuggest of club-rooms that any gathering of fishermen could meet in. Several fine cases of fish grace the walls of the room, including a brace of perch weighing 8½lb., caught some twenty-five years ago, in a lake on Mr. Brook's Park, at Epsom, by Mr. Puckle, who has kindly lent the fish to the club for exhibition. The other cases contain a carp 7lb. 1oz., taken in Atlee's Mill Pond, Dorking, by Mr. Allan Pagden, a jack 13½lb. caught by Mr. Puckle, in Tring Park, and three good roach hailing from Twickenham, where they were captured by Mr. Dix.

The Chairman, after explaining the object of the meeting, said he felt sure the members of the Epsom Angling Society would find Mr. Simms's paper a very interesting one. It was on a subject well worthy the attention of such a young club, and he sincerely hoped that they would think more of hatching coarse fish, and the culture of fish generally than they would of winning prizes. (Hear, hear.) For himself he had always been one of those to heartily support the prize-list from a sportsmanlike point of view, and he asked them to make it a sportsman's society, not a pot-hunter's. (Hear, hear.) The term "pot-hunter" did not apply to those who occasionally won a copper kettle or a set of jugs; it referred to those individuals who called themselves anglers when they only formed themselves into a club to win prizes. (Hear, hear.) If the club relied on its prize-list alone, then he prophesied for it a short career, but a long life if it was conducted in a sportsmanlike manner. (Applause.) But he believed the Epsom Angling Society would go in for advancing angling as a sport; if they did, then, indeed, would they have done a great and good work, and a permanent one. (Hear, hear.) In conclusion the chairman impressed on his hearers the necessity of fish-stocking and fish-cultivation, for he contended that if something was not soon done, coarse fish would speedily not be worth fishing for. He then introduced the lecturer to the meeting. (Cheers.)

Mr. Simms, who was cordially received, then delivered his interesting paper, and remarked that the depopulation of our inland waters was beginning to slowly force itself on the minds of the angling community. The reader quoted Mr. R. B. Marston's remarks on the increase in the ranks of the anglers, and the consequent immense destruction of fish. He (Mr. Simms) re-echoed that eminent authority's cry, "How can we get fish?" Well, an effectual answer has been given to the query by the salmon and trout anglers, who, by a sportsmanlike standard of size, supplemented by constant re-stocking, had greatly added to the worth of their fisheries. On the other hand, the coarse fishermen had been singularly apathetic after their own interests. They had used every endeavour to catch fish, but had done little or nothing to replace them. He, therefore, urged anglers to increase their standard and constantly re-stock with fish bred from ova produced from other rivers. Unless they did they would soon have to bid a sorrowful farewell to the coarse fishing that had provided them so many pleasant outings in the past. Probably the one cogent reason why greater attention had not been paid to the hatching of such coarse fish as roach and perch, was that people imagined it to be a very difficult operation. There was, he could assure them, no real difficulty in the matter; anyone could compass it. Mr. Simms then passed on to describe the appearance of coarse fish ova, and where it could be found. He said that once, with a dozen common glass pickle jars and a couple of aquariums, he hatched several thousand of roach and perch. He recommended the plant microbe as an admirable food for young roach, and he thought it would prove equally efficacious for perch fry. He contended that with a little care every vestige of spawn in any particular river could be collected and hatched out by the aid of wicker baskets. In conclusion, Mr. Simms trusted he had opened out a new field of thought in connection with their sport, and he urged upon them the necessity of keeping their stock replenished.

Dr. Daniel, in proposing a hearty vote of thanks to the lecturer, said he hoped they should be followers of his. (Hear, hear.) The way Mr. Simms had dealt with his subject showed that he was evidently a master of it.

Mr. Bucknill, Q.C., seconded the motion, and said he felt sure the members of the Epsom Angling Society were extremely indebted to Mr. Simms for his very able and interesting paper. (Hear, hear). He quite agreed with the chairman and Mr. Simms that they must do something towards cultivating their fish. They must if they wished to continue to be anglers not delight in catching the shrimps of the present day, but wait till they have grown into respectable specimens. (Hear, hear.) He had lately been spending a holiday at Whitby, and the fishermen had been complaining to him that they were unable to get along nowadays because of the stream trawlers, which ploughed up and down the sand banks and destroyed the spawn and young fish. The consequence was that there had been a great falling-off in the size of soles. If they destroyed their small coarse fish to-day, why next year and the year after they would simply get none at all. If the Eosom Angling Society desired to fish in years to come they must take some means of preserving their quarry. They hoped to get a stretch of water for themselves soon, and he should then look forward to their devoting one part of the year to the pasture of angling and the other to fish hatching. (Applause.) He hoped they would try and increase their knowledge in that direction, though compared with the chairman and Mr. Simms, they were, as Dr. Daniel had said, mere infants; they sat at the feet of Gamaliel. (Laughter.) In conclusion he expressed the great pleasure it gave him to second the resolution.

Mr. Dix supported it, and said he and several others of the club had been out that day. They had caught about four dozen fish, but had returned them all to the river again as there were none worth showing at the club. (Hear, hear.) He said the committee had decided not to give prizes for gross weight. (Hear, hear.)

Mr. Connellan, London, would agree with gross weight prizes, if they were given for the heaviest weight of specimen fish.

The resolution was carried amid cheers, and Mr. Simms having replied,

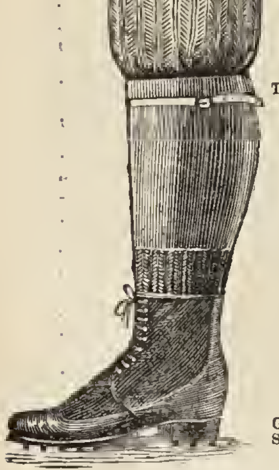
Mr. Bucknill proposed a vote of thanks to the chairman, which was carried with acclamation, after which the proceedings was brought to a conclusion.

CHRISTMAS HOLIDAY ARRANGEMENTS, 1891.—The Great Eastern Railway Company announce that a special booking-office will be opened at the Liverpool-street Station, from the 18th to the 24th December, for the issue of tickets for use from Liverpool-street Station, on any day up to and including the 25th December; also that tickets may be obtained at the Company's West-end offices, at 61, Regent-street, 215, Edgware-road, and 51, New Oxford-street, and at their other City and West-end booking-offices. On Tuesday, Wednesday, and Thursday, 22nd, 23rd, and 24th December, additional trains will be run from Liverpool-street to relieve the principal main line trains. On Christmas Eve, 24th December, special trains will leave Liverpool-street at 1.20 and 8.3 p.m., for Ipswich, Lowestoft, Yarmouth, Norwich, &c.; also for the accommodation of persons detained at business until late on Christmas Eve, special midnight trains will leave Liverpool-street at 11.55 p.m., for Bishop's Stortford, Cambridge, Ely, Dereham, Fakenham, Norwich, Yarmouth, Lowestoft, &c., and at 12.15 a.m., for Colchester, Ipswich, Bury St. Edmund's, Diss, Norwich, Yarmouth, Lowestoft, &c. On Christmas Day a special train will leave Liverpool-street at 9 a.m., for Ipswich, Norwich, Yarmouth, Lowestoft, &c.; and the 8.2 a.m. train from Liverpool-street will be extended to St. Ives, Peterborough, Lynn, Hunstanton, Dereham, Brandon, Norwich, &c. Special trains will be run for the conveyance of Christmas parcels. In order to secure expeditious transit, senders are desired by the Company to fasten the address to each package securely, and as an additional security against loss are recommended to put inside each package another address of the consignee.

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear Best quality only —EAST LONDON RUBBER Co., 8, Shoreditch, E.

SHORT WADING STOCKINGS.

WE last season introduced these short waders for use in shallow streams, round edges of lakes, &c., being perfectly waterproof light and compact. The extraordinary demand for them has justified our statements that they fulfil all the necessary requirements. Since first introduced we have improved the shape, and substituted a laced gusset in place of strap. When ordering, the measurements required are—girth round calf, and length of foot over ordinary woollen stocking or an outline drawing of foot on piece of paper.



Testimonials received from all parts of Ireland, England, Scotland; also America, France, Germany, and Norway

OUR NOTED "SEMPER FLEXILIS" BRAND.

Warranted waterproof, and to remain soft and pliable under all temperatures and climates. All genuine Goods bear our name and registered trade mark.

These Stockings wrap up in a parcel 8 in. x 5 in. x 1 in., so can be easily carried in the coat pocket.

Perfectly Waterproof, Light, and Compact.

All-Wool Cashmere, weight, 5 oz. each, 12s. 6d per pair.
Double Texture Sateen „ 7 „ „ 12s. 6d. per pair.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, DECEMBER 12, 1891.

NOTES FROM BIRMINGHAM AND DISTRICT.

A MEETING of the committee of the Birmingham and District Angling Association was held on Thursday evening, last week. An application was received from the Birmingham Piscatorial Society for permission to remove their club from the Bodega, Temple-street, to the Collonade, New-street, the reason given for the removal being that the accommodation at the Bodega was insufficient. No opposition was offered to the removal by any society in the district, so the application was granted. The Belmont asked permission to remain at the Brunswick Hotel, Lancaster-street, and make the hotel their place of meeting; this application was also granted. The Ashted Society, who hold their meetings at the Black Horse Inn, Coleshill-street, made an application to remove their club to the Whittington and Cat, Great Brook-street, but owing to no reason being assigned for the removal, and the clubs in the district not sending replies to the letters sent out by the secretary asking them if they had any objection or not to the removal, it was decided to allow the matter to stand over until the next meeting. Two new societies held in the neighbourhood of Sparkbrook asked for admission into the Birmingham and Provincial Association; the applications were opposed by representatives from the Leopold and Sparkbrook Clubs, who in making their objection pointed out that the clubs were within half a mile of the already established clubs, and that it would be injurious to them if the new societies were admitted. The committee took this into their consideration, together with Mr. Dance's by-law, which expires at the end of the present year, which was to the effect that no new clubs be admitted during the present year. The new clubs were acquainted with this by-law before making their application, but they wished to enter the association at the expiration of the by-law. The committee, after discussing the applications at some length, finally decided not to entertain them. Mr. Dance gave a notice of motion, which was seconded by Mr. Hughes: "That no society be admitted into the Birmingham and District Angling Association within a radius of three miles of Stephenson-place, and that all new societies pay an entrance fee of three guineas."

THE St. George's held their annual meeting at the Waggon and Horses Parade, on Monday evening last. The meeting was convened for the purpose of electing officers for the ensuing year, and to take the opinion of the general body of the members respecting the re-stocking of the club's waters, and other important matters. Mr. A. G. Hall was again elected without opposition to the office of president. Mr. C. White was elected vice-president; and Mr. T. Coles secretary. A committee of seven being required, eleven gentlemen were nominated, and upon the vote being taken, the following gentlemen were duly elected—namely, Messrs. Callaway, King, Beddel, Eccles, Bushell, T. Bayliss, S. Randford; Messrs. Callaway and Cottrell were elected auditors. The two gentlemen appointed as delegates to the Birmingham Association were Mr. T. Bayliss and Mr. J. Eccles. Mr. J. Moore, who was absent through illness, was again elected as treasurer. The question of re-stocking the river Auker was taken and approved of, Mr. Wainwright moving and Mr. G. King seconding the following resolution: "That the St. George's Society accept the offer of the Belmont Society, and buy the whole or portion of the fish offered to them, and that they be placed in the waters of the society, such parts of the water to be decided upon by the committee." A committee was also appointed to carry out the work.

I AM informed through Mr. Rowberry, the secretary of the Sparkbrook Angling Society which is held at the Rose Inn, Henley-street, that the worthy host of the club-house has made an offer to the club of £5 for the purpose of forming a fund for the purchasing of prizes, to be awarded to the members taking specimen fish. The club are to be congratulated upon having such a liberal host.

NOTES FROM LANCASHIRE.

"WAITING for the verdict" fully describes the position of things in Lancashire to-day (Tuesday). We have been doing our very best in respect to the great memorial to the railway companies, and doing it honestly, too. Many more signatures could have been obtained, but the promoters strictly objected to any but genuine anglers interested in the question appending their names. Some idea of the undertaking may be formed from the various towns and the signatures obtained in each: Accrington obtained 86; Ashton-under-Lyne, 51; Blackburn, 363; Bolton, 1,114; Bury, 69; Lancaster, 69; Liverpool, 12; Manchester, 1,218; Oldham, 51; Preston, 562; Rochdale, 20; St. Helens, 121; Staleybridge, 45; Warrington, 297; and Wigan, 326. In all there were 5,777, so that the County Palatine certainly has done its duty. Many sheets have since come to hand too late for inclusion in this statement. Should the concessions asked for be granted, a great boon will be conferred on all anglers, and the Northern Anglers' Association will have a great responsibility thrown upon them in seeing to the faithful observance of the conditions laid upon them by the various railway companies.

MANCHESTER is in a state approaching a crisis with regard to the question of withdrawing their delegates from the Amalgamated Anglers' Association. Every club is now discussing the momentous question in anticipation of the meeting to be held on the 17th, when a decision on the matter will be arrived at. From reports to hand there will be a large majority one way.

THE Openshaw Club have just appointed their new committee as follows: Messrs. H. Starkie, E. Tudor, J. Kay, S. Eynes and N. Bowden. Messrs. Starkie and Kay are the appointed delegates to the Manchester district.

THE reported pollution of the Dane around the Middlewich and Northwich district has caused a great amount of regret. The local fishermen claim to be able to trace the cause of the pollution, and it now remains to be seen if any pressure can be brought to bear in order to stop any further pollution. In the meantime the fish are found dead and dying in large quantities in the affected district.

THE New Islington Club is now re-constituted on a firmer basis than before. The future prospects of this club are much better than they have ever been. A really efficient executive is appointed, and new members are being freely enrolled,

A GREAT want is felt in Manchester in the absence of a central place of meeting, where all meetings, both large and small, could be held, and where a library formed of all kinds of literature relating to the sport may find a home easy of access to the great body of anglers residing in or near the city. Several prominent fishermen are giving this question their attention, but the development of the scheme is an item requiring careful consideration.

DURING the past week only a few rods are reported as turning out. Doubtless the unfavourable weather is accountable for this, but those who have braved the elements cannot be said to have had good sport, for the heaviest basket we have heard of is one of 7lb. Many are paying the penalty for their hardihood in severe colds contracted whilst fishing, and the roll of those on the sick list from various causes is extremely heavy.

A NEW movement promoted by a leading and noted local angler in Manchester will shortly be announced, for the benefit of all anglers in this district. In order that no clubs shall be overlooked, it will be advisable that all secretaries in the various Lancashire towns at once send in their names to Mr. Geo, S. Smeeth, 39, Hanging Ditch, Manchester.

NOTES FROM NORFOLK.

DURING the past week some good takes have been made on some of our famous broads. On Thursday week two gentlemen were fishing on one of these said broads, one with a spoon bait and the other dead bait, spinning—the first securing eight fish (largest, 8½lb.), the second six fish (largest, about 6lb.)

ON Friday, at Wroxham-on-the-Bure, a nice pike of 14½lb. was taken on live bait tackle; and two days later, at the same place, a similar fish, of 14lb., was secured in the same way.

ALL over the Bure and its tributaries sport has been obtained. Barton Broad and Heigham Sounds have both given up some good pike.

ALL the waters in this district are in splendid condition for spinning, and any angler who wishes for good sport can have it for the coming.

ON the Yare, little or no pike fishing has been done, but on the 6th inst., at Langley, one boat had twenty-five nice roach, and another boat at Rockland had thirty-five very good fish.

NOTES FROM NOTTINGHAM.

SPORT on the Trent has again been greatly interfered with by heavy rain. On Wednesday the river was much swollen, and until we experience a few severe frosts, both pike and chub anglers will be placed at a disadvantage as regards the enjoyment of sport. At this season of the year very little rain brings on a rise. The ground, generally, is thoroughly saturated, and the slightest flush in the tributaries stirs up the river anew and throws it out of condition for the followers of the two fish named. At the time of penning these Notes there was any amount of colour in the river, and very few places were fishable with any prospect of killing fish. In Clifton Grove, on the 4th, Mr. J. Boyd, of Nottingham, caught a surprisingly large number of big bream and roach, and on Tuesday the same angler again excelled amongst the same class of fish. Some of the bream weighed 4lb. a-piece.

AT Wilford, on Monday afternoon, Mr. J. Taylor, Nottingham, landed a decent quantity of chub and roach with the maggot; and above the New Trent Bridge, Mr. Geo. Hall bagged a dozen prime roach with bread paste. Better takes came from the lower reaches last Saturday, roach and bream predominating, and a few large roach came to hand from Shardlow, which of late has been much neglected. There has been no pike fishing, but in private waters in the Mansfield district, two members of the Nottingham Wellington Association have killed eleven handsome fish, weighing in the aggregate something like 70lb.

A FEW weeks ago, Mr. J. Theaker, fishing-tackle dealer, Canal-street, Nottingham, consigned to Mr. Warner, Welsh Harp, Hendon, something like eighty strong and healthy pike, which were turned into the extensive lake adjoining his famous hostelry. So pleased was Mr. Warner with the quality of the fish, that he requested Mr. Theaker to send him a further supply as soon as practicable. On Monday, Mr. Theaker despatched, not only sixty pike, but a large quantity of grand dace and roach. These arrived all safely, and the two consignments ought some day or other to afford sport to the numerous patrons of the Welsh Harp Fishery. I might add that several of the dace exceeded 8oz. each.

LAMPREY fishing on the Trent this season has varied considerably. At King's Mills, very few of the fish have been caught, but at the weir, at Colnick, numbers appear to have been taken. Most of the eels are got by the aid of wicker baskets, which are set at night. The fish are cut up and used as bait at sea. Anglers on the Thames use bits for barbelling; and I cannot see why barbel and chub on our own river should not be tempted by a dainty morsel.

IN conversation, the other day, with a gentleman connected with the Nottingham Shoulder of Mutton Angling Association, I ascertained that just lately the executive have admitted half a score new members, and that, in order to afford greater sport for the society, the committee are trying to secure a further piece of private water, which is known to contain plenty of pike. Several members have recently been trying their hands in the river for coarse fish, and as soon as the water fines down they hope to do something out of the common amongst chub.

NOTES FROM SHROPSHIRE.

THE streams are in splendid condition for pike fishing. There are an unusually large number of pike in the river in the locality of the town, and anglers will be well rewarded by a day's excursion. Perch and roach fishing is also good, but grayling, on the other hand, are very few and far between. Why this should be the case it is hard to say, for, to all appearance, the Severn in this locality is admirably adapted to their habits. A few fish may be found on some of the fords (notably the Silver Ford), but these are becoming fewer every year.

NOW that so many anglers and those interested in trout-culture are paying so much attention to the question of the migration of Loch Leven trout, it may not be out of place to note the experience of the Shrewsbury Severn Angling Society in this respect. For many years past this body has been endeavouring to re-stock the Severn with trout, and in their earlier attempts in this direction they turned a large number of yearling Loch Levens into the river in the neighbourhood of the town, many of these being generously given by local gentlemen, who were not slow to recognise the valuable work that the society was doing. A few years ago the society, in order to obtain further facilities for re-stocking, established a hatchery in the public grounds of the quarry. Their work here was even more successful than even the most sanguine had been led to expect, and ever since the establishment of this hatchery, the society has been able to turn into the river annually many thousands of fry. Many of these fish are annually captured, and during the last year or two, handsome trout of undoubted Loch Leven breed have been captured, many weighing between 4lb. and 5lb. each. Two taken last year by Mr. H. Brown and Mr. J. Williams (hon. sec. to the society) weighed nearly 6lb. each, and these beyond all doubt were the Loch Leven trout that had been turned in a few years before. But, while the fruits of the society's work were thus apparent, it has been found that the result by no means comes up to the general anticipation, and certain it is that perhaps the majority of the fish turned in either migrate to the other localities and swell the creels of other anglers, or are destroyed by river pollution or by the more rapacious of the fish. The experience of the Severn Angling Society seems to be that while some of the fish they turn in do stay in the locality, the majority are dissatisfied with their surroundings, and seek more favourable localities. It is to be hoped that the society will now turn its attention to grayling-culture, and that even a greater amount of success will attend its efforts in this respect.

NOTES FROM TYRONE.

THE rivers and streams are all two feet above the usual autumn level, from the heavy rains that fell in the latter end of last week and the earlier part of the present week. The floods have completely paralysed sport for the time being.

PERCH fishing on the Tyrone lakes would be very good were it not for the flooded state of the banks and meadows, which renders bank angling far from pleasant. Occasionally your correspondent takes a few brace from Stewartstown Pond, but bottom is rather plenty for brisk biting. On the other lakes—Roan, Carnteel, Farlough, Eskeragh, &c., not much has been done, owing to the floods.

A RATHER curious fishery case is reported from Co. Donegal. At the last Dunfanaghy Petty Sessions, before Colonel Bowlby, R.M., and Mr. Ramsey, J.P., the Earl of Leitrim prosecuted Mr. Charles F. Stewart, J.P., the owner of the Horn Head Fisheries, in that the defendant altered the position of a bag-net, which was prejudicial to complainant's fishery in Jackagh River, although the alleged alteration had been made seven years ago. The bench, after hearing the evidence, fined Mr. Stewart in £10, and with the additional penalty of £1 for thirty-seven days.

A LARGE HALIBUT.—EXCITING CAPTURE.—Alexander Ritchie, an old man belonging to Inverallochy, near Fraserburgh, Aberdeenshire, was last week fishing along with a boy in a small boat, in the Fraserburgh Bay, when he hooked a halibut of large dimensions. The old man and his companion had great difficulty in securing the fish, but after an exciting struggle they succeeded in killing it, and hauling it on board their frail craft. It measured 6ft. 11in. long, 3ft. broad, and weighed 1¾cwt. It was in splendid condition. Halibut is very seldom got in northern waters at this season, and the rare thing about it is that such a fish should have been got within a mile of the shore.

OTTER HUNTING EXTRAORDINARY.—The congregation of the parish church o' the "Muckle Toon o' the Langholm were thrown into an unusual state of excitement on Nov. 29, as they emerged from the portals of the sacred edifice, which is situated at the junction of the three rivers—Esk, Ewes, and Wanchope. To the astonishment of the dower, canny, honest, bodies, a shrill whistling noise came skimming up the bed of the Esk, which only could mean one thing, and that was there were otters abroad, not only that, but abroad in braid daylicht. Whew, here's a go! The impressive sermon all had patiently listened to was wiped out in a jiffy; and sportsmen of all denominations—nearly everybody is a sportsman in Langholm—hunters, anglers, cricketers, crack shots, footballers, bowlers, curlers, &c., crowded the banks both of Esk and Wanchope. There were no hounds at hand to follow the trail of the "varmint," indeed, as events proceeded, the hounds were not required, as a couple of otters were found sitting on the wooden cover of a drain at Wanchope Foot, quietly surveying the surrounding scenery, while a third otter was in the water. On the approach of the hunters the two dry-landers took the river and joined their companion. It was now a real bang-up otter hunt, with the exception of the pack and the huntsman's red coat and horn. Down the swift current went the animals, with the "field" in close proximity, while fresh batches of excited "muckle tooners" and "Mucklemholmers" joined eagerly in the chase, until at an opportune moment Mr. J. Ellis rushed in and "tailed" one of the otters. "Tailing" is a hazardous business with an old otter; but this happened to be a young one, and the smallest of the trio. Mr. Ellis is naturally proud of his capture, and purposes taming the animal.—G.

REPORTS FROM RIVERS, LOCHS, &c.

☞ *River Reporters who want forms and envelopes should send a post card to the Manager of the* FISHING GAZETTE, *St. Dunstan's House, Fetter-lane, London.*

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add 30 min. for Chelsea.
Add 40 ,, ,, Putney.
Add 45 ,, ,, Hammersmith.
Add 50 ,, ,, Barnes.
Add 55 min. for Kew.
Add 75 ,, ,, Richmond.
Add 80 ,, ,, Twickenham.
Add 85 ,, ,, Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

English and Welsh Reports.

Lower Thames.—GENERAL REMARKS.—If it were not for the reading of papers, and smoking concerts, the club-room of our Metropolitan anglers would be almost void of interest and attraction, except in those clubs where the members, as a rule, fish from the banks, and I never remember a season when so many large roach have been taken from the banks, and in numerous instances of fish up to 1½lb. each, and the capture of those of 1lb. each have been pretty general. I have been informed amongst this class of anglers some are now bringing their landing-nets with them to prevent the loss of any good specimens. Since my last report of results there has been some intervals of sport, but at the time I am writing the weather looks like a general upset again, and from Staines and other places I have not received any returns, owing to the total deficiency of sport, I never remember a season when more fine roach have been taken than in the present one, and I am glad of it, because those and the dace are fish most suited to the general body of anglers. There has been an idea suggested of exterminating the jack out of the Thames, and it reminds me of the expression of a similar opinion years ago in the columns of that time of *The Sporting Gazette*, which is now designated the *County Gentleman*: and it gave me considerable trouble, as it was stated on some definite authority; but such a movement was never even hinted at in the meetings of the committee, and I do not think it ever will, as the editor wisely adds: "And so say most of us." There are plenty of fish in the river for the anglers, after satisfying the desires of the hungry jack. Whilst on the subject of jack I would contradict the statement that the large jack recently caught at Hampton was taken out of the Thames, as I have ascertained since it was captured out of one of the reservoirs in that neighbourhood, where we have been refused permission to net. If we could only get that permission we should not lose the chance of increasing both jack and perch. where those fish abound to a great extent; and instead of depleting the rivers of both these fish, we should only be too glad to increase the number.—B.

RICHMOND.—During the week Job Brain, senr., has taken 35lb. weight of roach and dace; and Job Brain, junr., 4lb.; and H. Mansell, 7lb. Some of the roach in the latter take were of a large size, the best fish weighing 1lb. 1loz.

TWICKENHAM.—C. Brown, in one day, three dozen of fine roach and dace, and one bream; George Coxen, during the week, 59lb. of roach and dace, and four bream; John Coxen, in one day, five dozen of roach and dace, and a couple of bream; Richard Coxen, during the week, 52lb. of roach and dace; Pert Hammerton, in two days, 20lb. of roach and dace; Richard Moffatt, in two days, two dozen of roach and dace, and four bream; and John Spong, in four days, 45lb. of roach and dace, and seven bream.

TEDDINGTON.—Ben Stevens, in half-a-day, one barbel and one chub.

KINGSTON.—John Johnson, during the week, eleven bream, fourteen barbel, and two and a-half dozen of fine roach and dace, some of the roach weighing from 1lb. to 1½lb. each. John Wright, in one day, seven fine chub.

THAMES DITTON.—One of the bank anglers, in one day, three barbel; and another of this class got two and a-half dozen of fine roach up to 1½lb. each.

HAMPTON COURT.—James Hedger, in one day, three dozen of roach and dace.

SUNBURY.—One of the bank anglers in the day got four barbel.

Upper Thames.—The river during the past week has been quite out of angling trim, and will for days to come be in a worse condition in consequence of the deluge of last night and again (to-day) Thursday. The flood water is pouring over the low lying meadows and arable land, and the old birds of ill-omen at the river-side and in the village pubs, say that a big thing in water is in front of us, but I disregard their croaking, for if a frost supervenes, the "silver streak" will soon again be all there, and in rare winter cleansed-out condition. A few jack and some clinking roach were had early in the week, but since then my report will never become a matter of history.—MARLOW BUZZ.

Thames (Windsor).—Water here is in much the same condition as last week, and heavy rains having since fallen it cannot be in condition for jack or chub under ten days allowing we have no more rain. Worm fishing for barbel and roach will be productive of sport and many baskets of these fish have been had since my last. Mr. Carey, sen., of Windsor, has taken several daily; the best day's bag going 19lb., the largest 5lb. by Mr. Groves; Master Hornby, of Eton College, a young enthusiast, has also had five. Several small catches of roach have been made, and these fish are now in fine order. Worm has been the best bait and the small maiden lob the most attractive.—B. R. BAMBRIDGE.

Ancholme District.—The water courses are unusually full for the time of year which is very much in favour of the spawning season for trout. The native trout have hardly yet begun operations, but imported strains such as Loch Levens, &c., have well nigh done. Coarse fishing owing to clouded waters is at a low ebb.—THOMAS FORD.

Chichester Canal and Sussex Rivers.—Heavy gales, rain, and flood is the general record. On Dec. 6 a few anglers were out and from favoured spots on the Ouse a few roach were taken. The weather has not yet favoured pike or perch fishing, but I hear there are some good fish in the upper water. The Adur has not been much patronised, but on Tuesday Mr. Warren and friend landed some good roach, and among 4lb. of dace, one specimen weighed 12½oz. The Rother is high and clouded and the bankside deserted. Chichester Canal is in fair order, but with the exception of a few small bream, roach, and eels, the record of the week is a poor one. The weather remains unsettled; as I write (Thursday) it is blowing half a gale from the south-west with heavy rain showers.—GEORGE F. SALTER.

Douglas (Isle of Man).—Nothing to report except heavy floods and bad weather. There is not, nor has been any fishing worth mentioning during the past week. The annual dinner of the Isle of Man Angling Association was held on December 7, a report of which I will send later.—STORMY PETREL.

Fen Waters (South Lincolnshire). — There is not much to be said for angling in this district, the weather this week proving stormy and unsettled. This was more especially the case yesterday (Wednesday), when the wind was very high, and rain fell heavily. Probably the rivers may rise again as the result; otherwise the prospects are becoming better again. The open weather is very favourable for angling when other things allow of it, but the sport is more confined to only odd members of local clubs and not many of them. We are rapidly approaching the Christmas holidays, and the sparcity of visitors to even the favourite places shows it. Should the holidays remain open there will be plenty to take advantage of them; as for the angler some of the drains about this district afford the best of pike fishing. If live bait is about to be tried and that is much the best, anglers would do well to bring them as they are scarce.—LIMPET.

Idle (North Notts).—A good deal of rain has again fallen in North Notts, and there has been plenty of wind and storm, but it is scarcely likely that the river will be much affected. When the weather allows of it angling is now very good, and people scarcely need fear of getting something so long as they use well-scoured cockspur in the coloured water for bream, perch, grayling, &c.; and bread paste might be useful among roach. Visitors are very scarce, but local anglers in fair numbers were at Bollam and places in that direction. In the lower waters, last week, some are said to have done pretty well among the jack, some of the dykes or drains having a fair number in them, but they run rather small.—L.

Lea and Stort.—Angling has been quite out of the question this week, for no sooner has the river began to clear a little, than down has come another push of water discolouring the rivers, and therefore putting a stop to all chances of sport. I have met with a slight accident, which has prevented me getting about as usual this week, but I have heard sufficient to know that nothing has been done. I notice that the question of pollution by gas-lime is occupying some attention. I have written on this subject for years, and nobody knows much more about the damage done than I do. A correspondent to a contemporary writes about the quantities that are unloaded from barges and left lying on the banks, and that with the heavy rains, a lot of the filth is washed into the river. This is perfectly true, and it is a wonder how barges can be found to carry the filth, for it is well-known that none but nearly worn-out barges will carry it, they of course being so very rotten that a great quantity escapes during transit; until the powers that be absolutely prohibit the carriage of it by water, the dreadful nuisance and destruction of fish will continue. I again repeat, as I have done many times, that the protection of rivers from poaching and pollution is of far greater importance than the question of taking undersized fish, or the enforcing of the present close-times. On the 5th inst., an inaugural smoking concert was held at the Park Hotel, Tottenham, to celebrate the opening of the newly-formed Park Angling Society. With an efficient chairman, an energetic secretary, and an obliging host, the affair was a most decided success, and if only a tithe of those gentlemen present continue their support, there is a brilliant future before the club.—SPLICED JOINT.

Leicester.—Owing to the bad weather, very little in the way of sport with the rod and line has been obtainable lately. With provoking consistency rain has fallen daily, and for miles around Leicester the meadows are covered deeply with water. A few of the fraternity have been out Foxton way, and captured one or two small pike, but all other resorts in the district would appear to have been entirely deserted. Angling has been far from brisk at the waters adjoining Leicester, preserved by the local society, the doings consisting of small takes of roach, perch, and chub. Mr. W. Smith showed one specimen of the last mentioned, 2lb. 8oz.; Mr. Prime had a fair basket of roach and perch; and others who secured lots of roach were Messrs. J. Parsons, J. Hobbs, and W. Manship.

Loddon (Earley).—Just as the river gets in condition for angling down comes the rain and then floods; it will be another three or four days before it will settle down, and I hope then we shall have a good spell of dry weather.—J. R. GOULD.

Lugg and Arrow (Leominster).—No angling has been done this week. Sport will be had with the Grasshopper when the water clears. The Pinsley is coloured.—GWYNNE.

Lugg, Arrow, and Pinsley (Kingsland).—Gales of wind, with deluging storms of rain (at intervals) have prevailed in this district since Sunday night, swelling the rivers bank high of muddy water. They are still rising this (Thursday) evening, and the outlook is as bad as ever. No fishing for at least a week hence.—R. T. WILLIAMS.

Medway (Maidstone).—The water of the Medway is again running very thick, too thick to gratify the angler's wish for sport. It really seems we are not to have any settled weather; just when the water is getting in good trim, we get heavy rains. The water comes down more like mud than the river we are used to when it is favourable for the anglers. Some few good roach have been taken with the worm for bait.—W. SHRUBSOLE.

Nene (Northamptonshire).—Last week the floods had so far subsided as to admit of the dredger being at work at the New Cut, but the rains since have caused this to be abandoned, and the floods have considerably increased. Angling proper is, therefore, impracticable, and only eels have been tried for at Peterborough. Some roach averaging 10oz. have been obtained at Castor, a few perch at Peakirk, and a pike or two of 7lb. at Oundle, the latter by Mr. Smith. I hope for the sake of local anglers that this continual wet weather will dry up, and that we shall have more favourable weather, as a few sharp frosts always tickle the appetites of the pike.—NENEBANK.

Norfolk, Suffolk, and Cambridgeshire Waters.—We are all in a state of flood, and water very thick. No use thinking of fishing for a few days. The Ouse, Yare, Lark, Cam, Wissey, all in same state. Raining fast here now, and looks like keeping on.—WILLIAM HOWLETT.

Plymouth.—SEA FISHING.—Alternate days of fine weather have given us chances of fishing, and the opportunities thus afforded have been made use of by amateurs and professionals alike. Some friends of mine have had some very good sport with mullet and bass, the former averaging about 2lb. each. These are caught from the Turnchapel Jetty, at about two hours after the young flood. They are caught with a paternoster and rod and line. During this month mackerel very often make their appearance in shoals, being the earliest commencement of the general fishery. Hakes are generally now in great abundance, prior to retiring to deep water to spawn, and they are usually now heavy with roe. The list of fish in season for the month of December are—coal-fish, hake, ling, cod, haddock, pouting, whiting, tub, piper, red gurnard, eel, sprat, pilchard, anchovy, dory, mackerel, smelt, skate, homelyn, ray, sharp-nosed ray, oysters, crabs, lobsters, and shell-fish in general.—WILLIAM HEARDER.

Severn (Shrewsbury).—Anglers have had, perforce, to remain idle during the week, heavy storms of rain and keen and boisterous winds having rendered angling an impossibility. The river has become swollen and discoloured, but when it resumes its normal level pike fishing should be good.—PISCATOR.

Teme (Ludlow).—The Teme in this part is now running high and muddy, owing to the heavy falls of rain which have passed over this district. Angling is now stopped, and will be until the water clears again.—S. LUDLOW.

Teme (Tenbury).—In this district the water has risen again, and is now muddy and out of fishing order.—WORCESTER.

Trent (Newark).—Wretched angling weather, and with the Trent in one continuous state of fluctuation, its banks are almost deserted. Monday gave promise of sport with the water gradually fining down, but to-day (Thursday) it is again bank full, and boisterous heavy storms leave but scant hopes of success for some days.—TRENTSIDER.

Wimbledon Park Fishery—There were only two jack anglers down on Saturday, Dec. 5, Mr. Woods and Mr. Attwood. The former had a fine jack, weighing about 9lb. It was a handsome, well-fed, female fish, in the pink of condition. The latter gentleman had three nice jack, all taken legering. The wind was very boisterous, and dashed the water some distance on the path way near the cottage. The 6th was a marvellous day, thrushes, starlings, and even blackbirds singing and chattering most sweetly. I have not seen a more splendid sunset this year, and we may not have such another day this winter. The reflection of such a mass of crimson damask, light salmon colour, and gold on the lake, intensified by the undulating water, was simply magnificent, whilst paler clouds and a serener sky to the left, intermixed patches of ethereal green, and grey clouds to the right formed a most charming contrast. A short time back an angler fishing with gentles on one of the stages on the opposite side to the college, was fortunate enough to take a jack 4½lb. with gentles. A capture to be proud of. A large number of jack have been taken this season. All jack under 21in. must be returned, and as no gorge tackle is allowed to be used, there is every chance for this fish to increase and multiply. Over three thousand roach, many pound and half-pounders have been turned in this season. Live-bait can always be obtained, and rods and tackle left at the cottage, and as there is a station within four minutes' walk of the fishery, which is only a few minutes run to Wimbledon Station, this water is very convenient for London and suburban anglers.—VISITOR.

Witham, &c. (Mid-Lincoln).—Angling gossip from the Witham district is very scarce. The work is pretty well left to the home-birds, and will be so, no doubt, up to Christmas. There is a report that the Fossdyke is well worth visiting, as it is not affected by the rains like the river, and now the fish have been left to themselves pretty much of late, they are not too proud to take a well-hung bait, as is sometimes the case. Roach and bream are the chief fish, though perch and a few jack may be landed. Speaking of pike, it may be well to remind those who have friends watching their interests, that this is just the time when the waters are netted by poachers and others. There is growing a good demand for coarse fish for stocking purposes, and as these are supplied by dealers at a distance, it is suspected they are not over scrupulous as to where they come from. It is known that many go from Lincolnshire, and watchers will do well to keep an eye on their fish.—LUCI.

Yare (Norwich).—Very little pike fishing has been attempted since my last report, and with only one or two exceptions have anything been done worth recording; of course pike continue well on feed, and I've heard of one catch of nineteen, amongst which were some good fish, and another catch of nine fish on the Bure, none of which were very large, whilst at the other end of the lock, two rods, in water connected with the Ant, only had one jack of about 8lb. From now till the Christmas holidays it is likely to be slow, but there is usually a good number of anglers out on Boxing-day, and if favourrble weather prevails, we may look for some good fish being taken. Alternate storms of wind and rain have marked the past few days, and at present there is no prospect of improvement.—ROBERT MOLL.

Scotch Reports.

Dee, Don, &c.—The rivers have been in flood during the past week, and spawning on the mid reaches somewhat interrupted. Although verging on freezing point, and sometimes below it, still the weather is wonderfully mild for the time of the year. Diseased fish, both in a dead and dying state, are more numerous this year than has been the case for a number of seasons back. Not only are spent fish being picked out in large numbers, but a good few unspent fresh fish are among them. The spawning season is now drawing to a close, and a more successful one all over has not been experienced within the memory of the oldest angler. This was to be expected from the early volume of water, which permitted fish to ascend to feeders where salmon have not been known to get to for the past twenty years. So much for the future.—DON.

South of Scotland.—The spawning season has been much interrupted during the past fortnight with the heavy floods that have prevailed in the district rivers. This week the floods have overflowed their banks, and a good deal of damage must have been done to the spawning beds. It will be some time before the waters settle down to their normal level, as the barometer is still falling and the rain has not ceased. From every river the reports of the progress of the breeding fish, inform me that the redds were fully occupied a fortnight ago, and the keepers and others write me that they never saw so many fish in the beds in any previous year. Disease has not been very prevalent in the South of Scotland rivers so far; I hear of a few odd fish being marked with the disease.—Heatherbell.

Thurso (Halkirk).—Owing to the fine weather and pretty hard frost at night the river has fallen to a low level, and no fish can leave the sea for the present. The kelts in the river are betaking them to the deepest pools. A large male kelt was found dead in the river the other day, although in low condition he weighed 38lb. What would he have weighed when he left the sea? I believe this is the largest fish ever seen in this river, he was 48in. in length, and except for a curious formation of that part between the ventral fin and the tail he would have measured more. He must have died from exhaustion after his spawning operations. A good many male fish die every year shortly after spawning. I trapped a splendid male otter on the 4th inst., near Brawl Castle, he measured 3ft. 10in. from tip to tip, and weighed 24lb. He had killed a salmon in Halkirk Burn, and eat part of it. I used the remainder as a bait to the trap, and this accomplished Mr. Otter's destruction. The curious part of it is, that when I was giving him the *coup-de-grace*, another otter, probably his mate, came to the surface of the water within ten yards of where I was, but disappeared as soon as he made me out. I expect to get it trapped within the next few days. Mr. Lewis Dunbar, Thurso, is preserving the otter. —Archibald Harper.

Tweed.—Salmon angling on this river, and also on the Teviot, came to a close on Monday week, and the devotees of the gentle art are to be congratulated on all hands on the season that has just terminated, seeing that it has been the best experienced on the Tweed for a good many years back, so far as regards the number of fish killed, as well as the general average weight of the salmon and grilse captured. It is as yet much too early to give full details of the fishing on all the waters, which we hope to do in a future article; but when we state that in all the salmon angling waters of the river, the reports are of the most satisfactory nature, we will have said enough on that score in the meantime. The closing week, which was a good one, was fully in accordance with the excellent fishing obtained during the entire back-end season, and anglers had no cause to grumble, either about the condition of the water or the elements above. The weather during the week was nearly all that could be desired, and not a day's fishing was lost, and the takes got since last report were fully up to the average, while on some waters they were over it. On the Bigham Water, Lord Home and his friends killed close on half a hundred fish from November 23 to the closing day, and one of the fish weighed 39½lb., caught on Saturday by Lieut.-Colonel H. Clinton. Carham Water has a record of over a score since Tuesday of that week. On the Lees Water, Colonel Beven had seventy-four salmon and fifty-seven grilse to his own rod for the back-end season. About a score of salmon and grilse were hooked on the Hendersyde Water; while on those splendid casts on the Lower Floors Castle Waters, Mr. H. Hadden and Lieut.-General A. C. Cook had nearly forty fish from Nov. 25 up to closing day. Eighteen were killed on the Makerstoun Water during the same period, with the exception of Monday, when the take was not recorded. On the Floors Castle Upper Water, about a dozen were got, this water not fishing so well as during some previous weeks. On the Upper Water, the reports to hand show that the sport obtained was all that was expected; while of the other waters in the Coldstream district, not otherwise mentioned, the takes were in good proportion to those got previously. Just as the angling season went out we had a lot of rain, and the Tweed and Teviot, in consequence, were in flood on Tuesday and Wednesday, the gauge at Kelso Bridge reporting a flood of nearly four feet. I am sorry to say that the fungoid disease has already made its appearance in the river, and several fish were observed in the Tweed on Monday and Tuesday, affected with this loathsome pestilence, some with only a spot on them the size of a shilling piece, while others were well covered with the *Saprolegnia ferax*. It is to be hoped, however, that this opportune flood will have had the effect of taking down to the sea all the weakly and diseased fish, and thus prevent the spreading to some degree of this scourge amongst the "silvery kings" of the river Tweed. Since the closing of the fishing season, at end of last month, the river has been more or less flooded, thus giving additional facilities for fish to ascend to the upper spawning grounds. Since the advent of December the weather has been much broken, and it was indeed a lucky circumstance for the Waltonian that the elements remained good till the end of November, thus enabling them to finish the angling season so satisfactorily. Yesterday the river was in flood to the height of five feet; while since the 2nd inst., it has scarcely been much under two and a-half feet above its normal size. I am sorry to have to report that the fungoid disease has again appeared in the river thus early; in fact, during the last week of November a goodly number of fish of all sizes were observed in various stages of the disease. Some had only just begun to show the loathsome white spot; while in other cases the fish were entirely enveloped in the *saprolegnia ferax*, and were throwing themselves about in many of the pools. It is hoped, however, that the floods which have occurred will, to a certain degree, have cleared away the affected salmon and grilse, by rushing them off to the sea, thereby allowing them to again recuperate, and ascend to the spawning beds. The condition of the bed of the river for breeding purposes is this year all that could be desired, the numerous freshets that occurred lately having thoroughly cleared away all refuse and other deleterious matters that may have congregated and lodged in the stream; while all the season through the bottom of the river has been well bedded with nice clean gravel; so that a most satisfactory spawning time is anticipated. Scarcely a trout-angler is seen out on the river-banks now, and this is in great measure due to the action taken by the fishmongers here, who have, since the notice of the close time for trout (amongst the members of the Kelso Angling Association) was published—declined to buy such fish. This is a step in the right direction, and is sure to bear fruit, both as regards quantity and quality of the common trout during the spring months. The following is a return of the fishing got on the Rutherford Water during the last week of November, the list not being to hand in time for last report: Nov. 24, Miss Vickers, one salmon of 28lb.; 25th, Dr. Gibson Dyson, three salmon; and Miss Vickers, two, 16lb. and 15lb., the others being 16lb., 17lb., and 18lb.; Mr. George Forrest, Kelso, on the 26th, one of 16lb.; Dr. Dyson, two, 20lb. and 24lb.; 27th, Dr. Dyson, a 6lb. grilse; 28th, Dr. Dyson, besides being broken by two good fish, killed nine salmon, 12lb., 17lb., 18lb., 19lb., 20lb., 23lb., 24lb., 25lb., and 32lb.; on the 30th, Miss Vickers had one 8lb. grilse; and Dr. Dyson, a salmon of 11lb.—Maxwheel.

Irish Reports.

Ballinderry (East Tyrone).—The river is high in flood and and muddy. Lake trout have been observed crossing the carries. The runs of salmon from Lough Neagh have stopped, and only few fish have come up this week as far as Coagh. Small trout have spawned; but the heavier fish are not yet on the redds, nor will not till about Christmas. In the small burns and races, the numbers of spawning trout are unprecedented. Yesterday evening, in the Coagh Mill-race, I saw one trout, which must have been close on 10lb. in weight. On the upper spawning grounds the recent floods are said to have done damage in covering the beds with mud, and sweeping away half-spent trout. —J. A. B.

Waterville (County Kerry).—Good accounts continue to be received from the spawning grounds in this district. All the rivers are flooded, but there has been no violent floods that would do harm on the spawning beds. Sea angling, which was so good recently, has been abruptly brought to a standstill by adverse weather, and may now be considered to be practically over for the year.—T. J. Dennehy.

Westmeath Lakes (Mullingar). — The tributary streams of the Westmeath Lakes, owing to the late incessant rains, have swollen to such an extent that the spawning fish are able to ascend to the higher reaches, where suitable gravel is to be found in which to deposit the ova. At the present time there is a heavy run of trout, many of them being of large size. Immense numbers of salmon have also appeared in the upper portions of the rivers Inny and Brosna and their more important tributaries. The Westmeath Lakes and Rivers Fish Preservation Society are actively engaged in taking every precaution for the due protection of the salmon and trout during the close season in their portion of the Limerick district. A very competent and intelligent staff of water-bailiffs have been organised and appointed, and are ably assisted by the R. I. Constabulary. Poachers are very quiet, the late prosecutions by the assistant secretary having had apparently a very salutary effect; one poacher undergoing at present a term of two months' imprisonment in Tullamore Gaol; another having paid a heavy fine, goes to show that the fish are being well taken care of.—T. J. W.

RICHMOND PISCATORIAL SOCIETY.

Complimentary Supper to the Chairman.

The members of the Richmond Piscatorial Society assembled in good numbers at the Greyhound Hotel, Richmond, on Friday night. For a long time Mr. Davenport had been absent from the meetings of the society and from his other public duties as a member of the Middlesex County Council and the Twickenham Local Board, owing to a severe illness. Happily he had now recovered, and the members decided to give him a cordial welcome upon his return amongst them by arranging a complimentary supper. Mr. Philip Geen was in the chair, having the guest of the evening on his right.

The supper was admirably served, and the proceedings which followed were full of that enjoyment which usually prevails at the meetings of this society. The speeches were short and pointed; and the musical part of the programme, arranged by Mr. Perkins, fully maintained the high reputation of the society in matters of this kind.

The speeches were commenced, as usual, with a toast in honour of "The Queen and Royal Family," and after the expressions of loyalty this permitted had been heartily given, the Chairman proposed the toast of the evening. He said he could not refrain from alluding to the absence of their friend, Mr. R. B. Marston, the talented Editor of the *Fishing Gazette*, who was to have presided that evening, but was unable to be present owing to the serious illness of a child. He was confident that Mr. Marston had the sincere sympathy of every one of them. (Hear, hear.) With regard to the toast he had to propose, he thought the Richmond Piscatorial Society had been extremely fortunate in its selection of chairmen from the very foundation. They had had a series of able and excellent chairmen. He was not going to compare Mr. Davenport with the others, but generally they had been fortunate, and in Mr. Davenport they were most fortunate. (Hear, hear.) For many years he had been a member of the Twickenham Local Board, and a more respected member could not possibly exist. He (the chairman) took great interest in the first election of County Councillors, and he thought it was generally agreed that they now had, throughout the country, such a good average of men filling that position that there was room to fear that they would not again do as well. The very flower of our ablest and most practical men seemed to be members of County Councils at the present time. It said much that one of the men chosen in the important county of Middlesex was their chairman, Mr. Davenport. (Applause.) He was an excellent angler, as his father and his grandfather were before him. He was not surprised at that, for so much excellence could scarcely be developed in one generation. He had much pleasure in proposing the health of the chairman of the society, Mr. Montague Davenport. (Cheers.)

The toast was honoured with the utmost enthusiasm.

Mr. Davenport, who was cordially received, said the magnificent reception they had given him almost took his breath away. He did really appreciate from his heart all their kindness towards him. He certainly had regretted his enforced withdrawal from the society. At one time he almost gave up the hope of seeing them again, but as in angling they sometimes saw the clouds passing by and the sunshine coming again, so the sunshine had come once more to him, and he was able to greet them again. (Applause.) He felt flattered that night because he saw around him not only the members of that society, with Mr. Geen at their head, but his colleague at the Middlesex County Council was present, the Richmond Corporation was represented, and several members of the Twickenham Local Board were also present. They were paying him a compliment which he would never forget. It gave him the greatest pleasure to see them around that table. Many of them were not only comrades in the piscatorial world, but personal friends. Again he thanked them most cordially, and he hoped to deserve their good wishes. (Cheers.)

Mr. Davenport afterwards proposed "The Richmond Piscatorial Society." He was pleased to know that the society was prospering. They were having an influx of new members, and that was always a good sign. They had applied to his Highness the Duke of Teck, as president of the society, to see if he could asssist them to have some restriction placed on Penn Ponds, as to the size of fish taken out. He was glad to say that they had had a reply, in which his Highness said that he would do what he could in that matter, and also to assist them in all their angling pursuits. (Applause.) Mr. Marston had promised to present them with some very fine black bass, the finest sporting fish of America, and if they got the regulations they wanted, so that the fish might be protected, they intended to make Penn Ponds the home of the black bass. (Applause.) It was certainly a very suitable place for them. He thought that was a proof that the society desired to be practical. The black bass was a very fine fish, and would open up a new school of angling. In that society they were proud of being sportsmen of the first degree, and set their faces against anything in the way of a butchery of the fish. To crowd a basket with small fish, to be weighed in just as if they were weighing coals, was to their minds utterly unsportsmanlike. (Applause.) They wanted to get rid of trailling, and he hoped something might be done to induce the Thames Conservators to consider the angling interests of the river, as well as the navigation. When they got the Thames Conservancy represented, and the riparian County Councils represented upon it, they might have some men who were interested in angling as members of the board. He congratulated the committee on the manner in which they carried out the work of the society, and he thought he ought also to mention Mr. Perkins and others, to whom they were indebted for many successful entertainments during the winter months. (Applause.)

Mr. Wright responded, stating that the society was now in a more flourishing condition than it had ever been before. He hoped they would continue to attract new members.

Mr. Davis, whose name also was coupled with the toast, said it had been a pleasure to him to do what he could for the club during the last ten years. It had been whispered about that it was gradually becoming extinct, but he thought a glance into that room would at once dispel the illusion. (Applause.)

Mr. Potter proposed "The Health of the Chairman," complimenting him upon his ability as a speaker, and the toast was duly honoured and acknowledged.

Mr. E. V. Powell proposed "The Visitors," expressing his pleasure at the presence of so many members of the Twickenham Local Board, who had jurisdiction over a large part of the banks of the river in that neighbourhood. It was a part that was frequented by anglers, perhaps, more than any other part of the Thames, and there was certainly more fish taken there than in any other part of England. He calculated that in three months the anglers took 100,000 fish, weighing seven and a-half tons from that part of the river which flowed past the parish of Twickenham. Why did the fish come there in such numbers? He supposed it was on account of the extraordinary purity of the effluent the Twickenham Local Board poured into the Thames from the drainage works. (Laughter.) The society thanked the Board for the care they exercised over the river as far as their powers extended. In conjunction with Richmond, they had fought a good fight for the lock and weir, but their duty did not end there. He hoped they would guard the river as far as they had power, and look upon the anglers as their constituents. (Applause.)

Mr. G. J. Duncan, whose name was coupled with the toast, responded.

The other toasts included "The Press," proposed by Mr. Davis, and coupled with the name of Mr. Dimbleby; "The Vice-chairman," proposed by the Chairman, and responded to by Mr. Perkins.

NEW PATENTS.

The following is a list of Piscatorial Patents, which is supplied to us by Messrs. Hughes, Eli, and Hughes, Registered Patent Agents and Attorneys for Colonial and Foreign Patents, Designs, and Trade Marks, 76, Chancery-lane, Holborn, W.C., All inquiries answered by them free of charge to our readers:—

20,443.—J. Lander, of London, for "Improvements in and relating to fishing floats."

20,681.—P. D. Malloch, of Glasgow, for "An appliance for drying fishing lines."

The Migration of Loch Levens.—Some years ago, Sir William C. Brooks, Bart., M.P., Glentana, erected a hatchery near his mansion in the glen, and in addition to hatching out salmon ova, had altogether some twenty-five thousand eggs of Loch Levens. These were to stock the Tana, and were in successive years augmented by one-year-olds and two-year-olds. The hatchery is over three miles from the main stream, and last year and the year before distinctly marked Loch Levens were got near the Bridge of Potarch of about a pound in weight. There was no mistake about their being Loch Levens, as Mr. Davidson, Charlestown, Fife, who had several near there, knows Loch Levens well. Potarch is, roughly speaking, twelve miles from the mouth of the Tana, taking into account the windings of the river.

TADDY'S MYRTLE GROVE CIGARETTES

ALL NERVOUS, RHEUMATIC, AND ORGANIC DISORDERS,

Including Rheumatism, Gout, Sciatica, Lumbago, Nervous Exhaustion, Impaired Vitality, Brain Fag, Sleeplessness, Ladies' Ailments, Hysteria, Indigestion, Constipation, Loss of Appetite, Kidney Troubles, &c., yield like magic to the marvellous healing Properties of

HARNESS'
ELECTROPATIC
BELT

HARNESS' ELECTROPATHIC BELT

GALVANIC & FARADIC.

(By Royal Letters Patent.)

This genuine Appliance is light and comfortable in wear, and may be relied upon to speedily and permanently invigorate the debilitated constitution, assist digestion and assimilation, give strength to every nerve and muscle of the body, and effectually prevent chills and rheumatic pains. It seems, and is, a simple, remedy; but it is, nevertheless, a most reliable one; and the number of unsolicited convincing testimonials we have received from all classes of society amply prove that we do not exaggerate when we say that HARNESS' ELECTROPATHIC BELTS have completely cured thousands of men and women in all parts of the world, most of whom have obtained no relief from medicine, and, in fact, had been given up by the physicians as "hopeless."

THOUSANDS OF TESTIMONIALS

may be inspected at the Electropathic and Zander Institute, or copie may be had post free on application.

DEBILITY.

J. G WILLIAMSON, Esq., Aldenham New Lodge, Medburn, Elstree, Herts, writes, April 25, 1891: "I am truly thankful I bought one of your Electropathic Belts. I purchased it at the end of January, and have worn it ever since, and I assure you I would not be without it for anything. Before I had it the pain in my back was most cruel, my life being a misery. At times I could neither walk, sit, nor sleep with any pleasure; now I can walk miles, and not feel a bit the worst for it. My sleep is good, and I feel refreshed by it in the morning, but before I used to get up feeling more tired than when I went to bed. I can truly say the Belt has done me more good in three months than four doctors did me in seven years. I wish I had had it years ago, as it would have saved many an hour's pain and misery."

RHEUMATISM.

Miss A. M' GOWAR, 2, Keyford Terrace, Frome, writes, March 14, 1891: "You will remember that on August 2, 1889, I came to you as a great sufferer from Rheumatism (for over twelve years) and you recommended an Electropathic Belt, which I purchased and wore for nearly a year with wonderful results, I was then again troubled with bad attacks when I wrote to you in July, 1890, and asked if you would recommend a stronger Belt, which you did, and I purchased a No. 4, which I have worn daily up to six weeks ago with the greatest possible benefit, having had no bad attack throughout the time, even though the winter was most severe. I am so well that people think I am a 'perfect wonder'!"

MR. C. B. HARNESS, and the other Officers of the Company, may be consulted, Free of Charge, either personally or by letter on all matters relating to Health and the Application of Curative Electricity. Call or write to the

Advertisements must not be received later than 9 a.m. on Fridays.

N.B.—These Advertisements must be prepaid, or they will not be inserted.

AMATEUR, Fly Dressing Materials; Hackles, all colours; Wings, various assortment; Furs, Silks, &c.; Salmon hackles.—Address, J. PICKERSGILL, 12, Bingley Street, Leeds. (3)

GREAT BARGAINS.—Large quantity of ANGLER'S HOOK BOOKS, (shop-soiled) for Sale, at 2s. and 2s. 6d. each.—Send P.O. at once to A. PAGE WOOD, Huntingdon. (2)

GOOD JACK FISHING in the Ouse. Boats; comfortable lodgings; private home. — W. DUCKER, Great Paxton, St. Neot's, Hunts.

WANTED.—Nos. of *Fishing Gazette* for December 22nd, 1883. 6d. each will be paid for them by the Manager, *The Fishing Gazette*, St. Dunstan's House, Fetter Lane, London.

OYSTERS! OYSTERS!

Norton's Oyster Rooms,
ALBION STREET, LEEDS.
ESTABLISHED 1826.

For Royal Whitstable and other native oysters this establishment stands unrivalled in the North of England,

Fresh supplies *daily* throughout the entire season. Oysters sent to all parts of the United Kingdom and the Continent, packed in barrels of the requisite size. Quality—unequalled. Despatch—immediate.

ONE TRIAL WILL CONVINCE.

JAMES WRIGHT,
SPROUSTON, KELSO.

Highest Awards of all for Salmon Flies at the Great International Fisheries Exhibition. Salmon Flies for all parts of the world. Sets of dozen or half-doz. of the best pattern and sizes for any river. Special or local patterns copied.

Awarded Special Prize,
London International Fisheries Exhibition, 1883.

TROUT EGGS, 7s. per 1,000

SEND FOR PRICE LIST TO
FISH CULTURE ESTABLISHMENT,
Seewiese, near Gemunden, Bavaria,
GERMANY.

ROYAL LETTERS PATENT, No. 10424.

Important to all Anglers!

WALKER'S

PATENT IMPROVED DISGORGER.

No Angler should be without it; most useful and necessary. Will go into ticket pocket. Very ingenious and effectual. Protection to dressing of artificial flies. **POST FREE, 7d.**
JOSEPH WALKER, 37, Otley Road
HEADINGLEY, Yorks.

THE
HALF-YEARLY VOLUMES
OF
"THE FISHING GAZETTE,"

Bound in cloth, may be obtained from the Publishers, price 6s. 6d. each; post free, 7s. 3d.

ESTABLISHED 1837.

New Books, Old Books, Rare Books, also out of print publications, Back Numbers of Magazines, &c. Every number of "THE PUBLISHERS' CIRCULAR AND BOOKSELLERS' RECORD" (published every Friday, price 1½d.) contains advertisements respecting "Books Wanted," and announcements of new works. A prospectus, giving particulars of special features, can be had by sending a post-card request for it, to the Proprietors of the *Publisher Circular* St. Dunstan's House, Fetter Lane, London.

Cloth Binding Cases
FOR THE
FISHING GAZETTE
CAN BE HAD AT
Dorset Works, Salisbury Sq., London,
Price 2/6; post-free 2/9

CUMMINS'

High-Class Grayling Flies

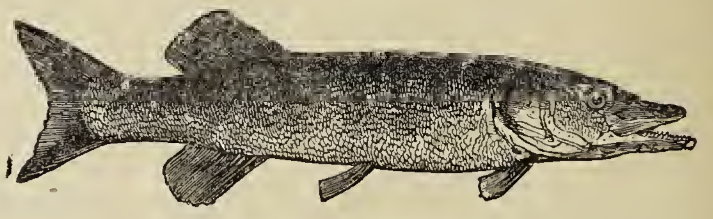
INCLUDING THE FOLLOWING PATTERNS—

Red Tag, Grayling Autumn Dun, Furnace, Silver Twist, Spanish Needle, Smock, Hare's Ear Dun, Peacock, Little Chap, Ash Coloured Dun, Dotterel. Yellow Legs, Grey Palmer, Bumbles, &c.

PRICE 2s. per doz. ON SELECTED GUT, 11-in. long,

Grayling Fly Casts, fitted with Three Flies, 1/- and 1/4 each.

ILLUSTRATED CATALOGUES, post free 3 stamps, giving full PARTICULARS of all kinds of ARTIFICIAL BAITS, SPINNERS, SPOONS, TACKLES, SNAPS, &c., for PIKE FISHING.



LARGE ASSORTMENT of Pike Rods in Greenheart, Cane, &c., Nottingham Wood and Ebonite Reels, Plaited Silk Pike Lines, Gimp and Gut Traces, &c., &c.

W. J. CUMMINS,
FISHING ROD AND TACKLE MANUFACTURER.

IN DAYS BYGONE.

By Mac.

Size for size, the fish of every species of the *Salmonidæ* differ greatly in their fighting and staying powers. Some display wonderful pluck and endurance; some get turned up very speedily. The gamest fish, however, need it be said, are those that the angler derives most satisfaction in getting hold of, and eventually bringing to the bank. Such fish make him "feel the wild pulsation," not *before*, but during and after the strife! They are worth fishing for and catching. Scarcely so to my mind are pithless, sluggish fish. Of both kinds I have had a good deal of experience "in days bygone." The gamest, most sporting fish for its size that I ever hooked was a 2½lb. sea trout, and the least troublesome one for its size (and to be fresh-run), was a 10lb. salmon. The former took me with a 12ft. rod and the best of tackle twenty minutes to kill; the latter I banked in under a minute's time. Both were killed by me during summer on the Aberdeenshire Dee—in wide streamy catches. I hooked the sea trout one evening about sundown, and the whole of the time I had him on he ran with a will, leaping repeatedly out of the water, and making the line whiz every time he headed up the strong water. Like Sir Galahad "his strength was as the strength of ten." Such endurance and such sustained activity displayed by such a small fish seemed a marvel to me. I am not one that temporises, handles fish gingerly so to speak, yet all my manœuvres and all the strain I could put on, failed to bring this wonderfully strong and active sea trout to my hand one single minute under the time I have stated. With the 10lb. salmon it was a case of no play at all. I hooked him within a couple of yards of the bank. He rose with a boil, and turning, went out, straight across stream for the matter of fifteen yards at a fair pace. But feeling, as he went on his way, that he was not on for an opening burst, I applied strain, whereupon he came to the surface, when lolloping and rolling he was drawn by me on to the shingle and tailed but a yard or two down from the place where I hooked him. In both cases, which are the extremes—the one of grand and the other of poor—play afforded in my experience by the migratory *Salmonidæ*, the fish were quite fresh-run and hooked inside the mouth.

It is early in spring and late in autumn that the salmon, when new-up and quite bright in appearance, affords as a rule the poorest sport. But no matter what the season, hooked in the gloaming—between half-light and darkness—he generally plays more fiercely than during the day. Many a very sharp and resolute battle have I had with fish which were got "on" just on the eve of the departure of daylight.

In catches at the top of long sweeps of rocky runs and rapids—a fish is often got hold of that gives but little play. This, however, is not difficult of explanation. Exhaustion is brought about by contending with the water. In such catches I have hooked more poor playing, rather I should say short-winded fish, than in the whole combination of all the other kinds of catches I have fished during my many years of angling. I have frequently seen fish come "over," through thin water, into "rock" or "rapid" head catches; and from two to five minutes later I have had hold of them—to find there was scarcely any strength for play left in them. And yet though thus very much exhausted they often take freely when quite fresh-run from the sea.

I have many a time had on fish that ran themselves aground—most frequently on the far side of the stream, and usually upon sand or shingle about level with the water. In this line my most remarkable experience was with a grilse, which I hooked on a small river in the Northern Highlands. Immediately the hook was into him this fish rushed right to the opposite side, and making a first gallant leap landed on the grassy bank quite two feet above the water. But his stay there was short; and back into the water he slid, without damage to my tackle. A wild fish he proved, making several very high leaps when that nasty tail lash to slap the line was performed, but despite this, and the fact that the place was unchancy from stones above water being everywhere tumbled about, I secured him after a most ticklish and exciting run *of short duration*.

When they are right on the take sea trout are remarkably keen and bold risers, but unquestionably they are much more particular in the matter of their food than common trout. The latter, especially when in poor condition, are far from being discriminating feeders. Nor is it little that "sairs" them. Indeed the voracity that some of them show is astonishing. Scarcely anything, possessing motion, that they are fit to gobble up will they allow to escape. I have caught them with almost all the sorts of small fish in them common to Scotch rivers, the eel included. Once I captured one which contained a young bird, and once I got one with a full-grown water shrew (*Scottice*, thraw mouse) in it. Many a time I have found them to be full of regular garbage, but a firm lump of blue cheese, full an ounce weight, was the greatest *solid* that I have ever known to be got in one. This was found in a big trout, caught in the Spey below Craigellachie Bridge. The trout with the "thraw mouse" in it I caught ten years ago in April on the Crathes Water of the Dee when fishing the March Brown. The "dominie's" wife made the discovery when "gutting," and I need hardly say that the trout never reached the frying-pan! The bird-eater I caught on a reach of the Deveron, and also in April.

It is well-known that in summer trout come especially close in to the side, or shore to "grub." They get in the dusk on to the shallows, and in the thin water of pebbly or sandy expansions, bays, and tails of pools and streams they may often be seen, moving about slowly with their back fins above the water. It is then that they are on the hunt—in special quest—for minnow, stickleback, worm, grub; and whether or no they smell it, they certainly are sharp in detecting the whereabouts of their prey. Of this I give an illustration—merely one, which I think will suffice. Many years ago I was spinning for yellow trout one June evening. I had spun my last minnow till it had become somewhat bulgy and broken, and as a very fine trouty run was just in front of me, I wished to go over it with a fresh new bait. My minnow-trap was set near a quarter of a mile down the river, and so to procure what I wanted I went away to draw it and pick the best baits I might find in it. Before going away, however, I laid down my rod, and to keep the gut moist I put the cast with the minnow on it into a little saucer-shaped depression in the gravel close to the bank. Now to this spot where the water was not over half a foot in depth, it would have looked, to any one, impossible for a trout of a decent size to get. Between it and the main stream was a bar which, all along, had not more than one inch of water covering it. Yet over this bar a trout of 3½lbs. had somehow got between the time of my departure for the minnows and my return. This was obvious, for soon after I got back I had effected the capture of a trout of this weight. It was getting pretty dark, and I did not notice till I had lifted the rod and stretched out my hand to catch the line that the minnow was not where I had left it, and that many yards of my line had been run out. Now what I wish to ask is: How did this trout find out the dead minnow? Was it guided to it by the sense of smell? Had the minnow been lying in the main stream I should not have felt a bit surprised. Quite freely get-at-able it would have been there, but lying where it was it was wholly impossible for the trout that took it to get at it without considerable effort, or being more out of the water than in it when crossing the bar.

I have previously remarked on my experience of finding it pretty generally hold good that the kelt of the salmon shows more a discrimination for the natural food of the place and the season than the clean fish. As regards, however, the common *fario* I have found it to be all the other way. Not only the facts I have stated above, but their (the trout) taking quite greedily huge salmon flies when, in October for instance, they are lean and voracious before spawning, demonstrates in quite a thorough manner the truth of this remark.

I have done some queer hooking in my time. Once I hooked a water vole (*Scottice*, water-dog), while fishing the bait in a burn. A trout was "titting," and I struck, but instead of bringing out the trout I brought out a vole, hooked by the side. The vole had been swimming across the stream, and the hook getting hold of the trout had caught in him as I jerked it up. Something like this, but more remarkable, was the experience of a friend with whom I was fishing salmon on a Northern Highland stream. He hooked a duck, which struck his minnow so sharply that he took it for a sudden tug by a salmon. But an instant disabused him of this belief, for the duck came to the surface with a flapper and splutter, and winged off, when the minnow lost its hold. Another time I hooked—well, not hooked, but caught—a salmon with a triangle grapple in his side, and about forty yards of rope at his tail. I was not much puzzled to account for this experience. It proved that there had been some rough work going on. And yet another time I hooked a fish which *was not in the water at all*. I was drawing up my line in the act of preparing for a cast, when the fish leaped right in the line of the fly and got foul-hooked.

In all my fishing experiences I have never once merited by my skill the distinguished honour of hooking any of my companions or gillies. No. But I once, by accident, had the whole clamour of the sleepy village of Kintore roused to its utmost pitch by the very fact of my hooking a huge "stickin" ram. This uncanny animal—a pet of the farmer's, trained to box, and, moreover, the terror of the whole tribe of youngsters in the place—came bouncing at me, apparently to butt me, whilst I was passing through a field to get to the village from the Don. I had to dodge him, run him, and finally to place him on his back to get the hook out of him, before he got fairly played out! The situation must have been very comical! So it was said, at any rate.

A REMINISCENCE OF THE ROD.

Retrospection is not always pleasant, but it is possible sometimes to find among the "annals of the past" the record of a happy experience.

The pessimistic undertone of these words may be forgiven an aged bachelor who has found *his* pathway through the world to be hitherto a continuous piece of "stony ground," broken only at long intervals by small plots of verdure.

Some twenty summers ago I found myself breathing the untainted air of the country. I had bidden a temporary farewell to the cankering cares of business, and "far from the madding crowd" of city life I sought that rest and refreshment which driven nature craves. I had, contrary to the advice of two "cronies," elected to put up at a small but picturesque village in the North of Scotland, where "peace with honour" could cheaply be had; and after undergoing physical torture purveyed by a lazy train and an attenuated 'bus I had found myself a guest in a neat and clean little inn, rejoicing in the designation of "The Reel and Rod," where a buxom landlady, assisted by "twa strappin' lasses," ministered with feminine tenderness to my urgent necessities. Two days were spent reconnoitring. By consequence I was elated with the wisdom of my choice. H —— may not be an ideal resort. It does not pretend to be anything of that kind; but as a quiet, soothing retreat it will stand comparison with any village beneath "King Sol." Surrounded by hills and knolls, it bursts quite unexpectedly upon the view of a turnpike traveller, and looks out laughingly from the cosy comfort of protecting elms. It possesses *one* street and numerous lanes and byways. The latter are fully taken advantage of by bucolic "pairs" who study astronomy to an extent calculated by their progenitors to hasten "softenin' o' the brain." This reckoning is unhappily no incentive to repentance. At the foot of the aforesaid "street" a sluggish stream "pursues the even tenour of its way." I was not long in discovering the utility of this stream. So soon as labour or "lessons" ceased, little bands of boys and knots of men could be seen "making tracks" for its situation; and the evenings were never wearily passed when these anglers offered company.

Along the banks of the stream ran a tortuous footpath that drew many feet into "wondrous places"; and it was from this path that mine eyes beheld a vision of female loveliness such as I never expect will again ravish them among the abodes of men. I was professedly fishing—that is to say, I carried a rod, bag, and other angling appurtenances familiar to lovers of the piscatorial art—but I had laboured long and caught nothing. Again and again had I examined my hooks in the expectation that the bait had gone, and as often I had flung back the line into the turbid waters with an exclamation approaching profanity.

Beginning at last to think I had mistaken the lucky locality, I hailed a small boy, with "towsy heid" and "freckled face": "Do you know any 'pots' here about?" I asked. "There's one or two up yonder a bit," he replied slowly, pointing with his finger up-stream.

Turning a bend, I, after scanning the banks intently, prepared for a throw. There had been heavy rains in the district, and the fault was not in the water—eh? yes it was. I had been using with the dogmatism of self-will a bait that had been advertised as being the most "Deadly attraction, for Trout, Grayling, Perch, Pike, Chub, Shad, Twaite, Dace, Ruffs, Gudgeons, and Flounders" ever put within the reach of sportsman, and my credulity had been fittingly punished. Throwing away the "artificial grasshopper" and fixing a fly, I lashed the stream with energy renewed. My earnestness was quickly rewarded by a "tension and a tugging" at my line. Exultantly I raised my rod. I felt my arms ache, a sense of great victory possessed me, the blood mounted to my temples and my hair to my excited imagination felt perpendicular. Something very heavy flew past me. The rod snapped in twain. I fell suddenly to the ground, and simultaneously with my fall arose in the air a musical shriek of pain and terror. Dazed, but not dead, I scrambled to my feet to perceive a pretty young lady removing from her lap a large iron kettle.

Crimson with mortification and betraying my chagrin in my gait, I scrambled to her assistance, mumbling the while a grotesque apology.

"Oh!" she said, a silvery little laugh killing my embarrassment, "I can assure you I'm not hurt, but" (looking coyly and in an amused manner at my dishevelled appearance and broken rod) "how disappointing it must be to have one's sport thus rudely spoiled."

"Oh," I hastily replied, careless for the truth in my anxiety to please so bewitching a conversationalist—"Oh, I'm all right, thank you."

By this time evening began to pace faster and nearer. The sun slowly sank behind a neighbouring knoll, throwing across the heavens with lavish liberality myriad streaks of rainbow-coloured fire, softly blew the winds, and afar and pale shone the trembling stars. My fair companion had been reading Kingsley's "Hypatia" when the prosaic domestic utensil brushed it from her hold, and as we journeyed towards the village she rapidly and eloquently summarised the contents of that masterpiece in English literature, her dark eyes sending forth gleams of enthusiasm; the beautiful face transforming from grace to grace meanwhile.

It was with mingled feelings that I left her.

A new world now opened up to me in which *she* played a prominent part, while reels, rods, and bait "followed afar off."

GLIMPSES OF SPORT IN IRELAND.

By H.

The Irish newspapers have recently been filled with letters from correspondents, who deplore the scarcity of sporting and other visitors to the country. Some of the writers lay the reason for this state of things at the doors of the hotel-keepers, while others say Englishmen do not come over because they do not know of the sporting capabilities of Ireland; and one writer, who wrote a very long letter upon the strength of a week's visit to a fashionable hotel in the south, suggests that Swiss waiters be imported, for they are, in his opinion, all that is wanting to make life a pleasant dream in Erin.

Now, the hotels in those parts of Ireland well known for their salmon fishing are as comfortable as any in the kingdom, for they have been garrisoned for many years by different corps of English fishermen, who have long since made their voices heard in the management of these establishments; but in the wilder and more isolated districts of the west, and in the interior of the country, where few penetrate to the quieter trout and pike waters, the hotel accommodation is almost all of the roughest and dirtiest description, for the reason that unless it is a garrison town, in which the wandering angler finds himself at nightfall, the class of men to which *the* hotel looks for existence is the usual local evening to midnight customers, and the red-letter days of such a house are those of fairs, petty sessions, and, perhaps, races. It is true that the food in most of the lesser towns is as bad as it is possible to conceive, and it is always vilely cooked and served, with the exception of the potatoes—the only vegetable. I should like here to mention something that always recurs to me when I eat an Irish hotel dinner: In "Latterel of Arran," by Lever, O'Kelly, a Fenian, who keeps a shebeen in the wilds of Donegal, turns to a girl and tells her, in the purest English, to "wash those *radishes and lettuces*," as if any Donegal "mountain heifer" ever saw either, or would think it necessary to wash them if she did, or knew how, for I am certain she would have used soap to do O'Kelly's bidding.

The same book is about the *Arran* Islands off the *Donegal* coast; but the chief place mentioned is Irishmore, and this happens to be in the *Galway Bay Arrans*, and the well-known islands of that name; and in my travels I have often found Lever out in mistakes of this kind, but never Trollope.

To resume.

I have very often been greatly indebted to members of the commercial travellers' fraternity, some of whom are never off the road, and know every crook and corner of the island, where they always have the best rooms and the best food and attendance at nearly half the usual prices at all hotels patronised by them; and when a stranger (fisherman or gunner) finds himself "off the rails," he should always ask for the commercial hotel. There may be some truth in the idea that Englishmen do not know of the capabilities of Ireland from a sportsman's point of view, for take up any issue of the *Fishing Gazette* and look at the advertisement pages, when they will be found to contain column after column of Scotch hotel advertisements of fishing and shooting, but only two or three Irish ones, certainly not six, will be seen; and, another thing, I have sometimes been startled to find myself ending a conversation about sport in Ireland, begun with a friend, to a large and interested audience in the smoking room of more than one London hotel, gossips which made me many a friend, and many a man happy with his rod in Ireland on a river rushing high and clear to the sea. But it is more often merely a waste of time and trouble to attempt to talk about the sporting capabilities of this country in English society, for it is almost impossible to reach the class of individual who would come over if he thought it would pay, in the sense of his creel and game bag acquiring a scaly and blood-stuck feathery appearance.

Those who read the London magazines have, of late, had the scenery of our west and northern coast line described to them by "wild women," and others who saw and noted everything from the seat of a car whilst bowling along high roads to places when their visits were expected and everything arranged—even to the picked men digging potatoes in the fields—and the writers of these articles profess to know Ireland and the Irish perfectly after a tour of this description. Why, although I have lived for years amongst them on a mountain side, up a "boreen" road, impassable to wheels, in a cabin of two rooms (14 by 12), in daily intercourse with the peasantry from which I have learned something of their language, I do not understand them yet, except to know, and perhaps to admire, the way they can walk round and rob a confiding visitor, whose knowledge of "the foinest pisintry in the warrld," has been derived solely from feminine articles in the society papers. Some of these have amused me here on a pouring wet day, when I have often read out portions to some of the peasantry understanding and speaking English, over our pipes and open hearth, and wish I could do justice to their remarks thereon.

A great wish to write something about life in Ireland, as it is enjoyed by one who has had a long struggle for existence as a creaking wheel, and who has to thank an inherited love for a rod, dog and gun for the victory so far, took possession of me as I pushed and dodged my way down the Strand to Farlow's, last week, and as I thought of my first visit to him, twenty-five years ago, I resolved to have a try, upon my return to Erin, if I could find anyone willing to publish my miscellaneous ideas upon such a subject. Great "Medicine Man" upon diseases of the respiratory organs; and after the interview my wheezy-little body was given in charge to a Commissionaire, to be taken to Rowland Ward's and Farlow's. The Strand seems just the same—the same tide of surging human beings; the same "roar," and the same dull and gloomy *hard-hearted* air. Surely *this* is a congested district, and not Connemara, where one may roam all day without meeting a fellow man! At last, after a walk far more fatiguing than ten times the distance over rock and heather, I arrived at my destination, to find the shop full of customers, all talking "fish," for it was the close season in the angling world. Amongst other things, I overheard one tall, sunburnt, fair-haired "Skallaquin" say to another: "Oh, yes, I went up; it's a fraud; the fish are all netted in the estuary, and it is dear at fifty." I longed to speak, to ask whether he knew Ireland, where for the same sum he could have ten years' salmon-fishing; but as the suggestion of a writer in the *F. G.* that we should wear badges, conferring the right to converse when travelling, never took root, I had to remain silent, but I am told that the man I overheard in Farlow's is not singular at the close of the angling season in England, Scotland, and Ireland.

Eleven years ago a copy of the *Fishing Gazette* ound its way to me down in Harrold, in Bedfordhire, where I then lived for such fishing as was o be had in the Ouse, and upon reading it I was aken with an intense desire to explore Ireland, articularly as all angling appeared to be for almon and trout, and free. At the end of a eek, I found myself in Cork, with all my possesions packed in two portmanteaux, and a bundle f bamboo rods; the latter I soon gave away, and eplaced with better weapons at Hacket's, in atrick-street, by whose advice I went to try a ver in Clare for a week, and liked the place so ell that I remained there for three years; but it as not a river upon which a man—however good -would become a fishmonger.

What is written in, I think, No. 3 of the *Fishing azette*, about the majority of our rivers being free all comers is still perfectly true, but owing to e times becoming gradually quiet and settled, e country is rapidly being taken up by a class individual from England who rent, or buy up r a time, all the sporting and fishing within ach of the generally decaying castle or lodge, nted by them at a trifling sum; and this ooting and fishing is sublet, often portioned out, customers procured through flaming advertiseents in the London sporting papers—for the lvertiser is not often a sporting man, and when *is* and is found advertising such rough shooting is to be found in Ireland at the present time, will soon be discovered that he expects to be ked to shoot with his tenant. These men are w to be found in all parts of Ireland, where ey are not often liked, either by the country ople or by such of the "ould stock" as have en able to keep their footing through the oublous times.

My neighbour will do for an illustration. He es in a large furnished house that before the urder twelve years ago was the show-place of e district, and for this, together with ten ousand acres of rough shooting, he pays the nt of thirty-seven pounds ten a year, having ken a lease of it at this rent when a man was unted brave to live in Ireland. Several other ts of adjoining shooting are taken by him at ifling rents, and all of it—for he is no sportsman is let to monthly tenants, *never the same*, prored through advertisements in *The Paddock, itch and Pistol*, &c. Every inducement is held t to get young men from London, who like to mo and lark about for a holiday, for all sorts of quiries are made, books hunted up, and any man ely to give trouble, or likely to search the ather for signs of grouse droppings, is generally alled off.

"Mr. Green will never die"; and it is a pity, by his aid "My Neighbour" is ruining the ountain shooting of Ireland, for he never spends arthing in game or fish preservation; and often s man shoots down everything at the close of e season, trusting to chance and the weather another thin crop of flat-catchers. On a operty in such hands the country people all urse hares, for they know well that the sporting nant cannot convict them, though he may osecute; and he is powerless to prevent fishing on the banks of a river not private grounds, for cannot convict for illegal killing of salmon if e fisher has a licence; nor for trespass, if the ming tenant has given one permission to travel er his land. I know the "hotel" name of nost every man who has had shooting and hing in Ireland during the last ten years, and ve met scores of such men, not one of whom uld ever dream of taking sporting estates over n without first going over them.

Never take a place upon the strength of a July vertisement in *Soil and Mud*, but get together e or two gun-maker's lists and go over the most ely places in July in the company of a good g, taking his evidence in preference to that of e caretaker; and when a place is taken get into idence some days before the Twelfth, for I uld tell some queer tales about some of the best own shootings in Ireland if I liked.

Large unfurnished, and sometimes furnished, uses, are still to be met with all over Ireland, h with its much-poached property adjoining; t they are not so numerous as they were five rs ago, for reasons aforesaid. The tenant mer class never had their guns given back to m, and although the possession of a gun is ked at in these quieter days, or rather *nights*, they are not very common, and it is a fact that the young lads of the rising generation do not know how to shoot; although, to read the accounts of "The Irish Game Preservation Association," a stranger would think we were a nation of poachers. There are no poachers in the land such as exist in Yorkshire or Norfolk. The whole of an Irish townland will run after a hare if there's a dog behind her, and in a few places they have been taught the art of snaring hares by that pest to game preservation—the imported rabbit-catcher. One dressing of "hare oil" stops the former, and a good watcher the latter form of poaching. *Poor* Pat and Mike are not poachers, neither are they *ever* sportsmen; and here in far Connaught I do not think I could find a *peasant* within a mile of my cabin who would willingly fire off my gun, and I know them well, for are they not coming in all day long for "kippeens" for their pipes, women as well as men?

These rambling remarks upon sport in Erin, by one who has called himself a creaking wheel, would not be complete without some mention of the beautiful winter climate of the valleys or dents in our western coast, a climate—or rather a winter atmosphere, which helps to keep alive, during the dreary season of leaden skies, not only delicate inhabitants of the vegetable kingdom, but human "tender animals" as well, for there is no "sting" in the early spring winds, for when it is blowing from the east, or north, all is still and quiet in our little valley, the sea smooth as glass, the fishing boats motionless, and the sky radiant with brilliant and often hot sunshine. Last winter appears to have been extraordinarily severe, and hard enough to kill even the turnips in the fields in England; while here I had pansies, violets, wallflowers, and mignonette, blooming away till after Christmas in the little plot of ground I have cleared from rocks, and we had no snow or frost until April, when at daybreak, upon one or two mornings, the ground was slightly rimed, neither had we the usual equivalent for "hard" weather—I mean incessant rains, with high winds—for during the whole of February and March we did not have half-an-hour's rain in this district. I would these valleys, facing south-west and protected on every other side by heather clad mountains, were better known, or known at all. for what happiness, health and strength, the knowledge would give to those poor mortals, who, like myself, and I believe they are a numerous class—were born asthmatics for the life and food (sea fish, game, and trout) do not allow of the existence of this distressing complaint, particularly if (as is my own case) the patient lives only to supply his larder by his daily exertions. I would say to any fellow-sufferer, give up burning papers, pouches, and inhaling all the vile health-destroying things advertised, and come to Ireland, when, if you have only a pound a week—and don't get that—and a drop of sporting blood in your veins, you can live out of doors from morning till night all winter, *free from all fear* and painful breathing. Even the paltry sum (to some) of a pound a week is more than sufficient to enable a single man to live well, *to keep himself warm*, and to enjoy plenty of sport in the wilds of Ireland; but he must be able to do a great many things for himself, and be a practical man (no fancy rods or patent baits), for it is easy to make three and four pounds a-week upon some free rivers during a wet *late* summer and autumn.

I have considered my own method of living this life only; but there are other ways by which a man able to work could knock out a living, for I quite agree with the writers of the letters appearing in the Irish newspapers at the present time, inasmuch as they point out the money which might be made if the inhabitants of our coast valleys could be taught to grow early vegetables for the London market; for there is no doubt but that such things as potatoes, broccoli, and seakale—the latter is a native, growing on the shore—could be raised here just as early as they are in Jersey, a wind-destroyed place, where I have often shivered with the cold, a very rare occurrence in Ireland. My visit to London twenty-five years ago resulted in all attempts at schooling me—with books at least—being abandoned; so that I am hardly qualified to write upon any subject, and I have endeavoured to place these rough notes in gossip form, trusting they may be of interest to some, and that I may escape being harshly criticised.

Notes

THIS issue of the *Gazette* consists of sixty pages, including the wrappers, with two separate Plates. We shall be obliged should any of our readers fail to receive the paper in its entirety, if they will communicate with us direct.

THE following note from the Marquis of Breadalbane will be of interest to salmon anglers:—"Dear Mr. Marston,—The other day I had occasion to run the water off one of the ponds in which I reared the 'land-locked salmon' two years ago. I found eight or nine of the fish had been left in the pond; they measured from 8in. to 11in., and are very handsome fish, being quite silvery, and having the appearance of salmon on first assuming their sea-going coat. I thought you might be interested to know the size the 'land-locked salmon' had grown in two years. I have not heard of any of the 'land-locked salmon' in any of the lochs into which I put them. I have little doubt some are sure to be got next season.—Believe me, yours truly, BREADALBANE. P.S.—I am fitting up a fish-breeding establishment at Taymouth."

WE have no doubt many anglers will learn with sincere regret that good old John Sutherland of Inchnadamph, an especial favourite as an angling "host," has passed away. He died at Inchnadamph Hotel on the evening of Friday, 4th Dec., after a severe illness. As an all-round sportsman, Mr. Sutherland, in his day, was second to none in the wilds of Assynt. Afterwards as landlord of Inchnadamph Hotel, he became very popular, his popularity as the years rolled by extending and increasing. His hearty hand-shake, and his entertaining stories did his numerous fishing cronies from all parts "a warld o' guid," but alas! henceforth, when visiting the old place, their's will be the "sigh for the touch of a vanished hand, and the sound of a voice that is still."

CONCERNING Loch Awe we should like to give prominence to a matter of far greater moment than the "lunch-and-flask" affair. It is the desirability of yearly angling frequenters of the loch doing something to strengthen the hands of the Angling Improvements Association in pursuing their good work. Without the "sinews of war," war against the pike and artificial stocking cannot be carried on to a sufficiently satisfactory extent. That's plain. Dr. McNicol, of Dalmally, is the hon. secretary and treasurer.

IN the Court of Session, Edinburgh, last week, their lordships of the Second Division disposed of an appeal from the Sheriff Court at Dornoch, in an action raised by Sir Charles Ross, Bart., of Balnagown, to interdict Messrs. Powrie and Pitcaithley, salmon fishers, Perth, tacksmen of the salmon fishings at Bonar, from narrowing or altering the channel of the Kyle of Sutherland, and to ordain them to remove an embankment which they have erected in the bed of the river. Sheriff Substitute Mackenzie granted interdict as craved, with expenses, and ordered the removal of the embankment. Defenders thereupon appealed to the Court of Session, and now the Second Division has affirmed the judgment of the Sheriff Substitute, with expenses, on the ground that the embankment was below low water mark, was an encroachment on the bed of the river, and interfered with the natural flow of the water, to the injury of the pursuer's property. It is thought the effect of this decision will extend to all fishings on the several rivers, whose united waters flow to the sea through the Kyle of Sutherland—to wit, Shin, Carron, Oykel, Cassley, and Einag.

NOT for twenty years back have so many gravid fish been seen on the minor tributaries of the Dee, Don, Ythan, Deveron, and Spey. The Nethy, a tributary of the Spey, was literally crowded with fish this autumn, and many a good kipper was easily secured without the aid of a "Gordon" or "Spey-hackle," before the bailiff appeared on the scene.

CLEEKING salmon fishings, so as to prevent poaching, is now the order of the day. The Dee will soon be cleeked from head to foot. There is no danger to the angler, and the security against poaching raids is worth a thousand times the cost.

Mr. Duncan, Inspector of Salmon Fisheries, on the Dee, who has charge of the Durris Hatchery, says that it is a vast mistake to over-crowd a hatchery with ova. He has 500,000 eggs on his grills, but this he considers the extreme maximum.

The *Dublin Gazette* of the 11th inst. contains an order of the Inspectors of Irish Fisheries, making the period from August 1 to January 1 following the close time for net fishing for salmon and trout in the Lismore district (Co. Cork), and the period from October 1 to January 1 the close time for rod fishing.

Notes and Queries

A Piscatorial Exhibition.—We have been asked by some leading fishing tackle firms to help in the promotion of a really representative Piscatorial Exhibition, in February, 1892. This we have consented to do, and think our readers will be interested in the particulars respecting this exhibition, which are given in an advertisement in another page. In addition to exhibits of fishing rods and tackle, it is proposed to have a fine loan collection of stuffed fish and also fish paintings, Andalusian, Game, Honey Dun, and other strains of poultry used in fly-tying, and possibly piscicultural exhibits.

Capture of Rare Fish off the Coast of Aberdeen.—The steam trawler *Cambria* arrived in Aberdeen on Monday with four "*Northern Chimeræ,*" a fish never before known to have been landed at Aberdeen. When trolling about one hundred and sixty miles off the coast, the trawl net was dropped, and after dragging for about six miles it was hauled up, and (curiously enough) found to contain only these four fish. They were at once secured as natural history specimens. The fish are about 2ft. 6in. in length, and resembles to some extent the dog-fish, to which it is allied, the chief point of difference being the tail, which is long and whip-looking, whereas the tail of the dog-fish is flat.

Dry and Wet-Fly Fishing.—There has recently appeared in *The Field* some correspondence on the rival merits of fishing with wet or dry fly, but I must confess that, although I have had ten times as much experience with the former system as with the latter, I can see nothing to argue about, as undoubtedly it is only a question of circumstances, and both systems should be adopted, frequently on the same water, on the same day. I have seen such instances occur on both the Yore and the Wharfe, which are acknowledged as typical wet-fly streams. I have seen both Mr. Senior and Mr. Halford kill trout and grayling with dry fly when I could not touch a fish with my sunken flies, and I have seen just the reverse. Only quite recently a well-known Yorkshire flyfisher, "Watchet," of the *Fishing Gazette*, killed fifteen grayling, weighing 12lb., every one of which took the dry fly, a floating Autumn Dun, and this was on a club length of the Wharfe, where dry-fly fishing is practically unknown. If, say, the day is wet, or the surface of the pools are ruffled with a good stiff breeze, then fish with four suitable flies haphazard; but if the day is bright, the water clear, and no wind, then a single cock-winged dun floated artistically over rising fish is bound to succeed, whether the stream is situated either in the north or south of England. When I was in Hampshire I tried most of the best-known Yorkshire grayling patterns, fished wet, as an experiment, but the weather was not suitable, and they did not succeed; but I do not, therefore, say that they never would; in fact, a noted south-country grayling fisher informed me recently that he had found Bradshaw's Fancy one of the most successful flies that he had used this season on the Wiltshire Avon. There is no doubt whatever that the good old maxim, "An ounce of practice is worth a ton of theory," is as applicable in angling matters as in any other.—"*Halcyon,*" *in the* "*Weekly Leeds Mercury.*"

A CHRISTMAS HOTCH-POTCH.

By the O. O. D.

The Arun.

In the early part of the season, that is to say from the middle of June to the end of July, bream bite best very early or very late in the day. Sometimes they prefer paste to worms, and worms to paste, so it is as well to have both baits. As a rule the best worm is the brandling, but occasionally they prefer the marsh to either the brandling or maiden lob, and taking one occasion with another, heavy legering is the best method to adopt to catch both bream and eels, which can be done either with a tight or running line according to fancy. Bream take paste best in hot weather, but to make quite sure have a brandling on one hook and paste on the other. The hooks should be about fifteen inches apart, with a pellet of ground bait placed just above the top hook. Sudden changes in the weather are not conducive to sport. The pellet of bread and bran, or bread and pollard, should be made as stiff as possible, as it is soon washed off in rather strong currents.

A pellet of ground bait may be placed just above a bunch of three or four gentles squeezed round the shank of the hook and brought down within touch of the bunch, with a final squeeze given to make sure. If you find roach feeding on your pellet of ground-bait (open a fish or two) immediately use it as a hook bait.

Lea Anglers.

If possible most Lea anglers prefer to fish dead on the bottom, not three to six inches off, as described in some old books. Of course there are occasions, where owing to a rough, uneven, or foul bottom, it is impossible, then the Lea men do the best they can, but they do not like it. When the float goes under from the hook, &c., catching a bit of sunken twig or fillet of weed, &c, then they lift the tackle free from the obstruction; but if they find the bottom very bad with frequent feguent obstructions they either attach the shots high enough for the bait to miss them, or they find a swim comparatively free.

Period.

I do not care to fish for roach in May, but if it is a cold and backward spring they may be taken in good condition until the end of April. Roach have been caught in splendid condition in May, notably in 1889 and 1890, but as a rule I do not recommend their being caught later than April.

Light Legering with Shots Resting on the Bottom.

When fishing thus for roach, unless the novice lifts the point of his rod to raise say, the first two or three shots off the bottom (so as to strike directly on the fish before he has time to eject the bait), he will lose two bites out of three. This is why so many novices when they first attempt light legering (with shots only) with a float, miss so many fish; the fact is, they strike in a similar manner as when following the float down with the point of the rod, and so strike the shots instead of the fish.

Catching Lobs.

There is a way of gathering lobs properly. If he objects to come out of his hole, you must humour him with a succession of gentle quick draws to make his broad bristly tail loosen its hold. This difficulty generally occurs amongst stones, between slabs, hard places on the edges of paths, and often on lawns; but where the ground is loose and light no such care is necessary, the tail and bristles having little power to hold or cling.

Heavy Water.

When fishing in tidal rivers, and more especially when the wind is meeting the tide with a rough water—often with crests of foam—then the best thing to do is to leger in holes and eddies, either with a maiden lob or brandling for bream, &c., and with white paste for roach; always using a hook in proportion to the size of the pellet. In other words, do not use a No. 10 hook for a pellet of paste as large as a walnut, &c., and always allow the point of hook to come just through.

Good Places.

There is an excellent place for perch, jack, and roach opposite Hardwicke House, between Whitchurch Bridge and Mapledurham, with a splendid bank to fish from, and there are some good swims along the Oxford-road above Pangbourne. After passing through the gate leading into the firs meadow (up-stream) plenty of capital roach swims can be found every ten or twelve yards right up to the oak tree swim as one nears the picturesque Hart's Wood.

Light Legering—Striking.

After having taken the depth in the usual way (*i.e.*, exact depth) which should be done as carefully and noiselessly as possible, shift the float up the line so that the shots can rest on the bottom, then hold the point of your rod back with the nose o the float out of the water, like a snag, waiting patiently until the float disappears. Do not strike at a mere knock, wag, bob, bow, or slight agitation of the float, or you will miss four fish out of six. If the water be clear and the weather warm, use a pellet of bread and bran, or white paste, on the hook; if rising or discoloured, use worms. Gentles may be occasionally resorted to for a change.

Swims only two or three feet in length may sometimes be found between the weeds, within easy distance of the side, and can be operated upon with a 16ft. or 18ft. roach-pole without any difficulty.

Striking when Legering with a Running Line.

When legering out any distance for roach with the line taut from the rod-top to the bullet, if the line is seen to shake or tremble without being run out, it is often caused by large roach taking the bait off the ground, and the angler should strike sufficiently hard to send the hook home—being big fish with good hard noses, but not too hard to break the tackle. The rod should be moderately stiff.

Floods.

When a river is below the banks and the flood-gates are up, the stream is often too strong for bottom-fishing; then the better plan is to wait until the water is quite down and the lower gates shut.

In flood time, for instance, the Thames is run off much too quickly for successful bottom-fishing.

Bait on Bottom.

When fishing with the bait well on the bottom, always allow the float to go under, because the fish have to pick up the bait, and for this reason they require a little more time.

Tides.

The last hour of the run up the top of the tide, and the first two hours of the run off are the *very best* times to catch fish.

"Wait for the turn of the tide," as the song says, and then fish as close and hard as possible. It is very strange, but fish very rarely feed well either half way up or half way down. I have seen many anglers mistaken on this point; at the same time I have seen them fishing in water in June and July quite deep enough for fish to frequent in October and November; then they were surprised that they fished all day and caught nothing. I should have been surprised if they had.

Effect of Certain Colours on Fish and Animals.

It would appear that even frogs are attracted by the colour red; for the late Mr. Frank Buckland somewhere describes a Frenchman catching frogs, near Paris, for the market, by means of a light and red piece of cloth; and we know perch affect the same colour. I wonder, by experimenting on fish, if a bait of a certain colour could be found more attractive than any other.

Different Rivers, Different Baits.

Period: Summer. Fish: Roach and dace. Lea: Paste; for whoever saw an angler getting roach with worms? Well, very seldom.

Trent.—Roach: Creed wheat and malt. Dace: Gentles and caddis; later with worms. To one angler using creed wheat or malt on the Thames for roach, one will see ten fishing with paste, gentles, bread and bran *on the hook*, or a cube from the crust of a loaf, with the outside cut off. I have taken more roach in the Trent in August and September with the above baits than any other.

I admit that for many waters the gentle is the best all-round bait, but both gentles and worms, as a rule, are very little good on the Lea.

N.B.—I have never heard anyone attempt to explain this peculiarity; at the same time, I have no doubt there is a good reason for it.

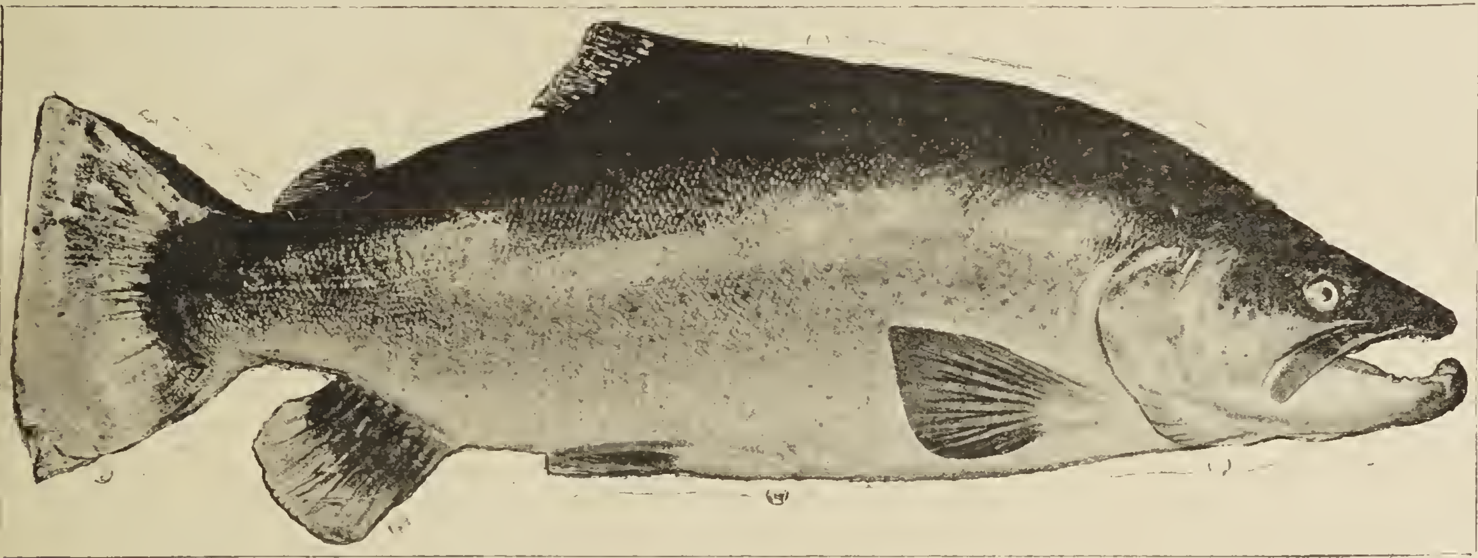
Correspondence

e do not hold ourselves responsible for opinions expressed by our Correspondents.]

ne of the charms of angling is that it presents an endless field for argument, speculation, and experiment."—T. E. PRITT.

A GRAND THAMES TROUT.

EAR SIR,—It was a fine morning on the 2nd of y, 1870, when the late Mr. James Forbes, of idge-road, Chertsey, said, "Gallaway, get punt ready, and we will have a try for that ge trout." Be it said it was on a Sunday, ut nine a.m., when they crossed below the ir to the Mill-side, and with a gudgeon on a ne-made flight of hooks, well soaked and ted, tried for the big-'un. The first throw was lank; but Bill, with his ever-watchful eye (for had but one) saw "som'at a-roolin like a pus," when out went the bait spinning as only . Forbes could spin. A moment's stop, a ghty pull, and away went seventy yards in a inkling, when it was turned, and after a few nges, an attempt was made to land it; but ough the net it went like lightning, the punt the meantime drifting on the shallows, where v stand the steps which lead to Mr. W. L. omas's house (of *Graphic* renown). William rter (now called Old Billy), who was on the k, was called to assist, as they were not able bring the fish near them; so he waded in, and the second attempt managed to put his fingers he gills, and throw it up on the bank. Thus landed the heaviest trout ever taken on rod line in the Thames, and in the short space of ty minutes from his first cast. Having put trout into the well, they went back to the dge House, and it was weighed in the presence ames Taylor, who is still at Chertsey Wharf, can, I believe, verify all my statements; as Old Billy Carter, now at the ripe old age of ty-two, who keeps the pots and kettles bright he Cricketers' Hotel.



THAMES TROUT *(SALMO FARIO)*; WEIGHT 14LB. 9½OZ.
CAUGHT AT CHERTSEY WEIR, BY JAMES FORBES, ESQ., ON JULY 2ND, 1870.

undreds collected on that memorable day to e a look at so fine a specimen. This fish was rwards cast by Mr. Frank Buckland, the well-wn naturalist, and painted by Rolfe, the st fish painter of the day. Among the extranary trout bred by our lamented friend were cross between the *Salmo fario* ova and the *mo fontinalis* milt, which resulted in a fish h like a mackerel, but more rich in its mark-. Four were labelled and put into the Thames myself after his death, but I have not heard of m being caught. Trusting this may interest a of the piscatorial fraternity, I am, yours y, A. E. ARMSTRONG,

Hon. Sec. to Chertsey Angling Association.

S.—Copies of the photo can be obtained of W. Bates, Chertsey, who has kindly taken on my behalf.—A. E. A.

LOCH HARRAY.

IR,—It seems to me that I have not made remarks in last letter clear enough, else aine Môr" would not have insisted so strongly on his *obiter dictum*. I had prolonged it to such a length that the fear of the Editor's scalpel alone prevented me from stating fuller and clearer what effect the salt water has on these trout. In perusing his letter it forcibly impresses me as rash to reproduce information from one or two individuals and conclude it is the opinion universally held by those having the best facilities for knowing.

"D. M." insists that 1885 was as bad as 1891 on Loch Stenness, which may be true for the earlier mouths of the season, but certainly not for September, which is the best mouth.

He also states that the reports which have appeared in the *F. G.* do not bear out what I said in regard to the sickening of the trout by salt water, and the prevention of their rising freely to the fly. Now, "M. S." and the reporter is the same individual, and my present opinion is precisely what it has been for over a dozen years, namely—that salt water does sicken the trout and bring about that train of casualties which disappoint and dishearten the angler. In several reports I stated that the influx of salt water prevents good baskets being made. Now what happens is this: Salt water flows into this loch for two or three days at a time, and only for four times a year during a dry season; twice during a moderate season, and not at all during a wet one. The trout take the fly eagerly for about two days, and during the rest of the month refuse to rise, except plenty of rain has fallen during the interval. It cannot be the food carried by the salt water (as "D. M." puts it) that prevents their rising, else why do they crowd in shallow creeks after fresh water, and not remain in the more brackish water where, according to his theory food is abundant?

That trout will adapt themselves to their environment, I daresay few Naturalists will deny. We see far more wonderful adaptations in Nature than fresh-water trout becoming habituated to brackish water—*e.g.* the whale, the seal, &c. The trout in Loch Harray have not the opportunity of adapting themselves to brackish water. The last influx of salt water in this loch was in Aug., 1890; next (if dry weather) will be in June, 1892. Now to me it seems no wonder they sicken after so long a spell of fresh water. Various wild theories have been advanced to account for these freaks of Nature, such as being frightened by otters (not the poaching kind), water contaminated by artificial manure, &c.; but now more than three-fourths of those interested believe it is the salt water. As a proof of the belief which "D. M." seeks to ignore, I may state that more than half the proprietors, and all the boat hirers, subscribed to erect sluice gates to prevent salt water getting in. "D. M." thinks that "to artificially alter the normal conditions of their existence will be proved to be dangerous experiments." This is exactly what we who are interested in the prosperity of the loch believe. It was explained in my last that the normal conditions were interfered with about twenty-five years ago when the natural rock barrier near the Bridge of Waith was lowered for the purpose of building the present bridge. It is with the view of restoring these natural conditions that we have erected sluices to prevent salt water getting access and unnaturally interfering with one of the best fishing lochs in Scotland.

The legal aspect of the question seems shrouded in the greatest mystery possible. Not much over a year ago the justices fined two individuals for using nets of illegal mesh; the case was carried to the Court of Session, and the decision of the justices sustained; but the expenses incurred by the justices were paid by the County Council, amounting to about £50. Now the county can't be expected to prosecute at so high a figure, with uncertain results, and in the end fined the fifty proprietors claiming any spoil there may be from protection, and who are now quite indifferent about the whole concern; in fact they (at least the majority of them), were the moving spirits in supporting the illegal fisheries in the Court of Session. Until some slight alteration is made in regulating trout fishing, I fear these lochs can't be protected as they ought. It does not seem unreasonable either to apply the same restrictions to proprietors as to others, or else enact that these lochs be placed under the control of the County Council for the benefit of the county. M. S.

AN INTERESTING INCIDENT.

DEAR SIR,—Mr. E. Merritt, one of the undermentioned members, was jack fishing, at Langley, on Nov. 13, when he hooked a jack, and after playing the fish for some time, he brought it close to shore; but it gave a sudden plunge and broke clean away with what I call an angler's outfit—viz., hook, trace-line, and float. He watched eagerly for his float, but, alas! in vain, for no trace could be found of the escaped one; so giving up all despair and putting down his misfortune—as many other disciples of Old Izaak do—fished again, but having no sport, he packed up, after getting a good drenching, and said "Adieu!" for this blessed day at Langley. But meeting his good brother member, they sauntered along, keeping sharp eyes on each side of the water, when Mr. Morgan shouted, and, almost frightening poor Merritt, taking and shaking him by the hand, said, "Run for your life; look at your missing tackle lying near the bank, the other side of the canal!" In a jiffy Mr. E. Merritt ran for his life across the bridge, and crept quietly along the path on his hands and knees, holding his breath, and, grasping with his right-hand, he got his line, and felt a tussel. He shouted for help, and, after some time, he got his fish, line, &c., out, and the fish proved to be a jack, 28in. long, and turning the scales at our club at 4lb.; but the hook just gave way when he landed his fish. I must congratulate our member, and also the other member, for his prompt action.—Yours, &c., B. ABRAHAMS,

Hon. Sec. Allason United Bros. A.S.

BLACK STAIN FOR RODS WANTED.

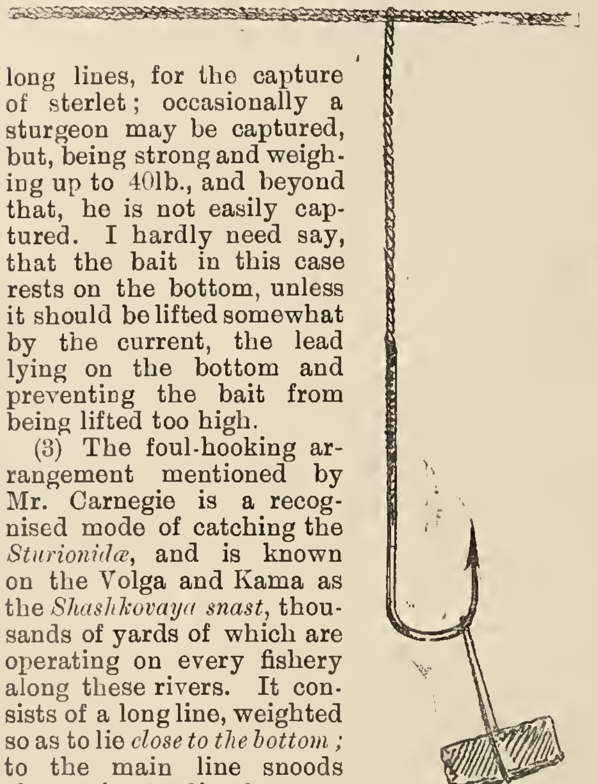
SIR,—I should be very glad if you, or some reader of the *Fishing Gazette*, could tell me, through your paper, what will make a good black stain for fishing rods, and where I may procure it?
Yours, &c., AMATEUR,

HOW THEY CATCH STURGEON, &c.

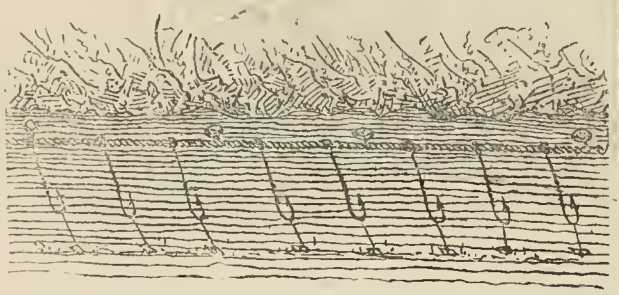
My Dear Sir,—I trust you will allow me to say a few words on this subject, as Mr. Carnegie's communication under the above heading is not quite correct.

(1) "Sterlet" are not "young sturgeon." The sterlet is the *Acipenser Ruthenus;* whilst the sturgeon of the Danube is the *Acipenser Güldenstätt.*

(2) Larvæ of May-flies are used on the Don on long lines, for the capture of sterlet; occasionally a sturgeon may be captured, but, being strong and weighing up to 40lb., and beyond that, he is not easily captured. I hardly need say, that the bait in this case rests on the bottom, unless it should be lifted somewhat by the current, the lead lying on the bottom and preventing the bait from being lifted too high.



(3) The foul-hooking arrangement mentioned by Mr. Carnegie is a recognised mode of catching the *Sturionidæ*, and is known on the Volga and Kama as the *Shashkovaya snast*, thousands of yards of which are operating on every fishery along these rivers. It consists of a long line, weighted so as to lie *close to the bottom;* to the main line snoods about 7in. to 9in. long are fastened, carrying peculiar-shaped barbless hooks, with very long points (see diagram). A short thin snood about 3in. or 4in. long, bearing a small cork float, is fastened to the bend of hook (see diagram) so as to keep it from the bottom with the point slightly inclined. All the *Sturionidæ are essentially bottom fish;* besides, they are rather thin-skinned and have only a few longitudinal rows of scales to protect them. Creeping along the bottom, the sturgeon or sterlet strikes a hook, darts away from it, comes in contact with another (the snoods are spaced differently on different fisheries, but 12in. is the average distance), and another, and is stopped by them, being a very tender fish. Even *one* hook that has "taken" well will stop a big sturgeon.



I trust Mr. Carnegie will take my correcting remarks in the same friendly spirit in which I make them.—Yours very truly,

Baron Paul Tcherkasov.

N.B.—The artist seems to have included the very thing the writer wanted left out—*i.e.*, the barb.

FISHING AND SHOOTING IN NEW ZEALAND.

Dear Sir,—Would you or any of your readers give information regarding outfit for one about to migrate to New Zealand? What sport can be got with rod or gun there? Where can one get the most suitable cooking stove for knocking about with?—Yours truly,

Maori.

[As far as the fishing goes, "Maori" should take plenty of small trout flies, loch trout flies, and spinning baits (Phantoms, &c.), and single and double-handed trout fly and spinning rods. Trout are numerous, and run up to 30lb., so that good tackle is wanted. "Maori" would find much useful information in "Near and Far," by Wm. Senior, published by S. Low and Co., price two shillings.—Ed.]

THE BIG TAKE OF PIKE.

Sir,—In the case of the late astounding catch of pike by Mr. Andrews, I venture to say that he must have been very busy during his fishing, and the pike must have also been very thick in the water. I should think that to keep these ravenous fish in fair condition, that the roach, dace, or other small fry must be in such immense shoals as to render the river nearly unnavigable.

I should like to be enlightened on this point; so would more of your readers, no doubt. Would Mr. A. kindly favour us with a little further information, for which we will thank him.—I am, Sir, yours faithfully,

W. H. Elsmore.

Castelnau, Barnes, S.W.

SALMON FISHING WITH PRAWN.

Sir,—Would any of your readers give a few hints on salmon fishing with prawn, and the best tackle for use with same?—Yours, &c., Viator.

ROLFE'S PICTURES AND THE FORTHCOMING PISCATORIAL EXHIBITION.

Sir,—Thanks to Mr. H. G. Green for his idea. I have another suggestion which might perhaps be better. Why not have a collection of the late Mr. Rolfe's pictures at the coming Exhibition of Fishing-tackle, which I understand is likely to be held soon at the Westminster Aquarium. I have a fine picture by that artist, and shall be glad to lend it.—Yours truly,

W. J. Cummins.

Bishop Auckland.

[We have also two or three pictures by Rolfe, which we could lend.—Ed.]

THE BIDEFORD SHOW.

Dear Sir,—Your readers may like to know a little of the results at the late Bideford show, where a prize was offered for the best birds suitable for fly-tying (trout).

The prizes were 20s., 10s., 5s., and a card. The first was won by an Andalusian Blue, of J. Bastard, fly-tier and practical angler, N. Devon; second prize, J. Rowe, fishing tackle manufacturer, N. Devon, with a beautiful rusty blue game cock and honey dun game hen; the third, by same person, with a freckled game cock, and honey dun hen; the fourth was a red bird; but a blue game cock and hen, owned by Mr. Paine, spirit merchant, Tiverton, was only commended. This bird, if judged as all birds should be (in February, when the hackle are used for flies), would be a beautiful blue; but first prize would be different, and second and third prize ones perfect and very valuable, being scarce as regards breed and colour. The first prize bird was valued at (in the list) 15s., and the same owner had others in the class unnoticed, and he says he sold them and bought better. I am rather inclined to think (like him) best way too, if a purchaser could be got for that figure; for a good breed and colour blue fowl to a fly-tyer would be worth treble that sum.

I should say that no birds should be in competition when moulting, if the real colour is to be taken, and that at all times a good shape feather is fifty times of more value than an Andalusian-bred.—Yours faithfully,

J. Rowe.

Barnstaple.

ARTIFICIAL PROPAGATION OF SALMON IN SCOTLAND.

Sir,—I will feel greatly obliged if any of your subscribers can give me any information as to the artificial propagation of salmon in Scotland. The names of the hatcheries and any details will be greatly esteemed by—Yours sincerely,

W. Fenwick McAllum.

Kent House, Gateshead-on-Tyne.

BAITING WITH WORM.

Sir,—I was pleased to notice that such a clever angler as Mr. Wheeldon undoubtedly is, adopts the old method of baiting the hook with worm—namely, hooking the bait in the middle, and consequently allowing it to "show" well in the water. I have myself caught large chub in the "Old River" (private) of the Kennet, as distinguished from the canal, but with one *loup* in the lob, and found this mouthful especially f to big chub in winter and up to the end of Ma some years back. Every fish will take worm some time or other; and chub near to and u trees or boughs in autumn can, with great and quietude, be got with the smaller cha which some seasons are very numerous, at ot hardly any at all. The large chafers also app at intervals of three or four years, but then t are not so numerous as the smaller ones. "beetles" form a deadly lure for chub, &c. perch loves a lively cockspur worm that has b through the moss; and the more the bait wrig the quicker Mr. Stripes is "dead on."—I am, Yours truly,

Old Han

THE 26lb. PIKE FROM POYNTON POO

Sir,—Referring to "Notes from Lancashi in your issue of Dec. 5, in reference to a 2 pike, I may inform you it can be seen at Touchstone Inn, Stockport, and, from a cut taken from the *Stockport Echo*, it was caught Messrs. Tom Smirthwaite and Sam Rowcrof Poynton Pool, Sept. 11, 1891; its length, 3ft. 10½ weight, 26lb; and was caught with live- (roach). It is well worth seeing for size, b not a handsome shape as it appears now.—I yours truly,

John Kershaw, ju

Church Inn, Longsight.

EELS AND STEWART TACKLE.

Dear Sir,—In reply to "C. G. D.'s" lette the above, I beg leave to state that the th hook tackle answers very well for eel fishing. first conceived the idea of using it when bait with lampreys, to obviate the necessity threading these tough gentlemen on a single h tackle, and I found that a run was gener followed by the landing of a fish. For w fishing there is, however, nothing to beat a la sized Limerick hook, long in the shank, and i eel is struck at the second knock the shank be found outside the mouth, and may be ea extracted. I always use one of these hooks on fine gimp, and find it answers admirably. the gimp gets tied into knots it is so easy to u even in the dark.—Yours faithfully,

Severn Graylin

LARGE ROACH.

Sir,—About seven or eight years back, ha business with Mr. Cooper, naturalist, of Rad street, St. Luke's, my attention was called t very large roach, in a case. Of course, I inqu who was the lucky man, &c. Mr. Cooper infor me it was picked up dead in the river Sev It was in a bad state, and his instructions w to make the best job he could of it, and he perfectly successful. I forget the exact wei but it was over 3lb.

Some years before that, on a Saturday eve at St. Margaret's, on the Lea, I saw a roach t had just been taken, which weighed 3lb. 2oz the scales at one of the neighbouring hou This fish was in the possession of the late Burnham.—Yours, &c.,

F. Castell,
City of London A.

THE ANGLERS' BENEVOLENT SOCIE

Dear Sir,—May I ask the favour of a s space in your valuable paper to express my hearty wishes for the welfare of the A.B.S. the committee and stewards who so ably car out the arrangements for the late competi at Rye House, not forgetting Mr. Walbran?

I was present at the distribution of pr (being a winner), and never saw anything car out so well before.—Your obedient servant,

W. Bird, sen.,
Waggoners A.

Capture of a Royal Sturgeon.—The st trawler *North East*, belonging to Mr. Wm. Py landed at Aberdeen a royal sturgeon, which sold for £3 12s.

*** **Club and River Reporters will oblige sending in their Reports early in the week.**

STALKING POACHERS IN WINTER.

By P. H. Emerson.

In the winter of '78, Darkel, the fish poacher, was unusually busy. Like the highwaymen of old, he seemed to be in several places at one time. One morning the Woodly water-bailiff found the inside of his boat decorated with slime, mud, and fish-scales, and on the prow a figure-head in the form of a large bream, gagged, and grinning contemptuously at the world. The bailiff knew it was Darkel's work. The landlord of the Woodly Arms told him that for the mere pleasure of watching his face. Darkel had sent his own boat to be repaired; so he had borrowed the water-bailiff's for a night's poaching, and left it with his usual mark of contempt—a great old bream.

Then came a marshman's story from the New River. The narrator, hidden in a clump of reed, one night watched Darkel; he wished to learn his methods. As he watched and grew wise, Reed, the well-known soft-hearted bailiff, came along. "He warn't no good only to go out with the hoscifers of the society a fishing in the daytime," was the verdict of the amphibious population. "He would only pull a poor man for getting a pike," they persisted. The marshman's story—which spread like wildfire along the quaint river-banks—was that Reed came rowing quietly up the dark river towards Darkel's wherry. No sooner did Darkel espy the bailiff than he and his mates got into their boat, and rowed down to meet their foe, whom they pretended not to recognise in the dark. They deftly shot their net round the bailiff's boat and began to haul in. Then, and not till then, did Reed show any signs of life; but when he saw the net closing round him, his tongue was loosed, and he cried fearfully, "Don't upset me! Don't upset me!"

He thought Darkel intended to upset his boat, catch him in his net, and drown him. With that horrible death so near, he grew excited and mad with fear.

"Now, you fellow, I have catched you this time, your'e poaching the river," laughed Darkel, ironically, as he drew the fearful net tighter round his prey.

"For God's sake; don't hurt me! I'm an Englishman — don't hurt me," shrieked the cowardly bailiff.

Darkel stopped, and taking hold of the net-encircled boat, he said solemnly, the planets only witnessing.

"Now, if you don't promise me that you'll never round on me, you'll never see your home no more."

"Let me go, and, by the God that made me, I'll never hurt you."

"Don't you forget yourself," cried Darkel, sneeringly, and, clearing the boat of net, he gave it a contemptuous shove away from him with his horny hand; "for," said he afterwards to his pals, "you'd have had to a' burnt a hundred of straw round him to have started him, he was that 'mazed."

The story leaked out, and Reed lost his situation. Shrewd old Darkel scratches his head to this day, puzzled to know how the matter got abroad; for he knew Reed would never breathe a word of it, nor would his own pals. But he had forgotten that reed-bushes have ears as well as trees. But the sharpest piece of work happened on the Northwey river. Darkel's wherry was moored at his favourite Woodly. She was carefully watched by day and by night for many a week, when suddenly one evening Darkel stepped ashore, leaving a boy aboard his old craft, and ran in the darkness to a wherry that had come up that day from Yarmouth. There he met his friends, and they set to and did a good night's work. The next morning you might have seen Darkel innocently hoisting the sail of his own old craft, bound for home; whilst their cargo was already miles away in the other wherry, on the way to Yarmouth. These deeds coming so close one upon the other, had excited the water-side dwellers—they were ready to hear of any daring or cunning escapade; and even the river-side officials were alert to make a capture, and stop these depredations on the innocent roach and bream. But all were doomed to disappointment that winter, for Darkel was a genius in his profession, as was Cartouche in his day.

As I have said, Darkel was not to be caught. Like many of the fish he netted, he was wily, and only to be taken by surprise. Two policemen thought so to take him, with what results we shall see.

The weather was freezing when the adventure took place. The ground was covered with a powdery snow; the reeds ringed with thin icy necklets, and the broad laid. The rivers were open for navigation; the tide kept them free, for it "splurtured" the ice up, as the natives say. Stock frost and rime frost had bound the landscape in fetters.

Darkel lay moored at the mouth of Sea March Broad one night. A bitter night that was, too, the water freezing all over the river. Just before daybreak—for Darkel had done them—a cargo of stiff fish lay snug in his old wherry, covered with thin ice, such as the ice-men collect to sell to the fish merchant for packing. When the day broke, Darkel still slept soundly, for he was a wise old man; never a drop of spirit did he drink on these excursions—always hot beef-tea and milk; and, moreover, he never remained in wet things a moment after he had finished work. He was as careful as a valetudinarian—this hardy old poacher—and, he has often told me, that was why his pals couldn't stand it as he could.

"They all died youngish—they would drink, and were proud to go about wet," he has often said.

At eight o'clock Darkel's son called him, and they had a comfortable breakfast in the grimy old cabin—bread, butter, tea, and prime pike, *ad libitum*, and they "eat sweet" when the frigid winter brings home the smacks from the "Dawger."

Whilst our adventurers were at breakfast, a bright fire roaring in the grate, a fierce north-easterly snow-squall fell upon the face of the land, nearly blinding two policemen that stood on the rond opposite, watching the *Dal Harnsee*, like cormorants. Darkel's son had seen them, and Darkel had named them before they all sat down to breakfast.

"They be the Sea March policemen. Don't pay no regard to 'em," he had said, grinning. His sons knew well by this that there was no danger, and that there was a bad time coming for those policemen.

"Lor! that dew blow," said the eldest son; "the ice is all colkilating [collecting] on our weather side; we shall have a job to get away."

"Is that still freezing?" asked the youngest hand.

"Ay; like a knife," answered Darkel, peeping through the little cabin window out into the white-flecked landscape at the policemen crouching under a rick of reed. He smiled grimly, as he looked up at the snow-laden sky, and listened to the roaring nor-easter's biting blasts whistling round his mast, halyards, and forestay.

The poachers smoked comfortably after breakfast, determined to wait for the ebb, which started at two o'clock. After that, Darkel and his sons curled themselves up in a warm corner, having first piled the grate full of coals, and slept soundly, whilst the fire crackled within, and the furious nor-easter blew without.

At noon Darkel arose and looked out; the gale was blowing as fierce as ever, and everything was white with newly-fallen snow. The landscape was dead and wrapped in a white pall; but the policemen were still there, their helmets and cloaks whiter than swansdown—they appeared clad in ermine. After this inspection Darkel roused his snoring boys and bid them get dinner; they ate more fish and drank quarts of tea. After dinner they had a smoke and went out into the biting snow-squall to shovel off the snow and hoist the sail. After much hard work they got the great sail up, but it was powdered white ere it was taut. Then all hands went below—for the tide was only slack as yet—to warm their frozen fingers and drink more tea; whilst the policemen walked briskly up and down the rond, beating their arms across their chests, and jumping on the frozen snow-covered rond. They had seen Darkel's manœuvre, and suspected he was about to start; and they guessed (and rightly) he had fish aboard. They had a search warrant, and determined to come aboard and ransack the *Harnsee*, but they were inexperienced in the work. After a consultation they walked to a reed-bush and got into their boat, and came, breaking the ice with their oars, towards the wherry. When they got alongside, amongst a lot of floating ice, they hailed Darkel:—

"Hollo, there; what are you doing here?"

Then Darkel poked his head out of the cabin door and looked at them with his piercing blue eyes, answering shortly—

"Icing? I can't get away yet; that's what I want."

"That's very suspicious—you've got something aboard."

"Well, you'd better come and look, if you've got a sarch warrant," said Darkel, drawing his head into the cabin, for the drifting snow nearly blinded him.

They came aboard, but they could scarcely climb out of the boat; their hands and feet were numb with cold, and their systems low from exposure. With great difficulty they pulled off a hatch, exposing a gleaming cargo of ice, that made the scene look more like the Arctic Regions. The chief constable climbed slowly and with difficulty into the hold, and began to turn the ice about feebly, whilst Darkel only looked on calm and exasperating. But the poor half-frozen fellow soon got tired of turning slippery pieces of ice about, and he rose up stiffly and slowly, and said, feebly: "They're in the cabin."

"Go and find 'em, then," said Darkel, shortly.

They went into the cabin, and the younger man gave a long sigh of relief as the warm air met him; and his eyes turned ravenously towards the bread and butter, still standing on the locker. Exhausted and half-frozen, he dropped on to the seat, and the elder man edged up towards the fire.

"Now then," said Darkel, grimly, "I ain't axed you here to wisit me. None of that setting down. Sarch the place and be off; we ain't no friends." The young man got up with a sigh, the melted snow streaming off him on to the floor.

"Here, you can't go sarching like that; and you ain't going to make a hog-wash of my cabin; out you go," said Darkel, pushing him through the cabin doors into the open. The poor fellow sat down on the snow-covered deck, and looked longingly towards the cabin fire; but it was useless.

"Now then, mister, do you be quick; the tide's on the tarn, and I'm off," he said to the elder constable.

The chief policeman looked cunningly about for a pretext to stay in the snug cabin until he was warmed through. He looked round and saw two guns hanging from the roof.

"Are they loaden?" he asked, nodding his head in their direction.

"Loaden, yes."

"What for?"

"To shoot the devil, if he come aboard."

"Bring them out and fire 'em off."

"No; 'taint likely."

"You won't fire 'em off?"

"No! that I on't for nobody. There ain't nothing to shoot."

Then the chief cried to his assistant Jones: "Come and fire these guns off."

"Hand 'em out, then," said Jones, with chattering teeth.

"No, you don't," said Darkel, fiercely. "I pay a licence; and if your mate want 'em, let him come inter the cabin and take 'em; then I'll know how to sarve him."

"Well," said the chief policeman, "let's see what else you got," changing the conversation. He looked in the cupboard, and saw an old rusty revolver, and asked—

"Why do you carry these here weapons?"

"What weapons?"

"This old rewolwer."

"Why, to shoot the devil; I told you onst."

He searched, and could find nothing in the cabin; so he said to Darkel—

"I believe you've got something about you," and began to feel through his clothing.

"I ain't a woman," cried Darkel, indignantly; "and I don't want no more of your tricks. Have you sarched the ship?"

"Yes."

"Well, get you and go, as quick as you like. That fire is very nice and warm, ain't it? but that's for my pals and me, and not for the likes of you."

"I'll be even with you yet, Mr. Darkel," said the policeman viciously, as he left the cabin reluctantly, joining his half-frozen companion outside. He soon began to put on winter plumage again.

Darkel got a mop and swabbed up the water in the cabin. Whilst he was clearing up and get ready to start, the two half-frozen policemen were consulting together on the end of the wherry. They decided that they must follow him to see whether he delivered any fish at the end of his voyage. So when he came out of the cabin, the chief constable said in a conciliatory tone—

"Well, Darkel, where are you going now?"

"I'm off to Harling Bridge, if I can get."

"Well, we've got to go down there. Will you give us a lift?"

Darkel smiled grimly, and answered softly, "A lift! No, Bor'; arter coming here to sarch me, that fare' too much to ax. But tell you what I'll do, if you like—I don't mind giving you a tow."

Their faces clouded, and they looked longingly into the snug cabin, and then at the arctic landscape and driving snow-squalls.

"All right, that will do," said the chief, slowly.

"Well, then, get into your boat; for I'm off," replied Darkel.

They could scarcely climb into the snow-covered boat. Darkel noticed that.

The anchors were pulled up, the sail filled, and the boys stood forward with boat-hooks, pushing the floating ice away, as the *Dal Harnsee* sailed slowly through the ice jammed into the narrow throatway between the broad and the river. They soon sailed through the small ice fields, and getting into the river met a fierce head-wind and blinding snow-squalls. Darkel sailed her amidst the snow and blast, whilst his sons kept warm before the fire. The policemen in the boat astern were white and silent, and showed little signs of life, except to yawn now and then; for their faces were buried in their arms to avoid the stinging snow-storm. Darkel looked round occasionally and smiled wickedly.

After a terrible battle with the head-wind and snow-squalls the bridge hove in sight, and Darkel shouted through the wind, "There she be."

The policeman looked up sleepily and grunted, "Ay, ay."

"Fare cold," asked Darkel, softly.

They did not answer.

"What, asleep, Bor?" asked Darkel, with irritating solicitude.

"Very nigh," answered the young man.

"Well, I'm going to stop at the bridge; there ain't no house there, so you'd better be going home afore you get frozen to death."

"What are you going to do at the bridge?"

"Unload my fish, to be sure."

"Fish! What fish? Where did you get 'em?"

"Out of the river to be sure. Ha! Ha! You be very sharp, baint you?"

They were silent; they were too frozen to struggle with boys, let alone determined men. So they sat silent, and let Darkel draw up to the bank and moor. A light cart was standing there, the squall notwithstanding. The policemen got out on the bank; they could scarcely stand. Darkel jumped ashore and ran up and spoke a few words to the driver of the cart, and then ran back to the wherry, the cart driving off hurriedly down the road by the river-side.

The constable came up and said, with shaky, feeble voice,—

"Tell me where your nets be. I shall take 'em."

"You can take 'em—fust if you can find 'em, and arterwards, if you've got the strength. There's three on us and two of you, and if you be stronger you shall take 'em. We'll have a tug of war for em."

The policemen swore terribly; the nearest inn was two miles away. Darkel was starting off again, it would kill them to follow; and they had searched the wherry, and had no proof that he had either nets or fish aboard. Their brag that they would take Darkel had turned out an empty vaunt; and they looked forlorn indeed as Darkel sailed off, leaving them staring stupidly after his wherry, as he cried—

"Fare you well, Bor'! A warm and a sup wu'd go high now, eh!"

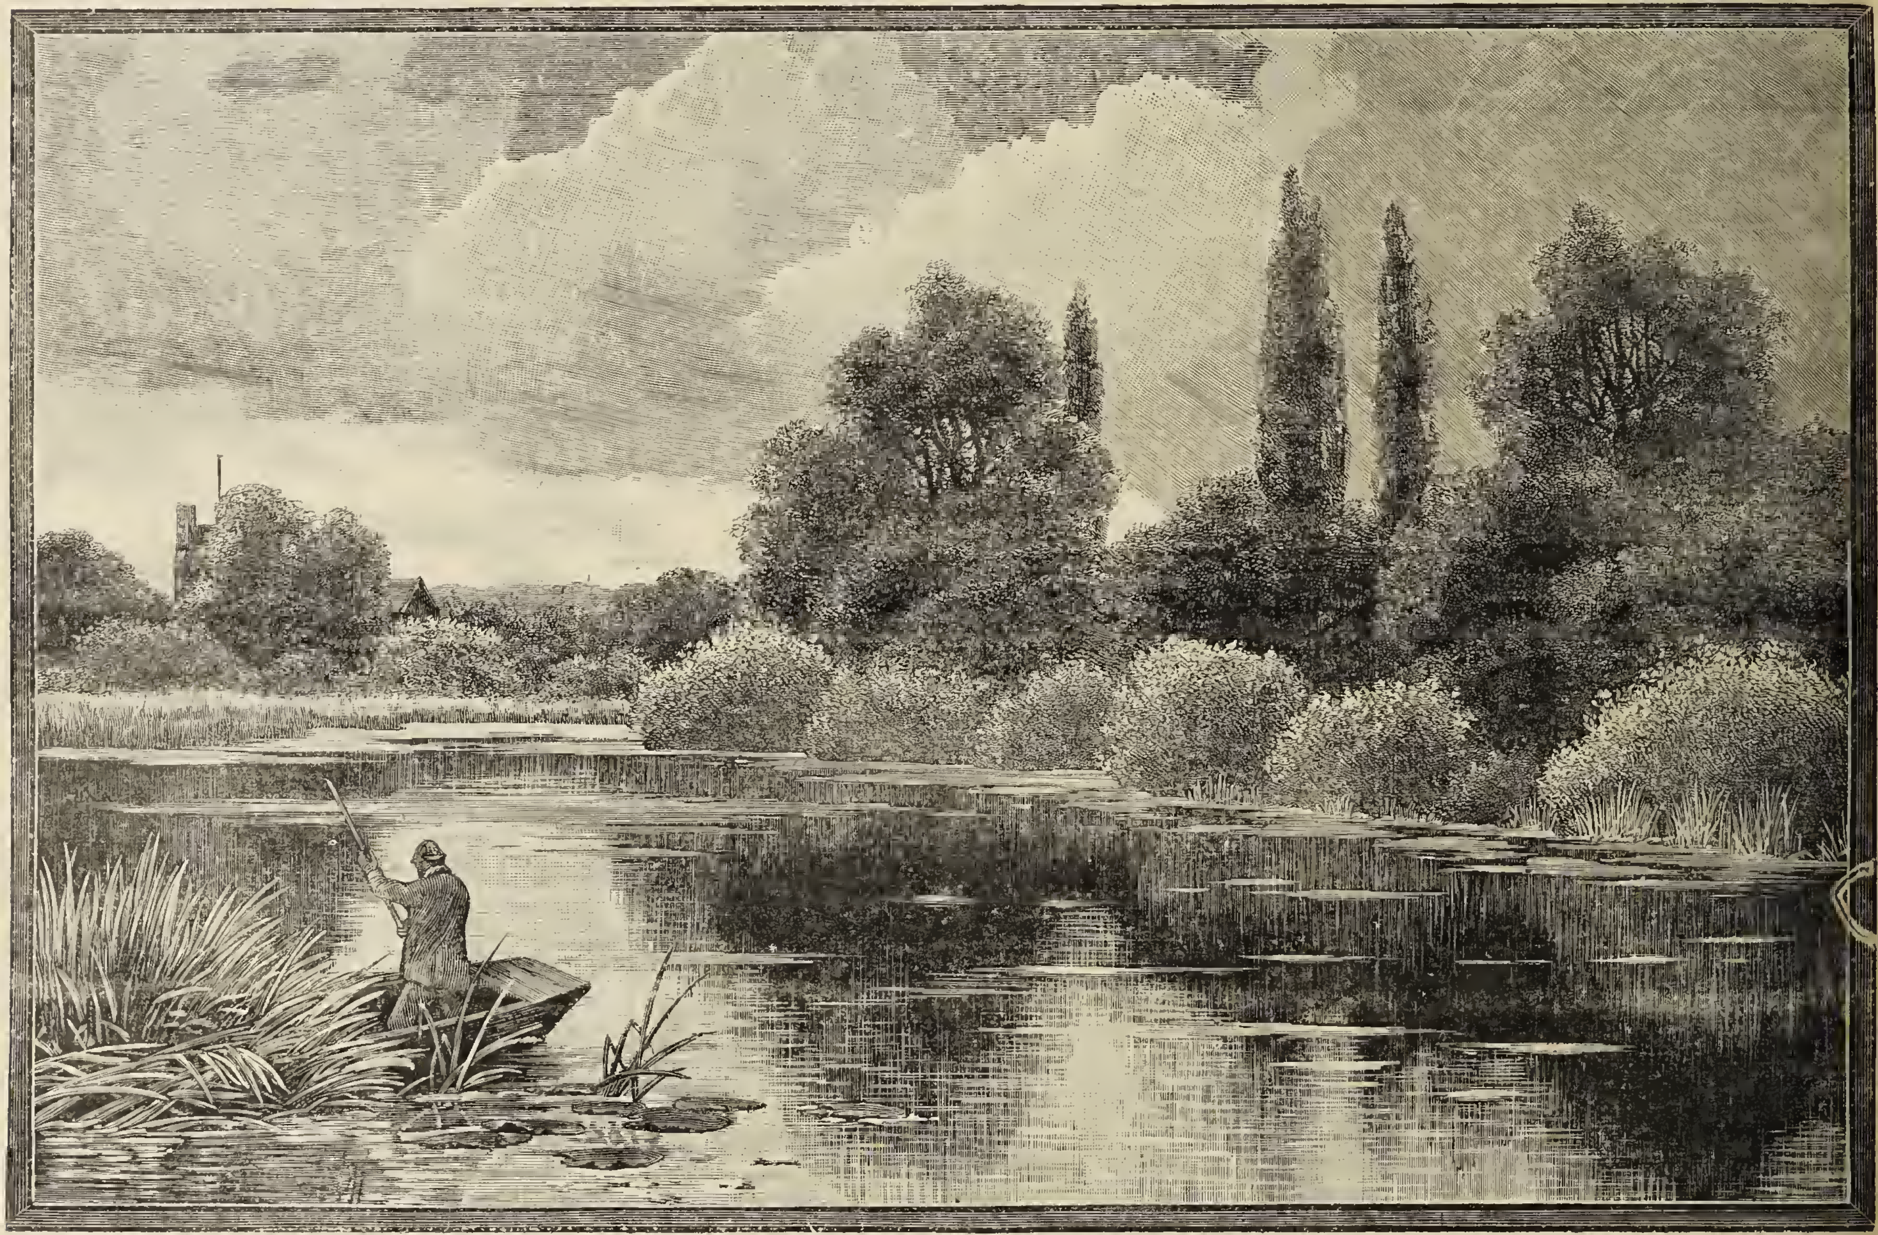
He merely sailed round the next bend of the river, where he met the cart, unloaded his fish, and returned the same night to his starting-place, for a fresh cargo of ice.

The frozen policemen tottered across the snow-covered marshes, and arrived at the Pig and Chicken nearly dead with exhaustion. One of them did not recover from the exposure for months. Thus was it, then, that Darkel, genius and poacher, avenged himself.

THE LEA AT BROXBOURNE.

[SEE ILLUSTRATION.]

No stream is so dear to the hearts of thousands of London anglers as the river Lea, and we feel sure they will appreciate the view of a stretch of it at Broxbourne, which we give this week. We have often published detailed accounts of the fishing stations on the Lea; but the following note from *The Anglers' Diary* will be found useful:—"The Lea holds trout, pike, barbel, perch, dace, chub, roach, tench, carp. The Broxbourne Fishery begins at the lock at Dobb's Weir, at Hoddesdon, and ends at Currant Tree Island. Hotel: Crown, where tickets can be had—season tickets, forty-two shillings, bottom and jack fishing; twenty-one shillings, trouting. Day tickets: bottom, one shilling; jack, two shillings; trout, five shillings. Trout fishing commences on April 1, ends Aug. 31. No person may fish with more than one rod and line. From the 1st of March to the 12th of August no leger fishing with worms is allowed, nor must any lob worm or fish bait be used except by trout subscribers during that time. No fishing for jack allowed from March 15 to August 14. No gorge fishing between August 1 and October 31. No roach or dace to be taken between May 15 and June 15. No perch to be killed between March 31 and June 15. The fishing from Currant Tree Hole to the Aqueduct Lock at Broxbourne is now in private hands, and is strictly preserved."



THE LEA AT BROXBOURNE.

A REMINISCENCE OF SEA-FISHING ON THE SOUTH COAST.

By L. S. G.

Sea-fishing, in which hooks and lines are employed, offers great variety. The fisherman can seek his prey operating from a rowing boat or other vessel anchored in the offing, or upon the waters of some bay or estuary; may fish keeping his craft in motion either under sail or with oars or skulls; may cast a fly from his skiff with a rod; and angle if it so please him from rocks or pier. Mackerel fishing with line demands a fair-sized boat, as often good stiff seas must be encountered in this pursuit, hence the expression, "a mackerel breeze"; and the same description of vessel should be used when anchored out five to eight miles from land whiting fishing.

But we will not follow the larger craft scarce visible from the shore, or the smaller boats riding, heaving, and sinking some few hundred yards from the sandy beach, their occupants content with the capture of pout and dabs; let us turn to the more active sport of trailing or whiffing at the broken base of rugged cliffs, and round rocky headlands in pursuit of bass or pollack.

Comparisons are odious; but this style of fishing, stealing along the shore trailing a spinning bait, or piloting a boat neatly in a swift tide-way, so that the lures may have full play, is as superior to the ordinary hand-lining from a stationary craft as salmon and trout fishing is to angling with worm and float.

Some years ago a friend and I had good experience of bass and pollack fishing on the Devonshire coast. Our beat, or beats—for the whole water could not possibly be covered in one day—lay between Teignmouth Harbour and the Orestone Rock, the Flat Rock, and the Thatcher, near Hope's Nose, at the entrance of Torbay. The southern side of this beautiful bay also afforded excellent pollack fishing between Paignton and Brixham; and lastly at Berry Head we found splendid sport beneath the gloomy cliffs of that noble promontory, and round two isolated rocks and a projecting headland that here rise from the waves. We used a 14ft. boat, built expressly for drawing up on a shelving shingly beach, and fitted with a mast carrying a lug sail and jib, while a small mizen, or "jigger," could be set astern.

Our tackle was comparatively simple—old salmon or pike lines, sufficiently reliable, to which we attached a snooding of thinner line, then came a trace of two yards of the best salmon gut furnished with four brass swivels at intervals. The baits were small Spoons, Phantom Minnows, and red and white artificial Sand-eels; while sometimes we were fortunate enough to procure that best and most killing lure, the living sand-eel. These lines were all weighted on the snooding with boat-shaped leads of various sizes, some heavily for deep water or high tide, others lightly for low water, and some with medium sinkers. In fishing we used two *tell-tales*, pieces of cane about thirty inches long, fitted into blocks to be attached to the gunwale on each side of the boat by wedges, and easily removable when not required. The line was passed through a slit in the end of the cane, and brought in board, the supple wand warning the fisherman when the bait was taken. Well can I remember some summer days on the sunny waters of South Devon, and one in particular, on which I believe we made our biggest bag.

One fine hot afternoon, when there was not a ripple on the sea, and not even the slightest swell, my friend Jones and I, accompanied by one, Smith, hurried to Watcombe Bay, where we kept our boat, and having looked well to our sails and our fishing gear, ran the light craft over the shingle and launched her. "One of the finest days we have had for a long time," exclaimed Jones, who was quite an authority on this sport. "Let us make at once for the Orestone. It is high water at five o'clock; it has just struck two. We shall find bass in the race both now and at the ebb." Smith, an amateur at sea-fishing, took the rudder lines, I pulled stroke, Jones bow, and with a steady Thames swing we shot out from our picturesque harbour, bidding the coxwain steer straight for the nearest point of the big rock, our goal, which towered above the calm water between three and four miles away to the south-east. The coast, beautiful at all times, looked its best. The old red sandstone cliffs, caverned by many an eastern storm, were reflected in the azure depths beneath them, while a fernery of bright green verdure, and even forest trees, crowned their lofty heights, producing strong and varied contrast. We quickly rounded the Quarry Point at Babbacombe, and opened Anstey's Cove, a lovely bay, with snug cottages nestling amidst a sloping bank of greenery above a curved white pebbly beach. Here a light breeze off the shore just rippled the water, and I proposed to hoist the mizen to help us on our way. "Stay," cried Jones, who had been gazing intently on shore as he rowed, "I see that the tide is just right for fishing Black Head; suppose we try our luck along the rocks up to Hope's Nose, and then shoot across to the Orestone?" We turned the boat's bows, and in a minute or two were beneath the grey cliffs, surmounted by a dense wood that forms the coast line, trending away southward from Anstey's Cove. In came the oars, Jones seized the sculls, the rudder was unshipped, the tell-tales were rapidly fixed upon the gunwale, and two india-rubber sand-eels were run out, a red one on the inner, or shore side, under the superintendence of Smith, a white upon the other, under my care.

Jones was right in his estimate of the state of the water, for he had scarcely begun to paddle along some ten yards from the base of the cliffs than Smith's cane bent with a swish, and the long taut line stretching out astern showed we had hooked our first fish. My companion seized his tackle, and while the oarsman slackened his speed, cautiously hauled upon it. "A good fish," he exclaimed; and he was right. Instead of coming home slithering upon the top of the water, our quarry maintained a steady strain upon the cord until near the skiff; then he bored down and tried to reach the masses of long brown tangle we saw waving in the depths beneath. "Out, out, into deep water," I shouted, and a rapid stroke or two baulked the struggling fish in his downward course. Smith played the victim well. It was a case of give-and-take, the hand having to perform the functions of a top joint in rod fishing. How frail the gut looked, how big the fish, as his struggles gave back an alternate sheen of bronze and silver. Then, helpless, our prey splashed upon the surface; I slipped the landing-net under him—we had secured a fine pollack of 5lb. Slap went my tell-tale now, but the game was insignificant. I pulled the wriggling fish easily in over the rippling waves, and swung him into the boat with the comment, "Only a pounder." Again, I had to pull upon my line, but this time the dupe—evidently of no great size—escaped; then Smith became engaged in a struggle, and I netted a pollack of 2lb. for him. It was clear the biggest fish were feeding in the wash of the tide, close under the cliffs.

Now floating, bobbing about, some two hundred yards from shore, we could see the corks of a posse of lobster-pots. A reef lay here, and the boat was circled round, and sculled gently past the row of tiny buoys. Down the windward side no incident occurred beyond the inner line catching the tackle of a lobster-pot, occasioning a good deal of manœuvring on the part of our boatman, lest the thin gut should break; but as we rounded the last cork, and prepared to row along the lee side, both lures, as they swept across in a semicircle, were taken, and the struggles of the frightened fish caused the lines to foul. Here was a mess, both were heavy pollack, fighting and gyrating close to the corks. A moment decided the combat, the biggest—of course the biggest—fish broke away, and the other came twisting in and was duly netted, then we sat down to disentangle the kinked lines. A wet job Smith and I had of it, seated on the thwarts, unravelling the twisted cords, dragging out the slippery sea-weed, and when our gear was again in order we were sculling under the rocks, near Hope's Nose.

The sport here was decidedly slack, but as we approached the head of the spit, Jones, always on the alert, gave a shout and pointed seawards. Some half a mile from the boat there appeared a sudden disturbance on the water. An acre or so of sea had turned a greenish blue, scintillating with silvery sparkling points and flashes, while the phenomenon moved swiftly onwards, leaving an oily wake behind. Above wheeled innumerable gulls, increasing momentarily in numbers, joined by fresh flocks of birds, that had hitherto been lazily sunning themselves upon the cliffs. "Mackerel," we cried. Yes, we were close upon a large shoal of brit, or young fish; the mackerel, bass, pollack, and dog-fish, in pursuit, were hurrying their unfortunate prey upwards to the surface; the sea birds were darting down, claiming victims, and we too now hastened away to take our share of the spoil.

Bringing in our pollack lines, we ran out two small bright metal spinners, Smith was given charge of the tell-tales, I took the stroke oar, and we rowed rapidly towards the troubled waters. There is no use in rowing through a shoal under these circumstances. We started with the intention of pulling round the churning circle, making sure of sport by this manœuvre. Nearer and nearer we drew to the hovering gulls, we could see the glittering small fry leaping in desperation above the surface to avoid their voracious enemies below. Click went the port cane, and up came a mackerel. Before the fish was in the boat the other tell-tale bent, our comrade had his two well-fed gorgeous prizes over the gunwale in an instant; then we paused to alter our baits. There is nothing like a strip of a brilliant mackerel's skin to attract its fellows. The fish being killed, a long triangular piece should be slit off the side with a sharp knife, and placed carefully upon the hook, so as to "wobble" in the water; this forms a killing lure. We removed the spinners and tried this "dodge."

Rowing smartly about in the vicinity of the shoal of fish, the tell-tales worked merrily; Smith had his hands full. No sooner had he pulled in one victim on one side, than the throes of the opposite wand demanded his attention. The green and silver heap of mackerel at our feet numbered over a dozen; then came a more vigorous pull, and the steady strain on the line told of a heavier fish, a powerful antagonist. I threw in my oar, seized the net, and a fine five-pound bass yielded to his fate. "Good," shouted Jones, encouragingly, as our salmon like prey flapped upon the bottom boards; "now we shall find these fellows at the Orestone," and putting our backs into it, we pulled away with a will to that rock, our mackerel lines still streaming out in our wake. Fish certainly were plentiful that day: ere we "eased" at a reasonable distance from the Orestone, we had another half-dozen mackerel. And now we had to prepare for more serious work all prophesied that "big ones" were about.

Contemptuously hauling in the gear which had done us such good service within the last hour, we put out two heavily-leaded lines, one with a small well-polished spoon, the other with a white artificial sand-eel. "A bass on the spoon, a pollack on the eel, before long, I bet," said Jones; and taking to the sculls he rowed for the Orestone, Smith and I each watching our respective tell-tales. The tide was nearly flood at our destination, but whirling eddies still circled over the submerged rocks at the base of the lofty islet, and a strong stream flowed off the southern end. What little wind had arisen during the early afternoon had died away, and the sea was glassy calm, lapping against the iron walls of the big rock, with a hissing murmur, while through the clear waters we could see the waving sea-weed, and masses of broken storm-beaten granite, from whose caverned recesses we hoped to lure our prey.

Our oarsman commenced at the northern extremity, and began to row round the rock which rose from 30ft. to 50ft. above us, covered at the top with long, thin grass. The course was purposely rather zig-zag, but the boat was never farther than twenty yards from the wall-like sides of the sea-girt isle, and our lines swaying to and fro in the eddies must have caused our baits to spin with lively accuracy. Slap went the outer rod, that under my charge. This time it was not a case of hauling in, but pulling up. "A pollack!" we all exclaimed, in chorus, for the fish sank struggling down at once, seeking refuge in the weed, from which we had tempted him. Jones ceased to row; Smith got his tackle in; I fought the battle out. Bit by bit the line came back, I could feel the fish scraping along the rocks, and the fragile gut cutting through the tangle; then came a shoot upwards, a flash of light beside the boat, vain endeavours to run beneath the keel, a contest on the top of the water, and my comrade had our antagonist neatly in the skiff—a fine pollack of 6lb., taken, as had been predicted, on the white worm, and the biggest fish we had yet secured. Again we settled down to our sport, sculling gently onwards, Smith got a 2lb. bass on his spoon; and so fluctuating are the chances of fishing that I brought in a half-pound pollack, which being lightly hooked, we threw overboard to grow and come again. "Not a big bass here yet," I said, "though the tide is still running off the ends and points of the rock, forming splendid currents for them to play in." As I spoke my line slipped off its cane, and twanged like a harpstring against the planks of the boat, then the tight cord raced away from our skiff, the hooked fish dashing along a foot or two below the surface. "A bass," cried Jones. "No doubt of that," I answered, and how I longed to have had that fish upon a rod, as the wet line ran through my hands, scoring my fingers—for my foe tried all the tricks of a salmon, except leaping, but at length, rolling and plunging, he neared the boat—the net hovered over the water, a dip, and our third bass—a seven pounder, joined the heap of slain within our craft.

A stroke or two after this capture and we reached the southern point, for the Orestone does not probably exceed a hundred and fifty yards in length, and here although the tide was beginning to slacken we found a good stream curling away into Torbay. This was the situation we had looked forward to. Jones slowly turned the boat to row round the point of the rock, the lines swept out into the tide, and one after the other both baits were seized. No doubt existed as to the nature of our fish—Smith and I were engaged with bass. They fought well; both anglers had to use the greatest caution lest the gear should foul. The boatman's services were required, Jones threw in his sculls, and stood up flourishing the net. A flash on the starboard side and in came a victim; then a tussle to port, and the other bass glittered in the air and fell wriggling at our feet. For a quarter of an hour we had a lively time rowing backwards and forwards through this race. Plenty of good bass were taken all varying from 3lb. to 6lb. We caught small bass, also a pollack of 3lb., the only specimen of his kind captured here, and broke a gut trace, leaving a spoon behind us in the invisible drowned corks of a lobster-pot. The spoon and the artificial eel seemed equally to attract the fish. We took our prey first on one side then on the other, sometimes both fishermen were occupied at once.

It was now flood, the currents and eddies died away for a space, the waters round the rock merely heaved and swelled sulkily, or leapt in tiny waves, Jones had to row faster, while the bass seemed less inclined to feed, though we took pollack. "Suppose we try the sunken rock," I said; "we will find the bass again when the ebb fairly sets in, a race will then run off the northern point." The reef to which we now steered lay some three hundred yards due south of the Orestone. At all states of the tide an ominous swell rolled over the hidden danger, and in rough weather the waves broke and churned above the rocks, while skippers always gave the spot a wide berth. We were soon cruising round this excellent fishing ground, with our India-rubber sand-eels out as bait, for this was altogether a locality dear to pollack. To-day for some unknown reason these fish were not upon their usual haunt. Our tell-tales had but slight employment; only four fish were caught, but they were not to be despised for size. One fellow, of 8lb., fought so vigorously and determinedly, that we had to tow him out thirty yards from the reef into many fathoms, lest he should scurry down to the sharp rocks, and cut the gut. The cause was apparent when the quarry was brought in—he was hooked outside the mouth. We fished on patiently for a time circling round, over, and across the shoal then we agreed, as the bites were few and far between, to return to the Orestone, and await the ebbing of the tide.

We had been longer "fooling round" this outpost of the big rock than we thought, when we came under the shadow of its riven sides. The tide had turned, streams and currents flowed gurgling towards the offing. Rowing along the eastern face of the mass of towering granite, we took a small pollack or two that only just wagged the cane; these small fry were feeding close under the rock, sheltered from the force of the ebbing waters. But now we came to a fierce race running off the north point. The sea foamed and boiled, rising in curling waves as the tide rushed out channel-wards, and our little boat rose and fell, splashing heavily, as Jones swerved her stern round into the tearing current. For a minute or two the skiff hung in the stream, notwithstanding the exertions of our expert waterman, while the lines straightened tautly out behind. Soon once more we began to forge slowly ahead, and at that instant Smith leapt to his feet and seized his line. The tell-tale was bent nearly double. As my friend grasped his tackle the cord suddenly slackened. I knew what had happened; he pulled in ruefully a broken trace. Another bait had been added to the list of lost. A bass of larger size than usual, perhaps, had seized the glittering spoon; the heavy fish and the strong stream combined had found a flaw in our carefully-prepared gear. Now it was my turn. I received the usual warning, and in an instant felt we had a stout opponent to deal with. Far away in our wake I saw my prey shimmer through a great surge; then he darted towards the boat. I hauled rapidly in, and the contest progressed. With a skilful turn Jones brought our vessel into comparatively calm dead water. Dragging out line, shooting hither and thither, the bass soon exhausted his efforts to escape. Smith desisted from repairing his recent mishap. He came to my aid. Another fish—and a good fish too—rolled from the net. We now returned into the race; both lines were again out, and the boat was about to round the low projecting point of jagged rocks, which formed the north-eastern angle of the Orestone, when Smith's lure attracted another bass, and he commenced pulling in. At the same instant my bait was taken. Jones had to guide us again from the stream, and grasp the net. Both victims were brought in, mine after a short fight proving to be a horse mackerel, brilliant silver and green, like his smaller mates, but larger, stronger, and a coarser fish to eat. Again we plunged into the current, and this time passed the jumble of granite off which the race we had been fishing streamed. The skiff was now in fairly dead water, the rock rose up above us, but in this, the northern end, the waves had worn a deep and narrow cavern, sufficiently broad for a small boat like ours to enter, but not to turn. Looking down into the depths of the cave, the green still waters, by the light of the now descending sun, were seen to be full of bass. Jones rested on his paddles, and we watched them. Like gold fish in a bowl, some travelled slowly round the sides of their cool grot, others would approach the surface until we could distinctly see their hungry eyes, their quivering gills, and the markings on their sides; then with a sudden whisk of the tail they would shoot down amongst the weed. A whole row of fish, too, lay motionless in mid-water at the entrance of the hollow, their heads seaward, as if on the look-out for what chance might throw in their way. "Those fellows inside are at play," suggested Jones. "They will have nothing to do with us, but these boys in the doorway might be tempted," and he commenced to manœuvre the boat.

Shooting out a little, we contrived that the baits should spin invitingly past the entrance of the cave, but the wary fishes we were intent on alluring would not budge an inch. Several times in succession we brought the lures neatly round before their very noses, but the sleepy detachment guarding the threshold of the watery lair refused all charming. We could see them plainly; they never stirred. Then our luck returned to us. Just as the skiff was being twisted about some distance from the rock, with a view of returning for our last attack upon these sulky bass, the spoon was taken, then my sand-eel. We captured these two fish—both fine fellows—and for a merry space, at some fifty paces from the rocky hollow, kept taking both bass and pollack as quickly as we could get the lines out, Jones rowing slowly to and fro the while.

I had a curious experience. Standing up in the stern, paying out my bait, I saw distinctly half-a-dozen bass in a bevy cruising about a short distance astern. I contrived to bring the twisting sand-eel within their ken, when two fish left the shoal and started in pursuit. One fellow (the smallest) outstripped his competitor, and seized the tempting morsel; I held him fast. The other appeared to hunt about from side to side, as if seeking the lure, then darted away, and fell a victim to Smith's spoon, which came hurrying along in the boat's wake. It was a pretty sight to see these game and active fish chasing their prey through the clear water. I saw the whole enterprise from start to finish, and we secured them both.

The sun had now set, a light breeze came stealing up with the twilight, gently curling the waves, affording us a valued opportunity of sailing homewards after the exertions of the day. We set our canvas, and in an hour rippled into Watcombe Bay as darkness fell.

By the light of our ship's lantern we counted our spoil upon the beach. Twenty-five pollack (the largest 8lb.), twenty-one bass (the heaviest 9lb.), nineteen mackerel, and one horse mackerel—a goodly boat-load for inexperienced landsmen, and the most successful by far of many pleasant days passed on the waves, beneath the well-remembered old red sand-stone cliffs.

"HARD LINES."

A FISHING SKETCH.

By Rux.

"Good morning. What can I do for you, sir?" said the Editor of the *F. G.*, addressing Mr. Scribbler, on this gentleman entering the sanctum in St Dunstan's House, one day last April—not the 1st.

"Well, sir, the fact is, I have had a wee bit of luck. *The Scientific Englishman* has just published several articles of mine, on a new method of rearing bees, for which contributions the management of that journal have paid me £50. 'Tis rather riling to an old fisherman to see the splendid salmon and trout, that arrive every day in the London market by hundreds and thousands; and to think of the pleasure these silvery beauties must have afforded some of the knights of the rod, and never have a chance of participating in the sport is truly awful. You see, Mr. Editor, nearly all my life has been spent abroad, where there is plenty of fishing to be had, without being under any obligation to anyone. Fish away; catch as catch can, is the order of the day on the western continent. Here I am, back again in my native country, a comparative stranger in the land; and not having the faintest idea whither to direct my steps in search of sport, have come to you for advice and information. Can you give a poor orphan the straight tip where he can have a few days' angling on the extreme 'Q. T.'?"

"Well, Mr. Scribbler, I very much fear I can be of little service to you. There is plenty of good angling to be had all over the United Kingdom. The free fishing is not up to much anywhere; and if you want good sport you must be prepared to pay handsomely for it, unless indeed you are lucky enough to have a friend that holds riparian rights on some of the rivers. Do you happen to know anyone?"

"Not a soul."

"Well, sir, the only way I can help you in the matter is by inserting a par. amongst the 'Notes and Queries' of my Journal. Write down exactly what you want, and I'll see to it."

"Thank you very much; I will do so. Good morning, sir." And the Scribbler departed.

In the next Saturday's issue of the *Fishing Gazette*, the following notice appeared:—

"Will any reader kindly inform me where there is some good salmon or trout fishing to be had? Must be cheap; free preferred. Distance from London not to exceed five hundred miles. Please address, A. Scribbler, 11, Queer-street, Soho, W."

Several days elapsing, and receiving no replies, the journalist had almost arrived at the conclusion that his case was hopeless, when, lo and behold! one fine morning he was unceremoniously interrupted in his studies by someone rapping violently at his door.

"Hollo, Eliza, is that you?" he inquired, hastily answering the summons. "You frightened me. I thought it must be either coal, milk, or bread. What the devil is the matter?"

"Oh, lors! no, sir! It's only me!" replied the maid-of-all-work, breathing heavily from a sharp run up three flights of stairs. "The postman is just come; and oh! Mr. Scribbler, there be such a 'eap of letters for you down in the 'all. There be black borders on some of 'em. The landlady thinks as 'ow there must be summut gone wrong, so, says she: 'Heliza, go hup and tell the third floor back.' Oh, if it be that hold hant of yours that be dead—she that is to leave yer all the money—won't it be jolly? Yer didn't give me nothin' at Christmas. Ye'll not forget the new hat, will yer, Mr. Scribbler? Hoorah!"

"Shut up, you little goose! I have no aunt with any money to leave. I only pretend I have, just to fool the confounded duns. There's a shilling for you. I will be down directly."

Suiting the action to the word, Mr. Scribbler, in journalistic dishabille, bounded down the stairs, and taking possession of his correspondence, once more retired to his den to peruse it.

"My eye, what a pile!" he remarked, as rapidly breaking the seal, he proceeded to read No. 1. It was from an agent in Edinburgh, informing him that he had on his books some choice fishing rights to lease, varying in price from £100 to £3,000 a year, according to extent and locality. No. 2 was likewise from Scotland, and gave him to understand that first-rate angling could be had on the Tay at £1 a day, exclusive of gillies. No. 3 was from the proprietor of an hotel situated on the Tyne: Capital salmon fishing—terms four guineas a week and all the fish caught; which, however, the angler had the privilege of purchasing at the rate of one shilling and sixpence per pound.

"Great Scott!" he exclaimed; "what bosh! I advertise for cheap or free fishing, and they answer me as I were a duke or a millionaire."

Then followed several epistles of a similar description, kindly worded and no doubt kindly intended, but the terms offered equally impracticable, as far as the poor journalist was concerned. Each letter in turn was consigned to the flames, till finally No. 20 was reached. This proved to be from a correspondent in Ould Oireland, and being a regular eye-opener, must be given at full length:—

"Ballycumnavaddy,
"Co. Limerick,
"Thorsday.

"ONERED SIR,—Big Mike Muloney, the Wather Balif, takes the *Fishing Gazette* once every week, and oftener if he can get it. I sees how your a wanton some throut and samon fishin'. Shure it's I that's sorry I didn't know it four year ago. Cushla Macree, but it's myself could hev gin ye a week or a fortnit. I has a bit of a shebeen, near the bridge that connicts the Blackwather with the Byne—two darlint strames full of fish, and they josslin won-another to see which of 'em will be first into the basket. But times is changed, Captin, and the fishin' is all tuck up, so it ain't isy to git a day, let alone a week or two now your worship. If yer oner comes, I'll do me best to show ye sport, but there's only one way it can be worked, and that's by keepin' the bottle to big Mike. He's the Wather and whisky balif too yer nor. There's plinty to ate, with lashins to drink, and all fishin' matarials kipt constant on the primis. I'll be waitin' yer onor's reply.—
er servant, "TIM HOGAN."

"Well, by George, this is a good one. Proceed to Bally—what a name! Gin up the river balif—go fishing—sudden appearance of the owner—before the beak—charge, poaching—fined £10, or month."

"It won't wash," exclaimed Scribbler, who commenced to perform a sort of Hibernian jig round the *multum in parvo* room, much to the astonishment of Eliza, who once more made her appearance, bringing the occupant's clean linen.

"The third single back be a cuttin' hup horful," he remarked to her mistress, who she met at the foot of the stairs. "I think his old hant 'as been and died, and left him nowt; or else he must have lost his whole bloomin' famerly. I never seed the likes afore. He quite frighted me."

"There, there! go along, you silly girl!" remarked Mrs. Gunn. "Go to your work. Never mind the attic—he's all right."

Once more alone, Scribbler continued to examine the remainder of the correspondence, till finally only one was left. A last chance, a forlorn hope: but, alas! like all the others, it was equally disappointing. From its contents he learnt much at he knew, and a little he did not want to ow; the writer informing him that the Dee was excellent salmon river, but that the best pools re all taken up.

"Did Mr. Scribbler know any of the landed ntry in Cheshire, or was he acquainted with y of the Members of Parliament of the counties rough which this splendid stream flows: if so," e letter continued, "you are all right, will be ll received, and A1 sport may be anticipated."

"This is the stupidest epistle of the lot," mused the journalist. "Do I know an M.P.? Good gracious! I wonder the idiot did not ask me if I was a friend of some of the Royal Family, and advise me to apply for a day or two on Virginia Water, with the use of the State Barge! Let me see, who do I know? There's Bread, his knowledge of piscatorial pursuits are strictly confined to Billingsgate, and he probably knows as much about landed gentry as a pig does about keeping Christmas. Then there's old Barley Corn, of the Three Tuns; by Jove, he might know someone. I purchase my modicum of beer from him; one good turn deserves another. Happy thought, interrogate old John; take a drink and drown dull care, nothing like killing two birds with the one stone."

Hurriedly slipping on his overcoat, seven-league boots, and wide-awake hat, Mr. Scribbler proceeds to the Three Tuns.

"Do you happen to know anyone who has any fishing, John?" inquired the journalist, who was evidently on pretty familiar terms with the landlord.

"Lor' bless yere heart, no, not one. I was down at Margate once, and got acquainted with some of them sailor chaps, as used to be harf their time up to their waists in the water a-catchin' shrimps. Them is the honly fishers I knows. Now, hif hit had a been a 'orse you was a wantin' to go after 'ounds, I could have 'elped yer home; but I ain't a got no friends river folks."

Thoroughly disgusted, Mr. Scribbler wishes the landlord adieu, and proceeds towards the Strand. As he strolls along he accidentally meets an old acquaintance, Jones.

"Ah, Jones, how are you? Where have you sprung from?"

"Just returned from Norway, dear boy. Had such capital sport. Grand salmon fishing, but awfully expensive, and very difficult to procure. My friend Lord Sprouts pays £3,000 a year for his right on the Sundaten river, and only obtained it at that price by a mere fluke."

"I wanted a week or two's salmon angling," broke in Scribbler. "Not much chance for me in Norway, I fear?"

"None, dear boy, unless you have had the extreme felicity to strike oil, since last we met. If I hear of any cheap angling I will let you know. Ta-ta."

Brown was another friend the disappointed journalist encountered during his rambles on this bright spring afternoon. He (Brown) had just returned from a two weeks' fishing excursion in Holland.

"Yes. How did you get on? Have good sport?" was the natural inquiry?

"No, my dear fellow, my luck was something awful. Some months ago I bought a confounded foreign guide-book, which stated there were plenty of salmon fishing in the Dutch Rhine. This information, as a matter of fact, is correct, but is most misleading, as the fish I found were only to be caught with nets. I purchased before leaving London a new 17ft. rod, several lines, innumerable casts and flies, and no end of other gear. Quite sickening, never got as much as a bite the entire fortnight, although the water was in first-rate condition, wind in the right direction, sky all that could be desired, and fish in abundance. They would rise occasionally–wink, no, not wink, but stare at me–shake their heads or rather their tails just as much as to say, 'Ah, we're a bit too fly for you, old fellow.' My brother went to Connemara, in the West of Ireland, last month, but returned from the distressed country having encountered similar disappointment. There are lovely streams in the Irish Highlands, which actually teem with trout and salmon, but they are all Home Rulers to a fish! and will have nothing whatever to do with any angler, unless he be a Nationalist or one of the Little Ireland party. But you, Scribbler, I suppose you have been over to the Emerald Isle yourself, testing the cunning of your hand in the gentle art? Your people have a river frontage on the Slaney, have they not?"

"Yes; but they can't fish it."

"No; why not?"

"Well, you see, Brown, things are somewhat changed in the land of Erin during the last few years, to what they used to be. Formerly land in Ireland was in demand, large sums of money being paid to become owners of the soil or even tenants; the streams, however, were mostly free. No one caring about them, any angler might whip away till his arms ached; but now no rents are paid, and owners of estates could not get the price of a gallon of whisky for a twenty-acre field. On the other hand, anyone who is the lucky possessor of a few salmon pools, a trout stream, or even a duck pond with a few pike in it, has but to name his price, and if not too exorbitant the sale is concluded in a brace of shakes. Times are bad, so my Governor has leased his half-mile river front."

"But surely, Scribbler, the fellow who now holds the right is not so mean that he would refuse you a few days' fishing over your own people's property."

"By Jove, he is, though. He's as jealous of his newly-acquired privilege as he might be over the girl he is spliced to. A week's fishing, indeed. The same fellow wouldn't give his own father an hour's leave. If he heard of my casting a line on his preserve, he would summons me before the beak; and if he were to catch me in the act—mind you, he is a great big fellow—there is no doubt but that he would take the law into his own hands, and probably chuck me in the stream, and then amuse himself by angling for me with the gaff for the remainder of the day. No, sir, you won't catch me giving him any such chance."

"Good heavens, how dreadful! I should give the Irish barbarian in charge of the police."

"Oh, you're mistaken, Brown, my boy. Mr. Braggit isn't Irish; he's an Englishman; hails from London; something in the City. He and two or three other Cocknies, with pots of money, are now in possession of nearly the whole river, some fifty miles in length. They arrive in couples, relieving one another regularly during the season; so you see there is no chance for an outsider."

It was late in the evening when Scribbler wearily wended his way homeward. He had in the hurry of the morning forgotten to bring with him his latchkey, which necessitated his ringing at the front door, the summons being quickly answered by Eliza.

"Another whopper!" remarked the slavey, as he entered.

"Another what?" he replied.

"Big letter with a black border, sir. Oh, it's such a thick 'un. Must be a hunkel this time, I'm thinkin'. I'm sure you're in luck; I seed it in the coals in the kitchen fire, and so did missus this werry arternoon."

"There, there Eliza; don't worry me, like a good girl."

"Worrit you," expressed the maid-of-all-work, rather sorrowfully. "I wouldn't do that no hows. I wish you was rich; and I does pitty you all alone in that 'igh hup dormintary, as yer calls it. How I'd like to see yer in the parlers, 'stead of that nasty forrin man."

"Go to the devil, will you?" was the ungrateful rejoinder; and seizing the letter, the now rather excited journalist bolted up the stairs.

On reaching the little cock-loft, the two-bob lamp was quickly lighted, the smouldering embers in the grate were violently poked into a blaze, and the author of scientific bee-keeping, with throbbing heart and fresh hope dawning on his troubled brain, seated himself in the easy-chair—an old family heirloom—when having adjusted his pet goggles, he proceeded to investigate the contents of the "thick 'un."

"From old Meekins, by Jove! Luck at last," he joyously exclaimed as he perused the following satisfactory little billy-dux:—

"Crab Apple Lodge,
"Heatherington, N.B.
"April 26, '91.

"MY DEAR SCRIBBLER,—I received quite a surprise when I read your paragraph in last week's issue of the *F. G.* Thought you were dead and buried long ago. You are (excuse the simile) just like a 'Jack-in-the-box,' appearing and disappearing as if by magic. Where the deuce have you sprung from now? If I understand rightly, you wish to have a few weeks' good salmon or trout fishing on the cheap, which, I fear, will be very difficult to find within the domain of the British Isles. Your limit of five hundred miles from London is certainly a unique idea, but affords one a chance of putting you on a lay, as the Americans call it. My advice is, lose as little time as possible, and proceed to Galicia, in the north of Spain. I enclose full directions (rather voluminous, I fear) of the *modus operandi* necessary for the trip, which, if followed, will most assuredly lead to a successful tour. I pledge you my honour that I am neither building castles in the air nor erecting them in Spain, when I state the climate is delightful, the senoritas charming, the fishing A1, and the streams as free to the angler as the air he breathes. Take with you a plentiful supply of everything necessary for angling, and my very best wishes.—Yours ever, ISAAC MEEKINS.

"P.S.—On your return, let me know, either by letter or through the medium of *F. G.*, what sport you have had."

The next morning Scribbler was up with the lark, and there was such a ringing of bells as had never been heard before during Mrs. Gunn's tenancy of No. 11, Queer-street.

"What's all that noise," inquired the good lady, interrogating Eliza on her journey from the attic.

"It's the third floor, marm," replied the maid-of-all-work. "He's a ringing for his boots and 'ot water. He doesn't want no breakfas', as he's a goin' hout."

"Good gracious!" broke in Mrs. G.; "what's come to the man?"

"I'm sure I doesn't know, marm. He's a packin' hup. I thinks he's a goin' to a funeral and wants to buy some mornin'. He's horful queer. Shouldn't be one bit surprised if he was to kill hisself. Don't yer think he oughter be watched, marm?"

"Watched. Fiddlesticks! There, there, fetch him his boots and water, and tell him from me to make less noise, and not to be disturbing the house at this hour of the morning."

"Yes, mum, I'll tell him," answered the slavey, as she vanished to the basement.

All the morning and nearly the whole of the afternoon was spent by Scribbler in visiting fishing tackle shops, and it was past four p.m. ere the cab with a full cargo of fishing appliances dropped him at the door of No. 11. In overhauling the packages he discovered, much to his disgust, that the most important parcel of all others—viz., one containing a large assortment of flies, had accidentally been left behind, so a second journey was necessary to recover the lost property. During his absence the inquisitive nature of woman prompted Miss Eliza to make a minute inspection of the goods awaiting transmission to the Sunny South.

"Whatever be this for?" she said to herself, examining the long canvas case which contained the butt of the rod with its various joints. "Well, I never, if they ain't walking-sticks; and such boots, I never seed the like to go to a funeral with. Why he ain't a bought a single stitch of black close, nor never a 'at-band. What a fright he will look a goin' to a 'ouse of mornin' in that old tweed suit."

"Hollo, Eliza!" shouted the journalist, who once more returning, entered quite unexpectedly—"examining my kit, eh?"

"I was honly a settin' of 'em out of the way," whimpered the surprised maiden. "You surely ain't agoin' to see the last of yere hold hant in them boots?" she added, quickly recovering her equanimity.

"Aunt be hanged, Eliza; I am going away to-morrow for six weeks' fishing on the Continent. Go and tell Mrs. Gunn so."

"Well, did hever anyone hear the like? Goin' a fishin'?" And Eliza fled to impart the intelligence to her mistress.

On the following morning the nine a.m. express was bearing Scribbler to Liverpool *en route* for sunny Iberia.

Space at present will not permit, but with the sanction of the Editor, in the sweet by-and-by, the readers of the *F. G.* will receive a detailed account of what the angling tourist took with him, how he reached his destination, of the frolicsome time he spent in the famous Peninsula, and the sport he had on the crystal streams that flow through the lovely valley of El Viergo.

Gentlemen, that vale is truly a "Jim Dandy."

THE salmon rod-fishing season for Thurso, Naver, Borgie, Halladale, and Hope commences in about three weeks. The opening of the Halladale might, with advantage to all interested, well be put back a month; and as for the Hope, which is by no means an early river, it is difficult to understand the reason for its season commencing long before there are any clean fish "up" to fish for.

DANIEL WEBSTER'S FISH-STORY.

SOME years since Mr. Webster started off from Marshfield on a trouting expedition to Sandwich, a neighbouring town of Cape Cod. On approaching the fine stream he alighted from his waggon, and just then he met the owner of the farm through which the stream ran.

"Good morning," says Webster, "is there any trout here?"

"Well," says the farmer, "some people fish here, but I don't know what they do get."

"I'll throw my line in," says Webster, "and see what there is." Webster walked the banks of the stream trying his luck, and the old farmer followed him. Soon Webster remarked, "You have some bog on your farm."

"Yes," says the farmer, "that ain't the worst of it."

Fishing still farther along, Webster says, "You seem to have plenty of mosquitoes here."

"Yes," he replied, "that ain't the worst of it."

Webster still kept on throwing his line into the deep pools, and then said, "You have plenty of briars here."

"Yes," said the farmer, "and that ain't the worst of it."

Mr. Webster, getting somewhat discouraged on a hot August day, bitten by mosquitoes, scratched by briars, and not raising a single fish, dropped his rod and said, "I do not believe that there is any trout here."

"And that ain't the worst of it," says the farmer.

"Well," says Mr. Webster, "I should like to know *what is the worst of it?*"

"*There never was any here!*" says the farmer.

Mr. Webster enjoyed the joke, and often told it to his particular friends.

A PLAGUE OF MICE.

SINCE the days of Johnny Armstrong of Gilnockie, Doughty Dan o' the Houlet Hirst and other famous Border Reivers, the "debatable land" been almost free from invasion, the '15 and '45 excepted, until within the last twelve months, when the mice pest set in again with redoubled fury. Talk about a "Raid on the Border!" Why, the whole country-side is over-run with a mighty army of mice, from Selkirkshire to the Solway Frith, and the Duke of Buccleugh (like his ancestor of old, "The Bold Buccleugh," who bearded Queen Elizabeth after he had rescued Kinmont Willie from Carlisle Castle) has girded on his armour and declared war against the innumerable host which has dared to encamp upon his territory. Professor Huxley says, when he gave a recipe for producing clover:—

> "The more old maids, the more cats;
> The more cats, the fewer field mice;
> The fewer field mice, the more humble-bees;
> The more humble-bees, the more clover."

His Grace of Buccleugh, who is the proprietor of a considerable part of the country affected, has taken the matter in hand, with the view of exterminating the vermin. In order to illustrate the gravity of the situation, the following advertisement from a Border weekly journal is here reproduced:—

> "MICE PEST.—Wanted at once, twenty cats; must be good mousers; with kittens preferred.—Apply to S. HYSLOP, Langholm."

"With kittens preferred." Mind you, that's a wily advertisement! Large tracts of land have been virtually denuded of pasture; and although birds of prey have somewhat increased in the district, they have made no material impression on the vast multitudes of mice which swarm the ground. Foxes are eating the vermin; but dogs, on the other hand, are not good mousers; and there is a hue and cry throughout the Border land for cats of all descriptions. One shepherd, it is said, has killed over a thousand mice with his "knibby," or crook, and a sheep farmer has over one hundred cats at work on a hill pasture. What a grand hunting country it must be for those hundred cats! If owls and other kindred birds of prey had not been almost extirpated fewer mice would now exist on the Border. What is to be done? The plague is worse than the rabbit nuisance in Australia. Rabbits are toothsome food, but no one would care to dine upon mice.—*G.*

SOME ACCOUNT OF JOHN YOUNGER.*

AUTHOR OF "RIVER ANGLING FOR SALMON AND TROUT.

MR. YOUNGER was what is emphatically called a "character." Having a thoroughly "independent mind," he thought out all questions within his reach to the best of his no small ability; and his originality and quaintness of style in expressing his ideas are at once apparent to the readers of his books. He died in 1860, in his seventy-fifth year, having spent a long life at the awl and "lingle end," beyond which, however, his thoughts soared to the dreamland of fancy. To give an idea of his attainments would be difficult. He was at once a poet, a naturalist, a geologist, a philosopher, and—a great deal more—a thoroughly true man who had the courage of his convictions. He was an original rather than a great man, but had his talent been properly cultivated, there is no doubt that he would have risen to eminence in some particular department. Mr. Younger was one of those who were called out by the "false alarm" of 1803. He obeyed the summons, albeit he expresses a great aversion to war. Robert Burns he admired sincerely, but cared less for Sir Walter Scott.

This notice of Mr. Younger we will conclude by the following extract:—

He was described, when verging towards his seventieth year, as "still active and athletic, of tall and commanding stature, and with the mien and presence of a nobleman; his stalwart frame, the correct and yet imperfect embodiment of his powerful mind; simple and unsophisticated as an infant, though rich in both joyous and sad experience; not unread in books, and of men and things an incessant, deep, and successful student; his workshop the village forum, himself a true oracle; the well-worn joint-stool fronting his own occupied day after day by listening visitors of all ranks, down to the sauntering angler and muse-struck ploughboy; a keen politician, without a spark of partizanship; a caustic satirist, who never made an enemy; a true philanthropist, without sickly sentiment; a real Christian, without sectarianism." That he was supremely original in some of his conclusions, and bold in his publication of them, may be seen in his sentiments upon Sir Walter Scott, for whose writings he, a Scotsman to the very tips of his nails, "did not care at all." He looked on the Waverley literature as "old piper stories," "dwarf and witch tales," and "monstrous caricatures of Scottish manners;" and he could never be induced to read one of the novels or romances through, or, indeed, to look at it twice—the circumstance of Scott being an anti-Reformer giving emphasis to his feeling of contempt for all laudation of the bad old times, when might was held to be right, superstition to be religion, and prejudice principle. The Reform Bill he hailed as a great and just measure, constituting "an inestimable general privilege," which "would exercise a wholesome influence over the tergiversations and abuses of public trust by the governing few." On the Corn Laws he naturally vented his hottest ire, summing up their evils in a "Scotch Corn-Law Rhyme," published in 1841—a rugged rhapsody truly, yet instinct with sterling truths. He was opposed to war in all its phases, as the following sentence will show:—"Has humanity not yet been long enough debased, running with dirks at their hips, after their worse than wooden gods, whom they call their chieftains?—ready at their paltry bidding to rip the life-blood out of the man whom God has created to be their rational neighbour, and then sent home to starve with their poor, degraded wives, and those who should have been their rational offspring, yes, and in cottar-hovels, scarcely deserving the name of a shelter! Were men not stone-blind, blank, and morally ignorant, could they submit to such things, or follow the wicked to war, when they have simply to agree in saying, 'We nourish the Christian principle of peace and good-will to men, and decline to kill each other?' And in such case what profane and dominant ruler could force them? What could an emperor of here or there say, should the millions say, 'We will not fight; so keep the peace yourself, or we will choose another servant to administer an equitable government to us?'"—*Hawick Express.*

SOME JOTTINGS OF AN AMATEUR FLY-DRESSER.

By Val Conson.

The Fresh-water Shrimp.

I sometimes wonder whether a good many of the soft hackled wet flies are not taken by the trout for the fresh-water shrimp. His shape when in motion in the water is a curve not unlike the outline of a well-dressed hackle fly (Fig. 1).

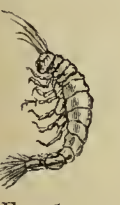

Fig. 1.

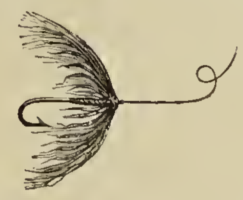

Fig. 2.

Stick a hook through the middle of him and there you are (Fig. 2). The colour of the shrimp varies from a pale translucent flint pebble colour to a deep olive green. The shades of the Golden Plover hackle very nearly reproduce the darker varieties, the golden tips very effectually reproducing the legs. Some of the partridge and woodcock hackles are not bad imitations of the lighter shades. The opening and closing of the plumes of a hackle fly not unfairly represent the peculiar jerking motions of *Gammarces pulex*. The body—if the colour be kept dim and in harmony with the hackle—is little off-set to the illusion. Thickish dressing is better than spare for the purpose of imitating a shrimp. I made several ingenious and singular efforts at reproducing the shrimp before this brilliant idea occurred to me. They were more ingenious than elegant, and were mostly combinations of partridge and yellow silk. This was the sort of thing (Fig. 3).

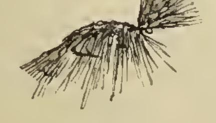

Fig. 3.

The Soft Hackle.

I turned a hackle fly loose into a white china conduit a few days ago and turned on the tap. The fly was dressed with a black metallic starling hackle, with a body of bronze herl, and it rolled about the bottom, writhing and fighting and kicking in a manner so live and uncanny I was almost afraid to touch it. No wonder that in a rough water Sir Trout is best taken with the hackle fly. In a smooth steady stream the South country floater s Queen.

Floating March Brown.

Many winged patterns of March Brown are described with a partridge hackle dressing for legs. But if you are dressing on a 1 or 2 hook, how are you to get your hackle short enough in he fibre without cutting the points? There *is* one way—viz., to cut the other ends and to make your hackle with the shortened fibres spun on a stem of silk. But it is difficult to dress.

The Origin of Fly-dressing.

Who was the inventor of the artificial fly? I often think with admiration mingled with envy of hat great man who made this advance that has been a boon to thousands. It was either genius of a very high order or a fluke of the most fortunate. But he must have had some of the immortal fire in him to have caught at this opportunity. Was ever such advance made in the art of ngling before or since? People call Walton the father of the Craft. But he was in truth only a humble follower of this great unknown whose memory is blessed for ever. Generations of anglers with the fly must have passed away before even uch proficiency in dressing as Walton possessed ould have developed itself. Time must have been required for the evolution of the fly-rod. Things moved more slowly in those days than these. And to think how many blatant nonentities are amous!

Hare's Ears.

One of the most useful spring flies on the Itchen the Olive Hare's Ear. This is by no means the rdinary Hare's Ear, with or without gold rib or ag. It is dressed in all respects as an Olive Quill, xcept that no hackle is tied in, and that after inding down the Quill and cutting off the loose end, you spin a little hare's ear fur of a dark shade, appropriate to the Quill, on the silk, give it two or three turns behind the wings to force them up, and then finish at the head in the usual way. Comb out the dubbing with a pin, and serve floating cocked. Now Mr. Halford's explanation of the success of the Hare's Ear is that it represents the Olive just hatched and still standing on its discarded shuck. I have floated a gold-ribbed Hare's Ear on a glass of water, and looked at it through the bottom, and think the explanation very likely correct. The remarkable thing is that the Hare's Ear fur shows so little, and that one sees through it so clearly the translucent olive of the silk. But flies of hundreds of shades hatch out and stand on their shucks, and there is no reason why the dark spring Olive should have a monopoly of that imitation which is the sincerest flattery. It is true that Mr. Halford gives two patterns, which are akin to this—viz., No. 8, Hare's Ear Quill: *Wings*—starling; *Body*—Peacock Quill, dyed canary yellow; *Legs*—hare's fleck (from outside shoulder of hare); and No. 22, Ogden's original pattern: *Wings*—pale starling; *Body*—pale primrose silk; *Legs*—lightest fur from a hare's face, spun on pale yellow tying silk. But I never saw the former in any shop but Holland's. The latter is almost a Whitchurch Dun. Holland uses, not the fur of the hare, but the very wiriest hair of the face (always excluding the whiskers) which he can find. For my part I don't see why a long series from Blue Quill to Pale Watery Dun, dressed on this principle, should not be a success. At any rate, I am dressing such a series for the forthcoming season, and look forward to killing well with them. They take about half the time of a hackled-winged floater to dress.

Hampshire Series.

If I had to pick out a short series of flies for the Hampshire rivers, I think I should choose—

(1) Hare's Ear (gold rib), 0 and 00, and several shades.
(2) Olive Quill, 0 and 00, and several shades.
(3) Red Quill, 0 and 00.
(4) Ginger Quill, 0 and 00.
(5) Blue Quill, 0 and 00, and several shades.
(6) Iron Blue, 00, A. and C. of Mr. Halford's patterns.
(7) Quill Marryat, 00, for August and September.
(8) Red Spinner, 0 and 00.
(9) Whitchurch, 0 and 00.
(10) Wickham's Fancy, 0 and 00, and 000.
(11) Pink Wickham, 0, 00, and 000—a large stock.
(12) Alder.
(13) Red Ant (in season).
(14) Coch-y-Bondhu.

I don't know any others really indispensablo.

Pink Wickham.

Apropos of this fly, the most aggravating of all flies to dress, I desire to record my experience that it is a fly almost best worth dressing of the series. It is a wonder. Only once of late years have I known it absolutely fail, and even then it brought me up one good fish, which I lost in the morning, and in the afternoon another one which I killed. It failed in the middle of the day, when the fish were smutting gorgeously. By a fluke that day I dropped on to something that tempted the fish—a big dark Olive, soaked and cast, undried almost on to the nose of the fish. With that I took four and a-half brace between one and 3.30 o'clock that day, and there was not a trace of Olive of any sort in their bellies. It was all smut, smut, smut. Next day the fish were smutting as steadily as ever, but not one could I tempt with the wet, dark Olive, but I had two and a-half brace, mostly with the Pink Wickham. It is a most delightful fly to drop almost on to your own bank, almost on to the nose of your trout. Dressed double, he floats like a haystack, for just long enough for you to see a black bulge absorb him, and then—stand by with the landing-net.

Pale Watery Dun.

This is a very aggravating fly. The fish will, however, often take a Blue Quill when it is on. But it is in the evening that it assumes its most exasperating form. Myriads of little glassy spinners, like jenny spinners, only with greenish yellow instead of mulberry head and tail, go dancing up and down in the last rays of the setting sun. At sundown the fish begin to rise, and refuse everything you offer them, till your patience is exhausted. Sometimes a stained gut or scarlet wool bodied Red Spinner will tempt them to a splashing rise. But it is thirty to one against their fastening. I have just fluked on to something that looks a good imitation of the Spinner of the Pale Watery Dun, and if I have the luck I will try it next year. *Wings and legs*—Palest Badger cock lightly dressed; *Body*—Finest end of flat tawsy gut from the waste part of the hank undyed; *Whisk*—Cream cocks hackle; *Silk*—Orange yellow tied at head only, the gut being worked on the bare hook; *Hook*—00 bronzed, not blue.

Hooks.

I don't care much for 000 hooks. A short-shanked 00 makes no bigger fly, and holds five times as well.

The Blue Wickham.

Turning over my Halford I have just noticed a dressing of a fly I never used or even saw:—The Golden Dun: *Wings*—Pale coot; *Body*—Flat gold; *Hackle and whisk*—Dark-blue Andalusian; *Hook*—00 or 000, and his note is "very successful with both trout and grayling when feeding on smuts." This is really just a Blue Wickham. Anyhow, we will try it.

Creepers.

To return for a moment to the Pink Wickham, I once caught a trout with one on a Monday evening with 18 inches of gut hanging out of his mouth, attached to another Pink Wickham, of which he had reft me by force on the previous Saturday, and in his mouth when I landed him were some eighteen creepers more or less alive. I took him in a sharp current, and I have ever since been vowing to try there with an imitation of the larva of small Duns, and I have even gone so far as to dress a few; wingless, almost legless, and with short whisks. I daresay some day I shall carry out my resolution, and then we shall see.

Lock's Fancy.

Mr. Walbran once sent me a set of three experimental dressings of the Little Pale Blue Dun for North-country waters. None of them seemed to me quite so likely as Lock's Fancy, a South-country rendering of the olive shade of the Pale Watery Dun, the same fly. This is dressed: *Wings*—Pale starling; *Body*—Floss silk of a yellow that turns green when wet; *Legs* and *whisk*—Olive-dyed hackle to match body. I wish I had had the pattern in 1888 on the Coquet. For some evenings in succession, between six and seven there was a huge rise of these flies, and the trout went mad. They would rise and slap the flies down under the very point of my rod as I stood in the water, but not a fish could I get while the rise lasted. When it was over, there was a chance with the Great Red Spinner or the Coachman.

Whitchurch Dun.

This is a great fly while it is on. The rises last a short time—ten to twenty minutes, but are fast and furious while they last. I was fishing two springs ago with a friend when such a rise came on. My friend had the good fortune or good judgment to light on to the Whitchurch, and killed a leash while the rise lasted. It did not yield me a fish. It is useful in April and May, and again in July, August, and September. In the early months the rise usually occurs with a strong down-stream wind. There is a very pale dun which rises during the May-fly time, very like it, but it is better imitated by Flight's Fancy, which is a pale variety of Whitchurch, with a fine, flat, gold rib. This year I was on the Itchen above Winchester for a day with the May-fly. The day opened with a sprinkling of Alder. Between ten and eleven the drakes began to hatch out, and there was a scattering rise all the morning and afternoon till nearly four o'clock. The fish took the fly fairly well up to 1.30 or so, lying anywhere all over the stream. At about 1.30 a singular thing occurred. Though the drakes continued to sail down in undiminished numbers, the trout all drifted under the right bank, and lay with their noses to the surface, sucking down rather than rising at a delicate pale dun of tiny proportions compared to the May-fly, and, while the short riso lasted, they attended to nothing else. I had no Flight's Fancy, so was unable to negotiate any of the fish during this rise. Later in the afternoon, about four, the drakes came down in incredible swarms, and on each side of the river for a rod's length or so their discarded shucks formed a scum on the surface of the water. It was a wonderful sight. The trout fed frantically, but seldom on the surface. For one fly taken from the surface, they took a hundred larva below.

THE FLOATING MAY-FLY.

I think the man who invented this must have been almost as great a genius in his way as the man who invented artificial flies. The floating May-fly bears as much resemblance to the natural insect as a bird's-nest does. All patterns (and they are myriad) seem to come almost equally welcome to the fish. On the whole, however, I prefer a small Champion—small because more easily dried, and more easily cast, and on the whole less likely to miss hooking. The temptation to strike too soon when fishing the May-fly in a down-stream wind is almost irresistible—and then away comes the fly from the mouth of the fish, and words from the mouth of the fisherman. The May-fly is most erratic on the Thames. I caught one this year at Henley, on the Sunday before the Regatta.

AUGUST DUN.

One learns more about fly-dressing in a week at the waterside afar from tackle makers than in a year in one's chair. On the Coquet, in 1888, I had my first introduction to the August Dun and great Red Spinner. I had no books with me but Theakston, and he, if I am right, did not get beyond July. So I caught a fly and dressed a floater to match as follows: *Wings*—Landrail quill feather, as little ruddy as possible; *Body and legs*—Same as Indian yellow. I tried him next day in a big slow cauld pool—fishing a long line, and placing him cocked on the oily water under the willows in the blaze of the day—and I killed good fish when there was not a ruffle on the water.

GREAT RED SPINNER.

In the evening out came the change of the August Dun, the great Red Spinner, dancing like little bars of red-hot steel through the dying sunlight. I dressed several patterns in imitation, but none did so well as this: *Wing*—Tail of partridge, the *freckled* part of the red feather; *Body*—Flat Orange stained gut on bare shank; *Legs and whisks*—Red cock's hackle. I tried this against a number of other patterns in wool and silk, and almost every trout I took was on this pattern. Curiously enough when I used the unfreckled part of the red feather not a fish would look at the fly. Wonderful indeed, seeing that it was almost too dark to see the rises.

SMALL DARK SPINNER.

Following on this success I tried to imitate the small Dark Spinner. I caught one, one afternoon in September, and next morning I dressed a fly as follows: *Wings*—The whitest part of jay's wing, the nearest pull to the root of the quill feather; *Body*—Orange-dyed flat gut over orange silk; *Legs*—Coch-y-bondhu; *Whisk*—Blood red; *Hook*—00. I used it in the afternoon as my only fly. and in an hour and a-half I took thirty-seven trout, the largest ¾lb. only; but it was the fastest time I ever had. My companion, fishing three flies, took three fish in the same time. I left next day, or I would have tried the pattern again. I commend it to my readers. In 1889 I used it with success on the Wear.

DRESSING.

I think that the above instances go to show that it does not always matter very much about taking books with you, or learning up standard patterns by heart. The important thing is to acquire such a mastery of material and method, and such facility of expedient as will enable you to successfully imitate any fly you come across. I must confess to being puzzled by the standard dressings of the Willow-fly. If I had started out to dress the fly by the light of Nature, I think I should have done something like this: *Wings*—Something of a dim brown transparency, with a metallic sheen on top; *Hackle*—Smoky blue; *Body*—Quill with white tip, slightly dyed olive. The mole's-fur body and honey dun hackle does not strike me as like—nine times out of ten, or oftener. Mr. Walbran turns out the best dressing of the kind I ever saw. Authors on this subject are apt to be very dogmatic about the only right way to dress flies. All ways, in my experience, are right, some time or another, and one ought to be master of all, from Cutcliffe to Halford; there is something to learn from all of them.

I hope when Mr. Halford brings out the next edition of "Floating Flies, and How to Dress Them," he will make it clear whether, on page 35, he means that in tying down the wing of a floater, you should leave the side nearest the root or that nearest the point of the feather uppermost. He says, "place them (*i.e.*, the wing-slips), with the natural inclination of the fibres towards the tail-end of the fly, and the cut side of the plume nearest you." This would seem to mean that the side of the slip nearest the root of the feather would also be uppermost and nearest the head of the fly. (See Fig. 4.) But all Mr. Halford's drawings give the feather attached the other way. (See Fig. 5.) Now I find the first illustrated method incomparably the better for floaters, both for wear and for appearance; and I am sure Mr. Halford must mean that. But the drawings misled me for a long time, and I only dropped on to the right method as the result of my own experiments.

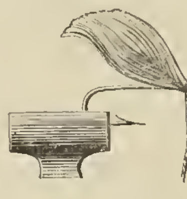

FIG. 4.

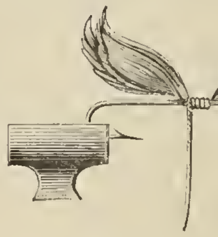

FIG. 5.

I also wish that Mr. Halford would bring out a companion volume of natural flies in their various stages, the outline being got by some photographic process, and the tinting done in the usual way, only much better.

The artificial trout flies in Mr. Bickerdyke's "Book of the All-round Angler," are illustrated by some photographic process, and one can make out the featheriness of every soft fibre of the soft hackle flies. But some of them seem, unfortunately, to have been rubbed the wrong way before they sat for their portraits, and such received less than justice accordingly.

BUMBLES.

One of my ambitions is some day to tie a series of bumbles, with tinsel bodies of gold, silver, and other colours, and ring the changes of black, red, Coch-y-bondhu, ginger, honey dun, and pale blue hackles on them. They might kill trout—the odds are they would. They would certainly kill grayling. An angler of my acquaintance, by the way, has a small stock of Wickhams with a pink tinsel body, which were dressed for him by a large and old-established London house, to fill an order for Pink Wickhams. And to add insult to injury, when my friend took the flies back to the maker and taxed him with his sins, he had the impudence to maintain that the dressing was quite right.

HIGHLAND AND ISLAND ANGLING.

CHRISTMASTIDE is perhaps hardly the most suitable period of the year at which to sing the praises of Highland and Island angling, or to dwell on its many charms; for now—

"Lone on the bleaky hills the straying flocks
Shun the fierce storms among the sheltering rocks.
Down foam the rivulets, red with dashing rains,
The gathering floods burst o'er the distant plains,
Beneath the blasts the leafless forests groan,
The hollow caves return a sullen moan;
Ye hills, ye plains, ye forests, and ye caves,
Ye howling winds, and wintry-swelling waves,
Unheard, unseen, by stranger's ear or eye,
No longer to you dare the angler fly."

While—

"The shepherd shifts his mantle's fold
And wraps him closer from the cold.
His dogs no merry circles wheel,
But shivering follow at his heel.
A cowering glance they often cast
As deeper moans the gathering blast."

A bleak and disagreeable prospect truly does the picture hold forth, but we must not forget that—

"To mute and immaterial things
New life revolving summer brings.
The genial call dead Nature hears,
And in her glory re-appears."

And hence in retrospection we can revisit and in anticipation behold the wild glens, moors, lochs, and rivers, of the North, even in midwinter, clad in the same garb and under the same smiling skies as we saw them last, and will, we hope, see them again, next summer.

There is hardly a loch or river in the wild country that lies beyond the Forth, which has not some romantic, legendary or historical interest apart from that beauty now sternly grand, now picturesque, soft and sylvan, with which Nature has so richly endowed them. Modern enterprise may, it is true, have altered the natural aspect of the country. The railway, by rendering the solitudes of the far north and wild west more accessible, may also have made them *pro tanto* more familiar and less terrible; but it has, at the same time, brought many compensating advantages. It would be as "far a cry to Loch Awe" as ever if one did not use the road and "bless General Wade" or avail oneself of the train to traverse the "pathless wastes"; but to modern enterprise we owe the fact that Loch Awe, as it were, breaks on our doorsteps and is still the Loch Awe of old. Ben Cruachan, though the locomotive awakes its echoes to mimic strange new sounds, is as wild and grand as when his hoar head saw the first glitter of the Roman legions by the green banks of the distant Forth, "the mountain breeze from Ben-na-darch" is as "joyous" in the sail of the modern yacht as it was in that of the ancient galley, and the "rippling eddies chase her course" with the same unnumberable laughter" of summer seas. "Wild Barra's ancient Thane" may no longer vaunt his proud *post-prandial* permission from his sea-girdled tower, but the tower still stands and the ocean guards it as of old, though its watch and ward be over senseless stone. "Grim Coolin" is not less grim than the Coolin of old, and the "desert dignity" of "dark Loch Cornisk" is unimpaired, though the eye of many a wandering stranger has gazed on the gloomy splendours of its savage beauty.

Ruskin may censure the railway as destructive of natural beauty; but his censure is unmerited, for the railway has brought the beauties of Nature, in all her varied forms, and with all her chastening influences, more directly before the eyes of men. The rush of the locomotive over the wild moor of Rannoch through the gloomy pass of Brander—the night which precedes the morning of the splendours of far-stretching Loch Etive, with its miles of churning tide—past the lochs and streams and mountains of Sutherlandshire and Ross, or elsewhere in the Highlands of Scotland, so far from destroying the grand beauty of these scenes, gives them a new charm by reason of the contrast, which it suggests, between the scene and those which the locomotive, from its associations, presents to the "mind's eye." To the angler, modern enterprise has been doubly kind, for not only has he—

"Nature's charms—the hills and woods,
The sweeping vales and foaming floods"—

within easy reach as objects of beauty, but he has also an opportunity of visiting for angling purposes localities which in a former generation were beyond the reach of all save those to whom money was "no object," and time only a thing to be pleasantly passed.

Modern sceptics, too, may sneer when angling is called the contemplative man's recreation, and say, with truth perhaps in a few isolated instances, that the angler of to-day is not the philosopher of the gentle days of Walton, who could well afford to murmur his quaint thoughts by the babbling brook or smooth-sliding stream, and with safety thus mingle thought with action, because he knew that no brother piscator was ahead of him spoiling his favourite pools, but they sneer without just cause; for personally I have never met any angler in the Highlands or Islands on whom the charms of Nature were wasted in vain, nor one whose sole desire was to "bring down the grey hairs" of some veteran of loch or stream "to the grave with blood," irrespective of the scenic beauties, and romantic and traditional associations of the loch or river in which the slaughtered giant had lived, moved, and had his being.

There is much that appeals to the heart as well as to the eye in our Highland and Island lochs and rivers. His soul would be indeed dead who could fish the Garry, where it thunders through the wild pass of Killiecrankie, and not once more hear the shrill pibroch in the whistling of the blast and the din of that sharp fierce conflict in its roaring waters, when the Highland host swept like a fierce mountain flood from the heights above to overwhelm with destruction, as complete as it was sudden, the Lowland soldiery in the valley below. Who could spend a day of lingering dalliance on the waters of Finlaggan Loch in Islay without in fancy restoring the ruined stronghold of the Lords of the Isles, and investing the whole scene with all the pomp and pageantry, the romance and tragedy, on which the ruined and crumbling walls must have so often looked down? Who could fish Loch Hollay in South Uist, and not in fancy see the boat of Clan Ronald, with its ghostly crew come slowly round its eastern end, where its dark waters find their troubled way into Loch Eynort, and not hear once more, in the mind's ear, the Gaelic boat-song make vocal the evening air with the sound of voices long since still? It is this blending of the romantic with the historical, this playing of fancy on the dry dust of a history, which is itself a romance, that make good sport better, and bad sport no bar to enjoyment, in Highland and Island waters.

Even the purely romantic, as distinguished from the romantic with a basis of fact, is often sufficient compensation for our otherwise barren day, and one can easily picture the genuine angler with an empty creel, standing at evening under the shadow of the giant Coolins, and gazing over the dark waters of Cornisk perfectly contented, with his fishless condition, because he stands where fierce Cormac Doil breathed his last, under the avenging sword of Bruce, and—

> "Where the proud Queen of Wilderness hath placed
> By lake and cataract her lonely throne."

No angler, worthy of the name, could stand just at daybreak when—

> "The wolves have preyed and look the gentle day,
> Before the wheels of Phœbus round about
> Dapples the lazy East with spots of grey."

by the lone shores of some highland or island sea loch, and not feel those same emotions stirring his soul, as some ancient cathedral when all is silent within its walls so readily awakens. Nor could one stand towards evening where some Western island "forgets the main," and gaze on the splendours of the dying day—the myriad hues, the green, the purple, the gold, the saffron, that dye each ever-varying but ever-fantastic cloud "piled deep and massy" over the sea; while to the East the silver sheen of night holds sway far over the hills which have scarce forgot their allegiance to the day and are yet blushing under its parting caress, without realising the full force of the words of the old Scotch song—

> "The setting sun, the setting sun, how gloriously it ga'ed doun,
> Its cloudy splendour raised our hearts to cloudless skies aboun'."

THE ETHICS OF SEA-FISHING.

By F. G. Aflalo.

> "It is a pursuit of moral discipline, requiring patience, forbearance, and command of temper."
> *Davy* ("*On Angling.*")

The "circumvention of aquatic vertebrates" has ever been a favourite occupation with mankind. The ichthyophagous Briton with his coracle and his spear has indeed long ceased to prey upon the inhabitants of river, lake, and sea; but he has been succeeded by an enormous class of fishermen, professional and amateur, whose inventive skill has been lavished on improving the implements of their craft. The professionals have chosen this perilous pursuit as a means of living; they have followed the whale and cod to remote seas; and encounter the most terrible hardships, and often death itself, within sight of their own coast. In introducing the ethics of sea-fishing, I am, however, addressing that increasing class of amateur sea-anglers, who, actuated by love of sport and solitude, willingly undergo the lesser hardships of rough quarters and indifferent food. Law and custom enter but little into the ethics of the angler, whose golden rule must in all cases be imitativeness and adaptiveness.

The amateur sea-fisherman is but little interfered with by the law. The policy of State interference has never been regarded with such universal lenity as in the case of recent Fishery Laws. Those absurd and impolitic attempts of the later Stuarts to destroy the Dutch fisheries by unjust legislation in this country met with the failure they so well deserved; but the legislation under the present reign has for the most part shown a decided tendency to remove existing restrictions on sea-fishermen, confining itself for the most part to the *salmon*—and fresh-water fisheries.

Nor would such laws necessarily hamper the amateur to any appreciable degree; for not only do they chiefly have reference to nets, the use of which is discarded by every true sportsman, but he enjoys in addition a blissful immunity from all the woes of close season, private property, house-boats, paper-mills, &c.

If "brute-instinct" be as, we are told, imitativeness, then should "brute-instinct" predominate with the sea-angler; for Emerson's "Insist on yourself; never imitate!" is a heresy in our creed.

In a recent contribution to these columns I had occasion to allude to the sad spectacle afforded by the stagnant conservatism of the German amateurs; this is the direct result of never imitating.

This somewhat despised branch of the gentle craft embraces all the departments of fly fishing, spinning, and bottom fishing. Its domain is inconceivably vast; the variety of fish and baits with which the salt-water angler is concerned is practically infinite; the former possess eminent sportive qualities, and the latter are remarkably easy to procure. Adding to these the many special advantages enjoyed by islanders, we find ourselves truly at a loss to account for the slow progress made by the sport of sea fishing in this El Dorado of sport. The literature of the sport is yet in its infancy; but, on arriving at maturity, it will at least embrace the *principia* of vast and remunerative national industries.

Nor are we familiar, like our cousins German, with the use of fresh-water coarse fish as an article of food; but sea fish are in great favour among rich and poor. Added to the cheapness of fish, compared with other forms of flesh-food, is its nitrogenous richness. Mackerel has, for instance, a greater nitrogenous value than beef, and costs considerably less; while herring has the same nitrogenous value as lamb or pork.

Islanders enjoy, as I have already remarked, peculiar facilities for the pursuit of this delightful sport. The chronicles of very early times have established the fame of the fisheries around Vancouver, Newfoundland, and the British Isles. All the most profitable Mediterranean fisheries centre around the islands; while the coasts of Ceylon are alone frequented, according to the computation of an eminent ichthyologist, by a greater number of species than exist in the entire Mediterranean, from the Bosphorous to Gibraltar.

Our own island is no exception to the rule; and the only four "commercial" fish of Europe that do not frequent our coasts—to wit, the tunny, sturgeon, sardine, and anchovy—are no loss to the amateur. Nor do we lack opportunity to visit these favoured coasts, with one or other of which every inland centre is, in these days of roads and railways, in easy communication.

The "endless field for argument, speculation, and experiment," formulated by Mr. Pritt, is especially characteristic of sea fishing; and the charm of uncertainty as to what species one's next catch may belong to is only equalled by that of doubt as to its size and weight. "There are many good fish in the sea"; but it requires no little skill to angle them out of it; and only those who have perforce confined their operations to river fishing can possibly ridicule with any sincerity the ingenuous facility with which sea fish are reported to sacrifice themselves to the advances of their pursuers, however clumsy these may be.

The sporting qualities of the bass, little inferior indeed to those of the trout, place it immeasurably above the coarse fish.

There are few fresh-water species as cunning as the pollack, or as wary as the mullet, and none as powerful as the larger individuals of the conger family.

In selecting his baits, too, the freshwater angler rings the changes on a few varieties of worms and maggots, pastes, pith, and cheese; the sea craftsman is continually enlarging a repertoire that already numbers over two dozen varieties. Nor is there quite the crudeness in our tackle that many brother sportsmen attribute to it. There is no improvement in tackle, of which some form is not equally applicable to sea-fishing, and several well-known London firms have assured me that they intend in future to make a very prominent feature of sea-tackle.

The sea angler should never lose sight of the unfortunate immorality of the fish he is trying to deceive; fish are the most lawless creatures on the face of the globe.

The shark is the type of rapacity in the ocean, and the pike betters his example, if possible, in fresh water; but for the true spirit of buccaneering commend me to the bass and pollack! Hunger plays, in all probability, but a very secondary part in the feelings that often prompt them to seize the most impossible looking rubber eel.

Humboldt has attributed to the trigon, or sting ray, the will as well as the power to transmit the electric shock, and it is certain that many a good creel has been filled by the wanton delight of devouring a hapless and fleeing creature, unaided by instinct sufficient to detect the hook that lurks within!

We have learnt that cannibalism is a weakness of the mackerel and smelt, and we accordingly cut up the first catch for bait; repeated successes and failures have proved to us the fastidious and lazy tastes of the conger, so, besides discarding at once all bait that is not perfectly fresh, we hammer that which is, and remove all the bones, so as to make it palatable to that lordly fish who, on the supposition of an authority, must have designed the Gordian knot one day when in difficulties.

The history of the evolution of fishing tackle points undeniably to spears, bows and arrows, hook and line, and nets as the order of invention, but only one of these is a legitimate weapon of sport. Nets should be discarded as unsportsmanlike, and not from any fear of depopulating the sea. There has always been a deal of terrorising and puling with regard to the speedy ruination of our sea-fisheries. The crisis has been at hand for the last century or two, and it is wonderful that each succeeding generation is no more sceptical than its predecessor.

The wolf is ever threatening, but the wolf never comes. Hundreds of years ago, churchmen and statesmen prophesied the impending destruction of our herring fisheries; bishops have prayed and statesmen have legislated, and still the covetous fishermen have extended their operations, spreading their nets with fearful havoc over every square mile of our seas, and still the herrings multiply till it is a wonder that the sea does not become solid with them.

For the two thousand millions of herrings annually drawn from British waters, ten times that number probably escape to multiply at the rate of fifty thousand eggs per fish, so the angling philosopher may indeed discuss his Yarmouth bloater at breakfast with an easy mind.

Besides studying the habits of the individual species, we must take into consideration the ever-varying phenomena of Nature. The angler who is not a naturalist must be content to rank with the gardener who is no botanist and the traveller who is unacquainted with modern languages.

THE STORY OF MAD MADGE AND THE PHANTOM ANGLER OF BROADYKE DAM.

As Told by one John Stuart to the Author,
Edgar S. Shrubsole.

In the winter of 18—, at the hearty invitation of a very old friend, I spent a holiday in the extreme northern part of Blankshire, a wild and rugged district through which flowed a magnificent trout stream that, together with many rippling tributaries, provided excellent sport during the summer months for the angler who could put up with the long walks over extremely rough ground that were necessarily entailed in getting at the best parts of the stream.

I had previously visited the district upon trouting bent, and had thoroughly enjoyed a week amidst scenery of the most delightful description. Very frequently indeed were my piscatorial efforts suspended; often enough, just as I had made a cast over a rising fish, involuntarily my attention was taken from the fly that had alighted upon the surface of the stream, and became rivetted upon the majestic surroundings. One day I traced the course of the stream for several miles, and arrived at an immense dam that extended the whole width of the valley, truly a remarkable specimen of engineering skill and man's persistent efforts to convert Nature's available formations to his own purpose.

The immense buttresses of smooth concrete and main structure of the same material, and the massive sluices, windlasses, handrails, and accessories of wrought iron—of course, painted the orthodox reddy-brown colour—at once convinced me that I had arrived at one of those necessary productions of civilisation—a reservoir. On the left side of the valley I noticed a winding pathway, with here and there a few primitive steps roughly formed where the character of the ground permitted it; and, resolved to have a look at the immense sheet of water there must be above, I clambered up the valley-side. It was a terribly tough job; but when I reached the top I was amply repaid for my trouble. Stretching before me—its upper end lost in the distance—was an imposing sheet of water, the appearance of which can only be expressed by the word—grand! On two shores the banks—which had originally been the valley-sides—were covered with trees and bushes of varied foliage; the hills on either side—imperceptibly reduced in height by the formation of the reservoir—looked down in quiet majesty upon the troubled waters; for I must here remark that, although below the dam I had hardly felt a breath of air in motion, above quite a strong wind was blowing, and miniature waves lashed the shores of the lake, and again and again dashed at the structure that held the vast volume of water back.

From below, the dam had impressed me with its commanding appearance, but here its gigantic proportions were more clearly discernable, and a mighty structure it was!

Of course, one of the first thoughts that struck me was, the reservoir *must* hold some big trout. The 10ft. 6in. fly rod I had with me I knew was of little or no use to fish such a large sheet of water, but I inwardly resolved to pay the reservoir another visit properly equipped.

Time was flying on, and I turned away to retrace my steps. The afternoon was far advanced when I reached the dam, and the evening was now drawing near. And then it struck me for the first time that I must be some miles away from my friend's house, and had a long tramp in front of me. I looked round to see if there was any indication of a road leading in the desired direction, for I "backed" at the idea of walking through the valley the way I had come. Following some wheel-ruts leading from the dam I presently came to a rough, uneven road, but still a road. I had not gone far before I reached a small cottage, and standing in the doorway was a female, past the middle age, neatly but poorly clad.

"My good woman," I said, "can you direct me to H—— ?" mentioning my friend's house. To my surprise she answered my inquiry in the same way the one-eyed Irishman did the O'Flanaghan's—by asking another.

"Have you been fishing ?"

I answered in the affirmative, and then repeated my inquiry.

"They are devil's fish up yonder!" she said.

I did not think proper to dispute this remarkable statement, but politely once again asked for the information I needed.

"They are DEVIL's fish!" she shouted, and went in and slammed the door to.

We were fated to meet again!

I thought her proceeding a peculiar one, but there was nothing left for me to do but continue my way along the rugged road. Another half-a-mile brought me to a wayside public-house. I did not stay to wonder what demand there was for a public-house in such an out-of-the-way place, but lifting the latch, entered, and found myself in one of the old-fashioned rooms, with sanded floor and rough deal tables and forms that are familiar to many anglers who fish in quiet country districts. Apparently I was the only customer, and it was some time before even I could get served. After repeated hammerings with my landing handle, a lad of about fourteen appeared, and I ordered a small Scotch whisky.

"We ain't got no whisky!"

"Then bring me a pint of ale."

After some delay it was produced—a splendidly-conditioned beer, served in a clean earthenware mug.

"Where is your father, my lad ?" I queried.

"Out at work on the farm."

"Mother at home ?"

"No; she's gone to the village."

"Any brothers or sisters at home ?"

"Ain't got no brothers nor sisters."

"No one at home but yourself ?"

"Not no one!" Then, after a pause: "Bin fishin' ?"

I nodded.

"Then you want some more beer!" and he took up my mug and departed, shortly returning with the measure re-filled. I resumed the conversation.

"Am I right for H—— ?" He nodded. "How far is it ?"

"Under four mile."

I finished my beer, and turned to depart. Suddenly I thought of the elderly female I had seen at the cottage door.

"Who lives in the cottage up the road ?" I queried.

"Oh! that's Mad Madge. 'Ave ye seed 'er ?"

I replied in the affirmative, but could gain no further information from the lad other than "She'd lived there for ever, and was mad and 'orrid!" So I resumed my walk to H——.

It was dark when I reached my friend's house, and he was getting a bit worried about my long absence. I told him what little I had to tell, and then we had dinner—a good hearty meal. Over our pipes that evening I learnt that the reservoir contained some *pike*, but few trout. When I asked my friend how he could account for that, he remarked—

"Oh, probably at some time a few pike have got in, in some way, and they have gradually increased the while the trout have been exterminated. That is *my* theory. There is another reason assigned to it by the few local inhabitants; but, as that has to do with Mad Madge's history, I must hold it over until to-morrow evening—it's too late now for a rather long tale. Have a turn at the pike to-morrow. I have some rough tackle you can use. You might run against a large trout with a live-bait, and, if you do, you will admit that uglier specimens never existed than those of Broadyke Reservoir. *That* also has to do with Mad Madge's tale, so you have a treat in store for to-morrow evening."

You can gather from this I had been questioning my friend about the strange female I had seen that day. All the information I got that evening however, was contained in the above remarks. I retired to rest, and dreamed of leviathan pike and enormous trout, the latter for the most part being hideously ugly. But the stay with my friend was brought to an abrupt conclusion. The following morning the post brought a letter informing me I was wanted on urgent business matters, so I had to depart. My friend drove me to the nearest railway-station, I was soon being whirled to the south, and my day among the pike at Broadyke Reservoir and the history of Mad Madge had to stand over.

We all know that *the* time for pike fishing is during the winter months, and, therefore, when my friend repeated his kind invitation the following winter, I availed myself of his offer, and, as I have previously said, spent my holiday at his house. I had an idea I could somehow manage to capture some of those big pike, and looked forward to several profitable days. I took with me quite an array of spinning-flights, paternosters, and live-bait hooks, and, on the off-chance of getting them there alive, several dozen of splendid live dace.

Arrived at the end of the journey by rail, I found my friend awaiting my appearance, walking up and down the platform, and stamping his feet the while; for it was a bitterly cold day. To my delight, the baits were as lively as possible, and we soon had them transferred to the dog cart, together with my rods, tackle, and travelling *impedimenta*. A drive through the clear, frosty air of that part of Blankshire gave me an appetite that took some time in satisfying; but this desirable conclusion arrived at, once more our pipes were lit, and the master of H—— and myself indulged in a long chat upon various matters. Many minor topics were disposed of, and then my friend satisfied my curiosity about Mad Madge; but I little knew that I should take such a prominent part in that strange creature's latter history; that, in fact, I should be immediately concerned in the ultimate fulfilment of—— but, I am running in front of my story. This is what my friend knew of Mad Madge's early history, so far as he had been able to gather it from the local inhabitants.

"Twenty-five years ago there was not a prettier lass in all Blankshire than Merry Madge Manton. She was the pride of the little village just below, as well she might be, and sad havoc she played with the hearts of the youths in the district; not intentionally, for Madge was never a flirt even, much less a coquette. She could not prevent her conquests, and I am told often enough she was really grieved at the disastrous effect her good looks and winning ways had among the male inhabitants whose years numbered from eighteen into the twenties. The only child of her parents—and she even never putting in an appearance until they had passed the fourteenth anniversary of their wedding-day—need I say she was spoiled?—that is, so far as such a true-hearted lass could be spoiled. Vicious neighbours were known to assert that Madge was not the offspring of the Mantons at all, but really an adopted child. I rather fancy our old doctor could tell a different tale. Be this as it may, Madge grew in good looks year by year, until when she reached the age of eighteen, as I have already said, a prettier lass it would be difficult to find. Offers of marriage she had in plenty, but to all applicants the same answer was given—No! Less attractive damsels would observe she ought to get married, and probably from their point of view she ought. But Madge had not yet met a man she could accept as a husband, although her wish in the matter was very simple; she told her friends 'she must love him, whoever he was.'

"At that time the stream running through the valley was literally full of fat trout, and it was an easy matter to catch a basketful. It will interest you to learn that Madge had a great love for angling, and with the rough appliances available proved a match for many a pound and pound-and-a-half fish. It was her unfortunate love for the sport—for unfortunate it proved to be—that induced the Mantons to purchase a little cottage that *used* to be snugly ensconsed in the valley just below the reservoir. Oh! by the by, that reminds me. A Broadyke Reservoir existed then, but was not such an extensive affair as the present one, although its dimensions were very considerable.

"Well, as I have said, the Mantons purchased the cottage in the valley, and shortly after went there to live. Individuals were not wanting who asserted that 'one of these days the old dam will give way and Manton's cottage will be swept away'; but Manton himself laughed at the idea. 'It has stood for fourteen years,' he would say; 'and I don't think it will give way now, just to spite me and mine!' I am given to understand the old man had implicit confidence in the stability of the structure, and ninety-nine out of a hundred persons would have supported him in his confidence.

"Within three months of the Mantons settling in their new home there came to Broadyke a tourist angler, a fine stalwart young fellow, with plenty of money, heaps of fishing tackle, and more than the ordinary share of good looks. It was a rare thing to get anglers this way then, and his appearance in the district created quite a sensation. He stayed at the village inn for some days, where he not only made himself comfortable, but very soon became immensely popular. With song and story he entertained the frequenters of the Broadyke Arms as they had never been entertained before, and during the last few days of his stay at the inn he introduced trout suppers, free to all-comers. You may depend upon it these 'went down' immensely, for not only were the trout of his own catching, but the drinks also were supplied at his expense. And here I should tell you that Harold Hartnup—that was his name—proved to be the best angler that had set foot in the valley within the memory of the oldest inhabitant. He soon found out the best trout were to be caught in the old Broadyke Reservoir, and the manner in which he caught 1½lb. and 2lb. trout there was a caution. He used to stand about mid-way on the old dam, and wielding a 12ft. fly rod cast a clean line far out into the reservoir, and rise, hook, play and land his fish just like shelling peas! It was his favourite spot, and although he frequently fished the stream below the dam, as evening drew near you might safely rely upon seeing him there.

"There was something else you could safely rely upon!—that was, Madge Manton would not be a hundred miles away! Hartnup had openly expressed his decision to stay a month or more in the valley; but it was no particular surprise to the villagers when he shifted his quarters from the Broadyke Arms to the Mantons' cottage below the dam; and I suppose you can pretty well guess what followed. Madge and Hartnup were constantly seen together, and it was evident the latter was not only instructing his companion in the intricate art of fly-fishing for trout, but that both were very busy falling head over heels in love. Then it was noticed that Madge was wearing a valuable diamond ring, and soon it became known that Harold Hartnup had asked Merry Madge Manton to become his wife, and she had said, 'Yes!' It was all fair and above-board, for the young fellow called at the Broadyke Arms, and invited those present to congratulate him, and drink long life and happiness to his future wife.

"But it's getting somewhat late; don't you think we had better go to bed? Old Hicks—the man at the public-house you called at on your way from the reservoir when you were there in the summer—can finish the tale much better than I can, for he was present upon the occasion that Madge went mad."

It was a great shame for my friend to thus suddenly break the thread of his story, but he would not continue it; so we finished our pipes and sought repose, which for my part was very acceptable after the long journey of that day.

The following day proved a perfect one for pike fishing. Frosty, but clear, and just a nice wind blowing. My friend agreed to drive me to the reservoir, and in the evening fetch me back. On the way we picked up Hicks, and he proved to be a fair specimen of the Blankshire type. I soon learned that he gained his livelihood principally by looking after the Broadyke Dam, adjusting sluices, &c., and pursuing farming in a small way. The public-house was merely kept just for the convenience of passers-by and the few labourers who were nearer to it than to the one in the village. Arrived at the reservoir, my friend left us, and Hicks proceeded to unfasten a substantial but somewhat clumsy boat, while I put my tackle together. We soon made a start, and hardly had the dace been in the water three minutes before—bang! went the float, and striking I found I had hooked a fish. It fought fairly well, but when gaffed and in the boat proved a big-headed lean and ill-conditioned beast. It weighed about 5lb., and should have weighed 15lb. At that time of the year—the latter end of January—pike are in their prime, and the condition of this fish prompted me to ask Hicks a question.

"Do you often get pike from here at this time of the year in such bad condition?"

"Lor' bless you, sir! they're allus the same, winter *and* summer. Never no different." And then, in a lower tone, "And I don't believe they ever will be!"

"How do you account for it?"

"Well, sir, p'r'aps it is there ain't enough feed for 'em, and p'r'aps it ain't. What allus licks me is, they're all about the same size—allus 'ave been—that is to say, ever since the new dam was finished. There didn't use to be any jacks in the old reservoir. I've 'ad the mindin' of this crib the last ten year. The first jack ever caught was the picter of that 'ere one. I've seen scores caught in my time, but they're all about the same size and all as bad-lookin'."

"What! do you mean to say small fish are never caught?"

"That's it, sir; *and, in my opinion, never will be.* 'Ow they got 'ere at all is a licker. There ain't none up above, and there never was any in the old reservoir. Mind ye, sir, I ain't superstitious; but I'm darn'd if I don't believe Madge Manton's right!"

And then I remembered my companion was *the* man who could finish telling me of Madge. So I at once started the subject. The earlier part of the poor creature's story was much the same as told me by my friend overnight, so I shall pick up the thread here where he had dropped it. I may remark I have altered Hicks' phraseology, but not in the slightest otherwise interfered with his story. I may also say that the while the tale was told I continued fishing, although I must confess my attention was principally drawn to the story, and that I caught two more pike (!) both the "picter" of the first, thus bearing out my companion's assertion so far.

"Very proud were the old people, sir, their only child had not only made such an excellent match, but also obtained a lover who would beyond doubt make her a good husband, for if ever two young people loved each other they did. It was settled they should be married from the cottage in the valley, and one day Mr. Harold went away to fetch his mother and sister to the wedding. He was to meet them at L——, for the little station below was not then in existence. Old Mr. Hartnup, we learned, had been dead some few years, and the only relatives of Mr. Harold's who would attend his wedding were his mother and sister. Through some delay, somehow or other, it happened that Mrs. and Miss Hartnup could not get through till the following day, and a telegram awaited Mr. Harold at L——, telling him so. Instead of waiting in the town, he did as most young men would do under like circumstances, drove back to Broadyke; and got there in time to start fishing in the evening at his favourite spot on the old dam, which for some time back I had mistrusted. I told the Water Works Company, I told old Mr. Manton, and I told Mr. Harold. But they all laughed at my fears. The company said if there was anything wrong with it they couldn't see where; but that, as they shortly intended to build a much larger one just below, it would last for a certainty a sufficient time. That they did intend erecting the present structure, there is no doubt, for Manton had notice to get out of his cottage, as the ground it stood on would be wanted for the job.

"Well, this particular evening the reservoir was full, and the water in the overflow channels running a torrent; the wind, too, was pretty rough. I happened to be up at the dam that evening, and my old fear possessed me strongly. Shouting loudly, so that my voice could be heard above the wind, I begged Mr. Harold to come off the treacherous structure; but he only shouted back his usual 'Oh, it's all right!' and went on with his fishing. Well, I was somewhat annoyed, sir, and turned and walked back in the direction of home. Nearly a mile down the road I met Miss Madge, and we had a little talk. I told her of my fears, as I had done many a time before, but she only laughed and called me an old stupid. By this time it was blowing a hurricane, and as the pretty miss left me it was as much as she could do to face the wind. I turned and offered her my arm, which she accepted, and we struggled along the road towards her home. Presently we heard a sullen roar above the howling of the wind, and in a frightened manner my charge asked me what it was. I told her I didn't know; *but I dared not tell her what I thought—nay, felt convinced it was!*

"The roaring increased, and telling Madge I *must* hurry to ascertain the cause, I left her struggling forward, and forced myself along the road in the direction of the dam. Arrived at the corner just before you reach it, I heard the roar of *rushing water* only too plainly, and when I sighted the old reservoir, my worst fears were realised. *The dam had burst!* One of Manton's labourers was standing by horror-struck, and I hurriedly asked him for the information I tremblingly feared to learn. Yes! Mr. Harold *was* fishing when it burst; as one enormous mass fell forward he had made a terrific leap to another, which in its turn fell away as he alighted on it! He was swept out of sight instantly. My informant hardly had time to tell me this, when Miss Madge came up breathless. As she looked upon the rushing water in a dazed manner, I suddenly realised the awful fact *that her parent's cottage was undoubtedly washed away in the roaring torrent,* and clasping her in my arms, I carried her away from the terrible scene. I felt her pretty head drop on my shoulder and her whole form go limp, and I knew she had fainted. It was a terrible night, sir, one I shall never, *never* forget!

"The villagers from below swarmed up, but nothing could be done. Our old doctor came to my house, and tended the sweet little creature who had lost *all* that night, but he could do little for her. From one faint she went into another, then had hysterics, and then got a bit calm and began talking silly like, the while she turned *his* ring round and round on her finger and gently murmured *his* name. I asked our old doctor, and he told me, 'Of course she has realised what has happened, and God have pity on the poor child; it has driven her mad!

"'Did we find the bodies?' Yes, sir, and terribly mangled they were. Yes, all three—poor old Manton and his wife and young Mr. Hartnup. A sad job the old doctor had when he went to L—— to meet old Mrs. Hartnup and her daughter. They came back with him, and such a grief-stricken party I hope I shall never see again. Poor Madge, of course, could not recognise Mrs. and Miss Hartnup, and the way she kept calling for Harold only made them sob and take on the more. Yes, they wanted to take her away with them, but a team of horses would not have dragged her from Broadyke. They could not bear to live in the district, or I verily believe they would have done so. So they bought the little cottage where Mad Madge now lives, and settled enough money on her—in my hands—to keep her in comfort. They come two or three times a year to see her, but of course she knows nothing of them; and it's a melancholy scene at such times, I assure you, sir.

"Well, after a bit, Madge got that she could be trusted about; and there she has been wandering ever since. She goes out and comes home like any other person might; but she is mad, sir, there's no doubt; melancholy mad generally, but at times very excitable. I can always soothe her; and there are times when I believe she actually remembers me.

"Well, when they were building the new dam, she would constantly go out and curse the workmen, the dam, the reservoir, and *even the fish in it.* The men got used to her after a bit; leastway, most of them did; some left the job a few days after they started work. Often she got fearfully excited; but I was generally at hand. In her calmer moments she tells me often that *he* will come back to her. She always calls the fish in the reservoir 'devil's fish,' and will constantly go out evening-time and call for her lost lover at the top of her voice; and this has been going on for near fifteen years now, sir."

Hicks finished his story, and looked at me as if expecting I should ask him something; which I did.

"And so, I suppose, you really believe that Mad Madge has cursed the fish in the reservoir, and hence their ungainly form?"

"Yes, I DO, sir; and what's more, I believe *the dam is cursed, too,* and that *'er* lover *will* come to 'er; and, mark my words, something awful will yet 'appen before the 'istory of Mad Madge is finished! As for the fish being cursed, you should see the trout that are sometimes caught 'ere, and then you would p'r'aps think so too. Why, the jacks are 'andsome put alongside 'em!"

I was curious enough to want to catch one of those trout, and feeling sure from the sample I had that the pike in the reservoir from some cause were an ill-conditioned lot, I attached a spinning trace and flight to my line, and baiting with the smallest dace I had, started to spin for one of the "devil's fish." But my efforts were fruitless; evening was drawing near when I gave it up for a bad job, and told Hicks to pull to the shore. We fastened up the boat, packed the tackle up, and wended our way to Hicks' house, where I was to meet my friend, and where the lad had asserted that I must want some more beer, because I had been fishing! We passed Mad Madge's cottage on our way, and I could but gaze curiously upon the home of the woman with such a strangely unfortunate history. I asked my companion if ever Madge spoke of her parents.

"No, sir," he replied, "she 'as entirely forgotten 'em. She never speaks of nothin' but 'er lost lover. My old 'ooman takes on at 'er sometimes about it; but, poor creature, she can't 'elp it."

I had some cold meat, pickles, and beer, at Hicks', and very well they went down, too! By the time I had finished my frugal meal it had turned quite dark. What possessed me I know not, but as my friend from H—— had not yet arrived, I made an excuse to Hicks, and lighting my pipe went out into the open air, and strolled in the direction of the dam. The story of Mad Madge troubled me more than I cared to confess to myself, the minutes flew by, and presently I found myself at the cottage. I felt a strong temptation to knock at the door—there was a light within—but refrained from doing so, and continued my walk right up to the reservoir. I stood looking upon the magnificent stretch of water that was dimly discernible in the semi-darkness for some seconds, and then turned my gaze towards the dam itself. Very weird it appeared, and its massive front and buttresses stood out boldly white. As I looked I noticed a queer sort of yellowy light appear about mid-way across the dam. I rubbed my eyes, but there was no mistaking the fact. Gradually the light became larger, and then quite strong, and in the brightest part I could plainly see the form of a nude male figure hazily outlined, but, nevertheless, certainly a human form! I tried to shout, but found I was unable to articulate a sound. I gazed spell-bound at what I could but acknowledge was not of this world. And then—horror of horrors!—A wild shriek *close beside me.*

"He has come! He has COME, my love is here!"

A grip of iron on my arm, and turning round I found myself face to face with Mad Madge! A second after once more I was looking in the direction of the dam. The figure had disappeared. Cold night as it was, the perspiration poured from every pore in my skin. With a mighty effort I threw off the unnatural feeling that had held me spell-bound, and turned my attention to Madge; and only just in time. In another second she would have cast herself into the valley below the dam, but exercising the strength of desperation I forcibly held her back. At that moment I heard a shout, and looking round I saw Hicks and my friend close at hand, and I inwardly thanked God for it.

Of our short journey back to Hicks' house (Madge came with us); of the many questions asked by my friend; of the terrible ravings of that poor mad creature on the way; of Hicks' solemn and awed reception of my version of the strange occurrence at the dam; of the silent drive to H——with my friend, I can tell but little. To me it was as a dream. Not until we got into the snug smoking-room at H—— did I begin to feel anything like my ordinary self. Even then mechanically I drew my chair towards the fire, lit my pipe, and sat smoking in silence for some time. My friend looked curiously at me, and suggested that the meeting with Madge had influenced me, and I only imagined I had seen the phantom on the dam.

"But, my dear sir," I said, "I saw the—something—*before* I knew Madge was anywhere near, and I had no more been thinking of ghosts than you had. I was as cool as a cucumber when I reached the reservoir, and *distinctly* saw the spirit *develop* on the dam. Moreover, I am no believer in ghosts; I have always argued the ordinary ghost appears *clothed* or accompanied by something mundane, and that if the spirits of the departed *can* appear to us in some form, that at any rate clothes, hats, and other manufactured articles have no spirit, and therefore cannot. Now the spirit on the dam developed from a spectral light, and I watched it as it gradually assumed the form of a nude human figure. I am as sure that I really saw it, and that it was really there, as I am that you and I are sitting here now!"

And nothing my friend could say altered this conviction on my part. We retired to rest; tired and strained nature could stand no more, and I slept as sound as a rock.

It is wonderful what a good night's rest and the appearance of daylight will do to dispel superstitious tendencies. When I awoke in the morning, and drew back the blinds at my bedroom window, I felt almost inclined to pooh-pooh my impressions of the previous evening. A hearty breakfast, the bracing drive to Hicks', and a long draught of his grand ale, pulled me quite together again, and the phantom of the dam almost became a thing of the past with me. Not so Hicks. He received us in solemn silence, and seemed amazed at my hilarity. 'Pon my soul, I rather fancy it was somewhat forced myself! We drove up to the reservoir, and once more my friend left us to proceed with our sport. The boat was got ready.

"Jacks to-day, sir?" said Hicks.

"No; trout!"

And all through that day I persevered in every conceivable way to capture one of the "devil's fish." At mid-day we noticed Mad Madge on the bank, and at my suggestion Hicks pulled ashore. She came towards us quietly enough and for some little time conversed quite rationally with Hicks. Evidently she did not recognise me, for she utterly ignored my presence. Presently she started off, and we resumed fishing. It was late in the afternoon when I turned to my companion, and remarked, "Another run, and I suppose another big-headed pike." For, be it understood, while spinning I had run several of those fish, and they all turned out just about the same as the first one I had caught. This time, however, the fish showed more sport, and I was just thinking I had at last hooked a well-conditioned pike, when my quarry gave in, and upon being brought to the gaff I found I had at last caught one of those "devil's fish." And an ugly brute it proved to be—about 7lb. in weight, black as a thunder-cloud, and with such a head and hook bill—well, I never saw such a beast in my life!

"Curse it!" I said.

And threw the wretched thing back into the reservoir. Without a word my companion rowed ashore; and then suddenly there arose a terrific storm of rain and wind.

"There allus does, when any of those fish are caught," Hicks remarked.

I took little notice of what he said, for an uncanny feeling suddenly possessed me, and I eagerly availed myself of the opportunity to get back to the inn, where I found my friend from H—— awaiting me.

The following morning the whole of the surrounding country was covered with a white mantle of snow; large flakes were still falling, and I determined to give up the idea of fishing that day; in fact, I had a great mind to abandon all attempts to catch any more fish from Broadyke Reservoir, for I felt convinced that the water held very little else—if anything—than the terribly ill-conditioned pike and repulsive-looking trout I had already caught specimens of. In the afternoon the snow ceased falling, and I walked to the village and called in at the Broadyke Arms. In the parlour I found several local "authorities" discussing a "ghost" that had appeared *last night* and the night before at the dam. Some little sensation was created when they found I was the very person who had seen it two nights ago, and of course I was plied with many questions. In the course of conversation I found it was currently reported that the "ghost" of Harold Hartnup had been seen *fishing from the dam* on the previous evening, and that Mad Madge had deliberately walked along the top of the dam and stood by his side, as she used to do many years back.

As even a ghost could not fish without a rod, and as I did not believe in the ghosts of fishing rods, I put the report down to exaggeration; nevertheless when I left the inn and walked back to H——, I could but help thinking there might be something in it, and I determined to pay Hicks a visit that evening, and hear what he had to say. I did not tell my friend of my intention, but after dinner, simply saying I was going for a stroll, I put my best leg foremost, and soon reached Hicks' quiet little inn. I say soon reached—by that I mean the time flew rapidly, and although I had a rough walk through the freshly-fallen snow, I arrived at Hicks' seemingly in "no time." I found him at home, and he very mysteriously beckoned me into an inner room, closed the door, and thus addressed me:—

"Sir, it's somethin' awful. I can't stand it much longer. Last night I went up to the dam, and saw Madge quietly waiting there. When I asked 'er what brought 'er out such a rough night, she turned to me and said, 'I'm waiting to see *'im;* 'e'll be 'ere presently!' She spoke to me *by name*, sir, and was as sane as I am! Then she went on to say, 'The end would soon come,' and a lot of other awful sayin's. And while I stood by 'er side, as true's I'm a livin' man, I saw a livin' figger on the middle part of the dam! The figger was about Mr. Harold's height, and the face *was* 'is. My 'air must 'ave stood upright, and I trembled like a leaf. Madge quietly said, 'I'm going to 'im, 'Icks,' and before I could stop 'er, she sprung on to the dam; and a minute after I saw 'er by 'is side! It was awful, sir; and before I knew where I was the figger 'ad disappeared, Madge was back by my side, and together we walked to 'er cottage, me being dumb and like a child all the way!"

"Tell me, Hicks, had Mr. Hartnup his fishing-rod with him?"

"Fishin'-rod! Sir, 'ow can *you* ask such a question? The *figger was naked!*"

And a cold chill run through me as Hicks made this statement.

"Hicks," I said, "I'll wait to-night, and we will go together to the dam."

And we did. When we reached it we were not at all surprised to find Mad Madge waiting. Mad, did I say? why she turned and conversed with us as rationally as possible. True, her statement (quietly made) that she was waiting for Harold, might seem a peculiar one under ordinary circumstances, but under those prevailing then it was not. *For he came.* The spectral light appeared on the dam, and (as before) it gradually developed into a human form, nude. But this time it raised one arm and beckoned. We did not attempt to interfere with Madge, who quickly walked along the top of the dam and joined her departed lover.

To say I was not fearfully frightened would be foolish. Yet the fear that possessed me was very different to that I experienced upon the first occasion—a sort of awed feeling. I felt lifted from my ordinary existence, and watched coolly and quietly the two on the dam. Then the spirit form disappeared, and Madge was by our side. In silence we wended our way back. Madge left us at her cottage, and went in as though nothing had happened out of the common. At Hicks' house I found my friend from H——, and as we drove home I told him of the re-appearance of the spirit of Harold Hartnup upon the dam.

* * *

"H——,
"February 22, 18—.

"MY DEAR FRIEND,—I am glad to know you have quite become yourself again, and that you propose breaking your journey on your way home, and staying a day or so with me. I may tell you now that I think it quite as well you left us as you did, for some few nights after your departure Hartnup's ghost haunted Broadyke Dam, and the whole village became demoralised. Mad Madge prophesied the speedy approaching 'of the end,' though what she meant by that I am at a loss to understand.

"During the past fortnight the 'ghost' has entirely disappeared, and as I know you would like to see the dam in its present form, I repeat I am glad you are coming. The severe frost we have had has completely frozen up the whole stream; the cascades, and especially the main fall from the dam, are simply a magnificent sight, and will well repay a visit. Let me know by what train you will arrive, and I will meet you.—Yours as ever, ——."

Three days after the receipt of the above letter I was at the little station below Broadyke. My friend met me, and as we drove in the direction of H——, he remarked—

"I'm very glad to see you, old chap; but you are too late for the fairy-like appearance of the valley and dam. The sudden thaw that set in yesterday has caused a total collapse, and it's nothing but sludge and ice-water now!"

It was getting dark when we drove into Broadyke, and we soon noticed that something of an extremely exciting nature had occurred. We were not long in learning the cause. "The water is coming over the dam a perfect deluge," we were told; "and, strong as it is, it's doubtful if it can stand the immense pressure."

My friend and myself knew the fallacy of this assertion, but we decided to drive up to the reservoir, and on the way it struck me that such a thing was possible as the dam giving way. We all know the action a severe and prolonged frost and then a sudden thaw may have upon concrete, and massive as it was, it was quite possible that one of the most powerful forces of Nature could burst it. We called at Hicks', and learned he was up at the reservoir, so we drove on. We had hardly reached the corner when we heard a shout:—

"It's giving way!"

Leaping from the dog-cart, we hurried towards the dam, which we reached just in time to notice the vast volume of water pouring over it perceptibly shelve off, as an enormous mass of the dam gave way, and fell with a thundering crash into the valley below. The remainder quickly followed, and the terrific roar and rush of the water was deafening.

My friend, Hicks, myself and several villagers stood looking on awe-struck. And then above the roar of the boiling waters a piercing shriek was heard:—

"I come, Harold! I am here!"

And there rushed by us the form of Mad Madge! One terrific leap she made—such a leap as no ordinary mortal could accomplish; right out into the foaming torrent she leapt.

A powerful light hovered over the spot where the dam had been; in its centre could be seen the nude form of Harold Hartnup, and Mad Madge was received in the outstretched arms of "The Phantom Angler of Broadyke Dam!"

ROACH AND RUDD: AND ANGLING FOR THEM.

By Alfred Jardine.

(Continued from page 302.)

The roach (*Leuciscus Rutilus*) may be considered the most fished for, and consequently the most popular member of the *Cyprinidæ* family.

The memories of an angler's childhood, and his first attempts at fishing, are usually associated with roach, especially as there is scarcely a river that is not inhabited by these fish. Among English anglers, whether "club-men" or the contrary, probably nine-tenths are "roachists," and on the Thames, Colne, and Lea, the Trent, and many other rivers, roach-fishing has become a "fine-art," and the passion for catching them so keen, that men far advanced in years, and long past the period of active pursuits, may often be seen on a river's bank, serenely enjoying their favourite sport; or, fishing from a punt, with all the necessary paraphernalia of rods and tackle, baits, and luncheon-basket, &c., about them; "pictures of happy content, and smiling resolve to enjoy themselves, come what will."

The roach is a handsome silvery-scaled fish, with reddish fins, tail, and eyes; though not so red as its "relative," the rudd, (or "red-eye"); the scales in both are large, a roach's back varies from blue-green to bronze-green, according to its age and the nature of the water it inhabits; and it can be distinguished from a rudd by its under-jaw rather projecting, while the rudd's under-jaw closes almost perpendicularly on the top lip.

In fin-rays, both count alike; but, as roach and bream, also rudd and bream, often hybridise, thus producing frequently, fish of abnormal size—and of very "roachy" appearance—(I once saw a fish of 3½lb. from Pulborough, *weighed in as a roach*)—the difference can be easily detected, by examining the anal fin; a bream's counting twenty-nine rays, roach and rudd eleven, and a hybrid's seventeen or eighteen rays.

The late Frank Buckland says, in "History of British Fishes," I have had them brought to me heavier than two pounds, but in some cases they were hybrids.

Roach seldom exceed 2lb. weight, and a score fish averaging half that would be considered a very fine sample lot, not often caught by rod and line. The finest roach are, as a rule, captured in the Hampshire Avon, also the Stour and Frome of Dorsetshire. I knew of half-a-dozen grand specimens from these rivers, considerably exceeding 2lb. each in weight—*i.e.*, *true roach*, not hybrids, and which I shall refer to later on, together with many large ones specified in the catalogue of the 1883 Fisheries Exhibition; although unfortunately, that publication does not give the weights of several fine roach and rudd, which were shown by "The Good Intent Angling Society," "The United Society of Anglers," and many other London clubs.

In much-fished rivers, roach are highly educated, therefore the observance of quietude is extremely necessary, and heavy footfalls on the bank when plumbing the depth, or throwing in the ground-bait, will scare the fish and make them vacate the swim. The same undesirable effect will be produced by awkwardness and noise when fishing from a punt. A capital lesson may be learnt from a Lea "past-master" in the gentle art; *he* approaches the water with the greatest caution, even taking care not to let his shadow fall upon it, and if possible, screening himself behind a fringe of rushes or reeds, growing on the river's margin; and then the nice balance of his roach-pole should be observed, also the delicacy of his carefully selected hair or fine gut lines, so "shotted" that the light quill float will show the faintest bite. I advise the young angler to watch a Lea "roachist," and note his *modus operandi*, for he will learn more in one hour than in a week's perusal of essays on roach fishing.

For angling Nottingham fashion, a rod of 11ft. in length, made of pine, of *straight grain*, with lancewood top and upright rings throughout, is a handy tool. These rods are constructed in great perfection at Newark-on-Trent, but can be got, of course, in the London tackle-shops. With a light Nottingham reel, and *fine* plaited silk running-line, quill or porcupine floats, some No. 10 to No. 13 round bend hooks, and split shot (size No. 5), the angler is equipped. Some prefer to use hooks, known as the "crystal" pattern, they are excellent ones. Baits of various kinds are used, according to the water, its condition, and the weather. If the water is thickened by a recent rainfall, then small red worms, nicely scoured till tough, will be most advantageous; but roach, if in a "feeding humour," will usually take any or all of the following: Paste, boiled wheat, rice, and pearl barley; worms, gentles, caddis, meal-worms, grubs of various kinds, shrimps, &c.; and if roach run large, then the tail of a lob-worm on light leger-tackle is a capital bait.

At times, roach are capricious in their tastes, and seem to ignore all the baits mentioned; they have probably "for the nonce," turned vegetarians, and are feeding on the silk weed (*Conferva rivularis*), which grows about old piles and weirs, and is known as the flannel-weed; a little of this may be gathered in the landing-net, and after well washing it, a small piece wound round the hook often proves very killing, *roach* taking it greedily.

When a lad, and making my first essays in roach fishing on the Darenth, I frequently used shrimps, either red or brown ones, carefully peeled, half an inch of the tail end, the hook point put in at the thickest part and out at the thinnest end, the shape of the bait accommodating itself very nicely to the bend of the hook. The skins and heads I mashed up, with a small portion of bread-crumbs and bran; and worked into small balls, the size of walnuts, these made excellent ground-bait, to keep the roach together in the swim I was fishing. Shrimp-bait often accounted for the capture of a Darenth trout; but this was fifty years ago, when I was a mere tyro in the art of fishing. The trout of Darenth are now too educated to be seduced by a shrimp.

In fishing with Nottingham tackle, much the same methods can be adopted, as described for chub and dace in a former article. The necessary thing to do is to select a nice steady stream about five feet deep, flowing over a level gravelly bottom; the float arranged or fixed on the line in such a position, that the bait swims along, about one inch above the bottom, or bed of the river; for roach are not like bream, picking the bait up off the bottom, as a rule; though they will do this in the late autumn and winter months, which, if not too frosty, are the best for legering with a lob-worm for big roach, of all the year.

Roach prefer gentle currents and quiet eddies, and are more often found in such places than in swiftly flowing streams. They frequent these quieter waters, for the reason that their food is found more readily; it being deposited by natural gravitation, instead of carried away and dispersed, as would be the case in rapid streams. Consequently quiet swims and eddies are the most likely to afford sport to the roach angler, whether he be float-fishing or legering. On the latter mode of angling—*i.e.*, legering, opinions differ; some "roachists" preferring to use a float, with four or five shots placed at intervals on the gut—the nearest one to the bait at least 18in. away—and the float fixed at such a distance up the line *that all the shots lie on the bed of the river*, the line being kept rather "taut" between the float and red-top; of course a bite is instantly seen by the float being drawn partly under water—this method is called "tight-corking." Other anglers incline more to the use of a small leger-lead—a perforated pistol-bullet does excellently well, no float is required; a bite *is felt*—the line being held tightly between the bullet, the red-top, and over the angler's fore-finger; and the "strike" is made instantly on the perception of a bite; the leger-lead is prevented running down to the bait by a small split-shot, pinched on the gut, 18in. or so above the hook; the line should be *fine*, of plaited silk, waterproofed.

It will be conceived that legering is more adapted for cloudy water than for clear, which is especially the case when heavy rainfalls have thickened the rivers, and fish are "nozzling" on the bottom *searching* for their food. At such times no bait is so good as a nicely-scoured marsh-worm, or the tail-end of a lob-worm. In clear waters, roach feed to gentles, small red-worms, grubs, paste, &c., on light leger tackle. When making long casts with float tackle, sometimes a little additional weight is necessary in order to reach the distance required and the place desirable to fish; if so, a little piece of stiff ground-bait may be squeezed on the gut near to the hook. A slight jerk will break and detach it, and leave the bait free.

On summer evenings, in hot weather, roach frequently rise freely to fly, either "naturals" or artificials. Of the latter, small Black Gnats, House-flies, Red Palmers, and Governors are among the best, while their killing properties may sometimes be enhanced by placing a gentle, or small strip of white kid to imitate one, on the bend of the hook; or whipping with a couple of gentles on a No. 1 sneck-bend (short-shank) hook is usually successful, if roach are swimming close to the surface. One hot August evening, when on the Thames near Magna Charta Island, I caught over a couple of dozen half-pound roach, fishing this way with a couple of maggots. The plan is to make a rather long cast, let the bait sink an inch or two, and then draw it slowly towards you. The fish will follow, and one of them is almost certain to make a grab at it, which will be perceived by the line tightening somewhat; then with a strike, or rather turn of his wrist, the angler hooks his roach, and draws it quietly away from the shoal, so as, while playing it to the landing-net, not to scare the other fish.

On rivers like the Thames, Colne, Loddon, and Lea, which are fished by hundreds of anglers, a roach swim can be easily detected by the grass or river-side herbage being trodden, also the *débris* of bait, and perhaps some roach-scales lying about. These "tell-tales" and other familiar signs understood by an angler, generally denote where sport may, at any rate, be expected. But a "virgin-swim" (if I may coin the phrase)—I mean an untried one—now and then may be fished with advantage from the bank or a punt. An opening is perceived between weeds with the stream flowing gently. The depth of water must be got by careful plumbing, when a bait, quietly dropped in, may be at once taken by a big roach, then, after a minute or two of fine sport, the angler is richer, by a real beauty in his pannier.

To get the depth of a swim at some distance from the bank, is not at all difficult to achieve. The float can be placed on the line at *a guess for depth*, and gradually lowered or heightened until the float "cocks." If every now and again the float hangs or drags under water, it shows the bait is "tripping" too much on the bottom, and this can be remedied by lowering the float another inch or two.

Rudd take small flies freely, and in July and August give capital sport, especially as evening approaches after a hot day. There was a moat at Cheshunt, in Hertfordshire, in the grounds surrounding an old house, where the water swarmed with rudd. Occasionally I went there with my rod, when I would put on a "leash" of flies, frequently catching two and sometimes three fish at a time, and usually enough to fill a couple of stable pails full. These rudd, however, were small—quarter-pounders—with here and there a larger one of 8oz. They were originally placed in this water, which, as far as I could discover, contained no other kind of fish, while the river Lea, although close by, held but few, if any, rudd.

The Norfolk Broads hold plenty of these fish, and large ones, too. The bait for them is a red-worm nicely scoured in moss. The best way is to fish with a paternoster, three hooks, and a float, with at least 40yds. of strong but *light line.* Bait carefully for two days previously, and mark the place by sticking a long willow wand in the mud or sand. Anchor the boat, *quietly*, 20yds. or so away from the baiting, and throw your float near the willow. The late Dr. Norman, of Yarmouth, says:[*] "On several occasions, fishing the broads, I have had a brace of rudd on my paternoster weighing nearly five pounds. Once I captured three at the same time that weighed over five pounds; and one evening, after an early tea, myself and a companion landed no less than one hundred and ninety-four."

Lough Derg, and several other Irish lakes, contain rudd—some as heavy as 3lb. each—but in the "Emerald Isle" they *are called roach:* however, the two can be distinguished by the front ray in the dorsal fin of a roach, being almost even with the front ray of the ventral; but a rudd's dorsal fin stands *midway over the ventral and anal fins*, and its eyes are much redder than those of a roach.

Some of the best rudd fishing in England is to be had at Slapton Ley, near Dartmouth, in Devonshire. This fine piece of water is about two miles long by nearly half-a-mile in width. It is brackish and seems to agree well with the rudd, which are caught in great numbers with both fly and bait. 2lb. and 3lb. specimens are not uncommon. Pike also are plentiful and large, but from November 1 to the end of March, which is the very best time for pike-fishing, the Ley is closed for wild fowl shooting. Comfortable "quarters" can be obtained by anglers at the Sands Hotel. About two miles from Slapton is Torcross, where is another water that bears a good reputation. This fishery was made some ten years ago by Mr. Vickery, the proprietor of Torcross Hotel. Besides pike, there are plenty of rudd. I have just received a letter from a friend, who fished there last month, saying: "In one hour and a-half, just before dusk, using two rods, we caught five dozen rudd, the largest, 1¾lb., and a dozen over 1lb. Had there been light enough to see our floats, we might have captured a cartload." On November 19, four rudd were taken by Mr. Brown, weighing 1lb. 10oz., 1lb. 9oz., 1lb. 8oz., and 1lb. 5oz.—*after* the fish had been out of water many hours.

Roach and rudd spawn in May. In the Thames at that time of the year, roach "head up-stream" in immense shoals, from the tidal reaches, below Mortlake and Putney—so that at Teddington the river is often black with the quantities packed together under the weir, which I imagine, they sometimes are able to surmount, if a lot of flood-water is coming down just at the time of spring-tides—which events concurring, the water would be level (or nearly so) at the weir, and the roach able to swim over, and make their way up the river. Colne roach have the credit of being the most beautiful in shape and colour of the *Leuciscus rutilus;* next to them roach of the Lea; but for size and weight, though somewhat coarse in colour and contour—those of the Wiltshire and Hampshire Avon—also of the Dorsetshire, Stour and Frome. I have a brace (4lb.) from the last-mentioned river; and Mr. J. P. Wheeldon has half-a-dozen fine specimens from 2lb. to 2lb. 8oz. from the Stour and Avon. The following list of large roach may be accepted as correct: Mr. T. S. Hughes, one, 2lb. 7oz.; the Piscatorial Society, two, 2lb. 6oz., and 2lb. 4oz.; the Friendly Anglers, one, 2lb. 5oz.; Mr. W. Foot, Lincoln, one, 2lb. 4oz.; Mr. J. H. Davies, one, 2lb. 4oz.

The largest rudd (*Leuciscus erythrophthalmus*) shown at, and accredited in the catalogue of the 1883 International Fisheries Exhibition, were one of 2lb. 12oz., by Mr. E. Arnold, of Huntingdon; another of 2lb. 10oz., by Mr. E. G. Eiloart; and, by the Friendly Anglers Society, one of 2lb. 3oz.

I was requested a few days ago, by our Editor, to look at a fish caught by a gentleman, who had had it very nicely preserved in a glass case, and labelled in gold letters as a *roach of 2lb. 10oz.*, but on diagnosing this specimen I at once perceived it was a *hybrid* between a roach and a bream; its anal fin counting *seventeen* rays, while a roach counts eleven, and a bream twenty-nine; moreover, its *dorsal* fin was much farther back than the position of a roach's—*i.e.*, *exactly where* a bream's would be, the rays (twelve) being the number also of a bream's. I am sorry to disappoint this angler, who no doubt thought he had captured a *gigantic roach.*

Do the bream and roach of the Thames sometimes "cross-breed" and produce hybrids? I think so, inasmuch as the Piscatorial Society have in their museum, at the Mona Hotel, Covent Garden, a *hybrid* roach, weighing 1lb., caught by Mr. J. Johnson when fishing at Walton, Sept. 30, 1865. This small specimen counts seventeen rays in the anal fin, and has many characteristics of a bream, *especially in the position* of its dorsal fin.

In an earlier article on "Chub and Dace," I hazarded the query whether chub and dace *do ever* "cross-breed." So many fish of abnormal size have been weighed in *and passed as dace*—notably, one at a very old West End club, it would be invidious to mention, though the mistake happened to be discovered after the specimen was sent for preservation, and their "tyro angler" (who took to fishing on the shady side of sixty), was disqualified in his 1¾*lb. specimen dace.* Yet it *may be* possible that chub and dace *do* sometimes hybridise, and thus I raise a question for *ichthyologists* to determine. The distinction between a chub and dace is so apparent, that no observant angler need ever fall into the error of confounding the two kind of fish; and by bearing in mind the following rules, no fisherman need be in doubt which he has captured: The anal fin of a dace is a pale greenish white, with a slight tinge of red, and its *hinder margin concave;* but in a chub the hinder edge of that fin is *convex.* Its tail and dorsal fin are dark, and the back of the fish much more bronzy in colour than that of a dace, whose scales also are smaller than a chub's of the same size or weight, counting fifty along the lateral line; whereas, a chub's number only forty-four or forty-five.

The illustrations published herewith (see separate Plate) show the difference between the chub and dace; also the roach and rudd.

NOTES ON GRAYLING.

My excuse for giving any opinion on the manners and customs of grayling must be the fact, for some twenty-five summers I have pretty regularly fished some of the best grayling streams in Europe, and have, therefore, caught and seen as many heavy specimens of that fish as most men. The experience of a quarter of a century leads me to believe that grayling above 3½lb. are very rare indeed. I have caught plenty of 3½lb.; but as far as I remember only two or three of 3¾lb., and but one good honest four-pounder.

The natives of the districts where I am in the habit of fishing confirm my opinion by always saying, in answer to my question as to size, that a grayling of about 4lb. is the biggest they ever see.

It is curious how very capricious grayling are as to the fly they fancy. One year they will take a March Brown, the next year (as likely as not) they will hardly look at it, but rise to a Zulu, a Red Tag, or perhaps to a sea trout fly, and occasionally—but only occasionally—they are very keen on an Alexandra. The experience of one year in the matter of favourite flies is a very poor guide for the next season.

At times grayling are singularly particular as to the colour in the fly, and of this peculiarity I saw an excellent instance some few years since. A friend and I were fishing from the opposite banks of a smallish river, then full of very heavy, and, that season, free-rising grayling. I had a small Hofland up, and was hooking pretty well every fish that rose within shot of me, and that day they were ringing freely all over the water. My friend, fishing also with a Hofland, but with one dressed with a very slightly lighter body, at first could not touch a single fish. This went on for some time. At last he waded across, borrowed and put up one of my patterns, and immediately began to catch them as fast, or faster, than I did. Now this happened on a stream which up to that time had hardly ever had a fly cast on its waters, where one would suppose all its inhabitants to be innocent and guileless to the last degree; but no, they had their fancies, and if you wanted to catch them, you must consult their caprices just as much as those of any fair lady.

What I have written applies to heavy grayling of 1½lb. and upwards. Small fish—*i.e.*, fish below 1lb.—are not nearly so hard to please, and have far less of the spoilt beauty about them. On the contrary, there is hardly any weather in which, or any fly with which, it is a matter of impossibility to catch small grayling in a rapid or stretch of rather shallow, broken water, in a grayling stream; but it is an altogether different matter with the experienced old stager, who has reached middle life, and put on weight to match his age.

To show how cunning and how difficult to circumvent these heavy grayling are, even when what we consider illegitimate means are used for their capture, I will relate what I once saw. I was fishing a large pool full of heavy grayling, which were rising freely all over it. I had already landed a few good fish, and was looking forward to a good evening's sport, when, to my huge disgust, I saw a boatload of men rowing down the stream in order to drag the very piece of water I was then fishing. I wrathfully reeled up, lit a pipe to improve my temper, and sat down to watch the proceedings. The men shot the net, and then dragged it in to land close to where I was sitting. The grayling were rising before the net within three feet of the corks, and, what was more remarkable, close behind them also. When the net was emptied, the bag did not take over long to count, for the result of the draw was a single trout of about 2lb., but not one solitary grayling. I suppose the latter dived under the net, and then at once began feeding again as if nothing had happened. I was never more surprised in my life. From the number of fish I had seen feeding, I fully expected to see half a boatload extracted from the river.

I fancy heavy grayling are far more gregarious in their habits than trout of same age and weight. I have not infrequently caught three or four large grayling, one after another, from the same square yard of water. Just the tail of a weed bank or the edge of a shallow will often give fish after fish to the angler who knows the water and where to look for its big grayling. This could not be done with trout of the same size, who are far more predatory in their habits, and won't tolerate rivals on their beat. Large grayling are very rarely found in such shallow water as trout at times frequent; they prefer the deeper parts of a stream—smooth, gliding water, with a sandy, loamy bottom suits their fancy well. The V-shaped glide at the head of a fall or rapid is, if deep enough, a very favourite haunt. Here, on a favourable day, you may see them rising freely in a stream which, although smooth and unbroken, is so strong that it is a matter of impossibility to wade in it above the knees. It gives one considerable respect for the strength of grayling when you see them ringing all over water of the force and weight which such places as these always provide.

It cannot be denied that as a fighter the average grayling falls behind the trout; but still, although lacking the dash and *elan* of the latter, he has a peculiar dogged sullen way of holding his own, which requires some little time and skill and patience to overcome; he is just as hard to rise, and perhaps even more uncertain as to what fly he will favour.

My ideal of a stream is one which holds both trout and grayling, where, in the pleasant summer weather, you may see ring after ring of grayling appear and fade away as you gaze up the broadening waters of the Lagoon; and higher up, where the pine-clad rocks hem the clear brown waters into a narrower space, and the rippling stream makes music for the angler's ear, you can mark the bright waters flash and glitter in the sunlight, as the hungry trout dash at the struggling flies; there, in such waters, is the fisherman's elysium.

Hard to find, no doubt, and not without their drawbacks when discovered; but such places do yet exist for those who think that good sport smooths down the *desagréments* and the difficulties which are nearly always inseparable from its pursuit.

Thymallus.

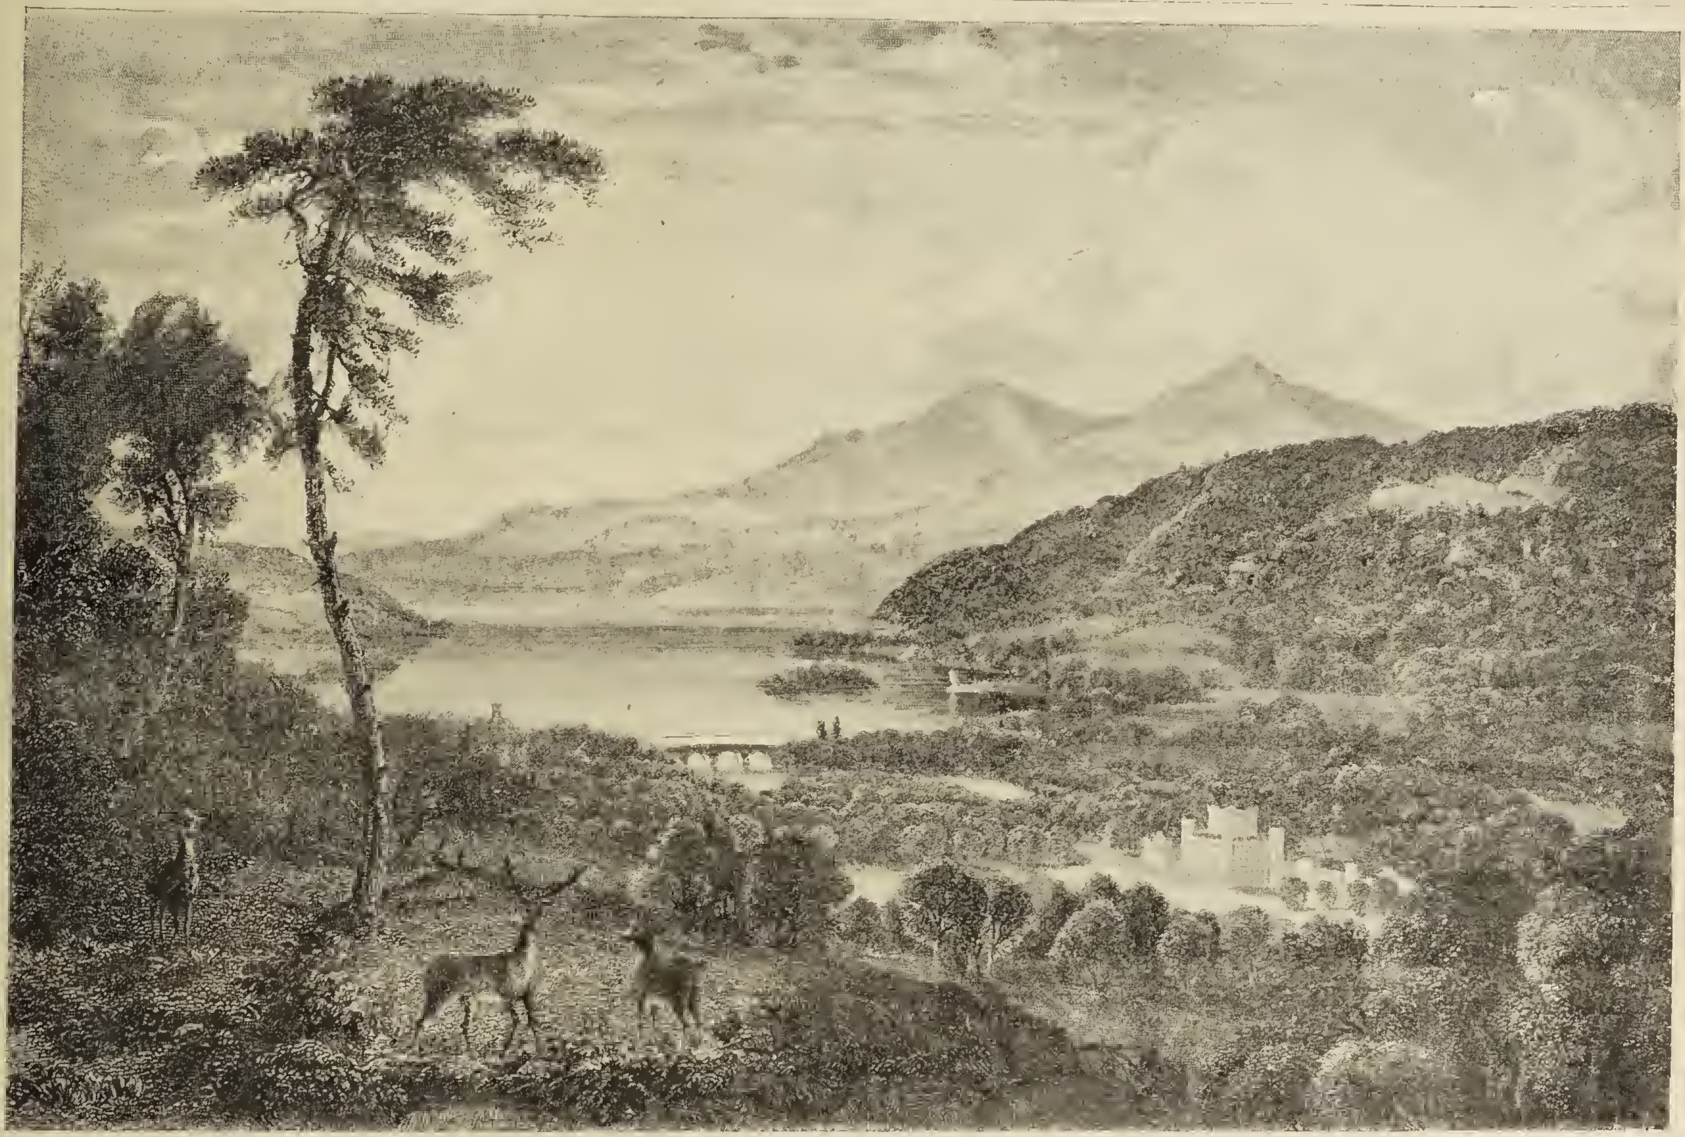
At dinner at Christmas, or New Year old style, many of the Highland Chieftains in the good old times had on the table a large fresh-run salmon, which no doubt "gaed doon fine" with the usqubae which went the round, like water, on these high occasions. The Earls of Aboyne, the Lords of Reay, the Chiefs of Gairloch, Dundonnell, Glengarry, Lochiel, the Lairds of Grant, the Barons of Braickley, and many others—all had the biggest salmon that could be got served up whole. It is not said whether there was an annual close time in those days! In any case it would have been beneath the dignity of such powerful potentates as those mentioned to ask leave to provide themselves with a most important part of the dinner on the occasion of their high carousal a the winter solstice. Might with them was right.

---

[*] *Land and Water*, August 8, 1874.

LOCH TAY, PERTHSHIRE.

Probably the finest salmon-fishing loch in Scotland is Loch Tay, out of which flows that grand salmon river, the Tay. It will be seen from the letter we publish this week, from the Marquis of Breadalbane, that he proposes to set up a fish-hatching establishment on the loch, and this is certain to improve the salmon and trout fishing, in which he takes such great interest. Many of our readers are already preparing for the opening day in February on Loch Tay, and we heartily wish them tight lines and bright fish.



LOCH TAY, PERTHSHIRE, WITH TAYMOUTH CASTLE, SEAT OF THE MARQUIS OF BREADALBANE.

A FORTNIGHT'S HOLIDAY.

By Francis M. Walbran.

(*Continued from page 349.*)

The following morning was more promising as regards the weather overhead, but the puddles in the roadway, and the draggled condition of the hedge-rows bore unmistakable evidence of a heavy downpour during the night; one thing was quite certain—viz., that the Yore would still be unfishable, and therefore during breakfast-time we held solemn conclave, and ultimately decided to try the tributary again. As we were sat, in came J. E. M., with the news that the Yore was higher than ever, so that settled the question at once. We therefore divided the water into beats: W. to take the upper portion, "Redspinner" the middle, and myself from the junction with the main stream upwards. Wishing my companions "good luck," I made my way down the lane to the starting-place. There was not very much difference in the height or colour of the water than when we left off on the previous evening—if anything, it was a shade clearer; and as the wind was blowing gently from the south-west, my hopes rose high. How often in an angler's experience do those hopes prove fallacious? You think, as you thread the line through the rings, that very soon the limber top will be bending in a delightful curve, and the winch making merry music, then after half-an-hour's patient work you discover that the fish are not on the feed, but for what reason? Ah! my friend, that is the rub; that is a mystery that no angler, however experienced he may be, can ever solve, for perhaps on some other occasion, when apparently everything is against you, the fish begin to take from the onset, and continue to the very end of the day.

The present occasion was a good illustration of this uncertainty. The first cast that I made was at the head of a pool overhung with trees. On my side of the river was a gravel bed; on the other, a grey limestone rock rising sheer above the stream; from its weather-beaten sides grew the bright green fronds of feathery ferns, some of which, drooping gracefully downwards, kissed the surface of the stream as it formed near the base of one of those gently-flowing currents that the grayling loves so well. Towards this point I threw my line, and, just as it curved round into the straight, I saw a silvery gleam just below the surface. There was no break, however, and, on raising the point of my rod, instead of the steady pull of a good grayling, as I expected, there was a blank. "Curious," I thought; "must have struck too quickly," and once more my flies covered the spot. Again exactly the same result. What was the reason? I still am wondering. But, without any exaggeration, for fully an hour I rose fish every cast and failed to hook one of them, although they appeared to come within an inch of the fly. Not one of them ever broke the surface of the water, and, had I not good eyesight and seen each fish distinctly, I might easily have been pardoned for making that most common of all excuses among unsuccessful anglers—viz., that there was not a fish in the river. At last came the welcome pull, and, from the manner in which he ran off the line and bored at the bottom, I felt certain that he was a good fish. What was my disgust, therefore, after some really exciting play, to find that my capture was only a ¼lb. grayling, *hooked by the tail.* Evidently he had disdained the fly in the same manner as his comrades, but, emphasising his contempt of my feathered lure in a bolder way by a lash of his tail, he paid the penalty for his temerity. This completely settled me, and I came to the conclusion that I must have forgotten how to fish.

Then appeared visions of my companions successfully landing grayling after grayling. If they had been rising as freely above, and they hooking them, why their panniers must be nearly full. Then I looked again at the unfortunate victim of juvenile precocity lying at the bottom of my creel. No, I could stand the suspense no longer: I *must* go up and see what they were doing.

The first part of my journey up-stream was plain enough sailing, being fairly open ground, bestrewn with yellow bracken and fading herbage; but at length I came to an iron wire fencing, skirting an impenetrable-looking coppice of larch, fir, hazel, and bramble. So far as I could see there was no clearly-defined path through this obstruction, but, as it separated me from my fellow anglers, I determined to do my best to thread my way through the maze. This was, however, easier said than done; and when, by dint of holding my rod high above my head in some places, and in others threading it under the branches, I struggled for five minutes onwards, I suddenly found myself on the summit of a rocky precipice, hemmed in with bush and bramble on every side, while far down below the swollen river rushed over its rocky bed. To add to my difficulties my foothold was anything but secure, and it made me shudder to contemplate the result if the little plateau of shaly red sandstone upon which I was standing was to give way. The situation was undoubtedly an awkward one; the question was how to get out of it. To retreat was impossible, to advance was equally so; there was therefore only one course left—viz., to take my rod to pieces as well as I could, to unscrew my five foot landing-handle in half, and then climb upwards and explore the territory in that direction. This I did; and after much labour, and numerous scratches from erratic brambles, I found myself, to my great delight, in an open path, winding down through the wood. It appears that there was a gate on the outskirts leading to this path, the existence of which I was unaware of. Just beyond this point I came upon "Redspinner," and then I found that he had experienced just the same results as I had. As we were sitting together on a low stone wall, eating our lunch, J. E. M. appeared on the scene, and advised us to proceed higher up; but my friend deciding to stick to his present ground, my guide conducted me to a broad and comparatively slow-running pool, about one hundred yards in length, with a rushing stream at the head of it. And then came the reward of perseverance, for now the fish appeared to have awakened from their inaction, and I basketed both trout and grayling in rapid succession; from two o'clock until four the fun continued, so that when the three of us met together as arranged at that time, we all had the same tale to tell, and the same good baskets to exhibit to each other. It appeared that the rise came on at exactly the same time in each case, and yet not one of us could assign any reason for the sudden change.

Next morning J. E. M. brought us the welcome news that the Yore was falling rapidly, and if no more rain fell, he thought it would be fishable on the morrow; therefore we decided to again stick to the tributary; but instead of commencing at the same point as I did on the previous day, I made direct for the pool where I had experienced my good sport. I commenced with the fly; but not rising anything, I changed to the worm, and found that equally a failure. A single maggot, fished on a very small hook, was my next experiment, and with that I "struck ile"—or, rather, a grayling; for I had hold of one the second swim at the tail of the rapid stream at the head of the pool. In less than a couple of hours I had killed eleven—all nice fish, from ½lb. to 1lb; and then there was an end of that, for they ceased taking as suddenly as they had commenced on the previous day. Then I saw a rise or two under the willows on the far bank, and, changing to fly I very soon piloted one of the gentlemen across to my own side.

The remainder of the short autumn day was spent in this manner; and before wading across to rejoin my companions, I counted the spoil, which consisted of eighteen grayling and four trout. The best fish were those which had fallen victims to the maggot; but I had no small ones among the lot. W. and J. E. M. arrived just as I was reeling up, and the latter said that he would conduct us to "Redspinner" (who was below), through a short cut in the wood. I was somewhat reluctant myself, preferring the open after my experiences of the previous day; but there was no denying our friend; so gathering up our gear, and girding up our loins, we submissively followed him. I shall not forget that "short cut" for some time. Herrick's line—"Rockie are thy wayes all over"—did not half describe the discomforts of that journey. Our guide bounded over the boulders with the agility of a young antelope, and I believe smiled with covert glee when he heard me give vent to a more than usually expressive adjective, or beheld W. disappear momentarily from sight into some hidden pit-fall. Great was our relief when the end was reached, and we emerged on to the gravel bed where I had "slated" the grayling on the Monday afternoon. "Redspinner" had just landed a good fish with a floating Red Quill Gnat as we came up to him; and after watching him capture another brace in the same manner, the game was up for that day, and we made the best of our way homewards.

(*To be continued.*)

"A FIRST LESSON."

WE have much pleasure in presenting with this, our Christmas Number, an illustration in photogravure of an exquisite painting by the late Mr. H. L. Rolfe.

The scene depicted is on a Scotch lake, and the bitch-otter, bringing a trout to her cubs, is giving them a lesson in poaching, and a taste for *Salmo fario*, in the capturing of which the youngsters will, no doubt, in due time prove adepts themselves.

The canvas of this subject was about four feet by three feet, it being one of several celebrated paintings that, while Mr. Rolfe was alive (and since), have been so greatly admired by his brother anglers, and many acquaintances who had the privilege of his friendship and the pleasure of an ever-ready and hearty welcome, at his studio in Nicholas-lane, E.C.

"The Baron" (by which appellation he was known to his numerous friends) in earlier life illustrated largely in the old *Sporting Magazine;* and some of its most beautiful engravings were from subjects of Rolfe's creation, who was also fond of apt titles for his paintings, such as—

"Threatened War in the Highlands,"
"A Smash on the Main-line,"
"A Leap for Liberty,"
"Not Caught Yet,"
"In a Fix,"
"The Poacher,"
&c., &c.,

all well-known examples of his facile pencil.

Among his most important works were—"The Fresh-water Fish of Great Britain" and "The Game Birds of Great Britain." For this pair of paintings the late Mr. Henry Lee paid (I believe) five hundred guineas.

Mr. Rolfe died on Monday, August 29, 1881, *ætat* fifty-seven. Art lost a devoted follower. We may have another fish artist, but another Rolfe we certainly shall not soon find again.

ALFRED JARDINE.

Waltoniana

ON Wednesday the Thames was within eighteen inches of the level it reached during the big flood in October. It was a bad colour, and will require an abstinence from rain on the part of the weather authorities, together with some frosty nights, to fine it down into good fishing condition before the end of the week. Some anglers were doubtless surprised to find that such good takes of roach and other fish were made last week while the river was apparently in such bad order. The probable reason was the long continuance of floods and thick water. Fish must feed, and I have often noticed that during the rainy seasons, like the present, the fish seemed to get used to the mud, and after a time, feed right well in water which would usually be considered unfishable.

I HAVE to thank Mr. Crumplen and Mr. Wilson Browne for courteously correcting the statement made in "Waltoniana" as to the area drained by the Thames. I quoted from a semi-scientific journal, the editor of which seems to have passed a very considerable printer's error. I note that Mr. Crumplen, on the authority of Huxley, states that the Thames drains an area of six thousand one hundred and sixty square miles, or nearly one-seventh of all England. This sounds an immense area to be drained by one river, but the tributaries, of which the Thames has many, are of course included in estimating the area of the watershed.

WHY does not every flyfisher in the Kingdom join the Flyfishers' Club? The subscription is little more than nominal. There is no entrance-fee. The club-room, overlooking the Thames Embankment, is one of the most pleasant lounges in London, and the members are a particularly nice set of fellows. The advantages to London members are obvious. Country members find the club a pleasant *pied-à-terre* when in London, and the annual dinner gives them an excuse to escape from domestic thraldom and enjoy London life for a few days. How the members held their annual dinner last week has been already recorded, so there is little left for me to say. Mr. Basil Field, the chairman, was deservedly complimented on his witty and eloquent speech, and Mr. T. E. Pritt, who journeys from Yorkshire every year to attend the dinner, delighted the members and their guests with several of those excellent stories for which he is famous. For the first time since the club was formed, the author of "Waterside Sketches" was absent, and his genial presence, eloquent words, and ringing voice were much missed. Another warm supporter of the club, Sir Ford North, was absent through illness.

THE following night, thanks to photography and Mr. Francis Walbran, of Leeds, about five hundred London club anglers were able to see views of two of the most beautiful Yorkshire rivers. What a changed thing is the old magic lantern of our childhood, with its smelling oil lamp and its comic coloured slides, representing the exciting adventures of the Babes in the Wood, the amorous Rolley, Jack the Giant Killer, and many more of the same nature. Limelight now takes the place of the oil abomination, and most charming photographs are shown upon a screen some 10ft. to 16ft. square. A little insignificant picture not more than three inches in height becomes transformed into a magnificent landscape, which only requires colour to make it Nature herself. I think the London anglers thoroughly appreciated both the pictures and the lecture, for Mr. Walbran told me after it was over that he never had a more enthusiastic audience. I was particularly glad to notice that the mention of the good feeling which existed between anglers of the north and the south was received with downright enthusiasm. When the time comes for a combination of all the anglers in England, to force upon Parliament the necessity of amending our fishery laws, there will probably be no difficulty in bringing about a union of the Northern Associations and those in the Midlands and Southern Counties. It is only by such combinations that any really satisfactory fishing legislation is ever likely to be obtained. At least that is my opinion.

THE five hundred anglers who assembled at the Foresters' Hall to hear Mr. Walbran's lecture were nearly left without either chairman or lecturer. Those gentlemen had the misfortune to engage an aged and crusty cabman, ignorant of the whereabouts of the Hall, and possessing only one eye. After driving his fares from Haverstock Hill, where they were staying, to Holborn, he took them to the House of Detention, and drove them three times round that useful but not ornamental edifice. Then he wildly galloped down the Clerkenwell-road, but pulled up some time later, on finding himself at the Angel. Thence he was directed back, and, about half-an hour after the lecture should have commenced, brought the pair to the Hall, where they were received by the Hon. Secretary of the Society for Promoting the Reading of Papers among Angling Clubs, and recounted their adventure. But the audience, consisting of anglers, and the chairman and lecturer being also "devotees of the gentle craft" (this is a quotation), it is just a little doubtful if the story was believed. However, the audience were as good-natured as they were orderly and appreciative, and the evening was quite the most successful of those that the energetic Mr. Shrubsole and his fellow-workers have organised.

TEMPLAR.

MESSRS. CURRIE, MCDOUGALL, AND SCOTT'S MANUFACTURES.—Twelve months ago we recommended our readers to give Messrs. Currie, McDougall, and Scott's Scotch tweeds a trial. Those who did so, we feel convinced, were well satisfied with the result. We hear very satisfactory statements from several anglers as to the durability of this firm's tweeds and homespuns. Nothing gets more knocking about than a fishing suit, and Messrs. Currie and Company deserve the thanks of anglers as well as their custom for having put such reliable materials upon the market. Now is the season for giving (*and* receiving we hope!) presents. Nothing could be more acceptable to the ladies than a costume of Messrs. Currie's new Cleopatra patterns, or serviceable than their homespun costumes. To the sterner sex we recommend the new patterns of fishing, shooting, and hunting homespuns and tweeds. To those who do not drink whisky, and *have* to be kept warm somehow, we recommend the magnificent blankets this firm makes. We saw a knee-rug from Messrs. Currie's some time back, and we were so well pleased with it that we immediately got one for ourselves. We feel convinced we shall be able to hand it down to our next generation very little the worse for wear—such rugs never wear out.

Holloway's Ointment and Pills.—Glandular swellings in the throat, neuralgia, tic-doloreux, rheumatism, gout, lumbago, and other diseases affecting the glands, muscles, and nerves of sensation are permanently eradicated by this healing anti-febrile and soothing preparation. It is also a perfect remedy for all skin diseases, and every kind of superficial inflammation, which soon lose their angry and painful character under this invaluable Ointment. The Pills have never been administered either by Hospital or private practitioner in dyspepsia or liver complaints without producing the desired result.

In Memoriam.

Died December 13, on his eighty-ninth birthday, Mr. C. H. Witherington, of Aberlash, Sonning, Berkshire. A gentleman honoured and beloved by all who knew him, and respected by everyone whom business or pleasure brought him into contact with. A true sportsman, of grand *physique*, known by scores of anglers frequenting that lovely portion of the Thames, to many of whom he felt pleasure in giving permission to fish his private waters, where so many magnificent trout, barbel, chub, &c., have been captured.

But little more than twelve months ago (Sept. 3, 1890), when fishing the weir-pool, at Sonning, Mr. Witheringtou—who had been all that day partridge shooting, and made a good bag of birds—came to the river-side to express his delight that I also had secured a good bag of barbel—it was his kind, generous way of making an angler happy.

He died "full of years." The people of Souning and its neighbourhood will greatly miss him, and it will be long "ere they look upon his like again."

Requiescat in Pace. A. J.

THE WHITE ANGLER.

A TALE OF THE ARUN.

By Goosequill.

Years ago now, when the Arun, comparatively speaking, was little frequented by the Cockney angler and his roach pole, and "Pulborough and Amberley" were not household words in the bosom of that worthy's family, I used to fish the river a good bit. It was in the days when bream were caught by stones, pike up to 20lb., and when the lordly salmon was not unfrequently dropped across. It was in the dear old days, when the angler sat by his float and saw never a human being till dusk set in and he entered the village inn over the sandy floor, and sat down in the old-fashioned tap-room, and drank his beer and displayed his take of fish. Ah! those fish—no "tin plates" amongst them—those big, golden bream that in the hot broiling days of July and August swam up and down the river and in and out of its rooks and curves like droves of pigs. As I write I think I can almost hear the splash of their tails and see them gambolling about.

We used to have some rare sport with them. By "we" I mean Dick Douglas and I. Dick was the son of a well-to-do Sussex farmer and sportsman, a man who rode, shot, and fished—the *beau ideal* of the good old country gentleman. Dick naturally inherited his father's keen taste for shooting and fishing, and the old gentleman was never so pleased as when he saw his son's pretty little single-barrelled gun raised and a jack snipe bowled over. "Farmer Douglas," as he was called, lived at Blue House Farm, and at the end of his orchard was the river Arun. There he had made many a good basket of bream, standing under the old Keswick tree, and there it was that young Dick first felt the pull of the golden fish.

Dick and I were close friends. We had been boys together, gone to the same school together, and shot and fished together. We both lived on the banks of the Arun, and from my house I could easily discern the silvery streak passing through his father's meadows, and see the gay-coloured weather-cock on the Blue House Farm.

Though bream were extremely prolific in the Arun, at the time I speak—I am glad to hear that the famed old Sussex river is fairly-well stocked with the golden ones—they require catching. Their "eddication" had, of course, not arrived at that pitch enjoyed by the Arun bream of the present day; but it was useless even then to approach them with clothes-props and whipcord. We used to fish with hazel-rods, a turkey-quill for a float, and good strong gut. To-day the old London angler who has had anything to do with the Arun will tell you that as regards the bream he has always done more execution in the night. That was exactly the case with us, and many a pleasant August evening we two have passed at the deep bream hole by the old Black Bridge. Some of our finest bream—fish of 4lb., 5lb., and 5½lb.—used to be taken ere the lark had risen, and whilst the nightingale was still pouring forth her sweet melody in the coppice at the top of the fifty-acre field. In night-fishing we use to leger for the fish with a piece of lead, or a heavy nail or screw. Great Scott! how they used to suck in the lob-worms, to be sure!

One night, about eight o'clock, Dick and I went bream fishing by the Old Black Bridge as usual. It was in August, and the day had been muggy and showery. The evening turned out a very pleasant one, however, and there was every anticipation of sport. Farmer Douglas's eyes glistened as he shook us by the hand and bade us good-night. "The bream should bite to-night," said he, giving a wise shake of the head. "Go up to the Bridge Hole, boys." When we got there it was almost dark, and by the time we had put our rods together the hedges and trees looked nothing but huge black objects. There was no moon, and very few stars. Dick sat about ten yards away from me. I could hear him putting his rod up and throwing in the ground-bait. It must have been close on ten o'clock, however, before either of us had a knock—"pull" we used to call it—and then Dick sung out that he had hooked a fish. I could hear the noise in the water, and I hurried to his assistance with the old barn lantern and the landing-net. The fish weighed about 2lb., and whilst I was remarking that they were not feeding up to much, there was another "pull" at Dick's rod and up came a second two-pounder. On returning to my own rod I found that during my absence an eel had helped himself to the worm, so greedily that about half-a-foot of the gut was down the wriggling beast stomach when I dragged him on to the bank.

That night I occupied the swim nearest the Black Bridge, and as the hour of midnight was made known through the old church clock, I looked up. A person with a fishing-rod in his hand and a bag slung on his shoulder was passing over the bridge. His costume was a milky-white colour, but the rod was black and so was the bag. As he stopped and looked over his shoulder in my direction, I felt a cold shudder pass through me. I tried to call Dick's attention to the strange figure, but I seemed as if I was choking. Horrors! He appeared to be coming towards me! Suddenly, however, he stopped again, and, muttering something to himself, rapidly walked over the bridge and down the river bank in the opposite direction to us. I watched him looking at the river with his haggard, thin, white face, saw him raise his rod in the air and point across stream, and heard him give a low moan. Then he vanished altogether.

When I was sufficiently recovered from my surprise, I told Dick, in a low voice, what I had seen. He, too, it appeared had been a witness of the extraordinary phenomenon. Neither of us believed in ghosts or spirits, yet we had both seen something we thought that vastly resembled them. The fact of his carrying a fishing-rod and his close scrutiny of the river as he passed noiselessly along rendered the thing more mysterious. The moan, too, which I heard was as if someone in intense agony had uttered it.

Next morning, when we told Dick's father of our adventure, he did a hearty laugh at us. He said the ghost was none other than his grey donkey or the white cow. We, on the other hand, were as equally certain in our own minds that there was no donkey or cow about the business; and at last we prevailed on Mr. Douglas to go out with us the next night, and watch for the strange being. Ten, eleven, and twelve o'clock struck; but, save the moaning of the wind through the woodwork of the old bridge, there was not a sound to be heard.

"I told you so," Mr. Douglas said, pointing to a white cow crossing over the bridge. "There's your ghost; let's back to bed!" So saying, the good farmer, chuckling to himself, turned his back on the Black Bridge, and all three of us started across the meadow.

Instinctively I turned round for a last look, and there, sure enough, was the man in white, standing on the bridge, with the black rod and bag. He gazed vacantly towards us, with his large stony-looking eyes. Dick also caught sight of the mysterious angler and nudged his father. Old Mr. Douglas looked dumbfounded as he surveyed the apparition. "By Jove!" he exclaimed, "who, *what* can it be?" Then we saw the white man with the stony eyes pass over the bridge, and down the river-side, as on the previous evening. As he walked along he could be heard muttering to himself, and then we lost sight of him as he moved behind a bush. When we walked up to the river bank there was no trace of him left behind.

Determined to find out more about this strange intruder, Farmer Douglas requested us to say nothing about the matter, but to meet him with the rods at ten o'clock again the next night. Instead of keeping in the vicinity of the Black Bridge, however, we took up our position opposite the spot where the figure disappeared. As the village clock chimed the hour of midnight, all eyes were turned towards the Black Bridge. Scarcely had the clock done striking twelve, than the white figure seemed to leap on to the bridge. This time he surveyed the vicinity longer than usual, but at length walked into the field and on to the river bank. I shall never forget the expression on the white face, as, sitting down on the bank, he held out his rod and placed himself in the attitude of fishing. The black bag slung across his shoulders showed up grimly on his ashen mantle. Every now and then he would give a movement forward, as if about to land a fish, and then we could see him place his bony hand in the black bag. Then he once more put out his rod and gazed straight in front of him with an agonising look. Suddenly, with a piercing scream, he vanished, leaving Farmer Douglas and Dick and I, staring at each other in a most vacant way. Indeed, neither of us spoke for fully a minute afterwards, so horrible had been the cry of the disappearing figure. When at length the old gentleman broke the silence, cold drops of perspiration were rolling down Dick's face and mine, and I felt in a terrible fright. As we crossed the fields home that night, with the hearty old farmer between us, I held his arm as if in a vice, and it was only after several doses of brandy and water that I felt myself again.

* * *

No one was fonder of his newspaper than the farmer. His favourite paper was the *Brighton Daily Pioneer*. At breakfast table next morning, whilst he was looking over the journal for the latest agricultural news, and telling his wife and daughter about the previous night's scene on the river bank, his eyes fell upon the following paragraph:—

"Mysterious Disappearance.—The residents of Dittleworth have been thrown into a state of much excitement consequent upon the disappearance, under mysterious circumstances, of Mr. Benjamin Slapper, a much-respected and well-known local inhabitant. Mr. Slapper was passionately fond of angling, and on Tuesday morning he left home in the best of health and spirits on a fishing excursion to Cophim, since which time nothing has been seen or heard of him. His friends are naturally much distressed at his disappearance, and as, up to the time of going to press, no news had been received concerning his whereabouts, it is feared that something serious has befallen him. Mr. Slapper, when he left Diddleworth was carrying a fishing rod and bag with him, and a reward of £5 has been offered for any information that shall lead to his discovery."

"Slapper missing, and come fishing here! Then he has been drowned, and that was his ghost we saw last night, my dears." Saying this, Mr. Douglas hastily rose from the table and left the room.

* * *

An hour later Mr. Slapper's dead body lay stiff and cold on the banks of the Arun. Wiggins, the village constable, was covering it over with a sheet, and Mr. Douglas and Dick and I stood around, sorrowfully watching the process. Mr. Slapper had been found drowned in the bream hole, by the Black Bridge; and at the inquest next day the jury returned a verdict to the effect, "that the deceased was found drowned, but how he got into the water there was no evidence to show."

And to this day Mr. Slapper's death remains a mystery, though the appearance on the banks of the Arun of "The White Angler" was thereby explained.

⁂ On account of the Christmas Holidays, Club and River Reports should reach us not later than Tuesday evening, December 22, for insertion in next week's issue.

NOTES FROM BIRMINGHAM AND DISTRICT.

THE annual meeting of the Birmingham and District United Angling Association was held at the headquarters, on Thursday evening last, December 10. About seventy delegates answered the roll-call; the clubs which were not represented were as follows: The Midland Piscatorials, St. Thomas's, Deritend, Convivial, Anglers' Pride, City, Birmingham Heath, Birmingham Piscatorials, Brothers Well-Met, and Dudley Societies. Mr. J. A. Dance presided during the first portion of the business, owing to the business engagements of Mr. T. Coles, whilst Mr. J. Hughes occupied the vice-chair. The letters of apology for non-attendance were read, after which the business of the meeting was opened with the reading of the minutes of the general meeting, held on October 15, which were adopted without discussion. The minutes of the committee meeting, held Nov. 5, were also confirmed. A notice of motion, of which Mr. Willock gave notice of at this meeting, respecting the renting of the reservoirs belonging to the Birmingham Corporation, was spoken to at some length by this gentleman, who, in his remarks upon this important matter, said that he wished the association to take the matter up, with a view of the association getting the corporation waters under their control if possible, and having the whole of the reservoirs thrown open to the members upon the payment of one shilling per day. Other speakers followed Mr. Willock, when it was finally decided to refer the matter to the committee, for them to deal with at their next meeting in the New Year, as it was thought that they would be better able to deal with the question than the general body. The balance-sheet for the quarter ending Sept. 30 was next taken, the income being £77 15s. 1d., and the expenditure £51 10s. 6½d., leaving a balance in hand of £26 4s. 6½d., the chief item in the expenditure being the grant for prizes for the last great Pershore contest and other expenses attending the same. After hearing the financial position of the association, read by the secretary, and the auditors' report, which went to show that the accounts were correct, it was resolved to receive the report and balance-sheet, and the resolution, upon being put to the meeting, was carried unanimously. A notice of motion respecting the banking of the monies of the association brought on a rather long discussion, when the following new rule was proposed by the vice-chairman (Mr. J. Hughes), and carried with a substantial majority: "That the general secretary's name be placed in the Post Office Bank-book, together with the names of the trustees; and that the postal authorities be requested to forward to him all receipts for the monies placed in the bank to the credit of the association." The election of the working committee for the ensuing year of 1892 was next proceeded with, the result of the voting being as follows, and the following sixteen gentlemen were duly elected, namely: Messrs. W. Willock, H. Miller, T. Smart, W. Rabone, J. Jones, H, Attwoood, A. Keeling, W. West, R. Holding, J. Allender, C. Cottrell, W. Lee, H. Gough, C. Wainwright, and T. Bayliss. Messrs. Keeling and Hiley gave notices of motion. With this the meeting came to a close.

I BEG to remind the members of the St. George's society, that the adjourned general meeting, will be held on Monday evening next, Dec. 21st, when the committee desire all who can make it convenient to attend will put in an appearance, as early in the evening as possible, as the important business down on the agenda will take a considerable time to get through. One important item on the agenda is the proposed increase in the subscription, in order to form a fund for the purpose of preserving specimen fish caught by the members.

ALL the midland river reporters have the same sad tale to tell of the deplorable state of the rivers, the latest reports to hand go to show that all our rivers and streams are bank high; and in many instances even the meadows, and that angling will be out of the question for a long time to come, several of the clubs who rent private stretches of river water this Christmas decided to have contests; but these will have to be postponed or they will have to do, as other clubs intend doing—that is try and bring their contests off in some of the canals.

NEARLY the whole of the clubs in the district have been holding their general meetings, for the transaction of business connected with the ensuing year; and also electing their officers and committees. I hear from Dudley that they have appointed a new committee and secretary, and that only the president remains of the old officers to pilot the club. Mr. Warren is the appointed secretary, and the delegate to the association.

NOTES FROM LANCASHIRE.

IN reply to the numerous anxious inquiries respecting the memorial recently receiving such general attention, it may be said the same has been bound, and is now in the possession of the various railway companies. As to the result, we must wait patiently and hope for the best. Should our request be granted, every angler in this county will sincerely wish the companies in question "A very prosperous New Year"; and more than that, will do their best to make it so, by putting all the traffic—both passenger and goods—at their disposal, with the companies so conceding us the facilities for travelling that we ask for.

ON December 11 the Manchester Centre Council of the Northern Anglers' Association held a meeting at the Crown Hotel, Booth-street, Manchester. In the absence of the president (Mr. R. Burn) through illness, Mr. W. Gartside occupied the chair. The name of Mr. R. Ramsbottom has been added to the roll-call of this council. Arrangements were completed for the next lecture, which will take place on January 7. The Manchester Athenæum was the place decided on as the most suitable. The subject of the lecture will be, "Trout Fishing in Norway." Mr. Abel Heywood, jun., will be the lecturer, and will, during the evening, exhibit, by means of a lantern, views of many of the places he visited, taken by himself during his different visits to this country, interesting to all anglers.

POLLUTION has again taken place in the Dane, a river visited by many rods from Lancashire. On Dec. 10, a meeting was held at the Cocoa House, Lown Bridge, Northwich, presided over by Mr. John Weston, to take steps with the object of effectually stopping pollution in the future, and it is to be hoped that the decision of that meeting will be sufficient to cope with the question. It is, no doubt, a difficult one, and we refrain from saying more than this, that it is desirable for all Lancashire fishermen to do their best to support the local executive in the matter.

THE Buckland Club have just held their annual dinner and re-union at the headquarters of the club, the Queen Adelaide, Ardwick. A good number sat down to the excellent spread provided by the landlord, Mr. Johnson, who is himself an ardent angler. The room was tastefully decorated by Mr. F. Bibby, and reflects great credit on that gentleman. It is superflous to say that an exceptionally enjoyable evening was spent.

MANY statements and also inquiries have been made from time to time as to when fish were last taken in the river Irwell. From a letter recently written by Mr. Frederick L. Tavare, of Rusholme, we are able to give the following information. In the *Manchester Gazette*, of Oct. 27, 1804, the capture of a trout, weighing 3lb. 12oz., and measuring 22½in. long, by 10in. in girth, is reported, an employeé of Mr. Samuel Brierley, dyer, Salford, was the captor. Nothing is said as to the disposal of the fish, despite, the fact of its being taken out of season. Again, in or about 1881, we have a record of a trout weighing 2lb., being caught at the Millrace, just below the Crescent, Salford. Many even assert that fish have been caught in the vicinity of Peel Park, up to 1850, hut this last item must be taken *cum grano salis*. Mr. John Hatton, who completed the one hundredth year of his age on Aug. 18, 1877, often said he had taken "snigs" in the Medlock. What a different state of things to our present polluted rivers—the Irwell and Medlook.

THE Merry Anglers have just elected their officers for the coming year as follows: President, Mr. Harry Perks; vice-president, Mr. Geo. Yates; secretary, Mr. T. J. Pearce; assistant secretary, Mr. John Wagstaff; treasurer, Mr. Geo. Thompson; delegate, Mr. Yates; committee, Messrs. Jas. Potts, Ben Marshall, Walter Down, Jas. Bilby, W. Thickett. The annual report is of a satisfactory character, and the club is numerically strong, being over fifty.

THE Wellington Club held their annual dinner on Dec. 11, forty members and friends sat down to a sumptuous spread. Mr. W. Worrall, vice-president, occupied the chair. Messrs. A. and E. Smith both well-known local musicians, Mr. C. Feay, and many others contributed a very acceptable programme. The rendering of "Auld Lang Syne," to conclude the proceedings, was a remarkable feature of the evening's festivities.

NOTES FROM NORFOLK.

THE jolly time that anglers were having with the pike, when last I wrote, was doomed to a speedy end. On Thursday and Friday several fair catches were made in various parts of the county, more particularly at Wroxham, Potter Heigham, and Barton; but on Friday night a high salt-tide came up the rivers, and overflowed the banks in every direction, making the water thick and high-coloured, so that by Saturday morning no angling could be done, even the back-waters (behind the mills) being so high that the river-banks were quite unapproachable. The wind having moderated, the water is fast going down to its normal winter height, and I trust by the time this is published it will have recovered its condition.

I SAW a beautiful pike (female) of 20lb., taken out on Monday with live-bait, from private water near Norwich. It was in splendid condition, and was by far the prettiest fish I have seen this season. It is now being preserved by Mr. T. E. Gunn, of Norwich.

NOTES FROM NOTTINGHAM.

THE Trent in our district is in heavy flood, and practically there has been no angling for a week. The flood has nearly approached the tremendous innundation of 1864, although the water, compared with that period, finds a much quicker outlet. There is no doubt that considerable damage has been done throughout the valley of the Trent, and residents in the low-lying villages adjoining the banks have already been subjected to great inconvenience. In some districts the inhabitants have, in fact, been waterbound. The various local angling clubs are extremely quiet, and are likely to be until the members can resume operations amongst the fish. I have just one bit of news to supply, and it is all the more welcome because it comes from a veteran on whose word I can rely. Before the change my informant, Mr. J. Boyd, of Nottingham, and a regular frequenter of the Wilford and Clifton Subscription Waters, fished the deeps in Clifton Grove, with the Cockspur Worm, and succeeded in killing 37lb. of splendid bream and roach. Some of the bream exceeded 3½lb. each, and several of the roach weighed 1lb. 2oz. each.

A MATTER of vital importance to Trent anglers cropped up at the last meeting of the Nottingham Town Council. Mr. Councillor Bailey, according to notice given, asked "What steps the Corporation can take in regard to the navigation of the Trent, and whether the Council could appoint a committee to try and use this excellent waterway for the benefit and profit of Nottingham?" The Town Clerk, who has always been a great friend to anglers, replied that a committee, authorised by the Town Council in the year 1884, entered into a contract to purchase the rights and property of the then Trent Navigation Company for the sum of £40,000 or thereabouts. The proceedings, however, of the committee, although confirmed in the first instance, were ultimately rejected by the Council, and the negotiations fell through. The Trent Navigation Company soon after obtained an Act of Parliament authorising them to raise further capital and retain the control of the river for the purposes of navigation and the carriage of goods. It was quite open to the Council to apply to Parliament to confer upon them such powers as might be necessary to maintain and improve the navigation of the river. There were several precedents, from which it might be inferred that Parliament would confer such powers upon the Corporation, either alone or conjointly with other large towns on the river. Without the Corporation obtained Parliamentary powers they could not interfere with the navigation of the river to the extent of compelling the company to carry out the obligations cast upon it by statute. There was no doubt that water communication with the sea was of vital importance to the well-being of the town and the development of the mineral resources with which the district abounds. Whether or no the matter should be again taken up by the Council was a question which did not come within his province to answer. On this Mr. Bailey gave notice of his intention to move at the January meeting for the appointment of a special committee to fully consider the question of the navigation of the Trent, and to report to a future council meeting what steps they recommended should be taken in the matter. The Ex-Mayor stated that it was very important the town should know that the present company, or some portion of them, were going to Parliament again next session to raise more capital. The capital which they raised under the last Act had been entirely expended, and to what extent improvements had been effected, as far as the navigation of the river at Nottingham was concerned, everyone would be fully able to decide for himself. As stated by the Town Clerk, it was of vital importance that Nottingham should have free communication with the sea, and they ought to watch very carefully the company's Bill through both Houses of Parliament.

THE company have already dredged the Trent in numerous places, and whilst some favourite swims of anglers have been thoroughly obliterated, others have been formed. but the evil of the work is the possible destruction of fish ova during the spawning season. The object of the company is to open up the trade of the great brewery companies at Burton-on-Trent, and to carry their beer into the various ports on the Eastern Coast. To enable them to do this successfully they intend, I believe, to construct a number of light fast running steamers, which will be so gauged as to pass through the canals *en route* for the Humber, &c. There is, no doubt, that beer casks can be carried better by boat than in railway trucks, and the company are sanguine that their enterprise will prove a great success.

NOTES FROM SHROPSHIRE.

SHROPSHIRE readers of these Notes last week, must have imagined that the writer was perpetrating a huge joke in stating that the river was in "fair condition" for pike fishing, whereas by the time they reached print the Severn had been transformed into a roaring turbulent stream, covering hundreds of acres of land in its course, inundating many houses in the low-lying parts of Shrewsbury and other places, and flooding the streets in various localities, much to the discomfiture of the general public. It has been long since the river has risen so rapidly, for while, when I penned my Notes on Wednesday, the stream was well within its banks, it had by Friday night risen to an alarming extent, and the inhabitants of the lower part of Frankwell and other low-lying places had had to retire to their upper rooms, their kitchens being in some instances several feet deep in water. On Friday night, the water went down a few feet, but the heavy rains of Saturday and Sunday caused it to rise again as rapidly as it had receded, and by Monday morning it was as high as ever. The public lamps on the tow paths near Frankwell were only showing their heads above water, and in places where the thoroughfares were flooded punts and vehicles were freely used to convey passengers across the water. The flood continued very high for some days, and it is hoped that it will do a great deal of good to the fishing by cleansing the river and bringing more fish within the locality. The salmon fishing should be greatly improved.

THE members of the Ironbridge and District Severn Angling and Protection Society, in holding social gatherings throughout the winter months, set an example which their brethren at Shrewsbury would do well to follow, for it is by such means that the success and popularity of institutions as these should be maintained. the members kept in touch with one another, and a lasting feeling of good fellowship promoted. The Ironbridge anglers last winter adopted the plan of holding their monthly meetings all through the year, instead of from March to October only, as formerly, and they have found the change to answer well, as friend Waghorn, the zealous hon. sec., informs me in an interesting epistle. At these winter evening gatherings, after any business there may be on hand has been transacted—and there is generally some—the members settle down (as anglers only know how) to harmony and conversation. Pleasant fairy tales are told of the catches and alleged catches of the season, secrets as to the whereabouts of pike and trout of wondrous proportions are told, the favourite localities for miles around are confidentially disclosed, the big pipes are lighted, generous liquids are brought into requisition, and under these combined influences the big fish caught during the past half century grow and grow to an enormous and fearful size; but what is more gratifying, the anglers themselves lose for the time their individuality, forget the ever-running race for gold and worldly position, and rest in sweet contentment with themselves and the outer world. One such meeting as this was held on Monday evening, when Mr. F. G. Beddoes occupied the presidential chair. At the commencement of the proceedings the chairman referred in feeling terms to the death of their late member, Mr. William Yorke, of Coalbrookdale, whose death at the age of fifty-seven had occurred since the last meeting. The committee had fully expressed the feelings of the members by forwarding a handsome wreath as a token of the regret they entertained for so old and genuine an angler, and so good a citizen.

THE first business was to decide upon the time and place of the annual supper, which had been postponed from the 18th ult. It was decided that this should be held at the Tontine Hotel, on January 20, and Messrs. F. G. Beddoes, B. Hughes, J. Toddington, and W. Waghorn, were elected to constitute a sub-committee to make arrangements for the gathering. After the transaction of some minor business, a few new members were enrolled. The vice-president rose to make a proposition which met with the hearty approval of the company. This was that the portraits of the annual president of the society should be obtained and hung on the walls of the club-room, to remind the members as the years pass by of the gentlemen who so generously give a helping hand to assist the institution in this its infancy, and helped to bring it to the satisfactory position it is now assuming. He had, announced the president, written to each of the past presidents, and he was happy to be able that evening to present the three he had received, together with a very courteous letter from T. F. Kinnersley, Esq., saying that he had not a portrait by him at the present time, but would have one taken for the purpose of presenting to the society, and would forward it when ready. The vice-chairman then presented the portraits he had received, these being cabinet photos neatly framed in gilt. They were those of J. C. W. Lister, Esq., A. H. Brown, Esq., M.P., and Colonel Kenyon-Slaney, M.P. Mr. Beddoes then proposed a vote of thanks to Mr. Lister, for the great interest he had always taken in the welfare of the society. As their chairman, he said, Mr. Lister was always present, and if at any time the waters did get a little troubled he was always ready to pour oil upon them and promote that feeling of good fellowship which over animated Izaak Walton of old. That evening they had further evidence how earnestly he worked to promote the prosperity of the society, and the pleasure of its members, and none more than he was worthy of their respect and esteem. Mr. Hughes seconded the resolution, remarking that he had known Mr. Lister for many years, but not as an angler. For the three years he had taken the chair at their meetings, he said, Alderman Lister had conducted their affairs and taken an interest in their institution such as none other could have done. No matter what the business was he made a point of attending their meetings, and it was an undoubted fact that it was through his instrumentality that the society had reached its present position. In conclusion, the speaker expressed a hope that the chairman would be long spared to preside over their meetings. Mr. Arthur Green, supporting the resolution in a complimentary speech, said that though not an angler himself, he had great pleasure in doing so. He had attended many of their meetings and had thoroughly enjoyed them, and as Mr. Green had said, he had the welfare and success of the society at heart, and hoped he might be able to attend their meetings and outings for many years to come. It would always give him pleasure to assist the society to the best of his ability, and he also hoped that he should see the society in a growing state. These complimentary proceedings concluded the business of the evening, the remainder of the time being devoted to harmony, some capital songs being sung by Messrs. B. Hughes, J. C. W. Lister, H. and A. Nicholas, A. B. Green, F. G. Beddoes, W. Bennett, J. Toddington, and J. Langford.

NOTES FROM YORK AND DISTRICT.

SINCE my last notes appeared in the *Fishing Gazette* a fortnight ago, angling in my district has been *nil*, or nearly so. The Yorkshire streams have been flooded to a degree which, for some years past, has been unparalleled. However, after more than a week's flood, the rivers are, at the time of writing, beginning to assume, by degrees, their normal state; but prospects are still far from bright. The grayling, pike, and roach season is fast slipping away, while we are, by no desire of our own, obliged to be idle; and the closing months of 1891 will, I am afraid, have, perforce, to be remembered on account of the unpropitious conditions. The spell of genial weather which, however, deigned to mark the advent of the present month, was utilised by rod-holders in York and district to a considerable extent. I heard of some fairly good takes of coarse fish in the Ouse, in the direction of Naburn, amongst them being several roach scaling 14oz., 15oz., and 16oz. each. Our angling clubs now have practically "retired" from active operations for the season, and are devoting their time to the social line.

THE Harrogate Society held its annual dinner at the Victoria Hotel, on Tuesday evening, the 7th instant, when upwards of forty members assembled and enjoyed an excellent repast. The chair was occupied by Mr. G. F. B. Milner, the president, and the vice by Mr. F. Stephenson. After the cloth had been removed, the toast of the evening —"Success to the Harrogate Angling Club"—was, along with others, heartily drunk.

NOTES FROM ULSTER.

FROM every county in broad Ulster come reports of vast floods in all the rivers, and a complete cessation of sport.

In Tyrone in particular the streams, especially the mountain waters, are veritable torrents, and I greatly fear that the spawning beds have suffered from the rush of water over them, and the depositing of organic matter which would seriously interfere with the fertilising of the ova.

From the Bann, Co. Antrim, I learn that the spawning season has been very favourable, so far as regards the plentiness of salmon and trout; but the keepers had quite enough to do to watch the poachers that actually swarm on that river. So bold are those gentry that a determined attack was made by a gang of them on a watch-house a short time ago.

A poacher is said to have narrowly escaped a merited doom on the waters of the Ballinderry during the recent floods. He was engaged in watching at Ardtrea Carry for any salmon that would come within reach of his gaff. He struck at a salmon, and buried the gaff deep in the fish, but on the slippery rocks he could not get a firm foothold; and poacher, salmon and gaff were swept over the fall, at the foot of which he was fished out almost lifeless by some of his lawless companions—*minus* his gaff and the salmon.

DURING the earlier part of the annual close season, which extends from Nov. 1 to Jan. 31 following, the pollen in Lough Neagh congregate in shoals and proceed to the rocks and islets, where they deposit the spawn, and where they fall an easy prey to the poaching fishermen. For a good many years poaching had almost been stamped out, but latterly the nefarious work has revived, and in so notorious a manner as to attract attention in the local press. A good many convictions against poachers have resulted from prosecutions instituted by the Board of Conservators, but the practice is still carried on, I regret to learn. At the last Antrim Petty Sessions, held on Wednesday, before Mr. J. C. Rutherfoord, R.M., and Mr. G. J. Clarke, J.P., D.L., Mr. W. J. Kydd, Inspector of Fisheries, summoned three fishermen, named James Hannen, sen., James Hannen, jun., and James McCoy, "for that they, the said defendants, had three large lots of fishing-nets on board their boat on Lough Neagh, at the Barmouth, the 9th November last, it being the close season and contrary to statute." Mr. J. K. Currie, solicitor, Bailymena, prosecuted, and Mr. W. Williamson, solicitor, Antrim, defended. Robert Steele, water-bailiff, deposed that, while on watch at Shane's Castle, he saw the defendants place nets in a boat, and afterwards proceed out on the lough, where they remained for about two hour. When they returned to land they had no nets with them. Mr. Williamson contended that if any person were liable to a penalty, it was the owner of the boat—Hannen, sen. The Bench held differently, for, after consultation, their worships fined each of the defendants in £5 and costs, or, in default, one month's imprisonment.

SOCIETY FOR PROMOTING THE READING OF PAPERS AT ANGLING CLUBS.

RIVER Depletions; Its Causes and their Remedy," was the title of a paper read on Tuesday night by Mr. G. E. Simms before the members of the North London Angling Society, the Tap House, Holloway-road. Mr. Thorling took the chair, and in opening the proceedings, called attention to the work which was being done by the Society for Promoting the Reading of Papers at Angling Clubs, and, predicted that it would do a vast amount of good in raising the status of angling. One of the members of the society, Mr. G. E. Simms, who was taking an active part in its work, and who always seemed to be better pleased to be in harness than out of it, had come there that evening to read a paper on a subject which was of interest to them all. It was the depletion of rivers; its causes, and their remedy. The chairman then concluded by introducing Mr. Simms to the meeting. (Cheers.) Mr. Simms at once proceeded with his entertaining lecture (extracts of which have already appeared in the *Fishing Gazette*, and was frequently applauded. A discussion ensued on its conclusion, and subsequently Mr. Hoyle, as president of the club, proposed a vote of thanks to the reader for his kindness in lecturing to them that evening. In the course of his remarks he suggested that an application should be made to the County Council for the removal of the stock of fish in the London Parks under their direction to the Thames, Lea, and other public angling waters. (Cheers.) He pointed out that it would be possible if the waters at Finsbury, Battersea, and Victoria Parks and other ornamental lakes were netted to raise sufficient stock to replenish most of the waters resorted to by the London anglers. He hoped that before long a concerted movement would be made in that direction. (Cheers.) The vote of thanks was carried *nem. con.*, and Mr. Simms, in acknowledging it, said it did seem iniquitous that the ratepayers should be called upon to maintain places which were open to the amusement of everyone but the angler. (Hear, hear.) Wherever he went in the public recreation grounds he found himself confronted with the legend, "No fishing here!" He thought Mr. Hoyle's suggestion was a capital idea; but if it was to be carried out, it should be done so at once, for it was astonishing, he said, how willing the members of the County Council were especially the Progressive Section of it, to interest themselves in anything for the public benefit, particularly when it came just on the eve of an election. (Cheers.) A concert followed; and the remainder of the evening was spent in harmony. We should add that there was an excellent attendance.

AT the invitation of Mr. Frank Griffin (of the Society for Promoting the Reading of Papers at Angling Clubs), a meeting of anglers was held on Wednesday night, at the Scotch Stores, King Edward-street, Newgate-street, City, to hear a paper by Mr. E. S. Shrubsole, on "Barbel Fishing," the chair was taken by Mr. H. J. Tibbatts, and amongst those present we noticed Mr. O'Callaghan (Silver Trout), Mr. Tom Keeble (Causton), Mr. A. E. Baldwin (New Albion Piscatorials), Mr. G. C. Cooper and Mr. G. E. Simms (Gresham), Mr. Williams (Silver Trout), Mr. Griffin (Friendly Anglers), Mr. Deplidge and Mr. Sowerbutts (Causton), &c., &c. In introducing the lecturer to the meeting, the chairman said he was one of the best fellows in the world, and the longer they knew him the longer they would esteem and regard him. (Hear, hear.) Mr. Shrubsole then, amid applause, proceeded to read his paper, having first put together the *beau ideal* of a barbel fisherman's rod, and rigged it up with the leger, unaided, to illustrate his remarks as he went along. He said the barbel was a very widely-distributed fish and thrived only in certain situations. In the early part of the season it was to be found in the rough water at weirs, whilst later on it resorted to the heavier stream. There was no doubt it was one of our strongest and gamest of fish —(hear, hear)—and on fine tackle there was no such thing as "hauling" it out. No; it required all the patience and skill possessed by the angler before the fish could be brought to the net. (Hear, hear.) The barbel, which was a gregarious fish, was a bold biter. He was certainly a ground feeding fish and he was of opinion that the more level the bottom of the river and the more clear of piles, stones, boulders, and other obstructions it was the better chance the angler would have of catching his quarry. (Hear, hear.) The lecturer proceeded to speak of big barbel, and said some very fine fish were to be found in some of the Continental rivers, and other parts. He said that in 1881 it was recorded that a brace of barbel weighing 35lb. and 40lb. respectively was caught in the Diamond Field in South Africa. (Sensation.) The late Mr. Tom Hughes, he said, had had one from the Thames going 12lb.; another and larger barbel scaling 18lb. had been taken on the Lea; and Salter recorded the capture of a still larger barbel in England, weighing 19lb, 10oz. Mr. Shrubsole also referred to the "14lb. barbel to be seen in the tacklemakers' shop," but significently added, "we very seldom get such fish out of the Thames nowadays. This I am of opinion is due to the taking of under-sized fish—(Hear, hear)—and I think the standard for barbel ought to be at least 15in." (Cheers). Continuing his paper the lecturer said, barbel would frequently feed all day, but sometimes they would not feed all day. (Laughter.) The best time, he considered, to try for barbel was on dark and lowering days. Then they should leger, for that was the best way to circumvent the wily *Barbus vulgaris*. He was, of course, an advocate of fine tackle, and he proceeded to show how, with his paternoster leger, he would fish for barbel. This, he explained, was attached to the main strand of gut by about a foot of finer gut, so that, in the event of the angler getting "hung-up" with his leger, he would lose that instead of his hook. He recommended the angler to strike as soon as he felt a "knock," and also to see before going to work what kind of hook he was using. Mr. Shrubsole preferred the "crystal" hook—(hear, hear)—and a fine line and a good one. (Hear, hear.) Some of the hooks he had seen in the punts were extremely thick and clumsy, and he could not make out how "a decently-educated barbel could take them on board." (Laughter.) When fishing with worms, the lecturer urged his hearers to insert the hook just beneath the skin, first at the head of the worm, then in the middle of it, and again at the tail, for they must remember that the more lively a bait was presented to the fish, the more likely they were to see it in the net. Mr. Shrubsole passed on to float-fishing, and took his audience as far as the Nottinghamshire Trent, there to indulge in a day's barbel fishing, and to hook fish thirty and even forty yards away, as old Jack Theaker has done full many a time and oft. Mr. Shrubsole can "hit" a trout twenty yards off with the fly, but he acknowledged that the barbel could not be his if it took the red-tipped one down more than fifteen yards away. "If you go in for float fishing," advised the lecurer, "fish with as light a line as possible; the next great secret is for your line to float, and float *perfectly*." He recommended them to bring about the desired effect by using an undressed silk line, well rubbed with mutton fat. (Hear, hear.) The baiting of a swim was next dealt with. The audience were never to chop up worms to put in. They were to deposit them in the river in their natural, wriggling state. Mr. Wheeldon's baiting pot was the best thing he knew of to bait a swim with. Last, but not least, the reader came to the important matter of scouring worms for the hook bait. Clean moss besprinkled with eggs and milk would, he said, impart a beautifully transparent appearance to the worms. Mr. Shrubsole concluded by thanking those present for the patient hearing accorded him, and resumed his seat amid congratulatory applause. A discussion ensued. Mr. Keeble said the lecture had been a very pleasant one. Mr. A. E. Baldwin followed with his sad experiences of worm scouring. One day he put a quantity of worms in "some nice fresh moss," procured from a nurseryman's, but on going to them next day they were nearly all dead. Subsequently he ascertained that the moss had been impregnated with acetic acid to preserve its freshness. He, therefore, warned them not to buy nurserymen's moss. Mr. Simms, in reference to the scouring of worms, recommended natural means rather than artificial ones. (Hear, hear.) Mr. Keeble spoke of cleansing worms on old bat sacking, which he said would render them beautifully pink and fresh. Arguments both for and against Mr. Shrubsole's light leger paternoster keeping the bait on the bottom in a sharp ebb-tide and a strong stream having been given, the customary vote of thanks to the chairman and the lecturer closed a very pleasant and profitable evening.

A TREATISE ON THE LAW OF SCOTLAND RELATING TO RIGHTS OF FISHING, WITH AN APPENDIX OF STATUTES AND BY-LAWS.*

IT is now more than twenty years since Mr. Charles Stewart, advocate, published his "Treatise on the Law of Scotland relating to Rights of Fishing," this book was well received when it appeared, and it has continued to maintain its place in the estimation of the profession and the public. But important changes have since taken place. New Acts of Parliament have been passed relating both to sea and salmon fisheries, and a great mass of decisions by the courts following upon these has gradually accumulated; so that a new edition of Stewart has become absolutely necessary. The Editor of the second edition—Sheriff Sharp—has discharged his laborous duties with much zeal and ability, and has skilfully incorporated the new matter with the old, so that we now possess a complete guide to the Fishery Laws of Scotand brought down to date.

In the chapter on the "Regulation of White Fishing in the Sea," the powers and duties of the Fishery Board for Scotland, which has taken the place of the old Board of White Herring Fisheries, are clearly set forth and explained, as well as the position of the Secretary for Scotland with regard to the Sea Fisheries and the by-laws made by the Fishery Board. The chapter on the "Herring Fishing" is entirely new and points out the duties and powers of the Fishery Board with regard to the construction of herring barrels; the branding of herring; the restriction on the manner and time of fishing; and other matters of importance.

The greater part of Mr. Stewart's book is devoted to salmon and trout fishing and to a consideration of the Special Acts which regulate the salmon fishing in the Tweed and in the Solway Firth, and its tributaries; and a careful consideration of the chapters which relate to these can scarcely fail to convince any one, who is not an upper or a lower proprietor on a salmon river and so wedded by interest to certain views on the subject, that the Scottish Salmon Fishery Acts of 1862, and 1868 are defective and imperfect in many particulars, and that farther legislation is required in order to do justice to the salmon fisheries of Scotland. As these Acts at present stand, stake nets and bag-nets may be placed far too near the mouths of rivers; there being at least twenty rivers, with estuaries so fixed by the Commissioners under the Act of 1882, that such nets may be placed at distances, varying from four hundred to one hundred and fifty yards from the mouth of the river on each side, measured from a point fixed in mid-channel. Such estuaries imperatively call for revision and enlargement, in order to give the fish a fair chance of ascending to the upper waters. At present there is no definition in the Acts, of what constitutes a fixed engine. This omission ought to be supplied in any future legislation. The following, it is thought, would be a fair definition:— "From and after the passing of this Act, the terms, fixed net and fixed engine, shall respectively mean and denote any net and engine used, or which may be used, for the capture of salmon, saving and excepting fishing by net and coble, as lawfully used and practised at the time of the passing of this Act." The Secretary for Scotland should have power to amalgamate or divide fishery districts as in the English Act of 1873. The constitution of District Boards should be revised. As at present constituted, the upper proprietors complain that they—in whose waters the salmon are bred—have too little power, and that they have no interest to preserve the fish and prevent poaching, as only a miserable remnant of salmon is permitted to reach their waters during the fishing season, and that until the nets are off, the lower proprietors have a practical monopoly of the fishings.

Further provision should be made for the abatement of pollutions and the removal of obstructions in rivers and estuaries to the passage of salmon. The weekly close time should be extended to forty-two or forty-eight hours. Some provision should be made against over-netting by net and coble in the lower stretches of great rivers—such as the Tay for example—similar to that in the 14th section of the English Act of 1873, which provides that no draft-net shall be shot within one hundred yards of another until the latter is landed. The sale of salmon caught with the rod during the extension of time for rod fishing should be prohibited. The use of the gaff for landing salmon should be forbidden from the beginning of the fishing season in every river until the 1st of June; and there should be a close time for trout and char, as in the English Act of 1873, and the Irish Act of 1850. Within its own district every District Board should have the same powers to prosecute for the removal of obstructions in rivers and estuaries to the passage of salmon as are at present competent to the individual proprietors of such board. As the law at present stands, every individual proprietor of salmon fishings has a right to raise an action for the removal of such obstructions. But, as the original Commissioners, under the Act of 1862, neglected to make a by-law with regard to such obstructions, as empowered by the said Act, the best legal authorities in Scotland hold that district boards have no title to prosecute, which undoubtedly they ought to have. In like manner every district board, within its own district, should have all the powers of prosecution for the removal or abatement of pollutions in rivers and waters as are at present competent to the individual members of such board. It is notorious in Scotland, that the clauses in the Acts of 1862 and 1868, intended to prevent the pollution of salmon rivers, have signally failed in effecting the object for which they were enacted, so that no attempt is now made by district boards to put them in force. District boards are, therefore, at present quite unable to put down pollutions, because, being the creatures of statute, they cannot travel beyond the statutes which create them and define their powers, and have, consequently no title to prosecute under the rule of common law that no upper proprietor has a right to pollute a stream to the injury and nuisance of a lower proprietor.

---

* By Charles Stewart, advocate. Second edition, edited by J. C. Sharp, advocate, Sheriff Substitute, Inveraray. Edinburgh, T. and T. Clark, law publishers, 1891.

The above is a brief sketch of some of the chief points which ought to be provided for in any new Salmon Fisheries Act for Scotland. But when is there any chance of such an Act. Political exigencies seem to forbid it in the meantime; and the irreconcilable differences between upper and lower proprietors make its passing dubious, even if Parliament had time and inclination to take up the subject.

THE ISLE OF MAN ANGLING ASSOCIATION.

THE second annual dinner of the above association was held at the Talbot Hotel, Athol-street, on Monday evening last.

In responding to the toast "The Isle of Man Angling Association," Mr. Colquhoun said he had been an angler thirty-five years, and derived the greatest pleasure from the sport. With a view to keep the members better together, he would suggest that the association should meet oftener, and read papers on angling, as was done across the water. He thought the adoption of something of that sort would prove of great advantage to the association.

Mr. Tuton proposed the health of the treasurer, and pointed out the amount of arduous work which Mr. Hindley had to do.

In replying, the Treasurer said he thought the compliments paid him in the toast were scarcely applicable to him, as the hard work really devolved upon the secretary, who was most entitled to the thanks of the association. He said that they had now forty-nine members as against seventy last year, and he would endorse the remarks of the vice-president in the matter of meeting oftener, and thought that if printed notices were sent to the members when their subscriptions became due, as at the commencement of the association, then they would retain their members more than at present.

Mr. Brearley then proposed the toast "Our worthy Secretary."

Mr. Malden suitably replied, and

Mr. Colquhoun afterwards said they had a pleasing duty to perform. That was, to acknowledge in some measure the work done for the association by Mr. Malden. He would, in the name of all the members, present, him with a gold medal, as a slight token of their appreciation of his services.

In thanking the association for their gift, Mr. Malden said that whatever he had done for them in the past had been a source of pleasure to him; and in the future, whether as member or secretary, he would be prepared to give all the assistance he could to those who required it.

The gold medal was inscribed as follows: "Presented by the Isle of Man Angling Association to Mr. F. Malden, 1891." On the reverse side of the medal was the monogram of Mr. Malden, engraved on a shield.

A letter was read from Mr. R. B. Marston, Editor of the *Fishing Gazette*, in which he expressed regret at the ill-health of the president.

The Vice-Chairman proposed a toast to Mr. Marston, which was effusively drunk, and afterwards proposed "The Press."

Mr. Frost suitably responded, and Mr. Rothwell supported.

The prizes were then distributed.

A toast to the donors, winners and host, closed the formal proceedings, which were characterised throughout by a spirit of harmony.

STOUR FISHERY PRESERVATION.

A MEETING in connection with the proposed preservation of the Stour was held recently, by permission of the Mayor of Sudbury, in the Town Hall, the object being to ascertain the views of fishermen as to the proposed new by-laws for the preservation of the Stour. Mr. H. H. Almack, of Long Melford, one of the conservators, was voted to the chair. Mr. F. Dunn proposed, and Mr. F. Webb seconded, that the closed time for all fresh-water fishing be from March 15 to June 15. Considerable discussion followed, many present advocating that in the Stour there was no necessity for any closed time for roach, perch, and bream; but, in order to bring the by-laws into harmony with the Act of Parliament, the motion was carried unanimously. Mr. J. F. Hills proposed, and Mr. H. S. Oliver seconded: "That no jack be allowed to be taken under 18in., and that no restriction need be put upon the size of any other fish." This was carried. Mr. Goodall proposed, and Mr. W. Good seconded a resolution: "That no eel gore be allowed," which was carried. Mr. Spurge proposed, and Mr. Herbert seconded: "That no night lines be permitted, except such as are baited with worms for eels," and the resolution was carried. Mr. Herbert proposed, and Mr. Spurge seconded: "That the only description of nets allowed should be a hoop-net for tench (the size of the mesh being decided upon hereafter), and a landing-net, the circumference of which shall not exceed 48in." This was carried. A form of water bailiff's warrant, prepared under the sanction of the Board of Trade, was read by the secretary (Mr. Pratt), and Mr. Hills was asked to express to the Conservators the desirability of having these warrants more clearly defined. Then followed the names of twenty gentlemen willing to become honorary water-bailiffs. Before the meeting separated, the idea of a Stour Angling Club was discussed, and all present gave it their hearty support, the Chairman particularly promising to do all he could to aid the club.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Association, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—The monthly delegate meeting will take place on Monday evening next, Dec. 21, at 8.30.—R. GHURNEY, sec.

Anglers' Association. — VISITING LIST, EASTERN DISTRICT No. 2.—The next return visit on this list will take place at the St. Andrew's Piscatorials, the Turk's Head, East-street, Lamb's Conduit-street, W.C., on Monday next. This will be the last visit this year, and as this club deserves a bumper I hope the clubs in this district will assist them and me.—F. THORLING.

Anglers' Association. — WESTERN DISTRICT. — A successful visit was paid to the Camden Angling Society on the 14th inst. Upon the roll being called, eighteen clubs responded. The A.B. box was opened, and found to contain £1 15s. The next visit will be paid to the Cambridge Friendly on Jan. 13.—J. JENNINGS.

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge, with thanks, the receipt of £3 from the Hounsfield Otters Angling Society, the contents of their donation box; and 18s. 4½d. collected on the presentation of prizes won at the Rye House Competition.—R. GHURNEY, sec.

Allason United Brothers Angling Society, Allason Arms, Uxbridge-street, Notting Hill-gate, W.—Our members met as usual, and we proposed that jack and punt fishing should be eligible to weigh in for our December competition; but any members six weeks in arrears will not be eligible to take a prize. Members must meet on 23rd inst. for important business. Our angling slate club is increasing; our number list has reached forty-seven members, and still more have promised, and no angler ought to lose a good chance of the benefits. It is a grand society. All particulars of treasurer, Allason Arms. Meeting night every Monday, from eight p.m. till ten p.m. Mr. E. Merritt weighed in a good jack in capital condition, weight 4lb.; 28in. long.—B. ABRAHAMS, hon. secretary.

Amicable Brothers Angling Society, Bald-Faced Stag, Worship-square, Finsbury.—I wish to remind members that next Wednesday is general meeting night, when I trust I shall see a good muster; roll-call at 9.30 sharp.—W. H. POTTER, sec.

Amicable Waltonian Angling Society, the Sun, Great Sutton-street, Goswell-road.—On the 13th inst. several of our members were out, but on account of the boisterous weather and floods, there was very few fish showed in the club-room, Mr. Whitebread being the only member weighing in roach, which saved the club a blank. Mr. Tomkins was proposed as a working member last Thursday, and will be balloted for next meeting night.—E. R. EMBLETON, sec.

Anchor and Hope Angling Society, Canal Bridge, Old Kent-road.—The usual weekly meeting was held on Wednesday night. Mr. H. Neve took first prize on the 13th inst., leaving two prizes to be fished for on the 20th. The following clubs answered to the roll call on Monday last, on the occasion of the South London Anglers visit to the above society—viz.: Bermondsey Bros., Second Surrey, Rodney, South London, Peckham Bros., United Bros., St. Albans and Excelsior, Waggoners, Blackfriars, St. George's, St. Thomas's, Cliftonville, and Hatcham Bros., to whom I tender my best thanks for their attendance.—A. G. SMITH, sec.

Battersea Friendly Angling Society, Queen's Hotel, Queen's-road, Battersea.—The Christmas prizes will be fished for on December 20, between Kingston Bridge and Hampton Court Bridge; tow-path only. Prizes not taken will be drawn for. All competitors must go by the train leaving Clapham Junction at 9.12. On the 13th we had a good show of fish. Mr. J. W. Hopkins, from the Cam, 9lb. 12oz., the heaviest roach, 1lb. 8¼oz., and a dace, 8oz.; Mr. Morris, at Wraybury, roach, two over 1lb.; J. Pindar, Sunbury, roach, one, 1lb. 5½oz.; W. Wastell, roach.—G. MUMFORD, sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—The members of the above society fished their annual competition for Christmas prizes on the 13th, at Twickenham, when, considering the weather, the result was fairly satisfactory. The first prize, £1 given by our host, Mr. Smith, being taken by A. Conn, with 3½lb. of bream and dace; second, a leg of pork, by Mr. Streeton, won by Mr. P. Allum; in all seven members had fish, the remainder of the prizes being drawn for by those members who took part in the competition. The next visit on the Central Association Visiting List will be to this society on Tuesday, January 5, 1892. This being the first visit this club has received on that list, the company of representatives from the various societies on the list will be esteemed a favour.—A. CONN, sec.

Blackfriars Angling Society, Winchester Arms, Southwark-street, Blackfriars, S.E.—On Wednesday night it was settled that we go to Windsor on the 20th inst., to fish our Christmas match. The prizes will be given out on Wednesday night next, when there will be a smoking concert. All prizes to be in by Tuesday night at the club-house. I hope to see a good muster on this occasion; all are heartily invited.—F. ROBERTS, hon. sec.

Bloomsbury Brothers Angling Society, the Rose and Crown, Broad-street, Bloomsbury, W.C. — The only member to venture out on the 13th inst. was Mr. C. Davis, who weighed in dace, taking the first prize in our Christmas list; the remaining prizes will be fished for on the 20th inst.; go where you please; all fish to weigh, bar jack.—D. WARREN.

Cambridge Friendly Angling Society, Mason's Arms, Titchborne-street, Edgware-road, W.—The next return visit (Western District) will be to the above, on January 13, when we shall be very pleased to see all angling friends.—W. SUTTON, sec.

Camden Angling Society, Royal Exchange, Hartland-road, Kentish Town.—A number of the members of the above fished at Cookham for our Christmas prizes, but owing to the rough weather, only one was taken—by Mr. Marshall, with roach; Messrs. King and Langton, roach, from other waters; the remainder of the prizes to be fished for on December 20; any water. On Monday last we held our return visit on the Anglers' Western District, when eighteen societies were well represented. On the Anglers' Benevolent Society's box being opened it was found to contain thirty-five shillings. We thank all those who were present on that occasion for contributing to the success of the evening.—E. T. WHITE, sec

Canning Town Angling Society, Marquis of Salisbury, Hermit-road, Canning Town, E.—I wish to remind our members that we fish at Dagenham Lake on the 20th inst. for our Christmas prizes, seven in number; to be a roving match; all to go down by the 9.42 a.m. train from Plaistow; leave off fishing at four p.m. Members please take notice that it is quarterly night on the 23rd inst., when there will be some very important business to bring forward.—O. JONES, sec.

City of London Angling Society, White Bear, Bride-lane, Ludgate-circus.—Our complimentary meeting on Monday evening was not quite a success, owing to counter attractions, broken promises and other causes. Mr. G. Taylor, of the North London, took the chair, faced by Mr. Chambers. We had twelve societies represented, viz.—St. John's, City of London, Independent Brothers, Rising Sun, Amicable Waltonians, Bloomsbury Brothers, Alma, North London, Rodney, Bermondsey Brother, Angler's Pride, and Anchor and Hope. We tender our sincere thanks to those clubs who sent representatives, and will not forget them when their turn comes.—CAS.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—On the 13th inst., we were saved from a blank by Mr. Scott with roach and gudgeon, he winning a prize for Christmas outing; and as we have two more prizes to fish for, and the 20th being the last day, members who have not taken a prize, are advised to go out for them; the prizes will be presented on the evening of the 23rd. I shall esteem it a favour if donors will kindly send in their prizes to the club-house on that day as early as convenient.—A. TROWBRIDGE, sec.

Clifton Angling Association.—The eighth annual meeting of this society was held at the Queen's Hotel, Clifton, on Saturday afternoon last, Mr. A. Mason (the president) in the chair. The hon. sec. having read the report, and the accounts having been submitted, the chairman congratulated the members upon the satisfactory position of the club, and formally moved that the report and accounts be received and adopted, which was seconded by Mr. G. Wager, and carried unanimously. The following were then elected officers of the club for 1892: President, Mr. A. Mason; committee, Messrs. J. T. Cundall, C. Eyles, E. S. Peck, and W. Colston Powell; hon. sec. and treasurer, Mr. J. W. Cundall; representatives on the Bristol Central Association, Messrs. Cundall and Frost. The club record showed that the continuous rain of the past summer had considerably affected the sport, such of the members as had secured respectable aggregates having achieved the result in consequence of one or two exceptionally good days, and not by reason of good average takes. On the proposition of Mr. W. R. Biggs, seconded by Mr. Eyles, a suggestion to provide a boat for the club-water was left in the hands of the committee. A new member having been elected, and some general business transacted, a vote of thanks to the chairman brought the proceedings to a close.

Dalston Angling Society, Brownlow Arms, Brownlow-street, Dalston.—On the 13th instant, Messrs. Freeman and Legge saved us from a blank with a nice show of roach and perch. Members, please show up on Tuesday next, as there is some important business to bring forward.—S. MALBY, sec.

Globe Angling Society, Fonthill-road, Finsbury-park, N.—We were saved from a blank on the 13th inst. by a few roach, bream, and perch, taken by Messrs. Slade, Evans, W. Laurence, and W. Hall.—A. PAYNE, sec.

Good Intent Angling Society, Crown Inn, Church-street, Shoreditch.—The members will fish for prizes on the 20th inst., at St. Margaret's; the roam of water; all start by the 9.8 train, Liverpool-street Station. The prizes consist of Christmas cheer, sucking pig, turkey, and bottles of spirits (fourteen prizes), all given by the members of the above club; all members allowed to fish.—R. MURPHY.

Gresham Angling Society.—Considerable progress was made on Tuesday in arranging a programme for the first six months of the year 1892, which includes fishing competitions, papers, discussions, exhibitions, and smoking concerts. After the business, a smoking concert was held, with Mr. J. Tayler, the secretary, in the chair, and a varied programme of vocal and instrumental music was gone through in a manner which gave great pleasure to a goodly number of members and visitors. There will be no meeting on the 22nd, but on the 29th business of importance has to be transacted.

Hoxton Brothers Angling Society.—On the 13th inst. no fish were weighed in. The presentation of the Christmas prizes will take place on Tuesday evening next, December 22.—R. GHURNEY, sec.

Izaak Walton Angling Society.—The members will compete for four special prizes on January 3; also for three ditto on January 6. Competitors may—private waters barred—choose their own fishing waters for the above prizes. The remainder of the Christmas prizes will be competed for on Wednesday next, the 23rd instant, on the same conditions as the special prizes mentioned above. The distribution of Christmas prizes will take place on Wednesday next, 23rd instant. The special committee will meet on Tuesday evening next, at nine o'clock.—H. B.

Jubilee Angling Society, Portobello, Kensal-road.—Since my last report the following members have weighed in. The brothers Challen some fine roach and dace. Mr. Sadgrove, roach; Mr. Warner, barbel; and Mr. Bence, jack.—A. IDE, sec.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—One new angling member was elected at the last meeting, bringing our total number up to one hundred and fourteen, which are all good sound paying members. Although the Thames represents a river of turtle soup, the members still stick and slog at it with more or less success. Messrs. Master, Prole, Wilmot, Newcombe, and Carter have had some fine trays of bream and roach, the largest bream weighed in being 3lb. 8oz.—T. SALTER, hon. sec.

Lincoln Angling Society, the Metropolitan, Winchester-street, Pentonville-road, N.—On the 13th inst., the members of the above society fished their Christmas prizes at Cookham, only three prizes being taken by the following: Mr. More, first; Mr. Wallis, second; and Mr. Webster, third. It was decided that the remaining prizes be fished for on the 20th; roving match, anywhere; all to start same morning. All prizes will be distributed on Wednesday next, December 23, after which a smoking concert will take place, to which all anglers will be welcome.—W. WATLING, sec.

Liverpool Angling Association, held at the Beo Hotel, 5, Queen's-square, Liverpool.—There was a very large attendance of members at our last meeting, the room being crowded. The attraction was a discussion on our

"Rented Waters," whether they are to be given up and others obtained. Mr. W. Ramsbottom read his report on the Knowsley Water, which he condemned, his reasons being that the water was too deep and cold, and food consequently scarce, and so the fish could not thrive. Papers were read by Messrs. W. J. Johnson, Woolfall, and Gass, and many members spoke to the whole subject, which was eventually adjourned, for decision, to the next meeting, on 17th instant. The general consensus of opinion appeared to be that we retain our two present waters until better can be obtained. Stocking must be vigorously carried on, and subscriptions for the purchase of fish will be welcome. —R. WOOLFALL.

Mildmay Angling Society, Radnor Arms, King Henry's-walk. Balls Pond-road.—We fished for Christmas prizes on the 13th, and only Messrs. J. Osborne and E. Jermy succeeded in taking fish. The distribution of Christmas prizes will take place on Tuesday next, when I hope all those that have promised prizes will come to the front as there are a few not yet given in.—J. COMBER, sec.

New Albion Piscatorial Society, Duke of Kent, Old Kent-road, S.E.—At the meeting on Thursday last it was resolved that no meeting be held on Christmas Eve, and that the competition on Boxing Day be an open one, Rule XVI. to be suspended for the occasion.—A.E.B.

North London Angling Club, Tap House, Holloway-road, N.—On Tuesday, Mr. G. E. Simms, of the Gresham Angling Society, lectured on coarse fish hatching at the above, Mr. F. Thorling in the chair, who, in the course of a few well-chosen remarks, introduced Mr. Simms, who proceeded with his paper, which was listened to very attentively by the company. At its conclusion, Mr. Simms was accorded a hearty vote of thanks, after which a smoking concert took place.—H. STRETCH, hon. sec.

Original North Lambeth Angling Society, the Wellington, South-street, Hercules Buildings, Lambeth, S.E.—I was very much annoyed at reading a paragraph in the *Fishing Gazette* of Saturday last, in which Mr. Wallis, of the N.L.A.S., states that letters have been addressed here in the name of Mr. E. G. Roe. I beg to say that I have never received any such letters, and have written him demanding an immediate apology. Three of our members fished for Christmas prizes on the 13th inst. at Hampton. Mr. Lever weighed in roach and perch; Mr. Garrett, bream; Mr. Cheese, gudgeon.—CHAS. FAIRHEAD

Peckham Brothers Angling Society, Prince Albert, Rosemary-road, Peckham. — Notwithstanding the boisterous weather on the 13th inst., a few of our members were out, but with very poor results, Mr. Fairelough being the only one that weighed in with roach and dace, taking the remaining prize left over from the last series. Mr. Kemp had fish but was too late to weigh in. I shall be very pleased to see a good muster of members on Wednesday next, as we have to elect auditors and chairman for the ensuing quarter. The date will be given next week for our visit on the S.L.U.V.L.—E. A. FAUTLEY, sec.

Phœnix Angling Society, the Crown, Old St. Pancras-road, N.W.—On the 20th inst., four prizes will be angled for; all members to go where they like. Several special specimen prizes as well.—W. ELBOURN, sec.

Prince Arthur Piscatorials, Golborne-road, North Kensington.—Members will please take note that the next meeting will take place on Wednesday, Jan. 6, which will be quarterly night, so I hope members will attend to clear the books, and arrange for the outing on the 10th of Jan. J. W. HARRIS, sec.

Rising Sun Angling Society, The George, Brook-street, Holborn.—The members of the above met at the club-house this evening (Saturday), between nine and ten, to make final arrangements for the roving match on the 20th inst.; several prizes promised.—F. BRADLEY, sec.

Rodney Piscatorials, Rising Sun, Harper-street, New Kent-road.—Our next outing is from the Bridge at Henley to Hambledon Lock, and takes place on the 27th inst. Members are requested to meet at Paddington for nine o'clock train, return by the 5.30. Our supper took place on the 10th inst., when a most enjoyable evening was spent, and our host, Mr. Clarke, is deserving of great credit for the able manner in which the affair was carried out. Comic and other songs were admirably rendered by members and friends, while the accompaniments were brilliantly played by Mr. Raper. The following members weighed in roach on the 6th inst.: Messrs. J. Wigley, W. Lamberton, T. Lines, F. T. Lamberton, F. Lamberton, H. Mitebell. Only two weighed in on the 13th inst.—namely, F. and F. T. Lamberton, both having roach.—F. T. LAMBERTON, sec.

Second Surrey Angling Society, Spread Eagle, Stangate-street, Lambeth.—As the weather was so bad on the 6th inst., the members would not go out for the two prizes of the series not taken. They were drawn for on quarterly night by the members entitled to do so, the winners were: Mr. Jarrett who took the prize given by Mr. G. George; and Mr. Pratt the prize given by Mr. Wink. The first of the series was won by Mr. J. T. Wright; second, Mr. Walls; third, W. Stone; fourth, Mr. Wink; fifth, Mr. Green; sixth, Mr. H. R. R. Wright; seventh, J. Wright; and eight, Mr. G. George; which were duly handed over by the chairman with a few appropriate remarks. A proposition was then made and seconded that two shillings and sixpence be sent to Mr. Brougham towards the river keepers' dinner, which was carried unanimously.—J. WRIGHT, sec.

Shepherd's Bush Angling Association, Bush Hotel, Shepherd's Bush-green, W.—At our meeting on Wednesday, Dec. 9, the hon. sec. weighed in one bream, 2lb. ¾oz. and 1lb. 12¾oz. of roach and dace: the vice-president had two roach, 1lb. 7½oz., and 1lb. 7¼oz. of dace. The storm on the 13th inst. entirely upset the fishing arrangements of members, and, although several went out, including the president and Mr. R. Jones, our competition proved a blank, not a fish being caught. Two new members have been elected.—C. B.

Silver Trout Anglers' Association, Bedford Head, Maiden-lane, Covent Garden.—On the 13th inst., although it was so rough, several of our members were out, Messrs. Williams and Smales having a show of roach. On Tuesday the auditors went through the accounts for the last quarter, and found everything satisfactory, with an increased balance in hand. Members and friends are requested to keep Tuesday, January 19, open, as on that evening Mr. Crumplen will read a paper, and a smoking concert will follow, which we hope will be very well patronised.—PELICAN.

Sociable Brothers Angling Society, Hope, Pollard-row, E.—Several of our members were out on the 13th inst., but the only member weighing in was Mr. Coxhead with a nice show of perch.—R. SPENCELEY, sec.

South London United Anglers' Visiting List.—A visit of the clubs on the above list was paid to the Anchor and Hope A.S. on the 14th, when a most enjoyable evening was spent. On the roll being called by Mr. G. H. Field, president of the list, the following fifteen clubs responded: Bermondsey Brothers, Second Surrey, Rodney, South London, Peckham Brothers, St. Albans, Waggoners, Blackfriars, St. George's, St. Thomas's, Cliftonville, Original North Lambeth, Hatcham Brothers, and Anchor and Hope. The next visit will be to the Peckham Brothers. Due notice of date next week.—A. CONN, hon. sec.

St. Andrew's Piscatorial Society, Turk's Head, East-street, W.C.—A return visit on the No. 2 Eastern District Visiting List Anglers' Association, will take place at the above house, on Monday next, when I hope to see a good muster. The Elm Concertina Band have kindly promised to attend and give a selection of their well-known pieces. —B. CHEVALIER, sec.

Tadcaster Angling Association.—Between forty and fifty members and friends of this association had their annual dinner at the Golden Lion Hotel on Thursday evening, Dec. 10. Mr. and Mrs. G. Barker left nothing to be desired, either in the way of a good dinner or in the decoration of the dining-room. Mr. C. J. Ireland (president of the association) occupied the chair, and Mr. E. Payne (vice-president) the vice-chair. When the cloths had been removed the chairman announced that he had letters from several gentlemen who regretted their unavoidable absence that evening. After the usual loyal toasts the chairman gave "Success and Prosperity to the Tadcaster Angling Association." He said the Association was established in 1887, and this was their fifth annual dinner. He was glad there was no falling off in the attendance. If there was anything that pleased an angler it was a good feed, and that they had had; and they had the trophies not of the chase, but of the sport hung around the room to make glad their hearts. He was extremely sorry to say that the past year, so far as he was concerned, was a somewhat barren one; and he thought that this must be the experience of all the members who had fished at Tadcaster. It appeared to him that they did not catch that quantity of fish which they used to do in years gone by. There was some cause for this —perhaps they were not there to be caught, or else they were being educated on the higher principle. When they fished in the Derwent, all who journeyed there, novices included, had a catch. He did not think that any of them would aspire to the proud and exalted position of scientific anglers, but they considered themselves capable of catching fish when they were there to be caught. There had been a report current that Mr. Samuel Smith was going to prevent the members fishing on his property. He (the chairman) had the authority of Mr. Smith's brother to state that there was no foundation for the truth of that statement. (Applause.) With the toast the chairman coupled the name of Mr. William Holloway (the secretary). Mr. Holloway, in responding, said last year their membership was thirty-three, and now it was forty-one. (Hear, hear.) During the year they had had five matches, and the first prize winners were Messrs. Wm. Spink, Hy. Barker, W. Holloway (twice), and John Fowler. The aggregate amount given in prizes was £15 13s. 6d.; £6 10s. of this sum was given by the association, and the remainder by members and friends. (Applause.) Prizes were also given for the best specimen fish caught. After their last annual dinner they had a balance in hand of £9 15s. 6d., and this year he calculated they would have £11 in hand. (Applause.) The hon. secretary concluded his remarks by giving the health of "The Visitors." Mr. H. W. Yates responded in most appropriate terms. He said that since he had been in Yorkshire he had been very kindly treated, and especially at Tadcaster. He loved to be in the society of Yorkshire anglers. (Applause.) The vice-chairman gave the healths of "The Proprietors and Occupiers of land on which we have the liberty to fish." He said that no matter how successful they might be as an angling association, it would be impossible for them to enjoy themselves unless they had water to fish in; and to those gentlemen on whose land they had to go they were greatly indebted. (Applause.) Mr. J. Allan proposed the health of "The President and Vice-President" in suitable terms, and the chairman responded. The healths of the "Host and Hostess" concluded the toast list. The Tadcaster Quartette Party were present, and contributed much to the interest of the proceedings by the tuneful and sweet rendering of several pretty pieces. Songs, &c., were also given.

Waggoners Angling Society, George and Dragon, Vauxhall Cross.—Several members were out on the 13th inst., Mr. Cliff being the only one to weigh in, he having dace. Owing to the state of the river, our outing is postponed till a future date. If those members who were away last Tuesday will kindly show up, they will hear something to their advantage.—H. C., hon. sec.

Walworth Waltonians, St. Paul's Tavern, Walworth, S.E.—On Wednesday last we had a good muster, Mr. W. J. Crisp in the chair. It was decided that the outing the 20th inst. be open; bank only; six prizes. And for the Wednesday outing, Dec. 23, be open; punt or bank; six prizes.—R. BAILEY.

NEW PATENTS.

THE following is a list of Piscatorial Patents, which is supplied to us by Messrs. Hughes, Eli, and Hughes, Registered Patent Agents and Attorneys for Colonial and Foreign Patents, Designs, and Trade Marks, 76, Chancery-lane, Holborn, W.C., All inquiries answered by them free of charge to our readers:—

19,919.—Henry Angus Murton, of Newcastle-on-Tyne, for "Improvements in and relating to fishing creels."

20,905.—P. Teherkasoff, of Russia, for "Improvements in artificial fishing baits."

20,907—P. Teherkasoff, of Russia, for "Improvements in artificial fishing baits."

Time of High Water in the Thames.

To find the time of high water in the Thames at any of the following places, to the time of high water at London Bridge given below,

Add	30 min.	for	Chelsea.	Add	55 min.	for	Kew.
	40 ,,	,,	Putney.		75 ,,	,,	Richmond.
	45 ,,	,,	Hammersmith.		80 ,,	,,	Twickenham.
	50 ,,	,,	Barnes.		85 ,,	,,	Teddington.

EXAMPLE:—If it is high water at 2 o'clock at London Bridge, it will be high water at Teddington at 3.25 or 85 minutes later.

N.B.—A strong wind up-stream accelerates the tide very much, and one down-stream retards it.

English and Welsh Reports.

Lower Thames.—GENERAL REMARKS.—If it were not for the bank anglers, there would be scarcely anyone fishing in the Thames at the present time, and to see the river as I did on my return from London on Tuesday afternoon, by way of Twickenham, the sight on going over the river at Richmond presented a fearful look out, as resulting from a very high tide. All the paths on each side were under water, and the fluid itself the colour of pea-soup. This is the description of colour given by the fishermen when it is discoloured, and, when it is bright, the designation is "as clear as gin." I refer to the river as presenting a bad look-out, and what I mean is, for the Christmas holidays; but there are some days intervening between now and the joyous period, and a great change may take place by then. I hope there will be, for the sake of all, whether anglers or not, as so many look forward to the three days free from "the beggarly elements of trade" to enjoy amongst their friends in the country some glorious Christmas cheer at the happy homes and the festive hearth. In my bachelor days I used to spend my Christmas at one of the riverside fishermen's cottages, contributing to a seasonable repast, and filling up the time in the pursuit of fish. It is a bad time for the fishermen just now, when they want to add to their exchequer some addition from angling employment, but I would fain hope some of their patrons will remember them by a contribution of some kind or other to make them merry and glad at their respective homes. The good old fashion in this respect has, however, become very much reduced. I used to be made the almoner of distributing gifts to some of the fishing stations to the fishermen, but that was in "days gone by," and, with the change of circumstances, will never return. All I can do myself is to wish, one and all, a very happy Christmas, and to hope some favourable weather will intervene to give the fishermen some little employment to afford some creature comforts at a joyous fire-side.—B.

TWICKENHAM.—C. Brown, in half a day, two dozen of fine roach and dace.

TEDDINGTON.—Ben Stevens, in one day, three barbel, the largest 6lb.; and W. McBride, in half a day, two barbel.

KINGSTON.—John Johnson, at odd times during the week, four barbel, three bream, and a quantity of very fine roach and dace, some of the roach weighing from 1lb. to 1½lb. each, and J. Knight an average of three and four dozen of roach and dace each day. The bank anglers in different portions of the river are getting some exceedingly fine specimens of roach, and the fishermen say if they only had customers they could find them some fish. J. Knight, fisherman, has taken a fine roach of 2lb.; it measured 14½in. in length, and has been sent for preservation. It was afterwards shown to Mr. Nuthall.

Upper Thames.—All again chaos with regard to angling on the Upper Thames! The flood at present is not quite so much in evidence as some six or seven weeks ago; but as I write it is still rising, and further rain for a day or so would bring on an unprecedented flood. Fishing is at present out of the question, and I do not glean that a fish worth record has been had during the past week. I am especially pleased to note that meadow-netting during flood-time seems a thing of the past, and I lay the flattering unction to my soul that in years gone by I made, by publishing names, an example of these noble poachers. For so doing I was continually threatened with "duckings" and "head punchings," but I still survive to tell the tale of by-gone unsportsmanlike conduct, and with the exception of being a little more mouldy about the frontispiece and the occiputpiece am still as fly as ever as a MARLOW BUZZ.

Thames (Windsor).—A vast area of land in this neighbourhood is again under water, and threatens to assume the same proportions as the last disastrous flood. Those who have been looking forward to a few days' jack fishing during the Christmas holidays should make other arrangements, as it is impossible for the river to be in condition, and very doubtful if it will be in bounds. A few enthusiasts have been *trying* to fish, and am told the veteran Carey, of Windsor, has had two brace of barbel since my last.—B. R. BAMBRIDGE.

Ancholme District.—The continuous floods keep the waters in a very dirty state, so that trolling for pike is very unprofitable.—THOMAS FORD.

Arun (Pulborough and Amberley).—There has been no fishing recently owing to the floods. The river has again overflowed its banks, and though the water now looks like settling down, I am afraid sport will be poor this side the festive season. When the water fines, I hope

TADDY'S MYRTLE GROVE CIGARETTES

to be able to record some good baskets of roach and jack. I know of one "old Johnnie" up Fittleworth way, and shall not neglect him as soon as there is a chance of making him a Christmas present in the shape of a nice lively dace. Whether he will prove another twenty-pounder I cannot positively say, but when I last saw him dozing under a canopy of rubbish, I guess he looked awfully near it. P.S.—This is not a "Christmas story."—Goosequill.

Chichester Canal and Sussex Rivers.—Floods everywhere is the order of the day, and yet a few fish are taken both from the Arun and Ouse in a few favoured spots, but the record is virtually *nil*. From the upper portion of the Ouse, I hear of a 9lb. salmon being recently killed by an otter in one of the small tributaries near Fletching. The keeper failed to secure the otter, but saved the fish. Sir Spencer Wilson has spared neither pains nor expense to stock the river with salmon, and a few have been taken from the water. In the Pulborough district, a sign-post, up to the board in water, has "no thoroughfare" alone standing out, and it will doubtless be some time before the waters regain the channels.—George F. Salter.

Douglas (Isle of Man).—Such floods as we have had during the past week, have been unprecedented during my forty year's experience of our local rivers. The river Dhoo or Black River, rose at Braddon Bridge (about two miles from Douglas) to a height of fifteen feet above its usual level. It is much confined there, by a viaduct, and a haystack, which it requisitioned, may have had something to do with the obstruction. The beautiful Nunnery Pool never more than eight feet deep, showed soundings of from ten to sixteen feet. The rain still continues, and I much fear the spawning beds will suffer. Sea Fishing.—The weather is too uncertain to give amateurs much sport—but cod are in good condition and take well.—Stormy Petrel.

Dove and Tributaries.—Weather has been again alternately wet and foggy, and angling has had no votaries in practice hereabouts, to our knowledge, since our last. We want a few more dry, keen, and bright days such as this is (Thursday) to bring both grayling and pike on the rise and run.—D. and W. H. Foster, Ashbourne.

Lea and Stort.—Just now there is a very welcome change in the weather, and if it only continues, some good sport may be confidently looked for. Such a day as this (Thursday) has been, was quite enough to tempt any angler to try his chances. There had been a nice white frost during the night, just sufficient to justify the idea that jack, perch, and roach would feed well. However, during my walk I did not see any fishermen out, consequently did not hear of anything having been done. The rivers are rapidly getting into good order; the navigation canal is already fishable, and well worth attention. The water has been, up to the last two days, in such an uncertain state as to render fishing chances a perfect lottery. On the 13th a nice jack was taken at Cook's Ferry, but in the afternoon the water again rose, and put a stop to sport. At Waltham Abbey a few pike and perch have been taken, but nothing calling for special notice. There is just now a great deal being said as to the use of shrimps as baits for roach. I should like to hear of this bait being tried in the Lea, as I cannot but think it would account for other fish besides roach. The account of a member of the General Gordon Angling Society, taking a pike of 11lb. whilst paternostering for perch with a fine gut bottom, at St. Margaret's, is very interesting, and goes far to prove that success in pike fishing may often be assured by using fine tackle and a small hook when the ordinary means fail; of course there is danger of a breakage, but how much more credit is due to a man who successfully lands his fish under such circumstances; again, the fish if it does break away, is not much injured. If we have moderate weather for the next week or two, I fully expect there will be some grand pike fishing, as they are exceptionally plentiful this season, and must be ravenous after their long rest, caused by the floods.—Spliced Joint.

Leicester.—The weather continues of the most execrable character. The latter of last, and during the whole of this week, gales of a most violent kind raged fiercely, causing many volumes of water to overflow the banks of the river, in the vicinity of the town, fishing has been anything but an enjoyable occupation. A few anglers have been found bold enough to try their skill: but these only captured an odd fish or two:—Messrs. Toe, Hobbs, Prime and Neal succeeded in landing baskets of roach. One of the fish in the first mentioned angler's lot, weighed 1lb. 10¼oz. Pike fishing is at a complete stand still, the waters at Anglestone, one of the best spots for this kind of angling. being altogether inaccessible owing to the immense floods.

Lugg and Arrow (Leominster).—These streams continue to run high and muddy. At the beginning of the week the water was out over the fields, but is now lowered, but will be some days before angling can be resumed. The Pinsley is coloured and no fishing in it.—Gwynne.

Lugg, Arrow, and Pinsley (Kingsland).—Gales of wind, with heavy downpours of rain, have again prevailed since my last week's report. On Sunday and Monday rivers rose rapidly, and considerably over the banks. They are now running down again, but cannot hold out any hopes of fishing this side the Christmas holidays, though should the weather take up—and to-day (Wednesday) has been much finer—there may be a chance with grasshopper (sink and draw) or maggot, &c., during the Christmas week. The present grayling season has been the worst for many years. Wind, N.W., strong and cold; clouds still threatening.—R. T. Williams.

Medway (Maidstone).—The water of the Medway is still running very thick; not much like good angling. It will be some few days—if weather continues fine—before it is in good condition for angling.—W. Shrubsole.

Nene (Northamptonshire).—Mr. Abernethy, C.E., and Mr. Thomas, C.E., have visited the river works at Wisbech. They were met by the Port and Harbour Committee. The works were thoroughly inspected, and the Council met shortly after. Mr. Abernethy had to leave by an early train, so that there was not much time for inquiries. One of the members had ten questions, which were forwarded the same evening, and all touched upon the dredging, &c., of the river. A conference was afterwards held by Mr. Thomas, and some strong opinions were expressed. The river is in better form now, and the weather is A1 for pike fishing. Some good pike have been taken from Lord Cadysforts water at Elton. Permission is generally freely given by the noble lord.—Nenebank

Norfolk, Suffolk, and Cambridgeshire Waters—Our rivers are clearing down nicely, especially the Lark, at Mildenhall, Barton Mills, and West Town. I had a try this day (the 17th inst.) and took 15lb. fine dace and perch (red worms). The banks as a natural consequence after being flooded for so long are very dirty and wet, it's many years since we had such a long continued flood as this has been. The Ouse is getting better. I must, however, advise my London and other angling friends to wait a few days before going to Ely or Littleport, if we get no more heavy rains the fishing will be good about Tuesday or Wednesday. The Little Ouse at Brandon is getting better and is about the best river at present to try, there are plenty of good fish all along the stream. Anglers had better call at Mr. Ralph, the Ram Inn, Brandon, close to the station and river, he will tell them the best places to try just now. All the Norfolk rivers are too high and coloured to do much good. The wind is right south by S.W., and at the time of writing the look out is much better. Red worms are the bait most used, and from my experience the best.—William Howlett.

Ouse, Derwent, &c., (Yorkshire).—Nothing doing, owing to our rivers and streams overflowing their banks. Much adjoining land is submerged, causing destruction and damage to property, especially in the lower reaches of the Selby district. It is feared also that much damage might be caused to angling by large quantities of fish being left stranded in the hollows when the waters recede.—Ronald.

Teme (Ludlow).—The weather in this part has been very rough, quite a gale of wind blowing, accompanied with rain, hail, and snow, and the water has risen high and over-flowed its banks, and fishing has been impossible. The water is lowering, but it will be sometime before it will be in order for fishing again. The Ony, Corve, Clun, and Ledwyche, are all muddy, no fishing in them of late.—S. Ludlow.

Teme (Tenbury).—In this part the late heavy storms made the water rise, and flooded the streets of the town. No fishing has been done or will be until the water goes down again. The Rea, Kyre, and Ledwyche, are muddy. Worcester.

Trent (Newark).—Angling *nil*. On Friday, the Trent got over its banks, and continued to rise until Tuesday at noon, when miles of land were under flood. To-day it has receded a few inches, but some time must elapse before it resumes its normal condition, and anglers are becoming anxious about prospects of the waters of the district being available for sport during the holiday season.—Trentsider.

Yare (Norwich).—Since my last report pike fishing has been very poor indeed, the weather to a great extent being responsible, but notwithstanding several parties have been out trying their luck and one party succeeded in showing a fish, weighing nearly 20lb.; whilst another party of three rods had fish of 8lb., 6½lb., 4lb., and 3lb., besides several runs which they missed. The worst case I've heard of was on Thursday last. when six gentlemen at a good place only succeeded in capturing one poor little jack of 3lb., so much for luck. I do hope the Christmas holidays may be fine, as then in all probability we may have to record some good catches in Norfolk waters.—Robert Moll.

Scotch Reports.

Dee, (Aberdeenshire).—All over the North of Scotland the spawning season is being pronounced an exceptional success. Only the late fish on the middle and lower reaches are now on the redds, while the spent fish are migrating to the sea in great shoals. The disease *(Saprolegnia ferax)* still makes great ravages among the spent fish, in hundreds of dead and dying fish having been taken from the Dee, Don, and the North and South Esks. Few clean fish are affected. The number of spawners in the Don exceeds anything within the past twenty years, and this is one of the improvements in the river passage at Grandholm.—Deesider.

Thurso (Halkirk).—The river is in spate, being the second since may last report. The water is running a fine clear colour, and the temperature is not too low for fish running up from the sea; at the same time, a good many kelts will go down, so that the spates came in good time to benefit the river, as spawning operations are fairly over. With regard to the letter, signed "E. H.," in the *Fishing Gazette*, of Nov. 28, *re* pike in Sutherland and Caithness, the last sentence says, "Mr. Peach says he has just heard of one being caught in the Wick river." I live within a few miles of the Wick river, but I never heard of a pike being seen nor caught there, and I wonder, if such a thing happened, that it should not be more spoken of among anglers. I, along with others, would be glad to know if the report is correct. Could Mr. Peach enlighten us as to when and by whom the pike was caught in the "Wick"? I have just heard of a novel method of catching wild duck: The poachers set lines and hooks, baited with something the ducks will eat. These are set in marshy places where they feed at night. They swallow the bait and the hook, and their capture is then a certainty. Cruel work, I should think.—A. H.

Tweed.—There is nothing to report from this river in the meantime with regard to angling, as even those who fish the river all the year round have not been able to throw a line since my last Notes, owing to the flooded state of the rivers. Since last week, the weather has been very changeable—rain, frost, snow, and then, again, a thaw, with rain. This is something like what we are experiencing just now in this peculiar northern climate of ours. On Tuesday we had a proper downfall of rain, while before that snow had fallen pretty generally in the higher districts, and on Wednesday both Tweed, Teviot, and their tributaries were in high flood, the gauge at Kelso Bridge registering from eight to ten feet of flood water consequent on the heavy rainfall of the previous night, accompanied by a rapid thaw of the snow which had previously fallen pretty generally throughout the higher district. During the morning the Tweedometer indicated a rise of nine feet in the Melrose district above the usual level of the river. All along its course the lands adjoining the river were completely submerged, and in some places the roads were completely under water. Compared with the last great flood, the Tweed is about six inches lower, and there is a smaller quantity of wreckage being carried down than on that occasion, although a considerable amount of damage has been done. A very keen frost set in last (Wednesday) night, and the next day it was very hard all through, consequently the river has gone down considerably, and it is now only some three feet above its normal size.—Maxwheel.

Irish Reports.

Ballinderry (East Tyrone).—Nothing but floods for me to record this week. The rising of the river has stopped all kinds of fishing. A portion of the salmon have spawned but the heavier fish are yet to come about the Christmas freshets. Last Tuesday, I noticed a shameful pollution in the river from a local gas works. The river resembled a sheet of oil, and had the river been low must have proved injurious to the spawning fish. To-day, the weather looks like clearing up, and indeed such a novelty as a good day would be greatly welcomed by angler, shooter, and athlete alike.—J. A. B.

Waterville (County Kerry).—Salmon are running up from the sea in pretty large numbers. If this run continues, there should be a good stock of fish up before the weir on the river is put down on January 1. This weir is down for four days in the week, from the opening of the year until July, and as it intercepts a large number of salmon during that time, anglers are always anxious to know how salmon are running before the weir season commences. Spawning is now over on the earlier rivers. Weather wild and wet.—T. J. Dennehy.

Sport *v.* Pothunting.—A man who goes to the riverside with three or four rods, and bait the same number of hooks, is a fisherman, but no angler. He is a "pothunter" as much a poacher, who endeavours to "rake" a feeding covey of partridges, or a shooter who tries a shot into the "brown" of 'em. The pothunter might be trying to win certain prizes in money or "kind," in a "go-where-you-please" competition. And he sets his lines—*day*-lines—one with live minnow or gudgeon for perch or pike, or any other large fish; on another line he tries the tail of a lob, or a scoured brandling, or a marsh worm, and perhaps the hook of the line of the rod with which he is a make-believe angler, he tries paste, or pith, or a gentle, all the while watching with the crafty eagerness which only befits the pothunting prize-tryer of the lower type, the lines which he previously dropped in, in likely places. If challenged as to the unfairness of such fishing, the day-liner would probably answer, "I ain't no angler; I wants fish and gets 'em how I best can." The pegged-down matches prevents the pothunting tricks; and as long as the present class of prizes obtain (*money* should never be offered), greater strictness ought to be enforced in go-where-you-like competitions.—Rus.

Forsinard Fishery Season.—The past season of 1891 proved the best, in regard to number of trout captured, that has been experienced in this district since 1887, beating the season of last year by full seven hundred trout. On May 4, it was opened by Mr. Lee, of London, and during the same month was continued by Messrs. Hindley and Allport, also of London. The former gentleman made the best basket got in May, on the 9th, when he secured forty-five trout, weighing 18lb. Mr. Allport, however, in respect of a gross total, carried off the first honours, having killed, in all, seven hundred and thirty-four trout, or an average of nearly thirty per day. During the whole of June, and until the weather broke about the middle of July, excellent sport, considering the weather was unfavourable—east wind constantly, with sharp frost every night up to the turn of the day—was steadily got by several anglers. The top weight basket of the whole season was made by one of the best rods to annually visit the "Far North," Dr. Everley Taylor, of Scarborough, who on July 3, on Loch Baddon, had fifty trout, weighing 25½lb. The best single day average was 1lb., obtained by Mr. Hindley, on June 10, on Loch-an-Dubh, with ten trout, 10lb. The two largest trout were caught by Mr. Darby, on Loch Baddan, on June 25, and weighed 7lb. and 3½lb. respectively. The baskets for the period from the middle of July until the close of the season were on an average the lightest on record. The almost unprecedented heavy rains, seldom "divallin," so flooded and discoloured the lochs, and so filled them with bottom food, that no wonder the trout rose not nearly so well as usual. The most successful of the hotel anglers who fished the Halladale river was Mr. Hindley, who got ten salmon, 92½lb., heaviest, 18lb. The autumn salmon fishing was almost a failure, owing, it is supposed, to the blackness of the water, which was *ink* black. Both salmon and grilse, in great numbers, could be seen sporting on every hand, but seldom could one be hooked, and the result was that the sport was far below what it generally is.

⁂ On account of the Christmas Holidays, Club and River Reports should reach us not later than Tuesday evening, December 22, for insertion in next week's issue.

— NOTICE. —

THE FISHING GAZETTE is published every Saturday, and can be obtained at Messrs. W. H. Smith and Son's Railway Bookstalls and of the principal Newsagents and Fishing Tackle Dealers in London and the Provinces.

Communications relating to the Literary Department Fishing Tackle for Notice, Books for Review, &c., must be addressed to R. B. MARSTON, the Editor of the FISHING GAZETTE, St. Dunstan's House, Fetter Lane, London, E.C.

Correspondents are requested to write on one side of the paper only, and give their real names and addresses, not necessarily as signatures to their letters, but as a guarantee of good faith. Unless this rule be adhered to, no notice will be taken of such communications.

Terms of Subscription.

The GAZETTE can be had by sending Postal Order or Stamps to Messrs. Sampson Low, Marston, and Co., Limited, the Proprietors, St. Dunstan's House, Fetter-lane, London, to whom all money payments should be made.

For One Year, post free to any part of Great Britain and Ireland ... ... 10s. 6d.

— FRAGMENTS. —

By MAC.

THE observations I now have to make are intended by me to be supplementary to those in previous papers under the heading "In Days Bygone."

OTTERS AND OTTERING.

Naturalists constantly warn us against interfering with the balance of Nature and much they have to-day on this score undoubtedly meets with our approval. Yet I cannot but think, indeed I affirm that were we to allow every creature with predatory habits and of no value to man as food to multiply without check we very soon would find ourselves suffering greatly in commercial as well as other senses. I am one of those who believe that all creatures have their day—" They have their day and cease to be" ; and also that so long as man increases, spreading over and more closely covering the land, all inferior creation of the kinds directly annoying to him or calculated to materially curtail his food supplies must disappear before him. Their total disappearance may be regretted but it follows inevitably on changed conditions. With the march of civilisation from our islands alone have disappeared a good many specimens both of bird and beast. Nor do we find we are any the poorer without them except in respect of natural history specimens. But more directly to my subject. As one of the class of creatures referred to the otter I am afraid is doomed. True for many years yet he may be of the Fauna, more particularly of the Highlands and Northern Isles, but I fear that gradually he will disappear, till finally like the Great Auk he is no more to be found.

The otter is a fish destroyer, and—paradoxical though the remark may seem—he is also both good and bad for sport. He is splendid to hunt, affording glorious excitement, and he is the mischief to hunt, desperately spoiling salmon angling. And it is for these three different reasons that he is likely to get gradually killed out. Personally however I should be sorry to learn of his complete extinction, and I would by no means be a party to assist in bringing it about. Often as he has spoiled my sport I yet bear him no grudge. His graceful movements in the water I have noticed with nothing short of admiration ; and I believe that on trout streams where eels "doth greatly abound," his usefulness in destroying these great devourers of fry and ova more than counterbalances all the direct injury to sport arising from his presence. But yet he will be hounded to death, trapped, and shot down mercilessly. Otter hunters must have their sport, water bailiffs their premiums awarded by fishery boards for otters caught, and keepers and others their tips from employers, and proceeds of the sales to fanciers and naturalists.

Where food is either not abundant or easily laid hold of the otter will hunt a dozen, if not more, miles in a single night. This statement I have had confirmed by three or four different parties who have followed up his track in the snow by the margins of salmon rivers. On the other hand all the same parties are agreed that unless compelled by necessity he does not roam far abroad from any place where he finds a safe and *undisturbed* hold. This latter piece of information concerning his habits I have several times had corroborated in my own experience. But as the main facts, in this relation, have before now been fully stated in the *Fishing Gazette*, I consider it would be superfluous to repeat them here. However in conclusion I hold it indisputable, from what I have known and proved, that an otter working closely on a salmon pool either frightens away the fish or puts them down most effectually. But a short time after an otter has left a pool a running fish, having come up, may be caught by the rod ; that is nothing, and does in no way demolish my contention. What I assert (founded on experience), is that when no fish are running none will be fairly caught by rod and fly on pools closely worked by otters.

There is no saying what size of a fish the otter, when his chances are good, will not attempt to place *hors de combat*. He may, as many assert, prefer eels to any other fresh-water fishes, but I should be slow in giving countenance to the opinion that he will not, whatever its size, pounce upon the first fish that comes in his way. Many large salmon which had been killed by him have I found in my time, and I have come upon trout and eel captures of his galore. In some cases but little was remaining to mark his depredations, while in others but little had been devoured. Once I found below a bush, on a birch and alder wooded islet on a lone Highland loch quite a number of "fragments" of eels and trout, and one fresh caught large trout scarcely touched. Likely enough, my landing from the boat had disturbed the otter quite early after he had made the capture of the last named trout. And in consequence a good meal had been lost to him for once, if it be true that he never returns to devour his prey if anything causing him to apprehend danger frightens him away whilst in possession of it. But as on this point it is desirable that we should have the statements of actual observers, I leave off for a time dealing with the *natural* otter, and proceed to speak of the *artificial* one.

Otters and ottering both produce a similar effect in one respect. Each frightens or puts down the fish closely worked over, though the one perhaps not to the same extent as the other. Those who work the otter are wont like the animal whose name it bears to fish on the sly. Seldom are they to be seen, for they know quite well the penalty of being detected. Yet where they work to any great extent they invariably leave their trail. The effect of their work is their trail. Where dour-rising, hook-shy and mutilated fish are all found unmistakable proof is given of ottering being practised. On lochs where it is keenly pursued it is found as a rule that very few of the large trout rise boldly to the surface to take the fly ; that they nearly all take a good distance below water, and that even then so very lightly do many of them hook that they soon succeed in breaking away. But the most conclusive evidence, indeed undoubted proof of the prevalence of ottering is mutilation. Hook shy and dour-rising fish may be found where no ottering goes on, but large numbers of mutilated fish hardly I think will. The mutilation I remark on is seen chiefly in respect of the mouth of the fish which often we will notice has been torn through the struggling of the fish on the hooks whilst the otter was fishing. In my own experience the most common form of mutilation observed has been the absence of the *superior maxilliary*. One day three years ago I fished a loch reported to be much ottered, and of the fourteen good trout I caught seven had been on the hooks of the otter—at any rate half of the fish of my whole catch were without, on one or the other side of the mouth, the *superior maxilliary*. Three others had healed up marks of laceration. My gillie whispered me that "two dare-devil old rascals living together in a cot by the sea shore were suspected of being the poachers." But added "they are fearsome men, sir, and no one relishes the idea of surprising and tackling them on this far out lone loch away up here, and in the nicht too, when there might be bad work done and mickle dool following it."

A RAPID SPIN.

Some years ago when fishing a narrow shallow Highland loch, I met with an experience which even to this day I sometimes puzzle over. I had gone out for an hour or two's sport with the small trout of this "tarn." When I started fishing the day was in every respect excellent for a basket being made, and for the first half hour or so I got "on" one of the very numerous free rising troutlets at almost every cast. Soon after however it clouded over, and anon quite a gale was raging. Being very shallow, the water in no time became extremely rough, with the fierce blast right upon it coming tearing down the gully. In consequence, and as my boat was not very seaworthy, I asked my gillie to put me ashore. At this juncture I wanted only two trout to make up a couple of dozen, and my intention was to get these if I could, by fishing from the bank, before I returned to the inn. After a good while's fishing, I secured one out of a quiet piece of water close to the bank sheltered by a high rock, and next cast or the one after it I hooked another somewhat farther out At once I pulled it to the surface and commenced drawing it landward. And nearer and nearer to me, spluttering on the surface, it came ; but lo! all at once it disappeared and the next instant my reel sang out and there was a rapid spin of at least seventy yards towards the opposite side of the loch. I held on, wondering the while what was up and if I should have line enough (for I had only eighty yards) to avoid a break when suddenly—just as suddenly as it had commenced —the rapid spin ended at about the distance from me I have indicated as I judged from what line was left on my reel. Now, how did this come about—this, to me and my gillie, marvel of a burst by a small fish ? Had the water, rolling heavily as it was, or the wind striking the line, anything to do with it? No large fish were ever seen or known of in the loch. None over half a pound weight had ever been caught in it. Nowhere is the water more than four feet deep; and on clear calm days during dry weather it is so clear that from the boat there is no difficulty at all in seeing the fish, even on the bottom, wherever you go. Not a single large fish has ever been seen, and none, in consequence of a very high abrupt fall can get up. When I pulled out the trout which had given me such a spin I instantly examined it carefully for tooth-marks or laceration, thinking it probable that it had been "cabbed," and run off with by a large fish. But not a mark was there on it to be seen. 'Twas then my gillie told me that never by set lines, by the rod, or even by the net which had several times been taken through the loch, had a trout weighing more than half-a-pound been secured. When I saw my trout disappear below the water there was no boil, nothing to indicate the presence of a big fish, and I am certain that no big fish, without being seen by me, could have come up and taken the trout from where it was. The whole thing is a perfect marvel to me. My rod was a fourteen-footer : the trout was scarce a quarter-pounder ; and yet the strain for power and the rush for swiftness were such I thought as could only have been given by a fish of at least several pounds in weight.

AMONG THE RAPIDS.

By R. P.

It is just one o'clock of the morning. Things are very quiet in and around the farm; even the Norwegian dogs, ready generally to give tongue at the smallest provocation, are asleep, as are their owners, all except young Andreas, who is busy putting together the rods and other matters requisite for a long day's salmon fishing in very rough water indeed. The valley is smothered in a heavy white mist, from beneath whose heavy folds comes the muffled murmur of the river, and from afar the deadened roar of the great Foss. The higher ridges and plateaux are alone visible, and their pine-clad slopes loom ghost-like through the grey silence of the morning. From the contemplation of this somewhat sombre scene, I am not sorry to be awoke by the voice of Gip, my terrier, whose cheerfulness of disposition nothing on earth, I am quite sure, could affect, unless, perhaps, were his medical attendant to eliminate bones from his diet for a prolonged period.

Gip is almost as fond of salmon fishing as I am, and we are about to perform on a beat of the river known as "the Rapids," which has not been fished this year, owing to the water never having been low enough. Young Andreas, bearer of the *impedimenta*, accompanies us on our walk to the point, six miles off, where his father, "Gammel Andreas," is to meet us with the boat. That worthy Norskman started down-stream yesterday at six o'clock; and we know that when we join him at the cast, called "the Black Rock," he will have a roaring fire and hot coffee and a salmon steak all ready for us, and perhaps even a bone for Gip, to whom the old man is very partial.

The woodland path which leads from the farm to the Black Rock is a charming one, through little dells and copses, and across burns and streamlets innumerable, with grand glimpses here and there of the mighty river; but this morning these beauties are effectually obliterated by the mist which hangs over everything. The clumps of pines and birch, the undergrowth of wild berry plants and moss, the patches of scanty grass, all are soaking wet; and when, in an hour or two the sun breaks through and disperses the vapours, these will all be clad in raiments of diamonds, wondrous to behold.

But when a little before three a.m. we reach the crest of the ridge which overlooks the Pool of the Black Rock, the transformation has not taken place, and we gaze down upon a vast sheet of grey vapour impervious to the human eye. Nothing is to be seen of Gammel Andreas. His worthy descendant, however, is not disposed to believe in the absence of his parent, and hurls down into the void beneath us something distinctly unique in the way of noises. It could not be called exactly a roar, a yell, a grunt, or a shriek of agony; yet it partakes of all these sounds, and at any rate, has the desired effect, for from the depths below there comes a reduplication thereof. It is evidently a noise owned by and peculiar to the family of Andreas. Thereupon we scramble down the hillside, and shortly become aware of the near presence of the figure of a man, with a long grey beard, sitting by a great fire, and apparently superintending the cooking of certain viands, a long pipe in his mouth. A savoury odour of coffee and of broiled salmon pervades the neighbourhood of the said fire, and in a remarkably short time we are all three—or I ought to say four—attacking these good things, Gip's portion being a gigantic bone, produced from the recesses of Andreas senior's somewhat roomy pocket. For nearly half-an-hour we remain snug and comfortable by the fire among the rocks, but enveloped in the mist; then signs of clearing begin to appear, and the scene rapidly changes. Assisted by a gentle breeze up-stream the sun soon breaks through, and in fantastic wreaths and shapes the mist whirls upwards and quickly disappears, exposing to our view two glorious vistas of river scenery. Looking down-stream we can only see about a mile of river, but therein are two splendid salmon pools. These lie in shade, the rocks on either bank rising steep from the water's edge, and crowned with ridges of pine; beyond we can see the head of the gorge, where, crammed into a narrow boulder-strewn bed, the river foams through "the Rapids." Above us lies another beautiful stretch of water, glittering (unfortunately for fishing purposes) in the rays of the rising sun, rank upon rank of pine and birch towering up on either bank; the view terminating with the island stream, with its beautiful gravelly beach on one side, and the great towering black rocks, whose shadows make it such a desirable spot for a salmon (when cloudless skies during the day and heavy mists during the night make fish hard to get).

It being impossible to get at "the Rapids" in any other way, our craft this morning is a long slight canoe, built by some wandering Lapps, who also taught Andreas and his son how to propel and guide it with poles instead of sculls; and I now don't mind venturing with them into the most difficult water, although at first I confess to have felt uncommonly queer sometimes when being dropped down a foaming torrent foot by foot, the long poles straining, and the two Norskmen yelling their directions to one another.

Propelled by their powerful arms the light craft is quickly at the head of the island and beached there, while, clad in waterproofs, I begin to fish the noble pool which lies between it and the right bank of the river. There is a large volume of water, but it is very clear and absolutely colourless; so I choose for my lure a brilliant insect, whose attenuated body is composed of blue floss silk and silver, and whose wings have little in them but golden crests.

This tied on a good big hook seems to me to suit the requirements of the situation, and forthwith it is disporting its glories within a couple of yards of the farther shore, where the current ripples over the sunken rocks, and where the big fish love to lie. Not for long do these gaudy charms remain unappreciated: the fly suddenly stops, there is a rolling heavy plunge, and I am fast in a heavy fish, which promptly shoots up-stream, and for a moment makes as if he would stem the heavy rapid above. Then he comes to the surface, half exposing his broad silvery flanks, and like lightning darts down back into the rocky depths of the pool. For a good ten minutes we fight hard, the fish gradually working downwards all the time; and were it not that of the many salmon I have killed in the island stream not one has ever left it (except for dry land), I would be getting a bit nervous, for only another hundred yards remain of the sloping beach, and then comes water far too deep to wade. Our craft is high and dry three hundred yards above, and both my men are watching the performance, intently keeping almost step for step with me, so deeply are they interested. At last the fish makes a determined shoot down-stream, and brings me within thirty yards of my limit. Instantly we are all alive to the danger. One or two more such efforts, and I will be run out to a moral certainty. It is hardly necessary for me to yell in impassioned accents "The boat! the boat!" &c. The two Andreas are both tearing up the beach as hard as they can split towards it, leaving me to do my best to stop the fish until they can enable me to get afloat. I must say they are about as nippy as they very well can be; but the salmon seems almost to know that his life and liberty depend on running me out before they come, for he makes effort after effort, and always down-stream. I have now reached my very utmost limit of wading on the point extending downwards from the island. I have quite 130yds. of the 160yds. of my reel line out; the fish is still bent on his downward course. The men are jamming the canoe towards me with their poles as fast as they can drive, the water flying on all sides, and a good deal of it being shipped. It's a precious near thing—a toss up altogether; and I hold on to the fish all I know. The boat darts alongside of me, and is brought up all standing with the poles. The heavy waders prevent my raising my legs out of the water, so I sit down gingerly on the edge of the boat; young Andreas seizes me by the coat-collar and drags me in; his revered parent makes a frantic dig with his pole, thereby sending the light craft flying out into the stream; and when with considerable difficulty I recover my equilibrium and few remaining senses I find the fish is still on, that there are not more than three or four yards of line left on my reel, but that we are fast gaining on him, and that the danger of being run out is over at last. That fish is a beggar to go, and a nice dance he leads us even after that; but we finally get him out at the tail of the Birchwood Pool, about half-a-mile below where he took the fly, having had him on just over the hour. A very thick-set male fish he is, slightly coloured by a week or two's residence in the river, and weighing 38½lb. While we celebrate his obsequies in Scotch whisky and recover our wind, we are joined by Gip, who had managed to get left on the island in the scrimmage. Having contrived to swim to the mainland, and struggle down through the various difficulties which beset his path, he has now arrived in a state of intense excitement and general disgust at being left out of the above performance. Some highly-flavoured delicacy, however, from old Andreas' wallet calms him somewhat, and he condescends to embark with us once more as we float away to try the Black Rock Pool. That celebrated cast and the "Birch Wood" have both got the sun well on them now, but the latter is too shallow to be worth attempting under the circumstances, while the former is deep, with a fair amount of current throughout; so before descending to "the Rapids" we try it, casting from the boat a fly of the same pattern that killed the big fish, but tied on a smaller iron. I have fished it carefully down without a move, and am exactly opposite the spot where still smoulder the remains of our fire; here, submerged in a deep and very slow-running stream, are two huge boulders—a favourite cast of mine. Changing my single fly for a double one similar in pattern, I put it carefully over the place, letting it sink deep. At the second cast I am rewarded by getting a dead pull, and, striking hard, find I am fast in a fish. There was not even a "boil" apparent when he took the fly, but the "strike" effectually wakes him up, and he promptly leaps high in air, "tarpon" fashion, showing the proportions of a fish somewhere about 20lb. I am landed on the rocks on the right bank, and over these he gives me a rattling race. For a second or two he fouls the line on a large branch far out in the stream, but to my relief it comes away clear; and some twenty minutes after hooking him old Andreas gaffs a nice fish of 22lb.

It is now nine o'clock, and time to try "the Rapids"—our *pièce de resistance*. The breeze has freshened, and brought up a few clouds, which occasionally obscure the extreme brilliancy of the sun; so that the prospects of sport are, on the whole, favourable, especially in such rough water.

The boat is cleared for action; the captured fish, the spare rod—everything loose, in fact—is put ashore, and Gip is left in charge. A couple of hundred yards or so above the entrance to the pass the sculls are dropped, and the men take up their poles. There is a good cast immediately above the first break, but fish hooked in it are very awkward to handle. Almost invariably they take down a channel—impossible for the most skilfully-guided boat—on either side of which sundry immense boulders rise high above the water, and a smash is pretty nearly a certainty. As we drop down, therefore, I put on a strong treble gut-cast for holding-on purposes, and with poles sloped to give the rod full play the boat is placed in position.

The rocks rise high on either side of the gorge, and below from among the boulders in the river-bed the spray rises in clouds, which vibrate with the breeze. Where we are the surface of the water is smooth; but the current is swift, in immediate anticipation of the plunge below; and the boatmen look desperately in earnest as they strain at the poles, and I begin to fish the "Bush Stream," feeling that the eyes of a critical audience are upon me. In the upper and safer part of the cast, where in the event of a fish rising there is a *chance* of forcing him up-stream, I do not get an offer, and the boat is dropped a yard or two. Almost immediately a somewhat anxious remark in their native tongue from both men announces that a fish has risen. He came at the very tail of the cast, and certainly within six feet of the break, and——missed, probably owing to the rapidity of the stream at that point.

Hauling in the line through the rings, in order not to lose the exact spot, I go carefully over the cast, trying every part of it very hard indeed. Then I put the fly to the fish once more. There is a beautiful head and tail rise, and as he sinks I jam the steel hard into him and hold on as hard as I dare. The strain of the treble gut, backed by a very powerful rod, is heavy, and at last has the effect of forcing the salmon a few yards up-stream, needless to say to our considerable satisfaction, that is manifested in grunts. It is but short-lived, however. Were the fish a moderate sized one all would be well, but he is very evidently one of the big chaps, and in spite of the strongest tackle is bound to have his own way for some time. It seems to me that as he surges slowly up against the stream he is yielding to the strong pressure to which I am subjecting him, through ignorance of his own great strength, and of the existence of danger. The event would seem to justify this. Thirty yards above the break the water shoals somewhat, and from a stony, rocky bottom the river-bed alters to one of shingly gravel. As far as this my friend condescends to be led, though unwillingly; then he stops short, and swirls heavily up to the surface. Whether or no he learned during that brief visit to the upper world that there were people in his near neighbourhood thirsting for his blood I cannot say; anyway, his manner of conducting himself quickly alters. Savagely he shakes his head and darts across and down to the head of the dreaded channel. At my instance the boat is rapidly dropped within 20ft. or less of the break, and shortening line I get on every ounce of strain I know. For a moment it brings him struggling to the surface, but *only* for a moment, and the next he is off down-stream, and in the full sweep of the torrent. All is up now; and knowing that the sooner we part the less tackle I will lose, I straighten the rod down-stream and hold on. The treble gut goes like pack-thread and minus a good fly, the greater part of a good cast, and, worst of all, a very heavy fish. I am put on shore by the sorrowing Norskmen, whose grief has to be drowned in Braendevin before making another essay.

Damages repaired, we once more get afloat; and after descending the rapid at an awful pace, find the boat floating in a large and very deep eddy formed by an immense rock in the centre of the river, whose volume, bisected thereby, tears past in white waves on either side of us. My task now is to fish the tail of the streams thus formed from where we lie behind the sheltering rock, and in the event of hooking a fish to haul it up into the eddy, and there allow it to disport itself till fit for gaffing. It don't look hopeful, especially in the light of my recent experience; but there is no shirking, so at it I go. The place seems full of fish, and I get rise after rise, but without hooking one. At last I am fast, and, to my no small astonishment, working him up into the black hole, which, from the length of line out plumb down, must be at least 30ft. deep. It is a queer place to play a fish, as most of the time he is under the boat; but in due course he comes near the surface, and young Andreas cleverly gaffs him from the boat—a nineteen-pounder. It seems a pity to leave a place where there are so many fish without another try, so I put a somewhat smaller fly over the rough stream. Again, after getting a number of short rises, I succeed in hooking a fish. This chap, however, is not so amenable, and no amount of hauling or persuasion will bring him up near the boat; therefore we are obliged at last to go down to him, in the hope that we may gaff him without descending another rapid. The hope proves a vain one—the salmon will have his own way, and gets into the sweep of the next stream. Our craft half broaches-to in a rather nasty way, and thereby ships an uncomfortable amount of water. My Norskmen yell at one another. I hold on by the hair of my teeth, and away we all go. One moment we race along, apparently at the mercy of the torrent; then, just as it seems that total annihilation is imminent, the men bring the boat up with the poles, its stern almost touching a big boulder rising high above the water, and twist it to one side. Under these circumstances the fish, I notice, invariably chooses the side opposite to the one we do, with the result that I am in constant fear of being hung up—an unpleasant addition to the excitements of the passage.

At last we bring up—this time behind a rocky point, which projects into the stream, and affords shelter from the torrent. Much to my relief I am landed on *terra firma*; and the salmon being somewhat exhausted by its efforts, is shortly induced to come within reach of the gaff, and old Andreas effectually puts an end to its struggles by pounding it on the head with a big stone.

Immediately below the rock point is the—to my mind—prettiest cast in this beat—the Otters' Pool. It is not of such a stormy character as the others, the water running throughout it at only a moderate pace; but it is most difficult to describe. I should say it was a certain section of the river's bed, about 50yds. or 60yds. long, where there had originally been some patches irregularly distributed of comparatively loose gravel and small stones. By the constant action of the current these had become completely excavated, leaving in their place deep holes with sharply-defined rocky edges—admirable spots for the fish to rest in during their ascent of this very stiff bit of water.

In the first of these a grand salmon swirls up at the fly, and within ten minutes of landing the last I am again hard at work from a rocky shore. A good fish he is too, and for twenty minutes plays strong and fast. Young Andreas has taken up his post close by a big stone alongside where the water flows deep. I force the fish very nearly within reach; but just as he is extending the gaff the fly comes away with a vicious swish, and the fish sails off in triumph.

The sun has now become too strong, so we, including Gip, who is fetched from above, take a long rest by the spring among the rocks half-way down the pass, and my two men beguile the time with tales of the forest, the flood, and the field. Late in the afternoon we again get afloat, and I kill two more fish (17lb. and 25lb.) and a grilse, besides touching several others. It is now seven o'clock, and I am sorry to say there are already signs of the mist rising. Here and there among the pools and eddies near the banks filmy cloudlets are forming, and floating on the surface of the water; but there is one pool we must try, mist or no mist—the big one at the foot of "the Rapids," which always holds plenty of fish, and big ones. Down to it we shoot, therefore; and I have not made a dozen casts before I am into a heavy fish. At the end of half-an-hour he is gaffed—a thirty-two-pounder; and as he comes ashore the fly jumps out of his mouth. A near thing!

The mist has now veiled the entire river, and by the time we have regained the top of the pass it is almost as heavy as when we arrived in the morning. The men start off in the boat with the fish, rods, &c., to make their way home by water. Gip and I take the shortest route by land; and by the time we reach the farm, I am more than ever convinced that I have just had one of the best day's salmon fishing I ever experienced, and that it will not be long before I once more pay a visit to "the Rapids."

Notes

Mr. P. Geen writes: "There is an error in your splendid Christmas Number—Loch Tay opens on January 15, and not in February."

Mr. Murdoch writes that, "On Sunday last the first strong head of the spring fish which are so numerous in the Dee in the early months of the year, left the sea to push up river. At the time there was an ascent-encouraging breeze, and the water was growing."

The gifted and genial Dr. Hugh MacMillan, in speaking of aptness, makes the following most correct remarks applicable to aptness for angling: "There is a homely Scotch proverb which says, that 'A bad shearer never gets a good hook.' . . In the country a would-be fisher sallies out with waterproof boots above his knees, his hat wreathed with fly-hooks, his pocket-book bursting with all sorts of hooks, gaily busked, on his back a huge basket, and in his hand a splendid rod glittering with brass-mountings. He goes to the stream, wades into the water, and lashes the pool for hours in vain. Whereas a little way beyond him, a country lad, with a hazel twig for a fishing-rod, a line of thin cord, and a common hook, is catching fish after fish as fast as he can."

We understand that Rhiconich Hotel, Sutherlandshire, which for several years past has been conducted by Mr. William Wallace, who with the aid of his kindly and managing guid-wife has made it a most desirable and much-frequented angling resort, is to change hands at the coming May term.

The handiest hotels on Loch Ness for the best salmon angling (trolling) parts of the loch are Invermorriston Hotel, the Lovat Arms, Fort Augustus. The fishing commences in under six weeks' hence, and prospects just now point to a good head of fish being forward by that time. Hotel visitors have permission to fish. About Invermorriston sport usually gets to be at its best earlier than at the farthest inland or Fort Augustus end of the loch. But it must be understood that even at the very start it depends wholly on the weather during January and early in February where it is best of all.

We extract the following from a letter sent us by an eminent Scotch pisciculturist: "The work of the McNicols in the far North of Scotland is most praiseworthy, and I only wish we had more enterprise of the same kind. Late rivers will probably remain late rivers, but, where they have been early, it is quite within the bounds of possibility to make them early again. Our salmon fisheries have been shamefully neglected. A practical fish culturist, with power to act, would soon alter some of the rivers for the better, and largely so." We entirely agree with our correspondent's remarks concerning early and late rivers, but do not think that a practical fish culturist, however eminent, unless he were possessed of a wide and laboriously acquired knowledge of the habits of the salmon and of the causes that regulate their migrations, would be the man to entrust with the sole responsibility of seeking to improve our salmon fisheries. The breeding of fish is not the only important thing. It is the initial step, and, to prove a thorough success, it must fit in with others which it is proved will best harmonise with physical conditions.

Writes a Scotch correspondent: "The old year goes out after what has to be called an exceptionally green early part of winter, throughout which but seldom any of the rivers have been really low for more than a few days on end. With the greater bulk of the fish nearly everywhere spawned out; with much disease still hanging about widespread along many rivers; and with the not agreeable prospect, should there be much shrinkage of water, of a great deal of the ova, before hatching-out time, perishing from dessication and frost in consequence of having, during high-running waters, been deposited in the highest or outmost redds—the soonest to become dry and frosted, the most liable to be lifted on "boards" on the occurrence of thaws, and the likeliest to be torn up by ice-blocks during heavy floods after long spells of frost."

Mr. Angus Morrison, landlord, of Melvich Hotel, by Thurso, who has fishing rights over a large number of capital lochs in the district, is, we are pleased to learn, hatching and rearing trout and importing Loch Levens for stocking purposes.

On the 14th of this month there were brought into Aberdeen four rare fish, specimens of the Northern Chimera (*Chimæra monstrosa*). This species falls so seldom into the hands of British naturalists, that its occurrence is worthy of note. The individuals in question were caught by trawl, one hundred and sixty miles north-east of Aberdeen, and curiously enough were all females, each about 2½ft. long. Of the habits of the Northern Chimera little is known, and of what constitutes its food almost nothing. Few have been found in British waters. It is, however, reported from Shetland and tho Orkneys, and one was found floating dead off Banff, as recorded by Edward. Two of the specimens referred to have, we learn, been secured by Mr. George Sim, A.L.S., naturalist, Aberdeen, for himself for preservation. Mr. Sim, as an authority—both practical and scientific—on sea fishes ranks among the very foremost of our day. His essays, for example, on the "Herring," have been adjudged by brother scientists as the best—from practical knowledge—that have been written up to the present time.

From Laxford, Inchard, Dinard, and Duartmore, we hear that the spawning of salmon, grilse, and sea trout had proceeded under most favourable circumstances up to last week, as the result of the waters having seldom been very high or particularly low. At the time of writing, our informant remarks: "The rivers are higher at present than they have been since the spawning commenced, but I apprehend only trifling injurious effects as likely to result from this, as before the rise of water most fish had taken up their spawning beds."

VERY large quantities of ova have been taken from both Brora and Helmsdale, during the past six weeks, for the Duke of Sutherland's hatchery at Loch Brora. The experiment of "mixing," with a view to increase the size, stock, and numbers of the fish, is to be tried by putting the young fish of the Helmsdale into the Brora and those of the Brora into the Helmsdale. A Helmsdale angler, writing us, says: "McNicol, Sandside, took some spawn off this river for Mr. Pilkington's breeding establishment at Sandside, and his Grace the Duke is to get back half of the hatch-out. I am glad to say we have had a very good spawning season for both trout and salmon. I never before saw so many of the latter on the redds. I am afraid there were too many, and that the last big lot that came up and took to redds, where the earlier ones had spawned out, will, to some extent, have unsettled or destroyed earlier deposited spawn.

THE BALANCE OF NATURE. — Mr. Goschen's Rectorial address at Edinburgh was interesting as far as it went. The cultivation of the imagination is anything but unknown to anglers, largely speaking; and if the Chancellor of the Exchequer had gone a bit further as to the field mice, cats, and bumble bees, he would probably have come to the conclusion that where the balance of Nature is not allowed fairplay, a time might come when in certain game-preserving districts where every kestrel, weasel, and its larger cousin—the stoat—the sparrowhawk, if not also the mouse-killing barn and other owls are shot or trapped wherever seen or found. To suppose that the domesticated cat, still less the all but extinct pole-cat, would be tolerated on a farm where "birds" were bred and preserved beyond their normal increase, and the pheasants in the woods and copses very much more so, argues a somewhat superficial knowledge of rural life in many parts of agricultural Britain. The kestrel persistently "hunts" along the hedges, as well as "hovers" over meadows and cultivated land, and if a mouse moves, the kestrel is certain to catch its prey. That the powerful legs of this bird could easily clutch partridge or half-grown pheasant is palpable to any person who had examined the bird; that the cat—half wild, or one which had developed a liking for leveret, young coney, and game birds, might also prey upon field mice is probable, where game ran scarce, but otherwise no gamekeeper worth his salt would tolerate Miss Puss's presence for a day. Even the useful vermin-destroying owls are not tolerated on some land, and what is the consequence? When wheat ricks stacked in fields have been taken to pieces to be thrashed, large numbers of rats have in places been found, and the vermin have lived riotously on the wheat. The field mouse finds out the larva of the bumble bees and eats it; and if no semi-wild cat, no owl, no kestrel, and no weasel be tolerated on a farm, the field mice have full play, and probably much of the flowering red clover is unfertilised in consequence. But is Mr. Goschen of opinion that the common honey-bees do not visit the red clover as well as the *white* clover—"heads?" The ordinary bees are very fond of white clover when in "blossom," and the writer only last summer noted the bumble bee also patronised these "flowers," but in a less degree. A report was current some short time ago about a "drove" of voles (?) being seen either in Scotland or the North of England. Sparrows and other corn, or at least seed-eating birds, are reported to have largely increased since their natural enemies have been all but destroyed; and the scarcer birds of prey get a "warm" reception when seen on preserved ground. There is a small field mouse which makes her nest in whisps of growing corn or wild grass. These pretty little things are believed to be "vegetarians," and pointers will often eat them in the shooting field. British agriculturists can ill afford to have their corn eaten up by rats and mice, nor their clover-seed rendered infertile by the destruction of bumble bees.—*Justitia.*

Waterproofs (ladies' and gentlemen's).—A large stock selling at low prices to clear Best quality only —EAST LONDON RUBBER Co., 8, Shoreditch, E.

MORE JOTTINGS OF AN AMATEUR FLY-DRESSER.

BY VAL CONSON.

CONCERNING FEATHERS AND OTHER MATERIALS.

MANY substitutes for feather have been tried one time and another—but the fly-dresser comes back surely to the plumage of birds again. It is an incontrovertible fact that there is more delicate clearness about a piece of pale starling's wing, or jay, or thrush, than there is in one of the waterproofed natural wings so much advertised of late. And then feathers have such mysterious movements under water, nothing really artificial can touch them.

Then the pleasure of hunting feathers and materials! The joy of ravaging the work-baskets of one's lady friends and carrying off their most delicate silks and wools and crewels! The rapid survey of the poulterer's stock as one passes, and the rapture of packing up an unexpected blue dun or honey dun! I am a Londoner by adoption and necessity, and I have to get my feathers how and when I can. Leadenhall Market is my happy hunting-ground. There one may buy curlews, woodcock, jay, golden plover, peewit, snipe, coot, moorhen, landrail, waterrail, thrush, blackbird, lark, owls, partridge, pheasant, grouse (black and red), teal, widgeon, &c. One may buy squirrels at times, and hares and rabbits, of course, but not much else in the way of fur. It is not generally known that if the fur of a squirrel be shaved nearly to the skin there will be found under the red fur a close blue fur on the skin, which is better than mole's fur for many purposes. Well, in addition to these things one can get a huge variety of poultry hackles to select from. The drawback is that the birds are mostly of the current year, being intended for the table, and are too young to produce the best and firmest kind of hackles. For this, birds of the second year should be chosen—if you can get them. If you cannot, you must do the next best thing. By dint of perseverance I have picked up by degrees a tolerable stock of hackles. deficient only in pale blue and honey dun *cocks*. Next to these in rarity come coch-y-bondhu cocks. Some years they are almost unobtainable. It is curious how the stocks differ from year to year. The 1890-91 winter season was remarkable for the extraordinary scarcity of cocks among the birds sent to market, and most that came were white. I only picked up one blue—rather a dark one, but plenty of honey-dun hens of sorts, not by any means the best kinds. These are blue all but the extreme edges, which vary from pale red to palest straw or lemon. But in my finds the colour is a good deal mottled about. All poultry hackles, except the blues and coch-y-bondhus, may be had at two shillings to three shillings per dozen necks, a striking contrast to the prices of the professional dealers. Redpath, of Kelso, buys here; so do some of the Redditch houses. Mrs. Ogden Smith is a customer, I am told, and many journeyman fly-dressers come in to stock materials to fill their orders. If one is short in the purse, it will pay one to buy here in the cheapest market. If it be difficult to get so far east, most first-class poulterers can do something for you worth your while, if you time your visits with judgment, and don't go at too busy an hour. Peacocks' feathers are not difficult to get, but Leadenhall is not the place for them. Messrs. Carter and Peek sell bundles, large and small, for a few pence each, containing both the sword or sickle feather and the eye. Each of these feathers serves two purposes. The short green part of the sickle feather is the staple of the Alexandra. The long strips, very tough and fine, are the ribbing of all the Derbyshire and Hampshire Bumbles. Mr. Currell also used them for ribbing some of his evening Sedges. The eye feather, dyed or undyed, furnishes quills for bodies, and the loose heart of the lower parts, unstripped, makes bodies for Red Ant, Governor, Alder, Welshman's Button, and such like, and stripped, if found to be cinnamon at the root, makes a fine natural Cinnamon Quill. Some of the long, tough strips used for Bumbles have a little strip of white just at the root. Tied in so as to show this strip just in the first two turns by the tail of the fly, and dressed with a steely, clear, sharp blue hackle, this makes a splendid pattern of the Willow-fly. It will also do for the Devonshire Blue Upright. The hackle used for this last fly is a lovely colour, so dark as almost to be undistinguishable from black till you put it on your black coat, and then on the downy strip down the centre you seem to see the violet reflection of a strip of blue sky, such a colour as one sees once or twice in a lifetime in the eyes of a woman. Blue Andalusian cock feathers will not do it—they must be game.

It is a curious fact that for finish of feather and equality of colour on both sides, upper and under, of the feather, there is no breed of bird equals the old English game. The feathers of Indian game are very beautiful—on the upper side, but all the show goods are in the shop window. Look at the underside and the magnificent colour is missing—in lieu of it, a dirty straw colour, or a mean white, perhaps. It flatters one's national pride to feel that the Creator has thought the British bird worthy of a thoroughness of finish denied to the foreigner, and one thinks it must come of the strength of the soil that breeds the British man and woman.

But Blue Game is growing rarer and rarer and more difficult to get. The shows do not bring him out, handsome bird though he be. So one must rely for one's blues largely on Andalusians. In some parts of Hampshire, these swarm, but one somehow seldom sees a cock. In parts of Yorkshire a great many are kept, but again nearly all hens, and so often too sooty about the hackle to be any good. The Plymouth Rock is a dismally useless bird for hackles.

The dealers manage somehow to supply any number of flies, dressed with coch-y-bondhu feathers, scarce though they be. Would you like to know how it is done? Well, I will let you into the secret. They dye badger hackles a suitable red, but they never get the brilliancy of the true coch-y-bondhu.

Dyed blues are not desirable. They soon wash out. But some shades required for fly-dressing one must dye, such as the Olives and Clarets. For the Olives one should lay in a good stock of good-shaped white hackles. So many hackles, good-looking as regards colour, have to be rejected for want of shape. I buy almost any neck of well-shaped hackles, if the colour be not impossible. It is noticeable that dying often gives a hackle a very much better set for dressing purposes. The late Mr. Currell dyed Olive not only white, but reds and yellows, and his theory being that every Itchen fly from the 1st of January to the 31st December (and there is scarcely a day from year's end to year's end without a few flies upon Itchen) has some shade of Olive in it. And I didn't think he was very far wrong. He had a process for giving his cock's hackles additional brilliancy. I thought I had discovered it. It was by keeping them some time in a strongish solution of common washing soda poured in hot and left to cool. But he said there was something more than that. It may be so, but the soda solution gave such a brilliant effect that I was quite satisfied with my own process. It should be applied by way of preparing the feathers for dyeing.

The dresser requires in addition to the materials stated above, a moleskin, a hare's face, a water-rat's skin, and some opossum from the flank. The last, Mr. Holland, of Salisbury, can supply—a little of it goes a long way, and hare's face is easy enough to get. The other things are to be obtained without difficulty if you make love to a gamekeeper. He also can get you magpie herl, a wren tail or two, and some great tit tail for the Iron Blue Dun.

Starling wings, especially young, are difficult to get in any quantity. Sometimes they are to be had in Leadenhall Market at from one penny to twopence per pair, but frequently they are unobtainable. I then get them at a shop on the south side of New Oxford-street just by Southampton-row, called Plumaria, but they are not so good as the fresh article. I like my wings with the natural grease of the bird still in them—at any rate for floaters. The fibres then hold more toughly together both in tying and in use.

The feathers available for whisks of upwinged duns are of three kinds—viz. (1) The cock's beard hackle; (2) the cock's saddle hackle; and (3) the cock's gallinas white breast feather, either white or dyed to taste. For spinners I prefer Nos. 1 and 2, which can be used long, and are very stiff and strong. For upwinged duns in the sub-imago stage, I like No. 3 dressed quite short. The points of these feathers are quite fine and taper sharply. They have a good stiff spring in them, and so assist flotation, and they can be dyed to furnish a better colour-imitation of the whisk of the natural insect than cock's hackles.

The feathers to use for winging in fly-dressing are, for winged floaters, almost always the quill feathers or primaries of the bird selected. These have the curve best adapted to form a parachute, and let the fly down hook downwards. The quill feather of the coot, however, is too stout and coarse for small flies, and some of the scapular feathers have to be selected. The tails of partridge and hen pheasant are also much in use for the wings. For wet fly-fishing with winged flies, it is not so important to have the primary quill feather, and secondaries may be used. For hackle flies the neck and scapular feathers are used, and the soft feathers which lie under the wing and between the quill feathers, close up to the shoulder. These feathers are those known as "inside"—the scapular or shoulder knot feathers are those known as "outside" feathers. Some birds, such as the partridge, afford useful feathers from the back, others from the rump. The breast and neck feathers of the moorhen are available as wings of the sunk Iron Blue. Wren and great tit are useful for their tails only. The wren tail is used as a hackle. The tit's tail can be used hacklewise or wingwise, and it is in great request for floating patterns of the Iron Blue. Feathers from almost all parts of the grouse (except the primaries and secondaries) are of service. Dark grouse and green is great medicine on the Coquet, and on some Cumberland rivers, while the little Freckled Green Rail is on. I daresay it is equally useful elsewhere.

There are a good variety of harls useful for the bodies of flies. After peacock and ostrich of various hues comes heron; magpie is serviceable. The common goose-quill, dyed or undyed, makes a lovely rough body. Condor and adjutant quills are difficult and expensive to get, but invaluable. It is not generally known that the long harls from the inside of the hook, at the tail of the Black Cock, makes a good dark blue dun body.

A very good quill body for a floater may be made from the stalks of cocks' hackles, dyed or undyed. If the stalk be first flattened, by passing it between fore-finger and thumb-nail several times, the strands of feather may be picked off without hurting the enamel at all. Bodies so dressed taper very well, and float lightly and corkily.

Dubbings are very various. These are the skins I have mentioned, and various coloured wools simply shredded. Scarlet wool treated this way, and dressed with a jay-wing, makes a highly effective Red Spinner. Raw silk from the spindle of the amateur silk-worm fancier is useful to mix up with sheep's-wool and other things. I have torn up bits of old sponge, and used them as dubbing for a sunk-fly. They make the fingers very sore; but the result is excellent to look at. I believe that a creeper dressed thus would be very killing after, say, the end of April. All sorts of odds and ends should be picked up, the tufts of cow-hair rubbed off on palings, the cow-hair in the mortar of walls, the tufts of sheep's-wool on thorn-bushes. Foxes afford a great variety of fur at all ages. I believe some lovely olive furs are to be had from monkeys of some breed. The combings of pigs and greyhounds' backs are useful occasionally. It is desirable to have as a friend a furrier, if you can. I am sorry to say I have not. If you have, strike him (as the Yankees say) for all the cuttings he is worth. The useful parts of the Australian opossum (useful for the Pale Watery Dun or Little Marryat) are just the parts which he, in his ignorance, despises and cuts off; and by analogy it should be the same with other furs.

I use dyed gut and dyed hair for bodies of flies, and both are effective. I have a fancy for gut—the flat, tawsy ends—as you can make a neater and finer body with it. Hair is apt to be heavy and thick, and makes the fly fall with a splash. Gut can be dressed either over the silk like a quill, or over the bare hook to the tail and back again to the shoulder. The latter method gives a brilliant transparent effect. It is difficulty to get hair fine enough for that. Dressed on hog's bristles for detached bodies, gut gives a still more brilliant effect.

An old naval or military epaulet is an acquisition. It will supply you with three or four varieties of gold tinsel and wire. That sold by tackle-makers is often too thick, and makes too heavy a fly. What the precise effect of the gold rib is in such flies as gold-ribbed Hare's Ear, Rough Olive, Lock's Fancy, and Red Spinner, I don't quite know, I fancy it must give a suggestion of glistening segments of a smooth body.

I wonder that fishing-tackle makers do not see how much to their interest it is to encourage in amateurs the craft of fly-dressing. It is not a lucrative branch of their trade, generally speaking. It would pay them better to supply materials vices and instruments, cases, &c. The amateur who dresses his own flies, takes a far keener interest in the fishing than the amateur who does not and must necessarily spend as much money at least—and probably more—on fishing-tackle of sorts. Gut, for instance, the amateur cannot make for himself, or hooks. Many feathers he cannot easily procure. Silks of suitable colours and strength cannot be had at all times and places. Therefore let the fishing-tackle makers take my words to heart.

Waltoniana

I visited the Thames recently and found the water, though still high, beginning to look almost a fishable colour. But what an Arctic scene it was! Fragments of ice were being carried downstream, the flooded meadows were frozen completely over, every branch and twig was covered with sparkling rime, and the sun shone dimly through that grey haze, which is so common in still weather during a hard frost. Where the sunlight caught the ice it turned it into gold and reminded me of the silver streak, which the moon casts across the sea. I saw no one fishing, but I wetted a line myself and landed a perch of 1½lb. then fished half an hour without a bite, and went home and eat my perch. Very good it was, too, as good almost as a sole.

Why is every or almost every perch one catches at this time of year a female? Are the males already troubled in mind with thoughts of the breeding season, its pleasures and anxieties, that they have no appetites for minnow or worm? Or is it that the females require extra nourishment on account of that mass of eggs they contain, and so easily fall a prey to the wily angler? We know as a fact that as the breeding season draws near female trout are far more often caught than the males, and that peculiarity seems if anything more strongly emphasised in the case of perch. If it be so with all fish, then it would seem that the angler has much to answer for, as by catching an undue proportion of females, he cannot but upset the balance of sexes. However it may be among humans, among fish the ladies are decidedly the more useful of the sexes. Indeed, the males are so little needed that Mormon tenets would answer very well in fish-land, and each male might have a considerable number of spouses.

I would suggest to those amateur photographers who are fishermen that they devote the winter evenings to making lantern slides from their negatives of river and lake scenery, and fishing incidents. At a small cost a very fair lantern can now be purchased, and there are few more pleasant ways of spending the evening than in seeing a series of fine photographs enlarged and thrown on the sheet. Lantern slide making is now a most simple operation, thanks to the dry plates, which are made specially for the purpose. It is, indeed, a good deal easier to do than to print pictures from the negatives. Mr. Walbran has shown us what can be done with two Northern rivers in this way, and I hope before long some south country angler will take north a collection of views of our most lovely southern streams. Nothing could be finer than some of the scenery to be met with along the most beautiful of the Devonshire rivers, while the valleys of the Thames, Test, Itchen, Frome, Lambourne, and many other rivers, yield scenery of quite another character, but in their way equally beautiful.

Are we to have winter like the last, or is the thaw to come before these lines are in print? Probably the thaw, I should say, and when it comes it will bring with it the usual complement of colds and rheumatics. That demon, influenza, seems to have been let loose again in this unfortunate country, while he is abroad winter fishing in swampy places is hardly the wisest thing a man can do. I have before mentioned a remedy, or rather a preventive medicine for this complaint, and as it is equally good in warding off ordinary colds and low fevers it is worth mentioning again I refer to the oil of the eucalyptus tree. The tree itself when planted in swamps banishes fevers and malaria most effectually, and I recently read that in Australia branches of the tree have been placed under the beds of fever patients with the result that the bedding, &c., required no other disinfectant. I could give two instances of persons, who perfumed themselves with the oil, being the only ones to escape the influenza when others in the house had it, and recently my good opinion of the oil was strengthened by a Birmingham doctor whom I met out pike fishing. He told me that by freely using it he kept off the complaint during the first epidemic, and that he believed he would have been as fortunate when the disease again broke out had not he failed to use it while attending the last patient he had with the complaint.

The way to use the oil is to keep some on the handkerchief during the day-time, and to sprinkle a little on the pillow and under the bed-clothes at night. Of course it is not much use putting a few drops on the handkerchief every day or two. I find that it actually cures ordinary influenza colds. I strongly recommend that a few drops be placed on the handkerchief when we are fishing in marshes. It will assuredly ward off many an attack of low fever. Of course it does not invariably succeed, but that it has most valuable properties is beyond question. Some people dislike the smell, and prefer the influenza, but that is of course a matter of taste, and the opinion is usually changed after one touch of the complaint. When a feverish cold does lay hold of you, fly to ammoniated tincture of quinine at once. It is the remedy, and will often cut short an attack. Perhaps I ought to apologise for intruding these medicinal remarks in this column, but it will be seen that they have a peculiar interest for winter fishermen.

There is such a strong personal feeling of friendship between so many of the readers of the *Gazette* and its writers, that when Christmas comes (as it usually does but once a year, with good cheer or otherwise) to wish those who read these lines a most merry time, and all prosperity in the coming year may seem superfluous. Probably things will turn out much the same, whether the wishes are expressed or not. But let them go forth, and let anglers remember that whether they hail from the north or the south, or the Midlands, they are all united by a bond of good fellowship and their common love for the most delightful of sports. Templar.

Capture of a Large Shark.—The steam trawler *Gannet* arrived at Aberdeen Fish Market on Saturday, and landed a shark measuring 15ft. from snout to tail, and weighing over a ton. This is undoubtedly the largest shark ever got off the coast of Aberdeen. The monster was bought for exhibition purposes by Mr. Robert Walker.

Whale Fishing in the Southern Seas.—The proposal to send steamers from Dundee to prosecute the whale fishing in the Antarctic Seas has now taken definite form. At the annual meeting of the shareholders of the whaler *Active*, last week, the subject was under consideration, and it was reported that Captain Robertson, the master of the vessel, was very sanguine about the success of a trip to the Antarctic Seas, and that he was ready to take command of his vessel if the company elected to send it there. It was agreed that the *Active* should as usual prosecute the Greenland seal fishing up till July, and that on her return from there should be equipped for the voyage to the Antarctic Seas, leaving for there in August, or early in September. It is expected that the owners of the *Baldena* will also arrange for that vessel accompanying the *Active* on its experimental voyage.

CHICHESTER CANAL, SUSSEX.

A SKETCH.

CHICHESTER CANAL is a branch of the Portsmouth and Arundel Canal, which was one of the oldest constructed means of inland navigation in the South of England. The latter was formed under a private Act of Parliament as far back as 1817. The promoters included the Dukes of Richmond and Arundel, Lord Leconfield, the Earl of Egmont, and other noblemen in Sussex and Surrey. The undertaking at that time was considered necessary for the transit of goods, &c., from Portsmouth to London, thus saving a voyage in the Channel and up the Thames. Starting from Portsea Island, a point near to where the Portsmouth Town Railway Station now stands on to Langston Harbour, thence to Chichester Harbour unto the canal opening at Birdham, where the first lock is; thence the barges made their way to Arundel through Surrey to London. This part of the canal was formally opened in 1823, and in 1826 a branch from the canal was made from Hunston to the city of Chichester; but, from some cause or other, the enterprise never paid a dividend.

CHICHESTER CANAL.
(FROM A PHOTO. BY FRANK MORTIMER, JUN., PORTSEA.)

The original canal to Arundel has been closed for a great many years, and the only traces which are to be seen are at the back of the cottage at the swing bridge over the canal at Hunston. From the city of Chichester to Birdham Lock is the only piece of the canal that has been utilised in past years for barges to convey coal, sand, building materials, &c., to the city, a distance of about four miles, and it is this part of the canal I am going to talk about.

Commencing at what is called "The Basin," about a hundred yards from the Railway Station of the Brighton and South Coast Line, you come upon a large open space of water, surrounded by substantially-built landing places, where the barges unloaded their cargos. At one time, it must have been of some importance in connection with the trade of Chichester, but now all is going to decay. At this place some huge specimens of pike, perch, and carp have been taken, and still holds some good fish. Passing round to the right of the timber stacks, you come upon the tow-path, and here the canal commences, that is from the Chichester end.

The first important pitch for the angler is at the unused bridge. Here is always to be seen a covey of anglers, from the boy with the withey rod to the older patron of our Father Izaak. Some fine roach and perch have been taken here. Following the path, which is well shaded by high hedges of blackthorn and bramble for a considerable distance, there are some capital swims abounding with roach. The appearance here of the canal is very pretty; we now come to the Ash-tree Swim, beloved by all anglers who know the locality, and the natives tell some *twisters* about this "charmed spot."

As you travel on you can perceive places that have been used by the ardent banker. We next come to the second bend of the canal, and here is another pitch, called "Warden's Gate." Formerly a swing wooden gate stood here to keep cattle from straying on to the tow-path. At this point, on Sept 13, 1880, the memorable pegged-down match took place between the Portsmouth Waltonian Club and the Brighton Anglers' Club, for a silver cup value five guineas and a silver medal, which were both won by the latter; there were sixty competitors. Between this and the swing bridge at Hunston there are some special swims, well-known to the frequenters of this fishing locality.

You now come to the Anglers' Rest, Dame Welcome's cottage, and you are always welcome here. It is the "trysting-place" for all members of the angling fraternity who patronise the canal to get a refresher in the way of a cup of tea, a jug of milk, or a bottle of "pop." At this end is what they call "The Pool," and it is here that the Chichester junction of the canal commences. From this point, looking towards Donnington, is the most picturesque part of the locality. The canal here runs perfectly straight, and the appearances all round say this is the anglers' *El Dorado*. The bream and carp in this stretch have been coveted, sizes ranging from five to ten pounds weight. A member of the Portsmouth Club in one afternoon, in four hours, landed 35lb. of bream alone. I am now speaking of twelve years ago. There are no such catches now, and we dream now of "lang syne," the silvery shiners, the bellows-shaped monsters, and carping, old foxy tricksters, not forgetting the members of the pike fraternity who have carried away miles of gut and grosses of hooks. The catches here now are getting smaller and beautifully less.

Close by Donnington Bridge is another favourite pitch and some carp locate about this place. The tow-path is now on the left side, and as you journey onwards the canal is not so wide or deep; some years ago this part of the water was run off for repairs to the lock, and though every precaution was made to retain the fish, thousands went out into Chichester Harbour. This stretch is much fished by the local anglers, and at present holds the best swims, as the weeds are not so luxuriant in growth as in the places already mentioned.

We now come upon the lock at Birdham, which is the end of our journey. Some few years since this was a busy spot for barges and bargemen, but now, alas! the lock is going to decay; no barges have passed through for the last two years, so the canal is fast filling up with weeds and rushes, the water gradually getting lower; consequently navigation is at an end. Mr. Purchase, who utilised the canal for many years, has given up his connection with it, and this beautiful stretch of water, the happy hunting-ground for hundreds of anglers, is fast going to decay. As a fact there are still quantities of fish in the canal, but they are small, and very rarely a sizeable fish is taken now. Of course, there are occasionally exceptions, when some of the old anglers of Chichester come across a stray pounder or two, but they are like "Angel's Visits."

Before I finish this notice of the canal, I cannot help lingering for a few moments to recall the pleasant memories of the past, the merry and earnest anglers I have met on its banks; the successful days and the blanks, are all cherished heartily by, yours truly, JAS. SOMERS DYER.

Portsmouth Waltonian Society.

The accompanying plate is from a photograph taken about a hundred yards from the unused bridge, looking towards Hunston, by Frank Mortimer, jun., of Portsea.

Since writing the above, it has been decided by the High Court of Justice (Chancery Division), "To transfer to and vest in the Corporation of the City of Chichester that portion of the canal from the sea to Chichester; and to confer upon the Corporation all rights and privileges for the supply of the said portions of the canal with water, and also from time to time repair, dredge, scour, and otherwise improve the water-way for the better accommodation of larger vessels, &c." A bill to this effect will be deposited in the Private Bill Office of the House of Commons during the month of December, 1891. This will seal the fate of Chichester Canal from an angler's point of view.

⁂ **Club and River Reporters will oblige by sending in their Reports early in the week.**

A SUNDAY SALMON; OR, THE FIFTY-POUNDER.

(Continued from page 352.)

THAT night I was talking over the events of the day with McNab, our landlord, as we smoked our pipes at the door of the hotel before turning in. I had been abusing Peter's clumsiness, which I reviled all the more because McNab assured me he had never known him to do such a thing. Then I turned the conversation on Sir John and his fair young friend, and asked who they were.

"Oo! Sir John Melfort's the biggest proprietor here about."

"And who is the young lady with him?"

"That's Miss Mary, his niece."

"Do you know her other name?" said I.

"Aye! McAlister, Miss McAlister. 'Miss Mary,' we call her; she's always coming to stay with the laird."

McAlister! Of course! I see it all now. The girl was my friend's sister. I might have seen the likeness if I had not been blind. I knew he had an uncle, a baronet; and wasn't one of Jack's names Melfort?

What a fool I had been to speak so freely to a stranger! That is why she smiled so curiously when she read my name in the railway carriage. She knew all about me. Now I understand her speaking so earnestly to Peter, and why the latter tried to keep me away from the best casts on the river, and at the last broke my line. No doubt it was all intentional and arranged between them. Oh! for revenge! But how?

The only way was to catch a salmon and confound them. But I have to leave on Monday morning to be in time for my steamer to India. I might try a cast in the river near the hotel if I got up early, but then, that part of the stream was considered useless, and for years no one had been known to get a fish in it. Sunday! I should not be allowed to throw a fly to-morrow, and I knew not what penalties would await me if I were caught; besides, it was against the terms of one, at least, of my bets. But if I only could get a fish on the sly, I shouldn't mind. Plot against plot, deceit *versus* deceit! If I managed to catch a fish to-morrow, I could hide it somewhere, and then go out early on Monday morning with a rod (I could borrow one) and come back in triumph. I made up my mind to venture, and fell asleep, revolving my nefarious scheme.

Though I was up early next morning, I did not start at once, as that might have excited suspicion. So I busied myself with getting my tackle ready. I selected some of the stoutest casting lines in my book, and picked out several of the biggest plain hooks I had. Then I got some lead and weighted the casting lines heavily, next I oiled my reel and tried if it would run easily. When everything was arranged to my satisfaction, I came down to breakfast. I was asked if I was going to church, and I said I was going to take a long walk to the top of one of the neighbouring Bens. To my delight no one offered to accompany me. After breakfast I asked for some luncheon to be put up in parcels for me, stating that I might not be home till late. I purposely asked for a large quantity in order that the bulky state of my pockets might be accounted for. In the privacy of my bed-room I exchanged one of the packets for my reel, and at last all was in train, and I stepped out of the hotel into the glorious sunshine with a beating heart and eager anticipations of victory.

At the door I met Peter, who looked at me more sourly than ever, and said: "Ye'll be for the Glen, I suppose?" I did not answer him, and walked on. After the hotel was out of sight I went aside into a field and began turning up the stones which lay here and there, in search of worms. After I had secured a dozen of the largest I could find, I put them in my sponge bag, which I had brought for the purpose. Then I struck the road again and resumed my walk. I passed the church, where the bell was still ringing, and thought all the people collected at the door looked at me suspiciously. Then I met the minister, who stopped to wish me good morning. I had made his acquaintance at the river-side, for he was a keen angler. I could feel the worms in the bag, which hung suspended under my waistcoat, crawling about, and was horribly afraid the string might break, and the whole concern fall at his feet. Then the brute of a reel in my pocket gave a horrid click, and I felt sure I should be betrayed. But the minister's face did not show any surprise or appearance of suspicion; only I thought he looked rather askance at me when he said good-bye and found I was not coming on with him.

At last I had passed all the church-goers, and was alone. So far I had succeeded. What a glorious morning it was! The mountains were splendid in their fresh green; bird and bush were glad and gay with song and sunshine; everything seemed happy and innocent. I only felt that I was out of tune with Nature with my dark design. But my spirits were high, and I sang as I strode along, and laughed to myself how I had stolen a march on the enemy.

When I reached the fishing-ground no one was to be seen. Everyone must be in church. So I commenced operations. In any case it would have been dangerous to use a rod, even supposing I had been able to smuggle one out of the hotel and carry it along the road unnoticed. The top joints would have flashed in the sun, and would have attracted the attention of anyone passing by the river. I attached a strong gut collar, heavily leaded, to the line on my reel, then I tied on a large single hook, and baited it with two of the biggest worms in my bag. I cut a short, stout stick, and lashed the reel on to it, so as to make it resemble, as much as possible, the butt-end of a rod, and prevent the line catching in my fingers when running out.

Nothing remained but to select my ground. I chose a deep rocky pool where the main stream ran close under the edge, and threw my bait in and let out line. How anxiously I watched it *worming* its way down-stream, and fancying every little stoppage was a bite. But nothing came, though I repeated the operation several times, and I had to move up-stream to another cast. This was a matter of some difficulty to select, as there were few places adapted to the style of fishing I was attempting. The ordinary streams where the bank sloped gently to the water's edge were of no use, as I could not throw the line far enough without a rod, and the rocky pools with the deep water right underneath were very exposed, and I might be seen easily from the road at most of them. However, I soon was on another pitch, but had no better luck there. At the next one I felt something bite, and at the following cast I felt I was into it, but it turned out to be only a good-sized trout.

Thus the forenoon went on, and I had got nothing, and had come to the end of the hotel water. I sat down on the bank and lit my pipe, and reviewed my position. Things didn't look bright—one bet already lost, and £50 as good as gone, not to count the expense of my trip and the mortification of defeat. I had tried every negotiable cast and had failed miserably, and there was little use going over the same ground again, disturbed as it was by the clumsy splashing of my bait.

I turned my eyes up-stream. There was a waterfall with narrow rapids above it, and still farther up a great deep pool, with high rocks on either side. A light foot-bridge spanned the narrow channel above the fall. It was just the place where I might have a chance of success. But, then, poaching as well as Sabbath-breaking! Sir John's fishing rights began here, and fancy if I were caught! I knew not what ecclesiastical, as well as secular, penalties I should incur in this savage country. But, again, what joy it would be to circumvent the enemy in their own particular territory; what a dear delight to pick out success under their very noses! I hugged myself at the thought, and after a pull at my flask resolved to venture it. I looked round. No one in sight. The kirk would not "scale" for a good half-hour yet. Here goes! And I flung in a couple of the fattest worms on my treacherous hook into the deepest part of the pool.

What a thrill went through my arm! What a shock made every fibre of my nerves quiver, as away raced my line at express speed, and my reel sang out like a mighty grasshopper. The fight had begun in earnest. Up-stream and down-stream dashed the fish; now at the bottom, rubbing its nose on the stones; now flinging itself into the air in a silver crescent, never resting a moment or giving me a second's breathing space, as I followed over the break-neck places it took me, dreading lest it should go over the fall and get away.

It was risky work, for there was no rod to take up, by its springiness, a sudden strain on the line; but the hook was large and strong, and kept a fast hold till I saw the salmon was nearly exhausted. There was a ledge of rock with only a few inches of water on it down below me; then came a bed of gravel with a current three feet deep passing over it; beyond, the black abyss of the pool. If I only could get the fish on to the ledge. I succeeded in bringing him there at last, and he lay gasping in the shallow water—a noble fellow of about 25lb. But how to get him out! I didn't dare to try to lift him up by the line, and he was much too far below me to reach with my hands. I must get down to *him* somehow. I pulled the brute as far on to the ledge as I could, and then cautiously began to swing myself down the steep face of the rock. Just as I was within a foot of my prize he began to writhe and swish violently with his tail, and before I had gained a foothold he was on the very edge of the ledge of rocks. I dropped at once, and threw myself recklessly on the disappearing fish, and got my hands round his broad body, but he struggled violently, and I could not keep my balance, and in a moment I found myself standing on the gravel with the beast in my arms, up to the waist in a strong current and in great danger of being swept away. It was all I could do to stand against the stream. I could not get on to the ledge of rock without using my hands, and I needed them to grasp the fish, which, feeling itself in its element again, was resisting hard. I was in a nice mess! Even without the salmon I doubt if I could have scaled the rocks again. I was in the position of the chamois hunter, who has tracked his dead quarry to a crag from which there is no retreat. I felt like a miser shut up to die in his own treasure-house. It was getting serious and I made another desperate effort to get on the ledge, and had nearly succeeded, in despite the strong stream and struggling fish, when I suddenly heard a clear ringing peal of laughter behind me, and turning my head I saw standing on the wooden bridge "Miss Mary," shaking with merriment, and beside her that villain Peter, his face more sullen and his nose bluer than ever. Oh! that moment of shame and anguish! Caught Sabbath-breaking! Taken red-handed when poaching! Found out in my nefarious scheme for winning my bet! Shown up as no sportsman! And by this pert slip of a girl, who made the rocks ring with glee as I struggled and stumbled and sputtered. I must have looked irresistibly ludicrous. Visions of gaols, cutty-stools, newspaper reports, and degradation, flashed before my mind. Oh! for a speedy death! I very nearly found it, for the treacherous gravel gave way, and in I pitched, right into the whirlpool beyond, and was swept away. Instinctively I clung to the salmon. When I got my head above water I took a look round; I had time to do so, as I found myself in a comparatively still part of the pool, where the current made a broad swirl before rushing down towards the fall beneath.

I could just see two figures leaping down from the bridge, and then I was hurled away by the rush of the stream. It was hopeless to resist, and on I drove. Bang! and my head went against a rock and I was nearly stunned, and away I went again, tossing and helpless, but still clinging to the salmon—why, I cannot say. I thought all was over with me, and that in a few seconds I should be dashed to pieces. When suddenly I felt my course arrested. Something held me fast by the neck, and I was suspended in midstream with the torrent dashing wildly by.

"Let go the fush, ye fule," I heard a voice say, and when the water got out of my eyes I could see it was Peter who had me fast by the collar of the coat, and was trying to lift me on shore on a point of rock above the falls. The girl was beside him, white as the foam which glanced past.

I only set my teeth and stuck faster to the fish, whether instinctively clinging to something with a desperate determination to go on and win I know not, but whatever was the reason I did not let go, and all Peter's efforts to lift me were fruitless. Suddenly the girl knelt down, and holding on by one hand to a root in a crevice of the rock she stretched out her other hand and grasped the tail of the fish and pulled. Then ensued a three-cornered struggle, Peter wrenching at my collar, the girl dragging at the salmon, and I resisting both. It was all over in a moment; I felt my grasp loosening on the slippery scales and myself rising out of the water at the same time, till I found myself safe on the rock—but without my prize. "Miss Mary" rose at the same time from her perilous position; she too was empty-handed. The salmon was gone.

Peter still had hold of my collar, and was quite prepared to treat me as a poacher; when the girl said: "Let go the gentleman, Peter; don't you see he's hurt?" Indeed I was sore all over from bumping against the rocks, and my head was bleeding freely. I felt rather sick and faint for a moment, and soon as Peter let me go I sat down on a stone to recover myself.

"I'm afraid your head's very painful; will you let me tie it up?" And in a moment nimble fingers were bandaging my forehead with a dainty handkerchief.

"There," she said, as she examined her work with the critical eye of a nurse, "that'll do. Are you able to walk to the house? It's close by." She looked very pretty and womanly there, fulfilling her gentle duties of aid-bringer to the wounded, and, with the tone of tenderness in her voice as she made the inquiry, appeared doubly charming by contrast with her former mischief and *abandon*.

I said I was all right, and, after Peter had been dismissed, we set out along a path which wound among the larchwoods till a mansion was in view. I confess that my feelings were of a mixed nature. I was almost inclined to turn back and make for the hotel. In what character was I entering the house? As a poacher taken red-handed, or what? Well, it wouldn't matter much even if I did decline to enter. My name was known and where I lived, and I couldn't well return with my dripping clothes and my bleeding head.

When the door was reached she rang the bell, and on a footman answering it, she told him to show me to a room and attend to my wants. I was directed to a bedroom, and began to take off my wet things. There was a bath-room opening off the apartment, and the servant suggested I should have a hot tub, and said he would take away my clothes to dry. I agreed to this, and after my bath, rolled myself in a blanket and waited. Presently the footman returned with a bundle of garments. "Miss McAlister's compliments, and lunch would be ready soon." My hopes rose at this message. Surely if I was to break bread in the house, I was not going to be treated as a malefactor. So I began to don the clothes which had been brought in—Sir John's, no doubt—"Hallo! what's this piece of raiment?" I turned it over and held it this way and that way, but could make nothing of it. And then—yes! a most indispensable garment was awanting. I was going to ring the bell and summon the servant when it flashed across my mind that I had been supplied with a kilt suit.

What devilry! It was that imp of a girl's doing, I was sure. Now that she knew I wasn't much hurt, she was at her mischief once more, and had sent me this barbarous dress just to make me ridiculous. I tried to hang it in graceful folds from my waist, but the result was very doubtful. Then the *sporran*. I wasn't quite certain whether it went behind or in front. So I thought it would be safer to fix it at one side. There was something wrong, I felt, as I looked at myself in the glass. My skirts were very short, too, surely! and how white my knees looked. I heard wheels on the gravel below my window, and peering out I saw a waggonette at the door and its occupants descending. The last to leave was Sir John; he stood a few moments to speak to the coachman. What luck! He was in Highland dress, and I ran my eye rapidly over him. Oh! the *sporran* was in front; That's all right; there! and his kilt doesn't look longer than mine. Courage, oh, Jones! and I surveyed myself in the mirror with some satisfaction. I had a fine leg, to be sure!

Presently I heard a step coming along the passage, it stopped at the door; there was a knock. Now for my fate! "Come in." The door opened and Sir John entered.

"Delighted to make your acquaintance, Mr. Jones," he said, as he shook me heartily by the hand. "I hear you're a friend of my nephew Jack in India. So you've had a ducking—hope your head's not much damaged. There's the bell: you'll be the better of some luncheon. Come along." And he led me downstairs. This *was* heaping coals of fire on my head, for, of course, he must know all.

In the dining-room, besides Miss Mary, there were only Lady Melfort and the minister. After we had sat down, Sir John said: "My niece tells me you got in just above the fall; an awkward place. A good one for salmon, though! Did you see any when you were in the water?" And he looked up from his soup with a smile. Oh, treachery! Was this to be my punishment? To be lulled into a sense of security by a seeming show of hospitality, and then put in the pillory of sarcastic ridicule! To be led forth garlanded like the sacred ox of old, only to be sacrificed! Unmercifully *roasted*, anyhow! Perhaps to be lured into making confessions before the minister, which would entail I knew not what ecclesiastical penalties! I dared not lift my eyes; I felt sure the footman behind my chair was on the grin at the sport provided by my humiliation, and that meaning smiles were being exchanged round the table at my expense. My face was burning hot—how cold my knees were, though. I didn't answer the question, but endeavoured to gulp down my soup, and I heard Sir John continue: "But the place is horridly poached, confound them." Worse and worse! Oh! for the floor to give way and let me disappear! I had a wild thought of pulling my skirts over my head and rushing out of the house, but more rational counsels prevailed. I couldn't go on for ever silent with my head in my plate, so I looked up. The first gaze I met was that of Miss Mary. She put her finger on her lip just for a moment, and I thought I could distinguish the slightest possible depression of one of the eyelids. Everyone else seemed occupied with their food—there was no one even looking at me or seeming to expect me to speak. My hopes rose. My young friend had evidently kept a discreet silence on the cause of my misfortunes, and I blessed her for it. Sir John's remarks were made without any covert allusion, and I soon found my tongue, and accounted for my adventures by a general story of a walk by the river (which was quite true) and a fall over the rocks (which wasn't a very *big one* at all).

When lunch was finished Miss Mary offered to show me the garden and grounds. When we were out of sight of the house, she suddenly stopped and burst into the merriest peal of laughter I ever heard. Then she cried, "Isn't it splendid? No one suspects anything, and I told Peter he wasn't to say a word to anyone; he knows better than to disobey me. But I say, you haven't said anything about the rod, have you? I shall get *such* a scolding if my aunt knew!" I assured her that I had been as silent as the tomb upon the subject, and that I would never betray her.

"If you did, sir," she replied, her eyes twinkling with mischief, "I should tell everything. There's nothing my uncle *hates* so much as a *poacher*—h'm—and if the minister heard of it, I don't know what he wouldn't do."

I didn't know, really, how much she was in earnest, and she evidently noticed it, and went on: "You must think me a dreadful girl, but I can't help it. It was so delightfully naughty of you. I should like to have done it myself. Tell me all about it." Then I told her how I had suspected who she was, and that she had leagued with Peter to prevent me catching a fish, and all about my preparations, and how I had tried pool after pool without success, and that it was in pure desperation I had trespassed on her uncle's preserves.

"Oh! I knew all about it," she cried; "we were watching you for a long time—Peter and I. He had heard the click of your reel in the morning, and suspected something, and followed you. And when he saw you fishing he came and told me. I hadn't gone to church. I'll never forget you trying to get out of the water with the salmon in your arms. I tried to keep still, but I couldn't help exploding," and off she went again in a delicious thrill of merriment. It was too infectious, her hearty girlish mirth, and I laughed, too, as long and loudly as she, without the smallest touch of annoyance. It was impossible to be angry with her, and she was so charmingly pretty.

"It was all very wrong of me, I know, and I must ask forgiveness; for if I hadn't laughed you wouldn't have tumbled into the water and got hurt."

I said it was nothing, and that I deserved all I had got.

"I tried to hold on to your fish, but I should have been pulled in. I admired the way you stuck to it; you deserved to win your bet. I'll tell Jack it was a drawn wager, and that it was I who let the salmon go."

"Oh, no!" I exclaimed; "you mustn't say anything about it. The story would be all over India in no time, and I should never hear the end of it."

"Well! £50 is rather a dear price to pay for a salmon, isn't it?"

"I suppose it is, especially when one does not get it after all. But I got off cheap on the whole; I might have been drowned. Besides, haven't I made your acquaintance?" I added, gallantly.

What she would have replied to this compliment I do not know. We had reached the bridge over the river and were watching the water going over the fall, when she called out, "Look, what's that?" She pointed with her finger, and far down in the pool below I saw something bright floating on the top of the water.

"I believe it's your fish," she said. We ran down, and sure enough saw a salmon floating dead on the surface, with a long piece of line trailing from its mouth. With the help of a stick I got hold of the line, and drew the beast ashore. It was indeed my fish; there was my hook sticking in its gills, and there was no doubt about the line.

Miss Mary almost shrieked with delight. "I'm so glad you've won your bet after all. I can tell Jack that I saw the fish you caught."

We took the salmon back to the house. I thought it wise, however, to remove the hook first, so that there might be no suspicion of foul play; and nothing was suspected, as it is not unknown to find salmon floating dead in this manner.

I was quite sorry when the servant came up and said that my own clothes were dry.

"Oh! wait a bit," said Miss Mary; "you must stay for dinner; we'll drive you back. Besides, I like you much better in the kilt"—this very archly.

What could I do but stay and enjoy the hospitality of those kind people? And when the time came for me to don the garb of civilisation and make my farewells, I left behind me all my disappointment, and, I think, quite half my heart.

But I must stop writing now. These fiendish mosquitoes are driving me wild. Mary says she can stand them no longer, and must get inside the curtains.

She is not "Miss" now. *Nous avons changé tout cela.* The next time I went home on leave I made a fishing tour in Scotland, and then and there I caught the noblest prize of my life.

Not to this day does anyone else but blue-nosed Peter know the whole truth, and I always tell Mary that the diamond ring I gave her was specially bought with Jack's £50, in hope that some day she would have good reason to remember me and the Sunday Salmon.—*Christmas Number of the "Singapore Free Press."*

THREE DELIGHTFUL DAYS.

By Edgar S. Shrubsole.

(*Continued from page 368.*)

Very softly the Yellow alighted upon the surface of that part of the pool—only about 12ft. square, in which the fish were feeding. Instantly it was seized by a trout; the angler as quickly tightened upon the fish, and by exerting a judicious pressure, induced it to leave the deep hole, and make for the rapid stream below. There it was quickly killed, and then carefully drawn into the shallow part of the pool towards the angler, who, having discarded his landing-net and refused my offer of the one I was carrying, stooped down, and with his hand removed Mr. Trout from his native element, and having released the hook, threw a fine-conditioned fish, well over 1lb., upon the bank where I was standing.

It was a pretty bit of work, quickly done in a masterly manner, *and four times more was the process repeated!* It was quite dark when Mr. Marston waded ashore, and with a quiet smile asked me if I didn't think that little hole was full of fish?

"Right you are!" I replied; "*was;* you must have nearly emptied it, though!"

And certainly he must have done so. Just fancy four trout out of such a small pool, all well over a pound, and one nearly a pound and a-half; in addition also one fish, returned to the water, of about half-a-pound.

I can see him now as with a steady cast, the fly was propelled over the fish, at least fifteen yards distant. Not one mistake. As cool as a cucumber was the angler, as fish after fish was risen, struck, played, and handled from the stream. The pool itself was right under the opposite bank, and hanging over it was a thorn bush! So the cast was none of the simplest, especially when dusk drew on. My friend pulled at his pipe, and blew a cloud like unto a Sheffield shaft, and that was the only sign he exhibited of what *must* have been stirring within him. As he turned to throw the fish towards me, however, I noticed each time the quiet smile and comical shutting of one eye, that so surely denotes his inward satisfaction.

I was to learn yet another lesson before that day was done. As we strolled down the side of the river I told my companion that I had always used a Coachman when it got dusk, and he—without denying the value of that fly for evening fishing—instructed me that when trout have fed through the day upon a certain fly, it is as well to use the same pattern in the evening, sometimes perhaps a size or two larger. He practically proved the truth of this at a pool we shortly reached.

"Now, a good fish lies there for a certainty," he remarked. "See, I will make a cast. Great Scott! It *is* a good one!"

I verily believe that was the only bit of uncontrolled excitement he exhibited that day. And it was excusable. The yellow was flicked carelessly out into the semi-darkness. I saw him tighten upon a magnificent fish, that ploughed the pool in a truly gallant manner, and after a prolonged fight was brought to the bank. *The* fish of the day. Mr. Marston told me afterwards it weighed just over $1\frac{3}{4}$lb. It looked a good 2lb. fish then.

I must not forget to say that during the afternoon and evening I had occasionally a turn at the sport myself, and succeeded in catching a few half-pounders. It seemed impossible for me to "hook into" anything beyond that weight—*i.e.*, if we bar the bushes and rocks I frequently "caught."

The last pool we could fish that evening was reached, and here my companion insisted upon me having a turn; this I did, and got a half-pounder, of course.

"There must be a bigger fish there," remarked my friend; "have another try."

This time I felt something more like the pull and plunge of the one or two decent fish I had caught earlier in the day, and in the result I managed to net a nice pound fish.

"There is a bigger one than *that* in the pool," said my friend.

I told him to have a cast over it, and he did so. Presently—

"I told you so!"

And the bowing of his little rod told a tale that could not be mistaken.

That was the last fish of the day, and it scaled $1\frac{1}{2}$lb. We left the river with regret, and at the little railway station I bade adieu to my newly-formed friend. I was awfully sorry to part with him; the day had been all too short; but everything must come to an end. Of course, we made arrangements to meet again, and the last words Piscator Major whispered to me just before the train started were—

"Shrubsole, it has been a delightful day, and that pie was one of the best I ever tasted! Don't forget to bring another when next we are on the war-path!"

You may be sure I did not!

Mr. Marston's catch that day was ten and a-half brace of trout, from 1lb. to $1\frac{3}{4}$lb.; mine, two and a-half brace, from $\frac{3}{4}$lb. to 1lb., *but I went home with most fish.*

* * *

Years have rolled by, many a day have I spent with the Editor of the *Fishing Gazette*, by the river-side; many a pie we have disposed of between us. Perseverance and continual practice have made—well a decent—fly-fisherman of me. Even now I must acknowledge the superior skill of the master who first *really* showed me "how to do it," but now *I* can manage to get a fly somewhere near a fish, near enough at any rate to account for one or two occasionally.

You may depend upon it I ordered the funeral of several pound-and-a-half fish when last summer I received permission to cast my flies in one of the finest trout waters in this (or any other) country.

Arrived at the lower part of this delightful trouting paradise, I soon got into my waders and mounting a Yellow Dun—Yes! you may laugh at Shrubsole's Yellow Dun, but it want's a lot of beating!—began "stalking my prey." The river was low and very bright, but presently I noticed a rise just in front of me. I sent the Yellow on a journey of inspection, there was a boil, the gleam of a golden side, a terribly amateurish strike on my bait, a line floating limp and fishless in the gentle breeze, and a quotation from me! I had broken in my first fish, and it was no satisfaction to me when I saw a thumping big trout scud away up-stream showing a tail above the surface as big as an anchor fluke!

I rigged up another cast and went a little farther on. A lump about as big as a Dutch cheese arose in my throat as I noticed another fine fish feeding a few yards away. I sent the Yellow on a little journey connected with the funeral of that fish—which did not come off, for he would not take the Yellow on at any price. I tried other flies over him, but not caring to waste too much time, soon left him "for another day," and directed my attention to brace feeding just on the edge of a "glassy glade" a little farther on. Down came the Yellow just in front of the nose of No. 1. He saw it and went for it; but oh! lor! the same thing happened as at first, and I sat down to rig up my third cast, with somewhat mixed feelings.

I soon found another fish to operate upon, and as the Yellow sailed to him he sucked it down. Oh! so nicely! This time *I merely tightened up*, and that fish did a delightful dance to the music of my reel. His funeral came off, and he made a pound-and-a-half corpse.

In an hour-and-a-half's fishing I had two others of about the same weight, besides turning back two of about a pound—for I could plainly see I had no need to creel anything much less than a pound-and-a-half. I spotted one fish, a regular "whopper," feeding in the tail of a run. My fly came down, and, as I fancied, passed him. I saw him show his side as he took *something* and was just recovering my line preparatory to making another cast, when I found he had hooked himself! Oh! yes, it was him right enough, and a tough fight he made of it. Twice I had him close to the net, and each time he shook his head, bolted, and made another gallant fight for liberty. Well, *his* funeral came off, and *he* made a two-pound corpse. It is usual to pass the flask at the funeral—of trout. I did so! But being alone I passed it to myself.

And then I came to a deep hole—and went in it! After I had emptied the water out of my waders, I made another start, and the Yellow proved too much for another brace, one $1\frac{1}{2}$lb., one $1\frac{3}{4}$lb., during the next hour. After this it turned terrifically hot, and I gave up fishing, had some pie, and lolled upon the bank watching the light cirrus clouds far away in the blue vault above me.

This was very enjoyable until I found I was lolling too near an ant's nest, and the little beasts were simply covering me. So I sprung erect (copyright!) and strolled up the river, spotting good places as I went. I left my fish at a little cottage close by, for they rather cut my shoulder, and moreover the hot sun was drying them. The civil owner of the cottage gave me several valuable hints of which I availed myself later on; and then I strolled on.

I passed one pool where I *counted* seven trout, not one of which would weigh less than a pound-and-a-quarter, and the biggest fellow would scale 2lb. My fingers did not itch to get at them—oh, no! I marked *that* pool down.

Then I came to a magnificent pool, with one of the prettiest cascades, at its head, I have seen. While I stood admiring this perfect trout-pool and its surroundings, a fine trout threw itself clean out of the water, and at the same time I noticed two unmistakable rings at different places. I couldn't stand that; could you? I reckon the man who could would stand anything! So I set to work, but not a fin did I get, although I tried a large number of flies, and several fish showed while I was fishing. I inwardly resolved to give the pool a trial in the evening, and being convinced it was too bright for fishing then, continued my stroll.

The afternoon wore on, and it came over a bit cloudy. I picked out three good fish before dusk, and then I reached the pool with the cascade at its head, mentioned above.

Gentle reader (also copyright!), do *you* know what it is to have a rod in your hand properly weighted with a *suitable* line, so that even in the semi-darkness, although you cannot *see* where your fly alights, you *know* and can *feel* exactly how much line you have out, and *where your fly is?*

When I reached the pool, the genial proprietor of the water, who had walked up to meet me, was there, and after a hearty greeting, he told me to get to work. Wading carefully out, I got a good swing on my line, and sent the fly right under the cascade. I felt a tug—didn't I just?—and it took me quite ten minutes to bring that plucky trout to my net, although I had fastened a slightly stouter cast to my line. He was a takeable fish, even at my increased standard.

For an hour I stuck in that pool, and succeeded in getting three more fish—one a beauty of over 2lb.—and then I gave it up, and the proprietor and myself strolled down-stream, smoking our pipes, and chatting as we went. When I told him I had turned back several 1lb. fish, he politely said, "More fool you!" Still, I was satisfied, you may be sure. When we reached the pool where I had seen the seven trout in the mid-day, I could not resist the temptation of having a trial shot. Standing in the meadow below the pool, I worked out the necessary length of line, and sent the fly on a voyage of discovery.

Shade of Walton! I thought at first I had hung up, but a tremendous rush of the fish soon convinced me I had not. And then commenced one of the most exciting struggles with a trout I have ever experienced. I got down into the water to have a better command of the fish, and of course went in over my waders! It's a mercy I did not lose the fish in gaining a foot-hold, but I didn't. How he bored and plunged about the pool! Once my line slackened, and I was terribly afraid I had lost him but carefully winching in my line I found he had only bolted towards me, and as soon as he again felt the strain, away he went, and my winch sang a sweet song to me. But the end came at last; his struggles grew fainter, and although I could not see him, I knew he was giving in. My friend handed me the net. I put all the strain on I dared. The 10ft. 6in. of built cane proved master, and I netted—a pound fish, hooked foul in the fleshy part of the tail!

Well, it was a disappointment, but I put up with it, because there was nothing else left for me to do. I kept that pound trout; it was the smallest fish I took away that day.

It was now quite dark, and so we adjourned to the little cottage, where I placed the latter part of the day's catch with those I had previously taken. It was a very pretty show indeed—seven brace of trout, weighing at least 20lb.

I believe Piscator Major would have been proud of those trout.

"You have come a long way for a day's fishing," said my friend the proprietor. "You can stay and fish to-morrow if you like."

Did I stay? Rather.

* * *

The morning of my third delightful day broke warm and cloudy; need I say more? Throughout the day the sun occasionally peeped forth, but it was a perfect trouting day taken all round.

I *kept* ten-and-a-half brace of trout that day—the same number as you had, Mr. Editor, upon the occasion I first met you. But I had not a fish under $1\frac{1}{4}$lb. full, and my biggest was over $2\frac{1}{4}$lb.

Altogether in the two days, I had about 50lb. weight of trout, besides turning back many really takeable fish.

And I shall fish that water again next summer. Will you come with me?

Who says "Yes!" for another three delightful days?

SALMON angling rents still move upward. Whenever will they stop rising? Not, we fear, till salmon anglers get far more sense in this particular matter. Quite recently several "lets" for next year of salmon angling on "first-class Scotch rivers," were effected at, in each case, a higher figure than any realised hitherto.

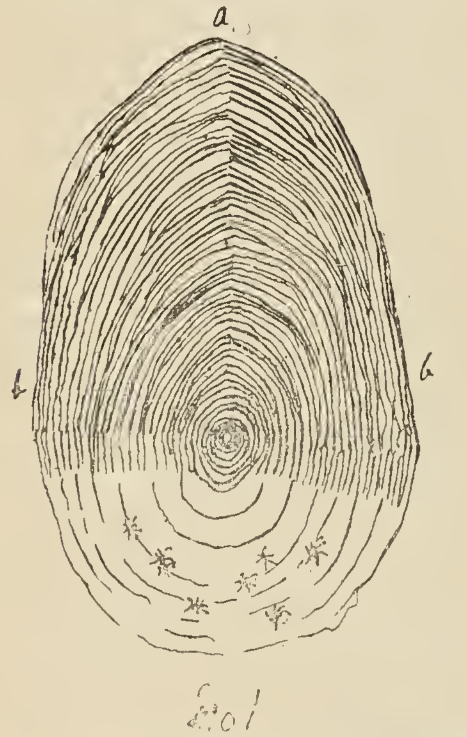
Correspondence

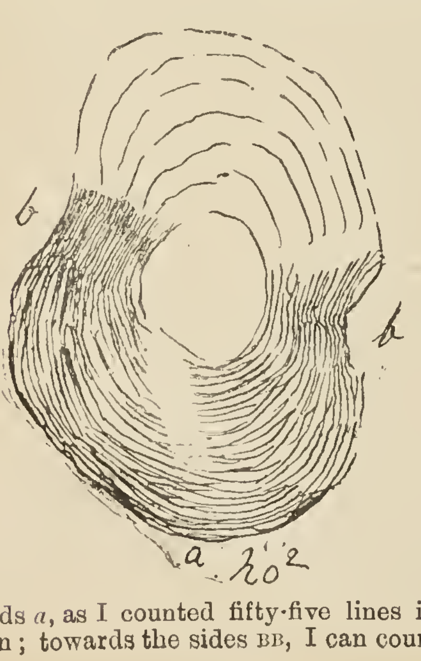
[We do not hold ourselves responsible for opinions expressed by our Correspondents.]

THE AGE OF FISH (*SALMONIDÆ*).

Sir,—In the *Fishing Gazette* of November 7, you kindly published a letter from me, asking for scales of *Salmonidæ* whose age is known. I will now explain my object in collecting scales. For many years I have been trying to discover a means of telling the age of fish. Cœcal appendages, colouring, and size, all failed to give any satisfactory results; now I have some slight hopes that scales will furnish the information required. The growth of scales on *Salmonoids* is, I believe, constant, even if the fish does not increase in size and weight, but of this I cannot as yet be positive. Fish do not moult their scales periodically, but such as have been lost by injury can be renewed (see page 18, "*Salmonidæ* of Great Britain," Dr. F. Day). Therefore such scales as have been retained from birth, if not injured, either during lifetime or after capture, should show in *Salmonoids* numerous lines on the portion that is free—the imbedded being frequently blank, other fish showing a few lines far apart. I have never seen scales off an adult fish lined all the way round (as figured, page 54 of above-mentioned work); but as these were drawn for another and entirely different purpose, it is no use taking them as examples in this instance. They are drawn, parr thirty-two, grilse forty-three, salmon sixty-four lines, as I count.

I send with this rough drawings of two scales off the same fish—a *fario*, age unknown. No. 1 I consider a perfect scale; No. 2, a very imperfect one. No. 1 shows the growth very plainly. In the middle is seen the scale of the infant, counting six or seven lines. The greatest growth is towards *a*, as I counted fifty-five lines in that direction; towards the sides BB, I can count only thirty-two. The scales of herrings are lined across, in nearly parallel lines, as from *b* to *b*. No. 2 is a scale that has been injured—the centre, or oldest part, is missing. Grayling scales are very differently shaped to trout scales, many being fluted. I have one with seven ridges on it. *Fontinalis* and *Irideus* wear scales that could be distinguished from *fario* or *salar*.





The value of a means to determine the age of fish is worth trying, for so many important questions would be decided could we tell the number of years we had fished over each individual. I hope that if I am working on an impossibility, or in the wrong direction, someone will kindly tell me so; as living shut off from scientific friends, I have no one to advise me.

The following Table gives the results of much counting:—

Name of Fish.	Age if Known or Weight.	Number of Lines.	Remarks.
S. Salar	1lb.	36	Caught in Sandown Bay, Isle of Wight.
S. Salar	20lb.	114	Average of 10 scales; caught by J. D. B., Torridge.
S. Salar	8½lb.	108	Average of 6 scales; caught by O. G., tributary of Torridge; male; thin.
*S. Thymallus	8 to 9 months	14 to 17	5½ in length; reared in my ponds.
*S. Thymallus	18 months	20 to 33	6¾ in length; reared in my ponds; the perfect scales have most rings.
S. Irideus	13 months	19	Average of 9 scales; received from Howietoun as a a yearling.
* S. Iridcus	25 months	38	7in. in length; received from Howictoun as a yearling.
S. Fontinalis	18 months	12	Average of 4 scales; received from Howictoun as a yearling.
S. Fontinalis	18 months	15	Average of 4 scales; received from Howietoun as a yearling.
S. Fontinalis	29 months	18	Average of 9 scales; received from Howietoun as a yearling; a deformity.
S. Fontinalis	33 months	31	Average of 11 scales; received from Howictoun as a yearling; 12in. in length.
S. Fontinalis	33 months	31	Average of 16 scales; received from Howietoun as a yearling; 11in. in length.
S. Levencnsis	20 months	32	Average of 11 scales; hatched and reared here; ova from Howietoun.
*S. Fario	½lb.	55	Average of 4 scales; from tributary of Torridge.
S. Fario	5½oz.	55	Average of 8 scales; from tributary of Torridge; 9¾in. in length; female.
S. Fario	10oz.	56	Average of 5 scales; from tributary o Torridge; 11½in. in length; female.

I consider enough evidence is given in this list to justify further inquiry, as in all cases where the age is known the older fish show more lines.

I have taken all the scales from close to medial line, above middle of pectoral fin. Anyone who owns a microscope may count the lines; or, if preferred, I shall be only too glad to carry out the work. A record collected from many fish, whose age is known, will be required before an estimate of the value of my idea can be formed, and only perfect scales lined from the point to centre, are of any value. The count to be taken in a straight line from centre to extreme edge of exposed portion, counting all lines (whether broken or not) intersected by imaginary counting line as from inside ring to *a*. I have named the part opposite the imbedded portion "the point" (marked *a* on drawings): the part I have called "the sides" is marked *b*.

Many scales show mossy star-shaped spots on the imbedded portion a month or two before spawning time; this, I suppose, is the colouring pigment. It is seen in the skins of alevins fry, and also in the skin of mature salmon, trout, and others, specially developed in Mahseer (*Barbus Tor*, of India). I find the scales of tarpons so thick and opaque that I cannot count the lines at all.—Yours, &c,

O. Greig.

Thuboro House, Holsworthy, Devon.

---

* Are not very reliable, as I took the count of some imperfect scales.

TYNE SALMON PROBLEMS.

Dear Sir,—I know that you are ever ready to advise where there is difficulty in fishing matters, and also allow the matter to be discussed through the columns of the *Fishing Gazette*, where we likewise can have the benefit of the opinions of some of the best anglers and writers on fishing questions of the present time.

The difficulty is almost in a nutshell; how to surmount the difficulty is the matter. Now for the difficulty. The river Tyne is a tidal river, and salmon, grilse, sea trout, bull trout, run up the river to spawn. Formerly there used to be a decided migration of spring fish, called by the net fishermen the March Buck, now fast becoming extinct. I just fancy I hear Neddy Rubbersole say, "How?" Well, when the river becomes dead low there is certain streams where passage by the fish is nearly impossible, and others where it is utterly impossible for a sea trout a pound weight to get over. These streams from the farthest up are about three and a-half miles above high-water mark, and there is a net fishery above the farthest up-stream that forms one of the land lockings, and eight fishery rights within the distance, but owing to certain circumstances are not let or fished now. When the water is a fair running size what escapes the nets may get up, but any fish that do not get over the farthest up-ford generally fall back into the pools, and become *the legitimate harvest of the net-fisher*, as they hold a licence to take them; but what suicidal policy!

The river Tyne opens for both net and rod on February 1, and the spring-run fish, *with isolated exceptions*, do not commence until about the third of March, consequently a month earlier than the river should open, and causes the net fishermen to do a great amount of damage to spawned and baggit fish. For the sake of an odd fish or so, and taking into account labour, tear and wear of nets and boats, I question if the fishermen are into pocket. Grilse, sea and bull trout we have a fair run. According to the public press our *first grilse on the Tyne* this season was six weeks later than the *first grilse on the Tweed* this season, got by the boat and net fishermen.

Now we have another distinct run of salmon, commencing about from the 10th to the 20th August. If floods come, and not too quickly after each other, they come up in shoals or runs until the end of November and some well on to Christmas; and the chairman of the Tyne Conservancy Board gave it as his opinion that the Tyne salmon were becoming later every year. Note the grilse run on the Tweed by ours. I will make one more comparison. The Eden whitling commence to run the latter end of June; the Tyne whitling commence in September. Now if you compare notes you will find the *Eden* opens a fortnight later, and closes a fortnight later; and the Tweed closes a month later than the Tyne, although both rivers are much earlier than the Tyne. I will give you the late F. Buckland's answer to the first overtures for an alteration of the annual close time on the Eden. He said: "No, gentlemen, I could not advise the Home Secretary to alter your annual close time, as the Eden is one of the earliest rivers, if not the earliest river, in England."

Now our river Tyne is like other rivers to many autumn fish, for the available spawning-beds, and sport has been fairly good, but fish took short. I will give you an instance. Out of fourteen runs with the fly I only managed to land three.

Mac's experience has often been mine this season, and made me ease the cover of my senses, and gaze in wonder at the antics of the salmon.

For burn trout we have none, or practically none, and could be re-stocked with grayling and suitable trout for very little, and mere bagatelle to the riparian owners and landed gentry.

Now what I want to draw your attention to are the following points:—

(1) Is the spirit of the Conservancy Acts that fish should have a clear run during the weekly close-time to enable them to pass the nets?

(2) Are the Conservancy Board entitled to issue licences for boats and nets where a river is land-locked and the fish cannot pass at dead-low water.—Yours, &c., UNEFEFAR.

[(1) The only object of the weekly close-time is to enable the fish to pass the nets. (2) We should say the Board is entitled to issue licences under the circumstances mentioned.—ED.]

LARGE ROACH.

SIR,—In answer to "Inquirer," of a week or two back, I beg to inform him that there are three roach in our society's room weighing over two pounds. Weights, 2lb. 4oz., 2lb. 3¾oz., and 2lb. 1½oz., weighed in the club room. Can any of your numerous readers inform me whether I can insure our cases of fish against breakage? Any information will greatly oblige.—Yours, &c.,

A. PAYNE, Secretary.

Globe Angling Society,
Fonthill-road, Finsbury Park, N.

OULTON BROAD FISHERY.

DEAR SIR,—It does not follow that because the fishing is free, and there is no close-time, that it is not "*strictly preserved*," as "someone" seems to think. I daresay it has slipped your memory, otherwise you know (from articles in the *Fishing Gazette* of your own) that the fishing on Oulton Broad is kept up by subscription, out of which two water-bailiffs are employed, and we find it very hard to meet all demands attending it. Perhaps "someone" after this statement will forward the secretary a trifle in aid of this public work. The secretary's address is, Mr. L. T. Johnson, Harley House, London-road, Lowestoft.—I am, dear Sir, Yours truly, G. W. MASON.

[We explained to a correspondent who asked a question, that "strictly preserved" in Mr. Mason's advertisement did not mean that anglers were excluded, only poachers.—ED.]

Oulton Broad Fishery, Lowestoft.

A PERTINENT QUERY.

DEAR SIR,—In the club report of the Canning Town Angling Society, of the 12th December, I saw that Mr. C. Riley, one of the members hooked a roach (foul) and it says deficient of a mouth. I should also like to have seen this fish, as it must be a curiosity nowadays to see fish without mouths. How do they feed and exist?—I am, &c. BENJAMIN ABRAHAMS.

25, Silver-street, Kensington.

INFORMATION WANTED RESPECTING RAILWAY CONCESSIONS.

SIR,—The Northern Anglers' Association are in need of the fullest information as to the facilities granted by the various railway companies to anglers in all parts of the kingdom. Will secretaries of the various associations please forward same to

GEORGE S. SMEETH.

39, Hanging Ditch, Manchester.

THE PISCATORIAL SOCIETY.—CHANGE OF ADDRESS.

DEAR SIR,—The meetings of the above society will be held in the Piscatorial Saloon, Holborn Restaurant, W.C., on and after next Wednesday, December 23.—Yours faithfully,

W. T. GALLOWAY.

2, Compton-terrace, Highbury, N.

A CAUTION TO FISHING TACKLE MAKERS.

SIR,—We wish to caution the trade against an individual who is evidently bent on swindling. On the 15th inst., a man waited on Messrs. Bartleet and Sons, 53, Gresham-street, representing that he had been sent by our firm to procure two rods value fifty shillings on approval. He was asked for an official order, or trade card, but not being able to furnish either, the rods were promised to be sent on. It is needless to say we never authorised anyone to call, and that it was a clear attempt to swindle. Messrs. Bartleet and Sons are to be congratulated for the precaution they took.—Yours truly,

G. LITTLE AND CO.

IS A WHALE A FISH?

DEAR SIR,—The above query cropped up at the Newark Piscatorial Club Room the other evening. Will you kindly give an opinion, or invite replies in the *Gazette?*—Yours faithfully,

TRENTSIDER.

[The whale is not a fish, any more than the seal is. They are warm-blooded animals, breathing by means of lungs. Fish are cold-blooded animals, and breathe by means of gills.—ED.]

COARSE FISH IN A TROUT AND GRAYLING STREAM.

DEAR SIR,—As a constant reader of your valuable paper, may I ask, through your columns, for any suggestions which may help me in the following difficulty?

There is a certain trout and grayling stream near the borders of Wales which would be as near perfection as any river in this imperfect world could be were it not suffering under one curse, and that curse is coarse fish. My father is the proprietor of a trifle over five miles of the fishing, and both ourselves and all others who have the privilege of fishing in this very strictly preserved and beautiful stream are always asking ourselves how we may rid ourselves of the nuisance. The stream is an extraordinarily prolific one in the matter of fish life, for, in spite of the coarse fish, it contains plenty of trout of a good size (they average, as near as possible, ½lb.). On our own water we have had this year baskets of forty trout, weighing 20lb., and thirty-six trout weighing 17lb. (everything under 9in. long being returned to the water), in spite of the fact that it is proverbially a very shy river.

About five or six years ago there were no grayling in the river, but, just after that period, an upper proprietor turned some in, and these have in this short time thrived to such an extent that there is now good grayling fishing also. And now I come to my point, and that is, that the river *literally swarms* with coarse fish (principally chub and dace), and both of an exceptionally large size. We have caught this year chub of 4½lb., 3½lb., and so on. The chub are, of course, the chief offenders, as they no doubt destroy a lot of young trout and grayling, besides immense quantities of spawn; but both are equally guilty in consuming food which might go towards increasing, both in size and numbers, their nobler and sport-producing neighbours, they themselves, of course, being useless from a standpoint of sport.

Now, I take it as a generally acknowledged axiom that a river is capable of producing and maintaining a certain weight of fish, and that, if the coarse fish were absent, the trout and grayling, from the larger food supply which they would then get, would increase greatly in numbers or size—or both. From what I have said about the present numbers and weight of the trout and grayling, you can well imagine what the river would be if we could be freed from the "vermin" (for in that river we look on chub and dace as much as vermin as we do stoats and weasels in our pheasant coverts).

But now comes the difficulty—*How* to effectually get rid of them. The river has high banks covered with brushwood, and the streams alternate with long, very deep, sluggish pools, whose sides are a mass of roots and stubbs, which form natural strongholds for the coarse fish. We netted the streams and shallows some three or four years ago at great expense, with the result that we killed an immense number of coarse fish (in one shallow about 100yds. long we netted over a hundred), and did an immense deal of good to the fishing. But it is impossible to net the long, deep holes, and so now the river is getting over-run as much with the undesirable chub and dace as ever. It would be almost impossible to get a boat on to these pools, and the labour and cost of getting it there and getting it from pool to pool, over weirs and sharp, shallow streams for five miles, would be prohibitive. Even if we could do so, the roots, &c., at the sides and other difficulties would make it extremely problematical whether we could *anything like exterminate* the coarse fish. My old fisherman has often declared that he has a poison which he can mix up with some bait which will be taken by and destroy every coarse fish, but which will not hurt a single trout; but, of course, this is an experiment that would be far too dangerous to try.

Would it not be possible to destroy the coarse fish spawn wholesale by some means or other? and, if so, how? I have made a study from earliest boyhood of salmon and trout and the art of fishing for them, but coarse fish I know nothing about. Beyond that they mostly spawn in summer, I know nothing about their habits, and I should be much obliged if you could give me any information as to their times and places of spawning in a river such as I have described, and any suggestions which would lead to the destruction of our *bêtes noir* in the most expeditious and, if possible, least expensive way.

I hope that you will forgive my very long letter, my only excuse for which must be that, to do any good, I thought it best to explain at some length the peculiar features of the river in question. I would not trouble you, but that your readiness is so well known to assist the improvement of our fisheries, and I am sure that it is a question which seriously affects the welfare of one of our best western trout streams. The name of the river I withhold from obvious reasons, but I shall be happy to give it in confidence to yourself and also corroboration of the figures I have given in regard to numbers, weights, &c.—Yours faithfully,

DOUGLAS W. GRAHAM.

BLACK STAIN FOR FISHING-RODS.

SIR,—In your issue of the 19th, "Amateur" asks for a black stain for rods. In that delightful book, "A Year of Liberty," the author tells us if we want a black stain to "treat the parts with a strong solution of nitrate of silver, and afterwards with hydro-sulphuret of ammonia." And having tried this stain, I can add my humble testimony to its efficacy.—I am, &c., POORBEAH.

TROUT FISHING IN NEW ZEALAND.

DEAR SIR,—Our trout fishing season began here on the 1st Oct., and I send you a list of some of the takes for the month. In the Ashburton district the season opened on Sept. 22, but the fish were found by no means in condition, though some large takes were made. On Sept. 22, from the Rangitata, Mr. Huston took nine, scaling 53lb.; Mr. W. F. Somerville, ten, scaling 50lb., including two 8lb. fish. From the Rakaia, Mr. J. M. Cambridge, one, 8lb.; Mr. Fox, eight, 29lb.; Mr. Kidd, six, 16lb.; Mr. Pilbrow, thirty, weighing 171½lb., the four largest scaling 39lb. 12oz.; Mr. J. H. Stevens, eight, 50lb. Two days later Mr. Pilbrow was drowned at the mouth of the Rakaia, through wading too far into the water and being swept off by a wave.

In the Lower Selwyn, on Oct. 2, Mr. H. Kimber killed seven trout, weighing 42½lb.; Messrs. Everest Bros., six, 24lb.; Mr. John Greenslade, three, 10½lb., 7lb., and 5lb. On Oct. 3, Mr. Meddings, in the Upper Selwyn, eleven, with fly, averaging about 1lb. each. In the Waimakariri, at Stewart's Gully, Mr. Broadly, four, 20½lb.

On Oct. 6 a very curious take occurred in the Lyttelton Harbour. There is no stream flowing into the harbour, nor is there any fresh water within several miles. On pumping out the graving dock, for the purpose of doing some repairs to a ship, a trout was found in it weighing 13lb. 7oz., and was taken out by Mr. R. W. Grantham. The length was 30in., girth 20in.

In the Lower Selwyn, on Oct. 8 and 10, thirty-eight trout were taken out of one pool by two anglers. On Oct, 10, in the north branch of the Waimakariri, Mr. J. Haigh killed two fish, 8lb. and 2¼lb.; Mr. Greenslade, three, the largest being 10½lb.; Mr. Hunt, one, 9lb. The Temuka river is giving first-class sport: on Oct. 10, Mr. Cruikshank killed seventeen; Mr. Nicholas, fifteen, both with fly, the largest being 2lb. In the Waitiki, spinning on the 16th, Mr. Schulter, of Boundary Creek, killed sixteen, averaging 4lb.; Mr. Nicholas, however, beat this with twenty, weighing 101lb.

The small rivers south of Oamaru are yielding good sport with the fly, and on the Winchester stream, on the 24th, Mr. R. Young killed with the fly fifteen; and Mr. J. Twigg forty-three.

Our best month, November, is just coming in, and we hope to improve on this yet. I have been unfortunately unable to get away much yet, but, fishing with Mr Marciel and Mr. Walrond at Whiterock, on Oct. 23, we took eight, averaging 6lb. each, with creeper, on very light tackle.

This morning, in the *Christchurch Press* newspaper, appears the following from the Rakaia River: Mr. A. H. Shury, Mr. E. B. Simpson, and a friend, in two days, Oct. 29 and 30, caught forty-four trout, which turned the scale at 342lb. 8oz.; Mr. Simpson, twenty-two, 168lb. 8oz., including three of 12lb., three 9lb., one 10lb., five 8lb., and several 6lb., the smallest being 3lb. 8oz. I send you the newspaper of Nov. 3 for your perusal. I think this is the record for the present.—Yours, &c., W. H. Spackman,

President Canterbury Angling Society.

Christchurch, New Zealand.

HIGHLAND AND ISLAND ANGLING.

Dear Sir,—In my article (in your Christmas number) on "Highland and Island Angling," there are one or two small printer's errors which, with your permission, I would like to correct. "Unnumberable laughter" should read "innumerable laughter," which is the more correct and more beautiful rendering of the phrase as it occurs in that sublime passage in the "Prometheus Bound" (I think) of Æschylus, which begins "Oh, holy heaven, and ye swift-winged winds and waves of ocean." "*Innumerable laughter!*" "Clan Ronald" should read "Clan Ranald," and "Cornisk" of course "Coruisk."—Yours truly, Duine Môr.

London, 22nd December.

DINNER TO THAMES LOCK AND RIVER KEEPERS.

Sir,—Will you kindly permit me to acknowledge the receipt of contributions from the following sources, and to express my best thanks for the same: The Richmond Piscatorial Society, the Society of Caxtonians, the Gresham Angling Society, the United Brothers Angling Society, the Athenæum Angling Society, the Anchor and Hope Angling Society, the Hon. Sir Forth North, Sir J. Whittaker Ellis, Bart., M.P., Messrs. Andrew Pears, Philip Geen, F. Berry, W. L. Thomas, C. Farlow and Co., G. F. Wilson, S. B. Wilson, H. G. Wilson, Young and Co., G. H. Harrison, J.P., W. G. Fletcher, H. L. Foster, S. Allcock and Co., A. K. Davis, J. R. Bonamy, and the Rev. W. M. Snell; and I have also to thank those who have made complimentary reference to my long connection with the society.

I have much need of further contributions, and I would express a hope that many anglers who are not members will during this Christmas time send me something.

The dinner will take place at the Castle Hotel, Hampton Court Station, on Friday evening, February 5, as on that day thirty-three years ago I became connected with the society, and anyone wishing to be present at the dinner can attend on payment of a dinner ticket, which is five shillings.—Yours, &c., W. H. Brougham, Sec.

Pownell-gardens, Hounslow,
December 22, 1891.

TENACITY OF LIFE IN EELS.

Sir,—Many remarkable stories have been written about the tenacity of life in eels, but I do not know if any instance has been given showing how long an eel can live under ill-usage after being taken out of the water, which will beat the following story, which I heard from a respectable person, well acquainted with the facts, and whose veracity I do not doubt in the least particular. I give it nearly in his own words:—

"A poor old woman (a neighbour of mine) who lives on the banks of the Inny river, in the summer of 1889, killed a cock—rather an old bird—and carried it to the mouth of a little rivulet that flows into the Inny, to disembowel and wash it. The water was soon, as a matter of course, tinged with blood. This attracted an eel, about 4ft. long, which caught chanticleer's head, which was under the water at the time. The old woman tugged hard, but the slimy denizen of the river would not let go his grip. The cock's neck being tough from age, was equal to the strain, and the old woman, by a great effort, at length pulled the eel out of the water, but could not persuade it to release its grasp even then. The end of it was that she should bring both cock and eel home with her. This was no easy task, because the eel was knotting itself up into the most fantastic coils over her hand and arm. Just after the woman arrived at her house, a neighbouring man, who saw the eel dangling from the head of a plucked cock held in her hand, came in to inquire about the strange sight. After satisfying his curiosity, this man cut the eel's jaws, and the old woman's cock was at last separated from the eel and restored to her. The eel was then thrown out into the farmyard, where some boys picked it up, and began to pelt each other with it. This went on for a quarter of an hour, when the man above referred to came back and told the old woman that he had only just remembered that there was a cure or charm in a preserved skin of an eel, and that, at any rate, he had often heard that it was a good thing to have in a house. He volunteered to skin the eel himself, and went and brought it back from the boys who were treating it so roughly. It was still "*all alive*," and the head should be cut off before the operation of skinning could be safely commenced. After the job was finished, the eel, now minus the head and skin, was thrown across a stout iron peg in the wall of the house. For a short time it remained motionless and limp—for a short time only—for it once more *knotted itself* up, fell wriggling on the floor, and was kicked out."

This was my informant's story, and it is certainly rather tough; but eels are tough also; and if this story is quite correct—and I have no reason to doubt it—the eels of the Inny river would appear to be particularly so.—Yours, &c.,

T. J. Dennehy.

CLOSE-TIME FOR NET FISHING FOR SALMON AND TROUT.

Sir,—I see that your issue of last Saturday says that "The *Dublin Gazette* of the 11th inst. contains an order of the Inspectors of Irish Fisheries, making the period from August 1 to January 1 following the close time for net fishing for salmon and trout in the Lismore district (Co. Cork)." There must be some mistake in this. I did not see the *Dublin Gazette* in question, but such an order would leave only one hundred and fifty-three close days. Now the 21st section of 26th and 27th Vic., cap. 114, enacts that "the annual close season shall not comprise fewer than one hundred and sixty-eight days in each fishery," and it is not in the power of the Inspectors of Irish Fisheries to alter this Act.—Yours, &c.,

Clonmel. Richard Bradford.

THE NORTHERN ANGLERS' ASSOCIATION.

Dear Sir,—I see it stated in your last week's edition, in respect to the memorials to the railway companies by the Northern Anglers' Association, of which body we are members, that the number of signatures from Liverpool was twelve. There must be some mistake here, as I obtained about one hundred signatures, and I should think our two local tackle-dealers, Mr. W. Ramsbottom and Mr. J. Whitby, must have got as many more.

Perhaps you will kindly publish this letter, and so obtain me a reply from whoever compiled the return.—Yours truly, R. Woolfall, Secretary.

THE PEOPLE WE MEET WITH!

From a Gillie's Point of View.

The devil, it is said, is not so black as he is painted; it depends on the humours and whims of the artist who takes his Satanic Majesty's visage in hand. Neither is the gillie so bad a fellow, after all, much depending on how he is dealt with by his patrons, and being either made or marred according as he is well treated or the reverse. The patron he loves most to meet with is the genial all-round sportsman, who gives him "plenty of rope," as far as his own skill and experience is concerned, and who knows how to bestow a word of praise, as well as the looked-for tip at the close of the day, as the case may be.

These open-minded, open-handed, sport-loving anglers, are often found to be past-masters of the art. They are no novices, and the word duffer is never breathed in their presence. They bring a genial warmth wherever they go, which in itself often brings luck from its very cheerfulness, and commands the utmost resources of all within reach to ensure success. They are welcomed as the rays of the morning sun, and their slightest behest is obeyed with alacrity. They are sportsmen and gentlemen to boot.

"He's a very goot shentlemans, Mr. Cameron. He asked for my wife and little Roary, man, as soon as he met me."

Yes. He is not stuffed full to the throat with his own poor miserable self, and his own selfish concerns, blinded with avarice, suspicion, jealousy of everything and everybody, but has a kindly word and a kindly consideration for all around him.

Thank God! these true sportsmen are by no means rare; although they might be more plentiful than they are. They are not drawn from any one class, and include professional as well as non-professional men, very rich as well as comparatively poor men, the noble as well as the plebeian, the politician, and the non-politician; but the crotchety, egotistical bombast finds no place in their ranks, be his title or wealth what it may.

The Army colonel is a lovable companionable sportsman, whom it is a pleasure to serve, after he is *broken in*. But he needs breaking in! He has very likely fished in India or Canada, or elsewhere, and has acquired the art abroad, with a body-servant and one or two of the rank and file as his gillies and attendants. The word of command has become second nature to him, and such a thing as calling in the opinion of a gillie into the *council of war*, is as foreign to his nature as blacking his own boots, and probably more so. He never carries a flask, and if so, it is purely for himself and his own consumption. He is punctual and exacting to a degree, and seems never to have a tire. It is impossible to read his thoughts, and there is a cold frigid feeling about him which is anything but desirable or attractive. He has to be broken off from these, very desirable qualities as a soldier; and very soon he comes to see that his wants are more carefully attended to by persuasion, and those little platitudes and condescending kindnesses, than by force of disciplinary characteristics. He becomes a man of the world if he is wise, or he remains a stuck-up, starchy, frosty individual, who is obeyed and followed through fear, and whose plights and misfortunes have but little sympathy with the crowd, while inward, even his best friends say, "Serve him right!"

But the Army man is not nearly so impecunious and mercenary an individual as the Navy officer, when he goes a-hunting or a-fishing. His "life on the ocean wave" has taught him all the make-shifts and cheese-parings of domestic economy, and his great fear is that he may ruin himself in running up an account with the tackle-dealer, that he cannot get the extreme use of the last rig-out in casting lines and flies, which have been twice round the world, perhaps, during the past few years, and that he cannot get a good enough market for the fish he caught, or which were caught for him! His parsimony and extreme economy evolve great meanness unless he yields them up in time, and becomes a sportsman and gentleman after the manner born.

The professional and business man, if a sportsman, has been a sportsman all his days. There is a story current on Deeside, that when the late Lord Beaconsfield visited the Queen at Balmoral, and met her favourite attendant, the late John Brown, he (the Earl) took him always by the hand, with "How do you do, *my friend?*" and it was remarked that John's assiduous attention on Disraeli was in marked contrast to many another Minister in attendance, whose code of etiquette forbade him to bend to a menial. The incident points a moral, if it does not adorn a tale. The true sportsman will see in his gillie a friend as well as a servant. Dod.

Interesting to Anglers.—Mr. John Kershaw, jun., president of the Palatine Angling Association, and assistant secretary of the Longsight Anglers' Society, Cheshire, has had five of the principal fish he has captured this season preserved, and mounted in a handsome case covered with bowed glass. The fish consist of a splendid chub, which weighed 3lb. when caught out of the Cheshire waters; two good specimens of roach, a dace, and a trout. They are quite a study for followers of the piscatorial art, being natural as life. The workmanship does credit to the artist, Mr. Ellis Wild, taxidermist, Tib-street, Manchester; and Mr. Kershaw has intimated his willingness to allow any lover of angling to inspect them, if they will call at his residence, the Church Inn, Longsight.

SUPPLEMENT TO THE FISHING GAZETTE

SATURDAY, DECEMBER 26, 1891.

NOTES FROM BIRMINGHAM AND DISTRICT.

THE annual meeting of the Anglers' Pride Society, Royal Oak Inn, Barr-street, Hockley, was held on Thursday evening, the 17th inst, Mr. S. Kendall presided. The annual balance-sheet showed that the balance in hand, after all liabilities had been disbursed, was £26 18s. 11d. The auditors in their report spoke in high praise of the manner in which Mr. E. Glover, the secretary, had kept the accounts of the club. The election of officers for the ensuing year was next proceeded with, when Mr. S. Kendall was unanimously elected as president. Mr. W. Carrier was elected vice-president, and Mr. E. Glover was re-elected secretary; Mr. G. Swain, the worthy host, was also re-elected treasurer, whilst Messrs. Twist and T. Swain were elected as auditors. The committee was next elected, when the seven following gentlemen were duly proposed and elected—namely, Messrs. Bird, Colesby, Hobell, Townsend, Tongue, Heaton, and Jarvis. The meeting took into consideration the Birmingham Anglers' Benevolent Society, the members listening very attentively to what was said, and all in the room expressed their intention to become identified with the society, and it was finally resolved to call a special general meeting after Christmas, so that the whole of the members should have the matter placed before them, and if possible get the members to join in a body.

THE adjourned annual meeting of the St. George's Society was held at the club-house, the Waggon and Horses Parade, on Monday evening last, to consider several important alterations in the club rules. Mr. A. G. Hall presided, and Mr. C. White occupied the vice-chair. The first business was respecting the days upon which the society should, in future, hold its contests, a certain portion of the members being in favour of all the contests being fished on Sunday. This was the purport of the resolution, which, after considerable discussion, was put to the meeting and lost by the narrow majority of three votes. The next business was respecting the raising of the subscription of the members for the purpose of forming a fund for the preservation of specimen fish caught from the club's private waters. This brought about a protracted discussion, which ended in the resolution which pointed to raising the subscriptions for the purpose indicated being lost by one vote.

THE question of the increase of friend's tickets was settled by the society deciding to make the charge one shilling per day instead of sixpence as formerly. Owing to the weather, the Christmas contest will, I understand, not take place.

THE Belmont Society had a rare jolly night on Thursday, the 17th inst., upon which occasion they held a smoking concert; Mr. T. Coles presided. The concert was in every way a success, and was well attended, as over sixty of the members and friends turned up to do honour to the occasion. Mr. Hands presided at the piano; and the vocal portion of the programme left nothing to be desired. Great praise was due to Mr. D. Currie for the manner in which he worked in order to make the concert a success.

MR. T. BUSHELL, of the Waggon and Horses Parade, Birmingham, has obtained a number of cases of preserved specimen fish from the members of the St. George's Society, and he has placed them on view in the liquor vaults. The whole of the fish are well worthy an inspection, and should any of my readers be in this vicinity during the holidays, I should advise them to give "Our Tom" a call.

THE weather during the last few days has been dry and frosty; the pools in our parks are frozen over, and the canals outside Birmingham have been frozen to such an extent that the ice-boat has been used to break the ice, in order that the navigation could be carried on. This state of affairs will cause the postponement of the Christmas contests, that is if the present weather continues, which from the present outlook there is every indication of such being the case.

NOTES FROM LANCASHIRE.

THE adjourned annual meeting of the Manchester District of the Amalgamated Anglers' Association was held at the Farmyard Inn, Blackley, the headquarters of the Royal Walton Club, on Dec. 17. There was a good attendance of delegates and members. Mr. Geo. S. Smeeth (president) occupied the chair. The most important item of business—that of the proposal to withdraw the two delegates usually sent by this district to the council of districts' delegates—was at once proceeded with. A long but exceptionally good-tempered discussion followed, which included an amendment to send two delegates for one more year, and then finally withdraw. On the amendment being put to the meeting, only two voted for it; the original motion, on being submitted, received the support of seventeen delegates, and was declared carried. Considering that seventeen out of twenty delegates voted for the motion, the voice of the district must be considered as unanimous, as out of the remaining three two were in favour of the principle, but wished it for a time postponed, and the remaining delegate remained neutral. The next item was a proposition by Mr. Geo. Yates, that a sum of £2 2s. be subscribed to the fund for promoting the lectures now being given by various gentlemen in the Manchester Centre of the Northern Anglers' Association. The passing of this motion unanimously is a graceful act, and will do much towards establishing on a firm basis the federation of all anglers in this district. A resolution of sympathy with the Northwich Anglers, in their endeavours to stop the pollution of the Dane, was also unanimously passed, and instructions were given to the sub-committee to take steps towards providing a room centrally situated suitable for holding the future meetings of the district in. Owing to prior arrangements, the next place of meeting had to be changed from the headquarters of the Shakespeare Club to those of the Cambrian.

PROFITTING by the many days during last winter when all chance of a day's fishing was a thing impossible, some of our "merry anglers" have this winter devised means of enjoying themselves in pursuit of knowledge appertaining to natural history. For this purpose a party of three paid a visit to the ponds of Burnage, not to emulate the immortal Pickwick, in his efforts to elucidate the Littlebat question, but to make observations on the habits and, if possible, procure specimens of snails and other living things usually found in well-appointed aquarias. The specimen obtained by the president must have been a remarkable one, and afforded some exciting sport. We must congratulate him on his escape from an inglorious death, and express our thanks to his two friends who, by rescuing him, saved an application to the insurance department of the *F. G.* No doubt the landing-net so successfully used on this occasion will find a permanent place amongst the archives of the club.

THE Royal Walton Angling Society held their annual dinner on Dec. 18, at headquarters. Mr. William Smith (the president) occupied the chair. The balance-sheet, read by the secretary, proved of a highly satisfactory character. The chairman's opening remarks, dealing with the season's doings, were concise and to the point. To attempt any detailed account of the musical programme is out of the question in these Notes.

AGAIN referring to the 25lb. pike captured in Poynton Pool, and to which Mr. Kershaw, jun., alludes in his letter, printed in our issue of the 19th inst., it is gratifying to learn reliable information as to the specimen now on view at Stockport. If Mr. Kershaw would favour us with the location of the pike that was found dead by the keeper, those sceptics who are still unsatisfied would be for ever silenced.

THE Manchester Centre Council of the N.A.A. is summoned for Jan. 4. One of the chief items of the business for that evening is the reception of a deputation from the clubs forming the Manchester District of the amalgamation which, on the 17th inst., decided to withdraw the two delegates usually appointed to the parent association.

NOTES FROM NOTTINGHAM.

AS soon as the flood water in our district got the turn it receded at a surprisingly rapid rate, and on Monday the Trent was low enough for either pike or chub fishing. When the flood reached its maximum height, the marks at the Trent Bridge showed that nine feet four inches of extra water were running. Unfortunately for the votaries of *esox lucius* most of the backwaters inland are covered with ice of some degree of thickness, and those who had looked forward to the enjoyment of a choice bit of sport at Christmas are likely to be disappointed. Baits are plentiful enough, but these are useless without the fish; of course I refer to pike. So long as the mouths of the backwaters in the river remain open, fishermen will stand a chance, but depend on it, those who get the first turn will fare the best. Pike fishing closes for the season on most of the subscription reaches with the advent of the New Year, and all things considered the sport met with has certainly been below the average. One great drawback has been the ever-fluctuating state of the river. Last Saturday at Colwick one of the subscribers killed three very handsome fish with the live bait, and on Monday six were caught in the Clifton Waters. On Friday and Saturday small fish anglers were out at Wilford, Beeston, Barton, and Trent Lock, and roach were found to accept the maggot and bread paste somewhat freely. There is nothing doing amongst bream, perch, or dace, and during the continuance of the frost nothing will prove so stirring as a day amongst the chub with a good supply of bullock's pith and brains.

A FEW particulars *anent* the takes of salmon in the river during the past season may not be out of place. Nearly all the fish were caught in the Shardlow and King's Mills lengths, and it is satisfactory to know they attained a large size. Sport opened in April, and on the 15th of that month Mr. G. Copenhurst, of Burton-on-Trent (late Derby) hooked and landed one of 18½lb. in the well-known Channel Swim below King's Mills Ferry. On the following day Mr. T. Wood, Nottingham (the lessee), killed one of 18lb., in the Lane End Swim above the ferry; and on the 17th, Mr. A. Green took one of 16lb. in the deep run at Colwick Weir Head. On April 27, Mr. Copenhurst killed his second fish, one of 26lb., in the Long Swim at Shardlow, and the next day, in the same meadow, Mr. J. Lowater, of Nottingham, took one of 10lb. This fish, however, was in very poor condition and would have been returned excepting for having been so terribly hooked. On May 5, Mr. Copenhurst was again to the fore, landing a fish of 16lb. in the Channel Swim already mentioned, and six days later, Mr. Wood caught one of 11½lb. in his favourite hole at the Lane End. He also lost one estimated at 20lb. On May 20, Holmes, the Weston keeper, took one of 12lb. above Wenham Hole at King's Mills; and on June 2 Mr. Wood registered his third one of 13lb. at the Lane End. After this the river underwent a much-needed change, and on the water again fining down, Mr. S. Marcer, of Derby, landed the heaviest fish of the year. This he hooked in the Long Swim, Shardlow, and had a very tough struggle with it; when weighed at Derby, it turned the beam at 27lb. Two days subsequently, or on June 22, Mr. George Beeton, of Radford, killed one of 14lb. in the same meadow, and this virtually brought the spring fishing to a close.

NOTES FROM SHROPSHIRE.

A KEEN and invigorating frost has succeeded the lengthy spell of dreary wet weather that we experienced in the early part of the month, but anglers have discarded the rod and turned to the more jovial pleasures of the festive season. The river after the flood has toned down into splendid condition, but the delights of skating have been too great for anglers, however enthusiastic, to withstand, even were they inclined to seek the voracious pike. Consequently the calendar of piscatorial pursuits during the week remains a blank.

IT is announced that a meeting of those conservators who are interested in the upper part of the fisheries will be held to-day (Saturday, the 26th), at 12.30, for the purpose of considering what steps are to be taken with regard to the annual close time for salmon as it is necessary that something should be decided on before the next meeting of the Board. Mr. Edmund Buckley, the hon. sec. to the Montgomeryshire Conservators, asks that those Conservators who are unable to be present will communicate with him and give their views upon the matter, so that they may be made known at to-day's meeting. Thus it will be seen that the Upper Severn Conservators are animated by a praiseworthy determination not to allow this question to drop until some practical steps are taken to improve the salmon fishing.

NOTES FROM TYRONE.

THE rivers and streams have subsided considerably in the past week, and they have returned to their embankments. In many places I hear that where the rivers overflowed their banks, large numbers of trout, salmon and pike were left in the flooded meadows and holms.

LAST week I adverted to the shameless poaching in Lough Neagh. Since then the local newspapers have taken the matter up, and some startling statements have been made in their columns. One correspondent—a gentleman named Wakefield—asserts that even in broad daylight the Bann and other feeders on the southern or Armagh shores, have been netted by the fishermen, and attributes this to the negligence of the water-keepers. This must cause dreadful havoc among the spawning trout, salmon, and what is just as valuable to the fisher—the pollen.

COARSE fishing is decidedly dull. The floods have rendered shore angling very unpleasant, and the plentiness of bottom feeding after the freshets seem to dull the appetites of perch, pike, and bream. Last Wednesday evening, during a favourable spell, I tried the Stewartstown Lakes—a small ten-acre piece of water—and in about an hour I had seven very nice perch. The pike lately put into the lake by Mr. C. R. Stevenson and myself are apparently thriving. No disease as yet has appeared among the perch. Eels have ceased to run to Lough Neagh from the lakes and swamps.

SOCIETY FOR PROMOTING THE READING OF PAPERS AT ANGLING CLUBS.—The members of this society met on Friday night at the Citizen, Houndsditch. As Mr. Walbran's recent lecture was such a successful event, the committee decided to take the Foresters' Hall again for Mr. Hearder's sea-fishing lecture. The date has yet to be fixed, but it is believed that the meeting will take place early next February. We understand that the lecturer will exhibit a large assortment of fishing tackle used in the sea and the committee have every reason to think that another great treat is in store for the London anglers.—Concerning the lecture at the Silver Trout Club in January, Mr. Shrubsole announced that owing to the great demand on his time he had been obliged to abandon his paper on "Bags, Baskets, and Creels," with the accompanying exhibition. He will, however, read a paper on the date fixed on another subject, the title of which will be duly announced in the *Fishing Gazette*.—The discussion concerning the proposed medal was again adjourned until January 8, when the next meeting will be held.—Mr. McDermott, on behalf of the Izaak Walton Society, applied for a paper to be read before the club about the middle of January. A vote of thanks was passed to the chairman (Mr. Tibbatts) for presiding and the proceedings shortly afterwards terminated.

INTERESTING TO ALL ANGLERS.—The Second Lady in the Land is an ardent pike-fisher, and she is as beautiful as she is good and popular. From the day of the Danish Princess's entry and magnificent reception into London, nearly twenty-nine years ago, until now, Her Royal Highness the Princess of Wales has literally "reigned" in the hearts of the British nation. All anglers should, therefore, either openly or mentally congratulate the good Princess and her Royal Husband upon the betrothal of their eldest son, the Duke of Clarence and Avondale, with the beautiful daughter of the Princess Mary of Teck—an ideal Englishwoman—and the handsome Duke of Teck. The last-named has become popular among the people of Richmond and neighbourhood. The forthcoming marriage will draw, if possible, the bonds of Royalty towards our venerable Queen and the Crown, since the alliance might be said to be very popular with the English people, and one which, humanly speaking, might prove of permanent good and security to the monarchical institution of these realms.—RUS.

Holloway's Ointment and Pills.—Dangerous Chest Complaints.—The enumeration of these diseases is scarcely necessary, as, unfortunately, most Englishmen know them to their cost. Coughs, common colds, influenza, bronchitis, asthma, pleurisy, inflammation of the lungs, and even consumption in its early stages, are best treated by rubbing Holloway's Ointment upon the chest and upon the back between the shoulders. It penetrates internally, checks the cold shiverings, relieves the overgorged lungs, gradually removes the oppression from the chest, and restores the obstructed respiration, hitherto so distressingly disagreeable and highly dangerous. In treating this class of diseases, Holloway's Pills should always be taken while using his Ointment; they purify the blood, promote perspiration, and allay dangerous irritations.

English and Welsh Reports.

Lower Thames.—GENERAL REMARKS.—At the closing portion of last week the weather made a desirable change; instead of a repeated continuance of rainy and stormy squalls, there was a sharp, bright, crispy cold atmosphere, evidencing the more natural character of the approach of Father Christmas; and the very appearance of the Christmas Number of the *Fishing Gazette* was redolent of the festive season, and a right good number it is. There were several things in it which brought back the records of days gone by—first of all the monster trout, caught by the late Mr. Forbes, which I had the pleasure of witnessing the day after its capture; and the reference to our late scaly painter, Mr. H. L. Rolfe, with the illustration of one of his fine pictures, "The First Lesson," of which I have a large photograph, and a smaller one, which he presented to me. I am glad to find arrangements have been made for holding a piscatorial exhibition at the Royal Aquarium, Westminster, in the month of February next, for fishing rods and other appliances used in catching fish, and I heartily wish it every success. I remember the one of a more extended character which was held there in the month of June, 1877, and I hold a bronze medal as one of the jurors on that occasion. That one was taken up by the directors of the Aquarium, who offered a series of prizes of gold and silver medals, and the exhibits of stuffed fish in cases was a most interesting item. There were contributions from fifteen angling clubs, and forty-six from private individuals. I have no doubt the coming exhibition will be a good one, and with the very popular entertainments now given from the central stage, it will attract a large attendance of visitors. I am sure the executive of the Aquarium will do their best to make it generally attractive. The Piscatorial Society this week has made a change of quarters, and it now hails in the Piscatorial Saloon at the Holborn Restaurant, where I am satisfied the members will be well looked after by Mr. T. J. Hamp, who is himself one of its members; and nothing gave me more satisfaction than to learn the committee had succeeded in finding a home there. They were in some difficulty in making the change to find a suitable room, and I think they have now been successful.—B.

ANGLING RESULTS.—There is very little to be said as regards angling, but there is this information: "The water is getting clearer, and has been going down since last Saturday." The general report is that some fine roach and dace have been taken from the banks between Richmond and Sunbury, but on Saturday last there was almost a total absence of anglers, either on the banks or in the punts, but on the day following the anglers were more conspicuous, as over sixty bank fishers were counted between Richmond and Kingston. Their visit was not productive of any good. All will depend upon the condition of the weather as to any fishing during the Christmas holidays. The death of Mr. John Maddison Morton, on Saturday last, reminds me of one of his angling triumphs in the Thames at Hampton some years ago. When fishing there with William Milbourne, he caught at one time on a paternoster with two hooks, a splendid brace of perch, weighing together 6lb.

Upper Thames.—The hard frost which has prevailed severely in the Thames Valley during the last four days, has enabled the flood-water to drop away from the channel of the river very fast, so enthusiastic anglers, who can and care to brave the bitter cold, will have a chance of "tight lines," during what will undoubtedly be a Christmas of ye olden times. The flooded meadows adjacent to the Thames are all frozen over, and I think the whirr of the skate will be more heard for some time than that of the winch. In an artistic point of view the river surroundings are just now beautiful in the extreme, every tree, branch, and twig being outlined with white frost. My own feelings, perhaps a little senile, would rather point to home comforts, rather than to river angling discomforts. However, I wish my brother anglers a "right Merrie Christmas, and may all the amenities of the season attend them; may good digestion wait on appetite, and health on both, with plenty of oof to keep the fish in the swim, well on the feed.—MARLOW BUZZ.

Thames (Windsor).—The very sudden but very welcome change has caused the water to drop considerably, and though very high, will, contrary to expectation, be fishable by the 26th inst., in fact it should be in good order for jack and chub. It is some years since such safe and enjoyable skating could be indulged in over meadow land. The frost setting in just as the river was at its highest a very large area of land was under water. As a consequence many fine sheets of ice are within easy reach of either station. Since my last, I can hear of no one being bold enough, or I might say mad enough to attempt angling.—B. R. BAMBRIDGE.

Chichester Canal and Sussex Rivers.—The angling prospects for the holidays have vastly improved with a continuance of frosts. Pike are on feed in many districts, and the water is fast resuming its normal height; but there is plenty left in the lowlands to afford skating to those who choose to indulge. Mr. Jas. Wright, at Chichester Canal, has secured a few good pike latterly. As the most enthusiastic fisherman in these parts, and knowing every inch of the water, 'tis hard lines if he is not rewarded with sport. A few good roach have been taken from the Arun in favoured spots, and the Ouse has yielded roach from the eddies—and good fish, too—with a few pike, but none noteworthy. The Rother is running like a mill-race, and the Adur will suit those who like a rapid swim. The tidal waters, as a rule, are not available, except at certain stages of the tide. I wish all our readers fine weather, good sport, and a happy Christmas. Piking I should recommend in the present state of the weather.

Douglas (Isle of Man).—There has been a marked improvement in the weather, but the rivers have not as yet fallen sufficiently low to ascertain what damage the recent severe floods have done to the spawning-beds. However, the barometer is high and steady, and the thermometer shows the water in our streams to be at a good temperature for the ova. Sea fishing has much improved since last week, and bait is plentiful.—STORMY PETREL.

Great Haywood and District.—The Trent and Sowe are now in excellent condition for pike. Principal catches last week were a good take of perch and bream, heaviest perch 1lb. 12¼oz.; heaviest bream, 3lb. 3½oz.; and a pike of 12¾lb., in good condition.—W. W. P.

Lea and Stort.—The rivers have fined down in consequence of the dry frosty weather we have had for the last week, but there has not been much sport, and now anglers' prospects for the holidays, look anything but rosy, as, if the present cold continues, it looks much more like skating than fishing. There are some ardent fishermen, however, who will not be denied, and who will have a turn at their favourite pastime, no matter how cold it is; certainly the present dry frost is much to be preferred to one like we had this time last year, when there was several inches of sloppy snow on the banks; under the existing circumstances wherever anglers can find a spot, sheltered from the wind and a piece of water uncovered by ice, the chances of sport are not altogether bad for those who can stand the cold; for roach, perch, and especially jack, will feed well. I can understand fishing for the latter and using a spinning bait, as there is a chance then of keeping the blood in circulation, but to sit down to a roach swim, or to live baiting is beyond me; the jack are now in first rate condition, especially in the Lea, which is a somewhat late river for them. There have have only been a very few roach, perch, and jack, taken during the past week, nothing amongst them calling for special notice. That all fishermen may spend a Merry Christmas either by fireside or riverside, is the hearty wish of—SPLICED JOINT.

Lugg and Arrow (Leominster).—Both these streams have improved since last week, and are now clear and lowered, and in order for fishing. The weather has been fine, but very cold and frosty, and the greyling have been more on the move, but few anglers have visited the water of late, fishing being quiet. The Pinsley is fishing order.

Lugg, Arrow, and Pinsley (Kingsland).—Since Wednesday we have been favoured with fine days, and sharp frosts at night, which have caused these rivers to sink very rapidly. By Thursday (should present weather hold), bottom fishing may be resumed in places, though possibly there may still be rather much water. By Monday, rivers should be in capital order, and good sport may be looked for during the holidays.—R. T. WILLIAMS.

Ouse (Brandon, Norfolk).—During the last two weeks the rainy weather put a stop upon fishing. We have now had a few fine frosty days, and the water is now getting into good order for all-round fishing, especially for pike and perch. Live-bait being now a little trouble to get, those who require any, in order to save time, should write to the Ram Hotel to secure them, there being several required. This is all free water, with plenty of boats to be had. By the Town Bridge there are several good roach swims full of fish—good ones. They can be had middle day with gentles or brandling worms. Anglers had better take a good stock of gentles with them. Railway service excellent. With suitable weather sport must be good.—J. O. GEORGE.

Teme (Ludlow).—The Teme in this district is now gone down and cleared, and is in capital order for angling. The weather has been cold, and sharp frosts have been had, and anglers who care to venture out will find some good sport with the Grasshopper and maggot. The grayling are feeding at the Grasshopper, and one or two nice fish have been taken, but few anglers have been out. The Ony, Corve, Clun, and Ledwyche, are all clear and in good fishing order. No anglers have been out of late.—S. LUDLOW.

Teme (Tenbury).—In this part the water has cleared and lowered, and is now in capital order for grayling fishing. The cold frosty nights and foggy mornings have made fish well on the feed, but little has been done amongst them of late. The Rea, Kyre, and Ledwyche, are all clear.—WORCESTER.

Trent (Newark).—A welcome and seasonable atmospheric change occurred shortly after my last note was dispatched, which quickly had the effect of reducing the amount of flood water and bringing the Trent and tributaries into approachable condition, and bottom fishermen commenced operations with the usual lures, after a fresh, of worms and bread paste, and should the present satisfactory condition continue, pike and chub fishermen will, I anticipate, hold high hands during the festival, though fourteen degrees of frost, as registered to-day (Monday) will deter some from participating in the sport. A marvellous two-pennyworth, and that it continues to improve was the unanimous opinion passed on the Christmas Number of the *Gazette*, and may its readers have a "right merrie time, and sport to their soul's content."—TRENTSIDER.

Severn (Shrewsbury).—A seasonable and invigorating frost put an end to angling operations this week; for although the river has been in good condition for pike fishing after the flood, the weather has been too severe to permit anglers to betake themselves to the Severn-side.

Scotch Reports.

Dee, Don, &c.—With a continuance of the past favourable weather for another week or so, we will be within measurable distance of another season. Already spring fish are appearing in certain early rivers, and although we do not look for the earliest of them much before the end of January, yet they have (under such favourable running conditions as have prevailed lately) been known to take to the Dee and Don even before the advent of the New Year, although not in any great quantity. Everything as yet points to an early season, which will greatly enhance the value of the upper waters.—G. M.

Thurso (Halkirk)—The river is again in flood; a fine thaw set in on Friday, The water is clear as crystal, owing to the recent high floods having carried off all the autumn decayed vegetable matter. This will encourage the migration of salmon. Kelts appear healthy, although a few have some scars received in their spawning *melees*. There are as yet but few dead ones to be seen, and these die from natural causes. Trout appear lively for the season of the year; they "show" freely on a fine day. Dr. Bell, the Unionist candidate for Caithness, in some of his stump speeches, said he was in favour of allowing the public to fish for salmon and trout in all rivers as far as the tide goes. He said they ought to be as free to the public within tide-mark as cod are!—A. H.

Tweed, &c.—The Border rivers have now once more fallen to their normal winter level, being about one foot above their usual summer level. The weather is now seasonable for the time of year—frosty, with a nice bracing air—but how long this will last no one can venture to predict. A few of the all-year-round anglers have been trying their luck during the past few days, but the trouble was not worth the catch, only a few most unseasonable trout being their reward, and the fish not worth the cooking. Salmon spawning is now progressing on all the available reaches of the river suitable for this purpose, and many "pairs" of salmon are now to be observed on both Tweed and Teviot exercising Nature's duty. The "redds" are in the best possible condition, and the late floods have done immense good in cleansing the streams from all foulness and impurities, and by laying down a capital bedding of gravel and sand, which serve as splendid spawning "redds" for the *Salmonidæ*.—MAXWHEEL.

Irish Reports.

Ballinderry (East Tyrone).—The river has fallen to its ordinary winter level, but no sport has been had yet. Neither pike or perch are feeding well, and bream are not much sought after. The smaller salmon have spawned, but the heavier fish will not come on for another week or more. Sake have spawned and are returning to the lough. The spawning season has been a success on the lower—the more important—reaches, but on the upper stretches poachers have been busy, as those waters are unprotected.—J. A. B.

Reports from Clubs

We beg to request Secretaries to post their Reports not later than **Wednesday Night,** *addressed "Editor* FISHING GAZETTE, *St. Dunstan's House, Fetter Lane, London," and marked* CLUB REPORT *outside envelope. Post Card Reports preferred unless for special meetings.*

Anglers' Benevolent Society, Foresters' Hall, Clerkenwell-road, Clerkenwell, E.C.—Since my last report I beg to acknowledge with thanks the receipt of £1 15s. from the donation box of the Camden Angling Society. The next meeting of the committee will take place on Friday evening, January 8, at 8.30.—R. GHURNEY, sec.

Anglers' Pride Angling Society, the City Arms, Great Dover-street, Old Kent-road.—Our monthly outing on the 13th inst. at Windsor was a failure, one prize only being taken, by H. Scutt, with a small barbel. Wednesday last was our quarterly night, when a discussion arose concerning the fishing for monthly prizes. It was decided to call a special meeting of the members on Wednesday, January 6, when I hope all will be in attendance.—J. TUCKER, hon. sec.

Bermondsey Brothers Angling Society, Pitt's Head, Grange-road, Bermondsey.—The members of the above society fished a competition at Twickenham on the 20th for their December series of prizes. Seventeen members took part in the competition, but not one of them were able to get above the stipulated ½lb. required by rule, consequently the prizes will be added on to the January series. The next visit on the Central Association List will be to this society, on Tuesday, Jan. 5, when the favour of the company of the representatives from the various societies, will be esteemed a favour.—A. CONN, hon. sec.

Clapham Junction Angling Society, the Clarence, Winstanley-road, S.W.—On the 20th inst. the following weighed in: Messrs. T. Jameson, 3lb. 4½oz., jack; Mr. Turner, 10oz., roach; and Mr. Robinson, 1lb. 14oz. dace (winning a prize for Christmas outing).—A. TROWBRIDGE, secretary.

Independent Brothers Angling Society, Three Doves, 24, Berwick-street, Oxford-street, W.—On the 20th inst. Mr. Pope weighed in. At our last meeting, Messrs. Holders were duly elected members. We distributed our Christmas prizes on Thursday last. Members are informed that they can fish from the 25th to the 27th; so that this will extend over the holidays; one weighing in only.—SNAP.

Lady of the Lake Angling Association, Queen of England Hotel, Shepherd's Bush.—Several of our members have arranged angling excursions for the Christmas holidays, and hope to be in a position to report some good results. We had a nice show of roach on the 20th inst., many turning the scale at 1lb. Messrs. A. B. Mason, T. Salter, and H. Salter got among the chub, but strange to say out of a good many landed, not one came up to our standard, which is 12in. They were returned to the river.—T. SALTER, hon. sec.

MAZAWATTEE TEA

Liverpool Angling Association, held at the Bee Hotel, 5, Queen's-square, Liverpool.—At last week's meeting it was unanimously resolved that our present rented waters be retained until better can be got. Resolved also that meetings be not held on the evenings of Dec. 24 and 31, being Christmas and New Year's Eves, and the next meeting will therefore be Jan. 7, which will also be our third social. Notice of motion was given by Mr. W. J. Johnson, that in future members six months in arrear with their subscriptions be, after notice, struck off the roll.

Odds and Evens Angling Society, King of Prussia, Bevenden-street, Hoxton.—Notwithstanding the very inclement weather on the 20th inst., half-a-dozen of our members were out, and two of them (Messrs. Bygrave, sen., and Saalfield) weighed in a few roach and dace (very level and good-sized fish), thereby winning the two prizes offered for that day.—J. CUTHBERT, sec.

South London United Anglers' Visiting List.—The next visit on the above list will be to the Peckham Brothers Angling Society, held at the Prince Albert, East Surrey-grove, Peckham, due notice of date next week.—A. CONN, hon. sec.

Stoke-on-Trent Angling Society.—Some very good sport has been had in the society's waters during the last two or three weeks, Mr. Wm. Osborne and Mr. Leslie Hassall being to the fore. Mr. Hassall in one day having amongst his catch two good specimens—a bream of 3½lb., and a perch, 1lb. 12oz. On the 17th inst., Mr. Osborne succeeded in landing a splendid pike of the following dimensions: extreme length, 42in.; girth, 19in.; weight, 19½lb.; the fish was in excellent condition, and has been sent to Messrs. Cooper's, Radnor-street, for preservation. Mr. Osborne on the same day hooked what he thinks would have proved a larger fish than the above, but after playing him for some minutes he broke away, he failing to get the gaff into him. The next smoking concert in connection with the club will be held on Tuesday, January 12, when Mr. F. S. Pepper will take the chair. Several of Mr. Pepper's personal friends will attend, and a musical treat, both vocal and instrumental, is expected. It is hoped that members and their friends will muster in strong force on the occasion.—J. HOLLINS, sec.

Books for Anglers

ANY OF THESE WORKS CAN BE HAD, CARRIAGE PAID, *BY SENDING POSTAL ORDER FOR THE PRICE TO SAMPSON LOW, MARSTON & CO., LIMITED, ST. DUNSTAN'S HOUSE, FETTER LANE, LONDON.*
